Another *Leitwort* of this section is *ʾil/ʾilm*, appearing entirely within the enemies' epithets. The word appears in the two epithets of Yamm/Nahar, *mdd ʾil* and *ʾil rbm*, but does not occur in the following three lines, where *tnn*, *bṯn*, and *šlyṭ* are described. Then the remaining four beings each have an epithet that includes either *ʾil* or *ʾilm*. These epithets show an interesting and ambiguous pattern. In line 43, Arish is described as *mdd ʾilm*, while the following creature, ʿAtik, is called *ʿgl ʾil*. The pattern of mimation on *ʾil* in the first line of the bicolon, then lack of mimation in the second line is repeated in 45–46, where ʾIšitŭ is called *klbt ʾilm*, while Dabibu is called *bt ʾil*. The mimation may be interpreted in two ways. It could be the marker for the plural, so that the two phrases *mdd ʾilm* and *klbt ʾilm* would be understood as "the beloved of the gods," and "the (female) dog of the gods." But it seems more likely that all four of the beings described here are related specifically to El and that the *-m* is enclitic. The two larger stories of conflict in the Baal Cycle, those about Yamm and Mot, both emphasize the fact that Baal's enemies are particularly beloved by El. Especially in the story of Yamm, El's support of Baal's rival is overt and constitutes a legal legitimization of Yamm's claims (see Wyatt 1985; Szubin 1993, 1995). The four enemies in III 43–46 appear to belong to the same category. If the word *ʾilm* is correctly identified as the proper name El, the epithets in lines 43 and 45 would mean, "Beloved of El" (as is the case for *mdd ʾil* in line 38b–39a; cf. Pardee 1997a:252) and "dog of El." Thus in her speech Anat explicitly emphasizes that her previous conflicts have been with deities closely allied to El. The latter's dominant position and his lack of support for Baal in the past may explain her fear that new enemies have emerged from the camp of El.

The cosmic enemies mentioned by Anat here include several names and epithets: the beloved of El, Yamm; Nahar, the great god; Tunnan; the twisty serpent; the powerful one with seven heads; ʾAršu, Beloved of El; ʿAtaku, Calf of El; ʾIšatu, Dog of El; and Dabibu, Daughter of El. Each will be discussed in turn (cf. Pitard 2007).

1. The first enemy, Yamm, is well known as Baal's major antagonist in 1.2. As his name indicates, he represents the Sea, although because his alternate name is Nahar, "River," it appears that this deity represents the full range of water flowing on the earth. In CAT 1.1 and 1.2 Yamm is Baal's chief rival for leadership over the divine council. In the conflict described in 1.2 IV, Baal defeats him with the help of Kotharwa-Hasis, who provides him with weapons (see *UBC* 1.318–61). Anat does not appear in the account of this battle. Thus it remains unclear what relationship exists between the narrative in 1.2 and the reference here to Anat's defeat of Yamm. Although some scholars have suggested that this section represents an alternative account of the battle with Yamm from that of 1.2, it also seems plausible that this section simply refers to another episode of the story which has not been preserved, perhaps in the lost parts of 1.1. As discussed in *UBC* 1: xxv–xxvi and in the Introduction above, the entire Baal Cycle portrays Baal time and again as receiving help from other deities in defeating his enemies (and in getting his palace built, too). Thus a story of Anat encountering and defeating a number of enemies of Baal would fit reasonably well into the overall picture of the cycle. The epithet used for Yamm here, *mdd ʾil*, "Beloved of El," appears only a few times in the Baal Cycle (1.1 IV 20; 1.4 II 34, VI 12, VII 3–4), mostly, unfortunately, in broken contexts. The most significant appearance of it for understanding its role here comes in 1.1 IV 20, where it is used by El himself in his proclamation of Yamm as head of the council. It seems clear that Anat uses it here particularly to emphasize the warm relationship between El and Yamm (cf. also the Introduction, pp. 52–5 above), as part of her overall intent to place all the conflicts at El's doorstep.

2. Yamm's name stands in parallelism with *nhr*, as commonly occurs in 1.2. This parallelism also appears in Israelite tradition (Ps 13:3–4; Hab 3:8; Nah 3:4; cf. Pss 66:6; 74:15). Because of the usage in 1.2, there is little doubt that Yamm and Nahar are a single figure there, and are thus likely to be so here. Nahar is given the epithet *ʾil rbm*, which may be rendered "the Great God," or possibly "the God of the Great Waters,"

i.e., the cosmic waters (cf. Pss 29:3; 93:4; so *TO* 1.167 n. h), if *rbm* here were elliptical for *mym rbm*, "great waters." The former seems preferable (but cf. Yamm's epithet in Isa 51:10, *tĕhôm rabbâ*, "the Great Deep"). Nahar may appear alone in a small and somewhat obscure text (CAT 1.133) that presents a brief speech by Mot (lines 1–11) in which the god apparently speaks of Nahar as his servant: "Indeed, Nahar mixes my cup, and my seven portions in a bowl" (so Pardee 2002: 212–13). But the passage is ambiguous, and others read *nhr* here as "in torrents" (cf. *DUL* 599, *sub mt* III). The reading of the word as the divine name seems the most natural way to understand the syntax, although this would be the only hint that Nahar has a relationship with Mot.

3. The third name in the tricolon (lines 38b–40) is *tnn*, which may be taken as a proper name or as an epithet, "the dragon." The word *tnn* appears to be vocalized in the *Ugaritica V* polyglot (# 137: 8') as *tu-un-na-nu* (see Blau and Greenfield 1970:16; Huehnergard 1987b:72, 186; Sivan 1997:70). Unfortunately, the Sumerian, Akkadian and Hurrian equivalents are not preserved on that tablet. However, #135: 15', which is probably a parallel text, reads *MUŠ* = *ṣi-i-ru*, "snake" in the Sumerian and Akkadian columns.[53] The dragon is also found in an uncertain context in CAT 1.82.1, where it is preceded before a break by *]mḫṣ. b ʿl[*. This strongly suggests that the line is describing a conflict between Baal and Tunnan. The name almost certainly appears too in 1.83.8, where the text reads *tʾan*. The context of the passage, with references to Yamm/Nahar (lines 4, 6, 11–12), as well as the appearance of the root *šbm* directly after *tʾan* in line 8 (the verb that also occurs with *tnn* in III 40), seems to assure that the *ʾa* in *tʾan* is a mistake for *n* (simply missing a third horizontal wedge; cf. Pitard 1998). A third additional reference to Tunnan, alongside *ʾarš*, is found at the very end of the Cycle, in 1.6 VI 51. It will be discussed below, in the commentary on *ʾarš*. Finally, the word may appear in the PN *bn tnn* (4.35 I 13, 4.103.42).

Tunnanu is clearly related to Hebrew Tannin, also a mythological being, related closely to Yamm/Nahar/Leviathan/Rahab in

[53] With regard to identifying *tu-un-na-nu* with the *tnn* of our text, note should be made that the word in the polyglot vocabulary apparently is equivalent to the natural creature, the snake, not the monster described in our text. It is thus possible that our *tnn* was pronounced differently from the standard word, *tunnanu*, listed in the polyglot. See Landsberger and Hallock 1955 for the Mesopotamian texts of this syllabary, esp. p. 34.

Ps 74:13–15, Isa 27:1, 51:9; Job 7:12. In these passages he is identified as a snake-like dragon, sometimes with multiple heads. This is probably the portrayal assumed in our text as well. The relationship between Tunnan and Yamm/Nahar will be discussed after we examine the next two epithets (lines 41–42).

4. The fourth and fifth terms for Anat's enemies are both epithets rather than proper names. The first, *bṯn ʿqltn*, in line 41 means "the twisting snake." The noun, *bṯn*, appears most often in Ugaritic literature with reference to the natural snake (1.6 VI 19; 1.17 VI 14; 1.19 IV 61; 1.166.28; 1.169.3; 1.175.11, RS 92.2014:4, 6, cf. Bordreuil and Pardee 2001:387 and Pardee 2002:158–59; and in 1.100.73–76, where it is parallel to *nḥš*). However, in this line and twice in 1.5 I 1–3//27–30, it refers to a cosmic monster. It is modified by the adjective *ʿqltn*, "twisting, winding" (Syriac **ʿqll*, "to twist"; cf. Arabic *ʿaqala*, "to bind a camel's folded fore-shank and arm together"; Lane 2113; see also *DUL* 177), the same adjective (*ʿăqallātôn*) that describes Leviathan, "the twisting snake (*nāḥāš*)" in Isa 27:1 (cf. the comparable semantics for the reduplicated form in Judg 5:6).

The cosmic foe in the form of a snake-like dragon is common throughout the Near East. The term *bašmu*, presumably cognate to *bṯn*, is used of some of the monstrous offspring of Tiamat that form her army against the young gods (Enuma Elish I:141, II.27, III.31 and 89). In a mythological text, KAR 6, a huge snake-like dragon, also called a *bašmu*, threatens the gods, and Nergal is called upon to defeat him. The story of his confrontation with the *bašmu* is not preserved, but the text clearly suggests that the creature is powerful enough to threaten the gods (see Foster 2005:579–80). His close connection with the sea is clear from the description of his birth in the unpersonified ocean (*i-na A.AB.BA ib-ba-ni* ^{muš}*ba-[aš-mu]*, *KAR* 6 ii 21, as cited in Lewis 1996:31, n. 18). *CT* 13:33–34 offers a similar story, in which Tishpak must fight a gigantic snakelike dragon that also has characteristics of a lion (Lewis 1996:31). In the preserved portion of the text, the monster is regularly called a *labbu*, "lion," but in lines 5–6, which are unfortunately broken, he is called a snake (the Sumerian determinative *MUŠ*, "snake" is preserved before the break; *ba-aš-mu* is the most likely restoration for this lacuna; see Lewis 1996:31; Foster 2005:581–82). Here too the monster threatens the gods, who then send off Tishpak as their champion after offering him the kingship. In this story, the monster performs the role that Tiamat plays in Enuma Elish and that Yamm plays in CAT 1.2.

The combat with the monster leads to confirmation of the heroic god's kingship.[54] The *bṯn* may also appear in an Ebla incantation, *ARET* V, 4, as *ba-ša-nu* (Fronzaroli 1997).

The term does not appear as such in the Hebrew Bible, but many commentators (listed in Day 1985:113–19) have proposed seeing at least an allusion to the *bṯn* behind the geographical reference to Bashan in MT Ps 68:23: "The Lord said: 'From Bashan I will return (*mibbāšān ʾāšîb*), I will return from the depths of sea (*ʾāšîb mimmĕṣulôt yām*).'" The lack of a definite article on *yām* suggests that it is to be understood as a proper name. If so, then the reference to *bāšān* might be a reference to the cosmic monster. One could suggest further that the second colon of the verse has been misdivided by the Massoretes and that the verb here is cognate with **šbm* from III 40 and 1.83.8. We could thus read *ʾešbōm mĕṣulôt yām*, "I will muzzle the depths of Yamm." From here one could also suggest that the *m* before Bashan is misplaced and originally belonged to the *ʾāšîb* of the first colon, allowing us to read, *bāšān ʾešbōm*, "Bashan (the snake) I will muzzle." This, of course, is highly speculative (cf. Day 1985:113–19), but given the apparent antiquity of Psalm 68 and its allusions, it is certainly possible that later tradents might not preserve such an allusion intact. At a minimum, it seems possible that an allusion or wordplay on the *bašan*-serpent is to be found here.[55]

5. The epithet in line 42, *šlyṭ d šbʿt rʾašm*, is an extended title that provides a striking element of description of the cosmic enemy as a seven-headed dragon. This type of monster is an old and well-known motif in ancient Near Eastern iconography. The Tel Asmar seal (ca. 2200) depicts a god battling a seven-headed dragon (*ANEP* #691; van Buren 1936:3, 1946:19–20; Gordon 1966a:4, pl. I; Rendsburg 1984; Lewis 1996:29; A. Green 1997:141, 155, fig. 14; see *UBC* 1.346–47). A shell plaque of unknown provenience (*ANEP* #671) portrays a god

[54] Note should be made that snakes and dragons play a much larger role in Mesopotamian mythology and art than we have discussed here. Wiggerman 1997 describes the use of snake imagery among chthonic/netherworld deities, where their primary home is in the earth, rather than the sea. There is also a netherworld god named Bašmu who appears to be an upstanding member of Ereškigal's court and fully anthropomorphized on the seals; see Wiggerman 1997:39). Many of the snake/dragon deities do not appear to be connected to the forces of chaos and destruction. Wiggerman points out the relationship between some snake deities and the administration of justice (p. 43). Dragons are also portrayed on a number of seals as their mode of transportation.

[55] We are grateful to J. J. M. Roberts for bringing this issue to our attention.

kneeling before a seven-headed fiery dragon (Green 1997:155, fig. 13). The body appears to have flames rising from its back (for some further examples, see van Buren 1946:19–20). Green (1997:141) has pointed out the interesting fact that Mesopotamian literature has very little to say about seven-headed monsters,[56] while they appear quite clearly in the preserved iconography.

On the other hand, the seven-headed monster is well-attested in West Semitic literature, including, besides our passage, CAT 1.5 I 3 and its broken parallel in 1.5 I 30–31, where the creature is identified with *ltn*; as well as in Israelite literature, Ps 74:13–14, which mentions the heads (no number) of Tannin and Leviathan. Early Christian and Jewish texts likewise attest to the long life of the motif of the seven-headed monster. Rev 12:3 and 13:1 (cf. 17:3, 20:2) describe a dragon and a beast, each with seven heads. BT. Qidd. 29b also knows the tradition of the seven-headed monster, in this case a seven-headed demon destroyed by the prayers of the righteous Rav Acha. Green (1997:141 n. 50) follows the tradition to "the seven- or nine-headed *hydra* of Greek mythology . . . and ultmately to dragon-slaying stories such as that of St. George."

The title *šlyṭ* given to the seven-headed monster can be understood in two ways. It has the primary meaning of "powerful," and can be understood as the substantive, "the Powerful One." In BH the word came to be used as a designation for a ruler. Pope rendered it aptly, if a bit archaically, as "Potentate," thus effectively evoking both meanings. If *šlyṭ* in our passage is to be understood as an epithet of Yamm (see below), then the meaning "Potentate" might be appropriate. If, however, *tnn/bṯn/šlyṭ* are names of a subordinate deity, then the emphasis of the name must have been on strength, rather than status, and thus "the Powerful One" would be more appropriate. Because of the uncertainty surrounding the relationship of the name to Yamm, we have chosen to translate with the less committed "Powerful One." Pope noted one final feature of interest about the word (1978a:30 n. 12): "In addition to lofty power, the Arabic cognate also relates to slanting direction, which may suggest serpentine, sidewinding locomotion."

Epithets such as these in lines 41–42 are not normally used independently of a proper name. Usually a character is named in the first

[56] See Lugale-e in Jacobsen 1987:243; Wiggermann 1992:153, 162; and van Buren 1936:3 for references to seven-headed dragons in some early Babylonian lists and in the omen literature.

line of a bi- or tricolon, then referred to in the next line or two with epithets.[57] It is unlikely that such epithets would be used to introduce a completely different character in a context such as we have here. We may also be fairly certain that the two epithets themselves describe a single entity. Similar examples of this type of usage abound in Ugaritic poetry. An example is just above in 1.3 III 29–31:

> In the midst of my mountain, Divine Saphon,
> In the holy mountain of my heritage,
> In the beautiful hill of my might.

An even better example is found in 1.5. I 1–3, where the same epithets appear in the second and third lines of a tricolon in which the monster Litan is named in the first line.

> *ktmḥṣ.ltn.bṯn.brḥ*
> *tkly.bṯn.ʿqltn*
> *šlyṭ.d.šbʿt.rʾašm*
>
> When you struck down Litan, the fleeing snake,
> Annihilated the twisting snake,
> The powerful one with seven heads

There can be little doubt that the second and third lines describe Litan, particularly since there is the clear connection between *baṯna bāriḥa*, "the fleeing snake," Litan's epithet in line 1, and *baṯna ʿaqalatāna*, "the twisting snake" (note that Leviathan is described as both *nāḥāš bāriaḥ* and *nāḥāš ʿăqallātôn* in Isa 27:1, just as we find here; cf. also Job 26:13). Looking back at 1.3 III, it seems most reasonable to argue that the two epithets must refer back to the character named in the previous line. In this case, that creature is Tunnan (line 40). It seems reasonable then to argue that the first five names/epithets in lines 38–42 refer to no more than two distinct beings.

Pardee, in his translation (Hallo and Younger 1997:252), recognized the relationship between Tunnan and the epithets in the two lines that follow, and thus he proposed joining line 40 to those lines as a tricolon. However, the appearance of the thrice-repeated *l* in lines 38–40

---

[57] For bicolonic examples, see 1.4 IV 23–24 and par.: "She comes to the mountain of El/and she enters the tent of the King, the Father of Years." 1.5 II 8–9: "Go, say to Divine Mot,/Recite to the Beloved of El, the Hero." 1.5 VI 9–10: Dead is Mightiest Baal,/Perished the Prince, Lord of the Earth." 1.6 IV 10–11: "Message of Bull El, your father,/Word of the Beneficent One, your begetter."

argues for an intimate relationship between line 40 and the preceding two cola as well.

The appearance of the word *tnn* in the third line of the tricolon has generated a considerable amount of discussion about the relationship between Tunnan and Yamm/Nahar of the first two lines. Could the dragon with seven heads described in lines 40–42 be Baal's primary enemy Yamm/Nahar, so that all five of the lines, 38–42, actually refer to a single opponent (as proposed by e.g., Løkkegaard 1953: 224)? While a definitive answer cannot not be given, there are a number of reasons to suggest that Tunnan should be identified with Yamm/Nahar.

Significant evidence for this identification is found in KTU 1.83, which presents another context in which Yamm/Nahar is found in close relationship with *tnn*. This small tablet originally contained some 25–27 lines, but now only fourteen survive. In these lines we find a description of a conflict between Yamm/Nahar/Tunnan and an unnamed opponent, who is certainly a deity, and perhaps Anat herself (Pitard 1998). When arranged in poetic lines, the text preserves three clear bicola (lines 5–12), preceded by the second line of a bicolon (lines 3–4) and followed by the first of another (lines 13–14). The text reads as follows (for text and photographs, see Pitard 1998):

3–4	*b'arṣ ṁḫnm.trp ym*
5–7	*lšnm.tlḫk.šmm.*
	tṯrp ym.dnbtm.
8–10	*tn!n.lšbm tšt.*
	irks [10]*lmrym.lbnṅ*
11–12	*pl.tbtn.yymm*
	hmlt.ḫt.ynhṙ
13–14	*ltph.mk tḥmṙ*

Translation of the text is difficult in that it is not clear whether the verbs in lines 5–10 are 3nd fs, 2nd ms, or 3rd plurals (those in lines 4–7 could also be interpreted as 3rd c duals; cf. Mazzini 2003:391–94). It is also unclear whether they all refer to a single subject, or whether those in lines 5–6 refer to one being, while those in line 9 refer to a different person (see Mazzini's translation, 2003:392). A case can be made for all these renderings (cf. Pitard 1998:273–74).[58] This problem

[58] Lines 3–6 are extremely difficult because of the broken context. The number of different translations is about equal to the number of scholars who have studied the text. There is even some uncertainty about whether the text is actually poetic, or whether it simply is using elegant prose (Dijkstra 1999a:152). Nor is the division of

does not play a significant role in the issue at hand, however. Below is the passage translated with the verbs as 3rd fem. sg.

3	[ ]…on the earth.
4	With *mḫnm*, (do something to) Yamm!
5–7	With (her) tongues she licks the heavens.
	With (her) twin tails she……s Yamm.
8–10	She sets a muzzle on Tunnan.
	She binds him on the heights of Lebanon.
11–12	"Toward the desert (*or*: Dried up,) shall you be scattered, O Yamm!
	To the multitude of ḫt, O Nahar!
13	You shall not see (*or*: Indeed shall you see); lo! You shall foam up!" (*or*: "you shall be parched!)"

The two bicola that precede the reference to Tunnan in line 8 both refer to a conflict with Yamm.[59] Unfortunately, the verb used with Yamm as its object is otherwise unknown; thus, its meaning is unclear. But the context indicates that the opponent of Yamm is defeating him. This is followed directly in lines 8–10 by an account of the opponent binding Tunnan on the heights of Lebanon, which in turn is followed by a direct address (presumably by the opponent) to Yamm/Nahar in lines 11ff. In this context it seems unlikely that lines 8–10 are describing a separate conflict with a dragon as a parallel scene to the battle with Yamm (although theoretically there could be a single conflict involving more than one cosmic enemy—one would have to presuppose extremely elliptical jumps in the storytelling here). Since the lines preceding 8–10 apparently deal with the battle against Yamm, and those following are directly addressed to the defeated and captured Yamm, the context here strongly suggests that all of this is describing a single scene with a single antagonist, and that Yamm/Nahar and Tunnan are parallel names for that single character.

---

the lines, particularly lines 3–4, clear, if we assume a poetic structure (see, for example, the proposals of Loewenstamm 1980:357–58; Parker 1997:192).

[59] Several scholars understand *ym* in lines 4 and 7 as references to the non-personified sea (e.g., del Olmo Lete 1999:131; Mazzini 2003:392). They have often assumed that the description in lines 4–7 must be of the dragon rather than its opponent. This is certainly possible. However, one should note that such a large circumstantial description of the enemy in such a small text seems odd. In addition the shift of the verbs from 3rd dual to 3rd fs with no clear indication of the shift in subject seems awkward. It still seems better to argue that all these lines have the same subject, and that *ym* in lines 4 and 7 is a proper name, just as it is in line 11.

Turning back to 1.3 III 38b–42, one may note in these lines a few features that suggest the identity of *tnn* and Yamm/Nahar here as well. First, the appearance of Tunnan in the third line of the tricolon, parallel to Yamm and Nahar, is suggestive of their identity, particularly in light of the close relationship between the three names in 1.83 just discussed. Secondly, as mentioned above, five of the opponents listed by Anat here are explicitly linked with El by epithets (i.e. Yamm in lines 38b–39 and the four creatures that follow the section we are concerned with, in lines 43–46). Since Nahar in line 39 is clearly equivalent to Yamm, then it is only Tunnan (with his epithets, *bṯn* and *šlyṭ*, in lines 41–42), who does not have an epithet relating him to El. This situation would seem surprising, and it seems more plausible suggest that Tunnan is in fact to be identified with Yamm, so that *mdd ʾil* in lines 38b–40a refers to him as well. If all five of the names and epithets belong to a single divine being, then line 40, the third line of the tricolon, with its mention of *tnn*, becomes a pivot, connected to the preceding lines and to the following lines, joining them together in one large, elegant description of Baal's powerful enemy.

If we are to identify the five names in lines 38–42 as a single character, then we must also address the fact that Yamm is not portrayed as a multi-headed sea monster in 1.2. In the description of Baal's battle with Yamm (1.2 IV) the latter appears to be portrayed in fully anthropomorphic style. He has shoulders (*ktp*) and hands (*ydm*) (1.2 IV 16–17), a single head and a pair of eyes (1.2 IV 22–23).[60] However, this does not preclude his appearing in literary texts in other forms. In the first instance, it is important to remember that even though he is portrayed anthropomorphically in 1.2 IV, he is also the sea and the rivers, the waters upon the earth, and therefore not humanlike at all. We see a similar multiformism in the presentation of Tiamat in the Enuma Elish. At certain points in the narrative she is specifically the water of the Ocean (cf. I:4–5), but elsewhere she is clearly being portrayed anthropomorphically (cf. I:29–34, II:92, 144 [where she is called *si-in-iš-tu*, "woman"]; see Foster 2005:440, 449, 451).[61] Then she

[60] Matthiae (1992) has identified an anthropomorphic figure on a number of second millennium north Syrian cylinder seals as a depiction of Yamm. This seems an uncertain identification. Perhaps the most troubling problem is that the deity is regularly shown with wings, a characteristic that is hard to connect with any of the known aspects of Yamm.

[61] The same multiformism can be seen with Apsu, who is the fresh water at the opening of the epic, but who is described in I:53–54 in clearly humanlike terms. Eventually, in I:69, he is tied up and killed by Ea, a difficult feat if he is water.

seems to show a different shape again in the climactic battle, where she opens her mouth, apparently to swallow Marduk (IV:97–104). Here she appears to be a dragon with a ferocious maw. Upon her death, Marduk splits her in two, "like a fish for drying" (IV:137) and later on coils up her tail to make "The Great Bond" (V:59). Within this same section that deals with Tiamat's dismemberment there are also references to her strictly as ocean (e.g., IV:140: "he ordered them not to let her waters escape"). Thus, within the Enuma Elish we see three different forms of Tiamat, sometimes used within the same scene. Wiggerman (1997:37–39) shows examples of iconographic multiforms on cylinder seals. On several seals that he discusses (51, fig. 2c; 52, fig. 3c; 53, fig. 4a), an anthropomorphized god who is related to snakes is portrayed as a human with snake-heads emerging from his shoulders or feet. In view of these multiform presentations of deities in the surrounding cultures (particularly that of Tiamat), there is no reason to preclude the notion that Yamm/Nahar might be also portrayed as a dragon/sea monster in a poetic description such as we find in 1.3 III 38–46.[62]

While the Mesopotamian evidence is helpful in the discussion of this issue, biblical passages that use both *yamm* and *tannîn* together provide little firm evidence about Israelite views concerning the relationship between the two names. Ps 74:13 places Tannin (the MT reads it as a plural, though it probably was originally the singular with an enclitic *-m*) in parallel with Yamm: "It was you (Yahweh) who destroyed Yamm with your might./You shattered the heads of Tannin upon the waters." Although one could easily identify the two here, the context is not precise enough for certainty. In Job 7:12, Job asks God, *hă-yām ʾānî ʾim tannîn*, "Am I Yamm or Tannin that you set a guard over me?" One can interpret this passage as indicating either that the two are the same or are two distinct characters. Isa 51:9–10 is a fascinating passage, where

[62] Wiggerman has recently proposed identifying a Mesopotamian god directly with *tnn* (1997:35 n.15). He notes the appearance in the *An-Anum* godlist (V 234) of a deity named ^{d}Dan-ni-na, which he identifies with Ugaritic and Hebrew *tnn*. This identification, however, is problematic. The deity appears in a section of the *An-Anum* list devoted to netherworld gods, where Dannina appears as one of the deities in Ereškigal's court. Ugaritic and Israelite *tnn* has no obvious connections to the netherworld. The Akkadian word, *danninu*, is in fact a name for the netherworld ("the Strong Place", or perhaps, "the Stronghold"), and the deity is certainly a personification of that name. There is no evidence in *An-Anum* for identifying him as a snake or dragon-like god, much less for connecting him to water, as *tnn/tannîn* regularly are. Nor is there a compelling reason to relate the Ugaritic/Hebrew root *tnn* to Akkadian *danānu*, "to be strong," although the meaning would be an attractive one.

reference is made to Yahweh smiting Rahab//Tannin, followed by a bicolon that refers to the drying up of Yamm//Tehom rabbah. The context allows for the possibility that all four of the terms refer to the same being, but this is uncertain. It is striking here that Rahab and Tannin are mentioned first, rather than Yamm and Tehom. In the other passages Yamm is always in the primary position, and the placement of Rahab/Tannin in the first line of the bicolon suggests that they are at the same level as Yamm/Tehom, not subordinate. But here the wider context must be considered. The bicolon describing the drying up of Yamm and Tehom is already being modified from the classic story of the cosmic battle into a reference to the drying up of the Sea of Reeds in the Exodus tradition. This may explain the surprising appearance of Yamm in the second bicolon: the poet may have used the reference to the sea in this position in order to focus the imagery toward the historicized climax of the passage. So again, no certainty about the identity of Yamm and Tannin can be reached from this passage. The only other text that mentions the two together, Isa 27:1, may be under the influence of the worldview represented by Gen 1:21, where the *tannînîm* are part of Yahweh's created world. Here Leviathan and the *tannîn* (with a definite article) are to be killed in the future, when Yahweh brings on a new age.[63]

A brief look at iconographic evidence is also in order. Across the Near East the image of the god battling snakes or dragons was quite popular. Examples can be found in Cornelius (1994:212–24, esp. 223 and pl. 50 BM 74, 75, 77, 79) and Wiggerman (1997:48–50, figs. 1e–h).[64] Undoubtedly many of the West Semitic examples are best interpreted as depicting Baal fighting one of the cosmic enemies we have been discussing. But the images themselves do not identify the snake that he battles, and they therefore offer no further help in determining whether Yamm was portrayed as a snake or not.

Thus the identification of *tnn* in III 40 as another name for Yamm/Nahar remains plausible, but uncertain. However, the evidence from 1.83, the usage in lines 38–46 of epithets relating the other enemy gods to El, the common appearance of multiforms of a deity in mythological texts, and especially on that account, the likely appearance of Tiamat

[63] For the classic study of much of this material from before the discovery of the Ugaritic tablets, see Gunkel 1895:3–88.

[64] This theme can also be found in Aegean iconography; see Buchholz 2000.

as both an anthropomorphic deity and a dragon, all argue in favor of identifying *tnn/bṯn/šlyṭ*, in this passage (and *tnn* in 1.83) with the god of the sea. At the same time, the existence of several texts that depict snake monsters who are independent of the sea-god (Isa 27:1; Dan 7; the Mesopotamian texts discussed above) allows for the possibility that Tunnan was a distinct being from Yamm.

One final potential identification should be noted. Because the bicolon of lines 41–42 is largely repeated in reference to *ltn* in 1.5 I 2–3, the question arises whether Tunnan and Litan are also the same creature. This is certainly possible. It is also arguable that BH Tannin and Leviathan are the same being in Ps 74:13–14. If they are to be related, then all six terms, *ym/nhr/tnn/bṯn/šlyṭ/ltn* could be seen as names and titles of a single deity. But here too the evidence from Ugarit remains too ambiguous to firmly decide the issue. It is also possible that these two lines are simply formulaic and are used by the poet as a standard way to describe a dragon in this type of context.

We now turn to other issues in these lines. The verb *ʾištbm* in line 40 remains ambiguous. The root, **šbm*, has been related to Arabic *sabama* (e.g., Løkkegaard 1953:225 n. 41), in the sense of "gag" or "muzzle", but Loewenstamm (1959; 1975) and Barr (1973) have been strongly critical of this etymology. Loewenstamm noted what he saw as a contextual problem: most of the other verbs in this passage involve words for destruction. Barr argued that the Arabic *sabama* does not have a meaning related to the muzzling of a dangerous animal and instead related it to the Arabic word which commonly means, "to be cold". He also considered a number of other etymological possibilities, but none of these were particularly persuasive. C. Cohen (cited in Sivan 1997:40) interpreted *šbm* in 1.83.8 to mean "captivity," relating it to the Hebrew cognate, *šĕbî*, and suggested a meaning "to capture" for the verbal form in 1.3 III 40. While this suggestion is suitable for the semantics and context, an enclitic *-m* attached to both the verbal and nominal forms would be surprising; this consonant seems to be part of the root. In defense of the standard interpretation, Hutton (2006:82) has noted that the Arabic noun from *sbm* is used to designate the threads that are attached to a woman's face veil, which are tied around the back to keep it secure. He argues that this meaning can be easily derived from a kind of face restraint, such as a bit (or even a muzzle, although he prefers the former). He renders the verb here, "I put a bit in the mouth of Tannin," a plausible proposal.

Despite the etymological difficulties noted above, other Mesopotamian and Ugaritic passages describe divine conflict in a manner that may be taken to support the idea of binding. The sufferer in *Ludlul bel nemeqi* appears to describe Marduk's intervention on his behalf as the god's muzzling a rhetorical lion: "Marduk put a muzzle (*nap-sa-ma*) on the mouth of the lion who was eating me" (Lambert 1960:56, line q; Loewenstamm 1959, 1975; Barr 1973:25–26; Greenstein 1982). In 1.83.8–10, *trks*, the word parallel to *lšbm tšt* in the second line of the bicolon, is clearly a word for binding. Loewenstamm's objection about the incompatibility of this meaning in the context of the other verbs in the passage is not valid. The verb need not be in the very same semantic field as the other verbs if this verb expresses the treatment accorded Tunnanu in preparation for his subsequent destruction, expressed in the second verb of the same line, *ʾištm[d]h*.

Hutton (2006:80–81) has proposed a plausible new interpretation of *ʾištm[d]h* that links it semantically with *ʾištbm*. He derives *ʾištm[d]h* not from the root *šmd*, "to destroy," but rather from *ṣmd*, "to harness," seeing the *š* in the word as the same kind of dissimilation from *ṣ* when followed by a *t* that occurs in the form *mḫšt* > *mḫṣ* (in lines 38, 41, 43 and 45; see above). He thus links the meanings of the two verbs in the line: "I put a bit in the mouth of Tannin and harnessed him." Both interpretations of *ʾištm[d]h* seem possible at this point.

6. ʾARŠ, "Desire" or "Demander" (so Pardee 1997a:252) is one of the more obscure figures in this list (for the root, see 1.17 VI 26, 27; also CAT 5.11.12; cf. 2.23.16, 18). The name appears only one other time in the Ugaritic texts, in 1.6 VI 51 in an unfortunately ambiguous context. The line there reads, *ḇym ʾarš wtnn*, which could mean, "In the day of Arš and Tunnan," or "In the sea are ʾArš and Tunnan." If the latter is correct, then this would suggest that ʾArš is another sea creature, and that both ʾArš and Tunnan are not equated with Yamm; rather, they would be cosmic creatures in the Sea. Daniel 7:1–7 provides a potential parallel in the case, with a series of monsters emerging from the sea. However, ʾArš is paralleled in line 44 with a land creature, *ʿtk*, the calf of El. The following bicolon mentions two more beings that are also land-based. This suggests that with line 43 we may have moved away from the water monsters to land creatures. In view of this observation, it might be preferable then to understand *ḇym* in 1.6 VI 51 as "on the day of." However, the obscurity of the context of this line and the fact

that land monsters emerge from the sea in Daniel 7 make it impossible to make a firm decision.

Moving beyond the Ugaritic material, little help for defining this deity can be found. The biblical corpus provides no parallel material. Dahood (1965:52) suggested that a god named *pothos*, "desire," a son of Kronos and Astarte according to Philo of Byblos' *Phoenician History* (*PE* 1.10.1) and Damascius' *De Principiis* might be a reference to ʾArš (see Attridge and Oden 1981:36–37, 76 n. 26; 102–3; Baumgarten 1981:96–97, 110–111). Gray (1979b:316 n. 5) argued that the name was an "*ʾaphʿel*-type adjective from *rʾaš*," and proposed rendering it as "the many-headed." Unfortunately this explanation does not account readily for the loss of the middle root-letter (*ʾaleph*), and so the proposal seems unlikely.

7. The deity named *ʿtk* stands in parallelism with ʾArš, but its distinctive epithet, "calf of El" (*ʿgl ʾil*), might suggest a separate identity. The name of this figure has been understood in two ways. It has been translated "the Attacker" or the like (see *CML*[2] 50 n. 9; Gray 1979b:316 n. 6), based on Arabic *ʿataka*, "rush to attack" (cf. directional use in an ESA prepositional phrase, *ʿtk/ʿd ʿtk*, "(in) the direction of," cited in Biella 388). Another rendering, "Binder" (Pardee 1997a:252) is more defensible, based on **ʿtk* attested elsewhere in Ugaritic, apparently in the meaning "to attach" (in 1.3 II 11//1.7.2//1.13.7; cf. *DUL* 191).[65]

The epithet of *ʿtk*, namely *ʿgl ʾil*, provides some information about this being. There is little doubt about the meaning of *ʿgl*, "calf," known from the cognate in Hebrew, *ʿēgel*.[66] While in English the term, "calf," perhaps gives a sense of youth and weakness, it is clear that the word may evoke a connotation of divine power in West Semitic religion. In the context of III 38–46, *ʿtk* the calf is a powerful enemy of Baal and Anat. In the Hebrew Bible *ʿēgel* is used of the "molten calf" made by Aaron in the wilderness (Ex 32:4, 8) and the golden images of Jeroboam for the temples at Bethel and Dan (1 Kgs 12:28, 32). Gray (1979b:316 n. 6) compared *ʿtk* to the Bull of Heaven in the Gilgamesh Epic VI, though the term used there is GU_4 = *alpum*, "ox." At the same time, the use of a title that is a diminutive, suggests both the subordination

[65] The semantics are unclear, however. It is to be noted that the BH word *ʿatak* is attested as a place name in the Negev.

[66] The Akkadian cognate, *agalu*, is more ambiguous and likely refers to a different animal, perhaps a type of donkey. See *CAD A/1*:141 for a discussion of the problem.

of the person to his superior (here, El) and perhaps even a familial relationship ("calf" of Bull El the Father?) A number of Akkadian names show the use of animal names as indicators of subordinate status to a god. For example, a number of personal names use the noun *būru*, the Akkadian equivalent of *ʿgl*, with a DN: Bur-^{d}Adad, "Calf of Adad," Bur-^{d}Ištar, "Calf of Ištar," Bur-^{d}Damu, "Calf of Damu," etc. (see CAD B: 342, *būru* A2b). A few names using the Akkadian cognate *agalu* also are attested: Agal-^{d}Marduk, "Donkey (?) of Marduk" (Koenen 1994:399 n. 5) and Agal-Shimegi, "Donkey (?) of Shimegi" (attested at Emar, Fleming 2000b:31).

The epithet of *ʿtk* here might appear in CAT 1.108.9, 11: *ʾaklt ʿgl ʾi.l… ʾil ġnt ʿgl ʾil*. Both lines are problematic. Line 9 reads *ʿgl.tl*, but the /*t*/ has been circled, perhaps to indicate it is a mistake. Pardee (1988a:106–7) argues persuasively for emending the text to *ʾil*. The second occurrence of *ʿgl il* in line 11 is certain, but the meaning of the phrase within the context of the line is very unclear.[67] L'Heureux (1979:180) suggested that this passage describes a divine banquet where deities dine on the flesh of the cosmic enemy. L'Heureux observes: "the present text may be the earliest existing prototype of the biblical tradition of the eschatological banquet at which the mythological dragon is served as food." Leviathan appears in this very capacity in 2 Esdras (4 Ezra) 6:52 and 2 Baruch 29:3–8. However, the ambiguity of the passage precludes any certainty for this proposal.

The second noun in *ʿgl ʾil* has most commonly been rendered as the name of the god El (so *ANET* 137; *GA* 93; *CML*^{2} 50; Coogan 1978:93; West 1992:383; Pardee 1997a:252). This seems most likely in the context. Others, however, have translated it as a generic noun indicating divinity, i.e., "the divine calf" (*TO* 1.168; *MLC* 185) or have taken it as a superlative use of *ʾil*, indicating the greatness of the creature, i.e., "the mighty calf" (*Thespis* 240). None of these can be entirely ruled out.[68]

8. ʾIšatu, "Fire" as a deity makes its only appearance in the Ugaritic texts here. A god ^{d}*ì-ša-tù* is attested also at Ebla (see the Commentary at 1.2 I 14–15, in *UBC* 1.267). In our text she is given the epithet, *klbt ʾilm*, which has been rendered in several possible ways: "the (female)

[67] Context does not allow a determination as to whether the word *ġnt* is a verb or a divine name. Thus the meaning of *ʾil* is also ambiguous here. It could be the god-name El, or it could be the common noun "god." See Pardee 1988a:109–10.

[68] The same ambiguity also affects the translation of the phrase in 1.108.

Dog (Bitch) of El" (e.g., Pardee 1997a:252; Wyatt 1998:80), or "of the gods" (*TO* 1.168; *CML*^{2} 50), or "the Divine Bitch" (*ANET* 137; Coogan 1978:93; West 1992:383, *MLC* 185), or finally, "the Mighty Bitch" (*Thespis* 240). As discussed above, the first rendering seems most likely. For this epithet there is additional support for the rendering "Dog of El." Akkadian sources mention a number of deities who have divine dogs who attack their enemies, including Marduk (who has four such dogs), Ea, Damkina, Gula, Ninkarrak, "the Lady of Byblos," and others (see *CAD K*:71, sub *kalbu* 1f). The "Dog of El" fits well into this context. In the same way that *ʿgl ʾil* suggested both strength and subordination to another deity, so the title *klbt ʾil* does the same. Dogs can be ferocious enemies, but they, like calves, have an inferior status in the social order.[69]

One may ask why "calf" and "dog" and not other animals are used to express this sort of status and relationship. The usage seems to derive from their domestication; under normal conditions, they are safe and pliable servants. To be sure, dogs could be threatening. *ARM III* 18:15–16 remarks on the stereotype of the biting "mad" dog: "Like a mad dog I do not know where he will bite (next)" (Marzal 1976:52). One Ur III incantation, refers to "a furiously biting dog" (Velduis 1993; for another case, see Sigrist 1987). Exod 11:7 mentions dogs as a potential problem, and Ps 22:17 draws on the image of menacing dogs in referring metaphorically to enemies as dogs. See a similar metaphor cited in *CAD K*:69b: *ana qāte* UR.GI7.MEŠ *muššurāni*, "we are delivered to the dogs" (*ABL* 1431 rev. 4, line 4, NB). Firmage (1992:1143) comments: "Feral pariah dogs roamed in packs on the outskirts of town (Ps 59:6, 14; cf. Rev 22:15), where refuse was plentiful." Dogs, however, also helped humans care for their flocks (Job 30:1) and accompanied

[69] The el-Amarna correspondence regularly uses *kalbu*, "dog," to express subservient status, specifically vassalage to Pharaoh (EA 67:16–18; 76:12–16; 84:6–10, 16–18; 90:19–26; 91:3–5; 108:25–28; 134:11–13; 201:9–16; 320:16–25; cf. 109:44–49; 130:31–38; 138:95–97; see Galán 1993:174). The juxtaposition of this title with "servant" (*ardu*) is especially indicative of this understanding of "dog": "What is Abdi-Ashirta, servant and dog, that he takes the land of the king for himself?" (EA 71:16–19; cf. 60:1–9; 88:9–11). The question implicitly identifies Abdi-Ashirta as a dog, which is supposed to be obedient to its owner. *ARM* I 27:28 likewise refers to captive princes as "dogs" (Marzal 1976:53; see also the self-disparaging expression of "dead dog" discussed in Paul 1993:242–44). Subservience is the point of the term in a Lachish letter as well (KAI 192:3–4; cf. 195:3–4, 196:3) and in 2 Kgs 8:13. To be sure, "dog" was used as a term of derision for a disobedient servant as well. The point of both usages is servitude.

them on journeys (see Tobit 6:1).[70] Humans were helped also by calves as beasts of burden (1 Sam 28:24). Iconographic representations depict dogs in human company (for examples, see van Buren 1936:11–15; Eichmann 1997).

9. The last named enemy is *dbb*, a *hapax legomenon* in Ugaritic. One would initially expect this name to be cognate to Hebrew *zĕbûb* and Arabic *dubab*. However, these words mean "fly (the insect)," an unlikely name for a deity. A somewhat problematic, but possible alternative is to relate it to BH *šābîb*, and Aramaic *šbibā*, "flame" (Greenfield 1994:89; see also *DUL* 285). Job 18:5 and Ben Sira 8:10 refer to *šĕbîb ʾiššô*, "the flame of his [Yahweh's] fire." The collocation of BH *šĕbîb* with *ʾiššô* in these two passages recalls the parallelism here of Ugaritic *dbb* and *ʾišt*, suggesting that BH *šĕbîb* may be cognate with Ugaritic *dbb* despite the irregular correspondence of their initial consonants (Greenfield 1994:89). The name, "Flame" would then be parallel to the name "Fire" in the previous line.

Fire and flame are paired in connection with the destructive activities of divinities. They appear together in the epic of Tikulti-Ninurta I (ca. 1244–1208). In this Assyrian king's battle against the Kassites, the gods fight: "Assur led in the vanguard; he kindled a biting fire (*išâtu*) against the foes. Enlil danced (?) in the midst of the enemy; he fanned the burning flame (*nablu*)" (5:25–26; *CAD N*:26; Mann 1977:40–41; for other Mesopotamian examples, see Borger 1956:97, rev. 14; Weinfeld 1983:132 n. 53a). Similarly, as noted above, Job 18:5 and Ben Sira 8:10 refer to *šĕbîb ʾiššô*, "the flame of his [Yahweh's] fire." In Pss 50:3 and 97:3 the word *ʾēš* appears in close proximity to the word *sābîb-*, "around." In view of the parallelisms discussed here, one might tentatively suggest that **sābîb-* in these two psalms might mask an older reference to "flame." It may be that a word **šābîb*, "flame" simply became obsolete and was forgotten, so that the occurrences in the biblical text came to be merged in later tradition with the much more common **sābîb-*. P. D. Miller (1965:257) compares Fire and Flame in this list to *pur* and *phlox* ("fire" and "flame") in Philo of Byblos (*PE* 1.10.9; Attridge and Oden 1981:40–41, 81 n. 53). One other fascinating, but enigmatic pairing of fire and flame occurs in the Akkadian wisdom tale, "The Fable of the

[70] For domesticated dogs, see CAT 1.16 I 2, 15. For examples of domesticated dogs in shepherding and hunting, see *CAD K*:71a.

Fox," in which the wolf says of the dog, "The mother who bore you is Fire (*girra*)... Your brothers are Flames" (Lambert 1960:196, lines 19–20; Watson 1978:397). Here we have fire and flame connected to the dog, as in our text, although, as Watson notes, the connection is quite vague to us. Finally, it is to be noted that of all the cosmic foes, only *ḏbb* is called El's daughter, a term denoting both proximate affiliation and subordination.

The enemies that Anat describes here appear to be divided into two groupings, water-based and land-based figures (for discussions about this, see above, and *BOS* 2.116; see also Pardee 1997a:252 n. 92 and 93). The former, with five names and epithets, appear to represent either one or two beings (Yamm/Nahar, Tunnan/Snake/Powerful One). The latter set of four may be interpreted as separate deities, perhaps all closely related in an otherwise unknown story of conflict (they presumably have little or nothing to do with a story of pre-creation cosmic conflict, which is usually related to the cosmic waters). But it is also possible to view each pair, ʾAršu/ʿAtaku and ʾIšatu/Ḏabibu, as a single deity, since the epithets of each pair may easily be understood as complementary, each consisting of a relational and an animal designation (*mêdada ili-ma/ʿigla ili*, "beloved/calf of El" for the god ʾAršu/ʿAtaku, and *kalbata ili-ma/bitta ili*, "dog/daughter of El" for the goddess ʾIšătu/Ḏabibu). In addition, the names in each bicolon, "Desire/Binder" and "Fire/Flame" can be seen as reasonable parallel names for a single deity. But because nothing else is known about these gods, no firm conclusion can be reached. None of these names appears in any of the offering or deity lists from Ugarit (cf. Pardee 2000:962–96).

The two sets of enemies seem distinguished not only by realm, but to some degree by their identification with various animals. In the first group we find snake-dragon(s) (on this type in Mesopotamia, see Wiggermann 1997). Snakes are wild animals, clearly viewed as enemies to humanity (cf. the snake-incantations). The four land figures are manifest, however, as domesticated species such as calf and dog, but in their specific relation to El, not in any formal nature as cosmic enemies. In this context, one might see the enemies as divided according to their association with two different gods: the first group of names is associated (or completely identified) with Yamm, while the second is attached to El. But because Yamm in 1.1–1.2 is the protégé of El (*mdd ʾil* in lines 38–39), everything leads back to the latter god's lack of support for Baal.

The last tricolon of 1.3 III (in lines 45–47a) ends with a reference to the spoils of silver and gold, presumably the result of Anat's victory over these enemies. This line brings in a political element to the battle(s) that accords well with the idea that Anat's conflict here is not so much cosmogonic; it is primarily related to the theme of Baal's achievement of authority among the gods. In a political conflict, the seizure of booty is a prime indicator of the extent of the victory. The Mesopotamian monarchs never tire of recording the booty taken from their defeated enemies. The same can be seen in the Hebrew Bible. For example, 2 Sam 12:30 mentions gold as part of the spoils brought to David after Israel's victory over the Ammonites. Zech 14:12–14 refers to the gold and silver of the nations that will be gathered as spoils in the end-times. The political importance of seizing this booty is also clear in CAT 1.2 I 19//35, in which Yamm's message to the divine council is, "Give up Baal that I may humble him,//The Son of Dagan, that I may possess his gold" (cf. *TO* 1.130 n. r, 168 n. o; Pardee 1984:255; for discussion see *UBC* 1.293). Gold and silver were the two most precious metals in the Near East, gold naturally being the more valuable (Stieglitz 1979; Heltzer 1977; Nasgowitz 1975), but the reference to silver and gold here has to do with less acquisition of wealth as such, and more with the symbolism of victory. It emphasizes Anat's complete overthrow of these enemies of Baal and also confirms her fierce loyalty to Baal and her clear readiness to come to his aid.[71] Anat's speech continues in the following column, 1.3 IV.

[71] The importance of this line in concluding the discussion of the conflict in lines 38–46 assures its placement as part of a tricolon with the two previous cola, rather than with the following section of the speech (as found in Pardee 1997b:252).

Textual Notes

Line 1. ḳ̊.ʿxx The end of the line has been damaged. There appears to be the left line of a fairly large word divider after the /k/, although this may simply be damage. Following the /ʿ/ is a damaged letter with at

least one long vertical still preserved. We see no certain traces of other wedges. Thus it could be /g/, /ṣ/ or, least likely, /l/, since there does not appear to be enough room for three wedges here. There appear to be highly damaged remains of short horizontals at the end of the line and along the edge, which make the proposed /r/ possible, though not certain. The translation assumes the reading *kʿṣr* (so also KTU and Pardee with qualifications).

Line 2. ʾudnh The first three letters each have more wedges than usual. The /ʾu/ has four verticals, the /d/ has four verticals as well, and the /n/ has four horizontal wedges.

Line 3. lnḫt The /ḫ/ has four wedges.

Line 4. mnm.ʾib The /n/ has four wedges. The /ʾi/ has four horizontal wedges.

/lbʿl./ There is a clear word divider after this word, contra CAT.

Line 5. [ ]ʿn There are no traces of the first letter of the line, contra CAT.

/yʿnyn/ The two/n/'s both have four wedges.

Line 6. l̊bʿl Only the right wedge of the first /l/ is preserved, along with the lower tip of the middle wedge and the possible lower right edge of the left wedge. Context assures the reading. The second /l/ has four verticals.

Line 9. bʿp̊r̊m The /p/ is certain. The letter certainly consists only of the two horizontal wedges. The /r/ is represented only by the right tip of the right horizontal, but the parallels to this passage assure the reading.

Line 10. lk̊b̊d.ʾår̊ṣ The letters /kbd.ʾar/ have all been damaged, but there are traces of each that strongly support the reading. /k/ is certain, with both left wedges and the upper left part of the right wedge well preserved. The lower line of the /b/ is visible, as is the general line of the top of the letter. The /d/ is more fragmentary, with only the three vertical wedges preserved. The lower line of the /ʾa/ is visible, and parts of the right three wedges of the /r/ survive.

Line 11. [ ]šk In the damage at the beginning of the line, there is an indentation that is probably what CAT read as a fragment of /ḫ/ here. But it is part of the damage, not an element of a letter. While it appears to be part of the upper line of the right wedge of the /ḫ/, it is actually far too much to the left to be that part of the letter.

[ ]ṣ̌k We see no hint of an /ʿ/ in the second break, contra CAT. The following /ṣ/, while certain from context, is only barely preserved along the right side of its right wedge.

Line 12. [ ]my The damage in the break is generally in the shape of an /ʿ/, but no actual traces of the letter itself appear to be preserved.

Line 13.]ẇ̓aṙgmk The upper wedges of the /w/ are visible. While badly damaged, the r is certain, with parts of all five wedges preserved. The rest of the line is clear.

Line 15.]ʿ.nš[Only the right slope and the deep interior of the /ʿ/ have been preserved.

Line 16. [ ]ṙṣ̌.[For the first /rṣ/, the /r/ is badly damaged, but three short horizontals on the left side are preserved and assure the reading. The probable /ṣ/ is also badly damaged. The left vertical is only preserved along its right line. Most of the right vertical survives, with only its head missing. Most of the word divider is visible. There do not appear to be any certain traces of the succeeding /t/ proposed by CAT.

Line 17. ṯẖ̊mṫ.̊[The lower line of the /t/ is preserved, and only the lower line of the bottom wedge of the /h/ survives. Only a portion of the lower line of the second /t/ is discernable. All of these letters are assured by parallels. The lower left portion of a wedge follows the damaged word divider. Its base seems almost completely horizontal, suggesting an /ʿ/ like those in line 11 above. Context argues for the reading as well.

Line 18. dl.t[The /d/ has four vertical wedges. The left side of the word divider is preserved here. To its right one can the see the lower part of the left side of the /t/.

]mṁ[The first /m/ is very clear and largely preserved and was noted by CAT. Only the tops of the two wedges of the second /m/ are visible.

Line 19. ʾib̰[The left horizontal and the lower half of the right horizontal of the /b/ are preserved, as are some of the indentations of the tops of the two verticals. The reading is certain also by context.

]rỷ.[ ]l̰ The /y/ is certain by context. Only two vertical wedges of the right half of the letter are visible after the break. This is followed by a short, but deep, vertical wedge, which sits very low on the line. CTA and CAT read this wedge as a word divider. But it is extremely low for a word divider. It is also possible that it is the lower vertical of the /ʾi/, although no traces of the horizontals are visible above or to the right of the wedge. There are a few examples of /ʾi/ in which the vertical is substantially separated from the horizontals (see Ellison 2002:II:189, fig. 764), but they are rare. The /l/ is certain by context, although only two large verticals are preserved.

s̰p̰[The /p/ is only preserved along its left side. No traces survive anymore of the following /n/, which must have been visible at one time. Virolleaud's drawing (*CTA* II, fig. 10, line 63) suggests that it and the full lines of the /p/ were visible. There appears to have been further deterioration of this break since then.

Line 20. bqd̰[The upper left line of a vertical wedge follows the /q/. This is compatible with /d/, which is assured by context.

b̰ǵ[Following the break after /bqd/, the lower lines of the two horizontal wedges of the /b/ are preserved, as is much of the lower diagonal of the following /ǵ/, along with what appears to be the very bottom of the indentation of the horizontal stroke of that letter. We see no traces of the succeeding /r/recorded in CAT.

]n̰ḫ̰lty Following the second break, two wedges of the /n/ are visible, with the right side of it and the left side of the /ḫ/ lost in another break.

Line 21. wi[ ] The /t/ is damaged, but easily discernable. We see no traces of letters following it, contra CAT, which reads /ʿn/ there.

Line 22. [ ]l̰ʾimm There are no traces of a /y/ at the beginning of the line, as in CAT. The two right wedges of the /l/ are preserved.

[ ]n̰.ʾa̰qry The letter after the second break is very badly damaged. All that can be said with certainty is that it is a horizontal letter. It could be a /t/, /n/, /k/ or /r/. The length of the letter and context argue for an /n/ here. Pardee has suggested reading it as a /k/, but the indentation he presumably identifies as the lower left wedge of the

/k/ appears to be breakage, rather than a wedge. However, the reading cannot be ruled out. The /'a/ is also badly damaged, but hints along the upper line of the letter suggest two wedges.

Line 23. [ ]r̊[ ] There appear to be the merest of indentations of three right horizontals of an /r/ in the damage of the beginning of the line.

mlhm̊t Only the horizontal wedge of the second /m/ survives.

Line 24. d̊d[ ]m̊ Both of the initial /d/'s are badly damaged. The context assures the readings. Only the lower parts of the horizontals still survive on the first one, while most of the interior of the second has been destroyed. The right side of the /m/ is the only part preserved, but the context argues for the reading.

Line 25. 'ar[ ]d̊. The /r/ is certain, though only three horizontals are preserved. The bottom half of the right horizontal of a /d/ is clearly visible on the tablet. Its identity as a /d/ is assured by context. The lower tip of the following word divider is also discernable, as is a bit of the impression of the upper part of the wedge.

l˚kb[The /l/ is assured by context, although only the upper part of the right wedge is preserved.

]d̊m The /d/ following the second break is also preserved only at the bottom, with the lower left part of the left horizontal and the right tip of the right horizontal still visible. The interior of those wedges suggests that the letter had four horizontals, rather than the usual three, a characteristic fairly well attested on this tablet.

Line 26. b̊[ ]b˹l Fragments of both vertical wedges of the /b/ at the beginning of the line are preserved, as is part of the indentation of the left lower horizontal. We see no other traces of letters or a word divider before /b˹l/, contra CAT, which records an /m/in the break and Pardee, who discerns the left-hand wedge of a /š/ directly after the /b/. The restoration /bšmm/, advocated by Driver (1956:88) and Good (1984:81), is plausible. The /l/ has four wedges.

mdlh The /d/ of /mdlh/ is certain, in spite of only two vertical wedges being visible. There are clearly three horizontals in the letter. The /h/ has four wedges.

Line 27. [ ]p̊t̊.[ ]rnh.'aqry The right tips of both wedges of the /p/ are visible, as is most of the /t/. Pardee's suggestion (1997a:253 n. 95) to read the three wedges as the right part of an /r/ seems unlikely, since the point of the lower left horizontal meets the large horizontal at a level much higher than the lower horizontal of an /r/ normally does. The reading /pt/ seems more likely. The head of the word divider is located at the right tip of the /t/. There is sufficient room to fit the reconstruction /rkb.ʿr/ in the broken section of the line preceding /pt/.

Line 28. 'ȧṅ[ ] The lower line of the /'a/ is largely preserved. The lower line of the /n/ is also visible, along with the upper line of the right horizontal. The restored /k/ fits the damaged space very well.

]b'a[ ]ṣ We do not see the word divider CAT places before /bʾa/. Nor are there any traces of the /r/ that follows in CAT (correctly reconstructed by context).

Line 29.]ʿp̊m̊ The upper line of the /ʿ/ is preserved. Both wedges of the /p/ are also visible. To the right are two damaged horizontals, one above the other. Only the left side and the lower left corner of the lower wedge survive, but a fair amount of the upper wedge is visible. The right line of the vertical of the following /m/ is preserved. The readings are assured by context.

ddym̊. All that is preserved of the /m/ is the left part of the horizontal and the lower tip of the vertical. The right side of the succeeding word divider is preserved.

Line 30. lkb[ ] The /l/ has four wedges. Contra CAT, there are no traces of the /d/ that context indicates followed /lkb/.

'awṣ The /w/ is certainly a scribal error for /r/.

Line 31.]'ap There are no traces of the /m/ CTA places before /'ap/. The depression that CTA and CAT identify as a word divider before /'ap/ appears to be damage, rather than a wedge.

Line 32. l̊k̊.lk The first /lk/ is badly broken, but parts of all three wedges of the /l/ are preserved. Only the lower left wedge and a section of the lower line of the larger right horizontal of the /k/ survive.

Line 33. ẇ'an The /w/ is damaged, with much of its interior missing, but the reading is certain.

Line 34. lrḫq The /l/ has four wedges.
ʾïlm The /ʾi/ is badly damaged, but certain, since the lower vertical is partially preserved.

Line 37. ʾidk. The /ʾi/ has four horizontal wedges.
ttnpnm Both /n/'s in this line have four wedges.

Line 38. ṣpn The /n/ has four wedges.
rbt. The /r/ of /rbt/ has been written with one left upper wedge instead of two, while the bottom left part of the sign has the regular two wedges.

Line 39. yʿn The /n/ has four wedges.

Line 40. pnnlẖ Only the top wedge of the /h/ is preserved, but the context argues for the reading.

Line 43.]kh The /h/ has four wedges.

Line 44. kbkbm. There is a word divider at the end of the line.

Line 45. šd̰ Only a few traces of the /d/, certain from context, are preserved. One can make out the vague lines of two verticals and the left side and lower line of the horizontals.

Line 46. ẓ̌ʾů[ ] The first letter could be /q/ also, but context argues for /ẓ/. It is not likely to be /ṭ/ as proposed by CTA, since the indentation that would indicate the upper vertical of the /ṭ/ is much too small. It appears to be a break. The context argues that the upper left part of a vertical next to the /ẓ/ is part of a /ʾu/. There are undistiguishable traces of letters further on down the line.

The Small Fragment of the End of the Column

Line 47. [ ]l̊[ ] We see no traces of the *bt* proposed at the beginning of the line by *CAT*. There are vague impressions that might be the lower tips of two verticals. This might be the remains of a /l/. But this is uncertain.

Line 49. bnh.m[There are no clear traces of the /*t*/ read by CAT after the /m/.

Line 53. knyt. The right half of the /y/ has four wedges, while the left half has three.

wtʿn̊[Only the left wedge of the /n/ survives, but context argues for the reading.

Line 54. ʾil̊ The /l/ is broken, with only the left wedge preserved.

Translation and Vocalized Text

[This column continues directly from the previous one.]

Anat's Response to Baal's Messengers Continued

Column III 47–Column IV 2

	Did he banish Baal from the summit of Sapan,	ṭarada ba'la bi-maryāmi[1] ṣapāni
	Making (him) flee his (place of) lordship like a bir[d]?	mušaṣṣisu ka-'u[ṣṣūri[2]] 'udna-hu
2–3	Did he drive him from his royal throne,	garrišu-hu lê-kissi'i mulki-hu
	From the resting place,[3] the throne of his dominion?	lê-nūḫti lê-kaḫṯi darkati-hu
4	What enemy has risen against Baal,	mannuma 'ibu yapi'u lê-ba'li
	What foe against the Cloudrider?"	ṣarratu lê-rākibi 'urpati

The Message of Baal

5	The youths [sp]oke up, they answered:	[ya]'nî ǵalamūma ya'niyūna

---

[1] The plural form would be theoretically possible as well, but the singular is used of Baal's mountainous abode in 1.3 III 29–31; cf. the singular form for the divine mountain in Ezek 20:40; cf. 2 Kgs 19:23 = Isa 37:24; Jer 49:16, 51:53; Ezek 17:23; Obad 3.

[2] The word is attested for example in 1.6 II 36 and 1.23.38. See the syllabic evidence and further discussion in Huehnergard 1987b:162. Avishur (1984:612) connects Ugaritic *'ṣr* with Akkadian *iṣṣūru* in contrast to Hebrew and Aramaic *ṣpwr* and Arabic *'uṣfur*. *CAD S*:155 similarly distinguishes Akkadian *ṣibāru*, Arabic *'uṣfur*, Hebrew *ṣippôr* and Aramaic *ṣippārā* from Akkadian *iṣṣūru* and Ugaritic *'ṣr*. The distinction works apart from the anomalous Arabic *'uṣfur*, which would suggest a more complex situation. In contrast to *CAD*, Pope (1977b:575) identifies Ugaritic *'ṣr* with all the other terms except for Akkadian *ṣibāru*, which he does not mention.

[3] The word is usually derived from Semitic **nwḥ*, "to rest" (see *DUL* 630). In his discussion of the word, Watson (1995:227) compares Hurrian, *naḫḫa-*, "to sit" (cf. *GLH* 175–76: "sens inconnue").

5–6	"No enemy has risen against Baal, No foe against the Cloudrider.	lā-'ibu yapi'u lê-ba'li ṣarratu lê-rākibi 'urpati
7–8	Message of Mightiest Baal, Word of the Mightiest of Warriors:	taḫmu 'al'iyāni ba'li hawatu 'al'iyi qarrādīma
8–9	'Offer in the earth war, Place in the dust love;	qiriyi(y) bi-'arṣi malḫamata šîti bi-'apari-ma dûdayama
9–10	Pour peace amid the earth, Tranquility amid the fields.	siki šalāma lê-kabidi 'arṣi 'arabbvdadi lê-kabidi šadîma
11	You must [ha]sten! You must [hu]rry! You must rush!	[ḫā]šu-ki ['ā]ṣu-ki 'abāṣu-ki
11–12	To me let your feet [ru]n, [T]o me let your legs race,	'imma-ya pa'nā-ki [talsu]māni ['im]ma-ya tiwtaḫā 'išdā-ki
13–14	[For a message I have,] and I will tell you, A word, [and I will recount to you],	[dam rigmu 'ê‡a lê-ya] wa-'argumu-ka hawatu/[wa-'a‡anniyu-ka]
14–16	[Word] of tree and whisper of [stone], [The word] peop[le do not kno]w, [And ea]rth's [masses not und]erstand.	[rigmu] 'iṣṣi wa-laḫšatu ['abni] [rigmu lā-tida]'ū našū[ma] [wa-lā-ta]bînū/[hamulātu 'a]rṣi
16–18	[Converse of Heaven with Ea]rth, Of Deeps w[ith Stars]. [I understand the lightning] which [the He]avens do not k[now.]	[ta'anatu šamîma 'imma 'a]rṣi tahāmāti 'i[mmana kabkabīma] ['abînu baraqa]/ dā-lā-ti[da'ū ša]mûma
18–20	[Come and I] will re[veal it] [In the midst of] my [moun]tain, [Div]ine Sapa[n], On the ho[ly] mou[nt of] my heritage.'"	['atî-ma wa-'anāku] 'ib[ġayu-hu] [bi-tôki ġā]ri-ya ['i]li ṣapā[ni] bi-qid[ši] bi-ġā[ri] naḫlati-ya

Anat Responds

21–22	And Adolescent [A]nat an[swered], [The In-law] of the Peoples replied:	wa-ta['nî] batulatu ['a]natu ta‡ûbu/[yabimtu] li'imīma

22–24	"I myself will offer [in the ea]r[th] war, [Pu]t in the dust lo[v]e;	['a]na 'aqriyu/[bi-'a]r[ṣi] malḥamata ['ašî]tu bi-'apari-ma/dûda[yi]-ma
24–25	I will pour [peace] amid the earth, Tran[quili]ty ami[d the fie]lds.	'assiku [šalāma] lê-kabidi 'arṣi/ 'ara[bbvda]da lê-kabi[di ša]dîma
25–27	May Baal set his harness in [the Heavens], May [the Clo]ud[rider] radiate his [ho]rns.	yašît/bi-[šamîma] ba'lu madali-hu yib'ar/[rākibu 'ur]pati [qa]ranī-hu
27–29	I mys[elf] will offer in the ea[r]th war, Put [in] the dust love.	'aqriyu/'anā[ku] bi-'a[r]ṣi malḥamata 'ašîtu [bi-]'apari-ma dûdayi-mi
29–31	I will pour peace am[id] the earth, Tranquility amid the fi[elds].	'assiku/šalāma lê-kabi[di] 'arṣi 'arabbvdada lê-kabidi ša[dîma]
31–32	On a second subject I would speak:	'ap maṯnê ragamīma[4]/'argumu-na
32–33	Go, Go, Divine Servants! You, you delay, but I, I depart.	likā likā 'anî-na 'ilêma 'attumā baššatumā wa-'ana šanôtu[5]
34–35	Ugar is very far, O Gods, Inbab is very far, O Deities—	'uġaru la-raḥāqu 'ilêmi[6] 'inababu[7] la-raḥāqu 'ilāniyyêmi

---

[4] ***maṯnê*** is the vocalization based on *ma-aš-nu-ú* in Ugaritica V polyglot, see Sivan 1982:212–13. For the etymology of ***rgm***, see *UBC* 1.169 n. 97. See below for the discussion of the phrase.

[5] The root is ***šnw***, as indicated by 1.96.1: *hlkt w šnwt* (Sivan 1997:161, 162; for a different derivation, see *UG* 597, 670). Therefore, the ***qatala*** base is ****šanaw-***, suggesting the vocalization here (so too Sivan 1997:162 with a question-mark).

[6] For the vocative in the genitive case, see Greenstein 1998:414, who proposes that the genitive is indicated for the vocative in 1.17 I 23 by the presence of the *-y* first person suffix on the noun ****'ab***. But according to Gordon and Sivan this suffix is added also to a noun in the accusative case (for discussion and examples, see *UT* 6.6; Sivan 1984:51–52). Tropper (*UG* 215, 216) points out the complexities of the use of *-y* on the accusative. He also (*UG* 314–15) provides examples that suggest that either genitive or accusative forms can be used for the vocative. So it remains unclear which case is used in the vocative. The comparative evidence available is also insufficient to resolve the question. However, according to Greenstein (personal communication), "the reason the genitive is used for vocative is that it is preceded sometimes (or in deep structure) by the preposition *li-*." In other words, in Greenstein's view, the vocative *l-* is a subusage of the preposition *l-*, which takes the genitive case.

[7] The vocalization of this word is unknown. The vocalization here is based on the assumption that a vowel intervenes between the second and third consonants (since ****-nb-*** might be expected to assimilate to ****-bb***) and between the third and fourth consonants (since otherwise only a single *b* would be represented).

35–36 Two lengths beneath Earth's springs, ṯinâ maṯpadāmi taḥta ʻênāti ʾarṣi
Three *mtḫ*-measures of the caves." ṯalāṯu mataḥū ǵayarīma

Anat's Travel to Baal's Home and Their Meeting

37–38 Then she (Anat) headed out ʾiddaka la-tatinu panīma
For Baal on the summit of Sapan. ʻimma baʻli maryama ṣapāni

38–40 From a thousand acres, a myriad of hectares[8] bi-ʾalpi šiddi ribbati kumāni
The advance of his sister Baal eyed, halaka ʾaḫati[9]-hu baʻlu yaʻînu
The approach of the {In-law}/ Daughter(?)} of his Father tadarriqa[10]/{yabimti/ bitti(?)} ʾabī[11] -hu

40–42 He removed women from his presence; šarḥiqa[12] ʾaṯṯāti lê-panī-nhû[13]
He placed an ox before her, šata ʾalpa qudmi-ha
A fatling right in front of her. marʾīʾa wa-tôka panī-ha

42–43 She drew water and washed taḥsupuna maha wa-tirḥaṣu
With Dew of Heaven, Oil of Earth, ṭalla šamîma šamna ʾarṣi

43–44 Dew the Heave[ns pou]red on her, ṭalla šamû[ma tissa]ku-ha
Showers the Stars poured on her. rabîba nasaku-ha kabkabūma

---

[8] It is difficult to render *šd* and *kmn* into the English or American systems of spatial measurement. We settle for a mixture of British and American terms (cf. "rods"//"furlongs" in *UNP* 58). The Ugaritic words are not distance measurements as such, so that Wyatt's rendering, "miles"//"leagues" (1998:82), is not accurate. They are measurements of field-size in Akkadian documents (noted by Loewenstamm 1956 and since followed; *UBC* 1.169 n. 96). For *šiddu* as one-sixth of an *ikû* at Emar, see Arnaud 1991:13 n. 2; Westenholz 2000:xiv; Mori 2003:104–5. Here the nouns are collective singular.

[9] For the syllabic evidence for this form, see Huehnergard 1987b:105; *UG* 172.

[10] For the root, see Huehnergard 1987b:119–20. It is generally understood as a *Dt*-stem verbal noun, but it could also be a *t-* preformative noun.

[11] For the length of the case vowel, see Huehnergard 1987a:189. In addition to the standard lexica, see M. Cohen 1947:77, #4. As Cohen's discussion might suggest, old biconsonantal bases without corresponding verbal roots in Semitic languages may be traced to an older Afro-Asiastic linguistic stratum.

[12] The form is vocalized here as **qatala* (as in Sivan 1997:138; *UG* 599), but it could be an infinitive (as could be the following verb).

[13] See *UG* 777. Or, is a dittography involved?

45–46	She beautified herself with murex,	tatāpipu ’anhibīma
	[Who]se extract [from the sea] is a thousand fields.	dā-’alpu šadû/ẓi’u-[hu bi-yammi]

[There is a gap of about 15 lines. The extant text picks up with Baal’s complaint about his need for a palace.]

	[‘…In lament,]	[’āniyu]
	[he indeed cries to Bull El his Father,]	[la-yaṣûḫu[14] ṯôra ’ila ’abā-hu]
	[To El the King who created/established him.]	[’ila malka dā-yakāninu-hu]
	[He cries to Athirat and her children,]	[yaṣûḫu ’aṯirata wa-banī-ha]
	[The goddess and the band of her brood:]	[’ilata wa-ṣibbirata[15] ’aryi-ha]
47–48	[‘For Baal] has [no house like the gods’,]	[wa-na ’ênu bêtu] lê-[ba‘li[16] kama ’ilīma]
	[Or court] like [Athirat’s] children’s.	[wa-ḫaẓiru] ka-banī [’aṯirati]
48–49	[The dwelling of El is[17] the shelter of] his son,	[môṯabu[18] ’ili maẓlalu] bini-hu
	The dw[elling of the Lady Athirat of the Sea,]	mô[ṯabu rabbati[19] ’aṯirati yammi]
50–51	The dwelling of Pidr[ay, Daughter of Light],	môṯabu pidra[yi bitti ’ari]
	[The shelter of] Tallay, Daughter of Sho[wers],	[maẓlalu]/ṭallayi bitti ri[bbi]
51–53	The dwelling of Arsay], Daughter of the Wide World,	[môṯabu ’arṣayi] bitti ya‘ibidrayi

[14] For *lyṣḥ ṯr ’il ’abh* implying **ṣ(w)ḥ l-*, “to cry to,” see Pardee 1997a:255 n. 113.

[15] For the syllabic evidence for *ṣibbiru*, see Huehnergard 1987b:169. It is possible that an alternative base such as **ṣibburat-* underlies the alphabetic form.

[16] For the syntax, see the examples in the Commentary below; cf. 1.10 II 4: *’in b‘l bbhth*.

[17] For nominal complementation in this instance, see Sivan 1997:203.

[18] For the syllabic spelling *mu-ša-bu* = **môṯabu* < **mawṯabu*, see Sivan 1997:71; Huehnergard 1987b:135; *UG* 188.

[19] The Akkadian cognate for this word is *rabītu* (see discussion on pp. 404–6). It might be that the vocalization here should follow suit.

	[The dwelling of the] Noble [Brides].	[mô<u>t</u>abu kallāti] kaniyāti
53	And [Adolescent Anat] answered:	wa-ta‘nî [batulatu ‘anatu]
54–55	“Bull El, [my Father], will heed me, He will heed me, or to him (?)[ ]”	ya<u>t</u>ûb lê-ya <u>t</u>ôru ’ilu [’abī-ya] ya<u>t</u>ûb lê-ya wa-lê-hu…

Commentary

The vast bulk of this column repeats or presents in modified form lines from prior columns in the Baal Cycle. The following list provides the parallels between lines in 1.3 IV and lines in other columns. Accordingly, notes for poetic parallelism are minimal. For commentary (including poetic parallelism), readers should consult the treatment of these parallel passages:

lines 2–3 with 1.2 IV 12–13 (*UBC* 1.322, 326, 341, 343)
lines 5, 6 with 1.3 III 37–38 (*UBC* 2.211–12)
lines 7–20 + 22–25 and 27–31 with 1.1 III 10–16 (*UBC* 1.159–60, 162–63, 173–81), and 1.3 III 13–31 (*UBC* 2.207–10), and reconstructed at the head of 1.1 II to lines 2 and repeated in lines 17–24 (*UBC* 1.195–96, 197, 198–199, 202–9)
lines 32–36 with 1.1 III 17–21 (*UBC* 1.160, 163–64, 181–84).
lines 37–38 with 1.1 III 21–22 (*UBC* 1.160, 164, 184, 186; see also 195, 199)
line 38, reconstructed at the beginning of 1.1 II and in line 15 (*UBC* 1.195, 199)
lines 42–46 with 1.3 II 38–41, III 1–2 (*UBC* 2.142–43, 205)
lines 47–53 with 1.3 V 35–44, 1.4 I 4–17, 1.4 IV 47–57 and 1.117.1–7 (Pardee 1988a:257–60).

Poetic Parallelism and Word/Syllable Counts

		semantic parallelism	word/ syllable count
1.3 III 47– IV 2	ṭarada ba‘la/bi-maryāmi ṣapāni mušaṣṣiṣu ka-‘u[ṣṣūri]/’udna-hu	a b c a’ d b’	4/12 3/11
2–3	garrišu-hu lê-kissi’i mulki-hu/ lê-nūḫti lê-kaḫṯi darkati-hu	a b c b’ (x, y) c’	3/11 3/10

For the formulas in this bicolon, see the discussion of Parker 1989b:15, *UBC* 1.153, 343.

4	mannuma ’ibu yapi‘u lê-ba‘li ṣarratu lê-rākibi ‘urpati	a b c a’ c’ (x of y)	4/11 3/10
5	[ya]‘nî ǵalamūma ya‘niyūna	a b c	3/10

The line-length of this extra-colonic, speech-opening formula maintains a consistency between units.

5–6	lā-’ibu yapi‘u/lê-ba‘li ṣarratu lê-rākibi ‘urpati	a b c a’ c’ (x of y)	3/9 3/10

For the unit in lines 5–6, see above 1.3 III 36–38.

7–8	taḫmu ’al’iyāni ba‘li hawatu ’al’iyi/qarrādīma	a b a’ b’	3/8 3/10

For the units in lines 7–20, see above 1.3 III 13–31 and the Commentary below.

8–9	qiriyi(y) bi-’arṣi malḫamata/ šîti bi-‘apari-ma dûdaya-ma	a b c a’ b’ c’	3/10 3/11
9–10	siki šalāma/lê-kabidi ’arṣi ’arabbvdada lê-kabidi šadîma	a b c d b’ c d’	4/11 3/12
11–12	[ḫā]šu-ki [‘ā]ṣu-ki ‘abāṣu-ki ‘imma-ya pa‘nā-ki/[talsu]māni [‘im]ma-ya tiwtaḫā ’išdā-ki	a a’ a” b c d b d’ c’	3/10 3/10 3/9
13–14	[dam rigmu ’ê<u>t</u>a lê-ya] wa-’argumu-ka hawatu/[wa-’a<u>t</u>anniyu-ka]	a b c d e b’ e’	5/12 2/9

14–16	[rigmu] ‘iṣṣi wa-laḫšatu/[’abni]	a b a’ b’	4/10
	[rigmu lā-tida]‘ū našū[ma]	a c d	3/9
	[wa-lā-ta]bînū/[hamulātu ’a]rṣi	c’ d’ (x of y)	3/11
16–18	[ta’anatu šamîma ‘imma ’a]rṣi/	a b c d	4/11
	tahāmāti ‘i[mmana kabkabīma]	b’ c’ d’	3/11
	[’abînu baraqa]/dā-lā-ti[da‘ū ša]mûma	e f g h	4/14

For the problem of the position of this third line, see the discussion below. As it stands, the line might be viewed as summing up the preceding description.

18–20	[’atî-ma wa-’anāku]/’ib[ǵayu-hu]	a b c	3/11
	[bi-tôki ǵā]ri-ya [’i]li ṣapā[ni]/	d e (x, y)	4/11
	bi-qid[ši] bi-ǵā[ri] naḫlati-ya	d’ e’ (x of y)	3/10
21–22	wa-ta[‘nî] batulatu [‘a]natu	a b	3/10
	ta<u>t</u>ûbu/[yabimtu] li’imīma	a’ b’	3/10
22–24	[’a]na ’aqriyu/[bi-’a]r[ṣi] malḫamata	a b c d	4/12
	[’aš]îtu bi-‘apari-ma/dûda[ya]-ma	a’ b’ c’	3/12
24–25	’assiku [šalāma] lê-kabidi ’arṣi/	a b c d	4/12
	’ara[bbvda]da lê-kabi[di ša]dîma	b’ c d’	3/12

Lines 22–25 and 27–31 each have two bicola, four lines, all beginning with *’a-* (Watson 1980:446). For the rest of the parallelism in these four bicola, see above in lines 8–9.

25–27	yašît/bi[-šamîma] ba‘lu madali-hu	a b (?) c d	4/12 (?)
	yib‘ar/[rākibu ‘ur]pati [qa]ranī-hu	a’ c’ (x of y) (?) d’	4(?)/12(?)

This bicolon is the only one in Anat’s response that is not paralleled in Baal’s message. The two preceding and the two following bicola directly echo his request in lines 8–9 above. Because of the lacunas, it is difficult to ascertain the full force of the parallelism here. However, the line-initial **yqtl* volitive verbs are notable, and if the reconstruction for the end of the second line is correct, then the objects with their third sg. masc. suffixes are likewise parallel.

27–29	’aqriyu/’anā[ku] bi-’a[r]ṣi malḫamata	a b c	4/13
	’ašîtu [bi-]‘apari-ma dûdaya-mi	a’ b’ c’	3/12
29–31	’assiku/šalāma lê-kabi[di] ’arṣi	a b c d	4/12
	’arabbvdada/lê-kabidi ša[dîma]	b’ c d’	3/12
31–32	’ap ma<u>t</u>nê ragamīma/’argumu-na	a b c d	4/11

This formulaic line regularly serves as a transition between two parts of a speech (e.g., 1.4 I 19–20). It shows no break in line-length compared to the preceding and following units, and one may detect some morphological and sonant continuity as well (for example, with the ending *-ima*).

32–33	likā likā ʻanî-na ʾilêma/	a a b	4/10
	ʾattumā baššatumā wa-ʾana šanôtu	c d e f	4/13

This bicolon is very helpful in showing the wide range of "parallelism" in Ugaritic poetry. Both lines concern travel of the addressees and the speaker, but the morphology and syntax are totally different in the two lines. Even sonant parallelism hardly binds these lines, perhaps with the exception of the gutterals + *n*'s in *ʻanî-na* and *wa-ʾana*. Instead, alliteration within each line (*l* in the first line, *t* in the second) is more conspicuous. See *UBC* 1.163 for this bicolon.

34–35	ʾuǵaru la-raḫāqu ʾilêmi	a b c	3/10
	ʾinababu/la-raḫāqu ʾilāniyyêmi	a' b c'	3/13
35–36	ṯinâ maṯpadāmi/taḥta ʻênāti ʾarṣi	a b c	5/13
	ṯalāṯu mataḥū ǵayarīma	a' b' c'	3/10

For these two bicola, see *UBC* 1.163–64.

37–38	ʾiddaka la-tatinu panīma	a b c	3/10
	ʻimma baʻli/maryama ṣapāni	d e f	4/10

For the formula of this bicolon, see above *UBC* 1.159, 161.

38–40	bi-ʾalpi šiddi ribbati kumāni/	a b a' b'	4/11
	halaka ʾaḫati-hu baʻlu yaʻînu	c d e	4/11
	tadarriqa/{yabimti} bitti (?) ʾabi-hu	c' d' (x of y)	3/9 (?)

This tricolon is fairly balanced. It opens with a well-attested formulaic line which is used in two primary contexts: (1) it can indicate the distance at which a person sees another approaching, like here and 1.17 V 9–10; or (2) the distance that someone travels to reach a destination, such as in 1.18 III 21–22 and 1.3 VI 17–18; 1.4 V 24; VIII 24; 1.1 III 2. By fronting the verbal nouns of travel, the focus remains on the traveller (in this case Anat), but it is cast from Baal's perspective. The second

and third lines show a high degree of parallelism. A parallel, but more complex version of this passage is found in 1.4 II 12–16, describing the arrival of Baal and Anat at Athirat's house. In this passage, the narrative has been expanded into four lines, set up as two bicola, instead of a tricolon. The initial line of our passage is missing and is replaced by a line that describes Athirat lifting her eyes and seeing. The next two lines both begin with *hlk*, as does the second line of our passage, the first describing the advance of Baal, the second one the advance of Anat. The fourth line is directly parallel with the previous line about Anat, referring, as does our third line, to the approach, *tdrq*, of Anat (for more details, see below, pp. 437–38). These lines in 1.4 II 12–16 might best be viewed as an expansion of the more basic presentation of the formula as it appears in 1.3 IV (specially with the duplication of *hlk* + DN.

40–42	šarḥiqa 'aṯṯāti lê-panī-nhû/	a b c	3/10
	šata 'alpa qudmi-ha/	d e f	3/7
	mar'ī'a wa-tôka panī-ha	e' f'	3/9

The second and third lines of this tricolon are closely matched both in line-length and parallelism. The same two lines appear as the second and third lines of a tricolon in 1.4 V 44–46, with a different preceding line. In that passage, the first line describes the arrival of Kothar-wa-Hasis at Baal's home. The first line here contains some syntactical and sonant elements that connect it with the following two lines. The verbs stand in initial position in both the first and second lines, and it is possible that they are the same form (**qatala*). Both verbs also begin with the same consonant. Furthermore, one may discern a further slight resonance between these lines, with the ending *-at* appearing both with the direct object in the first line and the verb in the second. Despite their morphological and syntactical differences, *lê-panī-nhû* and *'alpa* offer further sonant parallelism. The prepositional phrase in the first line, *lê-panī-nhû*, also echoes with *panī-ha* in the third line. Together the two phrases form the outside terms of a chiasm with *qudmi-ha* and *wa-tôka* as the inside terms. In short, there is a significant degree of parallelism, especially sonant parallelism, between the first line and the other two lines.

42–43	taḥsupuna maha wa-tirḥaṣu/	a b a'	3/10
	ṭalla šamîma šamna 'arṣi	b' (x of y) b'' (x of y)	4/9

For this bicolon, see above 1.3 II 38–39 on p. 142.

43–44	ṭalla šamû[ma tissa]ku-ha/	a b c	3/9
	rabîba nasaku-ha kabkabūma	a' c' b'	3/11

For this bicolon, see above 1.3 II 40–41 on p. 143.

45–46	tatāpipu 'anhibīma	a b	2/8
	dā-'alpu šadu/ẓi'u-[hu bi-yammi]	c d e	4/11

For this colon, see above 1.3 III 1–2 on p. 205.

[There is a gap of about 15 lines.]

['āniyu la-yaṣûḫu ṯôra 'ila 'abā-hu]	a b c d e	5/14
['ila malka dā-yakāninu-hu]	d c' e'	3/10

Restored from the parallel passage in 1.3 V 35–36. The difference in line length in this bicolon suggests that *'āniyu* constitutes an instance of anacrusis, i.e., it is an initial word that doesn't belong to the metrical scheme of the line (see Watson 1986a:110–11). We thus rendered it as belonging to a separate line in the translation above. If we take *'any* this way, the parallelism appears in stronger relief, and the length of lines now match more closely (4/11 and 3/10). The repetition of the noun *'il* perhaps highlights El's capacities as both *'ab* and *mlk*. Despite the difference in syntax, the verbs are both prefix indicative forms.

[yaṣûḫu 'aṯirata wa-banī-ha]	a b c	3/11
['ilata wa-ṣibbirata 'aryi-ha]	b' c' (x of y)	3/11

Restored from the parallel passage in 1.3 V 36–37. The syntax and semantics manifest clear and regular parallelism. In addition, the name of the goddess in the first line is picked up by *'ary* in the second line; perhaps such resonance was the reason for the choice of this otherwise rare noun. Final *-a*, on five forms over the length of the bicolon, is generated by three instances of the accusative case and two instances of the third fem. sg. suffix.

47–48	[wa-na 'ênu]/[bêtu] lê-[ba'li kama 'ilīma]	a b c d e	6/14
	[wa-ḫaẓiru]/ka-banī ['aṯirati]	a' c' d' e'	3/11

We have treated *wa-na* and *wa-* as distinct units in defining both the semantic parallelism within these lines and in the word count. This is in order to draw attention to their parallelism. Making this distinction for such relatively minor particles is defensible on the grounds that *wa-na* itself is not a proclitic. But one could also render the semantic parallelism and word-count without considering them as separate units by emphasizing that *wa-* is, after all, a proclitic. This would yield the following (and more seemingly regular) parallelism: a b c d/b' d'; and a word count of 5/3. In any case, the syllable count reflects a general balance in line length, and the semantic and syntactical parallelism match closely. Apart from what the shared syntax provides, parallelism in this unit shows no special features, except for the partial resonance between *ba'li* and *banī*.

48–49	[mô*t*abu 'ili ma*ẓ*lalu]/bini-hu	a b a' c	4/11
	mô[*t*abu rabbati 'a*t*irati yammi]	a b'' (x, y)	4/12

The formula of an initial noun + DN + epithet that begins in this bicolon's second line and continues through the two following bicola creates an overall repetitive, listing effect in these lines. Within this bicolon each of the three initial nouns, all *m-* preformative forms, stand in construct to a divine referent.

50–51	mô*t*abu pidra[yi bitti 'ari]	a b c	4/10
	[ma*ẓ*lalu]/*ṭ*allayi bitti ri[bbi]	a' b' c'	4/10

The balance in this bicolon is very conspicuous and formulaic. Picking up the same two nouns for divine dwelling used in the preceding bicolon, these lines continue to list inhabitants of the dwelling of El. Here and in the next bicolon Baal's women are listed with their standard titles (as in 1.3 I 22–27 and III 5–8). The listing continued in this bicolon issues in identical line length and precisely parallel components, in both semantics and syntax.

51–53	[mô*t*abu 'ar*ṣ*ayi]/bitti ya'ibidrayi	a b c	4/13
	[mô*t*abu kallāti]/kaniyāti	a' b'	3/10

This bicolon largely follows the pattern of the preceding one, except that the term *mṯb* is used at the beginning of each line, and the final epithet characterizes all three of Baal's women.

53	wa-ta‘nî [batulatu ‘anatu]	a b	3/10

Here, this speech-opening formula is extracolonic (compared to 1.3 III 21–22, where it is the first line of a bicolon). The same line is also extracolonic in 1.3 V 29.

54–55	yaṯûb lê-ya ṯôru ’ilu [’abī-ya]/	a b c d	5/11
	yaṯûb lê-ya wa-lê-ha…	a b ?	3 + (?)/5 + (?)

The broken nature of this bicolon makes it difficult to provide a full assessment of the parallelism here. The first two units in the two lines match each other exactly. Beyond that observation, little can be added.

Introduction

This column concludes Anat’s speech from the preceding column, then goes on to describe the delivery of Baal’s message by Gapn and Ugar, Anat’s response and subsequent journey to Mt. Sapan, Baal’s reception of the goddess and his announcement of his desire for a palace. The latter element will motivate the action of the rest of 1.3 and most of 1.4.

This column provides the first exposition of Baal’s lament over not having a palace appropriate for his position. It becomes clear here that Baal requires the permission of El in order to build such a palace. The requirement focuses attention on the fact that while Baal is taking on the position of ruler of the divine council, he is still subordinate to the older god, who remains the patriarch and retains the title “king,” in spite of sharing it with the younger deity. In the overall context of the story as we understand it, it is not until El gives Baal his permission for the palace that the former is officially granting his recognition of Baal as his coregent. See the discussion on the relationship between El and Baal in the Introduction, pp. 16–17.

Lines 1–5: Anat’s Reaction to the Messengers’ Arrival (Continued)

Anat’s speech, which began in 1.3 III 36, concludes with three final bicola. The translation and interpretation of the first two have been controversial. As the discussion below will indicate, these lines may be understood as follows. Anat, after having spoken of her previous battles

in support of Baal, now returns to the question with which she began the speech—has a new enemy attacked Baal? Here she expresses her worst fears. Has the enemy forced Baal from his mountain and removed him from his kingship, so recently established by his defeat of Yamm?

The ambiguity of the passage centers on two issues. The first is the uncertainty of the forms of the verbs, *ṭrd* and *grš*. Each of these could be understood as a **qatala* form or as an active participle. The other verb in the passage, *mšṣṣ*, is a participle, but its presence does not clarify the forms of the other two. The second issue is whether *bʿl* in the first colon should be understood as the subject or object of the verbs in these lines. Both of these issues can be resolved only through careful consideration of the context of the passage within the speech of Anat, and even then certainty cannot be reached. Some grammatical comments will precede the discussion of interpretation of the passage.

The first verb, *ṭrd*, is rare in Ugaritic, occurring elsewhere only in two or three broken passages (1.151.3; 4.428.3; cf. 1.6 VI 1). But it is well known in other Semitic languages (*AHw* 1380). The context here is suitable to the Akkadian and BH meaning, "to drive away, pursue." The terms, **ṭrd* and **grš* (cf. Avishur 1984:69), both denote expulsion from one's home or property (see Greenfield 1977b:187). The second line of this bicolon is the most problematic part of the passage. On the face of it, the line consists of a *C*-stem participle from **nṣṣ*, "to flee" (*DUL* 648), followed by a comparative that probably reads, *kʿṣr*, "like a bird," and the direct object *ʾudnh*. The general sense of the overall image may follow from a somewhat similar line, 1.117.10: *ʾaṣṣ knṣ*, "I will take flight like a bird" (Sanmartín 1978c; cf. Pardee 1980: 278; 1998a:259, 260). Regarding *ʾudnh*, Gray (*LC*[2]: 47; see also Pardee 1997a:252; *DUL* 20) offered a contextually suitable explanation by connecting *ʾudn* to the root, **ʾdn*, related to the noun *ʾadn*, "lord, father." The apparent **qutl* form of this noun likely expresses an abstraction, "lordship." On the whole, this seems superior to interpreting *ʾudn* as "ear," and rendering the line, "the One who pecks his ear like a bird" (so *CML*[2] 50; Smith, *UNP*, 112). The usage of the bird imagery here, if correctly understood, is striking and rare, since more commonly comparison to a bird is related to a person being caged in like a bird or being snared in a trap, rather than to a person fleeing away.[20] We

[20] For images of a bird to express royal conflict, cf. also EA 74:45–48: "Like a bird in a trap, so am I in Gubla" (Moran 1992: 143; for discussion of the passage, see Gianto

have been unable to find a comparable simile in West Semitic literature, and Black's 1996 study of images of birds in Sumerian poetry includes no such presentation.

The second bicolon, 1.3 IV 2–3, has a number of general parallels elsewhere in the Baal Cycle, which also occur in the context of divine conflict and include the usage of *ks'u* and *kḫṯ drkth* (see 1.1 IV 23–24; 1.2 IV 12–13, 20). The first noun in line 2b, *ks'i*, is well known across the Near East. It is usually identified as a loanword from Sumerian, GU.ZA, which came into the Semitic languages (*UT* 19.1277) as Akkadian *kussû*, as well as Emar *kissû* (Fleming 1992:258–59), Ugaritic *ks'u*, BH *kissē'*, Phoenician *ks'* (pl. *kwrsy*) and Aramaic *krs'* (cf. Arabic *kursiyy*; Lane 2605; see *DUL* 460–61; Hoch 1994:337). However, Kaufman (1974: 28–29) has argued forcefully that the Sumerian form is in fact a loanword from Akkadian and that the Akkadian might originally have derived from either West Semitic or from a foreign or substrate word (cf. Mankowski 2000:70–71). As evidence that the Sumerian is not the original noun, Kaufman notes that GU.ZA has no clear etymology in Sumerian and that that most Sumerian words ending in *-a* are loanwords. With regard to this point, Fleming (1992:258 n. 219) has also pointed out that Sumerian has a native term for "throne," DÚR.GAR, which is derived from the verb, "to sit." That the word is also not originally Semitic is suggested by the lack of a generative root in either East or West Semitic. This is perhaps supported by the alternative writing of Ugaritic *ks'u* as *ks'u*, e.g., in 1.53.7 (*DUL* 460), since in Ugaritic, the letter *ś* is normally used for foreign words (Kaufman 1974:29 n. 83).

The parallel word for throne, *kḫṯ*, is considered a loanword (with metathesis) from Hurrian *kišḫi* (*GLH* 143). The word is attested in Amarna Akkadian as *kaḫšu* (*AHw* 420; *CAD K*:36; *UT* 19.1219; *MLC* 564; and as a loan into Egyptian, according to Hoch 1994:337. EA 120:18 mentions "one chair (1 [G]U.ZA *ka-aḫ-šu*) ove[rlaid] in gold" (see Moran 1992:198 and 199 nn. 8 and 9). In 1.4 V 51–52 the plural form of *kḫṯm* stands in parallelism with *ks'at*.

Translations of the two bicola in lines 1b-3 have been quite varied. Several scholars have related them directly to the preceding colon, 1.3 III 46b–47a, as a further description of one (or more) of the enemies

---

1995:69). See also 79:35–36, 81:34–35; cf. 105:8–10, 116:18–19; cf. Ps 124:6–7; Eccles 9:12; Amos 3:5. Also see Tiglath-Pileser III's Calah Annals 23:11' (Tadmor 1994:78–79) and the Sennacherib Prism, col. 3:27–28 (cf. Hoch 1994:155; *COS* 2.286, 303).

of Baal that Anat defeated (Pardee 1997a: 252, see also Wyatt 1998: 80; Ginsburg in *ANET* 137):

> I have smitten for silver, have (re)possessed the gold of
> Him who would have driven Baʿlu from the heights of Sapanu,
> Him who would have caused (him) to flee like a bird (from)
> (the seat of) his power,
>
> Him who would have banished him from his royal throne
> From (his) resting-place, from the seat of his dominion.

There are reasons to be skeptical of this rendering. First, it ignores the strong evidence that lines 46b–47a belong as the conclusion to the previous pair of lines, paralleling grammatically and prosodically the third line of the tricolon earlier in the speech (lines 38–40, see Commentary above). Second, this rendering requires that III 46b–IV 1 be read as a case of enjambment of a type that is not attested elsewhere in the Ugaritic corpus. Enjambment is very rare in the Ugaritic poetic texts (Watson 1994b:138 n. 165). Several of Watson's proposed examples are quite uncertain and can be read without invoking enjambment (cf. 1.3 III 10–15; 1.19 IV 58–59; 1.23.62–63; three of the eight listed in Watson 1994b:138). Otherwise, most of the other cases occur under two circumstances: (1) when the formula *ʾapnk* PN + epithet appears as a single line with a second line providing the verb (1.6 I 56–58; 1.17 V 28–29; 1.19 I 38–40); and (2) when the formula in which a series of days pass, i.e., "One day and two", is used, so that these verbless phrases are continued in the next line (e.g., 1.17 I 5–13; II 32–40). Two certain cases of enjambment are found in 1.14 VI 36–38 and 1.16 I 44–45. But we are not aware of another case in which the break between the lines comes in the middle of a construct phrase, as proposed for this passage. Third, this interpretation is somewhat impressionistic. If these lines continue to describe the enemy that Anat defeated in the past, then with the exception of the framing question, "What enemy rises against Baal,//What foe against the Cloudrider?", the entire speech refers only to Anat's battles in the past. This seems unlikely, since it is clear from the context of the speech that she intends to register her concern about Baal's current safety.

Caquot and Sznycer (*TO* 1.169) read these two bicola as separate from what has gone before and take Baal as the subject of the first and third verbs, i.e., "Baal a repoussé loin des hauteurs du Ṣapon/celui qui… [ ] son oreille. Il l'a chassé loin de son trône royal." However, this reading does not seem to fit the context, since Anat is clearly

expecting to hear of disaster. It seems unlikely that she would speak assuredly of such a victory of Baal here.

One could render the passage as a question (cf. *UNP* 112):

> Has Baal banished from the summit of Sapan
> The One who makes his lordship flee like a bir[d],
>
> Who had driven him from his royal throne,
> From the resting place, the throne of his dominion?

In this case, one might interpret the bicola as a query whether Baal had defeated Yamm, the one who had previously defeated him. But this might seem to require that Baal had earlier been king of the gods, then was deposed by Yamm, and then reinstated as king. This does not appear to be the scenario of 1.1 and 1.2, although it could be argued that this speech reflects a different tradition about the conflict with Yamm anyway and thus could have presupposed such a scenario (so Wyatt 1998:80 n. 55). Another problem for this interpretation is that by understanding the first bicolon this way, there is a complete lack of syntactical and semantic parallelism between the two lines, thus turning them into another proposed case of enjambment.

The interpretation proposed in our translation sees the two bicola as questions, but Baal as the object of the verbs, and the enemy that Anat fears as the subject:

> Did he banish Baal from the summit of Sapan,
> Making (him) flee his place of lordship like a bir[d]?
> Did he drive him from his royal throne,
> From the resting place, the throne of his dominion?

In this interpretation Anat asks the messengers whether Baal has been forced from his kingship. In this case, we may assume that Anat is well aware of Baal's previous victory over Yamm and that the kingship referred to here is the one that came as a result of that victory. This interpretation has several advantages. First, it fits well into the overall context of the passage, in that it returns the focus of the speech to Anat's fear for Baal's safety, something that the other translations do not do. Second, it fits more satisfactorily into the colonic structure of the entire speech and does not rely on finding the rare device of enjambment here for its interpretation. Third, it minimizes the extent of discontinuity between this passage and the rest of the cycle, removing the problem of assuming that Anat is referring to an earlier kingship of Baal in these lines.

The final bicolon, line 4, is identical with the opening bicolon of this speech in III 37–38, as noted in the Commentary on that passage (see p. 242–44 above). It provides a frame for the passage that emphasizes Anat's fear and concern.

Lines 5–20: Baal's Message to Anat

This section presents the answer of Baal's messengers to Anat's fearful speech. The speech-opening formula in line 5, *[y]ʿn.ǵlmm.yʿnyn*, is an unusual variant of the common formula, (*w-* +) **yʿny* + PN (cf. Watson 1983:254). Here we have verb + noun + verb, where the noun acts as a "pivot" (Sivan 1997:212), governing both verbs. At the start of their speech (lines 5–6), they depart from the norms of message delivery by first allaying Anat's concern. Using the words of her question in line 4, they tell her that no enemy[21] has risen against Mighty Baal, no foe against the Cloudrider. Then the messengers present their master's words. There are some differences between Baal's version of the message in III 14–31 and the one here:

1. This presentation of the speech omits only the final words of line 31, *bnʿm bgbʿ tl'iyt*. There appears to be no major significance to this omission.
2. There is also a reversal of material here: the bicolon, *rgm ltdʿ nšm/ wltbn hmlt ʾarṣ*, has been moved up, forming a tricolon with *rgm ʿṣ wlḫšt ʾabn* (lines 14–16). The two lines that constituted the second and third lines of this tricolon in 1.3 III 24–25, now follow the new tricolon and form the first two lines of a new tricolon along with *ʾabn brq dltdʿ šmm* as the final line (lines 16–18). None of this shift

[21] The anomaly of the negative *l-* prefixed to a noun was noted by Cassuto and Ginsberg (see Ginsberg 1946:46). C. L. Miller (1999:348, esp. n. 55) takes the negative *l-* here as modifying the verb and not the noun as such; technically this view is grammatically correct. Nonetheless, it is significant that the particle fronts the noun and not the verb. (Miller's appeal to a theoretical gloss of "non-foe," if *l-* were to be taken as modifying the noun, is potentially misleading; one may understand the thrust of *l-* as a negative of *ʾib* to signify "no enemy.") A contextual argument may be added to this point. Just as *l-* precedes the noun and not the verb, so too *mn*, which precedes *ʾib* in the goddess' corresponding question, modifies the noun and not the verb; the phrase means "what enemy…?".

ing has a significant impact on the interpretation of this section (cf. *SPUMB* 107).

3. Although we have taken the colon in lines 17b–18a as the third line of a tricolon, one might, however, propose that the line could be placed with the following colon (lines 18b–19a) to form a separate bicolon. If it does belong to the preceding unit, then taking the initial word of this line not as a verb (as treated in the Commentary to 1.3 III 26–28), but as a noun (an alternative possibility discussed there) might seem less implausible, since the two preceding lines are noun phrases dependent on the preceding tricolon (lines 14–16). But it is also quite plausible to interpret *'abn* as the verb, "I understand," in this context, viewing the line as a sort of summing up of the preceding material. We have chosen to go with the latter interpretation, though the former cannot be completely dismissed.

Lines 21–36: Anat's Answer

Lines 21–31 provide Anat's specific response to Baal's invitation. The narrative rubric of lines 21–22 that opens the speech is more substantial than the usual one-line introduction:

wt'n btlt ['']nt.
tṯb/[ybmt] l'imm

According to Watson (1983:256, 260), this expansion of the regular pattern (*w* + **'ny* + PN) marks what follows as a key passage. It is connected to the preceding narrative by the use of *w-* + **yqtl* indicative (*wt'n*), and it is augmented by the parallel **yqtl* indicative form, *tṯb*.

The lines of the speech in lines 22b–31 contain a clear structure revealing Anat's favorable response to the Cloudrider's communication:

A Anat declares her agreement to desist from war (the two bicola in lines 22–25)
  B Anat declares her hopes for the situation that will result (the bicolon in lines 25–27)
A' Anat repeats her agreement to desist (the two bicola in lines 27–31)

A and A' closely match one another in wording. Both lines 22–24 and 27–31 have two bicola, four lines, each of which begins with the consonant, *'a-* (Watson 1980:446). Watson (1994b:433) offers a daring interpretation of the significance of the pattern of initial sounds in Anat's entire speech (lines 21–36). He notes that the speech is made up

of series of cola beginning with the same sound: lines 22–24 with *ʾa*, lines 25–27 with *y*, lines 27–31 with *ʾa*, lines 33–35 with an initial *ʾ*, and lines 35–36 with *t*. The only line that doesn't follow the pattern is line 32b: *lk lk ʿnn ʾilm*, "Go, go, divine servants." From this Watson argues that line 32b must be the "main content of her message and therefore the focus of interest." While it is clear that initial alliteration is indeed a significant poetic device here, the content of the speech argues against viewing this one line as the central element of Anat's response. In fact, her assent to Baal invitation and her announcement of her immediate departure are more central to the speech than line 32b.

Lines 22–25 and 27–31 closely follow the wording of Baal's commands delivered in 1.3 IV 8–10 and earlier in III 14–15 (and also by El to Anat in 1.1 II 19–21; cf. *UBC* 1.202–09), with the imperatives changed into first person imperfects. One additional element, the first person independent pronoun, *[ʾa]n*, appears in the first line of the speech. The pronoun in this context is not grammatically necessary since the verb that follows it is first person singular. Adding the personal pronoun in this manner may be viewed (see *UBC* 1.180 n. 125) as a means to emphasize Anat's agreement to Baal's summons. It is possible, but not necessary, to regard the pronoun as a *casus pendens* ("As for me, I will…"). The repetition of the content of lines 22–25 in lines 27–31 probably serves to confirm her willingness to accede to his wishes.

The bicolon in lines 25b–27a introduces the only new content into this part of the conversation between Anat and Baal's messengers. In response to Baal's promise to reveal his profound secret, Anat expresses a wish in this bicolon which, because of its damaged state, has occasioned considerable debate over its reconstruction and significance (see *Baal* 67–69; de Moor 1966, *SPUMB* 109; Good 1984:81; cf. Batto 1987:200–1). The common reconstruction reflected in these treatments is the following:

yšt/[bšmm.]bʿl.mdlh.	"May Baal set his bolts [in the Heavens],
ybʿr/[ʾil.hd. q]rnh.	May [the god Hadd] radiate his ['ho]rns'."

The reading of the first colon has been improved with the recognition of parts of the *b* at the beginning of line 26. The restoration *šmm* seems quite plausible, though it is by no means certain. The restoration of the second line has also been illuminated by collation of the tablet. It is evident that the second line calls for a title to match the mention of Baal's name in the first line. With the improved reading which shows evidence of the letters *pt* on the line, it is clear that the epithet here is

[rkb ʿr]pt, "Clo[udrider]," rather than the proposed [*ʾil hd*]. This title is especially appropriate to this sort of meteorological setting, and as indicated in the epigraphic notes, the reconstructed letters fit nicely into the damaged space before *]pt*.

The word *mdl* is attested as a meteorological phenomenon associated with the rainstorm in 1.5 V 6–8. This passage lists *mdlk* with clouds, wind and rain. But the exact meaning of the word in this context is uncertain. The word as a noun appears nowhere else in the Ugaritic texts and its etymology remains obscure. Three main interpretations have been proposed. First, a verb, *mdl*, appears in Ugaritic in 1.4 IV 9 and 1.19 II 3, 9, where it clearly has to do with harnessing a donkey. Some have argued that the noun *mdl* here means something like "harness," and is intended to evoke the image of Baal's storm chariot (Weider 1965:164; cf. also *Thespis* 210 and *Baal* 68, n. 1). This is the common mode of transport for Near Eastern storm-gods. The Sumerian storm-god Ishkur is said to ride on the storm (*CT* 15, pls. 15–16, line 7; see *ANET* 578). His "seven storms" are harnessed for him to ride (line 17). Marduk's storm-chariot is described in Enuma Elish IV:50–51. If this is the correct interpretation of *mdl*, the list of elements in 1.5 V 6–8 is paralleled precisely by the Storm-god's weaponry in the Kumarbi myth: "rains," "winds," "clouds" and "carts" (Güterbock 1952:14–17, tablet 2.III. 9'–13'; Weinfeld 1973:424). Yahweh likewise rides a meteorological chariot, assumed in a number of biblical verses (e.g., 2 Sam 22:10–11 = Ps 18:10–11). The storm chariot becomes a central image in the biblical book of Ezekiel (see especially chapters 1–3). Baal's common epithet, "Cloudrider" (*rkb ʿrpt*), assumes the context of a storm-chariot (see *EHG* 50; cf. **rkb* for Adad, for example in Atrahasis, see Lambert and Millard 1999:122, 123, in line 5 of the rev. of the Assyrian recension U). In spite of the frequent occurrence of this imagery, however, the use of a term that might mean "harness" to refer to the storm chariot is not elsewhere attested and may seem excessively allusive in this context.

Second, a rather obscure Akkadian noun, *mu-du-lu*, "pole," also has been proposed as a cognate (de Moor 1966; cf. *SPUMB* 109; *Baal* 67–69). From this etymology, de Moor suggested that the word might have the meaning of "bolt," with an extended meaning in a meteorological context of "lightning bolt." This etymology seems unlikely. The clear cognates of the Akkadian word are BH *mǎṭîl* and Aramaic *mĕṭal*, both of which also mean "pole or javelin." This strongly indicates that the Akkadian word, which is only attested in a single Sumerian/Akkadian

lexical text, and has not yet appeared in a literary context, should be read as *mu-ṭù-lu*, rather than *mu-du-lu* and that it has no relationship to *mdl*.

Third, Gaster (*Thespis* 210) proposed connecting the word with Akkadian *madlû*, "bucket, pail," from the root, **dly*, also attested in BH as a verb, "to draw water." He suggested that in the Ugaritic context the term refers to the objects from which the rain is poured out. Pardee (1997a:253, cf. n. 95) follows this etymology, rendering the word, "watering devices." This proposal has the advantage of deriving the word from a root with a transparent connection to water.[22] Though it remains uncertain, the first view remains preferable to the other two proposals, in view of its connection with traditional storm-god imagery and the attestation of *mdl* elsewhere in Ugaritic.

We have discussed above the restoration in the first gap of line 27 and have argued that it reads *[rkb ʿr]pt*. This leaves the issue of a restoration for the latter part of the colon, *]rnh*. The most common suggestion has been *[q]rnh*, "his horns," generally understood to refer to lightning. Another possibility, proposed by Pardee (1980:278), but later rejected by him (1997a:253 n. 95),[23] is to read *[mṭ]rnh*, i.e. *mṭr*, "rain," with sufformative *-n* (cf. Smith 1984a:297). Space considerations make this reading less likely, since an *m* and *ṭ* would have to fit very snugly into the break between *pt* and *rnh*. But it is indeed a possible restoration. In this case, the verb *ybʿr* would not mean "to burn, to radiate," as it would if reconstructing *[q]rnh*, but "to bring" as in 1.14 II 48 and IV 27. *Mṭr* and *mdl* appear together in the list in 1.5 V 8–11, but *mṭr* does not have a sufformative here or elsewhere. If the reconstruction of *[q]rnh* is correct, then the "horns" might refer here metaphorically to Baal's double-lightning attested in iconography. A similar radiance from the head of a god is attested in the description of Marduk as he

[22] Good (1984:81) has proposed that **mdl* might underlie the very difficult text in Hab 3:4, which reads, *qarnayim miyyādô lô*, "(With) his rays (literally, horns) from his hand." This passage, like ours, appears in the context of a theophany, and, if the reconstruction [*q*]*rnh* is correct, they both contain the noun *qrn*, "horn" (cf. also Batto 1987:201 n. 42).

[23] Pardee rejected this reconstruction because he read the wedges that we read as *pt* in the center of line 27 as an *r*. So he proposes reading *mṭr* as the word before the one that ends *]rnh*. If our reading of the line is correct, then Pardee's reason for not reading *[mṭ]rnh* is moot.

prepares for battle with Tiamat (Enuma Elish IV:39–40, 58; for cognates of *bʿr*, see *SPUMB* 109).

The thrust of this bicolon seems to be Anat's desire for Baal to manifest his royal power in the cosmos, perhaps as a sign to the world that hostilities have now ceased. (This sign may then be compared to the bow which Marduk hangs up after battle in Enuma Elish VI:82–90 and the rainbow in Gen 9:12–17, as suggested by Batto 1987.) The manifestation of this sign will initiate an era of divine well-being, human peace and natural fructification. It may be inferred from the larger narrative of the cycle that because this sign is expressly given by Baal after he installs the window in his palace (1.4 VII 25–31), the palace marks the new era of universal fructification. From here on the narrative will move, albeit somewhat laconically, toward the climax of the construction of Baal's palace.

The beginning of the second part of Anat's speech is marked by the expression in lines 31b–32a, *ʾap mṯn rgmm ʾargmn*. This appears to be a common way to raise a second topic in a speech (see 1.4 I 19–20 and 1.17 VI 39). In a rather different context, two omen texts, *mṯn rgmm* is best rendered, "ditto" (1.103 + 1.145.6,18, on which see *TO* 1.171; Dietrich, Loretz and Sanmartín 1975b:136–37; Pardee 2000:555, 1211 and 2002:139; and 1.86.10, Pardee 2000:465, 1211 and 2002:146). A Ugaritic letter also seems to contain the word *mṯn[* (2.60.1) in a broken context, but its usage in a letter comports with its occurrences in the literary texts. Etymologically related to *mṯn* is Akkadian *šanītam*, "a second (matter)," which provides a parallel also in usage to the Ugaritic literary and epistolary contexts. As in the Ugaritic literary texts, *šanītam* regularly introduces a new topic in letters from Boghazkoi, Byblos (e.g., EA 126:14), Mari, Rimah, Taanach and Ugarit.[24] The geographical distribution would suggest a West Semitic provenience for the usage.

In the first bicolon of this part of her speech (lines 32–33), Anat commands the messengers to depart with an urgency expressed in the double use of the imperative (cf. *ʿûrî ʿûrî* in Judg 5:12 and Isa 51:9 as a double imperative to battle). The second line contrasts the messengers' apparent delay with Anat's determination to hasten toward Baal. In the second bicolon, lines 34–35a, Anat indicates the great distance of

[24] For a listing, see *CAD Š/*1:387b–88a. The West Semitic usage continues to be shown in more recently published texts from Mari: see, for example, A.999.59, 71 in Durand 1988:83; A.163+A.4240.66 in Durand 1988:88; A.416.19 in Durand 1988:92.

her abode from Baal's mountain as a reason for the urgency of her command that the messengers leave and for her immediate departure. The bicolon may presume the conventional notion that the deities cover enormous, superhuman distances in their travels (e.g., 1.4 V 22–24; cf. the distance of fifty *bēru* or over 500 km per day covered by Gilgamesh and Enkidu in the Gilgamesh Epic IV:34–36; George 1999:31; for *bēru*, often translated "league," see *CAD B*:208b–211a. For this case and other examples, see Hallo 1996:79).

The third bicolon, lines 35b-36, seems to describe the underground route which Anat presumably will take on her journey to Mt. Ṣapan. The two difficult words here are *mṯpdm* and *mṯḥ*. Context suggests that both of them are terms of distance or measurement. Unfortunately, no precise cognate has appeared for *mṯpdm*, although several scholars have cited Arabic **ṯfd*, "one thing set upon another" (see Renfroe 1992:154; *UBC* 1.183; *DUL* 605–6). The proposed cognate would suggest "layer" or the like. However, the site of Emar has recently provided a precise cognate for *mṯḥ* in texts containing instances of *mataḫu* specifically used as a measurement of length, for example in a legal contract for the sale of a field (Beckman 1996:84; Mori 2003:105; see also Emar 168:14' and Arnaud 1991:11). This Akkadian cognate from Emar suits the Ugaritic term both etymologically and semantically (Pentiuc 2001:123). The word is also attested in texts from Ekalte and Tell Hadidi (for references, see Mori 2003:105 n. 19; cf. the less precise cognates, Arabic *mattaḥ*, "long," Lane 2688; Akkadian *matāḫu*, "to carry, transport; to lift," *CAD M/1*:403b–405a; BH **mṯḥ*, "to stretch out" in Isa 40:22; *DUL* 599; *HALOT* 2.654). Given the lack of a plural ending for *mṯḥ*, it seems evident that this word is best understood syntactically to be in construct with the noun that follows, *ġyrm* (cf. *UBC* 1.183). Most commentators have construed the numbers at the beginning of each line (*ṯn* and *ṯlṯ*) as being in construct with the two measurements that follow them (e.g., Pardee 1997a:253). However, the occurrence of *mṯḥ* in construct here might suggest instead that both lines are either nominal clauses ("two are the *mṯpdm*'s beneath the springs//three, the *mṯḥ*-lengths of the caves") or appositional ("two, the *mṯpdm*'s beneath the springs//three, the *mṯḥ*-lengths of the caves"). This syntactical interpretation is paralleled elsewhere in the Baal Cycle (1.4 VIII 12–14). Semantically, the bicolon in lines 35–36 elaborates upon the distance of Anat's home from Mt. Ṣapan mentioned in the preceding bicolon, and so implicitly the lines are to be understood: "two are (their, i.e. UGR and INBB) *mṯpdm*'s (of distance) beneath the springs//three, the(ir) *mṯḥ*-lengths of the caves."

This section of Anat's speech closely parallels Kothar's response to El's messengers in 1.1 III 17–21 (for full discussion, see *UBC* 1.44, 181–84). Both involve three sets of bicola: (i) a command to depart (1.1 III 17–18; 1.3 IV 32–33); (ii) a nominal sentence expressing the great distance of the deity's home from the destination (1.1 III 18–19; 1.3 IV 34–35); and (iii) nominal clauses in apposition describing the great distance beneath the earth's surface (1.1 III 20–21; 1.3 IV 35–36). Only the names of divine abodes differ in these two parallel passages. Here Anat calls her home *ʾugr* and *ʾinbb*. It is also attested (as *ʾinbbh*, with locative *-h*) in 1.100.20. Ginsberg (*ANET* 137) took the name as possibly Hurrian meaning "god's mountain" (cf. Hurrian *eni*, "god (or goddess" in *GLH* 80). Clifford (*CMCOT* 86–87) regarded these words as generic nouns for mountains. However, these terms do not appear as words for mountains outside of these very specific contexts, and there is no doubt that *ʾinbb* is a GN in 1.100, since throughout that text various gods are located at specific places, including Baal at Mt. Ṣapan (line 9), Dagan at Tuttul (lines 14–15), etc.

Lines 37–55: Anat's Travel to Baal and Their Meeting

Lines 37–55 describe Anat's journey and her meeting with Baal. The first bicolon, lines 37–38, marks the shift in scene from Anat's home to Baal's. The use of the particle *ʾidk*, followed by the asseverative *l-* and the idiom *ttn pnm*, "she sets the face" explicitly marks the shift in the narrative (Piquer Otero 2003:232; see *UBC* 1.167). The idiom denotes "to start out toward, to proceed" (for references, see *UBC* 1.165), comparable to the Akkkadian idiom, *šakānu panu* (*CAD Š/1*:139, #5a). One may note also the use of *ʾid* following a passage marked off by a scribal line in 1.41.50.[25] The second line of the bicolon refers to Anat's destination as, "the heights of Ṣapan," which is exactly paralleled in the description of Baal's location in 1.100.9 (see also 1.4 V 23).

While Anat is still a great distance from his mountain, Baal catches sight of her approach (lines 38–40; for the verb *yʿn*, see the commentary to 1.3 I 23 on p. 116 above). As discussed above (p. 285), the first line of this tricolon is a well-attested formula, used either to indicate the long distance traveled by a deity, or the great distance from which someone is seen, as here. The fronting of the prepositional phrase in

[25] Cf. also the compositional structure—and also sometimes redactional technique—of BH *ʾz* plus **yqtl*.

this line marks a shift in perspective from the person of Anat to that of her brother.

The second and third lines of the tricolon begin with a word pair, the nouns *hlk//tdrq*. The first is a common West Semitic root, probably the infinitive ("construct," so Sivan 1997:125; for a similar construction, see 1.17 V 10–11). The second, either a *t-* preformative (verbal?) noun (*WUS* 794) or infinitive (*UT* 8.48), has been compared with Arabic *daraqa*, "to reach, overtake, follow" (Lane 873–74; cf. Dietrich, Loretz and Sanmartín 1974:24–25, 37; Huehnergard 1987b:120). The only syntactical question for the second line involves the placement of the verb at the very end. In a parallel usage in 1.4 II 13–14, the asseverative *k-* particle prefixed to the verb shifts the verb to the end of the clause; whether such an understanding is implicitly operative in the placement of the verb in the final slot in 1.3 IV 39 cannot be determined. According to Sivan (1997:213), the subject plus verb serve as a "pivot" between the two object phrases preceding and following.

These two lines also provide parallel epithets of Anat. The first is common, but the second is enigmatic. In the second line of the tricolon she is called *'aḫth*, "his sister," which is common enough. But the parallel epithet in the third line is *ybnt 'abh*, whose meaning is unclear. As noted above in the Textual Notes, the scribe may have begun to write *ybmt l'imm*, but then perhaps switched after the second letter to *bnt 'abh*. We have rendered the phrase in the translation tentatively as "Daughter of his Father," while indicating the possible element of *ybmt*, "In-law," as underlying the peculiar form that is present here. It is usually assumed that Anat's father here is El, but it is to be borne in mind that Anat is well attested as Baal's sister and that Baal's paternity is hardly simple (see Introduction on pp. 51–2). Baal's familial status in the Ugaritic texts and his sibling relationship to Anat raises a question about her own family status: how was Anat's paternity understood, or was it just not regarded as an issue?

In the next tricolon, lines 40–42, Baal's response at his sighting of Anat is a positive one. Immediately he prepares an extravagant meal for her. Preparations for hospitality customarily follow directly on the host's sighting of the approaching guest (1.17 V 9–25; cf. Genesis 18; Xella 1978), but Baal first attends to one further detail. Baal dismisses his "woman" or collectively "women," presumably Pidray, Tallay and Arṣay (see p. 49) or simply one of them. The **qtl* form of the verb *šrḥq*, an initial *C*-stem form standing in initial position, may convey either circumstantial information or, less likely, the beginning of a new nar-

rative section or subsection. From lines 40–42, it might be suggested that Baal has been engaged at his banquet, first mentioned in 1.3 I, throughout the narrative action of 1.3 II through 1.3 IV 38. Baal seems to set these women aside in order to deal with the presumably more weighty matter of enlisting Anat in his plan to acquire permission for his palace's construction. As discussed above in the Commentary to 1.3 I 22b–25, Baal has perhaps been engaging in sexual relations with these females, who are called his *klt*, his "brides" (or perhaps his "fiancées," cf. the BH, *kallāh*; see discussion above on p. 119). It has often been argued that Anat is not only Baal's sister, a familial relation expressed explicitly in the texts, but also his lover as well. This relation, however, is not clearly indicated in the texts, as pointed out by Walls in his fine study of the goddess (1992).[26] Unfortunately, the texts that suggest sexual relations between Baal and Anat are all damaged enough to prevent a clear understanding of them. To these, however, may be added an Egyptian text, "The Contest of Horus and Seth for the Rule," in which Anat and Astarte are described as the daughters of Re and the wives of Seth,[27] commonly identified as the local Egyptian substitution for Baal. In addition, a sixth or fifth century Aramaic funerary stele from Egypt calls Baal "the husband of Anat" (Dupont-Sommer 1956:79–89). These two Egyptian texts, of course, cannot prove that at Ugarit Baal and Anat were viewed as husband and wife, but they are suggestive enough that the issue must remain open for now (cf. Good's critique in 1994:149 n. 8).

The second and third lines of the tricolon (41–42) describe Baal's presentation of food to his sister. He sets a prepared, fattened ox//bull before her (*'alp//mr'i'a*). The second of the two phrases for "before her" (*wtk pnh*) is interesting. The phrase literally means, "and in front of her

[26] For example, one text commonly cited as providing evidence for sexual relations between Baal and Anat, 1.10, does not in fact do so. In this case, where Anat is identified with a cow that has sexual relations with Baal and produces a calf, Anat actually plays the role of the announcer of the offspring's birth (and perhaps nursemaid as well). It is unlikely that Anat would be both the producer of the offspring and the announcer of the birth.

[27] *ANET* 15. The value of this evidence for Anat as Baal's consort has been challenged, however, by Te Velde 1967:29–30), seconded by Walls (1992:144–52) and P. L. Day (1991, 1992). Te Velde's chief argument is that except in this one text Anat is otherwise never called the consort of Seth. On the one hand, the uniqueness of this characterization of Anat might be viewed as arguing in favor of its authenticity as a witness to the West Semitic tradition, but on the other hand, Te Velde may be correct that it is better understood as an eccentric text.

face." The *w-* is placed in this context for emphasis, a usage known as the "pleonastic *waw*" (see Pope 1953; *UG* 783–84). Thus we render, "A fatling right in front of her." The emphasis here on the proximity at which he places the food before Anat suggests the joy and enthusiasm with which Baal is greeting his guest. (This proximity arguably contrasts with the distance at which Baal has placed his women in the first line of the tricolon.) The description of the feast here is somewhat abbreviated compared to other examples of such events (1.17 V 13–31), but this short account is not unparalleled: Baal's feast for Kothar in 1.4 V 44–46 is similarly described. To both Anat and Kothar Baal serves steak, namely the cooked meat of the best animal. The high life of the pantheon involves the same menu as royal feasts, fitting fare since the pantheon is a divine royal family.

The brief account of the feast is followed immediately in the text (lines 42–46) with Anat washing and beautifying herself. The language of this section is largely duplicated in the account of the goddess washing after her battle in 1.3 II (see the Commentary there, pp. 190–93).[28] Lichtenstein (1977:35–37) suggests that the banquet in our passage concludes with Anat anointing herself, by drawing evidence from Mesopotamian banquet accounts where the anointing of guests follows the feast. The fact that the verbs *thspn* and *ttpp* in lines 42 and 45, respectively, are **yqtl* indicative forms in an initial position, suggests that this passage is to be understood as a continuation of the action of the preceding narrative. Accordingly, the verbal syntax accords with Lichtenstein's understanding of this passage.

A lacuna of approximately fifteen lines follows here before the badly damaged small fragment provides parts of the last eight lines of the column (lines 48–55). Much of its content may be inferred from parallels to this part of the narrative. When the text resumes in line 48, Baal is in the middle of a speech bemoaning the fact that he has no palace, the pre-eminent sign of divine kingship. This speech is repeated three additional times in the next several columns (1.3 V 29–44; 1.4 I 4–18; and IV 40–57), so our fragmentary passage here can be reconstructed with a great deal of confidence. There can be little doubt that Baal is the speaker here, since Anat specifically responds to the speech in line

[28] The only difference between the two passages is that 1.3 II contains a line (lines 39b–40a) that is missing from 1.3 IV. It should also be noted that the fragmentary beginning of column II (lines 2–3) indicates that Anat beautifies herself before the battle too.

53 (*wtʿn [btlt ʿnt]*). Only the left sides of the lines on the small fragment are preserved, and the speech is already in progress on the first preserved line. The parallel sections in 1.3 V and 1.4 IV contain two bicola prior to the point where the extant text of 1.3 IV picks up (line 48) that probably are part of the speech here:

[ʾany.]	[In lament]
[lyṣḥ.ṯrʾil.ʾabh]	[He indeed cries to Bull El his Father,]
[ʾil/mlk.dyknnh]	[To El the King who created/established him.]
[yṣḥ.ʾaṯrt/wbnh.]	[He cries to Athirat and her children,]
[ʾilt.wṣbrt.ʾaryh.]	[The goddess and the band of her brood:]

On the face of it, Baal might not be expected to speak of himself in the third person to Anat, as this reconstruction assumes. Baal is Anat's intimate, and the first person would seem more appropriate. However, the third person may fit the context here better. Since the extant part of the speech is reiterated by Anat to El in V 30–44, then it seems likely that the version here is being given by Baal as part of his instructions to Anat on what to say to El. Since messages tend to be repeated verbatim or virtually so, Anat's delivery of the message in 1.3 V 29–45 should provide the text for our passage. There she uses the third person in speaking of Baal from lines 35–38, i.e., the two bicola we have reconstructed above, and the first line of the complaint, "There is no house for Baal." It would be highly unusual for a messenger to change persons in delivering a message (see, for example, 1.2 I 16–19//33–35; 1.3 III 11–31//IV 7–20).[29]

It is less certain whether Baal's speech here would have included any of the earlier lines with which Anat opens hers in 1.3 V 30–34. Messengers sometimes preface their message with their own words (cf. 1.3 IV 5–6 just above), and all these lines may be such a preface. But they also could be an element of Baal's careful instructions to Anat and thus be part of the content of our lacuna. The two bicola that occur in 1.3 V 32–34 in particular may be legitimate to reconstruct in here:

[mlkn ʾalʾiyn bʿl]	Our king is Mightiest Baal,
[ṯpṯn ʾin dʿlnh]	Our ruler, with none above him.

[29] The broken state of the small fragment would allow for one to reconstruct the first line of Baal's complaint as *[wn ʾin bt] l[y kʾilm]*, "For I have no house like the gods," following a parallel text, CAT 1.117.5. But the fact that the message is repeated elsewhere with *lbʿl* each time argues for reading the latter here as well.

[klnyy qšh nbln] All of us will bring him a gift,
[klnyy nbl ksh] All of us will bring him a cup.

In the other presentations of this message, these lines are critical because they introduce the name Baal, which otherwise does not appear until the line "Baal has no house like the gods." The appearance of the name here is the only indicator of who is "crying out to El his Father." They are also fundamental to the whole speech, since they alone give the rationale for Baal's argument that he needs a palace. It thus seems likely that they should be reconstructed here.

Other elements that probably occurred in the lacuna include the introduction to Baal's speech to Anat, commands to set her face toward El and to travel to his abode, and an introductory formula to the speech (cf. other examples of this type of scene in 1.2 I 13–17; 1.3 VI 7–25).

Baal's speech here is a lament without a specific request. This is unusual. Laments in prayer (rather than literary settings) generally include a direct address to the deity ("O DN"), a request of that divine party, and a complaint of the lamentable state which only answering the request will relieve. The complaint (lines 48–53) is introduced by the third-person introduction, beginning, in its fully attested form in 1.3 V 35, with the verbal form, *ʾany* (probably a participle or **qtl* indicative form), a term which denotes the speech-act of lamentation. Within the message proper, Baal does not speak for himself, but rather sets the speech up as coming from Anat. Perhaps there is a sense here that it would be inappropriate for Baal to make such a request of El in his own voice. And perhaps the lack of a specific request here also has to do with court etiquette, for which we have no evidence, however. In any case, the request is obvious, but remains unspoken. The third-person character of the speech also requires the dropping of the standard invocation, "O, DN," which in the speech is instead described: "he cries to Bull El, his father."

The transition from the introductory part of the speech to the complaint proper is marked by the particle *wn* (line 47 reconstructed from 1.3 V 38).[30] This type of complaint, i.e., comparing one's lack relative

[30] Cf. Watson 1994a:230; for the form, see *UT* 12.9; *PU* 1:65 and n. 4; *UBC* 1.257 n. 77. The particle *wn* arguably consists of coordinate *w-* plus *-n*, analogous to adversative or contrastive *p-* plus *-n* (in BH, *pn*, "lest"; so also in 1.114.12, so *DUL* 674). Might *hn* be understood accordingly as deictic *h-* plus *-n*? If so, final *-n* in these three particles might serve to explicitly mark it as governing a clause.

to others, is a traditional *topos* of the lament. 1.2 III 19–22 describes a god (either Athtar or Yamm; see *UBC* 1.258) making a complaint about his lack of a house and wife, "like the other gods" (*UBC* 1.253). The same sort of complaint appears also in 1.17 I 18–19 where Baal speaks to El on behalf of Danil that he "has no son like his brothers, nor offspring like his kinsmen'" (*d'in bn lh km 'aḫh wšrš km 'aryh*). The latter passage is further noteworthy since it, like ours, involves a divine intercessor stating the lament on behalf of another party (see further Parker 1989b:69). It might be suggested then that the model for the presentation of Baal's lament to El via Anat in 1.3 V (and later by Athirat in 1.4 IV) is not so much a general liturgical lament, but specifically the image of the personal god interceding before a chief god on behalf of his or her human devotee. Job 33:22–23 also appears to reflect this concept in the form of the heavenly "angel" who speaks for the suffering righteous in the divine assembly (cf. Job 16:19, 19:25; *CMHE* 180; Ross 1975). On a human level, one can see a similar intercession in 1 Kgs 1, where Bathsheba, Solomon's mother, speaks on Solomon's behalf to David concerning his appointment as successor to the throne (see the Introduction above, p. 17).

The content of Baal's lament reflects a widely held royal concern: the importance of the palace as a symbol of the king's status. This concern is expressed, for example, by the monarch Bar-rakab in KAI 216:16–19, as noted by Hurowitz (1992:103; see *ANET* 655):

wby(t).ṯb.lyšḥ.l'bhy.mlky.šm'l	And my fathers, the kings of Sam'al, had no good house.
h'.byt.klmw.lhm	They had the house of Kilamuwa;
ph'.byt.štw' lhm	So it was a winter house for them,
wh'.byt.kyṣ'.	And it was a summer house (for them).
w'nh.bnyt.byt'.znh	But as for me, I have built this house.

Baal is, at this point in the narrative, a king without a castle, as Gaster (1944) aptly called him. It is not that he has no house. The events concerning Baal on this entire tablet presuppose that he is living in a house on Mt. Ṣapan. But it is not a house appropriate for the king of the gods. Thus some of the complaint in the lament may be seen as containing elements of exaggeration and hyperbole.

The complaint itself (lines 48–53) is striking. It is composed of a series of nominal clauses (APO), which are all closely linked together by a series of repeated nouns (*mṯb, mzll* and the additional synonyms, *bt* and *ḥẓr*), each emphasizing what Baal lacks. In addition, an alternation of familial expressions runs through this part of the speech:

A Lament to El his father (first reconstructed bicolon)
B Lament to Athirat and her children (second reconstructed bicolon)
A' No house like the gods, *'ilm* (first line of the bicolon; line [47])
B' No court like the children of Athirat (second line of the bicolon; lines [47b]–48a)
A'' The dwelling of El/his son (first line of the bicolon; lines 48b–49a)
B'' The dwelling of Athirat (second line of the bicolon, plus the following two bicola; lines 49b–53)

Except for A', the complaint alternates between the names of El and Athirat. (By way of paranomasia, A' is not fully exempt from this alternation, for even though the name of El is absent, in its place is the virtual homonym *'ilm*.) Each bicolon will be addressed in turn.

The first of the two reconstructed bicola identifies Baal's act as a lament (**'any*),[31] which he intends to have addressed to "Bull El, His Father." The phrase *dyknnh* in the second line is slightly ambiguous and can be taken in two ways, "who established him" or "who created him." In the first interpretation of *dyknnh*, Baal is emphasizing the fact that El has already approved Baal's appointment as king, and thus should also approve the building of a palace. This usage may be compared with 2 Sam 7:13, "I will establish (*kōnantî*) the throne of his kingship forever." But the *D*-stem ("polel"/*L*-stem) of **kwn*[32] is also used to refer to the creation specifically of a person, for example, in Job 31:15 "Did not the one who made me (*ʿōśēnî*) make him, and did not One create us (*wayĕkūnennû*) in the womb?"(*EUT* 50). This is the nuance evidently intended here, since the immediate context of the passages emphasizes family. A similar argument would apply to the description

[31] This form is evidently *G*-stem active participle, 3 masc. sg., nominative case or possibly **qtl* indicative masc. sg. The root is **'ny*, evidently a verb of speech attested also in the *t-* preformative forms *t'ant/t'unt* (*SPUMB* 107; *CMCOT* 68–69). The typical translation is "groaning," (Gibson *CML*[2] 159;Watson 1983:263; Pardee 1997a:255; Wyatt 1998:87; cf. *MLC* 191: "suspirando." Cf. also BH *'ny*, "to groan." and Ugaritic *'un*, "complaint" (CAT 1.79.3; see Pardee 2002:119). The specific nuance of lamentation was at one time thought to occur with this root also in 1.16 I 8 and II 46, where the word was thought to be written *'any* in 1.16 I 8, but *nny* in 1.16 II 46. Recently, scholars have been taking the latter as the correct reading, rather than the former (cf. Dijkstra (1991:337) and Greenstein, *UNP* 31, 35 and 46 n. 109, following Bordreuil 1989; cf. Brody 1998:15–16 n. 30). In fact, the upper line of the letter in 1.16 I 8 shows indications that there are three wedges here, and thus that the letter is *n* in both occurrences, as read by CAT.

[32] For the *L*-stem form as the *D*-stem of middle weak and final weak verbs, see Sivan 1997:159, 174.

of Yahweh in Deut 32:6 with the same verbal form: "Is he not your father, who fashioned you, who made you and created/established you (*waykōněnekā*)?" The root **ʿśh* in this context would likewise militate in favor of the meaning "to create" rather than "to establish." These terms and the titles that follow show Baal's capacity to invoke the pantheon's head as his father,[33] even though technically El would not seem to be Baal's "birth-father" (cf. Baal's appellation elsewhere, *bn dgn*, "son of Dagan"). These epithets are standard ones for El, but in this context they may further indicate Baal's generally belonging to the family of the gods and even his acknowledged need of El's help. He therefore addresses El with conventional titles, perhaps as a signal of traditional respect expected especially from someone requesting help from El.

The second reconstructed bicolon adds Athirat and her family as invoked parties of the lament. Both this and the previous bicolon (attested clearly in 1.3 V 35–37 and 1.4 IV 47–50, and less so in the badly damaged 1.4 I 4–8) are governed by the same verb, *yṣḥ*. This suggests that both bicola may be understood as referring to a single act of lamentation directed at El and Athirat and their royal family. Athirat's children are first called "her children," *bnh*, and then the "band of her brood" ([*wṣbrt ʾaryh*]). The first term, *bnh*, has usually been rendered more literally as "her sons," but the banquet scene in 1.4 VI 38–59 specifically describes the *bn ʾaṯrt* as including both gods and goddesses (see the discussion below, pp. 628–30). The first word of the second phrase refers to a collection or grouping, therefore Athirat's "band" (Gordon 1977:110 n. 77; see also Pope in Smith 1998b:654). The BH meaning of **ṣbr* is "to heap up," as a verb used for grain in Gen 41:35, 49 and dead frogs in Exod 8:10, and "a heap" as a noun referring to severed heads in 2 Kgs 10:8 (MHP). Applied to people in Ugaritic and post-biblical Hebrew, it signifies a group or community.[34] Within our context, it designates Athirat's extended household of the pantheon. The second word **ʾary* is more ambiguous; the parallelism would suggest a familial designation. Different cognates have been proposed. Gordon (*UT* 19.349) compared Egyptian *iry*, "companion." Pope, assuming that the language of an animal group stood behind the term (1977b:34, 504–5), compared the Arabic use of *ʾry* with reference

[33] It may be noted that in the Hurrian-Hittite story of "Elkunisha and Ashertu" (*ANET* 519; Hoffner 1998:90–92), the Storm-god addresses Elkurnirsa as "father."

[34] So *UT* 19.2142; Dietrich and Loretz 1974:35; *TO* 1.193; Heltzer 1976:70–71; *MLC* 613. For this usage in post-biblical Hebrew, see Pirqe Abot 2:2 (Jastrow 1274).

to a manger and eating at the same manger (with another animal); Pope also proposed a verbal use of the root in Ps 80:13, meaning perhaps "to eat." He further connected the word to BH *'aryeh*, "lion." However, this element of the etymology seems less likely now that the word for "lion" in Ugaritic has turned up as *'arw* (CAT 6.62.2; *DUL* 111; cf. M. Cohen 1947:83, #34).[35] Renfroe (1992:83–84) notes Akkadian *ayaru*, "young man" (*CAD A/1*:230). *DUL* (111) compares Hittite LÚ *ara-* as well as Egyptian *'iry* and Akkadian *erâ/irâ* (an adverb meaning "side by side"; *CAD E*:254). As the proposals of Gordon and *DUL* would seem to suggest, a loan-form may be involved. In any case, the language evidently denotes here a family unit. The same word occurs in 1.4 VI 45 in a tricolon that also deals with the children of Athirat. Here the word is paralleled with "his brothers," *'aḫḫ*, and with "the seventy, the children of Athirat." Baal's relationship with the children of Athirat is rather rocky. Although he holds a feast for them in 1.4 VI 38–59, he eventually fights and defeats them in 1.6 V 1–4 (cf. Ashertu's 77//88 sons whom Baal slays in the West Semitic myth of Elkunirsa, attested in Hittite-Hurrian; *ANET* 519; see Beckman 1997). El and Athirat act together in 1.6 I in regulating the course of divine politics, and in our passage Baal expresses the reality that their support is required to secure recognition of his own divine kingship. Yet Baal does not ask for the support of El and Athirat only; his lament implicitly enlists the support of their children. In general, the family of El and Athirat generically constitutes the pantheon, and this list of invoked parties betrays Baal's problematic status. It is evident from the second bicolon that Baal himself does not belong to the family of El and Athirat properly speaking (see the discussions at *UBC* 1.91–94; Smith 2001a:34, 61–66).

The complaint in lines 47–53 compares Baal's unfortunate situation to that of several other gods who live happily in theirs. The point of this section is quite clear, but the exact syntax involved is ambiguous. Two primary interpretations have been proposed. Driver (*CML*[1] 89), Caquot and Sznycer (*TO* 1.172–73), Pardee (1997a:253) and Wyatt

[35] One should note, however, that an originally III-*w* root may retain the final *-w* root letter in some forms but otherwise may conflate with III-*y*. For example, *bnwt* and *bnwn* but **bny* elsewhere, or even both forms in a single expression, *bny bnwt* (see *DUL* 233; and below p. 447). Whatever the relationship between the two roots, the Hebrew pun that Pope sees in Judg 14:14 (connecting the reference to "eater" with the "lion," but without mentioning the root *'ary*), is still plausible.

(1998:83–84) read the entire list of dwellings as a list of deities who possess palaces in contrast to Baal:

> For Baʿlu has no house as (do) the (other) gods,
> no court as (do) the sons of ʾAthiratu,
> No dwelling (as does) Ilu, (no) shelter (as do) his sons,
> (no) dwelling (as does) the great Lady, ʾAthirat of the Sea,
> (No) dwelling (as does) Pidray, daughter of ʾAru,
> (no) shelter (as does) Tallay, daughter of Rabbu,
> (no) dwelling as does ʾArsay, daughter of Yaʿibdarru,
> (no) dwelling (as do) the honored brides
> (Pardee 1997a: 253).

The other major interpretation (de Moor 1971: 110–11; 1987:14–15; *CML*[2] 52) has been to take line 48–49a as a nominal sentence, "The dwelling of El is the shelter of his son," and to render the passage as follows:

> [The dwelling of El is the shelter of] his son
> The dwelling of the Lady Athirat of the Sea is
>
> The dwelling of Pidr[ay, Daughter of Light,
> The shelter of Tallay, Daughter of Showers,
>
> The dwelling of Arsay, Daughter of the Wide World,
> The dwelling of the Noble Brides.

In this interpretation, the son referred to in the first line is Baal, who complains that he must live in El's home and his women must live in Athirat's home, while all the other gods have their own houses.

While both interpretations are grammatically plausible, the second one seems to fit the context better. In the first interpretation even Baal's three women are said to have palaces, while Baal does not. Such a notion seems problematic, as noted even by Pardee (1997a:253 n. 99). The second interpretation suggests that everyone but Baal and his women have houses, an argument that, while probably hyperbolic, still fits the story better.[36] Four terms are used in this passage for the divine domiciles. "House" (*bt*) is a regular term for "temple." Baal's temple

[36] Smith earlier in *UNP* 115 proposed reading *bnh* in line 49 as "his children," but this seems unlikely, since it would suggest that all of El's offspring lived in his dwelling, and thus had no separate homes of their own. This would undercut Baal's argument for a palace of his own. In addition, the reference to Baal's three women in the following lines suggests that the reference to *bnh* here refers to Baal.

in Ugarit (*bt b'l 'ugrt*) is mentioned in CAT 1.109.11 and 1.119.3, 9. Royal dedicatory inscriptions regularly refer to the temple built for the deity as *bt* (see KAI 4:1, and the royal inscription from Ekron, line 1; see Gitin, Dothan and Naveh 1997:9, 10, 12). Yahweh's home is also conventionally referred to in BH as *bêt Yahweh* (1 Kgs 3:1; 6:37; Jer 36:6, 8; Ezek 44:4, 5, *passim*). The term rendered "court," *ḥzr*, is also a common designation for a palace or large house (cf. 1.14 IV 40–42; also 1.19 IV 9–11, where it is paralleled with *hkl*). The term is used of Yahweh's temple in Ps 116:19: *bĕḥaṣrôt bêt Yahweh*. The word *mṯb* appears to have two major meanings, "dwelling," as here (cf. 1.41.50–51, Pardee 1997b:275), and "chair, throne" (cf. 1.16 V 24). It does not appear regularly as a word for "house, temple" in BH, but may be used in that way in Ps 132:13. Ezek 28:2 perhaps refers to a Phoenician tradition of El's dwelling in a *môšāb*: "I am El, in the dwelling (*môšab*) of Elohim." Also cognate are *myṯb'* of the Teima inscription (CIS ii 114) and Sabean *mwṯb* (Gaster 1946:24 n. 23). The unusual term for divine domicile in Baal's lament is *mẓll*. The word *mẓll* only occurs in this passage and its parallels in 1.3, 1.4 and 1.117. It appears to be cognate with Syriac *maṭllā*, "cover" (*LS* 275), *taṭlūlā*, "roof" (*LS* 276) as well as the BA *C*-stem impv. *taṭlēl*, "give shelter," in Dan 4:9 (see further Gaster 1946:24 n. 23). In view of these cognates, the Ugaritic usage seems to represent an example of *pars pro toto*.

1.3 IV 53 is a narrative rubric introducing Anat's response. The **yqtl* verb in the initial position with *w-* marks the continuation of the narrative line (APO). In lines 54–55 Anat tells Baal that El will heed her words (literally, "turn to me," **ṯwb ly*). Pardee (1997a:253–4) renders this line aptly as "The bull, my father, 'Ilu, will come around to me." The similar use of **ṯwb* in reference to a verbal response is found in 1.4 VI 2, 15; VII 24–25 (cf. also 1.3 IV 21–22 and 1.19 IV 18–20; cf. Watson 1983:254). The last line of the column breaks off at the beginning of a new clause, "He will heed me, or/and to him . . . [". The context of the phrase *wlh* is uncertain, but in the next line, at the beginning of column V, Anat is describing the violence she will inflict upon El if he does not agree to her request. The syntax *w* + preposition, suggests a disjunctive clause is beginning here. Thus *wlh* may be understood best as the beginning of Anat's threat. In 1.3 V 22–25 she does threaten El at his abode just as she promises Baal here. Such a violent threat is hardly exceptional; she offers a similar one to El in 1.18 I 11–12. Anat's intimidating demeanor is comparable to Ishtar's

toward Anu in Gilgamesh VI:97–100 (*ANET* 84; see Abusch 1986), as well as her threatening behavior in the Descent of Ishtar (lines 15–20; *ANET* 107). For Anat, either El will pay attention to her, or he will suffer the consequences.

CAT 1.3 V

Textual Notes

Line 1. nn The two /n/'s both have four wedges.

Line 2. [ ]k̊. The letter is identified from context. Only two wedges are preserved, the right horizontal and a smaller one to its left. Epigraphically it could be an /r/.

dqnh The /h/ at the end of the word has four wedges.

Line 3. [ ]xd.lytn Only a right large horizontal survives for the first letter. From context, the most likely reading is /k/, as Pardee reads, but epigraphically one cannot be certain. The /l/ of /lytn/ is unusual for its very small right wedge. The scribe has failed to impress it deep enough into the clay.

Line 4. [ ]ṙ The first letter surviving on the line has three preserved horizontals, thus looking like a /k/, but the context argues for /r/.

]ʿnm̊ CTA identified the remains of a /p/ preceding /ʿn/, and this is certainly the correct reading of the line. The damage to the tablet at this spot is horizontal and creates the look of a /p/. But there are no clear traces of any actual remains of wedges along the break. The /ʿ/ is certain; most of it is preserved. The /m/ was not noted in either CTA or CAT. While it is badly damaged, the left part of the horizontal is clearly preserved. This word appears as *pʿnm* in both parallel passages, 1.4 V 21 and 1.17 VI 46.

Line 5. [ ]'ȧṛṣ.'id̊[Both wedges of the /'a/ are preserved. The /d/ is almost entirely effaced, but the general shape of the letter survives.

]n̊m Only the right horizontal of the /n/ survives, but the context assures the reading.

Line 6. [ ]mbk̊n̊hṙm̊[Unlike Herdner in CTA, we see no trace of an /l/ at the beginning of the preserved portion of the line (Virolleaud's drawing in CTA 2, fig 11 shows no traces either). Nor is there a word divider before the /m/, as proposed in both CTA and CAT or a word divider between /mbk/ and /nhrm/. Only the left two wedges of /n/ are preserved, but context assures the reading.

The /r/ is certain as well, although only the left sides of the left two wedges and the upper line of the right wedge are preserved.

The upper left corner of the horizontal of the /m/ is also discernable, although only context assures the reading of the letter.

]q̇ The upper line and right side of the /q/ are preserved at the end of the line.

Line 7. d̲[ ]'i[ ] We can discern no traces of a letter following /d̲/ or following /'i/ as proposed by CAT. Deep gouges in the tablet have removed any evidence of wedges.

wtb̊'u The /b/ is represented only by the bottom horizontals.

Line 8. [ ]š.m̊[The /m/ is damaged. The left wedge is fine, but there is only a hint of the left side of the vertical.

]k.'ab̊[The /b/ is represented only by the left upper corner of the left vertical and the upper line of the right vertical.

]tṣr As Pardee (1997a:254 n. 102) recognized, the first letter of this word is /t/, not /m/ as previously read. The lower center part of the

horizontal wedge has been damaged by a chip that resembles a vertical wedge. This has caused the misreading.

Line 9. [ ]bu.ddm̊.ttnỷ[This is a badly damaged line. The /m/ is not entirely certain. The preserved wedge appears to be the vertical, but it leaves a fairly limited space for the left horizontal. What is read here as /tt/ has been read as a /q/ in the other editions, but this is unlikely. While there is a horizontal wedge on the left, the indentations on the right do not resemble the *Winkelhaken* wedge of a /q/, but rather the complex indentations of the /t/. In addition, reading this complex as a /q/ makes the letter unusually long. The /y/ seems fairly certain, although only the left half of the letter survives. Pardee (1997a:254 n. 103) reads as here.

]'åd̆n[The /'a/ seems very likely, although it could theoretically be a /n/ or /w/. The /d/ is fairly certain, with the entire line of the top of the letter preserved, as well as the lower left horizontal and the right tip of the right horizontal. The upper line of the letter gives no clear indications of the number of verticals in the letter, but the width of the letter argues for /d/ over /b/.

]lm̊ The final letter seems likely to be /m/, although only the horizontal is preserved. Its shortness fits with an /m/ better than as a truncated /t/(so CTA). The gap between *'adn* and *]lm* is easily wide enough for two to three letters. Undoubtedly the last word should be reconstructed as *'i]lm*, but there is also room for the proposed restoration, /bn/. Pardee (1997a:254 n. 103) discerned traces of the *'i* in this position, but we could not identify any such traces. CAT's proposal *[bn'i]lm* seems plausible.

Line 10. ġlh.yš[ ].tr.[The right wedge of the/q/ is completely preserved, as is part of the lower line of the horizontal. We see no traces of letters /mʿ/ between /yš/ and /.tr/, as proposed by CAT.

]l̊.'abh.ỷ[ ]ỷ Following the break after /tr./ is the faint trace of the right side of a vertical, probably the right vertical of /l/. The /y/ following /'abh./ is epigraphically uncertain. Two short verticals indicate that it is either /y/ or /ḫ/. In context the former seems more likely. Following the break, there are the tops of two vertical wedges side by side. This was read by CTA as /l/. But because the right wedge is significantly higher than the left wedge, it is more likely that this is a /y/. (The wedges of /l/ are usually, but not always, at the same height.) Pardee (1998b:87) reads *y[ʿn]y*.

Line 11. ḫ[ ]rm. Contra CTA, there are no traces of a letter between /ḫ/ and /rm/. The reconstruction of /d/ is based on the parallel in lines 25–27.

Line 12. sgrt.g[ ]x[We see no traces of an /m/ after the second /g/, contra CAT. The /x/ stands for a large horizontal wedge, preserved without context. CTA reads this as part of a /ẓ/, but this is not likely. What Virolleaud and Herdner took as the upper line of the right wedge of the /ẓ/ is actually part of the damage on the tablet's surface. Nor is there any evidence that a depression below the wedge is an additional horizontal.

]ḅḥ[Following the break, we find a small vertical wedge, and the tip of a horizontal below it. The clear space to the left of the vertical suggests this is probably a /b/. There is often some space between the verticals in /b/, much less commonly in /d/ (see Ellison 2002.II: figs 864, 871, 874). This is followed by the three wedges of an /h/ or /'i/.

Line 13. ʿn.ṯk[The /n/ seems to have four wedges.

Line 16. m'id.'ax[The letter following /'a/ is too badly damaged to identify. The few traces suggest a letter with a horizontal orientation, perhaps /t/ or /n/.

]ṣn[The /ṣ/ is not entirely certain. The letter looks superficially like an /m/, but the top of the left wedge seems too horizontal for a /m/. There seem to be traces of the right line of the left wedge going down to the same level as the right wedge. It cannot be /y/ as proposed by CAT, since the right wedge is clearly just a single wedge.

Line 17. nrt.'ilm̊.špš[The /m/ is uncertain epigraphically. While there are fragments of the preceding /l/, there appears to be little beyond a general shape to indicate the /m/. Context, however, assures that the letter was there. The right half of the first /š/ is preserved. There are no certain remains of a word divider after /špš/.

]r̊x The right and lower middle wedges of the /r/ are preserved, along with hints of the left lower wedge. The last letter has been read as /t/, but this is not entirely certain. The right tip of the horizontal seems quite wide and suggests that it is a small wedge, rather than the typical long form of the /t/. There are also vague traces of what may be an additional horizontal to its left. In spite of these uncertainties, however,

the commonly proposed restoration, *[ṣḥr]rt*, based on parallels (1.4 VIII 21–24; 1.6 II 24–25) makes the reading /t/ seem fairly likely.

Line 18. l'a.šmm̊ The second /m/ only survives in the general shape of the horizontal. No clear lines of it are visible. No word divider is preserved after /šmm/.

]b̊ẙ[ ]t Only the very tops of the probable /b/ and /y/ are preserved, so the readings are epigraphically uncertain. The readings seem assured by context. We see no trace of the /m/ that Pardee (personal communication) reads shortly after /by/. Two restorations are plausible from the parallel passages: *by[d.bn.'ilm.m]t* is suggested by 1.6 II 24–25, but *by[d.mdd.'ilm.m]t* follows 1.4 VIII 21–24.

Line 19. ʿn̊[The /ʿ/ is almost completely gone, but the right edge appears to be faintly visible.

Line 20.]b̊h[Only the right wedges of the /b/are preserved, and thus the reading is epigraphically uncertain.

]šmḫ The /š/ is very damaged, but the left and right wedges are visible and assure the reading.

Line 21. br̊[ ] The /r/ is uncertain. The lower line of the letter suggests /r/, but only two wedges along the bottom of the letter are certainly visible.

]k̊l[The /k/ is likely, although epigraphically, it could also be a /r/.

Line 22. by m̊xẏ.[ ]b̊[ ] The only remaining part of the /m/ is the lower tip of the vertical. That means it is epigraphically uncertain. The only trace of the next letter is a thin portion of the deep interior of a horizontal wedge. The /y/ is certain, with the right half showing the three wedges. Part of a word divider follows.

Toward the end of the line, parts of two verticals side by side are preserved. The shortness of the wedges suggests that this is either a /b/ or /d/. Pardee (1997a:254 n. 109) identifies these wedges as a /ṣ/, which is also possible, and suggests that there are traces of a /š/ to the left of it. We do not see the latter traces. He proposes the following reconstruction, ['a] ⌜šṣ⌝ [qḥm], "I will squeeze them."

Line 23.]'am[We see no traces of a letter after /am/ as proposed by CAT.

Line 24. 'ašhlk. Although CTA read the /h/ as a /p/ and treated it as a scribal error for /h/, the letter does in fact have three horizontals, making it a /h/. The middle wedge is very close to the upper wedge, but is clearly distinguishable from the latter.

šbtḵ[Only the bottom half of a short horizontal letter survives after the /t/. Context, however, argues strongly for /k/.

Line 26. ḫdṙṁ The two left upper wedges and the upper line of the lower left wedge of the /r/ are preserved. Only the upper line and the right side of the /m/'s vertical survives. But both are certain by context.

Line 27. k'an[There are no traces of a letter beyond the /n/, contra CAT.

Line 28. qḷ[ ]ḵ The /l/ of /ql/ is epigraphically uncertain. Only two wedges are preserved, so the letter could be /l/ or /ṣ/. The restoration proposed here, /ql[ṣ]k/, is plausible from a parallel and argues for the reading /l/. The same issue affects the /k/on the other side of the break. Only a long horizontal is preserved for this letter, which allows it to be interpreted as a number of possibilities. But the reconstruction seems likely, and the wedge is compatible with /k/.

t'aršn̊ The /n/ at the end of the line is also very broken. Only the left edge of the letter survives, and that could be interpreted as a number of different letters. The context, however, argues for /n/.

Line 29. wt[ ]n̊ The left half of the /t/ is preserved, enough to assure its identification. The right two wedges of the /n/ are visible, but context assures the reading.

ʿn[ ] There are no traces of a /t/ at the end of the line, as proposed by CAT.

Line 32. tpṭn The /n/ has four wedges.

Line 33. kl̊nyy. The /k/ is certain. The two left wedges are fully preserved, and the left edge of the right wedge is partially visible. The /l/

is partially preserved, with the lower tip of the middle wedge and the complete right wedge.

qšh The /h/ has four wedges.

Line 34. klnẙy The right side of the first /y/ is lost in the break, but the context assures the reading.

Line 35. t̲r̂ The three right wedges of the /r/ are preserved completely, and the right tip of the lower left wedge is just visible, assuring the reading.

Line 36. dyk̂nnh The upper left wedge of the /k/ is broken away, but the letter is certain. The two left wedges of the /n/survive, along with the lower left corner and the right tip of the right wedge, assuring its reading.

Line 37. ʾilt̊ The /t/ is almost completely lost in the break. Only the left line of the wedge remains. But context assures its reading.

ʾarḫh Based on the parallels, the /ḫ/ is a scribal error for /y/.

Line 41. ẙm̀ The first two letters are badly damaged. Only the upper vertical of the right side of the /y/ is preserved. Faint traces of the upper line of the horizontal and of the interior of the /m/ are discernable. Context assures the reading.

Line 42. [ ]ṯlẙ[ ]rb The left side of the /y/ is partially preserved, but not the right. Context confirms the reading. Both /r/ and /b/ are badly damaged, but enough remains of both to assure the reading.

Line 43. [ ]m̀t̲b Only the tops of the three letters survive, but all are certain.

Line 50.]rṣ The small fragment contains the very right edge of column V, covering the space of the last eight lines of the column. Only the two letters, /rṣ /are preserved (we find no traces of the ḥ CAT reads in line 47). The /r/ is certain. The three right wedges are preserved, with traces of the right tips of the two left wedges. This assures the reading.

Translation and Vocalized Text

Anat's Response to Baal Continued (This follows directly upon the last line of column IV).

1–3	"[. . . I will] drag him to the ground like a lamb; [I will ma]ke his gray hair [run] with blood, The gray hair of his beard [with gore],	[. . . 'i]mṣaḫuna-nu ka-'immiri lê-'arṣi ['ašahali]ku šêbata-hu dama-ma šêbata daqini-hu [mam'ê-ma]
3–4	Unless he gives Baal a house like the gods', [And a cou]rt like that of Athirat's children."	[ ]d lā-yatinu bêta lê-ba'li ka-'ilīma [wa-ḥaẓi]ra ka-binī 'aṯirati

Anat's Journey to El

4–7	[She planted (her) fe]et, [and] the earth [shook]; S[o she hea]ded out [For E]l at the springs of the River[s], [Ami]d [the strea]ms of the [Dee]ps.	[tid'aṣu pa]'nāmi/ [wa-tarra] 'arṣu 'idda[ka 'al tatin pa]nīma ['imma 'ili] mabbikê naharêmi [qir]ba ['appi]qê tahāma]têmi

7–8	She came to the moun[tain] of E[l], And entered [the te]nt of the Ki[n]g, the Father of [Years].	taglî ḏa[da][1] ’i[li] wa-tabu’u [qar]ša ma[l]ki ’abī [šanīma]
8–9	She shouted angrily as [she en]tered the mountain, She repeated it [to] the Lord of [the children of E]l.	taṣṣuru [ta]bu’u ḏada-ma taṯanniyu [lê-]’adāni [binī ’i]li-ma

El’s Response and Anat’s Threat

10–12	Her voice Bull [E]l, her Father, he[ard]; H[e] an[sw]ered from the seven r[oo]ms,	qāla-ha yiš[ma‘u] ṯôru [’i]lu ’abū-ha ya[‘ni]yu/bi- šab‘ati ḫu[du]rīma[2]

---

[1] For this word, see *UBC* 1.187–89; Watson 1995:221–22; *DUL* 285. Loretz (1995b:727) compares *ḏd* not with Akkadian *šadû*, “mountain,” but with Akkadian *šiddu*, “Seite, Rand; Vorhang.” As a parallel, Loretz cites *ARM* IV, 10, line 6’ from *AHw* 1230, B, #3 *ana ši-id-da-at ekallim* as meaning “einen Bereich vor Gebäuden” (*AHw* leaves the phrase untranslated). Loretz would also see *qrš* not as a tent-term but “der Raum, in dem die Gäste empfangen werden.” The advantage of this approach is to understand the two parallel terms in a single word-field. However, it does not account for evidence that El’s abode is a tent structure. Furthermore, it is unclear how common the use of Akkadian *šiddu* is that Loretz proposes to compare with Ugaritic *ḏd*. Additionally, according to *AHw* 1230 (which Loretz cites), the term seems to refer generally not to the room itself, but to the long side of a room. The parallelism achieved by Loretz’s proposal would otherwise be attractive. Akkadian *šiddu* compares better with Ugaritic *šd* where it is parallel to *kmn* (see p. 280 n. 8). A third possibility for Ugaritic *ḏd* is to compare Akkadian *šadu*, “field,” and hence “encampment” here (see *UNP* 78). However, Ugaritic *šd* covers the meaning “field” (*šd//p’at mdbr* in 1.23.67, see also lines 13, 28). Therefore, Ugaritic *ḏd* does not mean “field.” Like Akkadian *šadû*, it may mean “mountain” here. The context of *ḏd* in 1.19 IV 51–52, often taken to mean “camp” or the like (*UNP* 77) or “tent” (*CMCOT* 51–53, *CMHE* 36 n. 143, 55 n. 43) is problematic. The view assumes parallelism with *<’a>hlm*, which in turn requires an emendation (Pope 1987:223 = 1994:51–52; for further criticisms of Clifford’s etymological argument, see Renfroe 1992:97–98). An appeal to 1.19 IV apparently complicates the discussion, as both *ḏd* and *šd* appear in its larger context, the former in line 51 and the latter in lines 48; it is logical to suggest some difference in nuance. If *šd* means “field” as it does elsewhere in Ugaritic, then it seems unlikely (though not impossible) that *ḏd* here has the same meaning. In short, 1.19 IV 48–52 provides little clarification of the lexical situation of *ḏd* (see also the difficult context of lines 58 and 60). In view of the clearer use of Ugaritic *šd* for “field,” it would seem better not to see this meaning here, while “mountain” appears highly plausible (cf. Cross’s earlier view, as noted in *CMHE* 55 n. 43). Jonas Greenfield (personal communication) suggests that the form *ḏd* was used instead of *šd* for Ugaritic “mountain” because Ugaritic *šd* was used for “field.” For more details, see *UBC* 1.187–88.

[2] For the syllabic evidence for this base for the noun, see Huehnergard 1987b:123; Sivan 1997:67.

	[From the] eigh[t openings of the en]closures.	[bi-ṯa]manî[ti 'appi[3]]/ sagūrati

[*Lines 12–16 are too damaged to interpret their prosodic arrangement.*]

17–18	"The Divine Lamp, Shapsh, [is re]d; The heavens are weak in the ha[nds of Divine M]ot."	niratu[4] 'ilīma šapšu[5] [ṣaḥrv]rat[6] la'a šamîma bi-ya[di bini 'ili-ma mô]ti
19	And Adolescent Ana[t] answers:	wa-ta'nî batulatu 'ana[tu]
19–21	"[In the construction of your house, O El, In the construction of your hou[se] do [not re]joice, Do not rejoice in the he[ight of your pa]lace.	[banîti[7]] bahatī/-ka ya[8]-'ili-ma banîti baha[tī-ka] 'a[l ti]šmaḫ 'al tišmaḫ bi-rā[mi hê] kali-[ka]

27–29	"[I] know [you], daughter, that [you are fu]rious,	yada'[tu-ki] bitti kī-'ana[šti]

---

[3] On the syllabic evidence for this form, see Huehnergard 1987b:108.

[4] *UG* 190 favors the plausible reconstruction *nûratu* (<**nuwrat-*), but the admittedly difficult syllabic evidence would suggest *niratu* compared to the BH base of *nēr*; see Huehnergard 1987b:152.

[5] For the syllabic evidence, see Huehnergard 1987b:183.

[6] For the form, see *UG* 680.

[7] The final *-t* supports taking this form as a noun (e.g., *DUL* 232 citing Akkadian *binītu*).

[8] For the vocative *y-*, see *UG* 804.

[9] The particle *'al* takes a jussive form. The verb derives from **'ḫd*, with ellision of root letter 'aleph of the first person prefix form (as vocalized here) or less likely a participle; see Sivan 1997:32, 116.

	For there is not among goddesses sc[or]n like yours.	kī-'ênu bi-'ilahāti qala[ṣi]-ki
	What do you desire, O Adolescent Anat?"	maha ta'arrišuna/[10] la[11]-batulati 'anati
29	And Adolescent Ana[t] ans[we]red:	wa-ta[']nî batulatu 'ana[tu]
30–31	"Your decree, O El, is wise, Your wisdom is eternal, A fortunate life is your decree.	taḥmu-ka 'ili ḥakama[12] ḥukmu-ka/'imma 'ôlami ḥayyatu[13] haẓẓati taḥmu-ka
32–33	Our king is Mightiest Baal, Our ruler, with none above him.	malku-na 'al'iyānu ba'lu ṯāpiṭu-na/'ênu du-'alênu-hu
33–34	All of us will bring him a chalice, All of us will bring him a cup.	kullu-na-ya-vya(?)[14] qaša[15]-hu/nabilu[16] kullu-na-ya-vya nabilu kāsa-hu
35–36	In lament, Indeed he cries to Bull El, his Father, To El, the King who created/established him.	'āniyu la-yaṣûḥu ṯôra 'ila 'abā-hu 'ila/malka dā-yakāninu-hu
36–37	He cries to Athirat and her children,[17] The goddess and the band of her brood:	yaṣûḥu 'aṯirata wa-banī-ha/ 'ilata wa-ṣibbirata 'aryi-ha
38–39	'For Baal has no house like the gods', No court like [A]thirat's child[ren's].	wa-na 'ênu bêtu lê-ba'li kama 'ilīma ḥaẓiru ka-ba[nī 'a]ṯirati

[10] For the root, with syllabic evidence, see Huehnergard 1987b:110; *UG* 547.

[11] For the vocative *l-*, see *UG* 804.

[12] For the verbal use of this root, see *ḥkmt* in 1.4 IV 41 (the parallel to *ḥkmk* in the next line), 1.4 V 3 and 1.16 IV 2. It is also possible that *ḥkm* here is the nominal form, **ḥukmu*, as in the next line.

[13] Cf. syllabic *ḫiyyūma* (Huehnergard 1987b:124). Accordingly, perhaps *ḥyt* is to be vocalized as **ḥiyyātu* instead.

[14] Alternatively, but unlikely, "the two of us." See the commentary on these lines below. For the form, see Pardee 1997a:255 n. 112; *UG* 224–25. Cf. *klnyn* in the parallel passage in 1.4 IV 45.

[15] For cognates, see *TO* 1.176 n. v; *KB*[4] 1150; cf. *DUL* 717: "all together we shall carry his tankard."

[16] For the form, see Huehnergard 1987b: 132, 133. If the subject is dual (see n. 14 above), then the vocalization would be *nabilā*.

[17] Cf. the rendering "Athirat and her children" as the subject rather than the object in Sivan 1997:104. This view overlooks the fact that this is part of a quoted speech from 1.3 IV 47–53 repeated here and in 1.4 I 4–18.

39–41	The dwelling of El is the shelter of [his so]n, [The dw]elling of Lady Athirat of the Sea,	môṯabu ’ili/maẓlalu bi[ni-hu] [môṯ]abu rabbati ’aṯirati/yammi
41–42	The dwelling of [Pidr]ay, Daughter of Light, [The shelter of] Tallay, [Daughter of] Showers,	môṯabu [pidra]yi bitti ’āri/ [maẓlalu]/ṭallayi [bitti] ribbi
42–44	The dwelling of [Arsay, Daughter of the Wide World], The dwelling [of the Noble Brides].”	môṯabu/[’arṣayi bitti ya‘ibidrayi] môṯabu/[kallāti kaniyāti]

Commentary

Poetic Parallelism and Word/Syllable Counts

		semantic parallelism	word/syllable count
1–3	[…’i]mṣaḫuna-nu ka-’immiri lê-’arṣi/	a b c	3/12
	[’ašahali]ku šêbata-hu dama-ma	d e f	3/12
	šêbata daqini-hu/[mam‘ê-ma]	e (x of y) f’	3/10

The second and third lines are closely parallel, but the first line considerably less so. That this is the case is evident from the description of Anat delivering this same threat in lines 23–25, which uses a different initial line, though it is of generally similar semantic content. Accordingly, it is evident that the second and third lines form a bicolon at a more basic level of composition. The repetition of the word of *šbt* in those lines points up the sonant parallelism of *dama-ma* and *daqini-hu [mam‘ê-ma]*.

3–4	[ ]d lā-yatinu bêta lê-ba‘li ka-’ilīma/	a b c d e	5 (?)/14 (?)[18]
	[wa-ḫaẓi]ra ka-binī ’aṯirati	c’ e’ (x of y)	3/11

The syllable-count provides a better indicator of the balance of lines than the word-count. What the second line lacks in a verb or initial

[18] The latter count assumes that a vowel precedes or follows the first attested consonant.

prepositional phrase, it expands in the comparative prepositional phrase (e as a single word as opposed to e' as x of y, as in the second and third lines of the preceding tricolon)

4–7	[tidʿaṣu pa]ʿnāmi/[wa-tarra] 'arṣu	a b c d	4/11
	'idda[ka 'al tatin pa]nīma/	e f g	4/9
	[ʿimma 'ili] mabbikê naharêmi	h i j (x of y)	4/11
	[qir]ba ['appi]qê/tahāma]têmi	h' j' (x' of y')	4/10

A line is prefixed to a basic tricolon that is attested in the parallel passages in 1.4 IV 20–22 and 1.6 I 32–34 without such an initial line (cf. similar lines in 1.3 IV 37–38; 1.5 I 9–11; II 13–15). The four lines also appear in 1.17 VI 46–48 (for a discussion of quatrains in biblical poetry, see Watson 1986a:186–87; cf. also Parker 1989b:25). The first line also stands in front of a similar tricolon in 1.4 V 20–24, but there it seems to belong with the preceding colon, rather than the succeeding tricolon. This line's three occurrences all refer to Anat as the subject. Although the second line occurs quite often without the first, there is a strong resonance between the lines, especially in the similar *[pa]ʿnāmi* and *[pa]nīma*. This sonant parallelism is complemented by these two words' semantic parallelism as terms for body-parts.

7–8	taglî ḏa[da] 'i[li]	a b c	3/6
	wa-tabu'u/[qar]ša ma[l]ki 'abī [šanīma]	a' b' c' (x, y of z)	5/14

The second line is considerably longer than the first in this interpretation (so also *CML*[2] 53; *TO* 1.174; Pardee 1997a:254; Wyatt 1998:84; cf. Parker, *UNP* 62 for the parallel in 1.17 VI 48–49), contrary to the general norm in Ugaritic that the second line is, roughly speaking, either the same length or shorter than the first line. However, this layout shows good syntactical parallelism, and there are in fact instances elsewhere the second line exceeds the first line in length (1.19 III 40–41, IV 15–17; 1.22 I 21–22; apparently also 1.10 II 8–9). As another possibility, the unit is a bicolon with two verbs in the initial line (see Ginsberg, *ANET* 137; del Olmo Lete, *MLC* 189, *MLR* 74; Dietrich and Loretz 1997:1147; Smith, *UNP* 116), as in the following layout:

taglî ḏa[da] 'i[li] wa-tabu'u	a b c a'	4/10
[qar]ša ma[l]ki 'abī [šanīma]	b' c' (x, y of z)	4/9

This alternative issues in nearly perfect line-length, and it retains some balance of syntactical parallelism of the objects plus divine name and titles. In terms of its line-length, it also fits the larger context very well. (It is to be noted that the parallel in 1.4 IV 23–24 belongs to a larger section running from line 8 through line 28, where the ends of the lines epigraphically correspond precisely to the ends of the poetic lines; if this is any indication, then the second alternative would be preferable.) The commentators, as noted above, are fairly divided between these two alternatives. We consider this second arrangement to be as plausible as the first. There is also a plausible, though arguably less likely, third alternative for the unit as a tricolon, to be rendered along the following lines:

tagliyu ḏada ’ili	a b c	3/7
wa-tabū’u qarša malki	a’ b’ c’	3/8
’abī šanīma	c’’ (x of y)	2/5

This arrangement issues in greater balance in line-length than the first alternative, and the parallelism works reasonably well. It may be justified further on the basis of other cases of cola with short lines (e.g., the tricolon in 1.19 IV 13–15; cf. the very short bicola of 1.19 III 11, 25, 39). However, it is also true that epithets generally do not occupy a line in a colon by themselves, and the quite short length of lines does not fit very well into the larger context. Thus the first and second alternatives appear to be superior. A further reason for taking this unit as a bicolon, as we have decided with the first alternative, is offered in the following discussion of lines 8–9.

8–9	taṣṣuru /[ta]bū’u ḏada-ma	a b c	3/9 (?)
	taṯanniyu [lê-]’adāni [binī ’i]li-ma	a’ d (x of y of z)	4/13

When lines 7–9 are considered together, these four lines appear to be an example of alternating parallelism, in which the first and third lines show a close relationship, as do the second and fourth. Here the first and third lines both have the word *ḏada*, and both describe Anat’s arrival at El’s abode. The parallelism in the second and fourth lines focuses on the three-word epithets used of El: “the king, the father of years,” and “the lord of the children of El.” As with the preceding unit, the first bicolon is a formulaic expression attested elsewhere (1.4 IV 23–24; 1.17 VI 48–49). At the same time, there are close relations

between the first/second lines and between the third/fourth lines. The only outstanding aural resonance between the first and the second lines may be detected in *tabū'u* and *'abī*. The lines of the second bicolon are bound by repeated /t/, /b/, /d/and /m/.

10a	qāla-ha yiš[ma'u] ṯôru ['i]lu 'abū-ha	a b c	5/13

This line acts as a transition between the quatrain above and the bicolon below. Its length echoes that of the previous line, as does its use of a three-word description of El. Yet the subject changes here from Anat to El.

10b–12	ya['ni]yu/bi- šab'ati ḫu[du]rīma	a b c	3/11
	[bi-ṯa]mānî[ti 'appi]/sagūrāti	b' c' d	3/11

Beautifully constructed according to parallel semantic and syntactical patterns, the lines in this bicolon show further resonance, thanks to the morphological parallelism of final feminine endings on the numerals and the passive participle.

Lines 12b–16 are too damaged to interpret.

17–18	niratu 'ilīma šapšu [ṣaḥrv]rat	a (x of y) b c	4/11
	la'a šamûma bi-ya[di bini 'ili-ma mô]ti	d e f g (x, y)	6/15

Despite the wide divergence in syntax, the occurrence of *'ilīma* and *'ilima* plus the resonance of this word with *šamîma* provides some sonant parallelism between the lines. Again the longer second line is produced by a compound epithet (see lines 7–9 above).

19	wa-ta'nî batulatu 'ana[tu]	a b	3/10

This monocolon is the standard rubric for indicating the beginning of a new speech. It stands separately from the surrounding colonic units. At the same time, its line-length is in keeping with the following unit that it introduces.

19–21	[banîti] bahatī/-ka ya-'ili-ma	a (x of y) b	3/11
	banîti baha[tī-ka] 'a[l ti]šmaḫ	a (x of y) c	4/10
	'al tišmaḫ bi-rā[mi hê]kali-[ka]	c a' (x' of y')	3/10

This sort of step (or climactic) parallelism appears also in 1.2 IV 8–9. Both units present the addressee in the third slot of the first line, and then delay the verb to the second line in final position, and then reverse its position in the third line. The broken lines in 1.18 I 7–10 appear to be a parallel text for these lines and for the following bicolon.

22–23	'al 'a(')ḫud-hu-ma bi-yamīni-ya	a b c	3/10
	[ ]/bi-gadulati 'arkati-ya	d (?) c' (x of y)	3(?)/9+(?)

Unfortunately, the parallel text in 1.18 I 9–10 does not help to complete the lacuna at the beginning of the second line. As a result, it is impossible to describe fully the parallelism in this bicolon. In the lacuna one might expect another verb parallel to *'aḫd*, or some form of a direct object (parallel to the suffix on the verb in the first line), or perhaps another term parallel to *bymny* (e.g., *bšm'aly*); and appositional to the prepositional phrase that follows; for the latter sort of usage, cf. 1.3 III 30 (= IV 20), 31. The BH cognate words for *gdlt 'arkt*, are also used innercolonically (e.g., Ps 145:8) and as parallel terms (e.g., Ezek 17:3; see Avishur 1984:31, 61; see discussion below).

23–25	'am[ḫuṣu]/qadqada-ka	a b(?) c	3(?)/7+(?)
	'ašahaliku šêbata-ka [dama-ma]/	d e f	3/12
	šêbata-ka daqini-ka mam'ê-ma	e' (x of y) f'	3/12

See the discussion of the basically parallel tricolon in lines 1–3 above. The remaining portion of the parallel in 1.18 I 11–12 aligns with the version of the tricolon attested here. Unfortunately, it does not help to complete the lacuna in the first line.

25–27	ya'niyu/'ilu bi- šab'ati ḫudurīma	a b c d	4/13
	bi-ṯamānîti/'appi sagūrāti	c' d' e	3/11

See the discussion of lines 10–12.

27–29	yada'[tu-ki] bitti kī-'ana[šti]	a b c	3/10
	kī-'ênu bi-'ilahāti qala[ṣi]-ki	e f c'	3/12
	maha ta'arrišuna/la-batulati 'anati	g h i	4/15

The first two lines of this tricolon are closely parallel, compared with the third line (see the variety of departures in the third lines of tricola in 1.3 III 38–40, 45–47, 1.4 I 30–32, 41–43, V 46–48). In addition to

the semantic and syntactical parallelism of the first two lines, the use of both suffix *-k* and subordinating conjunction *k-* mark these two lines. Despite such differences, perhaps *btlt* in the third line echoes *'ilht* in the second line, and *'nt* in the third line echoes *'anšt* in the first line.

29	wa-ta[ʿ]nî batulatu ʿana[tu]	a b c	3/10

See line 19 above.

30–31	taḥmu-ka 'ili ḥakama	a b c	3/8
	ḥukmu-ka/ʿimma ʿôlami	c d	3/8
	ḥayyatu ḥaẓẓati taḥmu-ka	d' (x of y) a	3/9

The lines convey a staccato rhythm, compared to the lines in the preceding tricolon. They are shorter and somewhat rhythmic thanks to the repetition of consonants. These lines reverberate with the consonants for *ḥkm*, "wisdom." In this way, the theme of wisdom echoes through every line (*CMHE* 184 n. 163). Ceresko (1975:75) also notes chiasm here: *tḥmk: ḥkm:: ḥkmk: tḥmk*.

32–33	malku-na 'al'iyānu baʿlu	a b c	3/9
	ṯāpiṭu-na/'ênu du-ʿalênu-hu	a' b' c'	3/11

Apart from the parallelism of the word-pair *mlk//ṯpṭ* plus the parallel suffixes on them, the syntax and morphology appear markedly different in the two lines. However, the suffix at the end of the second line is in fact parallel to the last word in the first line, and *'al'iyānu* and *'ênu du-ʿalênu* are semantically parallel (in antithetical terms). These words also show a particularly striking sonant parallelism: *'al'iyānu* and *'ênu du-ʿalênu-hu*.

33–34	kullu-na-ya-vya qaša-hu/nabilu	a b c	3/12
	kullu-na-ya-vya nabilu kāsa-hu	a c b'	3/12

The repetition of the subject and verb in the two lines highlights further the sonant parallelism of the direct objects, including their identical suffixes. A touch of variation is achieved thanks to the chiasm of the verbs and their direct objects.

35–36	'āniyu la-yaṣûḥu ṯôra 'ila 'abā-hu	a b c d e	5/14
	'ila/malka dā-yakāninu-hu	d c' e'	3/10

For the poetic parallelism here and in the remainder of Baal's lament, see the discussion of poetic parallelism in 1.3 IV 47–53 (above pp. 287–89).

36–37	yaṣûḥu 'aṯirata/wa-banī-ha	a b c	3/11
	'ilata wa- ṣibbirata 'aryi-ha	b' c' (x of y)	3/11
38–39	wa-na 'ênu bêtu lê-ba'li kama 'ilīma/	a b c d e	5/14

Introduction

Lines 1–4a conclude Anat's response to Baal that began in 1.3 IV 54. Most of the column describes Anat's journey to El's abode and their conversation, which climaxes with her delivery of Baal's complaint. Unfortunately, the column breaks off before we find out what El's reaction to Anat's message is, although the subsequent events in 1.4 I indicate that he has refused her request.

Lines 1–4: Anat's Response to Baal (Concluded)

Lines 1–4a complete Anat's response to Baal that began in the final lines of the preceding column. Here she describes what she plans to do to El if he refuses to grant her request. As seems characteristic of the volatile goddess, she threatens to pull El to the ground as if he were a domesticated animal, perhaps prepared for the slaughter (*SPUMB* 111). This type of action is characteristic of the treatment of an enemy. Ps 7:6 shows somewhat similar language: "May the enemy pursue my life and overtake (it), and may he trample my life to the ground, and may my glory dwell in the dust." The verbs in Ps 7:6 are quite different from Anat's actions, but the reference to the trampling of the enemy "to the ground" is comparable. Then Anat describes more graphically her intent actually to strike El, focusing specifically on the image of his bloodied head. In hyperbolic language, she uses the word pair, *dmm//mmʿm*, "blood//gore," previously used in the description of her

slaughter of the warriors above in 1.3 II 13–15 and 27–28. The word *šbt* (line 2a) is attested also in BH (*śêbāh*), as "gray hair," with the derived meaning of "old age."

In the extended phrase (*šbt dqnh*) that parallels *šbt* (line 2b), the second word has been understood in two ways. Most commonly it is rendered as "beard," thus parallel to BH *zāqān* (e.g., *ANET* 137; Pardee 1997a:254). Others have related the word to another meaning of BH *zqn* and have rendered in "his old age" (so *SPUMB* 112; de Moor and van der Lugt 1974:13). An expression similar to what is found in lines 2–3 appears in 1 Kgs 2:9 (noted by *GA* 143 and *CML*^{2} 52 n. 5). In his last words to his son (1 Kgs 2:9b), David tells Solomon how he is to treat Shimei: "you will cause his gray hair to descend in blood to Sheol" (*wĕhôradtā 'et-śêbātô bĕdām šĕ'ôl*). The locative in final position, Sheol, clarifies the final end intended by the violence (cf. Gen 42:38, 44:29, 31, where the phrase is used of death from sorrow, rather than from violence; note also Tobit 3:10, 6:15). David's speech also contains the negative expression of the same idiom (1 Kgs 2:6; for another image of smashing the head, cf. Ps 68:22). In 1.3 V 1–3 it appears unlikely that Anat is seriously threatening to kill El, but rather to deliver a beating that would only be a means of "changing his mind." This type of hyperbolic bravado, as we will see, does not appear to be taken too seriously by El.

The following bicolon in lines 3–4 states the conditions under which Anat would carry out her threat. The lines echo Baal's lament in referring to a "house like the gods', a court like that of Athirat's children." Pardee (1997a:254) takes the *l-* before *ytn* as negative ("That is if he does not give…"). An asseverative would read more smoothly ("unless he surely gives…"). In this case, one might compare Arabic *'iḏa* + *lā* used in negative conditional sentences in the sense "unless."[19] Perhaps Ugaritic *k* + *l* functions in this manner here, as understood generally by commentators for this passage.

Lines 4–9: Anat's Journey to El

With the completion of her speech, Anat takes off for El's abode. Lines 4b–7a describe her journey. The description is a formulaic one, with close parallels in 1.17 VI 46–49 and 1.4 IV 20–24. The first line, however, is not always joined to the more conventional tricolon that

[19] This possibility was suggested by Smith's student, Tony Badran. For Arabic *'iḏa*, see Lane 38; Wright 1.291–92, para. 367.

constitutes the rest of the description. It does not appear in 1.4 IV 20–24, but it does in 1.17 VI 46, as well as in a related travel scene in 1.4 V 20–21, which describes a journey to Baal's mountain. In all three of its occurrences, Anat is the subject of the sentence. Unfortunately, both verbs in the line are ambiguous. The first verb, *dʿṣ*, occurs only in this passage and its two parallels. There are no cognates in the contemporary languages that would help determine the meaning. (For example, the only early cognate, Akkadian *dâṣu*, means "to treat with injustice, to dupe," which is clearly not applicable to this context.) In Targumic Aramaic and in Syriac the verb means "to prick, squeeze, fix, stick" (Jastrow 316; Leslau 127). Interpreters have generally worked from the latter meaning, trying to provide a related sense that would fit the context. Since the verb describes some action with the feet, the range of possibilities is somewhat limited. Proposals have included, "Anat planted her feet" (Driver, *CML*[1] 89); "she stamps her foot" (*ANET* 137); "She digs in (her) feet" (Pardee 1997a:254); "She takes to her heels" (Parker, *UNP* 62, in his translation of the parallel in 1.17 VI 46). *DUL* (259) renders: "she pressed (?) her feet (down)."

Also difficult is the second clause (cf. *TO* 1.174 n. i). The verb here too is ambiguous, and its root is disputed. Some derive it from *twr*, known in Hebrew with the meaning, "to spy out, explore." In the context here, those who accept this etymology suggest that the word has the nuance of "to travel across" (see *TO* 1.174). Others have proposed Akkadian *tarāru*, "to tremble, shake," as the cognate. In this case, "the earth" becomes the subject of the sentence: "and the earth trembled" (see Driver *CML*[1]: 89; Gibson *CML*[2] 53; Wyatt 1998:84). The third common interpretation is to see the verb as related to *yry*, whose cognate in Hebrew (*yārāh*) means, "to shoot." The sentence is then read as, "and she takes off across the earth" (Pardee 1997a: 254) or "[she] shot (from) earth" (Pope 1971:400, 402).[20] The latter may be supported by the verb's appearance in 1.10 II 10–11. Here the text reads, *tšʾu knp btlt ʿn[t], tšʾu knp wtr bʿp*, plausibly rendered, "Adolescent Ana[t] lifts the wing, she lifts wing and shoots off in flight."[21] However, the lack of a preposition with *ʾarṣ* in 1.3 V 5, while not entirely ruling out the rendering "to shoot (from) the earth," requires seeing here a

[20] So too *GA* 101; for the adverbial accusative with the sense of "from," see CAT 1.119.28.

[21] Pope 1971:402. For the final clause, compare CAT 1.13.8 (see p. 178).

rare construction, which taking the noun as subject and relating the verb to *trr* does not. Accordingly, we have tentatively translated the clause as, "and the earth shook."

This interpretation does not, however, exclude the notion that Anat takes flight to make her journey to El's mountain. There are several references to her travelling by flight (cf. Fensham 1966, Pope 1971). In addition to the passage from 1.10 II 10–11 discussed above, one can cite 1.18 IV 17–22, 27–33, which describes the goddess hovering (**rḫṗ*) over the hero Aqhat. CAT 1.108.8–9 also makes use of **rḫṗ* in describing Anat in the air (cf. Tuttle 1976; Pardee 2002: 194). The West Semitic myth of Elkunirsa preserved in Hurrian-Hittite (*ANET* 519; Hoffner 1998:90–92) also has a scene in which El and Athirat engage in conversation at El's home, while another goddess, disguised as an owl, eavesdrops in the background. The second goddess' name is written as ^{d}IŠTAR in the text. Hoffner has argued that she is to be identified as Anat and Astarte merged into a single goddess (1975:6). There may also be iconographic representations of Anat in the form of a bird or a winged goddess, although the interpretation of these depictions remains speculative. Pope (1971) proposed an interpretation of a scene painted on a drinking mug from Ugarit that identifies a bird in the scene as a representation of Anat, but this interpretation is disputed (see the Commentary on pp. 505–06). A Ugaritic seal includes the scene of a figure holding a spear standing before a seated figure (Amiet 1992:95 and 107, no. 237) with a bird positioned between the two figures. The presence of the bird might suggest that the standing personage is Anat, perhaps before the seated El. As noted above (p. 185 n. 78), a well-known theme of seals attested from Syrian sites is that of a warrior god in the company of a winged goddess. This scene may reflect the pair of Baal and Anat. Finally, it is to be noted that Anat's violent counterpart in Mesopotamian myth, Inanna/Ishtar is also sometimes depicted as a winged goddess (see above on p. 154, n. 34).[22] In short, the passage here may assume the idea of Anat flying even though it may not use explicit language for this picture.

The tricolon in lines 5b–7a and the following bicolon in lines 7b–8, which describe the goddess' travel to and arrival at El's abode, are formulaic and are used elsewhere when a deity goes to see El (1.1 III

[22] Hallo and van Dijk 1968:17, lines 17, 27. On bird imagery for the gods in Mesopotamia, see Black 1996.

21–24 and 1.2 III 4–5 [Kothar-wa-Hasis]; 1.4 IV 20–24 [Athirat]; 1.17 VI 46–49 [Anat]).[23] The nature of El's abode has been discussed in *UBC* 1:188–89 (see also the survey in Homan 2002:94–99). Recently, Fleming (2000a) discussed an administrative text from Mari (M.6873, published in Durand and Guichard 1997:65–66) that provides an interesting description of a large tent that illuminates the presentation of El's tent in here in 1.3 V:

1 *ḫu-ur-pa-tum* GAL 16 LÚ^{meš}	One large tent[24]: 16 men;
10 ^{giš}*qé-er-su* 20 LÚ	10 framing (?) units: 20 men;
5 ^{giš}*mu-za-az-zu* 5 LÚ	5 stands (?): 5 men;
14 ^{giš}*mu-ru-du-ú*	14 fence(?) units: 2 men;
ŠUNIGIN 43 LÚ^{meš} *ša ḫu-ur-pa-tim*	Total: 43 men pertaining to the big tent.

Fleming (2000a:487) identifies the *qersum* in the second line as the large wooden frames upon which the fabric of the tent is arranged (see also Homan 2002:116–18). In this text, it takes two men to carry each frame. This is parallel to the Hebrew *qĕrāsîm*, the large frames for the tabernacle (cf. Exod 26:15–27). That such large tents at Mari were clearly used as shrines is evident from another text, M12803 (a *kispum* text first published in Birot 1980), where a tent is installed for a ceremony on "the day of gimkum" (col. II, lines 7–14, following Fleming's reading, 2000a:490):

> On the *gimkum* day, tent frames (*qé-er-su-ú*) are set up (*iš-ša-ak-ka-nu*). A donkey is put to death. The gods and the paraphernalia depart from the midst of the tent frames (*i-na li-ib-bi qé-er-si*); (each) deity goes to his temple and the king to his palace.

This material gives us a clearer picture of the complexity and substantial size of ceremonial tents in the second millennium BCE. It certainly allows us to see El's *qrš* as a substantial tent-shrine, with the large number of separate rooms that are described in our passage (lines 11–12). El's tent is thus a full-scale shrine, as we might expect for the abode of a major god. Although the tent was portable and could therefore be moved from place to place, there is no indication within the Ugaritic texts that El traveled with it. He always seems to be in one location.

---

[23] See *UBC* 1.184–87, 225. Cf. *tgl* rendered as "she turns," in Sivan 1997:101.
[24] For this term, see also Durand 1988:114–15, and below p. 671.

One might compare this loosely to the tent-shrine David sets up in Jerusalem to house the Ark of the Covenant (2 Sam 6:17–19), which apparently stays in a permanent location.[25]

The passage in M12803 quoted above also shows that such tent-shrines were used in rituals involving gods who had regular temples as well. In this case the gods, presumably their statues, come to the tent shrine for a ritual involving the slaughter of a donkey, and then they return to their temples (*bi-ti-šu*). Thus it seems possible that a god could have both a regular tent-shrine and a permanent temple at the same time. Some have suggested such a coexistence for Yahweh at Shiloh, where both a tent-shrine and a more solid temple (1 Sam 1:9) seem to be described. A similar situation might be attested also for Jerusalem in the time of David (2 Sam 6:17; 12:20). In this case, the rhetoric of 2 Sam 7:6–7, which contrasts the tent-shrine and a temple, may obscure the older religious usage; perhaps later tradents for whom the tent and temple in tandem was no longer part of their religious experience interpreted the two as stages of Israelite religion, with the shift to the temple brought on by Solomon's temple. A similar duality also seems to be suggested at Ugarit, where the abode of El is regularly described as a tent in the mythological texts (and presumably had some basis in reality), while the ritual texts from Ugarit only refer to a house of El (*bt ʾil*), similar to the other temples of the gods in the texts (1.87.42; 1.119.14, cf. see also *qdš ʾil* in 1.119.6).[26]

In each of the four parallel passages narrating the journeys of deities to El's dwelling (1.1 III 21–24; 1.2 III 4–5; 1.4 IV 20–24; 1.17 VI 46–49), the succeeding lines describe the newly-arrived deity bowing

---

[25] It is possible that *qrš* is related to Akkadian *quršu/garšu* (so Loretz 1995b:727). The phrase E-*quršu*, "a wedding pavilion" (Mattila 2002:120, line 9, and 313), perhaps literally "the pavilion house," appears as one part of an acquired property: "a built house with its beams and doors in Nineveh, a tool shed, *a wedding pavilion*, a storehouse, an upper story (with) 4 doors within" (Mattila's italics). This list distinguishes the É-*quršu* from a number of structures, including the first and main structure of the "built house."

[26] The duality may also be noticed in 1.17 I 31–32 and its parallels, where the duties of the good son include "to eat his portion in the house of Baal, and his share in the house of El (*bt ʾil*)." This passage clearly refers not to the mythic tent of El, but to the regular site of offerings to the deity, a temple within a town. The only mythological text that refers clearly to a house of El is 1.114, which is somewhat unclear in its geography. It appears that El holds a feast in his house, but in lines 17–18, he seems to leave his house to go to "his house." But here too there is no hint that the "house" is also a tent. Homan (2002:96) suggests the terms such as *bt* and *hkl* could be used to refer to the large tent-shrines, but none of his examples is decisive.

down before El (1.1 III 24–25; 1.2 III 5b–6; 1.4 IV 25–26; 1.17 VI 50–51). However, in 1.3 V, uniquely, no such obeisance is mentioned. Instead, the bicolon (lines 8b–9) describes different actions on Anat's part. The first line uses two words from the previous bicolon (*[t]b'u ddm*, "she enters the mountain"), but they are preceded by *tṣr*, a word of uncertain meaning and etymology. Previously read as *mṣr* and interpreted accordingly, much (but not all) of the previous scholarship on this word must now be rejected. Pardee (1997a:254) was the first to recognize that the supposed vertical wedge of the *m* was actually a break in the tablet and that the text thus read *tṣr*. With this reading, parallels now can help in the interpretation of the word here. Most usefully, the same form appears three times in 1.16 II (in lines 25, 26, 34). This is also a fairly difficult and broken passage, which almost certainly describes the reaction of Thitmanit, Kirta's daughter, to the news that her father is seriously ill. The key to understanding this passage is the largely preserved bicolon in lines 33–34, which reads:

tẖẖ [.q]l trm	She wept, she raised (her) voice,
tṣr.trm.t[n]qt	She shouted, she raised a wail.

Although several different renderings have been proposed for these lines (cf. Gibson, *CML*[2] 97; *TO* 1:557–58, Margalit 1995:281–82), Wyatt (1998:229 n. 243) has provided a strong defense of this understanding of the passage, which certainly fits the context better than the other proposals (Greenstein, *UNP* 34 and *DUL* 647 also support this interpretation). The surrounding phrases would suggest that *tṣr* is a verb referring to some kind of emotional cry. This bicolon may be used to help tentatively reconstruct the earlier bicolon in lines 25–26 as:

tṣr q̊[l.trm]	She shouted, [she raised] (her) [voi]ce,
tṣr.trm.tnq[t]	She shouted, she raised a wai[l].[27]

Following this description in lines 25–36 of her intense reaction to the news, Thitmanit gives an impassioned and angry speech about her father's mortality (lines 36–49). *DUL* (588) derives the three attestations

[27] Lines 25–26 are still quite ambiguous, and it is not entirely clear how the words we have used from line 25 relate to what precedes them. It is possible that *tṣr* here is second fem. singular and that the line (and maybe the following line) belong to Ilha'u's speech. The general meaning of the lines would change little, however.

of *ṭṣr* in 1.16 II from the root *nṣr*, which it interprets to mean "to sob." This specific meaning, however, is not attested in the contemporary languages and has been deduced largely from the context of 1.16 II. There is clearly an element of anger as well as sorrow in the outburst described in this passage, which suggests that the cry is more than just a sob. Now that we are able to add 1.3 V 8 to the picture, it is plausible to suggest that the verb refers to a shout of anger rather than sobbing as such, both in 1.16 II and in 1.3 V. The close relationship between 1.3 V 8b–9 and 1.16 II 26 and 34 can be seen in the fact that not only do they share the word, *ṭṣr*, but they are also syntactically identical in form: each is constructed of a **yqtl* verb + **yqtl* verb + direct object. Considering the available etymological and contextual evidence, we have rendered the bicolon in 1.3 V 8b–9, "She shouted angrily as she entered the mountain. She repeated it (i.e., the shout) to the Lord of the children of El." It is to be noted that a proper etymology for this interpretation remains a desideratum.

Before leaving *ṭṣr*, however, two other interpretations of the verb in 1.3 V should be mentioned. One alternative is to relate the word to the BH root, *ṣûr*, "to show hostility, treat as a foe." Here, one could suggest rendering the line, "She was hostile (or: confrontational) as she entered the mountain." But this meaning does not fit the context of 1.16 II very well, nor does it provide a connection with the following line's *tt̲ny*, as our interpretation does. Pardee (1997a:254) also related the verb to the hollow root *ṣr*, but chose to interpret it from an Arabic meaning and rendered "she bends over." But he does not explain why she has to bend over to enter El's abode (one could imagine her entering through a low tent flap perhaps). Such a description is not found elsewhere. Beyond this, the interpretation again fails to provide any parallel to the second line of the bicolon. Thus although neither suggestion can be ruled out, they both seem less likely than the one we propose above.

Pardee (1997a:254 n. 103) was also the first to recognize the reading *tt̲ny* for the first word of the second colon (line 9). The verb **t̲ny* occurs a number of times in the Ugaritic texts and means, "to repeat, reiterate." It normally is the second element of a word pair with *rgm*, "to tell" (e.g., 1.3 III 11–12; VI 21–23; 1.4 VIII 29–32; 1.16 VI 28–29; see the discussion in *UBC* 1.49, 170). Its appearance here in the second line of the bicolon also suggests that it is the second word of a parallel pair and that *ṭṣr* should be viewed as the first word. The appearance of *tt̲ny* here supports our interpretation of *ṭṣr* as referring to a vocal

action, and the shout referred to in the first line explains what Anat repeats in the second line. Anat is clearly not repeating a message at this point, since no message is even hinted at yet. She arrives at El's abode and shouts out at him twice. In the next bicolon he hears her shout and responds. This interpretation seems more plausible than Pardee's, "(she) addresses the lord," which requires a meaning of **ṯny* that is unattested elsewhere.

Lines 10–25: El's Response and Anat's Threat

El hears Anat's shouts from his interior room (line 10a) and responds to her (lines 10b–12a), not by coming out to meet her or by having her ushered into his presence, but by leaving her where she is and calling out to her from where he is. The bicolon in lines 10b–12a refers to the room in which El is located as "the seven rooms//the eight entrances to the enclosures." This suggests that he is in the interior-most part of his dwelling. The appearance of the numeric pair, 7//8, is a typical formula, occasionally used elsewhere of movement toward the interior. One might note in particular the parallel usage of the number seven in the description of the seven gates that must be entered to reach the center of the netherworld in the Mesopotamian myth, "Ishtar's Descent to the Netherworld" (lines 12–74; cf. Foster 2005:499–501; *ANET* 107–9; D. Freedman 1972:91–92). It is not clear whether the interior room is El's throne room or his private chambers. The BH cognate of *ḥdrm*, *ḥeder*, usually refers to a private room, such as a bedroom, rather than a public one (*HALOT* 293), but this is not decisive. The word *sgrt* suggests a well- protected area (cf. BH *sāgar*, "to shut, close," *sûgar*, "cage"). The usage of *ʾap*, usually "nose," for an architectural feature, "entrance," is also attested in South Arabian (*ʾf*, "façade" in Leslau 28).[28]

The substance of El's response to Anat is lost in the badly damaged lines 12b–16. It is not entirely clear whether the tricolon in lines 17–18 belongs to El's speech, but that seems to be the more likely interpretation. These lines represent a formulaic reference to Shapshu and Mot,

[28] For such usage elsewhere in Ugaritic, see *UBC* 1.189, esp. n. 141. Such an analogy lies behind the application of the architectural verbs, **bny//*mgr*, to the human person (more specifically, the person praying) in Ps 155 (11QPs[a] 24:5; see Greenfield 1992:313). From the linguistic side, the analogical use of bodily terms for architecture and vice-versa may enlighten both the so-called allegory of Eccles 12:3–7 (esp. vv 3–4) as well as the Christian notion of the individual as a temple of the holy spirit. The subject bears wider study in West Semitic languages.

but their relevance to the scene here is unclear. It is, however, certain that El's speech did not contain an invitation for Anat to enter his presence, since after her response to El in lines 19–25a, the bicolon in lines 25b–27a reiterates El's separate position in his inner room. Thus during the entire scene preserved here in 1.3 V, Anat is kept at the entrance to El's tent and is never allowed a real audience with the king of the gods. Such a peculiar situation is unique to this passage. In all other depictions of a deity's visit to El, there is a face-to-face meeting. This includes the thematically similar meeting between El and Anat in the Aqhat Epic (1.17 VI 46–53), where she also arrives in great anger. But in that case, she is admitted immediately to El's presence, bows down before him, and then makes her plea before proceeding to threaten him in very similar terms as those in this passage. Why is Anat kept away from El here? Some scholars have proposed that El is so afraid of Anat's violence that he refuses to let her in to his chamber (for example, Pardee 1997a:254 n. 105; Wyatt 1998:85 n. 64). However, the old god's reaction to Anat does not particularly express such grievous fear, nor is there any indication that Anat's threats are taken very seriously by him. They do not force him to agree to her demands. There are formulaic descriptions of such fear found elsewhere in the cycle (cf. 1.3 III 32–35; 1.4 II 12–20), but nothing of the kind occurs here. She clearly represents no serious threat to El, and his decision in a matter of importance, such as granting Baal permission to build a palace, will not be influenced by such theatrics. So why does he refuse to see her? The most obvious reason is that she has clearly broken court protocol with her boisterous entry. But El may also have political reasons not to give her an official audience. In CAT 1.1 and 1.2, El is not a supporter of Baal for the position of ruler of the council. He instead supports Yamm and even instructs Kothar-wa-Hasis to build Yamm a palace as a confirmation of his position. The preserved text of 1.2 unfortunately gives no indication of El's reaction to Yamm's defeat by Baal, but this passage may. El is certainly aware of Anat's relationship to Baal, and as will be discussed below, it appears that he will not grant her request for a palace. This suggests reluctance on El's part to support Baal's assumption of power. His refusal to allow Anat into his presence may thus be a political snub, indicating to her and to Baal that he has not yet recognized Baal's rise in stature. This highlights again Anat's relative weakness in this situation and Baal's by extension.

Comparing similar stories in Mesopotamian literature further illuminates Anat's comparatively weak position in the context of the story

here. Anat uses similar threats in the Aqhat Epic (1.18 I 7–14) and gets a positive response for her request. In the Epic of Gilgamesh (*ANET* 84), Ishtar, having been insulted by Gilgamesh after she proposes marriage to him, goes to Anu, to ask for his permission to send the Bull of Heaven to kill Gilgamesh. She also makes a threat during her request. Similarly, in the Descent of Ishtar to the Netherworld (*ANET* 107), Ishtar makes a threat when she demands that the gates of the netherworld be opened to her, so she can meet with her sister Ereshkigal. The episodes from the Aqhat Epic and Gilgamesh are closely related thematically, since in both the goddesses seek permission to kill a person who has insulted them; in these instances, the requests of the goddesses represent a matter of honor. And while neither El nor Anu seems particularly convinced of the need for such a drastic punishment, they do not question the basic need to requite those who express contempt for a deity. Neither of these requests has any impact on the divine sphere and its governance, unlike the situation in our passage, where the acquisition of El's permission for the palace is actually the gaining of El's full and final acceptance and authorization of Baal's kingship.

There is also a significant difference in the types of threats used by the two goddesses. Anat's threat is directly against El, a threat to beat him up. Ishtar's threat, on the other hand, is not directly against the deity that she seeks to influence (Anu or Ereshkigal). Instead, she threatens to endanger the cosmic order, by destroying the gates that keep the dead in the netherworld from returning to the surface of the earth. This would set two of the three great divisions of the universe into chaos. Such a threat clearly suggests the great power of Ishtar as one of the leading deities in the Mesopotamian pantheon. Compared to this, Anat's threat pales in relative significance. Anat's is personal and provides no hint that she has a major role in the sustenance of the universe.

The larger contexts of the goddess' requests in the Aqhat and Gilgamesh Epic show both similarities and contrasts as well. When Ishtar requests permission to use the Bull of Heaven in her plan, Anu points out to her that allowing the Bull to attack Gilgamesh will result in a seven year drought. He asks whether Ishtar has made arrangements for stocking up food for the people of Uruk and grasses for the animals so that they will be able to survive the disaster. She answers that she has provided such stores. Anat's action of killing Aqhat also results in a drought situation, but in this case there is no hint that Anat has made any provision for the people to survive the drought. Once again,

Ishtar, while volatile and violent, is still shown to play a major role in maintaining stability within the universe, while Anat seems to have little responsibility in this realm. This perhaps relates to her depiction as a young woman, as opposed to Ishtar's depiction with greater maturity, as the great lady. It additionally reinforces the impression that Anat, like the god whose cause she supports, stands in a somewhat weak position at this point in the narrative. As CAT 1.4 I–IV indicates, it will require the help of Athirat to win El's permission for the palace of Baal.

When the text resumes in lines 17–18, we are confronted with a formulaic passage that appears also in two other places within the Baal Cycle (1.4 VIII 21–24 and 1.6 II 24–25).[29] The interpretation of the passage is difficult in the two latter contexts, but is even more ambiguous here. Its position in 1.3 V suggests that the lines are the conclusion of El's spoken response to hearing Anat's angry shouts. But exactly how the passage fits into this context is not clear. There is even uncertainty as to whether it should be understood as a bicolon or a tricolon. We have chosen to render it as a bicolon (see also *CML*[2] 53; Pardee 1997a:254; two similarly unequal bicola appear just above in lines 7–9). A problem with this division of the lines is the significant imbalance this creates between the two parts of the bicolon (the word/syllable count being 4/11 to 6/15). Because of this, some have divided the passage into a tricolon (Ginsberg, *ANET* 135 [1.4 VIII 21–24]; del Olmo Lete 1984:162–67; Smith, *UNP* 116). Both divisions appear possible, and because of the uncertainty of the interpretation, neither can be considered clearly preferable. Neither rendering solves the additional problem that there is virtually no parallelism between the lines. The minor advantage of rendering it as a bicolon is that this allows the passage to be understood as two complete clauses, rather than one long sentence.

The first line calls the sun-goddess Shapshu, *nrt ʾilm*, "the divine light" (or "lamp"), an epithet commonly given to the goddess in the Baal Cycle (see 1.2 III 15; 1.6 I 8–9, 11, 13, III 24; IV 8, 17) and in the Aqhat Epic (1.19 IV 47, 49). The title in the newly published

[29] Wiggins (1996:330) expresses doubt about whether these badly damaged lines are actually parallel to the lines from 1.4 VIII 21–24 and 1.6 II 24–25. While caution is appropriate in this situation, it seems that all the letters (including the final /t/ on line 18, questioned by Wiggins) match the parallel passages, thus making it likely that they are parallel. At the same time, one must remember that at this point no clear interpretation of this passage within the context of our passage has been forthcoming. Thus the possibility that we are wrongly reconstructing the lines must be kept in mind.

mythological text RS 92.2016, line 38' varies slightly: *nrt 'il* (*EO* 394). This form of the sun-goddess' epithet suggests that the second word in *nrt 'ilm* is singular with mimation, meaning either "El" or "divine." In either case, it does not mean "gods." A similar title, *nyr rbt*, "great light," appears in the funerary text, 1.161.19, and probably in 1.16 I 37. It is against the background of these titles that the biblical title for the sun, "great light" (Gen 1:16), may be better understood. Many of the occurrences of the title come in contexts related to sunset and death, such as we have in this passage (cf. 1.6 I 8–10, 13–15). This calls to mind Shapshu's role in the netherworld, which may have involved her providing light to that region during the night, and with bringing spirits of the dead to the netherworld (see Lewis 1989:35–46). Thus the reference to Shapshu here may have to do with her relationship to the nether realm, even though the context does not provide any further insight.

The next word, *ṣḥrrt*, is also difficult. It derives from **ṣḥr* (on the reduplication of the final radical, see *UG* 680). Two primary meanings have been proposed for the verb. It is commonly interpreted from Hebrew, Syriac, and Arabic cognates as describing a color, either white, yellow, yellowish-red or reddish (cf. *HALOT* 1019). Reduplication of the final radical is known for MH color terms (abstracts), such as *'admûmît*, *labnûnît*, *šaḥărûrît* (Brenner 1982:188, 190; cf. *ḥaklîlî* discussed in Brenner 1982:130–31). The Arabic IX and XI forms also duplicate the final radical for a number of colors (see Wright 1.43–44, paras. 58–59), including the cognate for *ṣḥrrt*, *'iṣḥārra* (Lane 1654; *DUL* 783). Reduplication of second and third radicals also takes place in a number of West Semitic color terms: BH **'ădamdām* in Lev 13:42, 49; **yĕraqraq* in Ps 68:14, Lev 13:49, 14:37; and BH *šĕḥarḥōret* in Song of Songs 1:6 versus *šĕḥôrâ* in 1:5 (for details and a proposal to see "brightness" as the distinguishing feature of these reduplicated forms, see Brenner 1982:106–10, 121, 124, 129–30, 167, 186, 190, 191). But some modern South Arabian dialects use the word in the meanings, "to brand, cauterize" (see Rendsburg 1987:625), which suggests a possible meaning here, "to burn." Both meanings have been attributed to a word from the same root in the difficult passage, 1.23.41, 45 (for the first see *SPUMB* 114; *CML*^{2} 125, the second, Pardee 1997a:254). We have taken it to mean, "to shine red" in our translation. It possibly refers to the weaker shining of the sun near sunset, rather than the bright, hot sun of the midday. This view would conform to the notion of the sun-goddess at sunset, as suggested by some of the other contexts that

use the title *nrt ʾilm* (noted above). This image then may fit with the image of the heavens' weakness in the following line.

The next word, *lʾa*, is also ambiguous. Many understand it as a verb meaning either "to be weak" (Pardee 1997a:254 n. 107), or the opposite, "to be strong" (Sivan 1997:43). The latter meaning is well known, in particular in Baal's title, *ʾalʾiyn bʿl* (*DUL* 486), but such a rendering here seems difficult. The context suggests the former meaning, which is also attested in Ugaritic (1.100.68; cf. *DUL* 489): *tlʾu ḥ<m>t*, "the venom is weak" (Pardee 2002:178). In this interpretation of *lʾa*, the final *ʾa*-ʾaleph has been understood as indicating the form as third masculine singular **qatala* (e.g., Huehnergard 1987b:292 n. 117). But if so, then the verb does not match the succeeding *šmm*, which is plural. Sivan (1997:43), Tropper (*UG* 482–83), and Pardee (1997a:254 n. 107) identify it is an infinite absolute. While one might object that the form might then appear as *lʾu*, contracted from *laʾāyu* (cf. Sivan 1997: 42–43 for examples of the reduction of *-ayu* to *-û*), Tropper (*UG* 482) argues that the infinitive sometimes could also take the accusative or "Absolutivkasus" ending, *-a*, thus allowing the contraction from *laʾāya* to the form seen here, *laʾâ*. Unfortunately, the occurrence of *lʾa* in this passage is the only attested II-ʾ/III-y example of this proposed phenomenon, and the ambiguity of the entire sentence does not allow for certainty in regard to Tropper's proposal. A third interpretation of the word as a verb relates it to the Akkadian D-stem verb, *luʾʾu*, "to defile, desecrate, sully, soil" (see *CAD sub luʾu*; *DUL* 486, *sub laʾ*; de Moor 1987: 16). *CAD* notes a passage in Maqlu III 48, in which the verb is used with "the heavens" as in our passage: *mu-la-ʾ-i-tum ša šamê mulappittu ša erṣeti*, "she is the one who defiles heaven, desecrates the earth (or netherworld)." De Moor does not press a sacral meaning for the word in his translation of our passage, rendering it as "the heavens are soiled by Motu," and assuming that it refers simply to the dusty atmosphere being referred to in the bicolon.[30] The word has also been taken as a noun, meaning "strength, power" (e.g., Wyatt 1998: 85; Watson 1977a) or "orb" (Pope 1981a:168), as a reference to the sun itself, or "expanse" (Ginsberg *ANET*, 137), as a reference to the heavens. If so, the final letter suggests an accusative case ending, indicating that this word would be a direct object. In this case, one would have to connect it to the previous verb *ṣḥrrt*. But as

[30] De Moor 1987:16, see note 87. We thank Juliane Kutter for drawing our attention to this possibility. She deals with it in her thesis written at Tübingen.

discussed above, that verb is in all likelihood a stative verb, and thus would not take a direct object.

The passage's final section refers to the god of Death, Mot. This is the first mention of the god in the Baal Cycle. As a character in the narrative, he does not appear until 1.4 VIII. While *byd*, literally "in the hand of," seems a generic reference to Mot's power, it bears a further sensibility, which may be educed thanks to a Ugaritic letter, CAT 2.10 (Pardee 1987). This text appears to mention "the hand of the god(s)," i.e., a disease, in a comparative context with *mtm*, "death/Mot." Following the introductory identification of speaker and addressee in lines 1–3 and greetings in line 4, the body of the letter in lines 5f. takes up the matter of the pestilence. In lines 11–13, the speaker describes the severity of the epidemic (see Marcus 1974:406; Pardee 1987):

w.yd/'ilm.	For the hand of the god(s)
p.kmtm/'z.m'id	(is) here, like death/Mot, exceedingly strong.

The comparison here suggests that the power of death, perhaps even the god of Death, is proverbial for its strength. In this letter, the power of death/Mot is manifest as pestilence on the terrestrial level; here in our formula Mot's power is expressed on the cosmic level. Despite the sense 2.10 provides about the perception of death, the passage's meaning of "the hand of Death" within the storyline of 1.3 V remains obscure. Wyatt has attempted to interpret it by appropriating the verb that precedes the passage in the two parallel occurrences as the verb for the first line. He proposes:

> Will the Luminary of the gods, Shapsh, [carry me off, **ḫt'*],
> The Burning One, Strength of the Heavens,
> Into the han[ds of the divine Mo]t?

He interprets this as perhaps a mocking response from El to Anat's threatening arrival. While this rendering actually places it into an appealing context, the problem lies both with the poetical arrangement, which suggests that the verb Wyatt incorporates into the line actually belongs with the preceding bicolon. Furthermore, the verb, **ḫt'*, appears never to mean, "to carry off," as Wyatt renders it, but rather "to crush, grind up, annihilate" (cf. *DUL* 413). These meanings fit the context of the previous bicola, rather than those with which we are dealing. In addition, Wyatt's interpretation would not fit well with Shapshu's role elsewhere in the story, since in this understanding of

the passage, Shapshu appears to be in league with Mot, while particularly in 1.6, such is clearly not the case. Thus it appears that while the bicolon generally indicates a perception of cosmic difficulty, its precise meaning must remain a mystery for now.

Lines 19–25 present Anat's angry response to El. The speech-opening formula in line 19 manifests the standard verbal syntax for continuing the narrative, namely *w-* plus **yqtl* indicative. She registers her displeasure at El's apparent attitude toward her, and then threatens to attack him even though she has yet to even present her request from Baal. Her threat appears in terms that are related to, but not identical to, her speech in 1.3 V 1–3. In the first tricolon (lines 19–21), Anat addresses El's apparently flippant demeanor towards her. The exact details of her speech here are ambiguous once again, although the general point is quite clear. The problem concerns the interpretation of the word *bnt*, which appears in the second line of the tricolon and is usually, and probably correctly, reconstructed in the first line. Pardee (1997a:254 n. 108) suggested the possibility of interpreting *bnt* in the first two as "daughters" and proposed that Anat could be referring to the family of El in this part of her speech, "May the daughters of your house, O El,/ May the daughters of your house not rejoice." Several commentators (e.g., de Moor 1987: 17; Wyatt 1998: 86) have reconstructed the parallel in the first colon as *bn* or *bnm* and rendered, "Let not the sons of your house, O El, Let not the daughters of your house rejoice." While these proposals are possible, it seems more likely that Anat here is focused upon El, rather than the family at large (cf. Pardee 1997a:254 n. 108). A second interpretation was proposed by Margalit (1983:91–92), followed tentatively by Pardee (1997a:254), who took *bnt* as a derivation from **nty/w*, which in Arabic means, "to swell up," and proposed understanding the word here as "grandeur." Thus they read: "In the grandeur of your house, O Ilu, In the grandeur of your house do not rejoice." The third major interpretation is to read it as a noun from **bny*, "to build," and read, as we do, "In the construction of your house, O El,// In the construction of your house do not rejoice" (*CML*^{2} 53; *UNP* 117; cf. *TO* 1.175, where the verb is taken as suffix indicative, "tu as bâti"). This seems the more likely rendering. Anat thus opens her speech with a criticism of El's self-satisfaction in the comfort of his home, which contrasts with the situation for the new king Baal. As far as the extant text shows, this section is not part of the message Baal has given to Anat. Instead, it flows from the dramatic logic of the scene, which in numerous details (i.e., his failure to allow her

into his room, her earlier speech to Baal in which she already assumes a need to threaten him) emphasizes the strained relationship between El and Anat. A similar outburst appears in Anat's discussion with El about Aqhat's rejection of her in 1.18 I 7–8. The badly broken lines there only preserve *]k ʾilm*, "your_____, O El," from the first line, and *ʾal.tš[mḫ]*, "do not re[joice]," from the third. Thus it is impossible to determine whether the lines there are exactly parallel to 1.3 V 19–21, or whether only the call for El not to rejoice is identical with our passage, while the description of what he is not to rejoice in is different. Whatever the case, in both scenes Anat seems to perceive a smugness in El that she does not like.

Both speeches continue with an explicit threat against El (1.3 V 22–25//1.18 I 9–12). These latter lines appear to be completely parallel. The primary difference between the two passages is that in 1.3 the speech is Anat's prelude to making her request, while in 1.18, it concludes Anat's request, apparently after having received no clear answer from El following her actual request. In the latter case, the threat leads to El giving in to her demands. The context in 1.3 seems quite different, however.

Returning to the details 1.3 V 19–21, it is to be noted that El's house, given in the plural form (*UBC* 1.235), is not said to be a palace, which is what Baal requests. In contrast, El's home is a tent. This contrast between tent-shrine and temple can be found also in the biblical texts, where the contrast is between Yahweh's earlier home (the tent) and his newer home in Jerusalem (2 Sam 7:5–7; see also Ps 78:60; cf. Ps 132:6–7; *CMHE* 72–73; and the discussion above on p. 339). Despite the contrast between the two sets of imagery, the verb **bny*, "to build," presumably can apply to both. As its *-t* ending indicates, the word *bnt* is a noun (*DUL* 232) and the same may be inferred for the parallel *rm* in the third line of the tricolon (the verbal form being *rmm*; see references below). The parallelism with *bnt* suggests the further connotation with the meanings of building construction elsewhere associated with *rmm*. The BH noun *rāmâ* is used as a term for shrine in Ezek 16:24 (*BDB* 928) where it is governed by the verb **bny*. The use of the verb **rwm* is found in both Ugaritic and Israelite texts for construction of a divine palace (1.4 V 52, 54, VI 17; Ezra 9:9; Ben Sira 49:12; see *CS* 407; Avishur 1980–81; *UBC* 1.235). Given the parallel usage of *bny* and *rmm* in 1.4 V–VI, their joint appearance here in Anat's speech may represent the poet's anticipation of the language of construction for Baal's palace.

Anat's threatening speech continues in lines 22–25. As noted above, this section appears to be paralleled closely in 1.18 I 9–12. If our understanding of the previous tricolon is correct, Anat then threatens to seize and demolish El's abode in the succeeding bicolon (lines 22–23). The suffix on *ʾaḫdhm* in line 22, would refer back to *bh[tk]//[h]kl[k]* (so de Moor and van der Lugt 1974:22). The restoration, *bym[n]y*, appears certain, since it clearly parallels *bgdlt ʾarkty*, literally, "in the greatness of my length," in the second line, which certainly refers to Anat's long and powerful arm. This image belongs to the warrior. Baal's right hand (*ymn*) is presented likewise as part of his martial pose in 1.4 VII 41. Similarly in 1.2 I 39 Baal takes a weapon in his right hand. The storm god's iconography shows him brandishing weapons in both hands (*ANEP* #490, 501, 537). Verbally more proximate to the bodily terms used in Anat's threat, Yahweh's arm is called *yĕmînĕkā*, "your right (hand)" and *bigdōl zĕrôʿăkā*, "with your long arm" (Exod 15:6, 16, respectively; see *CML*[2] 53 n. 10; Pardee 1997a:254 n. 110; cf. Isa 24:10, 50:2). The term *gdl* certainly refers in such contexts to the strength and power of the deity's arm. Length, in terms of the arm, also evokes a superior capacity for action in combat.

The second and third lines of the tricolon in lines 23–25 appear to parallel exactly the words used by Anat in her discussion with Baal back in 1.3 V 1–3. The first line, however, is different from that in 1.3 V 1 (an indication that parallel passages are not always so parallel). This line, however, does appear to be reiterated in 1.18 I 11, although very little of the line there is preserved. In 1.18, the parallel passage is followed by a unique tricolon (I 12–14) that flows directly from the story line of Aqhat: "Then [cry to?] Aqhat to rescue you,/To [Daniel's] son to save you/From the hand of [Anat] the Girl" (Parker, *UNP* 63). This once again shows the flexibility of the use of formulaic passages within similar but fully distinct contexts.

Lines 25–44: El's Answer and Anat's Plea

El responds to Anat and her menacing pose in lines 27–29. As in lines 10b–12a, the narrative mentions (lines 25b–27a) that El speaks again from his inner chamber, rather than in the direct presence of Anat. The appearance of this bicolon a second time, rather than the standard single-line rubric, "Beneficent El the Benign answers" (cf. 1.1 IV 13; 1.4 IV 58; 1.18 I 15), indicates that this is a significant datum for understanding the dynamics of the story. It appears to emphasize again

that El has not granted an actual audience to Anat that would allow her to bring her request officially before him. This probably foreshadows an unsuccessful outcome to her mission.

El's response is short and hardly complementary. His exact meaning once again, however, is ambiguous because of the uncertainty of the meaning of the key parallel pair, **ʾnš* and **qlṣ* (the latter reconstructed from the parallel, 1.18 I 17). The first word, *ʾanšt*, can be related to two roots, *ʾnš*, one meaning "human, man, person," and the other, "weak, ill." De Moor (1987:17) and Pardee (1997a:254) relate it to the first of these, and the latter renders the line, "I know you, (my) daughter, (I know) that [you] are a manly sort." Others (e.g., Driver, *CML* 91; Coogan 1978:95) assume that the word is related to the second verb and translate it, "you are gentle," assuming that El is speaking ironically here. A third approach suggests that an extended meaning of "weak" can be "angry, furious" (*DUL* 83, which also gives bibliography for other suggestions). Such a meaning fits the context here very well, and is possible also for the appearance of *ʾanš* in 1.2 I 38, 43.

The second word, *qlṣ*, is not much less problematic. Three approaches have been taken here. The first is to relate it to Arabic *qallaṣa* (Lane 2559; so *DUL* 701), "to resist, oppose." This allows one to translate, "Among goddesses there is nothing that resists you" (e.g., see Parker's translation of 1.18 I 16–17, the parallel in Aqhat, in *UNP* 63). Pardee (1997a:254 n. 111) relates the word to Arabic *qalaṣa*, "to shrivel," which he takes here in an emotional sense ("there is none so emotional as you"). While such a characteristic is an appropriate description of Anat, this interpretation assumes no real parallelism between the two lines of the bicolon, and thus remains uncertain. A third approach, suggested tentatively here, is that the word is cognate to BH *qls*, "scorn, contempt, mockery" (*CML*^{2} 54; *UNP* 117). In terms of the two scenes in which this speech appears (here and in Aqhat), the meanings of the two ambiguous words that best fit the context appear to be "angry" and "scorn."

In the final line of El's speech (lines 28–29) the old god simply asks what Anat wants. It gives no hint as to his inclination to grant the request or lack thereof. The speech of El also shows no hint that he is intimidated by the goddess' bluster, but rather perhaps suggests a bit of tolerance toward the excesses of youth evident in Anat.

The rest of column V is taken up with Anat's request on Baal's behalf. Her speech divides into two parts, lines 30–34, which constitute an introduction to the matter, and lines 35–44, which quote the original

lament of Baal from the end of 1.3 IV. The second part is treated in full in the Commentary on 1.3 IV. The introduction (lines 30–34) is closely parallel to 1.4 IV 41–46, in which Athirat speaks to El about the same subject. A minor variation between the passages is found in the second line of the first tricolon, in which the goddess proclaims El's wisdom:

1.3 V 30–31	1.4 IV 41–43
tḫmk. ʾil.ḥkm[.]	*tḫmk. ʾil.ḥkm.*
ḥkmk/ʿm. ʿlm.	*ḥkmt/ʿmʿlm.*
ḫyt.ḥẓt.tḫmk	*ḫyt.ḥẓt/tḫmk.*[31]

As can be seen, the passage in 1.3 uses *ḥkmk*, a noun with a possessive suffix, which shows the line to be a nominal sentence ("Your wisdom is eternal"). In contrast, in 1.4, the text reads, *ḥkmt*, which is the stative **qatala* form ("You are wise for eternity"). Grammatically, the comparison has the value of suggesting the similarity if not the equation of the two formations. The third line has occasioned some difficulty, especially with the sense of the first two words. Some of the older translations presumed an etymological connection between *ḥẓt* and BH *ḥṣ*, "arrow," and suggested a relationship of the word to divination by arrows (bellomancy) with the notion that "good fortune" lies behind the sense of this line. They also connect *ḫyt* with *ḥym*, "life." Pope (*EUT* 43) translates: "*Triumphant* life is your word." Cross (*CMHE* 16, 184) renders *ḥẓt* somewhat similarly: "A life of fortune thy decree." Accordingly, de Moor (1987:643) suggests: "long live the excellence of your judgment!" (see also Wyatt 1998:87). Renfroe (1992:52–56) disputes any relation to bellomancy and translates the expression on the basis of Arabic *ḥazz, ḥuzwat* (*DUL* 383): "declaration of *fate*." Whatever the correct view of *ḥẓt*, it is clear that all three lines praise El's wisdom, which is proverbial according to 1.16 IV 1–2 (see *CML*^{2} 99; de Moor and Spronk 1982:187; Greenstein, *UNP* 36):

ʾamrk ph[t] kʾil	"Your word, [I] see, is like El's,
ḥkmt kṯr ltpn	You are wise like Bull the Beneficent."

[31] Sivan (1997:98) reads *ʿm ʿlm ḫyt*, "may you (m.s.) live [*ḥayêta/ḥayîta*] forever!" This approach evidently presumes the division of the unit's lines as *tḫmk ʾil ḥkm ḥkmt/ʿm ʿlm ḫyt/ḥẓt tḫmk*.

The themes of the god's great wisdom as well as requests for eternal life and wisdom given by the deity are West Semitic stock elements. Requests for long life and well-being were at home in royal prayer (see 1.108.20–27; KAI 10:8–10, 26 A III:2–7; Pss 21:5, 72:15; see Barré 1982; Greenfield 1990:164).

In the context of Anat and Athirat before El, it may seem odd to view this tricolon of lines 30–31 as part of the plea for Baal, but other ancient Near Eastern prayers use praise in order to motivate deities to respond to the supplicant's wishes (for an example in the biblical corpus, see Psalm 74). In this regard, a prayer to Ea, Shamash and Asalluhi (a byname of Marduk) furnishes a constructive parallel to Anat's praise of El in 1.3 V 30–31. Here the speaker praises the gods (Foster 2005:646, lines 6–9, closely paralleled in Foster 2005:648):

> "The destiny of life is yours to ordain,
> The design of life is yours to draw up,
> Your spell is life,
> Your utterance well-being,
> Your speech is life."

This prayer uses praise to advance the goal of persuasion to make the addressees more positively disposed toward the request of the prayer. Similarly, Anat's praise of El in this tricolon may serve to prepare him for her plea for Baal.

The next bicolon of Anat's speech in lines 32–33 proclaims Baal's kingship among the members of the pantheon. The two nouns denoting his position, *mlk* and *ṯpṭ*, are both complex and are used in various ways. Here both describe Baal, with the additional note, "there is none above him." This recognition of Baal is being addressed to El, who is, in fact, above Baal and who himself will be called *mlk* by Anat four lines later (line 36). The term *ṯpṭ* is most regularly used in the phrase *ṯpṭ nhr*, "Judge Nahar," the parallel term for Yamm in 1.2 I 17, 22, 26, 28, 30, 34, 41. But Yamm is not referred to as *mlk*, but *zbl*, "prince." It thus appears clear that these epithets are not to be considered absolute in designating hierarchical status, but rather are used as more general indicators of authority within various social realms. This is also suggested by the appearance of such personal names at Ugarit as ^{d}IM-*ma-lak*, "Baal rules," alongside *špšmlk*, *ršpmlk* and *ḫṯrmlk* (Gröndahl 1967:157–58).

In lines 32–33, Anat does not say "my king"//"my ruler," but "our king"//"our ruler." A similar characterization occurs also in a commu-

nal setting in 1.15 V 21–22: *wymlk yṣb ʿln*, "and so let Yassib reign over us." In Anat's case, she is emphasizing the authority that she assumes all the gods recognize, even (she hopes) El. This statement is the foundational basis upon which she makes her request. Cross (*CMHE* 187 n. 176; cf. 183–84) takes the first common plural suffixes as an indication that this scene transpires in the context of the divine council held at El's abode. He also compares the divine discourse spoken in the first plural ("we," "us") in the parallel passage (1.4 IV 41–44) as a hallmark of divine council language, which is found also in Israelite tradition (e.g., Isa 6:8; Gen 1:26, 3:22, 11:7; see also Garr 2003:7–8, 17–21). However, the instances in Ugaritic do not actually transpire in a divine council context as such. In addition, the evidence suggests that the mountain of the divine assembly is a distinct location from the mountain of El's abode (*UBC* 1.230–34), and there are no clear indications of anyone else present or involved in the scene in 1.3 V.

The expression *ʾin dʿlnh* perhaps plays on Baal's title, *ʿly*, "Most High," known elsewhere in 1.16 III 6, 8 (cf. Ps 89:28). Ps 16:2 contains a similar praise: "I said to Yahweh: 'You are my lord, with none above you (*bal-ʿālêkā*)."[32]

A remaining question about this bicolon involves its word-order. Many commentators would take "Mightiest Baal" as the subject and "our king" as predicate (*CML*^{2} 60; Pardee 1997:259). In contrast, we have rendered the passage according to the order given in the Ugaritic; hence, "Our king is Mightiest Baal,// Our ruler, with none above him" (*UNP* 117; cf. Wyatt 1998:87, reading as a tricolon with a different line division). C. L. Miller (1999:364) notes that it is difficult to render a judgment for such nominal sentences, but prefers the former approach since "personal names and epithets are more likely than common nouns to serve as subjects." Miller raises a valuable point. But here we would prefer to see emphasis being placed on the kingship, which is why it is placed in initial position. However, Miller may be correct in her assessment.

The next bicolon (lines 33–34) continues the discussion of Baal's position vis-à-vis the other gods. The gods continue to be referred to with

---

[32] The parallel was noted by Dahood 1966:87. Pope took *ʿālêkā* as a corruption of Baal's title, ʿAliy (though without versional evidence); see *RSP III* 457. Sivan (1997:179) takes *wʿlm* in 1.164.10 in a comparably way, as "and above all" (= *w-* + *ʿl* + adverbial *-m*), but see the translation, "And on the next day," in Pardee 2002:75 (see also in 1.43.9 in Pardee 2002:70–71).

first plural suffixes, here in the repeated word, *klnyy*, "All of us indeed," i.e., *kl* + the first plural suffix *n* + a doubled emphatic particle *y* + *y*; this is the most common interpretation (cf. Ginsberg's translation of 1.4 IV 45–46 in *ANET* 133, Coogan 1978:95; Pardee 1997a:255; Wyatt 1998:87). A few translators (e.g. Gibson, *CML*^{2} 54) have suggested that *klnyy* should be understood as *kl* + the dual suffix *-ny* + the emphatic particle, *-y*, and that Anat is referring to two specific gods, herself and one other. However, this view creates the problem of who the second god would be: Anat and El (cf. the discussion in Pardee 1997a:255 n. 112)? It seems hardly likely that Anat would be suggesting such a gesture of subordination from the chief deity. Gibson (*CML*^{2} 54) suggested that the pair is Anat and Athtart, who he proposed might have accompanied her. This, too, seems quite unlikely, since Athtart is not mentioned anywhere in this tablet. Interpretation of this phrase as a reference to the gods in general seems more plausible.

The exact meaning of the gods bringing Baal a chalice//cup is debated. Some scholars believe that Anat is describing herself and the other deities as cup-bearers for Baal (cf. the discussion in Pardee 1997a:255 n. 112). Such a position is a traditional one in the royal court (1 Kgs 10:5 = 2 Chron 9:4; cf. Genesis 40; Neh 1:11) and would denote subordination of the deities to Baal. While this is a possible interpretation, it seems unusual to suggest that all deities should in some way be placed in that kind of office. More likely the point of these lines is to evoke the notion of the gods bringing tribute to their sovereign. Cassuto (1942:54) suggested a different nuance by looking at the usage of the term "cup" in several biblical contexts (Pss 11:6, 16:5). He then proposed the following interpretation: "We have come to receive the cup of Baal the portion it may please thee to give him. In other words, we have come to hear from thee the fate that thou wilt decree upon him." Cassuto's interpretation associates Baal's cup with the idea of fate or destiny. Despite the thematic connection between Ps 16:2 and line 33 (noted above), unlike Ps 16:5, Anat's speech in lines 33–34 focuses not on a decree of fate or destiny, but proclaims Baal's kingship, which the notion of tribute suits. This tribute constitutes symbolic recognition, the body language matching Anat's verbal proclamation of Baal's kingship.

With this introduction, Anat then proceeds in lines 35–44 to present El with Baal's lament that he has no palace. This section follows the wording of what is preserved in 1.3 IV 48–53 and 1.4 IV 47–57 (with the exception of the line *mṯb klt knyt*, which in the latter is transposed

to the point before the line *mṯb pdry bt ʾar*). The lament brings us to the climax of the scene, i.e., El's response to Anat's speech. Unfortunately, the column breaks off immediately after the conclusion of her speech, leaving us with no information about El's reaction. The lacuna at this point probably contained ca. 22 lines in the rest of column V and the first thirteen lines of column VI. When column VI becomes legible, it is clear that a new scene is in progress. There has been considerable disagreement as to whether El agrees to or refuses Anat's request for the palace. Many scholars understand Anat's intercession to be successful, sometimes on the assumption that 1.3 and 1.4 are parallel but independent versions of the narrative (Clifford 1984:189; *MLD* 9–11; see the discussion in *UBC* I:7–11). Others have assumed that because the parallel scene in 1.18 shows Anat as successful in her pleading, she must be successful here also. Pardee follows the latter interpretation, supposing that after Anat wins the permission from El in 1.3 V, El and Athirat must be further placated in order to win their "final" permission. This idea of a two-staged permission explains Anat's putative success on the one hand, and the need for the very same effort by Athirat, on the other. Before his discovery that CAT 1.8 belongs to the beginning of 1.3 VI, Pardee (1997a:255 n. 116 and 256 n. 121) found evidence for the success of Anat's mission in Baal's supposed usage of Athirat's own messenger, Qudsh-Amrur, in column VI 9–11. Now that 1.8 shows that Baal is addressing his own messengers Gapn and Ugar and not Qudsh-Amrur in this scene, this argument no longer holds.

None of these arguments is compelling. The issue of the relationship between 1.3 and 1.4 has been discussed in *UBC* 1.7–11 (cf. pp. 9–10 above). The idea that Anat is successful at gaining El's permission, but that then Baal and Anat must go through an elaborate process of persuading Athirat to get El's permission a second time, or that El requires additional inducements ("baksheesh," as Pardee puts it in 1997a:256 n. 121) also seems very unlikely. Nor can Anat's success in the Aqhat Epic be used to assume a similar outcome here. This ignores the several differences in the contexts of the stories and in the details of the scenes, as described above.

Other aspects of the scene in column V suggest that Anat's mission was a failure. Most significantly, as mentioned above, Anat is never given an actual audience with El. She is left in the outer room while El remains in the innermost chamber. In the similar account in the Aqhat Epic (1.17 VI 50–51), Anat arrives at El's abode and immediately comes into his presence, where she bows down before him and honors

him before she begins to denounce Aqhat. The common formula of obeisance before El upon arrival (cf. 1.1 III 24–25; 1.2 III 5b–6; 1.4 IV 25–26; 1.17 VI 50–51) does not occur in 1.3 V, since she does not come before him. Thus the entire setup of the scene here is quite different from that in Aqhat. The same holds for the similar scene concerning Athirat's request before El on Baal's behalf (1.4 IV). Upon her arrival, she does enter his presence and bow down before him (lines 23–26). Anat's angry entrance into El's tent has ignored the requirements of royal protocol, and that has in part led to the failure of her mission.

Significantly as well, the following scene in column VI presents Baal and Anat preparing their plan to entice Athirat to help them by enlisting Kothar-wa-Hasis as an ally. As mentioned above, this entire plot line seems redundant if Anat has been successful. However, if Anat's plea has been rejected, then it makes perfect sense for Baal to persuade Athirat to work with them. Athirat is regularly portrayed as working in close conjunction with El, and her role in the selection of Baal's successor in 1.6 I can been taken to reveal her singular influence on him. Thus we would expect that her request would get a hearing where Anat's might not. We suggest, then, that within the some thirty-fives lines missing in the text, the narrative probably recounted El's rejection of her plea, her return to Baal with the bad news, and his change of strategy. As the next column opens, Baal is giving instructions to his messengers to go to Kothar wa-Hasis, the Ugaritic craftsman god, and to enlist his talents in craftsmanship.

CAT 1.3 VI + CAT 1.8

Textual Notes

CAT 1.8

Line 1.]x The upper right corner of a vertical wedge is visible, as is the right tip of a low horizontal below it. The possibilities for the letter are /b/, /d/ or /ʾu/.

mgn The /n/ has four wedges.

Line 2.]m̊ The right side of a badly corroded large vertical wedge is visible at the break. It is compatible with /m/, as expected by context.

qnyt The /n/ has four wedges.

Line 3.]x A large horizontal wedge, broken on the left, could be /t/, /w/, /k/, /r/. The first two have been proposed by different editors—/w/ by CTA and CAT, while Virolleaud (1932: xx) and now Pardee i.p. argue for reading /t/. While both are epigraphically possible, Pardee's arguments for preferring /t/ are strong.

tnbt. There is no word divider between /tn/ and /bt/ as proposed by Pardee i.p.

Line 4. wḫẓr There is a thin, horizontal wedge above the primary left wedge of the /ḫ/. Its deformed lower line shows that it was inscribed before the primary left wedge. Ilimalku may have made it, then decided it was too thin and too high, so that he replaced it with the larger wedge just below it.

Line 5. [ ]t̲rt There are no certain traces of the /ʾa/ that preceded the /t̲/.

Line 6. ḅʿl While the break on the left side of the /b/ might allow for reading it possibly as a /d/, the context assures the reading of /b/.

yṣḫ The /ṣ/ is written over the traces of a vertical wedge, whose head is visible above the right wedge of the letter, and a thin horizontal, traces of which are visible across the middle of the two wedges. An explanation of these wedges is not immediately apparent.

Line 8. ʿmmym The four letters /ʿmmy/ are unusually widely dispersed on the tablet. In spite of the gap between the second /m/ and the /y/, there are no traces of a word divider between them, as proposed by Pardee, i.p.

Line 11. .x[To the right of the word divider are two small vertical wedges, the left one well preserved, the right one more damaged. The size and shape of the left one suggests that the letter is either /b/, /d/ or /ʾu/, although /s/ is also possible.

CAT 1.8 +1.3 VI 1–6

Line 1.8.12 + 1.3 VI 1.]ḅ On 1.3, the right vertical and horizontal are preserved, along with a few traces of a left horizontal. The letter could also be /d/.

Line 1.8.13 +1.3 VI 2. gl̲t̲ On 1.8, the /l/ has four wedges.

ʾisṙ[Traces of three short horizontals, two above and one below, pretty much assure the reading of /r/ for the last letter of the word.

]ṙʾišk On 1.3, the right tip of a horizontal, compatible with an /r/, is preserved just to the left of the /i/.

Line 1.8.14 +1.3 VI 3. brḳ[At the edge of 1.8, a large horizontal is preserved (accounting for CAT's t̰), but on the edge of the tablet, there appear to be the traces of the upper line of the *Winkelhaken* of a /q/.

]ḅn ʿnkṁ At the left edge of 1.3, the /b/ could theoretically also be /d/, since only the right side of the letter is preserved. The /m/ is placed in the margin, and only the upper and right sides of the vertical are clearly preserved.

Line 1.8.15 + 1.3 VI 4. ymtṁ CAT reads *n* for the last letter on the right edge of 1.8, but the preserved upper line of the horizontal wedge shows no hint of multiple wedges. To the right of the horizontal are vague traces of the head of the vertical wedge.

]˚ ʾalp A small part of the left side of the word divider still remains.

Line 1.8.16 + 1.3 VI 5. šx[The uncertain letter after the /š/ must be either /h/ or /ʾi/. It is damaged in the area where the small vertical of the /ʾi/ would be. Although certainty cannot be reached, Pardee's proposal (i.p.) to read *šʾi[r]* seems quite plausible.

]ym We do not see any traces of a /b/ before /ym/, as in CAT. All the indentations to the left of the /y/appear to be breakage.

Line 1.8.17 + 1.3 VI 6. x[Contra CAT, this letter is almost certainly not a /t/. The only surviving wedge is much thinner than the normal *t*. It is considerably more likely to be part of a /h/, /p/, or /ʾi/.

]xbnhrm The lower line of a large horizontal is preserved to the left of the /b/. CAT's reading of /n/ is plausible, but relies on its reconstruction of the line. The traces could be /t/, /ʾa/, /r/, /k/, /w/, /b/ or /d/. We do not see traces of CAT's proposed word divider after the wedge.

CAT 1.3 VI 7ff.

Line 7.]ḅrgbl The first /b/ is epigraphically uncertain. Only the slight indentations of two low horizontal wedges are preserved. There is no word divider between /]br/ and /gbl/. The /l/ has four wedges.

Line 8. qʿl The /l/ has four wedges.

Line 9. npšmm Contrary to CAT, there is no word divider after /np/.

Line 11. mǵ.lqdš The probable word divider after /mǵ/ is small and nearly invisible. The /l/ has four wedges.

Line 12. ʾidk There is an extraneous horizontal wedge between the /d/ and /k/. Perhaps it was a false start for the /k/.

Line 13. ḫqkpt Based on the spelling of the word in the following bicolon, CTA and KTU emend to ḫkpt. Variant spellings of foreign proper names are not without parallel, however.

Line 16. nḫlth The /h/ has four wedges.

Line 18. ḳmn The /k/ is damaged in the lower left part, but context assures the reading. The /n/ has four wedges

Line 19. ḥbr The /h/ is broken, but evidence of all three wedges is discernable. The interior of the /b/ is also destroyed, but the upper lines of the two verticals assure the reading.

Line 23. yn.dḫrš The /n/ has four wedges. There is also an extra wedge to the lower left of the /š/, which almost looks placed intentionally for decorative effect.

Line 24. tḫm.ʾåḺ[The letter following the word divider is very damaged, but there appear to be traces of the top lines of two horizontals, strongly suggesting that the letter /ʾa/. All three tops of the probable /l/ are preserved, although epigraphically this could also be a /d/ or /ʾu/.

Line 25. ḥ[The upper line of a long, thin horizontal is preserved. Context argues for /h/, but it could also be /p/.

24–25	‘Decree of Migh[tiest Baal], Wo[rd of the Mightiest of Warriors]:	taḫmu ’al[’iyāni ba‘li]/ hu[watu ’al’iyi qarrādīma]

[*Approximately 22 lines are missing.*]

[3] Usually the compound names such as this one occur with *w-* before their second element. See 1.4 IV 13; 1.123.26 (in 1.4 IV 16–17, the two elements of the name appear in parallelism). The lack of *w-* before the second element of such DNs is, however, attested elsewhere and thus may not be a simple scribal error (e. g., *kṯr ḫss* for *kṯr w-ḫss* in 1.123.28). For further discussion, see Smith 2001a:70–72.

[4] For post-positional *kl* + suffix, see *UBC* 1.166 n. 90 (cf. *TO* 1.178 n. g; *CS* 36; Parker, *UNP* 58–59, to 1.17 V 21, 31). For another Ugaritic example, see *’aṯr tlṯ klhm* in 1.14 II 42, translated by Greenstein, *UNP* 15: “After three, all of them.”

[5] For the syllabic evidence for the third masc. sg. independent pronoun, see Huehnergard 1987b:120.

[6] For the syllabic evidence, see Huehnergard 1987b:126. The base is the so-called *nomen professionalis*, **qattāl* (see Sanmartín 1995:177–79, especially for a survey of prose texts containing this word). For an extensive discussion of the expression, see Dietrich and Loretz 1999.

Commentary

Poetic Parallelism and Word/Syllable Counts

		semantic parallelism	word/ syllable count

For 1.8.1–2, see the discussion of 1.4 I 21–22 on p. 400; for lines 3–5a, see 1.4 IV 62–V 1 on p. 501. Lines 5–12 remain too ambiguous in meaning for us to attempt a poetic analysis.

1.8.13–14	galaṯu ’isaru ra’šêkumā	a b c	3/10
	baraqūma bêna ‘ênêkumā	b’ c’	3/10

The lines show basic semantic parallelism, accompanied by a slight variation in syntactical parallelism. The morphology, especially with the nominal forms, helps to generate further parallelism. The parallelism of final *-umā* is generated by the morphology of the final nouns in the two lines. These endings are echoed in the ending *-ūma* in the plural masculine nominal form at the head of the second line. The dual forms of the nouns at the ends of the lines with *-ê-* resonate in the preposition in the second line. In these two ways, the dual morphology of the final nouns of the two lines resonates with some further feature in the second line.

1.3 VI 4–6	ya-mutêma		
	[uburā] ’alpa ši’ra (?) bi-yammi	a b c	4/10
	ribbata…bi-naharīma	b’ c’ (?)	2(?)/8(?)

The vocative noun here is set off as a matter of anacrusis, which is not exceptional (see p. xxxiv n. 3). The syntactical parallelism of these two lines, though not fully understood, is apparent. The semantic parallelism of these numerals is common in Ugaritic as is for the bodies of waters. The notable sonant parallelism here involves bilabials, *b*, *p* and *m*.

7–9	[‘u]burā gubla ‘uburā qi‘la	a b a b’	4/10
	‘uburā ’ihāti nupi šamîma	a b” (= x + y + z)	4/11

The three-fold repetition of imperatives dominates this bicolon (Watson 1980:446), which contains what Avishur (1984:56–63) designates as

intracolonic parallelism in the first line and what Watson (1994b:106, 122 n. 75) calls a "quasi-acrostic." The three-fold repetition of the verb may be viewed as even more emphatic than two-fold imperatives, which seem to be more common. For example, the first bicolon of Anat's speech in 1.3 IV 32–33 commands the messengers to depart with great urgency expressed in double use of the imperative, *lk lk*, "Go, go" (cf. *ʿûrî ʿûrî* in Judg 5:12 and Isa 51:9 as a double imperative to battle). The three imperatives may evoke a greater urgency, or it could be merely a means to structure this initial three-fold itinerary.

9–11	šamširā lê-daggayyi ʾaṯirati	a b c	3/12
	miǵâ lê-qudši ʾamrari	a' b' c'	3/8

The syntax and semantics of the two lines are quite close. Only in the last word in each line, *ʾaṯirat* and *ʾamrari*, is there any sonant parallelism, beyond what is generated by morphology.

12–14	ʾiddaka ʾal tatinā panīma	a b c	4/10
	tôka ḫiqkupti ʾili kulli-hu	d e f	4/10

The travel itinerary here follows a fixed formula (see below; *UBC* 1.165–66, 220, 224), despite the lack of parallelism.

14–16	kaptāru kissiʾu ṯibti-hu	a b c	3/9
	ḫikuptu ʾarṣu naḥlati-hu	a' b' c'	3/9

The basic idea and syntax of these lines are formulaic (see also 1.4 VIII 12–14). Moreover, *ḫkpt* and *kptr*, the names of Kothar's abode (*UBC* 1.165–66), constitute a fine sonant pair, with both GNs containing the sequence *-kpt-* (Smith 1985:103).

17–20	bi-ʾalpi šiddi ribbati kumāni	a b a' b'	4/11
	lê-paʿnê kôṯa<ri> huburā wa-qîlā	c d e'	4/12
	tištaḥwiyā wa-kabbidā huwati	e" e" f	3/11

As noted by Avishur (1984:59), *šd* and *kmn* constitute a word-pair forming intra-colonic parallelism within the initial line (see also Watson 1994b:106 nn. 10, 13). As with the preceding lines, the language here is stereotypical for messengers' obeisance (see above 1.3 III 8–10 above; and *UBC* 1.167–68)

21–23	wa-rugumā lê-kôṯari wa-ḫasīsi	a b c	3/12
	ṯanniyā lê-hayyāni di-ḥarrāši yadêmi	a' b' c'	4/14

For the epistolary formulas reflected in these bicola, see the Commentary below. The parallelism in this instance stacks the epithets in the second line, making it longer than the first line (a relatively less common feature of bicola). The epithets *ḫasīsi* and *ḫarrāši* may be viewed as a minor sonant pair, with each one containing guttural and sonant plus the same initial and final vowel; however, the differences between the two words are evident as well.

24–25	taḫmu 'al['iyāni ba'li]	a b c	3/8
	hu[watu 'al'iyi qarrādīma]	a' b' c'	3/10

The nominal syntax of the two lines (reconstructed after 1.3 III 13–14; IV 7–8) perhaps allows the stereotypical epistolary introduction to stand out in this narrative poetic context (Watson 1994b:283; see further discussion above on pp. 225–26). The initial words of the god's titles are basically the same word (discussed in *UBC* 1.153 n. 65), with the former differing in possessing a final **-ānu* sufformative (for other Ugaritic examples, see *UG* 271–73).

Introduction

The final column of 1.3 marks a new departure for the narrative. Since Anat's entreaty of El has failed, Baal pursues another avenue. He sends his messengers, Gapn and Ugar, to Kothar-wa-Hasis to secure the latter's aid, specifically to make gifts (1.4 I) designed in turn to enlist Athirat's support (1.4 III) and thus her assistance in gaining El's permission for Baal's palace (1.4 IV–V). Dennis Pardee's recent discovery (i.p.) that CAT 1.8 comprises the beginning of column VI (see Introduction, p. 4) has significantly improved our understanding of the beginning of this part of the story, providing eleven lines that were completely missing on 1.3 and filling in portions of five additional lines partially preserved on the main tablet (VI 1–5). In terms of the narrative itself, the most important improvement here is that we now know that the messengers Baal is addressing in this column are Gapn and Ugar, his regular pair. Until now, the broken text had suggested that Baal was addressing Athirat's servant, Qudš Amrar, an unusual situation (1.3 VI 9–11; for Qdš w'Amrr as a single figure, see Ginsberg 1944:25). This misunderstanding is now resolved,[7] and it is clear that

[7] Lipiński 1973:35–37 had already argued that Baal was speaking to an unnamed

Gapn and Ugar are told to stop by Qudš Amrar's abode on their way to deliver their message to Kothar (the purpose of this element of the trip remains unclear).

CAT 1.8.1–17 and 1.3 VI 1–25: Baal's Instructions to His Messengers

As noted by Pardee (i.p.), the join of 1.8 to the top of column VI, with its direct reference in lines 1–4 to the making of gifts for Athirat so that she will support Baal's request for a palace, now definitively shows that Tablet 1.3 directly precedes Tablet 1.4. A few scholars previously have argued that 1.3 did not belong before 1.4 (cf. de Moor, *SPUMB* 41–3, who placed 1.3 at the beginning of the cycle) or suggested that 1.3 was simply a variant version of 1.4 and did not belong to the cycle proper (Clifford 1984:191–93; for complete discussion see *UBC 1*: 7–11).

The first four lines of 1.8 describe Baal's new plan, perhaps in the form of a quotation from Baal himself or from Anat. Lines 1–2 find a parallel in 1.4 I 21–22, where the first phrase of our passage is preceded by *šskn mʿ*, a C-stem imperative from either *skn*, "to see to," or from *nsk*, "to (cause to) pour," accompanied by an enclitic *n*, (see the commentary on 1.4 I 21–22, pp. 403–4, below). If the latter derivation is correct (cf. citations in Sanmartín 1995:181–82, *DUL* 644, *UG* 595 and cf. Pentiuc 2001:132–33; cf. *šsk*, the *C*-stem imperative of **nsk*, in 1.13.6, used for blood), then the /k/ that precedes the word on line 1 might be the ending of the same verb here, i.e., *šsk*, without the enclitic. But the context is too uncertain to rely that strongly on the parallel passage.

Lines 3 and 4 are familiar from the context of Baal's lament, but the only near parallels for these two lines appearing alone and outside the longer lament are 1.4 IV 62–V 1, in El's speech giving Baal permission to build the palace, and, more distantly, in 1.4 V 27–29. The former passage parallels the nominal phrases, "a house for Baal like the gods'/ a court like the children of Athirat," but uses the verb *ybn*, rather than *ttn*. 1.4 V 27–29 uses *ytn* (as a passive), but shifts the nominal phrases to "a house for you like your brothers', and a court like your kin's." Although the first *t* is epigraphically uncertain, it seems contextually

---

messenger who was to rendezvous with Athirat's servant on the way. Cf. Patrick Miller's discussion (*DW* 16) of other instances in which a servant is commanded by a deity other than his master.

probable, as does Pardee's reconstruction (i.p.) of an *l* before it. Pardee has also noted the minor narrative difficulty this reading creates—the fact that Athirat, of course, cannot "give" Baal the palace; she can only persuade El to do so. But this kind of semantic shorthand (i.e., that Athirat's support will be instrumental in getting Baal his palace) does not seem to be problematic here.

Lines 5b–6a introduce Baal's speech of instructions to his messengers, Gapn and Ugar, which comprises the rest of the preserved column. This formula occurs occasionally elsewhere in the Ugaritic corpus (e.g., 1.6 III 22; 1.14 V 13; 1.15 IV 2; 1.17 V 15; 1.19 I 49), but most notably in 1.4 VII 52b–53a, where it introduces a close parallel to several lines of our passage. The similarity of 1.8.5–11 and 1.4 VII 52–57 has for years led scholars to connect 1.8 to 1.4, rather than 1.3. With the new placement of 1.8, it becomes clear that we have in 1.3 VI and 1.4 VII two distinct parallel passages, both of which inaugurate instruction speeches to Gapn and Ugar. The fact that these lines appear in two very different contexts allows us to use the larger contexts of both passages to interpret these difficult lines. Before now, these lines have often been understood as referring specifically to the circumstances of 1.4 VII, i.e., Baal's impending conflict with Mot (see especially the Commentary on 1.4 VII 52–57, pp. 694–96). The lines have been viewed as depicting the ominous indications that Mot's power is now extending into the sea and the heavens. Such interpretations now become unlikely, since it is now clear that the lines occur in a context completely unrelated to Mot in 1.3 VI. It appears more likely that lines 7–14 and the lines partially paralleled in 1.4 VII 52–57 (and maybe to line 60) focus on the messengers themselves, providing epithets for them and some indication of their close relationship to Baal.

The speech itself opens (lines 6b–7a // 1.4 VII 53b–54a) with an imperative, *ʾn*, "See!" addressed to Gapn and Ugar. The next two cola (lines 7b–9a//1.4 VII 54b–56a) remain ambiguous, in spite of our recognition that we now have two distinct contexts in which to interpret them. Uncertainties concerning the meaning of the vocabulary persist. Over the years, two general categories of interpretation have developed, although there is a great deal of variety within each. The first has been to see the bicolon as made up primarily or exclusively of epithets, that either belong to Gapn and Ugar (e.g., *TO* 1.219; *ANET* 135; Gordon 1977:101; *LC*^{2} 54; Aistleitner 46, Lipiński 1981:384–85) or to some minions of Mot (Dietrich and Loretz 1997:1170; de Moor 1987:65). The first phrase, *bn ǵlmt*, is usually translated as an epithet,

"sons of *ǵlmt*." The meaning of the latter word is disputed. Several translators (e.g., *LC*[2] 54; Aistleitner 46; *UNP* 138) render it according to a clearly attested meaning in Ugaritic, "young woman, lass" (cf. 1.14 IV 41; 1.15 II 22; 1.23.7; BH *ʿalmâ*). Since the term is sometimes used as the title of a particular goddess (e.g., Nikkal in 1.23.7 and uncertain goddesses in the ritual texts, e.g., 1.41.25//1.87.27; 1.39.19; 1.119.8), some commentators have suggested that it refers to a specific goddess in our passage as the title or even the name of the mother of the messengers (cf. *ANET* 135; Gordon 1977:101). On the other hand, several scholars have noted that the words *bn ǵlmt* are parallel to the phrase, *bn zlmt* in the following line. Most scholars have related the word *zlmt* to Arabic *ẓalima*, Akkadian *ṣalāmu* and BH *ṣalmāwet*, and understand it to mean "darkness" (for cognates and discussion, see *SPUMB* 172; Leslau 556; Huehnergard 1991:706; C. Cohen 1996:305–6; note also Brenner 1982:163). If *bn ǵlmt* is parallel, then *ǵlmt* might have a meaning similar to "darkness." This is supported by the probable equation in the Ugaritic polyglot texts of Sumerian IDIM with Ugaritic *ḫu-ul-ma-tu*$_4$, which may be equivalent to *ǵlmt* (see Huehnergard 1987b:98–100, 164; Ginsberg 1946:34, 45). Thus the two phrases could be rendered something like, "sons of gloom," and "sons of darkness." When this passage was assumed to be restricted to the context of 1.4 VII, it seemed reasonable to propose that these epithets belonged to minions of Mot who are causing trouble in the world, and that they were to be understood as objects of the imperative, "See!" (Dietrich and Loretz 1997:1170; de Moor 1987:65). Wyatt (1998:111–12) suggested that the epithets refer directly to Mot ("the Dark One, the Gloomy One"). But now that the phrases occur in a context completely outside the Mot episode, this understanding must be abandoned. It seems more likely that *ǵlmt* here means "young woman, lass" and that *zlmt* has a parallel meaning.

The context of this bicolon in 1.3 VI severely weakens the second common understanding of these lines as proposed by other scholars who did not see these phrases as epithets. The text of 1.4 VII 54 reads differently from 1.8.7. Instead of *bn. ǵlmt*, line 54 reads *bǵlmt*. Several scholars have argued that 1.4 VII 54 indicates that the *b* is the preposition, "in" and that the *n* in line 55's *bn.zlmt* is a *-n* energic. These scholars read the bicolon as a pair of sentences, to be translated along the following lines: "The sea/day is covered in darkness, the high lands/the exalted princess in gloom" or the like (e.g., *CML*[1] 101; *Thespis* 199; *CML*[2] 66; *MLC* 210; *MLR* 90; Pardee 1997a:263; i.p.).

To see how the latter interpret the passage, we must turn to the second phrase of the first colon (8a), *ʿmmym*. A few scholars have taken this as a further epithet: "Amami's twain" (*ANET* 135); "Errand lads" (Gordon 1977:101). Gray (*LC*^{2} 54) took it to mean "large-limbed." But several scholars see *ʿmm* as a verb, related to Arabic *ġamma*, "to cover, veil," and BH *ʿmm*, which occurs in the Hophal in Lam 4:1 meaning, "to be darkened." They usually read *ym* then as "day(-light)" (cf. Dietrich and Loretz 1997:1170; *CML*^{1} 101; *Thespis* 199; *CML*^{2} 66; de Moor 1987:65; Wyatt 1998:111; Loretz 2000:277). Pardee (1997a:263) and Olmo Lete (*MLC* 210; *MLR* 90) take *ym* to mean "sea." Good (1983:22) suggested a different etymology, proposing a relationship between *ʿmm* and BH *ʿām*, "people," based on the possible parallel between the forms *ʿmm//prʿt* here and *pĕrāʿôt//ʿām* in Jud 5:2.

The fourth phrase in the bicolon, *rmt prʿt* is also open to various interpretations. The first word, *rmt*, is generally identified as belonging to the root **rwm*, "to be high," and normally translated as a feminine adjective, "high, exalted, lofty." The second word, *prʿt*, is more problematic. There appear to be two Semitic roots, **prʿ*, the first one meaning, "to be high, best, first," and the second meaning, "to have long hair." The first is more likely the root involved here, but there is ambiguity about how it is to be understood in the passage. Most translators understand it as a feminine noun, literally, "the high one, princess, ruler" (e.g., Aistleitner 46; Dietrich and Loretz 1997:1170; *CML*^{2} 66; de Moor 1987:65; Wyatt 1998:112). The identity of the princess remains unclear, and the proposals made depend on how the rest of the bicolon is translated. Some see the "exalted princess" as the mother of Gapn and Ugar (e.g., Aistleitner 46), while those who understand these lines as referring to the darkening of the world, see this epithet as a reference to the sun-goddess Shapshu, who is being darkened (Dietrich and Loretz 1997:1170; *CML*^{2} 66; de Moor 1987:65; Wyatt 1998:112). Others have rendered *prʿt* as an adjective, "lofty" (*LC*^{2} 54) or "distinguished" (Gordon 1977: 101). Pardee (1997a:263) takes the meaning "lofty" and substantivizes it as, "the [highest] peaks," making this phrase a contrastive parallel to his rendering of *ʿmmym*, "The sea is enveloped."

With the new placement of 1.8 into 1.3 VI, it seems less likely that these lines are referring to the darkening of the sea/day/princess/peaks. We are skeptical of reading *bn* as a preposition + *n*-enclitic, since the form is not attested with any assurance elsewhere in Ugaritic (cf. *UG* 781). The twin contexts appear to suggest rather that this bicolon constitutes epithets of Gapn and Ugar, and that *ġlmt* is probably "the

young woman," an epithet of their mother. This rendering argues for understanding *zlmt* as an epithet parallel to *ǵlmt*, and thus probably not related specifically to the meaning, "darkness."

Lines 9–12 of 1.8, even with the added context of 1.3 VI and some minor reconstruction from 1.4 VII 56, remain very obscure. Several scholars (*ANET* 135; *CML*^{2} 135; Dietrich and Loretz 1997:1171; de Moor 1987:65) have taken a number of the words in these lines as references to birds. Thus *ʾibr* perhaps means "pinions" (cf. BH *ʾēber*). However, the reading *ʾibr* is not certain, since the parallel reading of the word in 1.4 VII 56 seems to be *hbr* (see below, pp. 695–96). It is not clear which of the two readings is correct. If the reading *hbr* were preferred, one could relate the word to the verb that means, "to bow." Unfortunately, the reading of the next word, lost in our line, but probably *gnt* in 1.4 VII 56, produces no obvious meaning that would illuminate the sentence. A second word identified as a reference to birds is *ḥbl* in line 10, which can be rendered "flock," as in 1.18 IV 31, *ḥbl dʾiy[m]*, "the flock of hawks" (cf. also *ḥbl kṯ[r]t*, "band of the Kotharat," in 1.11.6). In addition, the term *mʿṣrm* in line 12 could be related to *ʿṣr*, the common Ugaritic word for "bird."

How *ṣḥrrm* fits into the context is unclear. It presumably belongs to the same root as *ṣḥrrt*, which is used to denote the burning or reddening of the sun due to the power of Mot (see 1.3 V 17–18, 1.4 VIII 22, 1.6 II 24). It presumably belongs in a colon with *h/ʾibr gnt*, but how the words fit together is not discernable to us. The same can be said of *ḥbl ʿrpt tḥt*. Gibson (*CML*^{2} 66), de Moor (*SPUMB* 173; 1987:65) and Dietrich and Loretz (1997:1171) identify *tḥt* as a verb from the root *ḥt*, "to circle around" (cf. Arabic *ḥāta*). This seems plausible, although the preposition *tḥt* cannot be ruled out, since the context remains difficult. In sum, virtually nothing in these lines may be translated with any confidence. But in view of the likelihood that lines 7b–9a are probably epithets of Gapn and Ugar and that lines 13–14 are also describing the two messengers, it seems reasonable to suggest that lines 9b–12 also relate in some way to these two characters.

With the new join, lines 13–17 become considerably more understandable. The bicolon in lines 13–14 almost certainly refers to Gapn and Ugar, and *rʾiškm* is best understood as dual in both noun and suffix (cf. *UG* 290). The two terms that begin the lines, *glṯ* and *brq[m]*, "flow, downpour, torrent" and "lightning" (see the Commentary on 1.4 V 6–7, pp. 556–60), are both intimately related to Baal's meteorological character. Here they are apparently used as visible symbols of the mes-

sengers' authority to represent the god in speaking with Kothar-wa-Hasis (cf. Pardee i.p.). The appearance of the *m* at the beginning of 1.8.14 solves the problem of the suffix on 1.3 VI 2, where *rʾišk* was clearly problematic. This bicolon completes what appears to be a rather florid introduction of Gapn and Ugar before they hear Baal's instructions.

Lines 1.8.15–16/1.3 VI 4–5 mark the beginning of the instructions proper. The section opens with a vocative, *ymtm*, "O men." The term is primarily used of humans, but apparently could also be used of deities. In 1.3 I 12–13, the great goblet from which Baal drinks during the feast celebrating his victory over Yamm is described as *dn mt šmm*, "a container for men of heaven," a term that seems likely to refer to gods, although the context is ambiguous.

The bicolon of 1.8.15–16/1.3 VI 4–6 begins a description that continues through 1.3 VI 16 of the journey that Gapn and Ugar are to undertake. This section may be subdivided into two parts: (1) 1.8 15/1.3 VI 4 to 1.3 VI 11, which describe the messengers' journey to the abode of the Fisher of Athirat/Qudš Amrar, Athirat's servant; and (2) 1.3 VI 12–16, which describe the journey on to Caphtor/Memphis, Kothar's home. The verb that began the bicolon of 1.8.15–16/ 1.3 VI 4–6 is lost in the gap between the fragment and the tablet, but there can be little doubt that it was a verb of traveling. The parallel pairs *ʾalp/rbt*, "thousand/myriad" and *ym/nhrm* fit well into the geographical and travel terminology that dominates the next nine lines. Pardee's suggestion (i.p.) that *šʾi[ ]* be restored as *šʾi[r]*, a unit of measure known in the prose texts as a surface measure, seems plausible, even though we expect a unit of measure expressing distance here. No other alternative is obvious. Another measure term is presumably lost in the lacuna at the beginning of 1.8.17/1.3 VI 6.

Following the instructions to travel over the sea and the rivers, the second bicolon of the section, 1.3 VI 7–9 calls upon the messengers to "pass through/cross over" (**ʿbr*) three additional locations. Isaiah 23 offers a comparable, though much less succinct, three-fold use of **ʿbr* (see vv 6, 10, 12) in an itinerary around the Mediterranean basin (see also Arabic *ʿabara* and Sabean *ʿbr* for this usage, according to Biella 350). The major issue of interpretation in lines 7–9 is whether the nouns are GNs (so *CML*[2] 54; Watson 1980:446; Pardee 1997a:255; Wyatt 1998: 88–89; see *SPUMB* 51 n. 52) or common nouns representing general topographical features (*GA* 105; *TO* 1.177–8; *MLR* 76; Lipiński 1973:36; Pardee i.p.). It is to be noted that topographical features are often part of place-names. The Ugaritic word *gbl* may mean "mountain, height"

(CAT 1.16 VI 57), or it may be the Canaanite city, Gubla, known in English as Byblos (see CAT 4.338.13, 15, for example). Similarly, *qʿl* could be a topographical feature, perhaps "summit" or "cape" (see Dijkstra 1991:128–9 n. 11, *DUL* 691), and such a feature may provide the basis for a GN as in biblical Qeilah (Keilah), a place in Judah near Philistia (Josh 15:44 and 1 Sam 23:1), perhaps to be identified with El Amarna Qilti in EA 279:22; 280:11, 17; 289:28; 290:10, 18 (see Renfroe 1992:139–40). The third term, *np*, can also be either a topographical feature, "height, elevation" (cf. BH *nôp*), or a place-name (BH *nōp* = Memphis; cf. *SPUMB* 51 n. 52; Sanmartín 1978b:352–53 n. 26). With the added context of 1.8, which definitively shows that the messengers are being instructed here to go visit Qudš(-wa-)Amrar before going on to Kothar's habitation, it seems less likely that *np* should be interpreted as "Memphis," since there is no reason to think that Qudš Amrar's abode was located in that region. If *np*, therefore, is better interpreted as a common noun, "the height (of heaven)," then it is likely that *gbl* and *qʿl* should be rendered similarly. Thus the two bicola here depict the great distance that the journey requires, across sea and rivers, across mountains, summits and the coast of the heavenly height.

The new join of 1.8 to 1.3 VI significantly changes the way the bicolon in 1.3 VI 9b–11 are to be interpreted. Before the join, most scholars assumed that the reference to "the Fisher of Athirat/Qudš Amrar" indicated that this deity was the addressee of the instructions. It is now evident that this is not the case. Rather, these lines are now to be seen as instructions to Gapn and Ugar to journey first to Qudš Amrar's abode before continuing on to meet with Kothar. The reason for this side visit is not discussed in the text. It is not possible at this point to determine whether Qudš Amrar is to accompany Gapn and Ugar to Kothar's, or whether the Baal's messengers are just to inform him of their mission.

"The Fisher of Athirat/Qudš Amrar" (more often as Qudš-wa-Amrar) appears also in 1.4 II 31, where he seems to be in Athirat's presence when the goddess first spots Baal and Anat approaching from a distance. If he accompanies Gapn and Ugar to Kothar, he appears to have returned to Athirat's abode before Baal and Anat set out to visit the goddess. Qudš-wa-Amrar also plays a role in 1.4 IV 1–19, where he prepares Athirat's horse for her trip to visit El and accompanies her there. His close relationship to Athirat as her attendant is clear, but his role in the embassy to Kothar remains very uncertain, presumably lost in the lacunae at the end of this column and the beginning of 1.4 I.

The title, *dgy*, is not the common **qattāl* form or so-called *nomen professionalis* (cf. **dawrwāg*, "fisher" in Jer 16:16 and Ezek 47:10, and **dayyāg* in Isa 19:8, noted by Pope, personal communication), but another nominal base with the adjectival suffix *-ay/-ayyu* (Cross, *CMHE* 56, esp. n. 45; cf. Maier 1986:5). The double-name, *qdš amrr*, which elsewhere is written with *w-* between the elements, has been interpreted as "Holy and Most Blessed." This interpretation of the second element understands the form as an elative type *'aleph*-preformative of the root **mrr*, "to bless, strengthen" (*Thespis* 181; *BOS* 2.183; Cross cited in Maier 1986:5; *DUL* 577–78; see also *TO* 1.178 n. f). The exact meaning of **mrr* is not certain, but it appears in 1.15 II 14–15, 1.17 I 23–24, 34–35 and 1.19 IV 32–33 in conjunction with the parallel verb, **brk*, the common word for "to bless" (*DUL* 577–78).

De Moor (*SPUMB* 52, 144) and Perlman (1978:81, 187) suggested that *'amrr* could be an Ugaritic spelling for the DN Amurru. Amurru was a storm-god (Kupper 1961:245–7; *WdM* 97–98; *CMHE* 58; *DDD* 32–33), with titles such as *ramān*, "thunderer" (for the title see Greenfield 1976) and *bāriqu*, "thunderbolter," as well as ^{d}Adad *ša a-bu-be*, "Adad of the deluge" (*CAD A*/1:80).[8] An identification of the two cannot be ruled out. In Mesopotamian texts, Amurru was closely linked to the goddess Ashratu, i.e., Athirat. In the great god list, *AN = Anum*, Ashratu is listed as the spouse of Amurru, and in the Sumerian myth, "The Marriage of Martu," Amurru's wife's name is ^{d}Adgarudu, who seems to be equated with Ashratu in *AN = Anum* (on the Mesopotamian references to the goddess, see Wiggins 1993: 132–50 see also Kupper 1961:61; van der Toorn, *DDD* 32–34; Klein 1997). Ashratu is also called "the daughter-in-law of Anu" in an inscription of Hammurapi. It is evident that her role in Ugaritic mythology is quite different from that in Mesopotamia. At Ugarit she has become the wife of the head of the pantheon and is the mother of the gods par excellence. Her shift to El would exclude a spousal relationship to Amurru. De Moor and Perlman suggest that Qudš-wa-Amrar might be a reflection of the eastern mythological tradition that related the two deities, with Amurru demoted now in the Ugaritic context to a mere servant's position.

[8] Cross' identification of Amurru with El (*CMHE* 57), based on the Sargonic DN, *Amurru-kima-Il*, "Amurru-Is-Like-Il," cited in J. J. M. Roberts 1972:15, and on the similarity between the names El Shadday and Amurru's epithet, *bel šadê*, "lord of the mountain," seems problematic and unlikely. Amurru appears more closely related to Adad/Baal than to El in all his characteristics (cf. *DDD* 33–34).

All of this, however, remains speculative. Besides the lack of any characteristics of Amurru being attested for Qudš-wa-Amrar, there is the additional problem that the spelling of the messenger god's name does not correspond to the attested spelling of the word Amurru in Ugaritic. The place name, Amurru, is found in 1.4 I 41, 2.72.17, 24, 26, 29, 32 as *ʾamr*, rather than *ʾamrr*, as in the god's name here. It is possible that the latter was an alternative spelling designed specifically to distinguish the deity from the place/ethnic name, but this suggestion is not demonstrable from the current evidence. Any appeal to the two distinct spellings, *ḥqkpt* and *ḥkpt*, for Memphis in lines 13 and 15, while suggestive, is imperfect since both spellings here refer to the same thing and not to a deity and a place name.

Some scholars have related the title *qdš* to Athirat and have suggested that it appears here to emphasize the messenger's close relationship to the goddess. However, several scholars, including Pope (*EUT* 43–44), Wiggins (1991:386–89) and Cornelius (1993:29–33) have argued that the title in itself probably has nothing to do with Athirat. In sum, little can be said confidently about the relationship between *qdš (w)ʾamrr* and Athirat beyond the fact that he is her messenger and servant.

Of the five imperative verbs in lines 7–11 (*ʿbr* x 3, *šmšr*, and *mġ*), only one is ambiguous. The verbs, *ʿbr*, "pass, cross over," and *mġ*, "enter, arrive, go," are common travel words, but *šmšr* occurs only here in Ugaritic. It is clearly related in meaning to the verbs surrounding it, but its full nuance remains uncertain. Several scholars (e.g., Lipiński 1973: 36; Sanmartín 1978b:353; de Moor and Sanders 1991:288–89; Dijkstra (1991:129 n. 12; Pardee 1997a:255 n. 118) relate the verb to Akkadian *mašāru*, "to draw, drag, drive." But how this meaning fits the context has been a major problem. For example, Lipiński took the first *š* as the word for "sheep," and rendered the phrase, "drag a sheep to (the house of) the Fisherman of Athirat." Sanmartín took the word *šmm* from the previous line and translated, "Let the heavens drag, O Fish-Man of Athirat." Pardee, before his discovery of the connection with 1.8 read: "Have (your nets) drawn in, O fisherman of Athirat." Others compare Akkadian *D*-stem of *(w)ašārum*, "to abandon, leave (to), let go, release, send off" (cf. Maier 1986:4). Following al-Yasin, Caquot and Sznycer (*TO* 1.178 n. d) compared Arabic *simsar*, "entremetteur (mediator)" and translated verbally "Entremets-toi (Mediate!)" While the latter meaning somewhat fits the character of the messengers' mission, it seems unlikely that a meaning so different from those of the surrounding verbs would occur at this point. Although none of the

suggestions can be entirely ruled out, it appears that a meaning related to Akkadian *mašāru*, with its occasional meaning related to driving a chariot (cf. *CAD M/I*:359–60), fits closest to the context here. We have thus tentatively rendered *šmšr* as a *Š*-stem of *mšr*, with a meaning, "cause to drive, proceed ahead."

The second part of Baal's travel instructions (lines 12–16) names the goal of the messengers as Memphis, Kothar's home in Egypt/Kaphtor. The close identification of Memphis and Kaphtor (generally understood as Crete; see *UBC* 1.167 n. 92) in the descriptions of Kothar's home indicates some vagueness of the mythic geography in the Ugaritic literary material, even when real locations are referred to.

Some scholars (Driver, *CML*[1] 91; Wyatt 1998:87; Watson 1997:720) have argued that a colon giving the name of the god Kothar wa-Hasis should appear within the passage in lines 12–14 and was accidentally left out by the scribe. They have proposed inserting *'im (or tk) kṯr wḫss*, either as the second line of a tricolon or as the third line. However, this seems unlikely. A very similar set of instructions in 1.4 VIII 10–12 presents Baal telling his messenger Gapn wa-Ugar to go to the land of Mot, also without giving Mot's name in the parallel part of the instructions. It is unlikely that our scribe would have left out the names of the gods in both passages by accident. It seems more likely that in the lacuna above our passage the craftsman god has already been named as the goal of this journey.

The description of Kothar's home appears also in 1.1 III 1*–3, and it is discussed extensively in *UBC* 1.165–67. Shipping between Syria and Egypt was a hallmark of the cosmopolitan Late Bronze Age trade. A Theban tomb wall-painting (now lost) thought to date to Amenhotep III depicts ships carrying Syrians docked at an Egyptian port with their wares (*ANEP* 111; for travel by ship within Egypt, see Partridge 1996). Memphis in particular was a destination for Syrians, as noted by Redford (1992:228): "The northern suburb of Memphis became a favorite haunt of Canaanite merchants, who early established a community there centered upon their own temple of Ba'al, 'the house of Ba'al in Memphis,' and which one thousand years later when Herodotus visited Egypt still survived as 'the Camp of the Tyrians.' Memphis in fact loomed large in the life of a foreign merchant doing business with Egypt. He knew it by the term *Ḥikuptaḥ* ('*ku*-chapel of Ptah'), a term specifically denoting the enceinte of Ptah, the chief god of the place." As observed by Redford (1992:40) and long noted by scholars of Ugaritic, the location of Kothar's home in Egypt is a

stock item; the craftsman god is called *b'l ḥkpt*, "lord of Memphis," in 1.17 V 20–21, 30–31. As noted above, the names *ḥqkpt* and *ḥkpt* may be variant spellings for Memphis, as such variants are not unparalleled for foreign GNs (see *UBC* 1.166–67; Watson 1996a:74; see also Smith 1985:102–3), while *kptr* is evidently Kaphtor, probably Crete but arguably Cyprus or some place on or part of the island (for references, see *UBC* 1.167 n. 92). It has been thought, perhaps based on analogies with Hephaistos' underground workshop, that Kothar's home and more specifically his workshop is to be understood as located in the underworld (e. g., Pardee 2002:205; see the following column 1.4 I for Kothar at work in his workshop).

Lines 14–16 present a formulaic insertion within the travel itinerary (Watson 1994b:320), noting Kothar's ownership of these homes, couched first in royal language of enthronement (*ks'u ṯbth*) and then in terms of familial patrimony (*'arṣ nḥlth*). The language seems stereotypical, occurring also in the description of Mot's domain in 1.4 VIII 12–14.

Lines 17–20 command obeisance before Kothar at a great distance, as a further sign of deference. The distances mentioned in line 17 are enormous in size, also used for the length covered by divine travel. The language for obeisance is common (see 1.1 III 1*–6; *UBC* 1.167–69); it is aimed, as the final verb suggests, at honoring the great deity. The commands to speak to Kothar begin with lines 21–25, using terms stereotypical for such messages (*UBC* 1.169–70). The only variants are the names of the addresser and addressee. In this case, these are Baal and Kothar, and well-known titles of theirs are included.[9]

With line 25 the text breaks off. Presuming that 1.4 I 4–23 involves the delivery of the message commanded at the end of 1.3 VI 25f., the ca. twenty-two line lacuna at the end of 1.3 VI may be plausibly reconstructed in part as containing the message repeated in 1.4 I 3–23. The missing lines present the rest of Baal's message to Kothar—presumably including Baal's complaint that he has no palace and his request that Kothar produce gifts for Athirat—and the beginning of the messengers' speech to Kothar, which is the scene that we find in progress in the first column of the next tablet, 1.4.

---

[9] For Baal's titles here see *UBC* 1.153. For those of Kothar, see *UBC* 1.170–72. Note also ^{d}Ḫasisu in Shurpu, tablet VIII 38 (Reiner 1958:41).

Other numbers: RS 2.[008] + 3.321 + 3.323 + 3.341 + 3.? (see below under Find Spots); KTU 1.4 = CTA 4 = *UT* 51 = II AB (Virolleaud 1932: *editio princeps*).

Museum numbers: M8221 = A2777 (Aleppo Museum) = AO 16.637 (older Louvre number).

Measurements: 253 mm height by 218 mm width by 40 mm thick (cf. Bordreuil and Pardee 1989:26)

Find Spots: The tablet was found in the House of the High Priest on the acropolis of Ugarit, to the southeast of the Temple of Baal. It was recovered in six fragments. Two (combined in Bordreuil and Pardee 1989:26 under the number RS 2.[008], since none of the original inventory numbers from the second season survive) were found in the second season of excavations (1930), while the other four were recovered during the third season in 1931 (Virolleaud 1932:113). It has been difficult to identify definitively the original RS numbers of most of the 1931 fragments of 1.4 because, while the inventory list for the season is preserved, no comprehensive account that attributed the RS numbers to specific texts has survived from the original mission team. Two recent attempts to do exactly this (Bordreuil and Pardee 1989; Cunchillos 1989) have each produced dramatically different results, thus indicating the difficulties involved.

A look at both studies with regard to 1.4 will illustrate the issues. Bordreuil and Pardee 1989:29, 31 reconstruct the fragments in the following way (see Images 28 and 29). They identify the two fragments found in 1930 as those that constitute the central part of the tablet, the first being the one that preserves the upper surviving parts of columns I and II on the obverse and the lower parts of columns VI, VII and VIII on the reverse, while the second is the fragment that contains the majority of columns III and IV on the obverse and the central parts of columns V and VI on the reverse. Of the four third-season fragments, only two could be connected by the authors to RS numbers from the inventory list. They propose that RS 3.341 preserves the lower

right corner of the obverse (the end of column IV, along with a few letters from the right side of column III) and the corresponding upper corner of the reverse (the beginning of column V and some letters of column VI), while they identify the large fragment that comprises the lower left corner of the obverse, with portions of columns I and II, and the upper left of the reverse, with parts of columns VI, VII and VIII, as RS 3.347. They do not provide the other two fragments with RS numbers.

The second reconstruction was published independently of Bordreuil and Pardee's work by Cunchillos, also in 1989 (see Images 30 and 31). He was less certain about the identity of the left fragment from the 1930 season. He noted that Virolleaud (1931:21) in describing what had been found of tablet 1.4 in 1930 states: "la plus grande, qui measurait 23 centimètres de large, comprenait huit colonnes, ce qui représente un total de 600 lignes, mais le tiers seulement en a été conservé." Cunchillos found Virolleaud's reference to a specific width of the tablet to be significant. The only two fragments that fit together and span the entire width are the central right-hand fragment that Bordreuil and Pardee also identified as one of the 1930 pieces, and the fragment that the latter identify as one that was found in 1931, namely RS 3.347. Thus Cunchillos proposed that these two are the probable 1930 fragments. However, he left open the possibility that the upper fragment of columns I and II (i.e., the one Bordreuil and Pardee identify as the left 1930 fragment) was the second fragment.

Cunchillos' analysis of the 1931 fragments also differed from that of Bordreuil and Pardee. Most importantly, Cunchillos identified the RS number 3.347 not as a piece of 1.4, but rather as the main fragment of 1.2 (columns I, II and IV). He did this primarily because the dimensions recorded in the original inventory list for RS 3.347 (120 mm height by 100 mm wide; see Cunchillos 1989:61) almost exactly match the dimensions of 1.2 I, II, IV. The dimensions of the fragment of 1.4 that Bordreuil and Pardee identify as 3.347 are quite different: 140 mm height by 100 mm wide on the obverse and 132 mm height by 125 mm wide on the reverse.[1] In addition, Cunchillos identified the

[1] The identification of RS 3.347 with 1.2 I, II, IV is significant for the discussion of the relationship between 1.2 III and 1.2 I, II, IV. RS 3.347 was found in the same location as RS 3.346, which is 1.2 III. One argument against identifying 1.2 III as part of the same tablet as 1.2 I, II, IV has been that the latter fragment (identified with RS 3.367 in Bordreuil and Pardee 1989: 32) was found at a substantial distance from 1.2

small fragment that contains the end of column IV and the beginning of column V (which Bordreuil and Pardee label RS 3.341) as RS 3.323, citing the measurements of the latter (77 × 50) as a very close match to this fragment, which he measured as 78 × 52, and which we measure at 76 × 50. He then identifies the fragment that preserves the end of column V as RS 3.341 (Bordreuil and Pardee do not identify this fragment of 1.4). Here too he notes the closeness of the inventory's measurements (70 × 63) to the size of this fragment (he measures 68 × 61, we measure 68 × 60). He does not propose identifications for the large fragment that Bordreuil and Pardee had identified as 3.347 or for the fragment preserving the beginnings of columns VI and VII.

Our analysis of the fragments differs from both of these studies (see Images 32 and 33). With regard to the 1930 fragments, we believe that Bordreuil and Pardee are correct in their identifications. The primary evidence comes from Virolleaud's brief description of the 1930 fragments of 1.4 quoted above. It should be noted that Virolleaud's measurement of the tablet's width, 23 cm, is too large. The widest point across the two fragments Cunchillos proposes for 1930 is only 21.4 cm. This suggests either that Virolleaud badly mismeasured the tablet, or that he was estimating the width from two fragments that did not actually span the entire length of the tablet. The left fragment proposed by Bordreuil and Pardee as the one found in 1930 provides evidence of columns I, II and III on the obverse, and VI, VII and VIII on the reverse, but columns I and VIII are incomplete on the left. These two columns are considerably thinner than the other columns on the tablet, so, if this were the fragment Virolleaud had available for the left side of the tablet, it would not be surprising that he estimated their widths to be ca. one to one and a half cm larger than they proved to be. This would also explain why his estimate of the number of lines on the complete tablet was also too high (600 instead of the probable 540–550)—he has reconstructed the supposed height of the tablet as a ratio to its width, but he has calculated it on a presumed width that is too large. His note that the two fragments preserve about a third of

---

III (point topographique 209 instead of p.t. 338, 343, 341 for 1.2 III). If Cunchillos is correct, then 1.2 I, II, IV was actually found in the same context as 1.2 III. RS 3.367 is given little information in the inventory list. Its description reads, "fragment de tablette très empatée de calcaire." No measurements were given. Bordreuil and Pardee indicate that the identification of 3.367 with 1.2 comes from a card in Schaeffer's files that equates the two.

the tablet also fits the situation of Bordreuil and Pardee's reconstruction better than that of Cunchillos. The latter's two fragments hold at least parts of over 280 lines, close to half of the tablet in Virolleaud's calculations. The two fragments suggested by Bordreuil and Pardee preserve parts of ca. 230 lines, much closer to the number Virolleaud assumes (of course, there is no way of determining exactly what Virolleaud counted as a preserved line).

With regard to the 1931 fragments, it seems that Cunchillos' arguments for identifying RS 3.323 and 3.341 are strong and most convincing. The inventory measurements of 3.341 (70 × 63) seem quite problematic for accepting Bordreuil and Pardee's identification (their fragment measures 76 × 50), but fit the fragment Cunchillos proposes almost exactly. In addition, Bordreuil and Pardee do not provide a likely alternative identification for 3.323, which Cunchillos identifies from the dimensions of the fragment as the end of col. IV/beginning of col. V.

The issue of the fragment identified by Bordreuil and Pardee as RS 3.347 remains uncertain. There is no doubt that the inventory measurements for 3.347 do not match the measurements of the fragment of 1.4, while they do match those of 1.2 I, II, IV. At the same time, Bordreuil and Pardee have noted (1989:32) that a card in Claude Schaeffer's files identified 1.2 I, II, IV with RS 3.367. However, even if 3.347 is not 1.2 I, II, IV,[2] the dimensions of 3.347 still do not match the dimensions of the fragment of 1.4. We would point to RS 3.321, a substantial fragment which neither Bordreuil and Pardee (1989:30) nor Cunchillos (1989:85) identified with any tablet, as a more likely candidate for this fragment. The inventory list gives its measurements as 129 × 124 mm; these are virtually identical to our measurements of the reverse of this fragment, 132 × 125 mm.

We thus propose the following tentative reconstruction of the fragments belonging to 1.4. The two fragments found in 1930 were: (1) the fragment that preserves the upper surviving parts of columns I and II on the obverse and the lower parts of columns VI, VII and VIII on the reverse, and (2) the fragment that contains the majority of

[2] We are inclined to agree with Cunchillos' identification here, since the dimensions of the inventory list match those of 1.2 so closely. We would note the near identity of the numbers of the two fragments involved here, 3.347 and 3.367, and might suggest that the Schaeffer note is a scribal error.

columns III and IV on the obverse and the central parts of columns V and VI on the reverse. Three of the four fragments found in 1931 can be identified tentatively as follows: (1) RS 3.321, the large fragment that preserves the lower part of columns I and II on the obverse and the upper parts of columns VI, VII and VIII on the reverse; (2) RS 3.323, the small fragment that preserves the end of column IV and a few letters of column III on the obverse, the beginning of column V and parts of column VI on the reverse; (3) RS 3.341 that contains the end of column V. The fragment that preserves part of the upper lines of columns VI and VII has not been identified with an RS number.

The exact find spots for the second-season fragments cannot be ascertained. Because the inventory lists for that season are lost, Bordreuil and Pardee were only able to narrow the find locations for the tablets to the topographical points numbered 210–264 on the excavators' plans. Since these topographical points are spread all across the house, no determination for specific tablets can be reached. A map published in Schaeffer 1935 (pl. XXXVI) places the tablet discoveries of the 1930 season primarily in the room to the northwest of the southern entry room, where most of the third-season tablets were found. The three third-season fragments that we have identified above (RS 3.321, 3.323, and 3.341), were found near the southern doorway of the house (the first two at *point topographique* 343, the third more generally in the vicinity of *points topographiques* 338, 343, and 341). If the RS 2.[008] fragments were found in the room northwest of the southern entry room, the sets of fragments were separated from each other by a distance of between 4.5 and 7 meters.

Other tablets found in the area where the third season fragments were discovered (the southern entry room, the southern doorway and the street outside the door) included 1.1; 1.2 III (and as discussed above, probably 1.2 I, II, IV); the main fragment of 1.3; important fragments of 1.14; 1.15; parts of 1.16; 1.18; 1.19; and 1.20 (see Bordreuil and Pardee 1989:30–32; Cunchillos 1989:59–86).

As mentioned above (p. 88), the tablets appear to have been located on the second floor when the house was destroyed. They were found, not on the surface of the floor, but in the rubble of the collapse from above. The apparent dispersion of the fragments of 1.4 (and also 1.3, 1.6 and probably 1.16) across the house suggests that the tablets had already been thrown off their shelves during pillaging that occurred before the house was destroyed.

CAT 1.4 is the largest of the preserved tablets from Ugarit. It is divided into eight columns, rather than the six of tablets 1.1, 1.3, 1.5 and 1.6 (1.2 is a four-column tablet). The almost completely preserved column V indicates that there were probably 67–69 lines per column, thus providing approximately 540–550 lines of text. At least parts of some 396 lines of the tablet are still preserved. As is typical of Ilimalku's tablets, the left hand columns (I and VIII) are considerably thinner than the other columns of the tablet. They are ca. 40 mm wide, while the others range from 51 to 58 mm. The amount of damage to the tablet can be schematized by laying out the approximate number of *missing* lines at the tops and bottoms of each column:

FRONT (obverse)				
Column	I	II	III	IV
TOP	23	16	12	12
BOTTOM	–	–	–	–
BACK (reverse)				
Column	VIIII	VII	VI	V
TOP	–	–	–	–
BOTTOM	20–21	7–8	2–5	0–3

CAT 1.4 provides some interesting insight into the scribe's technique for preparing the tablet (a more detailed analysis of this issue is found in Pitard i.p.). The obverse of the tablet shows a number of unique elements that suggest a significant uncertainty on the part of Ilimalku as to how he would format his text. Unlike all the other tablets attributable to Ilimalku, which use double vertical lines to mark the margins between the columns of text, 1.4 obverse divides the four columns with varying numbers of vertical margin lines. Between columns I and II we find the regular double lines, but between columns II and III there are three verticals, two of which are deeply incised, while the third one, to the right, is more lightly cut, but actually functions as the left margin for column III. The margin lines between columns III and IV are more surprising. Here we find four incised verticals. The reverse of 1.4 is completely normal, with standard double-line margins. What can be deduced from the peculiar situation on the obverse?

A series of scribal irregularities in column I may give us some hints. From the point where column I begins on the tablet down to line 22, there are traces of a vertical line ca. 4 mm to the left of the official margin lines. The line appears to have been partially smudged out, but one may notice that it appears to have acted as the margin line for the text up to our current line 15. Suddenly the right margin

expands with line 16, and the writing goes consistently farther to the right than on any of the lines above. This may suggest that the left vertical was tentatively drawn as the right margin line when Ilimalku began to compose the column. By the time he reached line 15, however, it appears that he decided the column was too thin. At this point, it seems likely that he drew the double lined margin, which became the basis for the right margin of the rest of the column. The letters which run through the double margin lines (e.g., the /m/ that breaks into the right vertical in line 21, where in making the horizontal wedge, the stylus has pushed some of the clay downward, filling in the incision of the vertical just below the wedge) indicate that the margin lines were made before the text from line 16 on was written. However, the scribe now tried to put in as much text as possible, and often placed letters into the margin lines and beyond (especially lines 16–18, 20–21 and 23). When he began working on column II, he used the right hand vertical of the margin lines as the left margin of the column until he reached the spot parallel to column I line 16, where the final letter of that line slips over into the space of column II. At this point, Ilimalku made a short vertical to the right of the margin lines to act as an *ad hoc* margin line for col II 21 and 22. Below line 22, we find the last two letters of I 18 sitting entirely in column II, followed by an *ad hoc* vertical. Ilimalku simply decided not to begin a line to the right of these letters and skipped down below the intrusive letters to begin line 23. But even here he starts that line well to the right of the margin and places an *ad hoc* vertical at the beginning. The next four lines are separated from the overextended lines of column I by another *ad hoc* vertical margin line. In fact, lines 24–31 all begin well to the right of the official margin line. This produces a very messy look to the first two columns of the tablet.

It is clear that Ilimalku had already inscribed the double margin line between columns II and III before he began writing column II. By the time he arrived down at the section where he had to abandon the margin on the left side of column II, he had already written a number of lines that intruded into the margin lines to the right. But he clearly recognized that his *ad hoc* solution in II 21–31 was unsuccessful. So before beginning column III, he drew an additional vertical to the right of his original margin lines and used it for the left margin of the column. This obviated the need to adjust a few lines to the right and gives column III a more professional look.

Ilimalku's work on column III indicates that he was still having trouble predicting how much he could fit on a line. In line 17 he runs short

of space and solves the problem by curving the last letters vertically up the edge of the margin line. This is obviously not a good solution. So in the lines below where he once again miscalculates the space that he has, he simply returns to writing the letters over the margin lines. Careful examination of the four verticals between columns III and IV indicates that we actually have two overlapping sets of double margin lines here. The leftmost vertical and the third from the left are clearly the original double lines. But once he saw that he had the same problem he had dealt with in the previous columns, Ilimalku chose this time to simply redo a complete double line a bit to the right, so that the new left vertical is about 1mm to the right of the old left vertical, and the new right vertical is far enough from the letters that broke into the old margin that it can act as the left margin for column IV. Thus the four verticals here.

Ilimalku found himself with a very messy obverse that clearly did not please him or perhaps someone in charge. By the time he began working on the other side of the tablet, he had clearly figured out how to calculate what could be placed on a line. On the reverse, we find lovely and professional two-line margins. In column VI, only one line (line 33) has a letter that touches the right margin line between V and VI. The same is true of column VII (only line 19) and VIII (line 35). The contrast between the two sides is dramatic.

No other tablets attributable to Ilimalku show anything close to this extent of scribal clumsiness. How are we to interpret this? These are not the errors of an established scribe. It seems perhaps best to suggest that this indicates Ilimalku was quite inexperienced with writing a large, multi-columned tablet when he produced 1.4. In fact, since none of the other tablets we have from Ilimalku shows these problems, the evidence suggests that this might have been the earliest multi-columned tablet that he inscribed among those that are preserved for us, and perhaps even his first such tablet ever. Here we can actually watch him struggle to develop his technique for dealing with margins and calculating how much text may be placed in a line. His lack of success on the obverse led either to his being given additional instruction by his teacher, or to a serious reevaluation on his own that allowed him to work more professionally on the reverse. If we are correct in the interpretation of the evidence, this has implications for the issue of whether the Baal tablets were written from dictation or from older copies. If this were Ilimalku's first major tablet, then he must have copied it from a written text (see *UBC* 1.35–36), since it begins in the middle of a story, a

very unlikely place for someone to begin reciting a poem for copying. If he had written sources, then it would not necessarily matter where he began his new set of tablets. Other implications of the characteristics of 1.4 obverse are discussed in the Commentary on the colophon below (pp. 725–29).

CAT 1.4 I

Bibliography

Text Editions: Virolleaud 1932:114–21, pls. XXV, XXX (in the *editio princeps*, the captions for the two photos of the obverse and reverse have been exchanged; thus pl. XXIX, captioned as the obverse, is actually the reverse); CTA 22–23, fig. 14, pls. VII, VIII; KTU 15; CAT 15–16.

Textual Notes

There is a vertical line, ca. 4 mm to the left of the main margin lines between columns I and II, that appears to function as the right margin for the lines 1–15. Perhaps this was a provisional margin set up by Ilimalku, then abandoned before writing line 16 for the double margin line (see comments above).

Lines 1–3. The text of this column actually begins only with line 4. Virolleaud suggested in the *editio princeps* (1932:114) that there were vague traces of letters in three preceding lines, but we found no such traces. CTA and CAT both read a damaged /y/ at the end of line 2, and the original Louvre photo shows what appears to be the lower part of a vertical wedge. But this is a trick of the camera. There is no wedge at that point on the tablet, only damage to the surface of the tablet (this is clear in the new photo). Although we see no traces on these lines, we have maintained the numbering established by Virolleaud and continued in CTA and CAT.

Line 4. [ ]ḫ.tr Epigraphically, the identity of the first preserved letter is uncertain, though the context argues for /ḫ/. The traces are compatible with the right wedge of that letter. The lower tip of the word divider is preserved. It is best visible when light is shined from the upper right. Most of the vertical wedge of the /t/ is preserved, along with the lower right tip of the *Winkelhaken*.

Lines 5–6. There is a significant space between line 5 and the next inscribed line, large enough to suggest an intervening line that ended to the left of the preserved area of the column. But this seems unlikely, since the passage partially preserved here (lines 4–18) has parallels at 1.3 V 35–43 and 1.4 IV 47–57 that indicate that the following inscribed line follows directly upon line 5. This suggests that Ilimalku simply dropped a little too low when inscribing the next line, leaving an substantial gap between them. It is another example of the clumsiness of the scribe on this side of the tablet (see above). Although CTA gave the uninscribed space a line number, we follow CAT here in numbering the next inscribed line as line 6.

Line 6.]ḫ.'at Only the right wedge of the /ḫ/ is preserved. While damaged, the left half of the word divider is still visible.

Line 7.]'ilt Only the right tips of the two upper horizontals of the /'i/ are preserved. Epigraphically this could also be a /h/, but the context of the passage argues for /'i/. /l/ CAT reads the first vertical wedge here as a word divider, followed by a regular /l/. This seems unlikely, however, because of the large size of the left wedge. This is best read as a four-wedge /l/, as pointed out by Herdner (CTA p. 22, note 3). Note the similar four-wedge /l/ on line 17 (the first /l/ in *mzll*).

Lines 9–10 are lost in the break between fragments.

Line 11. [ ]r[ ] Only two short horizontals survive on this line, with possible traces of the vertical left edge of another horizontal connected on the right. This is most likely an /r/, although it could be an /a/ or possibly an /n/. CAT finds traces of /'at/ preceding the proposed /r/, but we see no traces of letters elsewhere on this line.

Line 12. m[ ]b'il Only a part of the vertical wedge of the first letter is preserved, but the context argues for an /m/. CAT reads /]b.'il/, but there is no word divider between the /b/ and the /'i/.

mẓll The three wedges of the final /l/ are visible, although the tops are missing.

Line 16. b'ar Notice that the scribe has placed an *ad hoc* vertical margin line at the end of the /r/, to the right of the double margin line, since the letter has crossed it. The corresponding line in column II then begins to the right of this temporary margin. This begins a series of lines (through line 23) which overflow into column II and cause a disruption in the left margin of that column (see the more complete discussion above). A scribal error is evident here, since Pidray's epithet is *bt ʾar*.

Line 17 mẓll The first /l/ is made up of four wedges.

Line 18. mṯb.'arṣy.bt.yʿbdr This line intrudes into column II with two full letters that run under the beginning of II 22. Rather than pushing the margin line between columns I and II even farther to the right, Ilimalku starts II 23 under the final letter of line 18.

Line 24. ṁṣbṭm The vertical wedge of the first /m/ is damaged partially by a break, but partially from what appears to be a an ancient smudge that damaged not only this letter, but also a letter on the next line (see below) and the corner of a letter on line 26. The surface of the tablet has been indented here, perhaps by a finger, while the tablet was still wet.

Line 25. kṡp The upper line of the /s/ is preserved, but the rest has been obliterated by the ancient smudge.

Line 28. lrbbt. There is a very clear word divider on the end of the /t/, even though nothing is written afterward.

Line 29 y{p/ṣ}q The scribe wrote /p/, then corrected himself to /ṣ/ without trying to erase the /p/. The wide heads of the /ṣ/ verticals almost obliterate the upper horizontal of the /p/, but the lower one remains very clear.

Line 32. šmrḫ̱t The /ḫ/ is uncertain, but a small upper wedge is partially preserved, with a nearly vertical left side and a sharply closing right slope, which indicates (with the clearly preserved larger wedge

below) a multi-wedge vertical letter here, either /z/ (which some early commentators entertained as a possibility), or /ḏ/. The small size of the head at the top of the letter shows that /g/, as read by *CTA*, is incorrect.

Line 34. ’id The /’i/ is made with four horizontals. The /d/ is certainly a scribal error for /l/.

Line 35. dpršʾa /d/ is made with three vertical, but four horizontal wedges.

Line 36. d.qblbl The word divider following /d/ is unusually large.

Line 40. ’ảrṣ The /’a/is damaged on the left and on the right, but certain.

Line 41. ṣʿ The first letter is certainly /ṣ/, rather than /s/, as in *CTA*. There is no lower wedge that would make the letter an /s/. The left vertical is, however, considerably smaller than the right vertical (not an uncommon form).

k’ảmr The /’a/ in the last word is badly damaged, having lost all of its bottom line, but is still clearly identifiable.

Translation and Vocalized Text

Baal's Messengers Convey His Message to Kothar

1	"'…	
2	…	
3	…	
4–6	[In lament] [He cr]ies to Bull [El, his Father], [To E]l, the King [who created him].	['āniyu] [la-yaṣû]ḥu ṯôra/['ila 'abā-hu] ['i]la malka/[dā-yakāninu-hu]
6–8	[He cri]es to Athi[rat and her children], The goddess [and the band of] her [brood]:	[yaṣû]ḥu 'aṯi/[rata wa-banī-ha] 'ilata/[wa- ṣibbirata 'aryi-]ha
9–11	['For Baal has no house like the gods'],	[wa-na 'ênu bêtu lê-ba'li/ kama 'ilīma]

	[No court like Athi]ra[t's children's].	[wa-ḥaẓiru/ka-banī 'aṯi]ra[ti]
12–14	The dw[el]ling of El is the shelter of his son, The dwelling of Lady Athirat of the Sea,	mô[ṯa]bu 'ili maẓlalu/bini-hu môṯabu rabbati[1]/'aṯirati yammi
14–16	The dwelling of the Noble Brides, The dwelling of Pidray, Daughter of Light,	môṯabu/kallāti kaniyāti/ môṯabu pidrayi bitti 'āri
17–18	The shelter of Tallay, Daughter of Showers, The dwelling of Arsay, Daughter of the Wide World.'[2]	maẓlalu ṭallayi bitti ribbi/ môṯabu 'arṣayi bitti ya'ibidrayi
19–20	On a second subject I would speak with you:	'ap maṯnê ragamīma/ 'argumu-ka
20–22	Please, see to a gift for[3] Lady Athirat of the Sea, A present for the Creatress of the Gods.'"	šaskin ma'[4]/magana rabbati 'atirati yammi/ magẓî qāniyati 'ilīma

Kothar's Response

23–24	The Skilled One ascended to the bellows, Tongs in the hands of Hasis.	hayyānu 'alaya lê-mappaḫêmi/ bâdê ḫasīsi maṣbaṭāmi
25–28	He cast silver, he poured gold, He cast silver by the thousands, Gold he cast by the myriads.	yaṣuqu kaspa yašalli/ḥu ḫurāṣa yaṣuqu kaspa/lê-'alapīma ḫurāṣa yaṣuqu/-ma lê-ribabāti[5]
29	He cast a canopied resting-place:	yaṣuqu ḫayama wa-tabṯuḫa

[1] Based on the Akkadian evidence for *rabītu* for this title (see discussion below on pp. 404–6), it might be that the vocalization should follow suit.

[2] The meaning of the title remains highly uncertain. For the interpretation suggested here, see Pope (in Smith 1998b:655), based on Arabic *wa'ib* and *dr*, comparing Akkadian *irṣitu rapištu*, "broad land," an expression for the underworld.

[3] Literally, "of," here and in the syntactically parallel following line.

[4] For this particle, see *DUL* 519.

[5] Sivan 1997:63.

30–32	A grand dais of two myriads (-weight), A grand dais coated in silver, Covered in liquid gold.	katta[6] 'ili data rabbatêmi/ katta 'ili nûbata bi-kaspi/ šumraḫata bi-dami ḫurāṣi
33–35	A grand throne, a chair of gold, A grand footstool overlaid in electrum.	kaḫṯa 'ili nûḫata/baẓri hadāma 'ili/dā-puraš'a bi-barri[7]
36–37	A grand couch of great appeal (?), Upon whose handles was gold.	na'la 'ili dā-qabalbilu/ 'alê-na yubalū-hu-ma ḫurāṣu
38–40	A grand table filled with creatures, Animals of the earth's foundations.	ṯulḫana 'ili da-mali'a/minīma dabibīma dā<ta>[8]/-môsadāti 'arṣi
41–43	A grand bowl (pounded) thin like those of Amurru, Crafted like those of the country of Yaman, On which were water buffalo by the myriads.	ṣa'a[9] 'ili daqqata[10] ka-'amurri/ sakūnata ka-ḫuwwati[11] yam'ani/ dī-bi-hu ru'umūma[12] lê-ribabāti

[6] The vocalization of the final vowel here and on the nouns that head the rest of the cola stands in the accusative case, governed by the verb in line 29. It is possible, however, that these nouns were considered to be in the nominative case.

[7] On this word, with possible attestation in syllabic form, see Huehnergard 1987b:115.

[8] The /d/ at the end of the line is grammatically problematic. A scribal error is likely involved here, as one might have expected *dt*, given the plural antecedent. Citing Gibson (*CML*^{2} 56), del Olmo Lete (*MLC* 194) suggested that *d* may be an error for *b* here (the translation in Wyatt 1998:92 assumes this view. The error may have involved a vertical mistake as well, as the combination of *d* and *m* appear also directly above in line 38 (*dml'a*). For this reason, one might incline slightly to *d*<*t*>, although this is hardly assured. Another alternative would be to take *dbbm* as a sg. noun plus mimation, but this seems unlikely in view of the context evidently involving many animals depicted on the table; an excavated table of this sort discussed below in the Commentary involves multiple animals. Accordingly, some emendation appears warranted, but it is difficult to adjudicate between the two proposals. It may be noted that *d*<*t*> would preserve a marked degree of inner-line alliteration with *dbbm* and *msdt*, while *b* would echo the two *b*'s in *dbbm*. On the assumption that the vocalization is correct, an emendation to *d*<*t*> would also issue in the same number of syllables in the two lines of the bicolon in lines 38–40. Poetic considerations do not, however, constitute a basis for emendations.

[9] For the syllabic evidence, see Huehnergard 1987b:170.

[10] For the syllabic evidence for the form, *daqqu*, "small," see Huehnergard 1987b:119.

[11] For the syllabic evidence, see Huehnergard 1987b:123.

[12] *UG* 295. Secondary vowel harmony appears to be involved.

Commentary

Poetic Parallelism and Word/Syllable Counts

		semantic parallelism	word/ syllable count
4–6	['āniyu]		
	[la-yaṣû]ḫu/ṯôra ['ila 'abā-hu]	a b c d	4/11
	['i]la malka/[dā-yakāninu-hu]	c b' d'	3/11

This bicolon, with its possible anacrusis, is discussed above at 1.3 IV –47 (on p. 287). For this instance, the scanning and counts are given assuming the anacrusis.

6–8	[yaṣû]ḫu 'aṯi/[rata wa-banī-ha]	a b c	3/11
	'ilata/[wa- ṣibbirata 'aryi-]ha	b' c'	3/11

For lines 6–18, see the discussion of 1.3 IV 47–53 above on pp. 287–89.

9–11	[wa-na 'ênu bêtu lê-ba'li/kama 'ilīma]	a b c d e	6/14
	[wa-ḫaẓiru/ka-banī 'aṯi]ra[ti]	c' e' (x of y)	3/11
12–14	mô[ṯa]bu 'ili maẓlalu/bini-hu	a b a' c	4/11
	môṯabu rabbati/'aṯirati yammi	a b' (x, y)	4/12
14–16	môṯabu/kallāti kaniyāti/	a b c	3/10
	môṯabu pidrayi bitti 'āri	a b' d (x of y)	4/10
17–18	maẓlalu ṭallayi bitti ribbi/	a b c d	4/10
	môṯabu 'arṣayi bitti ya'ibidrayi	a' b' c d'	4/13
19–20	'ap maṯnê ragamīma/'argumu-ka	a b c d	4/11

See the same line in 1.3 IV 31–32 discussed above on pp. 284–85.

20–22	šaskin ma'/magana rabbati 'aṯirati yammi/	a b c d (x of y)	4/15
	maǵẓî qāniyati 'ilīma	b' d' (x' of y')	3/9

The discrepancy in line-length might suggest the possibility that the opening verb plus particle stands as anacrusis, yielding a more balanced scan and counts, as shown in the following:

	šaskin ma‘/		
	magana rabbati ’aṯirati yammi/	a b c (x of y)	3/12
	maǵẓî qāniyati ’ilīma	a’ c’ (x’ of y’)	3/9

In either case, the bilabials are especially resonant in this unit. The consonant *m* marks the ends of the lines in either arrangement, and if the latter payout were deemed preferable, then *ma-* would end the anacrusis and begin each of the two following lines.

23–24	hayyānu ‘alaya lê-mappaḫêmi/	a b c	3/11
	bâdê ḫasīsi maṣbaṭāmi	d a’ c’	3/9

Despite the divergence in syntax (discussed in the Commentary below on p. 410), parallelism is evident in the use of Kothar’s divine epithets, the two *m-* preformative nouns (in associated word-fields), and the prepositional phrases.

25–28	yaṣuqu kaspa yašalli/ḥu ḫurāṣa	a b a’ b’	4/12
	yaṣuqu kaspa/lê-’alapīma	a b c	3/10
	ḫurāṣa yaṣuqu/-ma lê-ribabāti	d a c’	3/12

The word-pair, *ksp* and *ḫrṣ*, appear also within a line in 1.3 III 46–47. This inner-line parallelism is played out in the second and third lines: the second line develops the first half of the first line, while the third line develops the second half. (This poetic relationship suggests further that the two verbs in the first line are considered in this context to indicate the same word-field of metal casting.) In general terms, this tricolon characterizes the nature of the metalwork for the list of items described in lines 29–43; that this is so is suggested by the carrying over of both the word-pair, *ksp* and *ḫrṣ*, in lines 30–32 (see also *ḫrṣ* in line 37) and the verb *yṣq* in line 29. The final word *lrbbt* also gets picked up in line 43.

29	yaṣuqu ḫayama wa-tabṯuḫa	a b c	3/10

The translation above renders the line as a monocolon heading up the entire list. It might also be construed as the first line within a quatrain with the following three lines. Line-length is consistent with this observation.

30–32	katta 'ili data rabbatêmi/	a b c d	4/10
	katta 'ili nûbata bi-kaspi/	a b e f	4/10
	šumraḫata bi-dami ḫurāṣi	e' f' (x of y)	3/10

This unit describes a single item, *kt*, by carrying over the word-pair for metals, *ksp* and *ḫrṣ*, from lines 25–28, and by describing in further detail the nature of their use with the object. By the same token, the nature of the gold is slightly elaborated with the characterization of it as *dm ḫrṣ* (see the Commentary below).

33–35	kaḫṯa 'ili nûḫata/baẓri	a b c d	4/9
	hadāma 'ili/da-puraš'a bi-barri	a' b c' d'	4/12

The lines here are finely balanced and semantically coordinated. A throne and footstool are associated items of royal furniture. Both are characterized as *'il*. Both items are further qualified with terms involving a further specification of metal; the first is apparently fine gold and the second may be electrum. The two nouns for metals also share sonant parallelism. The only major syntactical departure involves the third item in each line, but their vowel-pattern is basically the same (as reflected in the vocalization).

36–37	na'la 'ili da-qabalbili/	a b c	3/9
	'alê-na yubalū-huma ḫurāṣu	d e f	3/11

Despite the wide variation in both semantics and syntax, the two lines show stunning effects of sonant parallelism with *na'la* and *'alê-na* and with *qabalbili* and *yubalū-*. The final noun carries over from lines 26, 28 and 32. Note also the sequence within the first line: *-ili . . . -ili*.

38–40	ṯulḫana 'ili da-mali'a/minīma	a b c d	4/12
	dabibīma da<ta>/-môsadāti 'arṣi	d' e f (x of y)	3/12

Despite the great difference in syntax, the two fronted nouns, the two relative particles, and the two plural nouns provide a notable degree of semantic parallelism.

41–43	ṣa'a 'ili daqqata ka-'amurri	a b c d	4/11
	sakūnata ka-ḫuwwati yam'ani	e c' d'	3/11
	dī-bi-hu ru'umūma lê-ribabāti	f c'' g	3/12

All three lines contain a word with the consonants *ʾ* and *m*. Furthermore, the endings *-ata* and *-ati* resonate through the tricolon, and the comparative particle *ka-* appears in the first two lines. The case ending is the same for all three of the final nouns in the three lines. Looking at the larger context of this tricolon, animal imagery continues from the preceding bicolon's description of the table. Two instances of distant sonant resonance may be discerned in this tricolon. The final word in the tricolon echoes also the end of the tricolon in lines 25–28 above. Similarly, *sknt* here may echo *šskn* in line 20. Accordingly, this tricolon picks up various words in the larger context and ties together various elements.

Introduction

This column has two distinct parts. The first, lines 4–22, records a message to Kothar relating the familiar complaint that Baal has no palace like the other gods and a request that the craftsman god make gifts for Athirat. The second part, lines 23–43, describes Kothar at work on elaborate furnishings for the goddess made of gold and silver. At the end of the column is a pair of horizontal lines, whose meaning is discussed below (p. 426). The words to Kothar and his subsequent labor initiate the second part of the larger building saga. After Anat's failure to gain permission from El for Baal's house (1.3 III–V), the latter seeks Kothar's help in crafting gifts (CAT 1.3 VI–1.4 I) which will gain Athirat's sympathy (1.4 II–III) and convince her to travel to El and petition him for the palace (1.4 IV–V). Only with this permission can the construction of the palace begin. (For more details see pp. 35–9.)

Lines 1–22: Baal's Message to Kothar

As mentioned above (p. 392) the text of the column begins with line 4. Lines 4–19 contain the third occurrence of Baal's lament that he lacks a palace. The other two instances, 1.3 IV 47–53 and V 35–43, help to provide for the reconstruction here. The form of the lament varies little (see the Commentary to 1.3 IV 47–53 on pp. 306–12 for the full details of this section). The only difference involves the placement of the phrase *mṯb klt knyt* at the end of 1.3 IV 52–53 and 1.3 V 43–[44], but moved up in 1.4 I 14–15. This variation would imply that lines 15b–19 are appositional.

The lament is part of the message that is sent by Baal to Kothar via the messengers Gapn and Ugar, as described in 1.3 VI. According to our understanding of the relationship between 1.3 and 1.4, the large lacuna that precedes the lament, amounting to about 23 lines in this column, along with the ca. 22 lines missing at the end of 1.3 VI, concluded Baal's giving of the message to Gapn and Ugar, described their journey to Kothar's abode, their obeisance before the god and the beginning of the delivery of the message. It is also possible that some additional message affirming Baal's kingship preceded the lament proper just as in 1.3 V 31–43.

The lament is followed by the conclusion of the message, a specific request. It is introduced by a well-attested formula, "On a second subject I would speak to you" (*'ap mṯn rgmm 'argmk*). The formula occurs also in 1.3 IV 31–32 (see commentary on p. 299) and 1.17 VI 39.[13] Although there is no explicit explanation of the relationship between the lament and the request in lines 20–22, it is clear that the request to make gifts for Athirat is no separate concern from the lament, but a matter closely related to it. It is not until the next column, especially 1.4 II 26–30, that the meaning of Kothar's gifts is made clear: they serve to bring about a cordial relationship between Baal and Athirat to encourage her to help Baal win El's permission for the palace.

The cola in lines 20b–22 do not request that Kothar actually make the gifts himself. Rather, Baal asks the craftsman-god to *šskn*, a *C*-stem imperative probably from **skn*, "to take care of" (cf. *TO* 1.194 n. c') or "to give heed to" (Sivan 1997:140), followed by an imprecatory particle *m‘* possibly related to Egyptian *my/‘* (so *PU* 1.77) and BH *nâ*, often translated "please." It follows the imperative in Ugaritic (Sivan 1997:194). Gaster (1946:25) and Pope (1965:149, 151; 1973:167) compare the expression *haskēn-nâ* in Job 22:21 (cf. Num 22:30; Ps 139:3). Pope (MHP) comments:

> The sense in both cases is "to act carefully," but the contexts of the unique occurrences in Ugaritic and in Job are different. What Baal wishes Kothar to do with great care is apparently what the latter proceeds to do, to prepare golden furniture.

[13] For Hebrew *'ap* to mark a section or subsection within a unit, cf. 4QMMT B 13, 21, 24 [partially reconstructed], 42, 52, 56, 62, 64, 66, C 12, 18, 26; and also to mark an addition within a sentence-unit, cf. 4QMMT C 25).

Pope renders the verb in Job 22:21 "submit" and uses "prepare" in the Ugaritic context. Caquot and Sznycer (*TO* 1.194) also render "preparer" on the basis of BH *hiskantāh* in Ps 139:3 and Amarna Akkadian *sakānu ana* "to take care of, to see to." Von Soden (*AHw* 1011) and *CAD S*:69–70 regard the Amarna idiom as a Canaanitism. The primary examples are found in letters from Abdi-Hepa, king of Jerusalem (EA 285:29; 286:34, 38; 287:17, 40; 288:48; and 290:29), and they all appear in the context of the king of Jerusalem urging the pharaoh to "take care of" his land (Moran 1992:325–34 renders the verb, "provide for"). Abdi-Hepa is not pinpointing a specific action that he wants the king to do, but wants the pharaoh to take charge of determining what is necessary to protect the land. The verb appears to emphasize the high status and authority of the person to whom it is addressed. That seems to be the intent also in 1.4 I 20–22. Baal wants Kothar to do whatever is necessary to produce gifts that are appropriate for the Creatress of the gods. Note that in the Amarna passages, the verb is in the *G*-stem, rather than the *C*-stem of *šskn* in line 20. The causative form might suggest that Kothar should appoint someone, i.e., "cause (someone)" to see to the gifts. In this case, in keeping with his own capacity for craftsmanship, Kothar himself takes on the responsibility, which is surely Baal's intent. But he very politely leaves that decision to Kothar. A related noun, *sú-ki-ni/na* also occurs in the Amarna corpus as a West Semitic gloss on the Akkadian term *rābiṣu* (EA 256:9, 362:69 respectively), referring specifically to Egyptian officials in Canaan. The noun's meaning there is clearly "commissioner," literally "one who takes care of (things)" (cf. the discussion in Moran 1992:xxvi n. 70; and Rainey 1987:402). This noun also occurs in Ugaritic (see *DUL* 757–59), and in Akkadian documents from Ugarit (for a listing, see Sivan 1984:267; see the survey of van Soldt 2001).

Some scholars have proposed an alternative etymology for the verb, as a *C*-stem imperative of **nsk*, "to pour" with an enclitic *-n* (see citations in Sanmartín 1995:181–82, *DUL* 644, *UG* 595 and cf. Pentiuc 2001:132–33; cf. *šsk*, the *C*-stem imperative of **nsk*, in 1.13.6, used for blood). While this is possible, especially due to the relationship between pouring and the metalworking described in the following lines, the interpretation of the *n* as enclitic, followed by *mʿ*, seems forced.

The goddess Athirat is referred to here by the full form of her title, *rbt ʾaṯrt ym* (also in 1.3 V 40–41; 1.4 I 13–14, II 28–29, 31, III 27, 28–29, 34, IV 31, 40, 53, V 2–3; 1.6 I 44, 45, 47, 53; 1.8.1–2). The first element, *rbt*, literally means "great one" and is often translated "Lady"

(note the appearance of *ʾaṯrt rbt*, "the Lady Athirat," in the incantation, 1.169.16). The term is used in several contexts, among them as the regular designation for the king's primary wife, the mother of the heir to the throne (Gordon 1988). This matches Athirat's role in the text. She is, of course, the primary wife of El (whether he is understood in Ugaritic mythology to have other wives is not clear), and she is clearly the mother of El's children. In fact, the description of the appointment of her son, Athtar, to the throne in 1.6 I emphasizes Athirat's significant role as primary wife and mother in naming him to that role. However, her relationship as *rabītu* to Baal is much less clear, and the fact that he becomes ruler, presumably in contradiction to the expectation that the ruler should be one of Athirat's sons, may be part of the reason for Athirat's dismay about Baal's arrival at her palace in column II. Kühne (1973:180), Gordon (1988), and others also note that *rabītu* may be used as a designation for the queen mother, i.e., the widow of the king, whose son succeeds to the throne.[14] Gordon, followed by Wiggins (1993:65–67), compared Athirat to this aspect of the *rabītu* (so also Binger 1997:81), particularly in relationship to her role in the Athtar story of 1.6 I. However, this is somewhat problematic, since the queen mother is by definition a widow, whose son now holds the kingship. In the Baal Epic, El is quite alive and still the true king. Baal's position, and that of Yamm before him and Athtar after, is a subordinate one to that of El. Thus Athirat always remains the chief wife of the king, never a real queen mother.

The title does not appear in reference to royal women in the Hebrew Bible, but it may be extant on a Hebrew seal inscription (Dijkstra 1999). Gordon and others have related *rbt* to BH *gĕbîrâ*, generally assumed to be a title of the queen mother. Ackerman (1993) suggests that the *gĕbîrâ* was associated in Israel with Asherah, as wife of Yahweh and

[14] The term is used of the widow of King Bentešina of Amurru in a number of texts belonging to the dossier concerning King Ammihtamru's divorce from his Amorite wife (see Kühne 1973; van Soldt 1991:15; *CAD R*:26a; Márquez Rowe 2000). EA 29:8, 63, 67 likewise uses *ra-bi-tum* to designate Teye as the principal wife and widow of Nimmureya (Amenophis III), who appears involved in the successful succession of her son, Amenophis IV, to the throne. Evidence for this royal female rank from Ebla and Mari is associated with the term AMA.GAL, according to Owen (1995:574 n. 4). Malamat (1998:177–78) has raised the further possibility that the *bēlet mātim* mentioned in three Mari letters (*ARM* II: 20, 28 and 117) was the mother of Zimri-Lim. This "Lady of the Land" is able to address the king without applying to herself the epithet, *amatkama*, "your maidservant" that always appears in letters attributed to Zimri-Lim's chief wife, Šiptu.

"mother" of the Judean king, as Yahweh was his "father." However, Bowen (2001) has emphasized the lack of clear information about the term in the biblical text. She argues that it cannot be connected strictly to the queen mother, but may have been used to designate the wife and perhaps even grandmother of the king (2001:603, 618). In Ugaritic literary texts, the title *rbt* is not confined to Athirat. Shapshu likewise bears this epithet, sometimes with *nyr*, "light, lamp," sometimes without (CAT 1.16 I 36–38; 1.23.54; 1.161.19); the title is indicative of her status relative to other celestial bodies in the Ugaritic pantheon.

Regarding the rest of Athirat's title, *'aṯrt ym*, Albright (1956:77–78; 1968:105) and many others following him (e.g., Lipiński 1972:110, 116–17; *CMHE* 31–35) have understood it as a sentence-name, "She who treads the sea." Others prefer to read it as a construct, "Athirat of the Sea" (for references, see Pardee 1989–90:440–41). Pardee (1997a:253 n. 98) correctly notes that the independent usage of her name without *ym* suggests that the latter "is added as a supplemental titular element." In either interpretation, Athirat is associated with the sea. Her relationship to the sea is made clear in other aspects besides her name. Her servant, already met in 1.3 VI, but also found in 1.4 II 31, is called *dgy 'aṯrt*, "Fisher of Athirat." 1.4 II opens with Athirat performing her domestic chores by the sea. But the further significance of Athirat's maritime association is not clear and rarely evident elsewhere. Brody (1998:26–30) argued for Athirat's maritime associations, by identifying her with an Egyptian goddess whose iconography portrays her with a crescent moon on her headdress. Brody suggested that the crescent, representing the new moon, provided aid to sailors in navigation. But the identification is debatable, since there is no clear evidence for identifying that goddess with Athirat. Another alternative was proposed by Watson (1993:431–32), who rendered *'aṯrt ym*, "she who determines the day," based on a comparable title of the goddess Ashratum. In lines 25–26 of an Akkadian hymn (Gurney 1989:15–19), Ashratum is called *be-ele[t] ši-ma-tum*, "Mistres[s] of fates" and ^{d}*aš-ra-t[um ši?]-ma-tim*, "Ashrat[um of f]ates." Watson argued that the Ugaritic title can be understood as reflecting a similar meaning. He suggested that the goddess' name should be connected to Akkadian *ašāru*, "to muster, organize, check, control." He then proposed that *ym*, "day," in this context means something like "fateful day," and is thus equivalent to *šimātum*. He also noted (1993:433) the occurrence in the Akkadian hymn (line 23) of the title, *[r]a-ba-a-at*. This interpretation has little to support it. The connection drawn between *šimātum* and *ym* is far from

evident, and Athirat shows significantly more connections with the sea than with the day and the sun (cf. Binger 1997:45–48 for an unsuccessful attempt to give solar characteristics to Athirat). The ambiguity of the evidence, however, forces us to agree with Pardee (1997a:253 n. 98): "the mythological background of the title remains obscure."

Athirat's parallel title is *qnyt ʾilm*, in line 22. The scholarly consensus understands this phrase as "creatress of the gods," a reflection of Athirat's capacity as mother of the divine family. The root **qny* is used also of El. Many commentators have understood the root's meaning in Ugaritic and the Bible (e.g., Gen 14:19, 22; Deut 32:6) to refer to the divine role as progenitor (see van Selms 1954:64 n. 7; *EUT* 50–54; McCarthy 1967:92; *CMHE* 15; *DUL* 706). However, some scholars have suggested that the meaning does not involve creation but mastery, establishment or acquisition (see Montgomery 1933:116). As Pope (*EUT* 51) noted, this may be so from a purely etymological analysis, but it is evident that *qnyt ʾilm* does not refer to the elderly divine parents' act of acquiring the other deities, but to their parental role in producing the next divine generation (*UBC* 1.83). From another direction, Watson (1993:433) has challenged this view by arguing that the phrase does not mean "progenitress of the gods," but rather "creatress of [= among] the gods," i.e., "the goddess who creates (mankind)." He proposes the meaning in light of the epithet *baniat šimati*, "creatress of destinies," used of the birth-goddess in the Atrahasis Epic, whom he identifies with Ashratum. None of this seems likely, and even if the two goddesses were the same, the second words in the two epithets, "gods" and "destinies," are not proximate.

Kothar is asked to prepare *mgn* and *mġz*, meaning "present" and "gift of honor." The first word derives from **mgn*, "to give."[15] Before discussing *mġz*, it is necessary to understand the meaning of the gifts being requested by Baal. It is important to understand that in planning to take these gifts to Athirat, Baal is not appealing to her greed, as is often assumed (e.g., Wyatt 1998:92 nn. 91, 95; Pardee 1997a:256 n. 121; cf. Gordon 1977:89 n. 65). Rather, this action is better understood within a political context, and particularly within the context of the gift culture of Late Bronze Age international diplomacy. Liverani

[15] Note in particular BH **mgn* in Prov 6:11, 24:34; Phoenician KAI 29; in Ugaritic and Phoenician-Punic PNs, see Benz 339; possibly in Hebrew and Ammonite PNs, see *WSS* 492, 510; and post-biblical *maggan*, "grace, undeserved gift" (Jastrow 729). See also the references in the following note.

(1978:21–26; 1990: 211–23) has discussed the political importance of gift-giving among the various rulers in the Late Bronze Age, pointing out its significance in providing prestige not just to the one who receives the gifts, but also to the one who provides it, who can expect some kind of reciprocation from the former in return. Extravagant gifts from one ruler to another were an established means of cementing friendships and alliances in Late Bronze Age Syria. Baal's bringing of the gifts to Athirat explicitly indicates his recognition of her power and authority, something that Athirat is not certain about, until she sees the gifts (1.4 II 21–29). From Baal's perspective it is a peace offering, indicating to her that he has no hostile intentions toward Athirat and her family in the aftermath of his defeat of Yamm. It is also clear from the numerous examples gathered by Liverani from the Amarna Letters and the Boghazkoy archives that once she accepts the gifts, she is under obligation to reciprocate, which she does in this case by using her influence on Baal's behalf before El. Since these roots in 1.4 III refer to Baal and Anat's means of honoring Athirat, namely the gifts, the nouns[16] *mgn* and *mġz* in I 21–23 further bear the connotation of gift and honor (for this use of **mgn*, see Prov 4:9; Held 1969:75 n. 36; C. Cohen 1978:138–39 n. 78).

It is in this context that the nuance of the root **ġzy* becomes clearer, not just in this line, but also in column II 11 and III 26, 29, 31, and 35. The root means, "to lower or shut (the eyes)" (cf. Arabic **ġḍw* IV "to close one's eyes" and **ġḍḍ* I "to lower" (one's eyes), and BH *ʿṣh*, "to shut one's eyes" in Prov 16:30; cf. Isa 29:10 and 33:15, where the verb is *ʿōṣēm*).[17] In 1.4 the root has developed a derived meaning that involves deference of one person to another. O'Connor (1989:27) observes about Ugaritic **ġzy*: "In the Ugaritic texts, the nuance of the verb is self-deprecating; the eyes are closed out of modesty and respect for the person addressed."[18] He also observes that the verb is reflexive and focuses on the subject; he thus renders it "to humble oneself before." This render-

---

[16] *UT* 19.1958 takes the words as *D*-stem participles, but the form for **mgn* would then be **mmgn*.

[17] See the discussion of these passages in Bryce 1975:27, esp. n. 28; for the two roots, see *DUL* 531, 534; Held 1969:36, 37; *CMHE* 4 n. 4; C. Cohen 1978:138 n. 58; Dietrich and Loretz 1974:31–32; O'Connor 1989:27.

[18] The *t-* preformative noun, *tġzyt*, is etymologically related to *mġz*. In 1.6 VI 44 it appears in the phrase *yn tġzyt*, "the wine of entreaty," parallel to *[l]ḥm trmmt*, "the bread of exaltation." In that context, the word has a cultic ring to it (see *UT* 19.2311; *SPUMB* 240–41).

ing takes into account the general semantic field of the word, but fails to note that its usage in columns II and III seem to suggest that it is a transitive verb, with *qnyt ʾilm* as its direct object. Within the context of gift giving it seems more likely that the meaning of "to lower one's eyes" is "to give honor to, to honor (sometimes with a gift)." Such a meaning parallels the root *mgn* very well, both in its nominal form in this passage, where its meaning is probably "a gift of honor," and in its verbal forms in column III, where the two verbs may be rendered, "to give gifts"//"to honor (with gifts)." In this context there is no specific sense of "entreaty" in **ǵzy* (cf. Smith, *UNP* 125), although this is what the gift-giving ultimately achieves. Lowering the eyes is body language for a person honoring another. So we would read the parallel in lines 20–22 as "gift"//"gift of honor." This translation comports with our view that the gift is not designed to appeal to Athirat's greed, but rather to be a political peace offering, in which Baal indicates his respect for Athirat, in the manner of the rulers of the ancient Near East in sending gifts back and forth. In short, this usage of the verbs is expressive of the political culture of LB Syria-Palestine.

Lines 23–43: Kothar's Response to Baal's Speech

Without a verbal answer, Kothar responds to the request by setting to work on the gifts. This section may be divided into two parts. The first, lines 23–28, describes Kothar at work. The second, lines 29–43, enumerates and describes the items that the craftsman god creates. Lines 23–28 contain a bicolon and tricolon. The bicolon skillfully evokes Kothar's arrival at his workplace and his setting to work at the furnace. The first colon begins with the title, *hyn*, "the Skilled One" (1.17 V 18, 24, 32; *DUL* 350), followed by a *qatala*-form of the verb, *ʿly*. These two features indicate a shift in the scene from the preceding. Cognates for *hyn* are found in Syriac **hwn*, "be dexterous, deft," and specifically Targumic Aramaic *hawnā*, used to translate BH *tĕbûnâ*, one of the qualities of the craftsman, Bezalel (Gaster 1946:21 n. 3; for further discussion, see Dietrich and Loretz 1999). *Hyn* literally "goes up" to the bellows (*ʿly*; see *DUL* 159–60; for Afro-Asiatic cognates, see M. Cohen 1947:88, #58). The **qatala* form, *ʿly*, is notable in this context, as it is not the usual verbal form for continuing narration in Ugaritic narrative poetry, which is the prefixed form (Piquer Otero 2003). Elsewhere, new sections using verbs of travel may begin with the **qatala* (*UBC* 1.54). The verb **ʿly* is usually translated "to go up," but it is unclear

that any ascension is involved; instead, it may denote movement more broadly. Perhaps the sense of the verb here would be better captured by rendering it, "he steps up to the bellows." The craftsman's workplace goes unmentioned, but a description may not have been necessary for an elite audience at Ugarit. Metallurgical workshops are found at Ugarit, even in some royal palaces. The northern palace of Ras ibn Hani, for example, included a room "avec ses traces d'activité métallurgique, son puits flanqué d'une cuve" (Bounni and Lagarce 1998:13; see figure 16). Another room yielded "plusiers fragments de creusets et de tuyères" (Bounni and Lagarce 1998:45; see figs. 144–148). The site of Ras Shamra likewise yielded tuyeres (pipes for forcing air into a furnace; Schaeffer 1949:210–11, fig. 87, 1–4).

The crafsman-god works with *mpḫm*, "bellows" (< **npḫ*, "to blow"). As noted by many scholars (e.g., Dietrich and Loretz 1978:59), the word is cognate with Akkadian *nappāḫu*, "smith, metalworker" (*CAD N/1*:307a–310b) and *nappaḫu*, "bellows" (*CAD N/1*:307a), a form attested in Akkadian texts from Ugarit (*awīlu nappāḫ eri*, "copper-smith," RS 15.172.A.10, *PRU* III, 205; see Heltzer 1982:93; Akkadian preformative *n-* here is dissimilated from an original *m-* preformative). BH *mappûaḥ*, "bellows," is attested once (Jer 6:29). Scheel (1989:16) provides drawings of bellows used for smelting in shaft furnaces and of dish bellows used for melting metals in ancient Egypt.

The second line of the bicolon (line 24) begins with a prepositional phrase that uses the name Hasis, "the Wise One," as the parallel to Hayyan, "the Skilled One." This title is, of course, the second element of the divine craftsman's full name, Kothar wa-Hasis. The syntax of this line, as a nominal clause dependent upon the preceding line, is similar to that of the bicolon in 1.3 I 18–19 (see the Commentary there). The order of elements in this syntax can vary: the appearance of *bd ḫss* before *mṣbṭm* may serve to emphasize the image of the god with his hands at work.

The word *mṣbṭm* here translated "tongs" is a dual form from **ṣbṭ*, "to seize, hold" (*BOS* 2.122 n. 22). The closest cognate in terms of semantics is provided by Jewish Babylonian Aramaic *ṣebṭā*, "tongs" (bT. Shab. 110a, Giṭ. 56b; Sokoloff 2002: 959) and post-biblical Hebrew *ṣĕbāt*, "a pair of tongs" (Jastrow 1260), for example in Pirqe Abot 5:6. The root **ṣbṭ* is also cognate with BH *ṣbṭ*, used of Boaz's grabbing parched grain in Ruth 2:14.[19] The noun *mṣbṭm* accordingly refers to some metallurgi-

[19] Cf. also Akkadian *ṣabātu*, used for holding an object, manipulating a tool; see *CAD*

cal equipment taken by hand; as the word is dual in number, scholars surmise that it means "tongs" (Sivan 1997:71). Ras Shamra Akkadian *ma-qa-ḫa* (RS 19.23.13, in *PRU* VI, 157; Sivan 1984:44, 244) and BH *hammelqaḥayim* (1 Kgs 7:49), both meaning "tongs," offer semantic parallels in the dual form.[20]

Heyer (1978:93–94) compares this passage with some iconography from the 18th Dynasty tomb of Rekhmire. Three panels present scenes of metallurgical activity (so Scheel 1989:25; Heyer 1978:94 shows two). Scheel (1989:24–25) comments:

> The introduction of dish bellows was crucial to enable the large quantities of metal used for the casting of large metal objects to be melted, as shown on a wall painting in the tomb of the Vizier Rekhmire at Thebes. In that foundry four hearths fired by charcoal are fanned by several dish bellows to melt a large quantity of metal, probably leaded tin bronze, for the casting of the leaves for a door intended for the Great Temple of Amun in Karnak.

The earlier sixth dynasty tomb of Mereruka depicts scenes involving goldworking (*ANEP* #133). In one panel, six men blow through tubes into a furnace to heat the metal for casting. Another panel depicts metalworkers fashioning molded objects on tables.

This bicolon sets the stage for the actual metallurgical activity, described initially in a tricolon (lines 25–28a). This tricolon contains the first mention of silver and gold, the two most valuable metals at ancient Ugarit (Stieglitz 1979:18; Heltzer 1977:204–6; Pardee 1981–82:270–72; Nasgowitz 1975). The tricolon describes the "pouring" (**yṣq*) of these metals, used for the items listed in lines 29–43. The same verb applies also to wine (1.14 II 18, IV 1; 1.22 I 17), oil (1.3 II 31; 1.16 III 1), dust on the head (1.5 VI 14), medicine in a horse's nose (1.71.3, 5, 7, 9, 15, 25; 1.72.8, 11, 15, 20, 24, 26, 35, 39), and in the passage here, molten metals (lines 25, 26, 27, 30). In Exod 25:12 the verb refers likewise to the pouring of molten metals (cf. Paul and Dever 1973:200 for a discussion of molding techniques in Israel). The same verb may have the sense of "smelting" in Job 28:2 (Pope 1973:20). The meaning of **yṣq* here is perhaps clarified by the further specification afforded by

---

Ṣ:19, #3j. For the variation of emphatics in this root, see Greenfield 1962:292–95; Claasen 1971:296).

[20] See Sivan 1997:81; see Held 1959:175; *CML*[2] 162 n. 10; cf. Steiglitz 1981:52–53. Ugaritic *mqḥm* derives from **lqḥ*, "to take"; cf. *lqḥ* in many contexts, e.g., 2.70.18–19, and *nlqḥt* in 4.659.1 (Sivan 1997:30). It is theoretically possible given the many occurrences of *yqḥ* in Ugaritic, that **lqḥ/*yqḥ* may be suppletive (as they appear to be in BH).

yšlḥ, the other verb in the colon (**šlḥ*, "to send forth," and thus here, "pour, cast;" cf. Pardee 1997a 256 n. 123). Some have proposed seeing here a separate verb, *šlḥ* II (cf. *TO* 1.194 n. e; Dietrich and Loretz 1978:59), but this does not seem necessary. Later languages also use **šlḥ* in a metallurgical sense. Driver (*CML*[1] 148) compared Arabic *suḥulâtu*, "fillings of gold and silver" (Lane 1320). Ginsberg (*KU* 20) appealed to Syriac *ḥšal*, "to fashion, adorn" (*LS* 263) used in the Peshitta in Exod 25:12 and 37:3 to translate BH **yṣq*.

The context of 1.4 I does not involve smelting (so *CML*[2] 56), a process of melting and fusing metal, but melting and casting, as the verbs indicate (Pardee 1997a:256 n. 123; MHP; for microscopic analysis of metal casting, see Scott 1991:5). In this usage, the poetic **yṣq* corresponds to **nsk*, "to pour," used in prose texts for metal casting, e.g., *nsk ksp*, "silversmith" (e.g., 4.47.6, 4.68.74, 4.99.14; Pardee 1974; Heltzer 1982:92) or *nskt ksp*, "item(s) cast in silver" (1.105.22; Pardee 2002:42–43, 112 n. 119). For the semantic range of **nsk*, one may compare Akkadian *patāqu* used for pouring both wine and metals (*AHw* 847). In Egyptian metallurgy open casting was used for smaller items (Scheel 1989:40–43). Melted metal was also used for plate or sheets (Scheel 1989:27–33; for gold sheet in Mesopotamia, see Moorey 1994:226–28).[21] For gold plating at Ugarit, see CAT 2.79.10, 2.83.9 and 4.167.1–6. It is not entirely clear whether Kothar is making the items completely out of solid gold and silver, or whether some of them are understood to be wooden furniture overlaid with gold and silver sheet (cf. the wooden throne of Tutankhamun with sheet gold set on a dais; *ANEP* #415–417). One might imagine the former, since these gifts are for a goddess. On the other hand, it seems that the furniture described here is based on items found in a royal palace, and thus could have been assumed to be similar to the latter.

The last two lines of the tricolon in lines 26–29a describe the vast amount of gold and silver used by the craftsman god: *'alp̄m*, "thousands" and *rbbt*, "ten thousands" or "myriads." Of course, these numbers are not intended to be precise in any way. They are used to indicate the limitless bounty of the divine realm, the measureless wealth that is poured into making appropriate gifts for the goddess. This pair of numbers

[21] On Mesopotamian gold working, see also Zettler 1992:231; van de Mieroop 1992:186; Bjorkman 1968, 1993; Hittite inventories of gold and silver objects are discussed by Kempinski and Košak 1977:90.

is the largest that appear in the Ugaritic literary texts (or elsewhere). The text does not provide the unit of measure being described here. It could be the *kkr*, "talent," the *mn*, "mina," or the *tql*, "sheqel." But most likely the sheqel is meant here. Of the three weights, only the sheqel is regularly the object of ellipsis as in these lines (cf. *DUL* 929). In the real world of the Ugaritic royal house, amounts of silver and gold discussed in the tablets usually equal tens to hundreds of sheqels (cf. *DUL* 928–929). In a few cases, primarily in the international correspondence, weights of up to 5000 sheqels of silver are mentioned (RS 17.129.8, 10, 24 in *PRU* IV, 166–67). RS 18.20 + 17.371: rev. 4' (PRU IV 202–203) refers to a threatened judgment of ten talents (*biltu*) of silver in a court case. If there were 3000 sheqels in a Ugaritic talent (see *DUL* 435 *sub kkr*; Powell 1992:VI 905–6) then 30,000 sheqels are indicated here. Much smaller numbers are involved with gold. A sum of 12 minas and 20 sheqels of gold is mentioned as part of a tribute payment to the king of Hatti in RS 17.227.21 (PRU IV 41). Assuming 50 sheqels per mina, this would equal 620 sheqels. Of course, all these sums pale in significance in comparison to the amounts assumed in our passage.

The scene in lines 25–43 should not be viewed as reflecting regular offerings to deities at Ugarit. Pardee, in his study of the Ugaritic ritual texts (2002:110), notes that offerings of precious metals are not commonly found on the tablets. These items are special and probably reflect furnishings of a temple (see below).

In this passage, the poet uses *rbbt* twice (lines 28 and 43) and the dual form *rbtm* in line 30. This may be an intentional word play on Athirat's title, *rbt*, but the formulaic nature of the usage of *'alpm//rbbt* makes it impossible to be certain about this.

Line 29 appears to begin the description of the furnishings that Kothar makes, but its precise meaning has been the subject of a great deal of debate. The two items that the god casts here, *ḫym wtbtḫ*, are most commonly rendered as "canopy/baldachin/tent" and "resting-place/couch/bed" respectively (e.g., Caquot and Sznycer, *TO* 1.195 n. f, Dietrich and Loretz 1997:1152; Wyatt 1998: 91; Xella 1982:108; cf. also Heyer (1978:94–96). Van Selms (1975a:471) and *DUL* (416) related *ḫym* to *ḫmt* in 1.14 III 55 where the latter apparently means "tent." Caquot and Sznycer (*TO* 1.195 n. f), however, saw it as a plural cognate to Akkadian, *ḫa'um*, understood to be a canopy over a royal throne (*AHw* 338). They proposed rendering it "baldachin," which is a canopy that covers a sacred object or a person of high status. Gordon,

in *UT* 19.401, 496, suggested that the two nouns could be names of metals, parallel to the usage of *ksp* and *ḫrṣ* in the previous lines.[22] The second word, *tbṯḫ*, has most generally been related to Akkadian *tapšaḫu*, "resting place," and *tapšuḫtu*, "bed." None of these proposals is without difficulties, and a number of scholars have decided not to translate the words at all (Ginsburg, *ANET* 132; Driver, *CML*[1] 93; Gibson, *CML*[2] 56; Pardee 1997a:256). Pardee (1997a:256 n. 124) best voices the perceived problems: "The image . . . of "casting" a tent appears strange and the Ug. word *tbṯḫ* though it could be cognate to the Akk. term [*tapšuḫtu* = "bed"], cannot be a loanword (Akkadian /ḫ/ would be written {ǵ}), and, in any case, the production of a bed is part of the list below." These are legitimate issues that need to be addressed.

As Pardee notes, it seems unlikely that Kothar would set out to make a tent out of gold and silver. Not only does it seem an odd thing to build with these materials, but such a tent would outshine El's tent, which is not portrayed as being made of precious metals. It seems further improbable that he would construct an entirely new dwelling for Athirat as part of the gift. The identification of *ḫym* as "canopies" or "baldachins," i.e., smaller coverings, seems preferable, although the connection with Akkadian *ḫa'um* is problematic, since the latter's meaning as "baldachin, canopy" is not certain (*CAD Ḫ*:162–63 understands the *ḫa'u*-cloth to be used for the seat-cover of the throne, rather than as a canopy). It is clear that canopies in the Near East were not completely made of cloth. Heyer (1978:94–95) shows some illustrations from Egypt and Mesopotamia that suggest that such covers had substantial frames made of wood (figs. 2, 3 and 4). Wooden canopy frames covered in gold appear to be mentioned in Mesopotamian texts (see *šamû* A, *CAD Š/I*:348). The tomb of Queen Hetepheres (4th dynasty) at Giza contained the fragments of a golden bed canopy frame (Killen 1980:35).[23] Perhaps *ḫym* refers specifically to the frame, but then is used as a *pars pro toto*. If the image is of a solid gold and silver canopy, however, then we have here the same kind of hyperbolic imagery that we often find in the descriptions of objects belonging to the gods (e.g.,

[22] Gordon later abandoned this proposal, translating the line (1977: 90): "He pours a bedstead and a resting place."

[23] Comparison also may be drawn to the canopied structure found in the Iron II city gate of Tel Dan (Biran 1994:238–41). The material remains of this structure consists of a low podium of dressed ashlar masonry (a dais) probably used for a wooden throne, with four surrounding recessed stone column bases that served as supports for wooden beams to hold an overhead canopy (see also Dever 2001:200, 202).

Baal's magnificent cup in 1.3 I 12–17). Thus while a canopy made of gold and silver may be impractical and physically problematic in the human world, in the realm of the gods, such a magnificent item would be fully appropriate.

The second term *tbṯḫ*, as noted above, has been related to Akkadian *tapšaḫu*, "resting place" (*AHw* 1322b) and *tupšaḫtu*, "rest" (*AHw* 1323a), both deriving from *pašāḫu*, "to rest"; cf. Syriac *pšaḥ*, "to desist, cease"; *LS* 610 (see *TO* 1.195 n. g; Dietrich and Loretz 1978:60; *CML*[2] 159; *MLC* 634). There appears to be no reason to doubt a relationship between the words as cognates (Pardee's concern in 1997a:256 n. 124 focuses on the supposition that the Ugaritic term is a loanword from Akkadian). Although the Ugaritic word might refer more particularly to a "couch" or "bed" (not uncommon translations for this word), it seems more likely in this context to have a general referent, i.e., "resting place." Perhaps there is a semantic relationship here to the use of BH *mĕnûḥâ*, "resting place" in 1 Chr 28:2: "I set my heart upon building a house of rest for the ark of the covenant of Yahweh and for the footstool of our God" (cf. Ps 132:14; Isa 66:1, the latter in a context with a throne and footstool). The word need not be considered a synonym for *nʿl* in line 36, as Pardee (1997a:256 n. 124) assumes in the quotation above. The phrase, *ḫym wtbṯḫ*, literally, "a canopy and a resting place," may best be understood as a hendiadys, "a canopied resting place." This could be seen as a general introduction to the items that Kothar creates in the following lines. The furniture described in lines 30–43 may be viewed as the contents of the canopied resting place, somewhat in the way one might describe purchasing a "bedroom suite," meaning the furniture that is placed in the bedroom. Interpreting this line as a general introduction distinguishes it from the rest of the passage and would explain why it is the only item in lines 29–43 that is not modified by the word *ʾil*, "divine, grand" (see below).

Lines 30–43 describe the items that Kothar makes as gifts for Athirat: a dais, a throne and footstool, a palanquin or couch, a table and a bowl/platter. The list is quite appropriate for the furnishing of a deity's temple or resting place, but at the same time reflects the kind of furniture that one also might find in a royal palace.[24] Each of these items is

[24] Actually, some of these items might be in any type of house. Cassuto (1942:53 = *BOS* 2.122) noted the similarity between this passage and the description of furniture in a room arranged for Elisha in 2 Kgs 4:10: "a couch and a table and a throne and a lamp."

modified by the word *'il*. Albright (1943:40–42), van Selms (1975:470) and Pardee (1997a:256 n. 125) have argued that the word here is the name of the god El, but van Selms (1975:470) also recognized the patent difficulty: "The problem arises how on the one hand Aṯiratu could be persuaded to intermediate for Ba'lu by presents which are called Ilu's property, while on the other hand Ilu's property was not brought by the gods to his abode, but remained with Aṯiratu." Van Selms finds a solution in positing a older sort of marriage arrangement where the wife does not dwell with her husband, but lives apart from him where she stands ready to receive his visits; according to this reconstruction, the furniture would indeed be for El's guestroom. The solution is *ad hoc*. More problematic, El is never described as traveling, except in 1.23.30. Other deities who desire contact with him proceed to his abode (Smith 1984b). While it is interesting that Athirat and El may not live together (*EUT* 41–42; Mullen 1980:18 n. 23), there is no indication that the presents here are intended to be his. It is more reasonable to reject the interpretation of *'il* as the god's name, and understand the word to mean "divine," used here to express the superlative quality of the goods, hence "grand" (Gaster 1946:26; cf. "the god" in *BOS* 2.123). A similar usage in Ugaritic is found in 1.3 III 29, 1.3 VI 14 and 1.101.1–4. In Amarna Akkadian, *ilu* is used once to refer to high quality silver (EA 35:20; *CAD I/J*:98; Moran 1992:107).[25]

The first item on the list (lines 30–31) is a dais or raised platform, designed to signify the elevated status of the person whose throne is placed on it. Albright (1943:40 n. 14) took *kt* from **kwn*, "to establish" and compared Aramaic *kannā, kannětā*, "stand, foundation, basis."[26] The word also occurs in reference to Anat in 1.13.10, 12 (pp. 178–80):

w'p ldr' nšrk	And fly at the arm of your raptors.
wrbṣ lǵrk 'inbb	And repose at your mount, Inbb,
kt ǵrk 'ank yd't	The dais of your mount which I know (?).
kt 'atn 'at	To the dais which I give, come (?).

[25] Malamat (1998:185 n. 23) proposes to understand *kasap ili* either as "finest silver" or as silver reserved for the gods (*CAD* I/J:98, #1e).

[26] See also *TO* 1.195 n. h; *DUL* 467 under *kt* II; MHP; *CML*[2] 56, 149: "pedestal." Note also BH *kēn*, "base, pedestal," but *kann-* in suffixed forms. The root of the cognate nominal forms is apparently **knn* (so *BDB* 487) despite the claim that the root is **kwn*. The two could be related, either the former as the *D*-stem of the latter, or more likely as biform roots, a phenomenon not unparalleled for middle weak/geminate roots (see p. 203 n. 17). Cf. Cassuto's comparison with Akkadian *kutû*, "vessel," in *BOS* 2.123.

mṯbk b'a (?)	To your throne, come (?).
[š]mm rm lk	To the high heavens, go,
prẓ kt [k]bkbm	Then rule the dais [of the s]tars (?).

The canopied structure in the Iron II gate at Tel Dan (cf. n. 23 above) provides an actual example of a dais.

The dais made by Kothar is coated (*nbt//šmrḫt*) with silver and gold. To the first of these two feminine singular passive participles, Gotthold (cited in Albright 1943:41 n. 16) compared the geminate root in the expression, *nĕbûb lûḥôt*, "hollow, with boards," in the description of the altar in Exod 27:8 (cf. Galling 1936:595; *UT* 19.1603). Van Selms (1975a:471) derived *nbt* from the middle weak root, *nûb/nîb*, as in Ben Sira (Sirach/Ecclesiasticus) 32:5 (LXX; NAB) = 35:5 (in the Jerusalem Hebrew Language Academy edition); here the word refers to the setting of a precious stone in gold (LXX 32:5 renders *epi kosmooi chrusooi*, "in a setting of gold" [NAB]). Evidently the geminate and middle-weak roots are biforms (see *MLC* 587, and p. 203 n. 17).

The parallel word *šmrḫt* was often read as *šmrgt*, which scholars identified as a *C*-stem adjectival or nominal form. It was compared to Ethiopic *maraga* (*Thespis* 447; *TO* 1.195; Dietrich and Loretz 1978:60–61; *MLC* 583; *DUL* 830), defined by Leslau (357) as "to plaster, cement together." Leslau related the Ethiopic word to Arabic *maraja*, "to mix" (see also Pardee 1997a:256 n. 126). However, the traces on the tablet show that the letter identified as *g* is actually a *ḫ*, making the word *šmrḫt*. This alternative has long been noted (see Albright 1943:41; *KU* 20). Cassuto (*BOS* 2.123 n. 27), who championed this reading, translated the word as "inlaid." As cognates he noted Arabic *maraḫa* and Hebrew **mrḥ*, "to smear, rub" (see *BDB* 598; see also Talmudic Aramaic *mraḥ*; see also *TO* 1.195 n. j). In commenting on this word, Cassuto also noted that silver vessels were coated with smelted gold. Contextually, metal "coating" rather than "inlaying" seems indicated.

The third line evokes a striking image, *dm ḫrṣ*, "the blood of gold" (line 32). This phrase is analogous to *dm ʿṣm*, "the blood of trees" (1.4 III 44, IV 38; see also the Commentary to 1.3 II 20–22 on pp. 161–2). The latter phrase serves as a euphemism for wine based on the notion that wine is a liquid deriving from the vine; it also evokes the color of wine. The image of *dm ḫrṣ* does not involve gold's origins, but the liquid form that it assumes in this context. As with *dm ʿṣm*, *dm ḫrṣ* could further evoke the specific color of the gold (note Brenner 1982:167). Pope (1977:444) accordingly rendered the phrase "red gold" (so also Dietrich and Loretz 1997:1152; Wyatt 1998:91). One Hittite metal

inventory (KBo 18:153 verso 16) includes gold mixed with copper to make "red gold" (Kempinski and Košak 1977:90), more technically known as tumbaga (Scott 1991:84).

The next bicolon, lines 33–35a, describes the making of a magnificent throne and footstool. The two items likewise appear together in 1.5 VI 11–14 (using a different word for "throne"): "Then Beneficent Kindly El, descends from his throne (*ks'i*), and sits on the footstool (*hdm*), and from the footstool he sits on the ground." The two terms are also paired in BH (see e.g., Isa 66:1). The word for "throne" in line 33, *kḫṯ*, is generally considered a loanword from Hurrian *kišḫi* (discussed above on p. 291). The throne as a sign of royalty is assumed here and generally elsewhere. A letter sent by Ibal-pi-el of Eshnunna to Zimri-lim of Mari mentions that "a large throne" (offered by the former to the latter) is a "symbol of royalty" (A.1289+M.13103+M.18136, col. III, lines 28–29; Charpin 1991:155, 156). Dramatic examples of royal chairs emerged from the tomb of Tutankhamun, including one almost completely covered with thick gold sheet (see the descriptions in Killen 1980:58–63).

The last two words of the first colon, *nḫṯ bzr*, are ambiguous and have been interpreted in a number of ways. The first word, *nḫṯ*, literally means "rest" (< **nwḫ*; cf. Watson 1995:226–27), and scholars have differed as to what part of the throne the term might designate. Some have proposed that it refers to a high back of the throne (e.g., Driver, *CML*[1] 93; Gibson, *CML*[2] 56; Gordon 1977:90; *TO* 1.195; Wyatt 1998:92). Others argue that the term more likely refers to the seat of the throne (e.g., Aistleitner 37; de Moor 1987:46). Still others render it as a synonym for *kḫṯ*, and thus another synonym for "throne," usually rendered, "seat, divan, chair" (e.g., Dietrich and Loretz 1997:1152; del Olmo Lete, *MLR* 78; Pardee 1997a:256; Xella 1982:108). The latter seems most likely. The word appears even more clearly as a synonym for *kḫṯ//ks'u* in 1.3 IV 3; 1.16 VI 24; and probably 1.22 II 18.

The final word of the colon, *bzr* is also uncertain. It has been interpreted as the preposition *b* + *zr*, "back, top" (e.g., Albright 1943:41; Aistleitner 37; *TO* 1.195; Driver *CML*[1] 93; Gibson *CML*[2] 56; Wyatt 1998:92; cf. Arabic *ḍahr*; Akkadian *ṣēru*, as in the prepositional phrase *ina ṣēri*). Others, particularly those who view *nḫṯ* as "seat, divan, chair," identify *bzr* as a metal name, parallel with *br*, "electrum," in the following colon. In this case, a cognate appears in BH as *beṣer*, a word for a precious metal, probably gold (*HALOT* 149; cf. Løkkegaard 1955:20 n. 11; MHP).

The final two words of the second colon (lines 34b–35) are also ambiguous. The form *prš'a* is problematic. It appears to be cognate with BH *pāraś* and Arabic *faraša*, "to spread" (*DUL* 683; *UG* 51, 681; *KB* 917; Jastrow 1232; Lane 2369–72). In biblical and rabbinic literature, it is used for the spreading of a cloak. Here it applies analogously to metal overlay (*TO* 1.196 n. n; *MLC* 612; cf. **ṣpy* for overlay with gold in the prose texts, 2.79.10, 2.83.9 and 4.167.1–6). If the form is a verb (for some difficult suggestions for nominal cognates, see *RSP* 1.390–91), then it is **qatala*, and the context suggests a passive (or stative?) sense, "covered"; therefore the verb may be analyzed as a *G*-stem passive **qatala* 3rd masc. sg. Such passive forms are relatively rare, but not unknown (Sivan 1997:44, 122). The final *'aleph* is mysterious. *TO* (1.196) and Dietrich and Loretz (1978:61) argue that the consonant may serve to vocalize the final vowel. But this type of usage for *'* is quite rare (*UG* 50–51). *DUL* 683 suggests that the scribe may have added the vocalization here under the influence of the similar construction of line 38, where one finds, *tlḫn 'il dml'a*, although here the *'a* is part of the root. In addition to these proposals, one cannot rule out the possibility of a scribal error (cf. Cassuto, *BOS* 2.123). The problem remains.

The final word, *bbr* is usually interpreted as *b* + *br*, the latter understood as a metal name (also in CAT 4.608.3). Compared with Akkadian *barru* (*AHw* 107), the exact meaning of *barru* is actually somewhat uncertain (see *CAD B*: 113). The word is often translated "electrum," which is a mixture of gold and silver (de Moor 1987:46; *MLR* 78; for a chemical analysis of the process, see Scott 1991:11, 84; for discussion, see Moorey 1994:217). Or, the word may mean simply *br*, "pure (metal)," assuming a cognate with BH *bar* (so Pardee 1997a:256: "brightest metal"; Wyatt 1998:92: "polished metal"; cf. Pope in Smith 1998b:655).

The next gift Kothar makes is called a *n'l* (lines 36–37). Van Selms (1975a:473) suggested "platform," on the assumption that this word is *n*- preformative from **'ly*, "to ascend." The proposal has little, if any, supporting evidence. *N*-preformative nouns tend to be Akkadian loanwords into Ugaritic, but if a loan were involved here, it would not have come into Ugaritic with *'ayin*, a letter not found in Akkadian. Accordingly, van Selms' proposal may be rejected. Albright (1943:41 n. 21), Gaster (1946:26 n. 36), Dietrich and Loretz (1978:61) and Pope (MHP) suggest "couch" or "litter," while Pardee (1997a:256) translates "bed," assuming a cognate with Akkadian *majālu*, "sleeping place, bed" (*CAD M/*1:117b), derived from **ni'alu/nâlu*, "to lie down, rest" (see also Emar *maš-na-lu*, "sleeping couch," in HC7, line 16, Westenholz 2000:52, 54).

Because the other items in the list in 1.4 I involve furniture, these scholars understandably do not favor the etymologically unproblematic *nʿl*, "sandals" (cognate with BH *naʿal*, Syriac *naʿlā*, Arabic *naʿlu*; so translated in *TO* 1.196; *CML*[2] 56). (The noun stands in construct to *ʾil* and therefore it would lack a plural or dual consonantal ending.) It is to be noted, however, that the mention of footware might not be entirely out of place following the footstool (MHP). The suffix on *yblhm* in line 38 (< **ybl*, "to bear, carry," not "to place," so Pardee 1997a:256; cf. **bll*, "to pour," so Gaster 1946:29) would seem to refer to plural or dual items, which would rule out a single piece of furniture, unless *-hm* is the singular suffix plus enclitic *m-* (see Smith 1985:299–300). A dual or plural suffixal form would comport with *nʿl* as "sandals." Assuming *nʿl* as "sandals," the reduplicated form and *hapax qblbl* in line 36 may be related to the Arabic **qbl* "to provide a sandal with string or strap" (Freytag 487; so *KU* 20; Gaster 1944:22, 23; *TO* 1.196 n. o; for the root see Huehnergard 1991:695). Thus "sandals," as a less problematic choice morphologically, remains a viable interpretation (Smith 1985:280; *UNP* 121). However, the appearance of this item in the midst of substantial pieces of furniture (Pardee 1997a:256 n. 128) provides a context favoring the proposal that *nʿl* is a couch or bed. The meaning of the final word of the colon, *qblbl*, is less clear in this interpretation. Dietrich and Loretz (1978:62; 2000: 62) noted the BH cognate, *qābal*, "to accept, receive," and suggested "acceptable" as the meaning of *qblbl* (see Pardee 1997a:256 n. 128). This seems plausible. The reduplicated form could give the meaning an emphatic dimension, "most acceptable," i.e., "most appealing." However, this meaning for the word remains uncertain.

The next line (line 37) is equally difficult. Comparing ivory on bed panels from Ugarit, Pardee (1997a:256, and n. 128) suggests that the line be rendered: "above, he places an engraving." One might object that there is no reason not to see here the common word *ḫrṣ*, "gold," in this context, in view of its occurrences earlier. However, this is not a serious objection, since homonyms may occur in related contexts. Indeed, it might be viewed as poetically creative. More problematic for Pardee's proposal, the verb **ybl* does not really conform to the meaning, "to place." Rather, the root in Ugaritic seems to mean, "to carry, bring, take" (*DUL* 948–49), as in BH. Dietrich and Loretz (1978: 62) related it to BH *yôbēl*, "ram," suggesting that this referred to animal decorations on the couch. They have since (2000:20–21) joined several scholars (e.g., Albright 1943:41; Driver, *CML*[1] 93; Wyatt 1998:92) in

taking it as a noun related to BH **ybl*, "to bear, carry." Some, including Albright and Wyatt, translate the word as "poles," envisioning the *nʿl* as a palanquin or litter with poles for being carried.[27] If the *nʿl* is a divan or bed, then the best translation of *ybl* is "handles" or the like. Assuming that *nʿl* is singular, then the suffix on *yblhm* is best understood as 3rd masc. sg. *-h* + enclitic *-m*.

The divine table (lines 38–40) is the next item on the list. Tables for royalty were often made of luxury woods, with carved and inlaid decorations on them (cf. Meiggs 1982:279–99). This table is said to be "full" (*mlʾa*) of *mnm* and *dbbm*. This syntax recalls the description of a swampland as "full of (wild) bulls" (*mlʾat rʾumm*) in 1.10 II 12. In context, *mlʾa* means "ornamented with," a usage found also in the Amarna correspondence (with the Akkadian cognate *malû* in EA 22 II 38) and in Hittite texts (see *CAD M/1*:179; Moran 1992:59 n. 21). Biblical texts likewise use the root for ornamentation or fittings with precious stones or jewels (see Exod 28:17; Song of Songs 5:14). Pardee (1997a:256 n. 130) suggests that "'filled' (*mlʾa*) in this description "may refer to the fact that the representational friezes [of the table] were set inside a plain raised border" (cf. Schaeffer 1954:60, fig. 8). Heyer (1975:104) compares the literary description here with the remains of a circular table from Ras Shamra that had an inlaid top with carved ivory animal figures on it, especially sphinxes (see Schaeffer 1954:59–61; 1962:23–24, 30, fig. 22).

The ornamentation consists of *mnm* and *dbbm*, explained in the second line of the bicolon as things related to the foundations of the earth. There are two primary interpretations of *mnm*. The first relates the word to Akkadian *mīnummê*, "all, everything" (e.g., Albright 1943:41 n. 25; Coogan 1978:97). This word often appears unambiguously in Ugaritic (*DUL* 563). Several scholars read it as belonging directly with *dbbm*, and render the two words, "all sorts of creatures," or the like (e.g., *ANET* 132; de Moor 1987:46; Wyatt 1998:92). This interpretation seems unlikely, however, since the poetic meter strongly suggests that *mnm* belongs to the first colon, and *dbbm* to the second. Other scholars have related *mnm* to BH *mîn*, "species, kind" (e.g., *TO* 1.196; Dietrich and Loretz 1997:1153; *MLR* 78). The latter seems more likely, as a

[27] A cognate term, Akkadian *nûbalu*, is found in two letters from Mari: A.2679.41, in which it is translated by Durand 1988:111 as "porteurs de chaise"; and in A.3892, where it is rendered "chaise à porteurs" (Durand 1988:123; cf. 112 n. 13; cf. *AHw* 799; *CAD N/2*:306).

parallel to the following word, *dbbm*. Pardee (1997a:256) has deftly rendered the word "creatures," which fits into English better than the more literal "species," and we have followed his lead.

The second term is probably related to Arabic **dbb*, "to crawl, walk slowly" usually referring to animals. Albright (1943:42) cited the Arabic noun *dâbbatu(n)*, "beasts," as the closest parallel. Some translators assume a fantastical element to the word and translate "monsters" (de Moor 1987:46; Wyatt 1998:92), but there seems to be no warrant for that view. Pardee (1997a:256) renders the noun as "creepy-crawlers," and the relation of these animals to the "foundations of the earth" supports the idea that they are the kinds of animals that live in holes in the ground, thus snakes and other reptilian creatures. But the general nature of the meaning of *dbb* (i.e., "to walk slowly") does not require an exclusively reptilian connotation here. One might note that many animals walk slowly, and that Arabic makes use of the root for various creatures. For example, the word *db*, "bear," is probably derived from the same root (cf. Albright 1943:42 n. 26) and, because of its living in caves, may also have been considered one of the creatures from earth's foundations.

The concluding phrase of the colon, *msdt ʾarṣ*, is also attested several times in the Hebrew Bible (Isa 24:18; Jer 31:37; Micah 6:2; Ps 82:5; Prov 8:29). The phrase appears, from its common contrast to the heavens in passages such as Isa 24:18 and Jer 31:37, to refer to the subterranean regions just below the surface of the earth, where animals might live when not creeping about, but not where the dead dwell (i.e., Sheol in Israel; cf. Albright 1943:42 n. 27).

The final object that Kothar makes for Athirat is a grand bowl or platter, *ṣʿ*, described in a tricolon in lines 41–43. The word is cognate with Aram *ṣuʿâ*, "banquet dish or plate" (Gaster 1946:27; *UT* 19.2178; cf. BH **ṣʿḥ*, "to pour out" in Jer 48:12; the Phoenician Larnax tes Lapethou III.1 *ṣw[ʿ]*,"sacrificer," so Greenfield 1987a:396–97), and Punic *ṣwʿḥ*, "(a type of) offering," in KAI 69:3–7, 9, 13; 74:4, 5. The object itself is clear, but the description of the object that follows in lines 41–42 is again the subject of controversy. The term *dqt* is understood in two very different ways. Some relate it to a common word in Ugaritic, *dqt*, "small, tiny," which in numerous places in the Ugaritic tablets is used as a designation for small cattle, i.e., sheep and goats (see *DUL* 279; for the Akkadian cognate, see *CAD D*:107).[28] The other proposal

[28] See Levine 1963:108; de Tarragon 1978:33. For a recent review of the evidence,

has been to derive it from the root *dqq*, "to pound thin, mold" (Aram cognate, Jastrow 319; *DUL* 279; Pardee 1997a: 256–57 n. 131). Before discussing the reasons for our interpretation, we need to look also at the parallel word in line 42, *sknt*, which suffers from a similar ambiguity, as well as at the phrases that follow each. Recognizing that *sknt* is parallel to *dqt* and interpreting the latter as "small animals," Albright (1943:42 n. 30) and van Selms (1975a:474–75) both looked to the root **skn*, "to care for," for its meaning. They each suggested that the word refers to an animal in some way cared for by humans. Albright proposed "tame (animal)," while van Selms put forward "tended, [i.e., domesticated] (goat)." This idea is plausible; it comports with the usual sense of Ugaritic **skn*, and it suffers no etymological difficulties. However, others (Dietrich and Loretz 1997:1153; *CML*[2] 56; de Moor, 1987:46; Pardee 1997a: 256; *DUL* 760) who do not see *dqt* above as an animal term, have translated it as "form, appearance" or the like. Proposed cognates have included Akkadian *šukuttu* or *šiknu*, "figure, image," or BH *maśkît*, "(carved) figure" (*BDB* 967). But neither of these etymologies is without problems.[29] All of this seems unnecessary for the word to be parallel to the second proposed meaning of *dqt*. It is possible that the standard meaning of *skn* in Ugaritic could have a manufacturing connotation related to the one proposed for *dqt*, i.e., "taken care of," i.e., "made."[30] Thus the parallel pair, *dqt* and *sknt* can be interpreted either as nouns for animals or passive participles concerning manufacture.

Each word is followed by a comparative phrase, *k'amr*, and *kḫwt ym'an*. Both words are best viewed as place names. The first of the place names, *'amr*, is the well-known region of Amurru, probably referring to the kingdom south of Ugarit. The location of *ym'an* is unknown,[31] although

---

see Tropper 2001b, whose theory of *dqt* as "Brot als Opfermaterie" does not apply to *dqt* in 1.4 I 41.

[29] While Akkadian *šukuttu* or *šiknu*, "figure, image," may be semantically suitable (*WUS* 1908; *SPUMB* 50–51; Dietrich and Loretz 1972:30–31; see *CAD S/2*:436–39), the sibilant *ś* does not correspond correctly to Ugaritic *s* (Healey 1979:354 n. 1). Gaster (1946:28 n. 51) tried to salvage the etymology by noting one other example of irregular correspondence of sibilants ("Canaanite *spr* = Acc. *šipru*"), but the exception to the rule is to be avoided in favor of the norm. For *maśkît*, the problem centers on the greater likelihood that that noun comes from the root *śky*, rather than *śkn*.

[30] The use of *sknt* here may be an intentional return to the root that appears in line 20, when Baal requests that Kothar *šskn* the gifts. Here at the conclusion of the description of Kothar's work, it may have been appropriate to reiterate the word.

[31] Proposals for identification include Ionia (*DUL* 966); the Aegean area in general (Dietrich and Loretz 1978:63); and Yemen (*CML*[1] 93). None of these carries conviction.

the context of its appearance in the ritual text CAT 1.40.27 suggests that it was located near Ugarit (cf. Pardee 2000:137; 2002:77–83). The word preceding *ym'an* is *ḫwt*, a common Ugaritic word meaning "country." In contrast, Albright (1943:42 n. 22) and Gaster (1946:27) both read *ḫwt* as an animal word. Citing Aramaic *ḥiwyâ*, Albright translated it as "python," while Gaster related the word to BH *ḥayyāh*, "animal." However, it is quite clear that the phrase *ḫwt ym'an* is parallel to *'amr*, since each follows the preposition *k*. Thus *ḫwt* almost certainly means "country."

We now return to the interpretation of *dqt* and *sknt*. Each noun is modified by a following comparative clause, "like (that or those) of Amurru," and "like (that or those) of the country of Yam'an." Taking *dqt* and *sknt* as "small cattle" and "domesticated animals" respectively, one wonders just how distinctive such animals might have been in these two regions that such a comparison might be made in a literary work. It seems much more likely that the comparisons made here would refer to the mode of manufacture, rather than the livestock of the areas. Thus we have rendered the two difficult lines, "A grand bowl (pounded) thin like those of Amurru, crafted like those of the country of Yam'an."

The third line of the tricolon then describes the decoration on the bowl—thousands of undomesticated water buffalo or wild bulls, *r'umm*. The excavations at Ras Shamra have yielded two fine examples of a similar motif dating to the 14th century. One is a gold bowl with repoussé decoration on its exterior, depicting hunting scenes with wild bulls. The other, a plate with decoration on the interior, depicts a figure in a chariot hunting deer and bulls (Schaeffer 1934:124–31, and pls. XV, XVI; a color photo of the plate may be found in Caubet and Pouyssegur 1998:118).

Cognates for *r'umm* include Akkadian *rīmu* (*AHw* 986), BH *rĕ'ēm*, Aramaic *rêmā*; Amorite *ri-iḫ-mu* (denoting a zoomorphic figurine; see Zadok 1993:328). The words show a variation of *u/i*, known from a number of Ugaritic words.[32] Diakonoff (1970:456) noted this particular variation in the environment of labial consonants; most of these examples have monosyllabic bases (see also Sivan 1997:43). Bisyllabic-based instances, also in the environment of labials, may also involve vowel harmony

[32] Ugaritic *'um* and Akkadian *ummu* (cf. BH *'ēm*); Ugaritic polyglot, *bunušu* (cf. Akkadian *binu* and BH *bēn*). See Marcus 1968:54 n. 45, reference courtesy of W. R. Garr. For Ugaritic polyglot, *bunušu*, see Huehnergard 1987b:47. For further examples, see Marcus 1968:51 n. 8. Reference to Diakonoff is also courtesy of R. Garr.

(Ugaritic *'ulp* versus BH *'allûp*; Ugaritic *'urbt* versus *'arūbbâ*; see *UT* 5.19; Sivan 1997:44, 67). The word *r'umm* is well attested in Ugaritic (for Mesopotamian iconography of water buffalo, see van Buren 1946:6–7). According to 1.10 II 8–11, Baal goes hunting in *'aḫ šmk*, "the reed-marsh of ŠMK (cf. BH *'ḥw*, "reeds, reed-marsh"; Ginsberg 1973:131 n. 4), a place "full of water buffalo" (*ml'a[t r]'umm*). The undomesticated water buffalo (*Bubalus bubalis*), perhaps more specifically the river buffalo, was suited to marshy or flooded areas (Shkolnik 1994:17). The region of *'aḫ šmk* has been often identified as classical Semachionitis (Josephus, *BJ* III 515, IV 3), modern Lake Huleh, now a nature preserve in northern Israel located between Dan and Hazor (see Ginsberg 1973:131 n. 4 who leaves open the identification). Toward the end of the British Mandate period, only about 5,000 water buffalo were left in the Huleh and Batiha Valleys (Shkolnik 1994:17). From a herd surviving the Six Day War of 1967, 87 were transferred to the Huleh preserve; and as of 1994, there were about 150 there. The species' pattern of life has been so described: "the water buffalo established fixed spots for drinking, eating, bathing, urinating and defecating, and sleeping. Between these places, it proceeds along fixed routes" (Shkolnik 1994:17). Given these patterns, these animals would presumably have made easy targets for Baal on his hunt.

The gifts described in lines 29–43 may be taken as eminently appropriate for a deity. Indeed, as the survey of objects and iconography nicely amassed by Heyer (1978) would suggest, this passage lists items commonly associated with both divine and human royalty. A number of parallels with the Israelite tent of meeting may also be noted. 1.4 I 29–43 describes a canopied area with silver and gold furnishings made by a craftsman. Exodus 31 likewise describes a craftsman creating a tented area with items made of the same metals (Exod 31:1–5; 35:10–19, etc.). Functionally the throne mentioned explicitly in 1.4 I corresponds to the ark, upon which Yahweh is enthroned (1 Sam 4:4; 2 Sam 6:2; Exod 37:1–9). Closely connected to the ark is the idea of Yahweh's footstool (cf. 2 Chr 28:2, which mentions the ark, "and the footstool of our God."). A table is also made in both cases (cf. Exod 25:23–30). Van Selms compares further the juxtaposition of the table and bowl in Athirat's gifts with the golden flagons and bowls made for the table for the bread of the presence (Exod 25:29; Num 4:7; see also Cassuto 1967:340). Although Bezalel, the craftsman chosen to make the objects for the tabernacle, is not divine, he is described in this following manner in Exod 35:31: "He (God) has filled him with the

spirit of God, with wisdom, understanding, knowledge and in every kind of work." This is certainly a reasonable analogue or substitute for Kothar. A bed or couch does not appear in the paraphernalia of the Israelite God, nor is there evidence for a grand dais upon which the throne (ark) is set.

The column comes to a close with the conclusion of this scene. The gifts are ready for delivery. The end is marked by a double-line, but it is uncertain what the function of this line is. Although some have suggested that it simply marks the end of the scene (e.g., Gordon 1977:90), this seems unlikely, since such markings are not found between other scenes. It is more probable that it marks another place where a formulaic passage is omitted from the text, but is to be inserted by the performer of the poem (see Pardee 1997a:257 n. 132; *MLR* 79; Wyatt 1998:92 n. 97). See the similar lines after 1.3 III 31; 1.4 VIII 47; and the explicit instructions given with the lines at 1.4 V 41–43.

About sixteen lines of text are missing from the beginning of column II. In this short lacuna the gifts must be delivered to Baal and Anat, who then proceed on their journey to Athirat's abode.

CAT 1.4 II

Textual Notes

Line 1. We only see clear evidence of one letter. It consists of traces of a right vertical and traces of one, perhaps two, horizontals. It could be either /b/ or /d/. We found no evidence of the word divider given by CAT to the left of the letter. There is a possible indentation of a much-abraded horizontal to the right, but if it is a genuine trace, there is no evidence that it is the only wedge of the letter. Thus we would not read a /t/ with any confidence.

Line 2. x'ȧbn[/x/ has only the trace of a single vertical wedge. The /'a/ seems fairly certain. The lower line of the two-wedges of the letter are fairly clear, and there is no evidence of anything above the horizontals, which might turn it into a /b/.

Line 3. ’ȧḫdt The first letter is fairly clear. The surface edges have completely disappeared, but the interiors of the two horizontals are visible.

Line 4. p̊lk.t‘lt.bẏm̀ṅḫ Only the deep interior of one long horizontal wedge of the first letter is preserved. The context argues strongly for /p/. Although both CTA and CAT suggest that one could read /t ‘/ as /q/, /t ‘/ is certain here. The stance of the right wedge is that of the / ‘/, not the right wedge of a /q/ (see Pitard 1992:265). The reading /bymnh/ is certainly correct and matches the remains of the lower parts of each of the letters.

Line 9. ṗḫmm One will note what appears to be a small vertical wedge at the lower left corner of the /p/, which makes it look somewhat like an /’i/ with only two horizontals. But the vertical there is not a wedge; rather, it is a straight-line incision, presumably an accident.

Line 15. ‘ṅṫ. Only the upper parts of these letters are visible. The word divider after / ‘nt/ is largely preserved.

Line 16. [ ]ʾ.bh The upper part of the word divider before /bh/ is preserved.

Line 18. [ ]nh.tḏ‘ CTA records only two wedges of the /h/, but three are clearly visible. The upper two are very close together, but distinct. Only the two left verticals of the /d/ are preserved, but the context assures the reading. The lower right tip of the /‘/ is also visible.

Line 19. tǵṣ[ ]x̊[ ]xl[ ] Following the /ṣ/, after a gap that probably contained a word divider, there are possible traces of the lower left corner of a long horizontal, consistent with the reconstructed /p/ here. We see no traces of letters after that until the end of the line. There we find the top of a vertical wedge, which is consistent with the upper right wedge of an /s/ that parallels lead us to reconstruct here, while the next letter contains the three heads of an /l/. This has been read as the upper wedge of an /h/, based on the assumption that it is the last letter of the line, which can be reconstructed on the basis of 1.4 I 34–35. But one can clearly see the three distinct wedges. Thus we may assume that the final /h/ is lost in the break to the right.

Line 21. Line 17 from column I has broken through the double margin line. Ilimalku has created an *ad hoc* margin line for lines 21 and 22 to the right of the standard one. He has thus begun these lines somewhat to the right of the normal margin.

ʾi̊k The right side of a low horizontal wedge is preserved just to the left of the /k/. It is fully consistent with the proposal to read it /ʾi/.

Line 22. ʾalʾiynb̊ʿl As CTA notes, there is no trace of a word divider after ʾalʾiyn/. But as CAT notes, the left vertical and horizontal of the succeeding /b/ are indeed preserved. The context assures that it is a /b/, rather than a /d/.

The run-on line from column I (line 18) places two complete letters into column II. Rather than beginning his next line after them, Ilimalku drops down below the letters, but still starts the next line well to the right of the regular margin lines. As he has done for lines 21 and 22, he draws an *ad hoc* margin line to indicate that the /ʾik/ is the beginning of the new line.

Line 23. b[ ]l̇t The right side of the middle wedge of the /l/ is visible, as is the complete right wedge.

Line 24. The final letter of col. I, line 20, crosses the margin line. This time Ilimalku moves the first letter of the line a little to the right, but does not make a new margin break.

ḫm̊ Only the deepest part of the lower wedge of the /h/ is visible, but the letter is certain. The left horizontal of the /m/ is all that is left of that letter.

Lines 21 and 23 of column I once again intrude into column II. Ilimalku again draws a vertical margin line to the right of the original one until line I 23. However, Ilimalku continues to indent column II, lines 28–30 so that they match the beginning points of line 24–27. Only at line 31 does he move the left margin of column II back to the original margin line.

Line 24. ḫm̊[The bottom part of /h/ is damaged, so that it could theoretically be /ʾi/. But context supports reading /h/. The /m/ is epigraphically uncertain, since only the horizontal survives. But again the context supports the reading.

Line 25 ḫm̊[The /h/ is damaged, but elements of all three wedges survive. Only the upper left corner of a horizontal is preserved after the /h/. The reading /m/ is quite compatible with the traces.

Line 26.]l̇. ḵsp.[ ]t̲rt Although neither CTA nor CAT see traces of the /l/, the lower tips of all three wedges are preserved. /k/ in /ksp/ is damaged and is missing its upper left wedge. But the reading is certain. /t/ is quite damaged, but partially visible.

Line 27. [ ] ẓ̇l We see no traces left of the probable word divider after /kt‘n/. While the *Winkelhaken* is abraded, it is clear enough to see that it has a vertical right side. This shows that the letter should be read /ẓ/, rather than /p ‘/, as proposed by Ginsberg and Gaster (see Pardee 1997a:257 n. 138). On the forms of /ẓ/ and /‘/, see Pitard 1992:267–68.

/wn̊[ ]x The /n/ is uncertain, though likely. There is a clear short horizontal that touches the right wedge of the preceding /w/, and there appear to be remains of the interior of an additional horizontal wedge to its right. It should be either an /’a/ or an /n/. To the right of the break, at the end of the line is a very damaged horizontal wedge that might be a /t/, but may also be the end of another letter (/’a, k, w, r/). CAT’s proposed reading of /nr/ seems to assume that this wedge is the right wedge of an /r/. But there is too much space to argue that there is no intervening letter between /n/ and /r/. So *n[r]t*, “light” (see CTA p. 23 n. 9) is a plausible reading, as others might be (cf. the reading *n[b]t* in *CML*[2] 57).

Line 28. ḫṛṣ Although badly damaged, the three letters are certain. Each is partially filled with an encrustation.

’åt̲. The left horizontal of the /’a/ and upper left tip of the right horizontal are visible. The /t̲/ is much less well preserved, but the deep interior of the sign appears to have survived.

Line 29. ẏm The /y/ is badly damaged and partially filled with an encrustation. But it is still fairly clear.

ḵ[Only the two left wedges and part of the left line of the larger right wedge are preserved, but this makes the letter certain.

Line 30. ’apq̇ [The horizontal left wedge of the /q/ is well preserved, but also the upper left edge of the right wedge is visible, making /q/ the correct reading over /t/.

Line 31. dġy. Several of the letters on this line, /dg/ and /r/are partially obscured by an encrustation that fills some of the wedges. But all the signs are still visible.

'aṯṙ[The /r/ is very damaged, but certain, since traces of the four left horizontals are still visible.

Line 32. bdkx[A single horizontal is preserved to the left of the break. It could be a /t/, but epigraphically it could also be the left wedge of a /q/, or an /m/.

Line 33 ydṁ [The final letter is again at the edge of a break, but the upper part of the right vertical wedge is visible.

Line 34 'il.x[/x/ The deep interior of an upper left wedge of a letter is visible. The context argues for /y/, and this is consistent with the traces.

Line 35. bym'il We see no word divider between /ym/ and /'il/.

Line 39. mh.kx̊[There appear to be traces of the upper left corner of a vertical wedge at the break.

Line 40. w'at̊[The reading /t/ is not certain. It could also be part of a /q/ or /m/.

Line 43 bll[Although there is a gap between the two /l/'s, there is no word divider between them. Nor are there any traces of a letter at the end of the line.

Line 44. mlx[While /k/ seems plausible for the uncertain letter here, only the upper left corner of a wedge is preserved.

Line 45 dt[We see no trace of a word divider after the /t/, as proposed by CAT.

Line 47 gm[One last time Ilimalku has allowed column I to break past the margin line. Here col. I line 42 is the culprit, forcing the scribe to make one last short *ad hoc* margin line, followed by the /g/.

Line 48. yx[The second letter has a large vertical on the left, which suggests that it is a /g/, /ṣ/ or /l/.

Translation and Vocalized Text

Athirat at Her Domestic Chores

[About 16 lines are missing.]

1	[ ]	
2	. . . the stone [ ]	
3–4	She took her spindle [in her hand], An exalted spindle in her right hand.	ʾaḫadat pilakka-ha [bi-yadi-ha]/ pilakka taʿlîti yamīni-ha
5–7	As for her robe, the covering of her skin, She conveyed her garment into the sea, Her double-robe into the rivers.	napayāna-ha maksî bašari-ha/ timṯaʿu madda-ha bi-yammi ṯinê[1]/napayāna-ha bi-naharīma
8–9	She set a jar on the fire, A pot on top of the coals,	šātat ḫupatara lê-ʾišiti/ ḫubruṯa lê-ẓāri paḥamīma
10–11	She would exalt Bull El the Beneficent, Honor the Creator of Creatures.	taʿāpipu ṯôra ʾila dā-pāʾida/ taǵaẓẓiyu bāniya baniwāti

Athirat Receives Baal and Anat

12–14	When she lifted her eyes, she looked, Athirat indeed saw Baal's advance,	bi-našāʾi ʿênê-ha wa-taphîna/ halāka baʿli ʾaṯiratu/ kī-taʿînu

[1] See *UG* 345. It is possible that the object should be understood as a plural.

14–16	The advance of Adolescent Anat, The approach of the In-law [of the Peoples].	halāka batulati/ʻanati tadarriqa yabimti/ [liʾimīma]
16–18	On her, feet [shook], [Arou]nd, loins [trembled], [Above,] her [fa]ce sweated.	bi-ha paʻnāmi/[taṭṭiṭā] [baʻ]dana kisalū/[taṯburū] [ʻalê-na pa]nū-ha tadiʻū
19–20	[The joints of her loi]ns convulsed, Weak were the ones of [her] back.	taǵǧuṣū [pinnātu kisa]lī[-ha]/ ʾanašū dātu ẓāri[-ha]
21	She raised her voice and declared:	tiššaʾu gā-ha wa-taṣûḫu
21–24	"Why has Mightiest Baal come? Why has Ado[les]cent Anat come?	ʾêka/maǵiya ʾalʾiyʾānu baʻlu/ ʾêka maǵiyat ba[tu]latu/ ʻanatu
24–26	Are they my murderers, or the [mur]derers of my children, Or [the destroyers of the b]and of my brood?"	māḫiṣū-ya himma [mā]ḫiṣū/ banī-ya himma [mukalliyū ṣi]bbirati/ ʾaryi-ya
26–28	[The gle]am of silver [A]thirat eyed, Gleam of silver, g[lin]t (?) of gold.	[ẓi]lla kaspi [ʾa]ṯiratu/ kī-taʻînu ẓilla kaspi wa-ni[ra]ta/ ḫurāṣi
28–29	Lady Ath[irat] of the Sea rejoiced, Aloud to her attendant [she declared]:	šamāḫu rabbatu ʾaṯi[ratu]/ yammi gā-ma lê-ǵalmi-ha kī-[taṣûḫu]
30–31	"See the skilled work of the source [of the Deeps (?)], O Fisher of Lady Athir[at of the Sea].	ʻîn maḵtara ʾappiqê [tahāmatêmi (?)]/ daggayi rabbati ʾaṯira[ti yammi]
32–33	Take a net in hand…, A great one in your hands….	qaḥ raṯata bâdê… rabbata ʻalê yadêmi…
34–36	Into the Beloved of El, [Sea], Into Divine Sea [ ], [Ri]ver, the God [ ]	bi-mêdadi ʾili [yammi…]/ bi-yammi ʾili… [na]/hari ʾili…
37–38	Mightiest [Baal], Adolescent [Anat]…"	ʾaliʾyānv [baʻlv…]/ batulatv [ʻanatv]

[*Lines 39–48 are too damaged to translate.*]

Commentary

Poetic Parallelism and Word/Syllable Counts

		semantic parallelism	word/ syllable count
3–4	ʾaḫadat pilakka-ha [bi-yadi-ha]/	a b [c]	3/11
	pilakka taʿlîti yamīni-ha	b d c'	3/10

The bicolon is a good example of a common type of poetic syntax, with a single verb governing the direct objects in both lines (here actually the same word), the latter followed by prepositional phrases (in this case, the reconstructed *b-* in the first line doing double duty). The nouns at the end of the lines are almost certainly the well-known word pair *[yd]//ymn*. The single non-paralleled term in the second line is *tʿlt*, which offers slight resonance with *ʾaḫdt* in the dental and guttural consonants.

5–7	napayāna-ha maksî bašari-ha/	a b c	3/11
	timtaʿu madda-ha bi-yammi	d a' e	3/9
	ṯinê/napayāna-ha bi-naharīma	a'' e'	3/12

Or, with transposition of lines (see Commentary below on p. 444), there would result the following arrangement:

timtaʿu madda-ha bi-yammi	a b c	3/9
ṯina napayāna-ha bi-naharīma	b' (x, y) c'	3/12
napayāna-ha maksî bašari-ha	b'' d (x of y)	3/11

The reference to the garment in line 5 does not fit with the two preceding lines (2–4) involving the spindle. Rather, it belongs with the reference to the garment in lines 6–7, and perhaps it is to be reconstructed after lines 6–7 (so Smith, *UNP* 122). However, the placement of line 5 before lines 6–7 might be explained as an unusually long *casus pendens* ("as for her robe, the covering of her skin,…"). By the same token, the customary poetic pattern would suggest that line 5 was the third line in the tricolon with lines 6–7. See further discussion in the Commentary below.

If this were the correct order, it would highlight the sonant echo from *tʿlt* in the preceding bicolon. However one reads this tricolon,

the parallelism is dominated by the accusative nouns + 3rd feminine singular suffixes. The last word in each line begins with *b-* (once a root letter of the noun, twice the preposition *b*). In addition, the repetition of *npyn* further binds the lines.

8–9	šātat ḫupatara lê-'išiti/	a b c	3/10
	ḫubruṯa lê-ẓāri paḥamīma	b' c' (x of y)	3/10

The classic poetic syntax of parallel direct objects and prepositional phrases governed by a single verb in the first line here balances that verb with the expanded prepositional phrase in the second line. In addition, the same preposition is used in both phrases. Of particular note is the use of two rare words in Ugaritic (*ḫptr* and *ḫbrṯ*, both possibly loan-words), with their very closely related sonance (*ḫ*, *r*, and a medial bilabial *-p//b*).

10–11	ta'āpipu ṯôra 'ila dā-pā'ida/	a b (x, y, z)	4/12
	taġaẓẓiyu bāniya baniwāti	a' b' (x of y)	3/11

The initial verbs, parallel in both syntax and form, govern parallel sets of titles for El. One subtle sonant effect involves a string of vowels, a-i-a, a pattern running two times through both *ṯôra 'ila dā-pā'ida* and *bāniya baniwāti*. This effect is generated partially through syntax (the nouns' final endings) and partially by morphology (the internal structure of these nouns).

12–14	bi-našā'i 'ênê-ha wa-taphîna/	a b c	3/11
	halāka ba'li 'aṯiratu/kī-ta'înu	d (x of y) e c'	4/13

The visual vocabulary binds the two lines, with the same root used for the object in the first line and the verb in the second. Apart from this feature, the effects between the two lines appear less strong (i.e., *b-…-i* in *bi-našā'i and ba'li*; the string of *n*'s in the first line picked up at the end of the second line). In comparison, the parallel in 1.3 III 32 involves a single line.

14–16	halāka batulati/'anati	a b (x,y)	3/10
	tadarriqa yabimti/[li'imīma]	b' c' (x of y)	3/11

The unit picks up from the preceding with the repetition of *hlk*, and extends it with *tdrq*, parallel in meaning and syntax (with this parallelism

compounded sonantly by the string of shared *a*'s as well as similar consonants, *k/q* and *l/r*). The two initial parallel nouns are followed by syntactically parallel epithets for Anat. Internally each set of titles carries a certain resonance (in the first, *a-a-i* in the vowels plus final *–ti*; in the second, *i-i* plus bilabial consonants).

16–18	bi-ha pa'nāmi/[taṭṭiṭā]	a b c	3/8
	[ba']dana kisalū/[taṯburū]	a' b' c'	3/9
	['alê-na pa]nū-ha tadi'ū	a'' b'' c''	3/9

For these lines, see the discussion of the parallel in 1.3 III 32–34 (pp. 210–11 above).

19–20	taǵǧuṣū [pinnātu kiṣa]lī [-ha]/	a b c	3/10
	'anašū dātu ẓāri[-ha]	a' b' (x of y)	3/8

For these lines, see the discussion of the parallel in 1.3 III 34–35 (p. 211 above).

21	tiššaʾu gā-ha wa-taṣûḫu	a (V + DO) a'	3/9

For this line, see the parallel in 1.3 III 35–36 (p. 211 above).

21–24	'êka/maǵiya 'al'iy'ānu ba'lu/	a b c (x, y)	4/11
	'êka maǵiyat ba[tu]latu/'anatu	a b c' (x, y)	4/12

The parallel in 1.3 III 36 is a single line (see p. 211), but here it is expanded into a bicolon since there are two subjects involved, Baal and Anat. The bicolon reuses the same initial particle and the same verb, and the subjects here are presented with their standard epithets, perhaps chosen here for thematic reasons. Baal's title suggests his martial demeanor, and Anat's status as *btlt* expresses her independent status, perhaps implying her capacity for conflict; see p. 188. By the same token, the initial *ba-*, the interior *l*, and the final *-u* in *ba['lu]* and *ba[tu]latu* (as well as ' in both their names) add sonantly to the effect.

24–26	māḫiṣū-ya himma [mā]ḫiṣū/banī-ya	a b a' (x of y)	4/12
	himma [mukalliyū ṣi]bburati/'aryi-ya	b a'' (x of y of z)	4/13

The two-fold use of ***mḫṣ*** in the initial line followed by the semantically parallel *[mukalliyū]* dominates these two lines, which are bound further by the repetition of *himma* (the marker of the second and third terms in double and triple questions; see Ginsberg 1946:35; Held 1969). The parties governed by the verbs expand through the unit from a simple pronominal suffix *-y*, to a single noun plus the same suffix, finally to a construct phrase with the same suffix.

26–28	[ẓi]lla kaspi ['a]ṯiratu/kī-ta'înu	a b c d	4/12
	ẓilla kaspi wa-nî[ra]ta/ḫurāṣi	a b a' b'	4/11

The same nominal phrase in the initial syntactical slot particularly binds the two lines, further connected (if the restoration is correct) in the sonant parallelism of *ta'înu* and *nî[ra]ta*.

28–29	šamāḫu rabbatu 'aṯi[ratu]/yammi	a b (x, y of z)	4/12
	gā-ma lê-ǵalmi-ha kī-[taṣûḥu]	c d a'	3/10

Reactions by the goddess, perhaps both verbal, appear in the two lines, which are otherwise disparate in their parallelism. The repetition of *m* in the two lines perhaps contributes to the binding of the two lines.

30–31	'în makṯara 'appiqê [tahāmatêmi?]	a b c	4 (?)/12 (?)
	daggayi rabbati 'aṯira[ti yammi]	c d (x, y of z)	4/12

The broken condition of the first line makes it difficult to appreciate the poetics of this bicolon. It may be noted that as different as *mkṯr* and *'aṯrt* are semantically and syntactically, they still offer a limited sonant parallelism. If the reconstructions are correct, then there would also be semantic parallelism between *[tahāmatêmi]* and *[yammi]*.

32–33	qaḥ raṯata bâdê…/	a b c…	3+(?)/6+(?)
	rabbata 'alê yadêmi…	b' c'…	3+(?)/8+(?)

What remains of this bicolon is highly parallel in a rather standard poetic syntax of a verb governing parallel direct objects and parallel prepositional phrases. In addition, the morphology of the direct objects (*ra-a-ta*) and the vowel patterns of the prepositions (*â/a-ê*) show sonant parallelism.

34–36	bi-mêdadi 'ili ya[mmi…]/	a b c…
	bi-yammi 'ili…[…	c b…
	[na]/hari 'ili…	c' b…

The three lines all use "god" (*'ili*) as an element for parallelism, supplemented in the first two lines by the preposition *bi-* plus a title or name of the god. Because of the broken character of the ends of all three lines, it is impossible to offer a fuller appreciation of the parallelism involved in this tricolon.

37–38	'ali'yānv [ba'lv…]/	a b
	batulatv ['anatv]	a' b'

For the parallelism of these titles, see above for lines 21–24.

Introduction

At some point in the lacuna of about sixteen lines at the beginning of the column, the scene shifts to Athirat, El's wife and mother of the gods. The column consists of three parts: (1) Athirat is introduced performing domestic chores (lines 2–11); (2) she then notices the approach of Baal and Anat and reacts in fear (lines 12–26); and (3) then she sees the gifts in tow and realizes they are coming in peace (lines 26–33?). Lines 34ff. are too broken for certain interpretation. Athirat is not mentioned by name until lines 28–29, but it is clear from context that she is the subject of the narrative in this column.

Lines 1–11: Athirat at Home

The initial section, consisting of lines 2–11, has produced a wide range of interpretations, due to a number of ambiguous words here, as well as to the general lack of clarity concerning the context. Our interpretation, like the others, remains tentative. Some things can be considered certain. While a few earlier scholars identified the character described in these lines as Anat (Driver, *CML*[1] 93; Gaster, *Thespis* 175–77), the majority rightly interprets this scene as a description of Athirat at home performing a series of activities. The first bicolon (lines 3–4) shows her at work with a spindle whorl (*plk*). The word is vocalized in the Ugaritic polyglot as *pilakku* (Sivan 1997:71); its cognates include Akkadian *pilakku*, Arabic *falak*, Aramaic *pilkā*, BH *pelek*, and Phoenician *plk* (possibly also

Emar *palakku*; see Pentiuc 2001:138). The latter West Semitic forms are sometimes said to be loans from Akkadian, but perhaps the forms generally derived ultimately from an early "Kulturwort."[2]

The word that follows the second appearance of *plk* (line 4) has been read as either *qlt* or *tʿlt* (see the Textual Notes above). The latter appears correct, and so the word likely derives from *ʿly*, and may refer to the spindle as "exalted" (?), or it could refer to Athirat ("befitting her high station," according to Pardee 1997a:257). We have chosen to see it as modifying *plk*, and tentatively render it "mighty." Spindle whorls found at LBA Ugarit (Elliott 1991:41–45) are mostly domed or conical and circular in shape. The spindle was primarily used to produce thread for sewing, an activity identified as the domain of women in the ancient Levant: *ʾšt tk (perhaps, t<l>kʾ*[3]*) lḥdy dl plkm*, "a woman walks along (?) with (her) spindles" (KAI 26 A II 5–6); (see also *pilaqqi* as a symbol for women in the Treaty of Esarhaddon, para. 91, in Parpola and Watanabe 1988:56). Despite some doubts expressed by van Selms (1954:55), weaving was evidently regarded as women's work (for a Sumerian witness, see Frayne 1997:304, iv 23–31). This seems to be the situation regularly in Egypt too, to judge from iconographic evidence. A wooden tomb-model of an Egyptian weaver's house depicts the processes of turning flax into cloth (*ANEP* #142). One of the figures, an unclothed spinner, rotates the spindle with its whorl on her thigh, giving the thread its twist (see the description of #142, p. 266). A tomb painting at Beni Hasan (*ANEP* #143) and a stone relief from Susa (*ANEP* #144) likewise show women working spindles. Administrative texts from Mari (*ARM* IX 24:4:18, 25:38, and 27:5:43; *ARM* XIII rev. 21:9'–16') mention female weavers serving in the palace, and another text (*ARM* X 126) refers to women designated *ugbabtum*, priestesses of lower rank, sent to the weaving house, *bīt išparāti* (Malamat 1998:184). Biblical literature situates weaving and its tool, the spindle, within the domain of women's labor (Prov 31:13, 19). Women are attributed the role of spinning in Exod 35:25–26. Tobit 2:11 calls weaving cloth, "the kind of work women do" (NAB). It is considered a curse (2 Sam 3:29) that a man be one who "handles the spindle" (*maḥăzîq bappelek*; see Malul 1992). The spindle evidently serves as a symbol for females. Upon

[2] See Kaufmann 1974:82–3 and Huehnergard 1987b:83, 1991:693; see also *UT* 19.2050; Layton 1989; Malul 1992. Rendsburg 1997:272 also notes Eblaite *pilak(k)u*.

[3] So proposed by Greenfield 1978:75–76 and 1982:180.

birth, girls in Mesopotamian culture would be consecrated by placing beside them a spindle and a hairclasp (so van der Toorn 1994a:20; for further discussion, see Malul 1992:52–56).

A variety of goddesses are attributed spindles (cf. Layton 1989:85, 86 n. 16). Ashertu herself may wield a spindle in the story of Elkunirša (*ANET* 519; Beckman 1997), but there she uses it as a weapon, a function hardly suitable to the context of 1.4 II. The primary function of the spindle is the one most likely involved here, as domestic activities seem to be the general activity described in this section and since working with the spindle leads reasonably well into the next one. The idea that Athirat had a particularly close relationship to weaving may be hinted at in 2 Kgs 23:7. This passage recalls how women used to make garments in the cult devoted to Asherah in the Jerusalem temple (Meyers 2003:433, 560; Smith 2003:558). Thus weaving perhaps may have been a particular form of religious devotion to, or religious activity associated with Athirat. Perhaps Athirat, as the divine mother, was considered a patron of this women's work. Finally, one should also note that weaving and textile-work constituted an element in the wider arena of LBA Aegean-Mediterranean commerce (see Barber 1991). Perhaps Athirat's association with both the sea and weaving reflects this feature of ancient Ugarit's commercial links. This remains speculative.

The following tricolon in lines 5–7 is the most ambiguous of the passage. A wide range of interpretations may be found in the various translations. For the most part, scholars agree that Athirat does something with some of her clothing in the sea. But the details remain controversial. There seems little doubt that clothing is the central subject of these lines, given the terms, *mks bšrh*, "the covering of her flesh" (< **ksy*, "to cover") and *md*, a clear cognate with BH *madd*, *midd*, "robe, gown" (Lev 6:3; Judg 3:16; etc.). Controversy, however, centers upon *npynh* in line 5 and its parallel repetition in lines 6–7 as *ṯn npynh*. Most commentators recognize the first *npynh* as being appositional to *mks bšrh* in line 5, indicating that it is also a word for a article of clothing, presumably parallel in some way to *mdh*. Thus it is usually translated as "gown, robe, undergarment, clothing, etc." A somewhat distant cognate is found in Arabic *nafayân*, "foliage" (al Yasin 1959:80. In contrast, Caquot and Sznycer (*TO* 1.197–98, n. d) and Pardee (1997a:257 n. 133) take the word from ***npy*, "to winnow, expel." Caquot and Sznycer interpret it as "excrement," and assume that Athirat is cleaning herself after having lost control of her bowels because of the approach of Baal and Anat. This, of course, may be rejected, since it is not until line 12

that she becomes aware of the two gods' arrival. Pardee takes the word to mean "rubbish," and here assumes that Athirat is cleaning both her garments and herself of the dust of weaving. This is not convincing, since it makes the subject of the tricolon shift awkwardly from her skin to her clothing and apparently back to her skin. In addition, it creates a peculiar interpretation of *ṯn npynh* as "two rubbishes." The context, we believe, argues more strongly for understanding *npynh* as a noun referring to an article of clothing. The phrase, *ṯn npynh*, probably refers to a garment with two layers of cloth. The phrase, *lābūš šānîm*, in Prov 31:21 may be related to *ṯn npynh*, as proposed by Driver (1947), if the LXX reading of the latter word (*dissás* = *šĕnāyim*) is correct, i.e., "her household is clothed in double garments," rather than "clothed in scarlet."

Assuming that this passage deals with clothing, there remains the problem of determining what Athirat is doing with the clothes. The verb governing these nouns, *tmtʿ*, has been related to Arabic *mataʿa*, "to carry off, carry away, remove." Two renderings of the verb provide very different interpretations of the scene. The first is "to remove," which would suggest that Athirat removes her clothes and rinses or washes them in the sea (cf. Albright 1934: 117; Cassuto *BOS* 2.124; Coogan 1978:97; Driver *CML*[1] 93; Wyatt 1998:93). The other is "to carry," in which the removal of clothing is dropped, while the assumption remains that the clothes are rinsed or washed in the sea (cf. Dietrich and Loretz 1997:1153; Gibson *CML*[2] 56; de Moor 1987:47; Smith, *UNP* 122). The sense of "remove" seems particularly awkward in the context, with the difficulty of understanding what line 6 would mean: "She removed her robe in the sea." The meaning "to carry, convey," works better here contextually, fitting well with the idea that she is performing some kind of domestic chore, although the value of washing clothes in sea water is not obvious.

Line 5, made up of two phrases without a verb, presents an interesting syntactical difficulty. As it stands, it appears to be either a pair of phrases dependent on the preceding line, or it may be seen as a *casus pendens* related to the following line, as rendered in our translation above.[4] Both alternatives are awkward. The first suggestion may be dismissed fairly easily. The subject matter of line 5 is not related to that of the preceding lines and is clearly part of the succeeding. A *casus pendens*

[4] For discussion and examples of *casus pendens* in Ugaritic, see *UG* 882–84.

customarily elaborates a noun in the following clause to which it refers; in this case line 5 would refer to *mdh* in line 6. However, such a long *casus pendens* would be unusual, if not unparalleled, in Ugaritic poetry (see Dahood 1969:24; Sivan 1997:217–18).

Scholars have dealt with this problem in various ways. Ginsberg (*ANET* 132) simply translated it as a sentence fragment, connecting it grammatically neither to the preceding or succeeding lines. Gibson (*CML*^{2} 56) applied the verb of line 6 in parenthesis before the nominal phrases of line 5. Using a different approach, *TO* (1.197–98) and Pardee (1997a:257 n. 133) take *mks* as a predicative participle governing *npynh*; while possible, the predicative participle would appear to be rare at best in Ugaritic (see Smith 1999) and thus dubious in this context. Wyatt (1998:93) takes the verb of line 6 with the words in line 5, thus making the three cola severely unbalanced in line-length (4/2/3). This, too, is problematic.

There is no obvious solution to this problem. One additional proposal is to suggest that the lines of the tricolon have been wrongly arranged. Ugaritic narrative poetry generally builds tricola with a verb in the initial line and then elaborates the other grammatical items in the following lines. For this reason, one might tentatively propose that line 6a should be the initial line of the tricolon instead of line 5. We would thus have the following translation (as in Smith, *UNP* 122):

6	*tmt‘ mdh bym*	She conveyed her garment in the sea,
6–7	*ṯn/npynh bnhrm*	Her double-robes in the rivers,
5	*npynh mks bšrh*	Her robe, the covering of her skin.

Rearranged in this manner, the tricolon has no syntactical problems, and it conforms to the standard canons of Ugaritic parallelism and line-length. De Moor 1987:47 switches just lines 5 and 6a: “She carried her clothing into the sea,//her skirts, the covering of her body,//her two skirts into the river.” The former version, by keeping the parallelism of sea and rivers together, may be slightly more likely. But in the final analysis, such a radical solution to the problem without textual evidence must remain extremely tentative. There is no simple solution here.[5]

[5] Miller (1999:370–72) uses the patterns of verbal ellipsis in Ugaritic texts to evaluate various proposals for reading this passage. She points out that, while some interpretations can be dismissed, several must be considered plausible, so that certainty in interpretation here cannot be reached.

The bicolon in lines 8–9 shifts from the cleaning of clothes to cooking. Most of the words in this bicolon are common Semitic: *štt* (< **šyt*, "to place, put"); preposition *l-* plus *ẓr*, "top" (cf. Arabic *ḍahr*, Akkadian *ṣēru*, BH *ṣōhar*); and *ʾišt*, "fire" (syllabic *ʾišītu*, Huehnergard 1987b:110; cf. BH *ʾēš*), parallel to *pḥm* (BH *peḥām* and Arabic *faḥm*, *faḥam*, "(char)coal"). Many of these terms appear also in the cooking scene in 1.23.38–39, 41, 44–45: *yšt lpḥmm* and *lʾišt//lpḥmm*. The two unusual words in the bicolon are the terms designating the cooking vessels. According to Pope (1971:399 nn. 12, 13; see *DUL* 385, 401), the parallel words, *ḫptr* and *ḫbrṯ*, are related to Hurrian *ḫuppat(a)ru* and Hurrian *ḫubrušhi*/Hittite *ḫuprušhi-*, listed in Akkadian inventories from Qatna, Nuzi and Alalakh (*CAD H*:238, 241, sub *ḫuppataru* and *ḫuprušḫu*; see Gaster 1935:476–77, 1936–37:384; and *BOS* 2.125 n. 38). The former appears to denote a type of ewer or jar, the latter a type of cooking pot.[6] Pope (1971:396, 399–400, 403) noted a relevant depiction painted on a drinking mug from Ras Shamra. The mug depicts a seated, bearded figure; in front of him is a stand with a large pot on it and behind him is a fish. On the other side of the pot is a standing figure. Pope relates this depiction both to our scene and to the scene of Athirat's arrival at El's abode in 1.4 IV. He suggests that the pot on the stand illustrates the *ḫptr*/*ḫbrṯ* of lines 8–9. While there is no certainty that the seated person on the mug is El, nor that the damaged figure to the left of the pot is Athirat, or even a female, the fish behind El's throne would constitute a good indicator that the scene on the mug is a watery one befitting the literary descriptions of El's abode (1.3 V 4–8//1.4 IV 20–24). The possible correlation of details between the text and the mug, however tentative, is impressive. Whether or not the identification is correct, the depiction may still furnish a depiction of the sort of pot involved in our scene.

The final bicolon of this section (lines 10–11) is in many ways the most important for understanding the entire passage. At the same time, it is surprisingly difficult to interpret, although only one word is ambiguous. To determine the meaning of the difficult *tʿpp*, we first turn

[6] Pope (1971: 299, n. 12) also suggested a correspondence between *ḫuppataru* and Mycenaean *o-pi-te-te-re*, thought to be a lid or cover. If this were correct, then the evidence may suggest that the word may have been an Indo-European loanword into Hurrian. If these terms were used by the poet to evoke a wider Mediterranean milieu, then perhaps they suggested as well Athirat's maritime associations (see Brody 1998:26–30).

to the second line of the bicolon. The latter reads, *tġzy bny bnwt*, "She honors the Creator of Creatures" (on the meaning of *tġzy*, see the Commentary on 1.4 I 22 above, pp. 408–9). The meaning of the first line of the bicolon, since it has an identical syntactic structure, almost certainly means something similar.

A variety of proposals for the etymology and meaning of *tʿpp* have been made. Some relate it to the root **ʿp*, "to fly," and suggest a wide range of derived meanings, from "to flutter (the eyelids)" (Gibson *CML*² 56), to "to conjure, bewitch" (del Olmo Lete, *MLC* 195; *MLR* 79; *DUL* 173). Others relate the word to Arabic *ʿafa, ʿafw*, "to efface, pardon, forgive." From this come translations such as, "she propitiates" (*ANET* 132); "she implores" (*TO* 1.198; Coogan 1978:97; Wyatt 1998:94); "she would tame" (Margalit, *MLD* 25); "she entreated" (Pope 1971:396); "she is servile" (Smith, *UNP* 122). Most of these translations are problematic in the context of the scene, since they assume actions by Athirat that would require El to be present. It is clear, however, that El is not at Athirat's abode. Pardee (1997a:257) notes an Arabic cognate root *ʿff*, which is rendered, "to feed someone *ʿuffatun* (a kind of milk)." He translates the verb, "so as to prepare a (warm) drink for the Bull." As none of the translations (with the exception of Pardee's) makes use of meanings actually attested for the cognates, it becomes clear that most of the renderings are related to the understanding of the verb in the second colon, *tġzy* (most often, "to entreat, implore"). Pardee's proposal, on the other hand, follows the meaning of his cognate, but does not match the meaning of the second line very closely at all. This seems problematic for his interpretation.

It seems at this point necessary to attempt a translation for the word that is in some way related to the relationship to the parallel word in line 11. We argued in the Commentary to the preceding column that the root of *tġzy* is best understood as meaning "to give honor, to honor (with gifts)," and so it seems likely that *tʿpp* also has a similar meaning. However, a suitable cognate is not forthcoming. One might venture the speculation that the root is an *L*-stem form from *ʿp*, "to fly," and that it means "to cause to fly, give wing to, exalt, lift high, honor" El. In this case, the word evidences a semantic relationship to the flight of a bird (cf. BH **ʿwp*, in the *L*-stem [polel], "to make to fly"). However, the semantic development cannot be confirmed and therefore remains tentative. As this etymology appears somewhat unpersuasive, it is possible that the sense, "to honor," here might be derivative of the better

attested meaning, "to make with the eye (lids)." This literal sense is often taken to be the actual meaning in 1.4 II 10 (e. g., *CML*² 154: "fluttered eyelids at," taken as an *L*-stem of **ʿwp* and related to the noun *ʿpʿp* in 1.14 II 43, VI 30), but this meaning cannot work since the verb takes a direct object, because El is not present for this act, and because it misses the larger context of Late Bronze Age political gift-giving.

Apart from the verbs, lines 10–11 are relatively clear. The epithets of El in these lines are standard ones, most appearing already in 1.1 III 26, IV 12, V 22, 1.2 I 16, 33, 36, 1.2 III 16, 17, 19, 21 (see *EUT* 35–42; *CMHE* 4–5 n. 6; *UBC* 1.128), and elsewhere in the Ugaritic religious texts for El. The word *ṯr* is also used an epithet of high rank for humans (1.15 IV 6, 8, 17 and 19), and was an "emblem of kingship" according to Philo of Byblos (*PE* 1.10.31; Attridge and Oden 1981:54–55). The word "bull" has been identified only rarely in biblical texts (BH *šôr*), as a divine title in passages such as Hos 8:6 (though in this case with a doubted revocalization; see *EUT* 35) and perhaps as a human title in parallelism with *ʾiš* in Gen 49:6. The second element of El's title is *dpʿid*, consisting of the two elements proclitic relative *d-* and the adjective *pʿid*, usually rendered "Benign" or the like (see already in 1.1 III 22, discussed in *UBC* 1.184). The title is a common one for El (1.4 III 31, IV 58, 1.5 VI 12, 1.6 III 10, 14, VI 39, 1.15 II 14, 1.16 V 23, 1.24.45). Moran (1961:61), with many others following him (e. g., *CMHE* 20 n. 44), compared the syntax with Mari names such as Zu-hatni(m), Zu-hadim, Zu-sumum and possible Zu-sa-abi as well as the biblical divine title, *zeh sînay*, "the One of Sinai" (Judg 5:5). The element **zu* + DN is also found in West Semitic personal names. Emar, for example, attests to a number of instances (see the listing in Beckman 1996:138). The title may not be entirely conventional or without purpose here. In the context of the Baal Cycle, the word may suggest El's amenability to the desires of the divine children of the pantheon, even that of Baal with his status as an outsider. Lines 10–11 contain the first occurrence of the parallel second title, *bny bnwt*, literally "Builder of Built (Ones)," usually taken to mean "Creator of Creatures" (*EUT* 47, 50).[7] This title has been compared with the Akkadian epithet *bān binûti* (*DUL* 233). The word *bnwt* is used in 1.100.62 to denote Horon's offspring (in this case, snakes). El is likewise the maker of his offspring.

[7] See also *DUL* 233, with its discussion of the comparable Akkadian.

Several scholars have assumed that lines 10–11 involve a ritual, presumably magical, involving Athirat, often understood as her effort to influence El to do her will (cf. Aistleitner 38; Dietrich and Loretz 1997:1153; *MLC* 195; *MLR* 79; Pope 1981b:320). Although there may be an aspect of ritual in the description, there is no evidence that the honor paid to El here is anything beyond a regular practice that fits in with the domestic scene being described. There appears to be no evidence from the context that Athirat is attempting any special magical inducement concerning her husband. Nothing in the succeeding passages hints at such a story element. It certainly cannot be related to the primary theme of the tablet, the palace for Baal, since Baal and Anat have not yet appeared on the scene to ask for her help with El. As all of the previous actions in the passage seem to be ordinary, everyday work, there is no reason to assume that it is describing the goddess performing special magico-ritual activities. Whether there is a ritual underlying the description here (perhaps an offering of whatever Athirat is cooking on the fire) or not, it seems best to understand these lines as indicating Athirat's close and loving relationship with El. Pardee (1997a:257 n. 135) has suggested that Athirat may be expecting El to come for a visit and is thus preparing herself for his arrival. While possible, this does not seem particularly likely, since she will subsequently undertake the long journey to El's abode to ask him about Baal's palace. If she were expecting him to come to her soon enough to consume a warm drink, she could wait for his arrival.

Lines 12–26: Athirat Reacts to Baal and Anat's Approach

The second section of this column, lines 12–26, closely parallels 1.3 III 32–IV 4 in structure and sometimes in wording: (a) the perception and recognition of an approaching figure (lines 12–16 and 1.3 III 32a); (b) a consequential negative physical reaction (lines 16–20 and 1.3 III 32b–35a); (c) a question asking why the figure(s) has/have come (lines 21–24 and 1.3 III 35–36); and (d) an accompanying question regarding possible hostile action taken against the speaker or her allies (lines 24–26 and 1.3 III 37–IV 4). While the middle two elements just described are virtually identical in the two passages, the first and fourth sections are quite different in their wording. The description of Athirat catching sight of the approaching gods is substantially larger and more elegant than that of Anat in 1.3 III 32a. The passage in 1.4 II 12–16 uses two bicola to describe what occurs in a single colon in 1.3 III. We find here

three phrases or verbs for visual perception in the first bicolon (*bnš*ʾ*i ʿnh*, *wtphn*, and *ktʿn*), in contrast to the single verb in 1.3 (*tph*). The phrase *bnš*ʾ*i ʿnh*, is an idiom attested not only in Ugaritic but also in BH (Gen 18:2, 24:63, 64, 43:29; see Díez Merino 1984:24–25; Reif 1985:239). The first bicolon describes with these verbs Athirat's spotting of Baal, while the second bicolon focuses on Anat. In his study of **yš*ʾ*u gh wyṣḥ* in its various forms and its parallels in Akkadian, Hittite and Biblical Hebrew literatures, Polak (2006:285–89) regards the initial clause of this formula as naming (if at all explicitly) the subject of the action and the second verb as focusing on the object of perception. Compared to some briefer examples (e.g., CAT 1.10 II 26–27), our case here is complicated by the elaboration in the second line, line 13, and in the bicolon that follows in lines 14–16, the very sort found also in 1.17 V 9–11. As line 13 involves a subordinate clause and not an independent clause, the agent is not named until the second line of the bicolon. Furthermore, the object is mentioned only incipiently in the object suffix on the second verb in the first line of the bicolon of lines 12–13 and spelled out more fully in the second line of our bicolon and then further in the bicolon that follows in lines 14–16. Polak (2006:287) also cites the earliest example of the formula in OB Gilgamesh (University of Pennsylvania tablet, labeled as OB II, col. iv, line 137 in George 2003:176, 177), followed in time by the Hittite and Ugaritic cases. He thus proposes that the various attestations of the formula may "represent a common literary tradition that goes back to the Old Babylonian period" (2006:288).

Athirat's fearful reaction to seeing the approach of the two deities in lines 15–20 is identical to the description of Anat in 1.3 III 32–35a. For detailed discussion, see the Commentary there, pp. 238–41. The first question that the goddess asks ("Why has Mightiest Baal come?//Why has Adolescent Anat come?") is similar to the one Anat asks in 1.3 III 36. The primary difference is that Athirat's question is a bicolon, the first line referring to Baal, the second to Anat, while Anat's question in 1.3 is a single colon referring to Gapn and Ugar together.

The final part of this section, lines 24–26, in which Athirat expresses her fear that the two gods are coming to attack her and her family, is story specific and thus is different in many ways from the parallel passage in 1.3 III 37–38. However, there are connections: Anat's question ("What enemy rises against Baal,//What foe against the Cloudrider?") expresses a similar concern about an enemy. In addition, Athirat's question appears to use verbs parallel to those employed in Anat's continued

speech in 1.3 III 38–47 about her having smitten several of Baal's enemies (**mḫṣ//*kly-* the latter restored in 1.4 II 25 on the basis of the former passage and on Pughat's vow of revenge in 1.19 IV 34–35). One final difference is that while Anat's speech in 1.3 continues for an additional sixteen lines, Athirat's speech ends after this short bicolon.

Athirat's fear seems well justified. Later on in the cycle, exactly what Athirat dreads appears to take place, when in 1.6 V 1–4 Baal is said to attack and kill Athirat's children. However, some caution is worthwhile in interpreting this passage, since its context is quite ambiguous. In a scene preserved on 1.4 VI 48–59, we find Baal inviting the children of Athirat to a feast. This suggests a more cordial relationship between Baal and Athirat's children. The West Semitic myth of Elkunirša, preserved in Hittite, however, strengthens the view that Baal killed the children of Athirat. In this myth, after Baal and Athirat engage in sexual relations, he says to her: "I have slain your seventy-seven [sons]. I have slain eighty-eight" (Beckman 1997:149). So the strained relationship illustrated in our passage seems well attested. But great caution must be maintained in using the Elkunirša myth to illuminate the Baal Cycle, since it portrays such a dramatically different mythic context.

A comment should be made concerning the interpretation of *hm…hm* in these lines. Scholars are divided as to whether *hm* is better understood here as the 3rd plural pronoun, "they" (e.g., Aistleitner 38; Gaster, *Thespis* 178; del Olmo Lete, *MLC* 196, *MLR* 80; Xella 1982:109), or as a conjunction with interrogative force (e.g., *TO* 1.199; Gordon 1977:91; Pardee 1997a:257; Pope 1971:397; Wyatt 1998:94). The latter interpretation is more likely. One may note that in the two similar passages, 1.3 III 36–38 and 1.4 IV 31–34, the initial question ("Why has PN come?") is followed by an additional question. The case of 1.4 IV 31–34 is the more instructive, since it makes use of the *hm* conjunction at the beginning of the second clause of the question. The Ugaritic practice of asking a double question without an interrogative marker on the first question, and *hm* in front of the second was discussed by Ginsberg 1946:35 (see also Held 1969:77).[8]

[8] We may also note the thematically similar double-interrogative question in Isa 27:7 (here rendered literally): "Did he smite him like the smiting of his smiter, or was he killed like the killing of his killed?"

Lines 26–38: Athirat Sees Baal and Anat's Intentions

In the third and final extant section of the column (lines 26–38), it becomes clear that Athirat has nothing to fear, just as Anat had nothing to fear when she saw the approach of messengers in 1.3 III 31–34. Rather than bearing weapons, Baal and Anat are bringing gifts. As indicated above (pp. 407–8), the giving of gifts among ruling elites was an important way of affirming friendship and alliance. Athirat's relief here is political; she is not being swayed by greed.

Lines 26–28a describe the appearance of the gifts as Athirat sees them from afar. The words that precede the two occurrences of *ksp* and of *ḫrṣ* are broken or damaged. The least damaged of the three is the word before the second *ksp* (line 27). It may be read with certainty as *zl*. Earlier scholars had assumed that the wedges for *z* were identical to the wedges used to make *pʿ*, so that it was possible to read either *zl* or *pʿl* here. However, paleographic study of these letters has shown that they are not easily mistakable (Pitard 1992:267–68). The wedge of the *ʿ* is quite distinct in its stance from that of a right wedge of a *z*. Here the traces of the wedge show clearly that the letter must be *z*. Thus we have the phrase *zl ksp*. The first occurrence of *ksp* is also preceded by an *l*, with room for only a single letter before it. Thus it seems quite reasonable to reconstruct the word there also as *[z]l*. The meaning of *zl* in this context is different from its usual meaning, "shadow, shade." "The shadow of the silver" (so Dietrich and Loretz 1997:1154; Gordon 1977:91; Margalit, *MLD* 26) does not seem to work here. The word also appears in CAT 1.92.27 in the phrase, *zl k kbkbm*. The comparison to stars calls for a meaning that suggests shining, splendor, etc. (cf. Wyatt 1998: 370–74). Such a meaning also works well in our context. Thus we translate, "the gleam of silver."

The reading of the word that precedes *ḫrṣ* is more difficult. None of the letters of the word is certain, although the first letter is likely *n*, and the word ends with a letter that has a large horizontal wedge. The most common suggestion has been *n[r]t*, "light, glint." This fits well with our understanding of *zl*. Driver (*CML*[1] 92) proposed reading *nbt* here, relating the text back to 1.4 I 32, where the term means, "coated." Here it would mean, "overlay." However, with the uncertainty of both the second and third letters of the word, no firm decision is possible.

Having seen that the two visitors are not hostile, Athirat addresses her servant, here called "Fisher of Lady Athirat of the Sea," and gives him instructions, the import of which are not clear in the broken

context (lines 28–38 and probably farther). This servant has already been introduced in 1.3 VI 9–11, where he is called "Fisher of Athirat//Qudš-Amrar." As discussed in the Commentary for that passage, the title "Fisher" apparently reflects the nature of his mistress, Athirat, as suggested by the longer form of her name attested here, "Lady Athirat of the Sea." Watson (1996a:319) compares a title of the Sumerian goddess, Nanshe, "queen of the fisherman." Watson considers the parallel with Athirat remarkable, especially as she is said to be "born on the shore of the sea," a characterization that for him recalls her title, "Lady Athirat of the Sea."

The first line of her speech (30) is somewhat difficult: *ʿn.mkṯr.ʾapq[ ]*. The first word is easily identifiable as an imperative, "Look at, See," but the second word, *mkṯr*, is ambiguous. Many have interpreted it as an epithet ("Skilled One, Deft One") of Athirat's servant (Aistleitner 38; Dietrich and Loretz 1997:1154; Driver, *CML*[1] 93; Gaster, *Thespis* 178; Ginsberg, *ANET* 132; Maier 1986:10). However, this does not seem very likely, since the deity appears to function only as a messenger and a stable hand in the scenes where he plays a role (1.3 VI; 1.4 IV). An epithet referring to artistic skill, especially one closely related to the name of Kothar, seems unlikely for this character. The noun *mkṯr* is better understood as a reference to the gifts just described. Athirat refers to them here as "skilled work" (Smith, *UNP* 123; cf. Coogan 1978:98: "marvelous gifts"). The poet presumably uses the word to refer back subtly to their maker and to emphasize that Athirat recognizes the divine quality of the gifts.

The word that follows is ambiguous. The reading on the tablet seems clear, *ʾapq[*, "source, channel." This word appears elsewhere in the Ugaritic texts only with reference to El's abode, which is described as being located *mbk nhrm//qrb ʾapq thmtm*, "At the springs of the rivers,//amidst the sources of the two deeps" (e.g., 1.4 IV 21–22; 1.3 V 6–7; 1.17 VI 47–48). Might our passage be a reference to this location? The tablet is broken to the right of the *q*, but there is sufficient room in the break for *thmtm* to have been written there. One might then read, "See the skilled work of the sources of the two deeps," and propose that Athirat means that the gifts are of a quality that befits the lodging of El. However, we cannot confidently restore the end of the line, and thus the reference may have nothing to do with El's abode. We must leave its interpretation open.

Beginning with the bicolon in lines 32–33, Athirat instructs her servant to take a net (*rṯt*, cognate with BH *rešet*) and apparently to use it in the sea. The damage to this section keeps us from understanding

the import of these instructions. Some (e.g., Wyatt 1998:95 n. 108) have suggested that the servant is to gather the gifts up in his net and bring them in. This seems problematic, particularly if lines 34–36 continue the instructions by having the nets placed in the water. There is no reason to assume that Baal and Anat would actually arrive with the gifts floating freely in the water. Divine visitors usually appear to arrive by animal (1.4 IV 2–22) or on foot (cf. lines 13–14, where the noun *hlk* is used of their approach). In any case, it appears that Baal and Anat present the gifts to Athirat later in 1.4 III 25–26, so they presumably stay in their possession until then. It seems possible then that the Fisher is being instructed to catch fish in the sea in preparation for a welcoming meal for the guests. This is a common element of the stories of gods' arrivals at the homes of other deities. When Anat arrives at Baal's home in 1.3 IV 38–42, he has an ox/fatling set before her for dinner. When Athirat arrives at El's abode in 1.4 IV 31–38, El immediately offers her food and drink. And indeed a meal is given to the gods in 1.4 III 40–44. This seems then to be a plausible context for the instructions given here.

The tricolon in lines 34–36 appears to be intimately related to the previous bicolon. Pardee (1997a:257 n. 139) noted that if these lines do indeed describe the destination of the net, (i.e., ["cast it"] into the Beloved of El, Ya[mm],/Into Yamm, the god [ ],/Into Nahar, the god [ ]"), we may have here a remarkable blending of the mythic deity Yamm with a naturalistic depiction of the sea. Such an interpretation appears to be reasonable and illustrates the fluidity with which gods may be depicted in mythological narrative (see the discussion of 1.3 III 38–47 above, pp. 255–6).

Only the first word of each line is preserved for the next bicolon (37–38). The first line reads, *ʾal'iyn*, clearly the epithet for Baal, while the second contains the epithet of Anat, *btlt*. These lines may be a continuation of Athirat's speech, or they may represent a change in subject, perhaps the description of the gods' arrival before Athirat. There is no way to know.

The final ten lines of the column are too broken to interpret. In addition, approximately 12 lines are missing from the top of column III, followed by nine additional lines that are too fragmentary to understand. Exactly what transpires in this thirty-one line break is unclear. When the text in the next column becomes intelligible, Baal is describing a very unpleasant meeting in the divine council from some time in the past. But it is unclear to whom he speaks, and why this event is being discussed. Thus little can be said about the lacuna here.

CAT 1.4 III

Textual Notes

Line 2. [ ]xdn /x/ is represented by a low, long horizontal. It could be the remains of /t/, /b/, /d/, /k/, /r/, /ʾa/, /n/.

Line 3. [ ]dd The first /d/ is certain, since the lower line of the three horizontal wedges is visible.

Line 4. [ ]n.kb We see nothing preserved before the n (contra CAT).

Line 5 [ ]x.'al.yns /x/ The right tip of a low horizontal is preserved, but could be the remains of /t/, /b/, /d/, /k/, /r/, /'a/, /n/. CAT is correct that a word divider precedes /'al/.

Line 6 [ ]ysdk. The trace of a letter to the left of the /y/, suggested by CAT, is probably just a break in the tablet. It is noted in red on the drawing. There is indeed a word divider at the end of this line.

Line 7. [ ]x.dr /x/ is probably either a /k/ or an /r/. There are only two wedges preserved—the long right horizontal, and a smaller low horizontal to its left. We see no trace of an additional wedge that should be visible if the letter were /w/, as suggested by CAT.

Line 8. [ ]yk CAT reads an /ḫ/ preceding the /y/, but the indentations there are once again merely damage marks at the edge of the break.

Line 9. [ ]y.'ilm The indentations identified by CAT as a word divider between /y/ and /'ilm/ may simply be damage.

Line 10. y[ ]n̊. The /y/ is damaged on the top, but seems certain. The letter read here as /n/ has been read by CTA and CAT as /b/, However, if it were /b/ or /d/, we would expect to see traces of the right vertical in the well-preserved area above the only visible element of the letter, the low horizontal wedge. Reading the traces as an /n/ would work here, with a lost letter in the break to its left. One could also read a /k/ or /r/ here, but /r/ is less likely, assuming that another letter would need to fit into the break. Context suggests that this word is a verb of speech. While the most common proposal has been *y[t]b*, literally "he returned, responded," this seems unlikely, since, as remarked above, the preserved third letter is almost certainly not *b*. Thus the other common restoration, *y['n*, seems most likely.

Line 11. yx'dd The reading of the second letter in CTA and CAT as /t/ is problematic. There is a substantial break between the /y/ and the horizontal identified as the /t/. This would be an extraordinarily large gap between the two letters if there were only blank space between the two. In fact, there appear to be the right tips of two horizontals adjoining the left face of the supposed /t/ wedge. It thus seems more

likely that the letter should be read as a /k/ or /r/. See the commentary on this line below.

Line 12. q̊m̊ These two letters are uncertain. There is a fairly small horizontal on the left side of the possible /q/, with part of the upper left line of the *Winkelhaken* probably (but not certainly) preserved. /m/ A large vertical wedge is completely preserved to the right of the break in the tablet, with a possible point where a horizontal for a /m/ would meet it at the upper left corner. Unfortunately that meeting point is cracked, and it is not clear whether any traces can be seen of the actual right tip of a horizontal there. The letter could conceivably be simply a /g/, or a /ṣ/, though this seems less likely than /m/. At the same time, one would expect the left side of the horizontal to appear to the left of the break in the tablet, and it doesn't, even though the face in that area is in good shape. Thus the reading must remain tentative.

Line 13. ẏqm The first letter is broken, but certain. The left half is well preserved, but only the left line and a few interior traces remain of the right half.

wywpṯn The /n/ has four, rather than the usual three, wedges.

Line 14. x[ ]r While the first letter has been read as /p/ by both CTA and CAT, there is uncertainty here. The points of the horizontals of the letter have been cut off by the break, and it is quite possible to see these wedges as part of a /k/, /r/, /w/, or /ẓ/. There are no traces left of a letter between /x/ and /r/, as proposed by CAT.

Line 15. ṗ[ ]xbṯlḥny The /p/in this line is much more certain than the proposed /p/ at the beginning of line 14. To the right of the following break, there is a depression that may be the trace of a letter with one or more horizontals. CAT reads /t/ here, but the damage makes the traces too vague to be certain. Either /t/, /p/ or (less likely because of the height of the wedge)/h/are possible. Both CTA and CAT read a word divider before /bṯlḥny/. We see nothing here but cracks on the surface. The /n/ has four wedges.

Line 16. b̊ks.'ištynh. /b/ is certain, though badly damaged. Traces of the two verticals and left horizontal are discernable, along with the right tip of the horizontal on the right side of the tablet break. There is a word divider after /'ištynh/. The line ends about 25% short of the

right margin, while the next line is too long for the column and curves upward, taking up part of the unused space of this line and the right end of the space of line 15.

Line 17. ḏm.ṯn.dbḫm.šn'a.bʿl.ṯlṯ Only the right side of /d/, the low horizontal and the right tip of the right vertical, is preserved. The space for the letter is cramped and perhaps it was written as a /b/, as several older commentators proposed. This is a strange, run-on line that curves up the column, rather than across the margin line (unlike the long lines in column I). The spacing of the line changes suddenly from quite normal to very squeezed at /šn'a/. The next two words curve dramatically up the tablet, so that /ṯlṯ/ is written vertically. Were these three words accidentally skipped, then inserted, perhaps even after column IV was written? See the discussion of the scribal practice above, pp. 386–89.

Line 19. wdbḫ.wdbḫ The context indicates that the second /wdbḫ/ is a dittography.

Line 21. 'ampt The /p/ here is an error for /h/, the scribe having written only two wedges, instead of three.

Line 25. 'ȧṯrtym Part of the upper line of the right horizontal of /'a/ is preserved, the rest lost in a break. The context assures the reading.

Line 34. xm Only a well preserved large horizontal of the first letter on the line clearly survives. It is possible that the upper line of the right tip of another horizontal can be discerned where it meets the horizontal on the left. This would suggest that the letter is a /k/, /'a/ or /n/. Context suggests that /k/ is the most likely choice.

Line 35. [ ]ẓ̊ Although we see the indentation that CAT suggests is the upper wedge of the probable/ġ/that preceded the /ẓ/, it appears to us to be part of the breakage and not a real wedge. The /ẓ/ also remains uncertain epigraphically. Only the right *Winkelhaken* is preserved, so the letter epigraphically could also be /q/. However, the context strongly supports the reading /ẓ/.

Line 36. [ ]x /x/ The first surviving letter on this line is represented only by the remains of a single large horizontal. Without evidence from

traces of wedges to the left, there is no way to determine which letter it is. CAT reads and reconstructs *['aḫ]r*, which is plausible.

Line 39. [ ]bṯlt.ʿnt The /b/ is certain from context. Part of the right vertical is preserved, but nothing else.

Line 40.]ḫm Only the upper and right wedges of the /ḫ/ are preserved, and thus epigraphically the letter could also be /ṭ/. But context argues for /ḫ/.

Line 41.]q̇.mrǵtm While the /q/ is damaged, it seems assured by the right tip of the left horizontal having been preserved.

Line 42.]lḫt The right two wedges of the /l/ survive, but context assures the reading.

Line 43.]krpnm The /k/ is only definable by context. Only the right tip of a horizontal wedge is preserved, meeting the left end of the lower left wedge of the following /r/.

Line 44. [ ]m.ʿṣm The first /m/ remains epigraphically uncertain, though context argues strongly for the reading. Only the right half of the letter is preserved, and it shows evidence of two wedges that make the preserved traces look a bit like a /z/. However, the remains of the upper wedge are slightly angled downward toward the right, which suggests that the wedge could be the right tip of a horizontal. This allows it to be read as an /m/, with the vertical wedge placed lower than usual (such forms are attested, see Ellison 2002:II:180 figs. 728, 729).

Line 51. [ ]š This letter is very damaged, but traces are visible of all three wedges.

Line 52. [ ] ʿl The traces CTA and CAT identified as an /n/ after /ʿl/ appear to be merely breakage.

Line 53. [ ]d CTA and CAT both read /ln/ here. We see no traces of the /l/, but the supposed /n/ is actually a /d/. The three verticals are short and stumpy because the line is at the bottom of the column, and they have been misread as the /n/. The three horizontals are preserved on the very edge of the tablet.

Translation and Vocalized Text

Someone (Anat?) Speaks to Baal

[*Lines 1–4 are too damaged to translate.*]

5 [ ] "may he not escape

6 [ ] he will establish you

7 [ ] for ever and ever

8 [ ]. . . . .

9 [ ] the god who is king."

Events in the Divine Council are Recounted

10–11	Mightiest Baal an[swe]red (?), The Cloud-Rider testified (?):	ya[ʿ]nî ʾalʾiyānu baʿlu/ yxʿdd rākibu ʿurpati
12–14	"He rose, stood and abased me, He stood up and spat on me, Amid the ass[em]bly (?) of the children of El.	qāma yaddidu wa-yaqalliṣu-nî[1]/ yaqûmu wa-yawappiṯu[2]-nî bi-tôki/pu[ḫ]ri (?) binī ʾili-ma
14–16	I drank dis[grace(?)] at my table, Dishonor from (my) cup I drank.	šatîtu/pv[…] bi-ṯulḥani-ya qallata[3]/bi-kāsi ʾištayuna-hu

[1] Cf. *UG* 555.

[2] If this verb were a *G*-stem form, its prefix would form a diphthong with the initial root letter that in Ugaritic would have collapsed (either **yiw-* > **yî-* or **yaw-* > **yô-*). Accordingly, the form is to be regarded as *D*-stem. See *UG* 564, 639.

[3] For the root in Ugaritic as well as the base (in syllabic form) *qallu*, "small, inferior," see Huehnergard 1987b:174. Cf. BH *qallôn*.

17–18	For two feasts Baal hates,	dam ṯinê dabaḥêma šani'a ba'lu
	Three, the Cloud-Rider:	ṯalāṯa/rākibu 'urpati
18–21	A feast of shame, a feast of strife,	dabḥa[4]/buṯati wa-dabḥa/dinnati
	And a feast of the whispering of servant-girls.	wa-dabḥa tadvmvmi(<ati?>)[5]/'amahāti[6]
21–22	For in it shame indeed was seen,	kī-bi-hu buṯatu la-tubbaṭu/
	For in it the whispering of servant-girls."	kī-bi-hu tadvmvmatu 'amahāti

Baal and Anat Speak with Athirat

23–24	Just then Mightiest Baal arrived,	'aḫra maǵiya 'al'iyānu ba'lu/
	Adolescent Anat arrived,	maǵayat batulatu 'anatu
25–26	They brought gifts to Lady [A]thirat of the Sea,	tamagginānni rabbata 'aṯirata yammi/
	Honored the Creatress of the Gods.	taǵaẓẓiyāni qāniyata 'ilīma
27	And Lady Athirat of the Sea answered:	wa-ta'nî rabbatu 'aṯiratu yammi
28–30	"Why do you two bring gifts to Lady Athirat of the Sea,	'êka tamagginānni[7] rabbata/'aṯirata yammi
	Honor the Creatress of the Gods?	'êka taǵaẓẓiyāni[8]/qāniyata 'ilīma
30–32	Have you brought gifts to Bull El the Beneficent,	maggintumā/ṯôra 'ila dā-pā'idi
	Or honored the Creator of Creatures?"	himma ǵaẓẓîtumā/bāniya baniwāti
32–33	And Adolescent Anat answered:	wa-ta'nî/batulatu 'anatu
33–36	"We are bringing you gifts, Lady Athirat of the Sea,	namagginā/ki-ma rabbata 'aṯirata yammi/
	[We are hono]ring (you), Creatress of the Gods,	[naǵa]ẓẓâ[9] qāniyata 'ilīma/
	[ ] we will bring gifts to him."	[ ] namagginā huwata

[5] See the discussion below; and *UG* 582.
[6] Sg. *'amt*, pl. *'amht*. For the pluralizing medial *-h-* in so-called "primitive" biconsonantal or middle weak nouns, see *UBC* 1.235 n. 29; Sivan 1997:34–35. For Afro-Asiatic cognates, see M. Cohen 1947:84, # 41.
[7] See Sivan 1997:136.
[8] Compare *UG* 460, 669.
[9] See *UG* 669.

37–39	Mightiest Baal […], Lady Athirat of the Sea […], Adolescent Anat […].	…'al'iyānv b'alv/ …rabbatv 'aṯiratv yammi …batulatv 'anatv
40–43	[As the gods a]te, drank, A suckling of [breast was provided], [With a sal]ted [knife], a cut of [fatling].	['adê til]ḥamū tištayū/['ilūma] [wa-tupa]qu[10] maraǵǵiṯu-ma/[ṯadi] [bi-ḥarbi malū]ḥati qaṣṣu/[marī'i]
43–44	[They drank] wine from goblets, [From a cup of gold, the blo]od of trees.	[tištayū] karpanīma yêna/ [wa-bi-kāsi ḫurāṣi da]ma 'iṣṣīma

[Lines 45–53 are too broken to translate.]

Commentary

Poetic Parallelism and Word/Syllable Counts

		semantic parallelism	word/ syllable count
10–11	ya[']nî 'al'iyānu ba'lu/ yx'dd rākibu 'urpati	a b (x, y) a' b' (x of y)	3/9 3/6 + x

The semantic and syntactical parallelism of verbs and divine titles strongly bind the lines. The divine epithets share some consonants, generating limited sonant parallelism. Furthermore, the consonant ʿ appears twice in each line (assuming the correctness of the reconstruction of the first line).

12–14	qāma yaddidu wa-yaqalliṣu-nî/ yaqûmu wa-yawappiṯu-ni bi-tôki/pu[ḫ]ri (?) binī 'ili-ma	a b a' b' c d e	3/11 2/9 4/10

It is the syllable count rather than the word-unit count that better shows the balance in line-length in this tricolon. The verbs **ndd* and

[10] The root is **pwq*, "to provide" in the *G*-stem (see Greenfield 1984a:243; *DNSWI* 2.903). The issue is whether the form here is 3 masc. pl. *G*-stem active (so *UG* 645) or 3 masc. sg. *G*-stem passive. The semantics favor the latter.

**qwm* occur together elsewhere; it is the other set of verbs that stands out here. Together the verbs morphologically and syntactically bind the first two lines, and they govern the third line. This final line bears no further syntactical or morphological linkage to the first two, and unlike the preceding two lines, the third is particularly marked by bilabials. However, the syllable *-nî* appears at or toward the end of all three lines, and the last line perhaps further punctuates this usage with the vowels of the following word *'ili*. Considerably more muted in effect, the final mimation of the last line perhaps echoes the final *-m* of the first word of the second line.

14–16	šatîtu/pv[…] bi-ṯulḫani-ya	a b c	3/9 + (?)
	qallata/bi-kāsi 'ištayuna-hu	b' c' a'	3/11

As noted by Held (1962:289–90, followed by Sivan 1997:108), the parallelism of the **qtl//*yqtl* of **šty* appears to be operative in this bicolon, and as such would constitute with the prepositional phrases with *bi-* (with the nouns bearing the same case ending) the chief elements of semantic and syntactical parallelism here. The lacuna in the first line prevents further observations about its possible parallelism with *qlt* in the second line.

17–18	dam ṯinê dabaḫêma šani'a ba'lu	a b c d	5/12
	ṯalāṯa/rākibu 'urpati	b' d' (x of y)	3/9

The parallel of numbers and of the god's name and title mark the primary components of semantic parallelism. These words also occupy comparable syntactical slots and thus generate both syntactical and morphological parallelism (in some of the case endings). The words *ba'lu* and *'urpati* show limited sonant parallelism insofar as they share two vowels as well as ' and a bilabial.

18–21	dabḫa/buṯati wa-dabḫa/dinnati	a b a b'	4/11
	wa-dabḫa tadvmvmi (<ati?>)/'amahāti	a b'' c	3/11 or 12

Following its introduction in the previous bicolon, *dabḫa* dominates the unit here, and alliteration is generated further by the word-choices of *dinnati* and *tadvmvmi <ati>*. The ending *-ati* likewise resonates through both lines. The semantics of the terms in addition to *dabḫa* also bind the lines.

21–22	kī-bi-hu buṯatu la-tubbaṭu/	a b c	3/10
	kī-bi-hu tadvmvmatu 'amahāti	a b' (x of y)	3/12

The "terms of disgust" in the prior unit cascade into this one, generating some of the same semantic parallelism (note also *-atu/-āti* and generally dental *t* in four of the words in this unit as well). The striking new feature of this unit is the parallelism of the fronted phrases, *kī-bi-hu*. This phrase sets up consonance of *b* which echoes through the first line, while by comparison the fronted phrase is picked up sonantly only with the medial *-h-* in the final word of the second line. The alliteration within each line is also notable.

23–24	'aḫra maǵiya 'al'iyānu ba'lu/	a b c (x, y)	4/11
	maǵayat batulatu 'anatu	b c' (x, y)	3/10

The **qtl//*qtl* verbal forms of **mǵy* constitute the strongest element of parallelism on all levels. In addition, the divine titles generate not simply general semantic and syntactical parallelism (as well as shared case endings), but a subtle effect with the initial *b-* and followed by ʿ may suggest further resonance between them. Within the first line, gutterals evidently predominate, while in the second line the dental *t* offers additional consonance.

25–26	tamagginānni rabbata 'aṯirata yammi/	a b (x, y of z)	4/14
	taǵaẓẓiyāni qāniyata 'ilīma	a' b' (x of y)	3/12

The standard divine titles here generate considerable parallelism, semantically and syntactically; they also provide slight sonant parallelism with the final syllables of *-ammi* and *-ima*. The initial verbs are strongly parallel through their shared semantics and morphology (see lines 28–30 below).

27	wa-ta'nî rabbatu 'aṯiratu yammi	a b (x, y of z)	4/12

The speech-opening formula of this sort is commonly considered a monocolon or as non-colonic. However, it carries over the divine titles from the previous unit and into the following unit, and the overall line-length is consistent with that of the surrounding cola. Moreover, the verb here occupies a relatively comparable position as the preceding verbs (also with prefix *ta-*). The point is not that this line forms the third

line of a tricolon with the preceding two lines, only that this line is not as disembedded poetically from its context as many speech-opening formulas are in Ugaritic poetry (e.g., lines 32–33 below).

28–30	'êka tamagginānni rabbata/'aṯirata yammi	a b c (x, y of z)	5/16
	'êka taǵaẓẓiyāni/qāniyata 'ilīma	a b' c' (x of y)	4/14

This line echoes lines 25–26, and apart from the observations made above, the striking addition here is the initial parallelism of the same interrogative.

30–32	maggintumā/ṯôra 'ila dā-pā'idi	a b (x, y of z)	4/12
	himma ǵaẓẓîtumā/bāniya baniwāti	c a' b' (x of y)	4/13

The rhetorical question marked by *himma* calls attention to the parallelism of these two lines, which for a third time in this column use **mgn* and **ǵẓy* in parallelism as verbs (the roots form a word-pair but in *m-* preformative noun forms in 1.4 I 20–22; see O'Connor 1989, and pp. 407–9 above). As in the bicola above in lines 25–26 and 28–30, divine names and titles appear in parallelism with this word-pair. In this case, bilabials dominate the titles. Almost completely due to morphology, both lines show final *-a* throughout, except in the final syllable of both lines where the final vowel is *-i*.

32–33	wa-ta'nî/batulatu 'anatu	a b (x, y)	3/10

The line is monocolonic or extra-colonic. See the discussion above for line 27 about the relative degree to which such speech-opening formulas are connected to their surrounding units. The title of the goddess is repeated from line 24.

33–36	namagginā/ki-ma rabbata 'aṯirata yammi/	a b (x, y of z)	4 (?)/15 (?)
	[naǵa]ẓẓâ qāniyata 'ilīma/	a' b' (x of y)	3/10
	[ ] namagginā huwata	.a b'	2+(?)/7+(?)

The first two lines repeat the sort of parallelism found above with **mgn*//**ǵẓy* plus divine titles. The third line, if correctly understood, seems to punctuate the point by repeating the first root that governs the relative pronoun referring back to El.

37–39	…'al'iyānv b'alv/	…a b
	…rabbatv 'aṯiratv yammi/	…a' b' (x of y)
	…batulatv 'anatv/	..a" b"

These lines are too broken to discern any more than the possible parallelism of divine names and titles.

40–43	['adê til]ḥamū tištayū/['ilūma]	a b b' c	4/11
	[wa-tupa]qu maraǵǵiṯu-ma/[ṯadi]	d e (x of y)	3/11
	[bi-ḥarbi ma]lūḥati qaṣṣu/[mari'i]	f (x of y) e' (x of y)	4/12

These lines and the following bicolon present the standard formulae for divine feasting (e. g., 1.4 VI 55–59; cf. 1.1 IV 30–32, discussed in *UBC* 1.133, 154–55). The lines progress from a general statement that the gods eat and drink (first line), to their being provided with meat (second line), to a description of the provisions and their manner of presentation (third line). Verbs appear in decreasing frequency from line to line, while objects of the verbs appear increasingly over the unit. Binding between the first and second lines is evident in their three **yqtl* verbs, while the second and third lines have three substantives with initial *ma-*. As a corollary, the first two lines show as a result of the verbs (mostly) final *-u*, where the second and third lines contain several substantives in final *-i*.

43–44	[tištayū] karpanīma yêna/	a b c	3/9
	[wa-bi-kāsi ḫurāṣi da]ma 'iṣṣīma	b' (x of y) c' (x of y)	4/12

Where the prior unit spells out in its second and third lines the nature of the eating mentioned in the first line, this unit details the drinking mentioned in the prior unit's first line. Especially through the repetition of the verb *tištayū* (and not generally the theme of drinking), the effect is to bind this unit with the preceding. With a couple of two-word units, the second line doubles the nominal components of the first line and follows its syntax as well. The phrase *[wa-bi-kāsi ḫurāṣi]* echoes *karpanīma* (especially with initial *ka-* in the nouns), while *[da]mi 'iṣṣīma* offers an evocative image for *yêna*. At a more subtle level, final *-ma* also binds the two lines.

Introduction

Between the last understandable lines in column II (lines 34–36) and the beginning of intelligible narrative in column III (line 10), there is a lacuna of over thirty lines: twelve badly broken lines at the end of column II, twelve additional missing lines at the beginning of column III, followed by nine that are too broken to give a continuous translation. When the text becomes complete, the narrative introduces a speech by Baal that recounts a meeting of the divine council in which he was shamefully treated by another god (lines 10–22). The function of this speech within the overarching story of Baal and Anat's visit with Athirat is not clear. Following the speech, the narrative continues with Baal and Anat arriving before Athirat, their presentation of the gifts they have brought, a conversation with Athirat that concludes with the gods having a meal together (lines 23–44).

One may note that a substantial amount of action occurs between the time when Athirat first sees the two gods approaching her home (1.4 II 12–16) and the time when they actually arrive into her presence (1.4 III 23–24). Such a delay between these two events is not unusual in the Baal Cycle. For example, in 1.2 I 21–22 the gods see the approach of Yamm's messengers. The narrative then describes their fearful reaction, and Baal's angry speech to rally the gods (lines 23–29) before they meet the messengers with their heads raised. The messengers finally arrive in line 30. In 1.3 IV 39–46, Baal sees the approach of Anat, and before she comes into his presence (somewhere in the lacuna following line 46), he prepares for a dinner, while Anat herself freshens up (at least lines 42–46) before she comes to meet Baal. Similarly, Dan'il sees Kothar wa-Hasis approaching in 1.17 V 9–11 and instructs his wife to prepare a meal for him (line 21), and she prepares the meal (lines 21–25) before Kothar arrives (line 25). Our passage (1.4 II 12–III 22) clearly contains a more elaborate interlude than in any of the passages just described. The scene here includes Athirat's fearful reaction and subsequent recognition that Baal and Anat are coming in peace (1.4 II 16–28). She then instructs her servant perhaps to prepare for a meal (1.4 II 29–36). The broken lines and lacuna that follow (1.4 II 37–III 9) give no clear sense as to the succeeding action, except that when the broken lines begin in 1.4 III 1–9, there appears to be a conversation going on between Baal and someone else. As it seems likely that lines 23–24 describe the actual arrival of the two gods before Athirat, it is probably not Athirat who is conversing here with Baal. It seems

more reasonable to suggest (tentatively) that the other member of the conversation is Anat. Presumably the discussion is intended to prepare for the meeting with Athirat, perhaps in a way somewhat similar to Baal's speech in 1.2 I 24–28, which prepares the assembled gods for their meeting with Yamm's messengers. But unfortunately, the reason why this particular discussion is taking place before meeting with Athirat is unclear.

Some fragments of the first nine lines of the column can be translated, and they hint at the content of the passage. Line 5, *'al yns*, can be rendered, "may he not escape." Within the context that follows, one may suggest that it refers to an enemy of Baal. Cassuto (1942:52; *BOS* 2:127) identified the enemy as Mot, while Gaster (1946:21 n. 5) suggested that it is Yamm here. Gibson (*CML*^{2} 57 n. 5) believed that it referred to any enemy who might oppose Baal. The context does not allow us to determine the referent with certainty. However, it seems possible that the subject of this line is also the deity who defied Baal in the event described below in lines 12–14. Lines 6, 7 and 9 each have clear reference to the establishment of someone as king, "he will establish you," ... "for ever and ever," ... "the god who is king." They most likely refer to Baal.

Lines 10–22: Events in the Divine Council Recounted

As we understand the episode, lines 10–11 introduce Baal's response to the previous speech, and lines 12–16 describe an incident in which a god grossly insulted Baal. This is followed in lines 17–22 by a discussion of what offends Baal at a feast, apparently concluding with a statement about the things that were present at the feast he has just described. There has been some disagreement about this interpretation. Several scholars have viewed these lines as describing, not a past event, but rather a meeting of the assembly of the gods at the time when Baal and Anat arrive to see Athirat (e.g., Albright 1934:119; Ginsburg, *ANET* 132; de Moor 1987:49; Dietrich and Loretz 1997:1155–56; Gordon 1977:91–92). This interpretation views lines 12–14a as a continuation of the narrative, rather than as the beginning of Baal's quote. Thus it is Baal who stands in the assembly and spits. This, however, seems quite unlikely. There is too little space in the broken passage at the end of column II and beginning of column III to make this plausible, and since 1.4 II 12–38 and 1.4 III 23–44 show a clear continuation of the plotline, the development of a scene taking place in the divine

council would constitute a major break, one rather difficult to explain. In addition, one should note that Athirat's abode, the setting of the scene both before and after this section, is never otherwise the site of the assembly. Recognizing the passage from lines 12–22 as a quotation of Baal describing a past event fits much more reasonably, in spite of its ambiguities, into the context of the overarching scene and is thus more likely to be the correct understanding (so for example, Aisleitner, 38–39; *TO* 1.200–01; Coogan 1978: 98; *CML*[1] 95; Pardee 1997a:258; Wiggins 1993:52; Wyatt 1998:95–96).

The bicolon of lines 10–11 indicates that the speech discernable in at least lines 5–9 has ended and that now Baal responds. The two verbs are both 3rd masc. sg., with Baal and his two epithets as the subjects. The verbs themselves, however, are uncertain because of a break in the tablet directly after the first letter of each. In the case of the first verb, only the *y* is certain. The second letter is completely lost, and the third is damaged. Above in the Textual Notes we pointed out that the best interpretation of the long horizontal that constitutes the remains of the third letter is as *n*, rather than *b* or *d*. Thus the most likely reconstruction of the verb is *y[ʿ]n*, "he answered." The second verb has been read universally as *ytʿdd* and is often identified as a *tD*-stem form from the root *ʿwd*, which can plausibly be interpreted as, "he replies" (cf. BH *ʿwd*, "to repeat, do again, admonish"), thus making a reasonable parallel to the first verb.[11] However, the epigraphic realities discussed in the Textual Notes above, p. 457, urge caution about this reading. The wide gap between the *y* and the supposed *t* wedge and the uncertain evidence of the tips of two possible wedges meeting the left side of the horizontal call the traditional reading into question, although a verb *ykʿdd* or *yrʿdd* would have to be understood as a *hapax* with a reduplicated final consonant. This root type, with geminated third and fourth consonants, is attested in Ugaritic (*ṣḥrr*), as well as in BH and Syriac (see *UG* 680). If we were to read the verb as one of these, *yrʿdd* would be more likely. It might then be related to BH *rʿd*, "to shake, tremble," and the form with the reduplicated consonants would

[11] BH has an example of a Hithpolel of *ʿwd* in Ps 20:9b, but it does not have a meaning related to speaking: *waʾănaḥnû qamnû wannitʿôdād*, "but we stand and keep upright" (cf. *BOS* 2.128). The Hithpolel of the verb also appears in 1QH (Hodayot) XII:36: *hitʿwddty wʾqwmh*. *HALOT* 795 divides the occurrences of *ʿwd* into two distinct roots. See Margalit *MLD* 37, who uses this meaning in his translation and interprets the bicolon as describing Baal as he arises in the assembly. Cf. also van Zijl, *Baal* 87.

have *D*-stem transitivizing force, i.e., "to make tremble," which in our context would perhaps carry the connotation, "to speak in a loud and imposing voice." This line of approach, of course, is speculative.

The tricolon of lines 12–14a opens Baal's speech with his description of someone's outrageous actions against him in the assembly of the gods. Who is this opponent who abased and spit at Baal? The most obvious candidate would be Yamm, whose conflict with Baal plays such a central part in the cycle (1.1–1.2). Such personal confrontations between the two appear to be mentioned in two passages. 1.1 IV 13–27 describes El's proclamation of Yamm as ruler of the council and refers in a broken context (lines 22–23) both to Baal and to insults (*kd yn'aṯn*: "Thus he reviles me (?)"), although it is not clear who is the subject of the insults. The second passage is found in 1.4 VI 13, where the verbs *qlṣ* and *wpṯ*, central in our passage, appear in a somewhat broken context, but clearly related to a reference to Yamm in line 12.

In our interpretation of these lines, the first two cola consist of verbs. If our reading of the first two letters of line 12 is correct, then we find each colon beginning with a form of **qwm*, "to rise, stand up" (3rd masc. sg. perfect in line 12, imperfect in line 13). This is paralleled in the following bicolon (lines 14b–16), with similar forms of **šty*. The final verb in each of the two cola has the 1st sg. object pronoun *-n*. The only ambiguous element in the two cola is the word *ydd*, which is either a verb or a noun. Some scholars see it as the epithet, "the Beloved," and consider it the subject of the verbs in the two lines (Albright 1934: 119; Aistleitner 38; Wiggins 1993:52–53; Wyatt 1998: 95). This seems unlikely, however. The epithet *ydd* elsewhere is only used of Mot, and is always the B-word of a parallel pair, in which the proper name Mot is the A-word. Thus an appearance of the epithet without a prior reference to the name of the deity seems problematic. In addition, there is little reason to identify the opponent here as Mot, since he has not yet made an appearance in the story. It seems much more likely that *ydd* is a verb from the root **ndd*, "to move forward, stand" (cf. *DUL* 620; Pardee 1997a:258; *TO* 1.200, n. c; *CML*^{2} 58). The same verb appears in another context with **qwm* in 1.10 II 17: *lpnnh.ydd.wyqm*, "Before her he got up and stood."

The verb **qwm* is a standard term for assuming the posture appropriate for addressing an assembly (1.2 I 15–16//31; Dan 7:10; cf. Job 19:25; see Mullen 1980:231; *UBC* 1.288, 295). In BH the synonym **ʿmd* also is used in this manner in 1 Kgs 22:19; Jer 23:18, 22; Zech 3:4),

as is **nṣb* in Ps 82:1 (cf. an Egyptian example in Wenamun; *ANET* 29; Hoch 1994:126). The last words of each line describe the actions that outraged Baal during the assembly. The first verb, *wyqlṣn*, has been discussed above in the commentary on 1.3 V 28, p. 352. While it could be cognate to Arabic *qallaṣa*, "to oppose," we preferred to relate it to BH *qls*, "to scorn, abase." Pardee comes to the latter meaning by suggesting it as an extended meaning of Arabic *qlṣ*, "to shrivel." However one reaches the meaning, "to scorn," this seems a reasonable meaning here as in 1.3 V 28, although the alternative meaning "to oppose," is also quite plausible.[12] The verb *wywpṯn* in line 13 is apparently cognate with Arabic *nafaṯa* "to spit" (Pope 1947:341 n. 29, and in Smith 1998b:655; *UT* 19.806; *TO* 1.200 n. e; *MLC* 544; cf. perhaps Jewish Babylonian Aramaic **tpp*, see Sokoloff 2002:1226). Spitting as such was not considered inappropriate in some contexts, as reflected in Sumerian Proverb Collection 3.9 (as interpreted by Hallo 1985:27):

> To banquet without washing the hands,
> to spit without stamping (on the spittle),
> to blow (literally, cool) the nose without returning (the mucus) to dust,
> to use (literally, do) the tongue at noon without providing shade—
> these are abominations of Utu.

The issue seems not to be the behavior as such, but its obvious, derogatory meaning within the context of the assembly. As the object suffix indicates, the behavior was specifically aimed against Baal. Such an action is considered an act of contempt. De Moor (1987:49 n. 220) compares the offence of spitting in 1.4 II 12–14 to spitting in the community assembly in 1QS 7:13 (cf. Josephus, *BJ* II 147).

It is to be noted that the reading and reconstruction of *p[ḫ]r* in line 14 is not assured. However, the reference to the gods (*bn ʾilm*) and a setting in their midst (*btk*) are clear, which makes *p[ḫ]r* a highly plausible reconstruction.

The general intent of lines 14b–16 is clear, but the specific meanings of several words are not. In particular, there is uncertainty about

---

[12] Pope (1947:340–41, esp. nn. 28, 31) suggested that *wyqlṣn* might be understood as referring to "hawking," that is, gathering up of saliva in the throat before spitting (and relating it to the same Arabic root as Pardee). However, if we identify the *n* at the end of the word as the 1st sg. object suffix, this rendering becomes virtually impossible.

the appropriate root of *štt*, about the identity of the broken word at the beginning of line 15, and about the meaning of the noun *qlt*. The verb, *štt*, could be from **šyt*, "to place, set" (so, for example, *TO* 1.200; Coogan 1978:98; Dietrich and Loretz 1997:1156; *CML*[1] 95; de Moor 1987:50; Pardee 1997a:258) or from **šty*, "to drink" (e.g., Albright 1934: 119; Aistleitner 38; Cassuto, *BOS* 2.128; Gordon 1977:92). While recent scholars have tended to interpret it as coming from the former, there is a strong argument for relating it to the latter. In the previous lines 12–13 we have seen the apparent occurrence of the suffix and prefix forms of a single verb used in parallel to one another (*qm//yqm*). It seems reasonable to argue that the same is operative here (*štt//'ištynh*). In addition, there is no other example of **šyt* and **šty* being used as a parallel pair.

Before discussing the damaged word in line 15, we first turn to *qlt*, since it represents the parallel B-word in the second line of the bicolon. Three major interpretations of this word have been proposed. Several scholars understand it as "filth, cheap drink," i.e., a contaminated drink of some sort, inappropriate for consumption (cf. Coogan 1978:98; Dietrich and Loretz 1997:1156; *CML*[1] 95; *Thespis* 179; *ANET* 132; de Moor 1987:50; *MLR* 81). Others have rendered it as "dishonor, humiliation, disgrace, scorn, mockery" (so Albright 1934:119; *CML*[2] 58; Gordon 1977:92; Pardee 1997a:258). This interpretation has stronger backing from cognates (cf. BH *qālôn*, "dishonor, shame," *qĕlālāh*, "curse"; Akkadian *qalālu*, "to humiliate, dishonor," in the *D*-stem; Aramaic **qll*, "to be dishonored, lightly esteemed"). It also has a fairly clear parallel use in 1.6 V 12: *ʾlk bʿlm pht qlt*, "due to you, O Baal, I faced humiliation." A third translation, "whorl" (so Margalit, *MLD* 37; Wiggins 1993:52, 41–42; Wyatt 1998:96) has very little substantiation and relies largely on a mistaken reading of 1.4 II 4 (*qlt* instead of the certain *tʿlt*, cf. *MLD* 28–29, see the Textual Notes above on the line, p. 429). From this passage Margalit attempts to build an etymology of "whorl," based on *qll*, "to be light," and then proposes an unlikely reconstruction of the broken word in line 15 as *p[lk]*, "spindle." The most plausible rendering, therefore, is "dishonor, humiliation."

Turning from *qlt* to the broken word that is its parallel term in the first colon, all that we can say with reasonable certainty is that the word probably begins with a *p* and may end with a *t*. The most popular proposal for restoring the word has been *p[gl]t*, "foul meat," first suggested by Gaster (1946:24 n. 18) and followed by *CML*[1] 95; de Moor 1987:80 and CAT (cf. also Dietrich and Loretz 1998:1156).

Gaster cited BH *piggûl*, a term referring to unclean sacrificial fare (cf. *BDB* 803). This word is otherwise unattested in Ugaritic, but might fit as a plausible A-word with *qlt*, if the latter is understood as "filthy drink." It would also require that *štt* be understood as deriving from **šyt*. As noted above, neither of the latter two proposals is particularly likely, and so this reconstruction appears to be problematic as well (Held 1962:289–90; Sivan 1997:108). If *qlt* is best understood as "dishonor, humiliation," then the broken word in line 15 should have a similar meaning. Pope (MHP) suggested *p[qʿ]*, perhaps with a meaning of "insult," here, which would be suitable, perhaps as *pgʿt* (cf. BH *pegaʿ*, "evil occurrence"). This suggestion, of course, is speculative.[13] If we are correct in our understanding of this word-pair, then it seems clear that the two are to be taken as metaphorical rather than literal. Such metaphorical drinking is a well-attested image in the ancient Near East. Biblical literature uses such cup imagery in various ways to express one's lot (MHP): cup of salvation (Ps 116:13), cup of wrath (Isa 51:17, 22; Jer 25:15); cup of suffering (Matt 26:39).

In lines 17–22, Baal apparently speaks of himself in the third person using the popular form of the numerical proverb. Such proverbs are well known in Mesopotamian, Aramaic and Israelite literature. Many of them include a list of items considered an abomination to the deity (cf. Hallo 1985). The formula of describing "two"//"three" detested things appears in other "abomination sayings." Ben Sira 50:25–26 [B] reads: "There are two nations that my soul detests, the third is not a nation." The numbers "two"//"three" appear in other kinds of proverbs as well (see Prov 30:15–16; Ben Sira 23:16, Ahiqar, col. vi, saying 12 [*ANET* 428; Lindenberger 1983:65–67]; cf. de Moor and van der Lugt 1974:23 for similar proverbs in Sumerian and Akkadian). Our passage uses this sort of parallelism to mark the types of feasts Baal considers inappropriate. It is made up of three parts: the introductory bicolon (lines 17–18a), followed by a tricolon that describes the three feasts (lines 18b–21a), and a concluding bicolon which appears to suggest

[13] It may be noted that Avishur's list of word-pairs contains no pairs consisting of one word beginning with *p-* in the A-line and *qlt* in the B-line in any of the Semitic languages used in his study (Avishur 1984:765, 770, 774, 778, 780). Thus whatever word is reconstructed here, the pairing is thus far unique.

that the feast Baal mentioned in lines 12–16 was just such a detestable one (lines 21b–22).[14]

The word rendered "feasts" is *dbḫm*, which can also be interpreted as "sacrifices" (so Albright 1934:119; *CML*[1] 95; *CML*[2] 58; de Moor 1987:50; *MLR* 81; Wiggins 1993:52; Wyatt 1998:96). Pardee (1997a:258 n.142) has pointed out, however, that the Sumerian/Akkadian/Hurrian/Ugaritic polyglot text, *Ug* V 137 iii 6, equates Ugaritic *dabḫu* with Akkadian *isinnu*, Sumerian *EZEN*, "festival, feast." Since the context of the passage is a discussion about an assembly of the gods that clearly took place in connection with a feast (thus the reference in lines 14–16 to the "table" and "cup"), it seems best to render the noun here as "feast(s)" (so also *TO* 1.201; *BOS* 2.128; Dijkstra 1975:563; Gaster, *Thespis* 179; *ANET* 132).

The verb *śn'a* occurs only here in the literary texts. A participial form appears in 1.4 VII 36, "haters of Baal," and the verb may appear in a very badly damaged economic text, 4.217.8. It commonly appears in the Hebrew Bible (as *śānē'*), in contexts associated with Yahweh (cf. Deut 12:31; 15:22; Amos 5:21). In Prov 6:16 the verb appears in a numerical saying similar to our passage: "Six things Yahweh hates (*śānē'*), and seven are abominations (*tô'ēbôt*) for him."

In characterizing the despised feasts, the tricolon of lines 18b–21a uses three terms, *bṯt, dnt* and *tdmm 'amht*. Two major trends of interpretation are evident in the scholarly literature. The first sees these terms as referring to inappropriate sexual activity during a feast (cf. e.g., *Thespis* 179; Wiggins 1993:52; Wyatt 1998:96). Thus the first term, *bṯt*, "shame," cognate with BH *bōšet* (*BOS* 2.128; see *ANET* 132), is interpreted in such a sense. One may note that it sometimes occurs in the Bible in a context of sexual shame (cf. 1 Sam 20:30 and Jer 3:23–25). The second term *dnt* has been related to BH **znh*, "to fornicate" and is translated as such by some. But this proposed relationship between

[14] Roth (1965:80–81) argued that lines 17–21a are a proverbial saying from the context of the cult of Baal at Ugarit. The saying was originally entirely separate from the Baal Cycle and was set in its form when it was incorporated into the speech found in our passage. For Roth, this explains the shift from first person in lines 14–16 to third person in 17–21a. This proposal does not seem likely, however, since he can provide no corroboratory evidence for his reconstruction (cf. de Tarragon 1980:58). In addition, the gods speak of themselves in the third person fairly often in Ugaritic narrative: El does so in 1.4 IV 38–39, 1.6 III 4–5, and 1.14 I 41–43; Athirat does it just below in lines 28–30a. Thus there is no need to see this as an indication of the presence of a foreign literary fragment here. Roth's approach also fails to address how such a ritual saying would fit into the present context.

the two words is problematic. The Arabic cognate of BH **znh* is *zana*, which indicates that the first root consonant is **z*. Thus the word's rendering in Ugaritic as *d* would be highly irregular (van Zijl, *Baal* 91). Del Olmo Lete (1978a:45–46) attempted to salvage this etymology by positing an inner-Ugaritic development of **z* > **d̲* > **d* for this root. Though not impossible, the development would be unusual. The third word, *tdmm(t)*, could be viewed as cognate with BH *zimmâ*, a common euphemism for fornication or incest (Lev 18:17; 19:29; 20:14; Judg 20:6; for the form of the noun, see Good 1981). As support for this interpretation, one may note Jer 13:26–27, which uses *qĕlōnēk*, "your shame" (= *qlt* in line 15) and *zimmat zĕnûtēk*, "your lewd fornication," in successive lines (MHP).

While this interpretation is possible, the question arises as to how this subject fits into the context of the speech in which it appears. Nothing in the preserved lines before this section, either in Baal's speech or in the broken speech in lines 1–9, nor anything in the subsequent scene (lines 23ff.) gives any hint of a discussion concerning sexual matters. On the other hand, Baal's speech until now has dealt with conflict in the assembly and outrageous behavior there against Baal. The issue has been divine status and authority and affront to his honor. The other line of interpretation fits more closely into the context of the overall passage. The term *bṯṯ*, "shame," is compatible with the subject of Baal's humiliation in the assembly. A more likely etymology for *dnt* than the one proposed above is found in BH *dîn*, "strife, contention, conflict" (e.g., Aistleitner 39; *BOS* 2.128; de Moor 1987:50; *Baal* 88, 90–93). Again, such a meaning fits the context of Baal's speech. This word appears in context with *qālôn* (again = *qlt* in line 15) in Prov 22:10: "Drive out the one who scorns, and strife (*mādôn*) goes away, and conflict (*dîn*) and abuse (*qālôn*) cease." One may also note Prov 17:1, which refers to the semantically related *zibḥê rîb*, "feasts of strife" (cf. *BOS* 2.128 n. 59). A third possible etymology for *dnt* is to relate it to Arabic **d(w)n*, "to be low, mean, vile" (*SPUMB* 93; for further references, see del Olmo Lete 1978a:45; cf. *TO* 1.201 n. g; Dietrich and Loretz 1997:1156; Dijkstra 1975:563; Pardee 1997a:258, 2004a:73). This may be the meaning of the text, although we would argue that the relationship between this passage and the surrounding narrative suggests that the second interpretation is the more likely.

Similarly, there is a potential cognate for *tdmm(t)* in BH *dĕmāmâ*, "whisper" (cf. 1 Kgs 19:12; Job 4:16; Levine 1993:101–2). Thus one might render the phrase, *tdmm ʾamht*, "whispering of the maidservants"

(so Albright 1934:119; *BOS* 2.128). In the context of humiliation and outrage, this may refer to quiet, but disrespectful derision among the serving girls at the feast (cf. "une fête où les servants se conduisent mal"; Pardee 2004a:74). Such treatment by servants is seen as the ultimate insult. In the Akkadian text, *Ludlul bēl nēmeqi* I:89–90 (Foster 2005:397), we see a more open defamation of this sort by a female servant. The narrator, in the midst of a disastrous change of fortune, states:

> My slave cursed me openly in the assembly (of gentlefolk),
> My slavegirl defamed me before the rabble.

This passage refers to defamation that all in the assembly can hear, while Baal's complaint refers to defamation whispered among female servants. Thus all three of the words and phrases describing the offending feasts can be related plausibly to the situation that Baal discusses directly above.

Recognition of this passage as a direct continuation of the discussion of the feast in lines 12–16 situates the concluding bicolon of the speech also within that context. Having described the kinds of actions during a feast that he hates, Baal then indicates that those very features were present in the feast he has been discussing, thus summing up his outrage over the events. Some simply see this bicolon as a further explanation as to why Baal dislikes the three kinds of feasts, for example Gibson (*CML*^{2} 58):

> For therein shameful conduct is indeed seen
> And therein the debauchery of handmaids.

While not impossible, there are two objections to this interpretation. First, there is the same problem that was brought up concerning the sexual interpretation of the previous lines, namely that taking this whole section as a general discussion of feasts that offend the god makes the passage difficult to place into the context of the preceding part of the speech. Secondly, it hardly seems to be explanatory, as it repeats the descriptions given in the previous tricolon. Such repetition is not impossible, of course, in this type of poetry, but an interpretation that places the comment more clearly into the context of the overall speech seems preferable. Thus we render the verb *tbṭ* in the past tense.

The etymology of *tbṭ* is uncertain. Most scholars have taken it to be from **nbt*, which appears regularly in BH only in the Hiphil, with the meaning, "to look, see," and in Akkadian with the meaning "to be bright, to shine" in the *G*-stem (*CAD N/I*:22–23). A meaning in this

semantic field appears quite plausible in the passage. One could render the line, "For in it (i.e., the feast discussed in lines 12–16) shame indeed shone forth" (cf. *Thespis* 179); or "For in it, shame indeed was seen" (so more commonly, e. g., Albright 1934:119; *TO* 1.201; Dietrich and Loretz 1997:1156; *CML*[2] 58; Pardee 1997a:258). Another interpretation (e.g., *BOS* 2.128 n. 60; *CML*[1] 95 n. 5) focuses on the Arabic and Mishnaic meaning of *nabaṭa*, "to sprout, flow out," also a plausible rendering for the verb in our passage. Dijkstra (1975) proposed relating the verb to the root ***hbṭ*, found in Ugaritic with the apparent meaning, "to knock down." His understanding of the line is quite different from the other renderings: "When they are shamefully abased (i.e., knocked down) there." His derivation incurs the problem that in neither of the two clear occurrences of the prefix form of the verb *hbṭ* in Ugaritic does the *h* assimilate (*yhbṭ* in *CAT* 2.4.20; *thbṭ* in 2.47.16).

An ambiguity arises concerning the fact that lines 20–21 read *tdmm ʾamht*, while line 22 has *tdmmt ʾamht*. Some scholars read the first *tdmm* as a verb, and the second, with the added *t*, as a noun (e.g., *CML*[2] 58; *TO* 1.201; Pardee 1997a:258). While plausible, it seems less likely that there would be such a striking semantic shift in this kind of repetition of phrases in succeeding poetic units. It seems more likely that both *tdmm* and *tdmmt* are nouns (so Dietrich and Loretz 1997:1156; *CML*[1] 95; Gordon 1977:92; Wiggins 1993:52; Wyatt 1998:96). It may be that the poet simply uses a masculine and a feminine form in the parallel passages for aesthetic purposes. It may also be the case that we have a scribal error in line 20 and that a *t* is to be reconstructed at the end of the word.

We may summarize our interpretation of the first twenty-two lines of this column thusly. The first nine broken lines appear, at least from line 5, to be a speech by someone discussing the kingship of a god, presumably Baal, perhaps referring to an enemy of Baal in line 5. The speaker is unclear, although Anat seems a likely candidate. Lines 10–11 introduce Baal's response (lines 12–22). In these lines he describes an event in the past when a male deity, perhaps Yamm, dishonored him during a feast and assembly of the gods. This god scorned Baal and spit in the assembly, clearly considered a highly insulting act toward Baal. In a metaphoric description, Baal states that he "drank" disgrace and dishonor from the outrageous behavior of the unnamed god. He then indicates that the feast during which this happened was filled with every element of inappropriateness that he hates. Baal's anger at this public humiliation is obvious in the speech. Thus the speech itself

can be seen to hold together in an artful way. Unfortunately, its place within the larger context of the narrative, spoken directly before Baal and Anat meet Athirat, remains unresolved. It is simply not clear why Baal brings up this event directly before the meeting, or what role it plays within the context of Baal's attempt to gain the support of Athirat for his goal.

Lines 23–44: Athirat's Meeting with Baal and Anat

This section describes the meeting of Baal and Anat with Athirat, their presentation of the gifts to the goddess, the resulting conversation and meal. The poet provides some dramatic suspense in the dialogue of lines 28–36, in which Athirat suggests an initial reluctance to accept the gifts. The significance of her acceptance is emphasized by the fourfold repetition of the word pair **mgn//*ǵzy* in lines 25–26, 28–30, 30–32, 33–36. The conversation is followed by a characteristic description of a meal for the gods, part of a typical welcome for visitors.

The section opens in lines 23–24 with the arrival of Baal and Anat before Athirat. As discussed above (p. 469), there is often a certain amount of action that occurs between the account of the arrival of a deity at the home of another god and the actual meeting between them (cf. 1.2 I 21–22; 1.3 IV 39–46). We may assume that this is their first meeting since the gods arrived. The bicolon opens with a temporal referent *ʾaḫr*, which can be a preposition, "after," or a conjunction, "afterwards, then, when." Most scholars have recognized it here as a conjunction (see Pope's discussion in 1986 = 1994:305–10), governing both lines of the bicolon. Thus Baal and Anat both arrive at the same time. A few have rendered it as a preposition and have suggested that Baal has arrived prior to Anat's appearance (e.g., *TO* 1.201; Coogan 1978:99; Gordon 1977:92; cf. Pardee 1997a:258 n. 125 holds open this possible reading). But this is unlikely. The conjunction *ʾaḫr* is used in several very similar contexts in which there is no question of a sequential arrival (e.g., 1.4 V 44, *ʾaḫr mǵy kṯr wḫss*, "Then Kothar wa-Hasis arrived"; similarly in 1.17 V 25–26). The best parallel is in 1.2 I 30, where *ʾaḫr* appears at the beginning of a bicolon and clearly governs the two lines: *ʾaḫr tmǵyn mlʾak ym//tdʿt ṯpṭ nhr*: "Then the messengers of Yamm arrived,//the legation of Judge River."

In lines 25–26, the two gods present the gifts to Athirat. On the meaning of the verbs **mgn* and **ǵzy*, see above, pp. 407–9. For the

epithets of the three deities in lines 23–26, see UBC 1.153, and the Commentary, pp. 188 and 404–7. This presentation of gifts, of course, may be expected as the first order of business upon meeting with the goddess, and presumably it reflects the protocol of meeting among human royalty too. As discussed above, the bringing of gifts was an important political activity in the Late Bronze Age Levant (see above, pp. 407–8). Here it indicates that Baal desires friendly relations and an alliance with Athirat.

Athirat's response to the gifts (lines 28–32) is clearly not quite what Baal and Anat hoped for. There are two aspects of Athirat's questions here that are important to recognize. First, they indicate that she is not at this point ready to accept the gifts. Accepting them will indicate that she recognizes Baal's legitimacy and will also place her under obligation to reciprocate. Thus her pointed questions here, "Why are you giving gifts to me? Have you given gifts to El?" suggest a distrust of the motives of the givers, as well as a hint that they may not be following the appropriate protocol, if they have not taken similar or superior gifts to El himself. The emphasis on El in this response is marked by his standard epithets (appearing already in 1.1 III 26, IV 12, V 22, 1.2 I 16, 33, 36, 1.2 III 16, 17, 19, 21 as well as 1.14 II 10–11). Since we know that she does accept the gifts eventually and agrees to help Baal, it may be that these questions are intended by Athirat to remind the young gods of her superior status and their vulnerability. They thus may not actually represent serious doubts in Athirat's mind. In any case, this exchange creates suspense in the story.

Anat responds to Athirat's questions. In the same way that she brought Baal's request for a palace before El, she plays the role of intermediary before Athirat as well. As in the former situation, it was presumably inappropriate for Baal to speak directly in a situation where he is at a clear disadvantage. Anat's response is both defensive and conciliating, emphasizing as it does that they indeed want to honor Athirat with the gifts, but do not intend to ignore El either.

The broken word at the beginning of line 34, *[ ]m*, has caused some confusion among interpreters. A number simply ignore it in their translations (e.g., *TO* 1.202; *CML*[1] 95; Pardee 1997a:258). Several restored it as *[ʾu]m*, "mother" (e.g., Aistleitner 39; *CML*[1] 94–95; *Thespis* 180; *CML*[2] 58). This reading must now be dropped on epigraphic grounds, since the trace of the letter indicates that it is most likely /k/, /ʾa/ or /n/. Of these, the only one that appears probable grammatically is /k/, which

forms ⌜*k*⌝ *m*. This can be understood as the third fem. sg. direct object marker with enclitic *-m*, i.e., ("we give gifts to) you" (this reading already proposed in Coogan 1978:99 and de Moor 1987:50).

The next three lines (lines 37–39) unfortunately are broken. Each line contains the name of one of the three deities, but the verbs describing the action (or further direct discourse?) fall in lacunas at the beginning of these lines. They may describe the beginning of the banquet that is the subject of the following lines, since the two passages parallel to the description of the banquet in lines 40–44 (1.4 VI 55–59 and 1.5 IV 11–16) in neither case initiate the discussion of the feast, but occur after the banquet has been introduced. Less likely, they might describe Athirat's acceptance of the gifts. But none of this is certain.

The last five preserved lines are broken, but can be restored confidently on the basis of 1.4 VI 55–59 and 1.5 IV 11–16 (and other shorter passages, such as 1.4 IV 36–38 and 1.17 VI 3–6). They describe the banquet held in honor of Baal and Anat's arrival. The gods eat and drink at the feast, a conventional aspect of divine interaction (see *UBC* 1.154–55). This may be the divine equivalent of ritual as the setting in which divine-human communication takes place (cf. Wright 2001:47). The introductory line, 40b–41a, refers to the gods eating and drinking, the usual sequence for describing feasting (Lichtenstein 1968). If the line is to be restored closely to that in 1.4 VI 55, then it begins with *ʿd*, often translated "while." The particle is perhaps meant to suggest the divine feast as the general backdrop to the interaction of the three deities already described. At the same time, it is possible that the previous broken lines (lines 37–39) actually introduce the scene of the banquet.

The phrase in lines 41b–42a, *mrġṯm [ṯd]*, "sucklings of the breast," has occasioned two very different interpretations. Some scholars (e.g., *Thespis* 180, 192; *TO* 1.202; Gordon 1977:92; Pope 1977:657; *PU* 2.72) have viewed it as the parallel B-word with *ʾilm* in the previous colon, and thus see it as an epithet for the gods, i.e., those who suckle the breast of the goddess, presumably Athirat. The majority of interpreters, however, see the phrase as the A-word in parallel with *mrʾi* in the following colon, and thus as a description of the meat eaten in the feast (*BOS* 2.159; *CML*^{2} 58; cf. *ANET* 134; de Moor 1987:51; Pardee 1997a:258; Wyatt 1998:97).

Several arguments for reading the phrase as an epithet of the gods have been put forward. The gods sired by El in 1.23, for example, are variously called "suckers of the nipples/the breast of Athirat/the Lady"

(*ynqm b'ap zd/dd 'atrt*), in lines 24, 59 and 61. Kirta's son, Yaṣṣib, is said to be one who "sucks the milk of A[thi]rat, draws the breast of Adolescent [Anat], the wet nurses [of the gods]" (1.15 II 26–27). An ivory panel from a royal bed excavated from Ugarit depicts a female giving suck to two other figures (Pope 1977:pl. XI), perhaps a portrayal of the divine nursing of the king. Another significant argument is that in general, the initial parallel term in Ugaritic poetry is usually the more common one and the following parallel term the less common one and the one that is expanded in form. This is not the case if *mrġtm [td]* is the A-word to the following *mr'i*. The latter is much more common than the former, and the former is certainly expanded in form, as is expected of a B-word. Thus it seems plausible to relate it to *'ilm* as an epithet of the gods.

But there appear to be better arguments in support of the interpretation of the phrase as food. The first colon of this passage, lines 40b–41a, occurs also as a single line in another context (1.4 V 48) and therefore it may best be seen here as a line prefixed here to the following bicolon (lines 41b–43a). The verb *[wtp]q* in line 41 governs both lines of the bicolon, thus tying the two nominal phrases together as parallels, even though the second phrase (*qṣ mr'i*) is the more common of the two. In addition, the final line, *[bḥrb m]lḥt qṣ [mr'i]*, actually appears elsewhere (1.3 I 7–8; 1.17 VI 4) as the second line of other bicola, in which it is the parallel of the preceding line. It is always dependent on the preceding line and it expands the nominal elements of the preceding parallel. In this context, then, *mrġtm [td]* must be the first part of the parallel pair. On the basis of this reasoning, *mrġtm [td]* is best interpreted as part of the rich fare of the divine feast.

The feast closes with a stereotypical bicolon for drinking, found in complete form in El's invitation to Athirat to eat and drink in 1.4 IV 36–38 and in the description of the divine feast held at the inauguration of Baal's palace in 1.4 VI 58–59. The vessels for drinking, *krpn//ks*, appear twice in the description of Baal's feast in 1.3 I 10–11, 13–14. An evocative, traditional sort of image, wine (*yn*) here is called "blood of trees" (*dm ṯṣm*), or less literally "blood of the grapevines" (Ginsberg 1982:101 n. 131). This image is attested in comparable form as the "blood of grape(s)," for example in Gen 49:11 (*bayyayin//ûbĕdam-ʿănābîm*) and Deut 32:14 (*wĕdam ʿēnāb tišteh-ḥāmer*).[15] The expression *dm ʿnb* occurs

[15] So *CML*[2] 58, which also cites 1 Macc 6:34. For further discussion, see *SPUMB* 146–7; M. L. Fisher 1969:66–67; cf. Akkadian *damu* in *CAD D*:79.

also in Ben Sira 39:26 [manuscript B]. In the Tyrian legend of the invention of wine cited by Achilles Tatius II:2 (Gaselee 1917:60–61; cf. *Thespis* 180), Dionysius the god of the vine said that wine "is harvest water, the blood of the grape (*haima botrous*)." Further parallels are provided in citations given in Lipiński 1970:86–87 and de Moor and van Lugt 1974:14 (see also Zamora 2000:599–601).

The feast often marks the close of such an episode, but here it may be assumed that the following lacuna moves to the next order of business between the deities, i.e., gaining Athirat's agreement to ask El about the palace for Baal. Nine lines are either completely or almost completely destroyed at the end of column III, and the following column IV begins with a lacuna of about twelve lines. The missing twenty-one lines presumably describe Athirat's acceptance of the gifts, Baal's request that she go to El to plead for him (probably including the oft-repeated lament [1.3 IV to Anat, and 1.4 I to Kothar]) about his lack of a palace, followed by her agreement to go. When column IV becomes legible, the goddess is preparing for her trip to El's abode.

Textual Notes

Line 2. ’at̲r̊] The reading of the /r/ is uncertain epigraphically, but context assures the reading. There is a pockmark, not part of the /r/, to the right of the /t̲/. The left and upper line of one small wedge is visible just to the right of the pockmark. When a sharp light is shone directly from the right, there seem to be hints of the lowest interior of a small horizontal above the latter.

Line 3. w’am̊r̊r̊[ ] The /m/ is damaged, but the upper line and right tip of the horizontal are preserved, as is the deep interior of the vertical. Of the first /r/, traces of the left side of the two left horizontals are visible, along with the probable bottom line of the right wedge. The second /r/ is represented only by a possible lower line of the lower left wedge. But this may be breakage.

Line 5. ṣmd.pḫl [We see no traces of a word divider after /pḫl/. The indentation identified by CAT as part of a /š/at the break is actually part of the break, not a wedge.

Line 6. yrq̊[The lower corner of the horizontal of the /q/ is preserved. While other letters are possible epigraphically, the context confirms /q/.

Line 7. ’atn̊t[The final /t/, assured by context, is only represented on the tablet by the lower left corner of the wedge.

Line 27. kyphnh The final /h/ has four wedges.

Line 28. {y}wyṣḫq It appears that Ilimalku began to write a /y/ here, but recognized, after making two wedges, that he needed to place a /w/ before the /y/. He simply placed the two left wedges of the /w/ over the aborted letter.

Line 29. wẙkrkr /y/ is not certain epigraphically, though the context assures the reading. Only the general shape, which is compatible with /y/, seems present. We do not see any certain edges. The word wraps all the way around the right edge almost to the face of column V at line 31. For the final /r/, see the photo of column V edge, Image 66, bottom right.

Line 30. wyṣ̊[All that is left of the letter at the break is the upper left corner of a single vertical. But context assures the reading of /ṣ/.

Line 33. wt̊gt[Of the first /t/, only the left indentation here is actually a wedge. The larger indentation is a break, not another large wedge; /t/ seems the best possibility. Following the second /t/, there need be no additional letters on this line.

Line 37. bk.ḫrṣ̊ Most scholars emend /bk/ to /bk<s>/, on the basis of the parallel in 1.4 VI 59. One may note, however, that *bk* could also could be a variant (< **bbk*, "from a cup"), so that emendation may not be necessary. Only the right wedge of the /ṣ/ is preserved.

Line 38. ml̊k The /l/ is largely chipped away. The left line of the left wedge is preserved, however, along with perhaps the deep interior of the middle wedge. The /k/is shallow, but all three wedges are visible on the edge of the tablet.

Line 41. ḫkmt The final /t/, on the edge, is damaged by a crease (not a crack) on the tablet. There appears to be an accidental vertical line along the edge from line 39 to line 42.

Line 45. klnyn.q̇[ ]ḫ[ ]n̊[The left side of the /q/'s left wedge is preserved, as is the upper half of the right wedge. The right part of the upper wedge of the /h/ is clear, and the deep interior of the middle wedge is preserved. The letter is certain. There is no trace of a word divider after /h/. CAT sees a tiny break in the tablet that has been misread. The following /n/ is very worn, and only the upper half survives about the large crack. Little clear distinction between the individual wedges can be seen. Thus the letter is epigraphically uncertain, though the context argues strongly for /n/.

Line 46. klnyn̊[ ]b̊l̇. ksh After the first five letters, the text moves onto the small fragment that constitutes the lower right corner of the tablet's obverse. It is particularly poorly preserved. The face of the fragment is mottled with tiny cracks, which make reading it more difficult. The upper left part of the second /n/ is preserved along the break of the upper fragment, with a hint of the middle wedge's upper line (this is not easily seen in the photo). We don't see any traces of an

additional /n/ preceding the /b/, as proposed by CAT. The /b/ is not well preserved. The horizontals are visible, but the vertical that seems to show up on the left may only be some breakage. It is also possible that the crack above the right horizontal is the remains of the right vertical. The outline of the following /l/ is clear in the discoloring of the interior. Part of the upper left wedge is preserved. To the right one can discern the verticality of the letter.

Line 47. [ ]ỷ[ ]l̊ẏṣḫ The first /y/ is uncertain. Two verticals are discernable, with only the right side of the left vertical surviving. No clear remains of multiple wedges are visible, but /y/ is most likely. Only the right wedge of the /l/ is visible, but context supports the reading. The edges of the /y/ and /ṣ/ are largely broken away, but the deep interiors are largely there.

Line 48.]l̊ Epigraphically uncertain, but parallels assure the reading. Only the right wedge is nearly complete, with the right side of the middle wedge partially preserved.

Line 49. ’åṯrt /’a/ The right tip of a horizontal is preserved on the broken left edge of the column. Context assures reading.

Line 50. ’åryh /’a/ The right tip of the right horizontal is preserved at the break.

Line 53. ṁṯb̆rbt The central section of the /m/’s horizontal is preserved, as is the right line of the vertical and perhaps part of its upper line. The first /b/ is in bad shape. The interior depths of the horizontals and perhaps part of one of the verticals survive. There seems little room for a word divider after /mṯb/, but the damage may mask one, as suggested by CAT.

Line 54. ṁṯb̆.klt. /mṯb/ is badly damaged, but certain. Fragments of both the horizontal and the vertical of the /m/ are visible. Only the upper line and the right tip of the /ṯ/ are preserved. The upper lines of the two verticals of the /b/ are visible, plus the right side of the right horizontal. Contrary to CTA and CAT, there is a word divider still visible after /klt/.

LOWER EDGE

Line 58. wy‘nlṭpn Contrary to CAT, there is no word divider after /wy‘n/.

Line 60. ṗ‘bd The /p/ is in bad shape, but certain. The upper wedge is fairly well preserved, but only fragments of the lower wedge survive.

’aṅk The edges of the /n/ are badly worn. There are only vague indications here of multiple wedges.

’aḫd. The /ḫ/ is only partially preserved. The left side is visible, but the right is badly damaged.

Line 62. İbnt The wedges of the /l/ were placed on the tablet very unevenly. The left two wedges begin at a much lower level than the right wedge. The /n/ has four wedges.

bṫ Only the left side of the /t/ is preserved.

lb‘l The last /l/ of this word appears to have four wedges.

Col. V 1 ḵm The /k/ is damaged, with the right wedge clear, along with the right tip of the lower left wedge, and a hint of part of the upper left wedge. That this is a /k/ is assured by context.

ẇḫẓr Very little of the /w/ is preserved, most of it having been chipped away. But parts of the left wedges and of the two right wedges are discernable. Pieces of all four of the wedges of the /ḫ/survive. The lower horizontal of the /ẓ/ is visible, as is the upper left corner of the upper horizontal and much of the *Winkelhaken*.

Translation and Vocalized Text

Athirat and Her Servant Travel to El

1	…Bull [El…Father].	ṯôrv ['ilv 'abv…]
1–2	[And Lady] Athir[at of the Sea answered]:	[wa-ta'nî rabbatu]/'aṯira[tu yammi]
2–4	"[Hear, O Qudsh] wa-Amrar, [O Fisher of Lady] Athirat of the Sea:	[šama' la-qudši]/wa-'amrari [la-daggayi rabbati]/'aṯirati yammi
4–7	[Tie the horse,] harness the stallion; [Set ropes of] silver, Golden [bridles]; Prepare the ropes of [my] mare."	[madal 'êra]/ṣamad puḥala [šît gapanīma dūta]/kaspi dūta yaraqi[1] [niqabanīma]/ 'udub gapanī 'atānati[-ya]
8	Qud<sh> wa-Amra[r] complied:	yišma'u qud<šu> wa-'amra[ru]
9–12	He tied the horse, harnessed the stallion; He set ropes of silver, Golden bridles; He prepared the ropes of her mare.	madala 'êra ṣamada puḥala/ šāta gapanīma dūta kaspi/ dūta yaraqi niqabanīma/ 'adaba gapanī 'atānati-ha
13–15	Qudsh wa-Amrar clasped, Set Athirat on the back of the horse, On the beautiful back of the stallion,	yaḥabbiqu qudšu wa-'amraru/ yašîtu-na 'aṯirata lê-bamati 'êri/ lê-yasamsamati bamati puḥali

[1] See the discussion in Huehnergard 1987b:134.

16–17	Qudsh flared up as a flame, Amrar, like a star in front.[2]	qudšu yu'uḫadu-ma šab'iri/ 'amraru ka-kabkabi lê-panīma
18–19	Behind (came) Adolescent Anat, But Baal departed for the summit[3] of Sapan.	'aṯāru batulatu 'anatu/ wa-ba'lu taba'a[4] maryami ṣapāni
20–22	So she headed out For El at the springs of the Rivers, Amid the streams of the Deeps.	'iddaka la-tatina panīma/ 'imma 'ili mabbikê naharêma/ qirba 'appiqê tahāmatêmi
23–24	She came to El's mountain And entered the tent of the King, the Father of Years.	tagliyu ḏada 'ili wa-tabū'u/qarša malki 'abi šanīma
25–26	At the feet of El she bowed down and fell, Prostrated herself and honored him.	lê-pa'nê 'ili tahburu wa-taqîlu/ tištaḥwiyu wa-takabbidu-hu
27–28	There—El indeed perceived her! He loosened his brow and laughed.	halumma 'ilu kī-yaphîna-ha/ yapriqu liṣba wa-yiṣḥaqu
29–30	His feet on the footstool he stamped, And twirled his fingers.	pa'nê-hu lê-hadāmi yaṯpudu wa-yakarkiru/'uṣbu'āti-hu

El and Athirat Converse

30	He raised his voice and decl[ared]:	yiššaʾu gā-hu wa-yaṣû[ḫu]
31–32	"Why has Lady Athir[at of the S]ea arrived? Why has the Creatress of the G[ods] come?	'êka maǵayat rabbatu 'aṯira[tu ya]mmi/ 'êka 'atawat qāniyatu 'i[līma]

---

[2] The final word in this line, *lpnm*, may belong to the following bicolon instead. If so the lines would read:

Qudsh flared up as a flame,
Amrar, like a star.
Ahead went Adolescent Anat,
But Baal departed for the summit of Sapan.

See the Commentary on these lines below.

[3] Cognates include BH *mārôm* (*BDB* 928). The only interpretive issue is whether the form is singular (e.g., 2 Sam 22:17, Isa 33:5, 57:15, Jer 25:30) or plural (used collectively for singular; see Isa 33:16). The singular is overwhelmingly predominant in the Hebrew, and nothing in the context here requires the plural.

[4] Cognates include Akkadian *tebû*, "to depart, set out" Syriac *tb'* and Arabic *tabi'a*, "to follow" (cf., *UT* 19.2517); see also *UBC* 1.218 n. 5; *DUL* 857; and Huehnergard 1987b:184.

33–34	Are you very hungry, having travelled, Or are you very thirsty, having jour[neyed]?	raġābu raġibti wa-taġîti/ himma ġamā'u[5] ġami'ti wa-'assa[ti]
35–38	Eat, indeed drink! E[at] food from the tables, Drink wine from goblets, From a golden cup, the blood of trees!	laḥami himma šitiyi-ma laḥa[mi]/bi-ṯulḥanati laḥma šitî/bi-karpanīma yêna biki ḫurāṣi/dama 'iṣṣīma
38–39	Or does the 'hand' of El the King excite you, The love of the Bull arouse you?"	himma yadu 'ili malki/ yaḫāsisu-ki 'ahbatu ṯôri ta'āriru-ki
40	And Lady Athirat of the Sea answered:	wa-ta'nî rabbatu 'aṯiratu yammi
41–43	"Your decree, O El, is wise, You are wise for eternity, A fortunate life is your decree.	taḥmu-ka 'ili ḥakama ḥakamta/'imma 'ôlami ḥiyyatu ḥaẓẓati/taḥmu-ka
43–44	Our king is Mightie[st] Baal, Our ruler, with none above him.	malku-na 'al'iy[ānu] ba'lu/ ṯāpiṭu-na wa-'ênu du-'alênu-hu
45–46	All of us will br[ing] him a cha[lice], All of us [will b]ring him a cup.	kullu-nayyanna qa[ša]-hu na[bilu]/ kullu-nayyanna [na]bilu kāsa-hu
47–48	[In lame]nt Indeed he cries to Bull El, his Father, To [E]l, the King who created/ established him.	['āni]yu la-yaṣûḥu ṯôra 'ila 'abā-hu/ ['i]la malka dā-yakāninu-hu
48–50	He cries to Athirat and her children, The goddess and the band of her brood:	yaṣûḥu 'aṯirata wa-banī-ha 'ilata wa-ṣibbirata/'aryi-ha
50–51	'For Baal has no house like the gods', No court like Athirat's children's,	wa-na 'ênu bêtu lê-ba'li/kama 'ilīma wa-ḥaẓiru ka-banī 'aṯirati
52–53	The dwelling of El is the shelter of his son, The dwelling of Lady Athirat of the Sea,	môṯabu 'ili maẓlalu bini-hu/ môṯabu rabbati 'aṯirati yammi

[5] For cognates, see *DUL* 322. For loans into Egyptian, see Hoch 1994:386.

54–55	The dwelling of the Noble Brides, The dwelling of Pidray, Daughter of Light,	môṯabu kallāti kaniyāti/ môṯabu pidrayi bitti ’āri
56–57	The shelter of Tallay, Daughter of Showers, The dwelling of Ars<ay>, Daughter of the Wide World.’”	maẓlalu ṭallayi bitti ribbi/ môṯabu ’arṣ<ayi> bitti ya‘ibidrayi
58	And Beneficent El the Benign replied:	wa-ya‘nî laṭipānu ’ilu dū-pā’idi
59–60	“So am I a servant, Athirat’s slave? So am I a slave who handles tools?	pa-‘abdu[6] ’ana ‘anû-na’aṯirati/ pa-‘abdu ’anāku ’āḫidu ’ulaṯi
61–62	Or, is Athirat a servant? Does she make bricks?	himma ’amatu ’aṯiratu tilbanu/labināti[7]
62–V 1	Let a house be built for Baal like the gods’, A court, like Athirat’s children’s.”	yubnâ[8] bêtu lê-ba‘li/kama ’ilīma wa-ḥaẓiru ka-binī ’aṯirati

Commentary

Poetic Parallelism and Word/Syllable Counts

		semantic parallelism	word/ syllable count
1	ṯôrv [’ilv ’abv . . .]	a b c	
1–2	[wa-ta‘nî rabbatu]/’aṯira[tu yammi]	a b (x, y of z)	4/12

This is a monocolon introducing direct speech below and further tied to it by the repetition of the goddess’ name and title.

2–4	[šama‘ la-qudši]/wa-’amrari	a b (x + y)	3/9
	[la-daggayi rabbati]/’aṯirati yammi	b’ (x of y = p, q of r)	4/13

The syntax binds the two lines, but as a further outstanding feature, the title of *’amrari* ties sonantly to that of his master, *’aṯirati yammi*.

---

[6] For syllabic evidence, see Huehnergard 1987b:158.
[7] Fem. pl. For syllabic evidence, cf. the gloss in EA 296:17, *la-bi-tu*.
[8] This jussive form derives from **yubnay*; see *UG* 511.

4–7	[madal ‘êra]/ṣamad puḥala	a b a’ b’	4/9
	[šît gapanīma dūta]/kaspi	a c d e	4/9
	dūta yaraqi [niqabanīma]/	d e’ c’	3/10
	‘udub gapanī ’atānati[-ya]	a’’ c b’’	3/10

These lines are parsed as a four-line unit and not simply as two bicola, since the initial line is preparatory for the middle two lines, while the fourth line recapitulates the preceding three lines. The three animal terms belong to the first and fourth lines, while the animal’s bridles, etc., dominate the middle two lines. As recapitulation, the fourth line combines one term for bridle with one term for the animal.

8	yišma‘u qud< šu> wa-’amra[ru]	a b (x + y)	3/9

This monocolon is similar to the speech-opening formula we saw in lines 1–2 above. In terms of line-length, it is continuous with the preceding unit.

9–12	madala ‘êra ṣamada puḥala/	a b a’ b’	4/12
	šata gapanīma dūta kaspi/	a c d e	4/10
	dūta yaraqi niqabanīma/	d e’ c’	3/10
	‘adaba gapanī ’atānati-ha	a’’ c b’’	3/11

This unit virtually duplicates lines 4–7, except that the imperatives of the latter are replaced with suffix verbs (following the command-fulfillment pattern of imperatives followed by narration with **qatal* forms, in contrast with the pattern of jussives, followed by prefix indicative forms, cf. Fenton 1969).

13–15	yaḥabbiqu qudšu wa-’amraru/	a b (x + y)	3/10
	yašîtu-na ’aṯirata lê-bamati ‘êri/	a’ c d (x of y)	4/14
	lê-yasamsamati bamati puḥali	d (x of y of z)	3/12

The second and third lines are particularly strong in their parallelism, highlighted by the repetition of *bmt*. The first line uses a verb that prepares for and leads into the verbal action of the next two lines. It also introduces the full name of the agent, who is the subject of the other lines. Despite these relations, the first line on the face of it seems quite at variance with the other two lines. Yet there are a few features tying the first line to the others. The occurrence of divine names, **yqtl* indicative verbs and perhaps a subtle resonance of *’amraru//bamati ‘êri*

connect the first and second lines. Note also *-am-* three times in the third line. Perhaps also a subtle resonance is *ya-* at or toward the head of all three lines. Noegel (2004:10) emphasizes the poetic clustering of reduplicated forms in this unit (*ysmsmt* and *'amrr*, as well as *'amrr and kbkb* in the following unit).

16–17	qudšu yu'uḫadu-ma šab'iri/	a b c	3/10
	'amraru ka-kabkabi lê-panīma	a' c'd	3/11
or	qudšu yu'uḫadu-ma šab'iri/	a b c	3/10
	'amraru ka-kabkabi	a' c'	2/7

There is uncertainty about whether *lpnm* belongs with this bicolon or the following. Because plausible interpretations can be made for both positions, we provide both versions here. The divine titles are parallel semantically and syntactically, and the overall semantics of the bicolon show general parallelism. Apart from the subjects, the lines show little or no syntactical, morphological or sonant parallelism. It is to be noted that Noegel (1995:92–93) has proposed seeing "Janus parallelism" in the use of *šb'r* in this context; he suggests understanding double meanings of "to lead (a caravan)" connecting to what he views as a verb, **'aṯr*, in the next unit, and "to burn" relating to the image of Amrr "like a star." The former is clear; the latter is not. The validity of Noegel's proposal depends on the interpretation of **'aṯr* (see the Commentary below).

18–19	'aṯāru batulatu 'anatu	a b (x, y)	3/10
	wa-ba'lu taba'a maryami ṣapāni	c' b' a' (x of y)	4/12
or	lê-panīma'aṯāru batulatu 'anatu	a b c (x, y)	4/14
	wa-ba'lu taba'a maryami ṣapāni	c' b' a' (x of y)	4/12

The two deities—as well as the two lines describing each one's travel—move in very different directions. By the same token, travel and DNs are common to the two lines. Sonant parallelism between *panīma//ṣapāni* as well as *batulatu//ba'lu* is notable. The cumulative effect of these features is to dramatize the semantic chiasm of the bicolon, perhaps echoing in a formal way the movement of the two divine figures in two directions.

20–22	'iddaka la-tatina panīma/	a b c	3/10
	'imma 'ili mabbikê naharêma/	d e f (x of y)	4/11
	qirba 'appiqê tahāmatêmi	d' f' (x of y)	3/10

See the Commentary to 1.3 V 5–7 above, as well as the Commentary on 1.2 III 4 in *UBC* 1.220.

23–24	tagliyu ḏada ’ili	a b c	3/7
	wa-tabū’u/qarša malki ’abī šanīma	a’ b’ c’ (x, y of z)	5/14

See the Commentary to 1.3 V 7–8 above, as well as that on 1.2 III 5 in *UBC* 1.220–21.

25–26	lê-pa‘nê ’ili tahburu wa-taqîlu/	a b c c’	4/12
	tištaḫwiyu wa-takabbidu-hu	c’’ c’’’ b’	2/10

The scan for semantic parallelism counts the pronominal suffix on the final verb in the second line, since it is parallel with *’ili* in the first line (which echoes in *taqîlu*). The considerably longer verbs in the second line balance the prepositional phrase and shorter verbs in the first line. For more comments on the poetry, see the discussion of the parallel, 1.2 III 6, in *UBC* 1.221.

27–28	halumma ’ilu kī-yaphîna-ha/	a b c	3/10
	yapriqu liṣba wa-yiṣḥaqu	d e	3/9

A semantic scan, by itself, would convey wide divergence between the two lines, but even in semantics the lines are closer than they may appear on an initial examination, since all three verbs entail body language. In addition, all three verbs show morphological parallelism. It is to be noted that the second line of this colon, the first line of the following colon (line 29), and the first line of the colon after that (line 30) constitute a tricolon in 1.17 II 10–12 (see *UNP* 55).

29–30	pa‘nê-hu lê-hadāmi yaṯpudu	a b c	3/10
	wa-yakarkiru/’uṣbu’āti-hu	c’ a’	2/10

The two sets of body-parts in different motions presented in chiastic parallelism evoke a picture of a single body-expression of joy.

30	yišša’u gā-hu wa-yaṣû[ḫu]	a (V + DO) a’	3/9

This is another monocolonic speech opening formula.

31–32	’êka maǵayat rabbatu ’aṯira[tu ya]mmi/	a b c (x, y of z)	5/14
	’êka ’atawat qāniyatu ’i[līma]	a b c’ (x of y)	4/12

This is a fine example of parallel structure. Both lines begin with *’êka*, followed by a **qtl* verb and a title of the goddess. The titles used here seem particularly appropriate. They may be seen as denoting El’s respect for his consort in referring to her first as *rbt*, “Great One, Lady” and then as *qnyt ’ilm*, “Creatress of the gods.” These titles evoke what the goddess shares in status and role with El. Watson (2000c) has probed the fairly common characteristic of dialogue (seen here in lines 31–39) in which the speaker switches from third person address to second person address (or vice versa) in the middle of a speech. He suggests that it is a stylistic component of the poetry, comparable to parallelism, etc.

33–34	raǵābu raǵibti wa-taǵîti/	a b c	3/10
	himma ǵamā’u ǵami’ti wa-‘assa[ti]	d a’ b’ c’	4/12

The syntax, quite unusual for Ugaritic poetry, is remarkably parallel here. The single variation involves the particle *himma*, which coordinates the two rhetorical questions (Ginsberg 1946:35; Held 1969). Alliteration with *ghayin* is particularly conspicuous (as well as *t*, to a lesser extent, along with *m* in the second line). The particle *himma* also links this bicolon to the next two units.

35–38	laḫami himma šitiyi-ma/	a b c	3/9
	laḫa[mi]/bi-ṯulḫanati laḫma	a’ d e	3/10
	šitî/bi-karpanīma yêna	c’ d’ e’	3/9
	biki ḫurāṣi/dama ‘iṣṣīma	d’’ (x of y)	4/10
		e’’ (x of y)	

For the structure, compare the four-line unit in 1.1 IV 30–32//1.4 VI 40–43. Apart from the parallelism of synonyms, the parallelism with *bi-* is conspicuous. Also notable is the end-rhyme of the lines, especially with *-ma* (which in the first, third and fourth lines follows other words with *-ma*). As with the preceding unit, the particle *himma* links this unit to the following unit.

38–39	himma yadu ’ili malki/yaḫāsisu-ki	a b c (x, y) d	5/13
	’ahbatu ṯôri ta‘āriru-ki	b’ c’ d’	3/10

The morphological and syntactical parallelism matches the basic semantic parallelism, as expected of double questions (see Ginsberg 1946:35; Held 1969). Parallelism of *L*-stem prefix forms is relatively rare in Ugaritic poetry.

40	wa-ta‘nî rabbatu ’aṯiratu yammi	a b (x, y of z)	4/12

This is another speech-opening clause.

For the poetry of lines 40–57, see the discussion of the parallel passage in 1.3 IV 47–55 and V 29–44 (above pp. 287–89 and 333).

41–43	taḥmu-ka ’ili ḫakama	a b c	3/8
	ḫakamta/‘imma ‘ôlami	c d	3/8
	ḫiyyatu ḫaẓẓati/taḥmu-ka	d’ (x of y) a	3/9
43–44	malku-na ’al’iy[ānu] ba‘lu/	a b c	3/9
	ṯāpiṭu-na wa-’ênu du-‘alênu-hu	a’ b’ c’	3/12
45–46	kullu-nayyanna qa[ša]-hu na[bilu]/	a b c	3/11
	kullu-nayyanna [na]bilu kāsa-hu	a c b’	3/11
47–48	[’āni]yu		
	la-yaṣûḫu ṯôra ’ila ’abā-hu/	a b c d	4/11
	[’i]la malka dā-yakāninu-hu	d c’ e’	3/10
48–50	yaṣûḫu/’aṯirata wa-banī-ha	a b c	3/11
	’ilata wa-ṣibbirata/’aryi-ha	b’ c’ (x of y)	3/11
50–51	wa-na ’ênu bêtu lê-ba‘li/kama ’ilīma	a b c d e	5/14
	wa-ḫaẓiru ka-binī ’aṯirati	a’ c’ d’ (x of y)	3/11
52–53	môṯabu ’ili maẓlalu bini-hu/	a b a’ c	4/11
	môṯabu rabbati ’aṯirati yammi	a b (x, y [= p of q])	4/12
54–55	môṯabu kallāti kaniyāti/	a b (x, y)	3/10
	môṯabu pidrayi bitti ’āri	a b’ c d	4/10
56–57	maẓlalu ṭallayi bitti ribbi/	a b c d	4/10
	môṯabu ’arṣ<ayi> bitti ya‘ibidrayi	a’ b’ c d’	4/13
58	wa-ya‘nî laṭipānu ’ilu dū-pā’idi	a b (x, y of z)	4/13

This unit is extracolonic, but it is to be noted that the epithets selected in this context suit the speech that follows. In other words, El the Beneficent and Benign is about to show an instance of these qualities.

59–60	pa-‘abdu ’ana ‘anû-na ’aṯirati/	a b c d	4/12
	pa-‘abdu ’anāku ’āḏidu ’ulaṯi	a b’ c (x of y)	4/12

The identical openings to these lines particularly highlight the parallelism of alternating first-person pronouns. The sonant parallelism of the goddess' name *'aṯirat* with *'ulṯ* may be one reason for the choice of this rare term for "tool." Alliteration with 'aleph and 'ayin mark the lines as well.

61–62	himma 'amatu 'aṯiratu	a b c	3/9
	tilbanu/labināti	b' (V + DO)	2/7

In view of the shared terms and the linking element *himma* in double questions (see Ginsberg 1946:35; Held 1969), this bicolon should perhaps be read with the preceding bicolon as a four-line unit. The internal vowels perhaps signal the semantic correlation of *'aṯirat-* and *labināt-*. The letter *t* in nearly every word perhaps binds them together.

62–V 1	yubnâ bêtu lê-ba'li/kama 'ilīma	a b c d	5/12
	wa-ḫaẓiru ka-binī 'aṯirati	b' d (x of y)	3/11

The basics of this bicolon appear in the first bicolon of Baal's lament (1.3 IV 48, V 38–39; 1.4 I 9–11, IV 50–51). The only departure involves the verb, perhaps signaling the reversal of the lament. The verb here also adds alliteration of *b* to the bicolon, and despite the altogether different grammatical nature of the terms, *yubnâ* and *binī*, these form sonant parallelism.

Introduction

This column begins the longest continuous passage preserved in the Baal Cycle, flowing through columns IV, V and VI (with perhaps a line or two missing at the end of column V). In this large section Athirat visits El and secures his permission for Baal to build his palace. Anat takes the news to Baal, who then sends for Kothar to begin construction. The palace is built, with the exception of a window that Baal at first does not want in the building. When the palace is completed, Baal hosts a banquet for the seventy children of Athirat. Column IV describes Athirat's journey to El's abode (lines 1–26), her welcome by El (lines 27–39), her plea on Baal's behalf (lines 40–57), and El's positive response (1.4 IV 58–V 1).

Lines 1–19: Athirat's Travel Preparations

As described at the end of the Commentary to the preceding column III, the twenty-one line lacuna between the end of the preserved part of III and the preserved beginning of column IV probably described Athirat's acceptance of the gifts from Baal and Anat and her agreement to go to El on Baal's behalf. When column IV becomes legible, she is preparing to depart, giving her servant Qudsh-wa-Amrar instructions for arranging her transport (lines 2–7). There is one fragment of the unit that precedes the introduction to Athirat's speech, the single word *ṯr* on line 1. This is probably El's title, "Bull." In this context, it seems plausible to reconstruct the line as something like *ṯr [ʾil ʾabh/y/n]*, "The Bull El, her/his/my/our Father," and to suggest that it occurs within a reference to Athirat's journey to visit him.

Unlike most of the passages that describe a god setting out on a journey to visit another deity (e.g., 1.1 III 10–12; 1.2 I 19–20; 1.3 IV 35–38; 1.3 V 3–4), here the poet lingers over Athirat's departure, giving a description of her preparations for the journey. He uses a number of formulae in lines 2–15 that are found also in the Aqhat Epic (1.19 II 1–11), where they describe Danil's preparation to travel the land to survey the results of a terrible drought. These two passages are far from duplicates; there is a great deal of variation in the similar descriptions, showing the freedom with which the poet could make use of these formulae. At the same time, the overall frameworks of the scenes are quite similar. In both we find an initial command, *šmʿ*, followed by the name and epithets of the subject of the imperative (1.4 IV 2–4 // 1.19 II 1–3), in our passage Qudsh-wa-Amrar, in Aqhat, Danil's daughter Pughat. This is followed in both by the instructions for preparing the animal for the journey (1.4 IV 4–7 // 1.19 II 3–5). In the Aqhat Epic, this unit only has three cola, while our passage adds a fourth line (line 7). The subject of the command is then described as having heard (obeyed) the instructions (1.4 IV 8 // 1.19 II 5–7). The parallel account in Aqhat is much larger than that in our passage, since the poet repeats Pughat's complete set of epithets, unlike the situation for Qudsh-wa-Amrar in our passage. The description of Pughat's activities in preparing the animal (lines 8–9) is quite different from the parallel in the Baal Cycle. The unit in 1.4 IV 9–12 is a virtual duplicate of the instructions Athirat gives in lines 4–7. But in Aqhat, the two lines of the description are not duplicates, adding an adverbial description of Pughat, *bkm* (either "then," or "weeping"), then paralleling the words of

the first line of Dan'il's instructions, but leaving out the other two lines. The lifting of Athirat onto the animal (1.4 IV 13–15) is paralleled by Pughat's similar assistance to her father (1.19 II 9–11), but the verb of the first line is the more common *tṣ'u*, instead of the rarer *yḥbq* in 1.4. In both passages it is clear that the extended description is intended to indicate the importance of the character who is making the journey, as well as the significance of the journey upon which each is going. In the case of our passage, the description of Athirat riding upon an animal with gold and silver accoutrements contrasts with the apparently normal way in which the younger gods travel. They proceed on their own power, either by walking (cf. the formulaic call for the god to run to his or her destination in 1.1 III 10–12; 1.1 II 1–3; 1.3 III 19–20; IV 11–12), or, in the case of Anat, perhaps by flying (cf. the Commentary on 1.3 V 4–5). This difference in mode of travel presumably marks Athirat's high status as mother of the gods.

This passage begins with a standard, non-poetic speech-opening rubric, here largely lost in the breaks of lines 1 and 2. It is followed by Athirat's direct address to Qudsh-wa-Amrar, her servant, who has already played a role in 1.3 VI and 1.4 II (see the Commentary on each). He is told to prepare an animal for her journey. Three words are used to denote this animal: *ʿr, pḥl*, and *'atnt*.[9] It has been thought generally that these terms designate members of the asinine rather than equine family (cf. Pardee 1997a:258, esp. n. 148). The use of donkeys (onagers) for transportation is, of course, very old and well documented. Written evidence for their use in Syria is found in Old Assyrian trade texts, correspondence from Mari (e.g., A.3401; see Durand 2002:50–51), Ugarit (e.g., RS 20.211+ in *Ugaritica V*: 195–98) and elsewhere (cf. *CAD I*:113, sub *imēru*, d). Onagers were often captured and trained for work purposes (cf. the well-known hunt scene from Nineveh, *ANEP* #186). In view of the word-field, onagers might apply in all three instances, in contrast to horses elsewhere associated with chariots (1.20 II 2–4//1.22 II 22–24; 1 Kgs 10:26–29; 2 Kgs 2:11, 6:17; Song of Songs 1:9; on the latter, see Pope 1994:251–56).

However, the terms do not necessarily refer to donkeys. For example, in 1.20 II 2–4 and the closely related passage in 1.22 II 22–24, the term *ʿr* appears to be paralleled to the term *sswm*, "horses," and described

[9] See Zamora 2000:638–40 for a more symbolic interpretation of the three animals.

in relationship to pulling a chariot (see Wyatt 1998: 316, n. 16 for a good discussion; cf. Lewis, *UNP* 198, 202; de Moor 1987:269, 271). The restored text of 1.22 II 22–24, based on 1.20 II 2–4, reads:

ʾasr.mr[kbthm]
[sswm.tṣmd]
tʿln.lmr[kbthm]
[tʾityn] ʿrhm

They bound their chariots,
They yoked their horses,
They got up into their chariots,
Their stallions went.[10]

The presence of horses at Ugarit is illustrated in the Akkadian letter RS 20.184.10, 9' (*Ugaritica V*:98), where King Ammithtamru refers to a gift of several horses sent to him by the king of Hatti. Also RS 20.211+ (*Ugaritica V*:195–98) provides a list of horses being distributed to various people.

Ugaritic *pḥl* and its cognates can be related to horses, as well as donkeys. Arabic *fiḥalu* and *faḥilu* can mean "horse," and Akkadian *puḫalu* similarly refers to a "horse" or "donkey, ass" (*AHw* 875, #4; cf. *CAD P*:479–81: "stud, breed animal"; cf. *CDA* 277: "male animal, stud," applied to ram, bull, stallion, elephant, duck; for horses and onagers in Mesopotamia, see Owen 1991).[11] The word has been understood by most scholars to refer to a horse in CAT 1.100, while the feminine form, *pḥlt*, is usually rendered "mare" (see Pardee 2002:174; Pope, MHP; Wyatt 1998:378; cf. Huehnergard 1991:694). Finally, *ʾatnt* is similarly ambiguous. The Akkadian cognate, *atānu*, regularly refers to a female horse (normally accompanied by the determinative for horse, *ANŠE.KUR.RA*), but may also refer to a female donkey (see *CAD A/II*:

[10] The other common interpretation of the fourth colon reads "they go from/come to their city" (cf. *DUL* 178, *ʿr* (I)). While this is possible, this seems very unlikely in the context. The external parallelism evident between the two bicola suggests that *sswm* and *ʿrhm* refer to the same thing, i.e., the animals that pull the chariots.

[11] A Mari letter from Warad-ili-su to the king (M.7161.11, 13) seems at first glance to offer an interesting parallel in its reference to *pa-ḫa-al-li* ^{d}IM (M.7161: 10, in Durand 2002:44 and A.1121+: 16 in 2002: 137), which might be the animal of the storm-god. However, it has been taken, more plausibly in the context, as animal genitals devoted to the storm-god Addu ("bas-ventre de Addu," so Durand 2002:136–7) in keeping with other cognates (Durand 2002:136 cites Syriac *paḥĕlata*, "testicles," and Mehri *feḥʿl* and Soqotri *fáḥal*, "penis"; see further Leslau 157). According to Pardee (1997a:258, n. 148), "the origin of the term [Ugaritic *pḥl*] seems to relate to the reproductive qualities of the male."

481–83). BH *ʾātôn* appears to mean "donkey" in all its contexts, and the Bible includes examples of both men (Num 22:21–33) and women (2 Kgs 4:21–24) using them for riding.

Thus the occurrence of the three terms in our passage is ambiguous with regard to the exact kind of animal involved. Nor are there clear indications which animal might be considered the more appropriate to carry the queen of the gods. Some Akkadian texts seem to suggest that the horse enjoyed a higher status than the donkey. A Mari letter from Yaqqim-Addu to the king of Mari (A.3401, lines 6'–7'; Durand 2002:51) refers to a white horse and white mare, especially reserved for the king. Officials of the king are often described as *rākib imêrim*, "rider of an ass," in Mari letters (e.g., A.3263.11, in Durand 1988:296, cf. 297 n. b; and in a letter to Zimri-lim, A.2988.+ A.3008.16 in Charpin 1991:161–62). While the "rider of an ass" is certainly at a lower social level than the king, it is clear that the term is an honorific title, and thus does not indicate any type of pejorative sense with regard to donkey riding. But the relative status of riding a horse as opposed to a donkey is seen in EA 88:46–48, where Rib-Adda of Byblos complains that "the messenger of the king of Akko is honored more than my messenger, for they gave him a horse to ride (*kî nadnu ANŠE.KUR.RA šaplišu*)." On the other hand, the donkey appears in BH as the animal upon which the king rides in Zech 9:9. Yet for Israel, equally relevant is the use of the mule (*pirdâ*) as the royal animal in 1 Kgs 1:33, 38, 44, where David orders Solomon to be placed on David's own mule to indicate that Solomon is David's choice for successor and has become the legitimate king (cf. also 2 Sam 18:9).

One additional piece of evidence might support the proposal that Athirat is riding a horse in this passage. The evidence is found in a scene painted on a drinking mug recovered at Ugarit. The mug shows a seated male figure holding a cup in his hand. In front of him is a stand with a large jar on it, and on the other side of the stand, another figure, holding a wine jar. Behind the latter figure is a horse, above which is a bird, and behind which is a fish. Pope (1971:393–405 = 1994:17–27) proposed that this scene represents an amalgam of two scenes found in CAT 1.4, the first in column II, when Athirat prepares food on a fire, and the second in our column, when Athirat has her audience with El. If Pope is correct about identifying the scene, then the depiction of the horse here supports the equine interpretation of the three terms in lines 4–12. However, Pope's interpretation of the scene is questionable, and other views have been proposed (see Lewis

2005:78). At the same time, even if we cannot be certain about identifying the iconographic scene on the mug as a specific depiction of the figures from 1.4 IV–V, the mug still shows an interesting witness to the horse as the animal used for travel. Whatever the species of animal is described by these words, it is clear that it is provided with elaborate and beautiful equipment of gold and silver, as would befit the divine/royal transport. Within the context, it seems that the purpose of depicting her preparation to depart on an animal is to emphasize her status and importance. She does not walk, but rides on her way to see her husband (cf. Binger 1997:74).

We now can turn to the four terms in lines 4b–7 that involve the preparation of the animals for travel and the equipment used to do so, namely the two parallel imperatives, *mdl* and *ṣmd*, and the two parallel direct objects, *[gp̄nm]* and *nqbnm*. The etymology of **mdl* is in dispute. No basic root of **mdl* in other Semitic language has been convincingly shown to relate to Ugaritic **mdl* (Greenfield 1964:529). Goshen-Gottstein (1960) derived the root from **lmd*, "to teach, train," but Gordon (*UT* 19.1429) rejected this etymology because both **lmd* and **mdl* occur in Ugaritic. Accepting Goshen-Gottstein's proposal, Greenfield (1964:529–34) also compared MH *lĕmûdîn*, "binders" and Syriac **lmd*, "to attach, join together." He also proffered an explanation for the metathesis (1964:534): "Although *lmd*, 'to learn' is found in Ugaritic (albeit in unclear contexts) there is no need to see in *mdl* the reflex of a different basic root, it is rather another instance of consonantal change for differentiation of meaning." In a later discussion of this root, Greenfield (1993:31) suggested that its meanings "to learn" and "to join" compare with the two basic meanings of the root **'lp*.[12]

Good (1984; 1986) preferred to see *mdl* as a denominative verb from a noun of instrument *mdl*, a lead-rope (to be derived from an original **dll*, "to guide"; cf. *dll*//*'dd* in 1.4 VII 45 discussed below on p. 686),

[12] Pope (in Smith 1998b:655) noted the occurrence of a noun, *tlmdm*, in 4.384.8, where it appears in conjunction with *ṣmdm* in a context related to horses. The obverse of this text lists teams (so CAT) of horses (*[šš]šw*) by town (marked by the preposition *b-*), while the reverse (lines 8–14), which are marked off from the previous section by a pair of scribal lines, lists groups of horses designated by three terms, *tlmdm*, *ṣmdm*, "yokes, pairs," and *'aḥdm*, "single ones," along with the names of their owners. One might interpret both of these terms as denoting the first two groups of horses by the use of the names of horse equipment, *ṣmdm*, "yokes" and *tlmdm*, "ropes." However, in the context of the text, the term *tlmdm* (line 8) may better be understood as relating to the meaning "to learn, train." It appears to be a general designation for all the horses listed in the following lines: *[šš]w tlmdm*, "trained horses."

itself derived from **lmd* by metathesis. Good accordingly reconstructed the Proto-Sinaitic pictographic form of the letter, lamed, as a rope coil. Good (1984:80) further argued that *mdl* does not refer to a saddle, but rather to the ropes used in riding, pointing out that iconographic and literary evidence attests the use of saddles in the Levant only very rarely during the late second millennium. Watson (1986c:73–74), on the other hand, sees **mdl* as the original root, citing Akkadian *madālu, muddūlu*, "to preserve," and *muddulû*, "elastic strip." From these terms, Watson (1986c:77 n. 17) suggests a derivation from "to preserve" to "strip" to "strap" and the noun, "halter" (the second shift being perhaps easier in English than in Semitic languages). He also notes (1986c:74) a potential cognate at Ebla, *ma-da-LUM*, in a list of equipment belonging to some equids. This too could be considered a word for a harness or halter. Watson (1996b:76) has also proposed that a depiction of a horse on a krater from Ugarit (RS 27.319) may show a halter that could be identified as a *mdl*.

Unfortunately, none of the proposals can be excluded, and none may be considered conclusive. Each one has plausible elements, but each also has difficulties. The argument for relating the term to **lmd* relies on the uncertainty that the metathesis developed to distinguish the meaning from the root's more common one. This is certainly not a regular feature of the language. In addition, the appearance of the term *tlmdm* in a context connected to horses may indicate that there was in fact a functioning cognate for the MH and Syriac words that Greenfield used to argue for the metathesis. This, of course, makes it harder to derive *mdl* from **lmd*. Good's argument relies on a similar metathesis. Watson's derivation from the Akkadian cognates is not entirely persuasive, either, although it remains possible. Until more evidence is discovered, we must withhold a decision on the matter. Further discussion of the root *mdl*, in a different context, can be found in the Commentary above on 1.3 IV 25–27, pp. 297–8. In spite of the uncertainty of its etymology, however, the general meaning of the verb here is clear. It has to do with preparing the animal for riding, and all of the proposed derivations fit in with that meaning. Good's recognition that the use of saddles was rare in the Late Bronze Age allows us to refine the understanding of the verb by narrowing its focus to harnessing, bridling or something similar (but cf. Wiggins 1993: 55, n. 156, for cautions against rejecting the idea that *mdl* refers to saddling the animal).

The root of **ṣmd* means "to bind, join" (cf. BH *ṣāmad*, Syriac *ṣmad*). It may have the connotation of "binding together," as in BH *ṣemed*,

which means "a couple, a pair," i.e., two things bound together. But it can also be used in contexts where something is bound onto something else. Thus in BH we find *ṣāmîd*, "bracelet," and Akkadian *ṣamādu*, "to bind, harness" (*CAD S*:89). The latter is certainly the meaning here. The use of the noun, *ṣmdm* in CAT 4.384 could be understood with either of these connotations, i.e., as "yokes," or as "harnesses."

The word *gpnm* used here for "ropes" elsewhere means "vine" (1.23.9–10), but in this context the usage is metaphorical (de Moor and van der Lugt 1974:25). Like rope, the care of vines involved binding or tying, as in 1.23.9–10: *ṣmd gpn* (*// zbr gpn*), "to bind a vine" (Greenfield 1964:528 n. 7). Epstein (see Greenfield 1964:527 n. 2) compared *gpn* here with Aramaic *kapnitā*, a noun for a type of saddle. The relationship is possible, but the probable meaning in our context is "rope, reins" rather than "saddle," since the noun is in the plural or dual (so De Moor and van der Lugt 1974:25). Pope (in Smith 1998b:656) proposed deriving *gpn* from a different root, cognate with Arabic *jaffa*, "to put war-armor on a horse." But this suggestion has little warrant.

The term *nqbnm* occurs only in this passage and its parallel in 1.19 II 5. It is translated variously as "bridles" (Greenfield 1964:527), "reins" (*Thespis* 181), "trappings" (Gordon 1977:93),"housings" (MHP), "decorations" (Pardee 1997b:258), or the like. These meanings are largely inferred on the basis of the parallelism of the term with *gpn*. The BH cognate, *nāqab*, means, "to pierce, make a hole" (see also Babylonian Aramaic *nqwb*', "perforation," Sokoloff 2002:772), and this suggests that the term here might refer to straps on the harness that had holes in them for adjusting its size (so de Moor and van der Lugt 1974:25). De Moor and van der Lugt (1974:25) also cite a number of illustrations showing harnesses of royal horses decorated with gold and silver.
The word *yrq* is a color term. In Hebrew it is "green, " but in Akkadian (as *arqu*) it is used also for "yellow" and is attested as the color of gold (see *CAD A/II*:300, # 1d). In a reduplicated form, *yĕraqraq*, it also appears in Ps 68:14 as the color of gold. In fact, the root has the specific meaning, "gold" in Sabean and Ethiopic (see Leslau 618). Thus in our passage, it is normally assumed to be the metal gold, parallel with *ksp*, "silver."

The orders that Athirat gives in lines 2–7 are matched line by line in the narrative in lines 8–12. Fenton (1969) showed that fulfillment of commands given in imperative form are often narrated in the suffix form, in short, a correspondence of suffixal forms (in contrast to commands given in volitive prefix forms, which are usually followed in narrative with indicative prefix forms).

Having prepared her animal, Qudsh-wa-Amrar then assists Athirat onto its back. The first verb of this action, **ḥbq*, is not entirely clear. In BH it means "to embrace, clasp," and in CAT 1.23.51, 56 it has the same meaning. In this context, however, the verb must be related to the setting of Athirat onto the back of the animal. In the parallel text in 1.19 II 9–10, the common verb, **nšʾ*, is used in this line:

bkm tšʾu ʾabh	Then she lifts her father,
tštnn l[b]mt ʿr	She sets him on the [ba]ck of the ass,
lysmsm bmt pḥl	On the beautiful back of the donkey.

The pair of **nšʾ//*šyt* in this passage functions contextually in the same manner as **ḥbq//*šyt* in 1.4 IV 13–14. It thus seems likely that **ḥbq* means to hoist someone by wrapping one's arms around the person. Cassuto (*BOS* 2.186) proposed a very different reading of the line by relating the verb to the Mishnaic meaning of **ḥbq* as part of a harness for a horse or ass (Kelim 19:3; see the rabbinic evidence cited in Greenfield 1964:528; Jastrow 421, *sub ḥebeq*). He thus proposed that this line belonged with the previous lines, rather than the following: "Qdš-wa-ʾAmrr fastened the breast-collar." While possible, it seems unlikely, given the parallel passage in Aqhat that clearly shows a similar line as part of the description of placing the rider on the animal.

The second verb, *šyt*, is common in Ugaritic and is used in the parallel in 1.19 II. The third line of the tricolon (line 15) describes the back of the animal as *ysmsmt*, "beautiful." The word is the fem. sg. reduplicated adj. of **ysm* (cf. Arabic *wasama*, "to be pretty," and *wasîm*, "pretty," cited in *UT* 19.1119). The masculine form of this word (i.e., without the *-t*) is used in the parallel in 1.19 II, but also occurs in a context with at least one other term for good looks in 1.96.2–3. On the aesthetics here, Pardee (1997a:259 n. 149) observes: "It is debatable whether the donkey was beautiful in its own right, but it certainly was when its trappings were of gold and silver."[13]

Once Athirat has mounted the animal, the travelling party heads out. Qudsh wa-Amrar appears to take the lead (note *CAT* 4.337.12, where a ration is given to a functionary who is called "the messenger who leads the mule," *ql.d.ybl.prd*). The description of the servant in lines 16–17

[13] Watson (1978:398–99) suggested the possibility that *ysmsmt* might be related to Akkadian *asmātu*, a "blanket-saddle" for a horse, according to a lexical text (only SB; *CAD A/II*:337). However, the context for the root in 1.96.3 shows that it applies to looks in Ugaritic and not to a "blanket-saddle."

is the subject of some controversy. The issue centers on the meaning of the phrase *y'uḫdm šb'r*. Both words are ambiguous. The verb **'aḫd* is familiar with the common meaning, "to seize, grasp," and some scholars interpret the word here that way. In so doing many interpret the following word, *šb'r*, as a noun from the root *b'r*, "to burn," and render it as "torch." Thus they read, "Qudsh seized a torch" or the like (e.g., *TO* 1.203; *CML*[2] 59; Maier 1986; Wiggins 1993:56; Wyatt 1998:99). A second proposal is to understand *y'uḫdm* in the meaning, "to start, begin, proceed, undertake" (cf. *DUL* 36–38, section 6; *BOS* 2.180; Coogan 1978:99; Dietrich and Loretz 1997:1158; *ANET* 113; Gordon 1977:93 Pardee 1997a:259). In this case the following word is taken as a *C*-stem infinitive dependent on *y'uḫdm*, either "Qudsh began to shine, or "Qudsh began to lead" (on the meaning of *šb'r*, see below). In support of this approach, Cassuto (*BOS* 2.186–87) compares the semantically similar verb, **lqḥ*, in its use for commencing action in Num 16:1 and 2 Sam 18:18.[14] The problem with this translation is that there appears to be little evidence of any clear usage of *'aḫd* with this meaning elsewhere. The only cognate that has a similar meaning is Arabic *'aḫaḏa*, but it is normally followed in this meaning by an imperfect, rather than an infinitive. The few other proposed occurrences of **'aḫd* with the meaning "to begin" in Ugaritic are ambiguous at best (cf. *DUL* 38). This rendering thus remains problematic. A third proposal, suggested by Albright (1934:121 n. 88) and followed by Greenfield (cited in Watson 1978:399, n. 19) and Watson (1978:399), is to relate the form to the Akkadian *Št*-causative stem *šuḫāzu*, "to kindle a fire, to be set aflame" or the *N*-passive, "to flare up, be aflame."[15]

The *hapax legomenon šb'r* has likewise been debated. Most scholars link it to the root **b'r*, "to burn." This fits the context of the line quite well, since the parallel to the word in the following line is *kkbkbm*, "like a star" (comparative *k-* + **kabkab-*; see Sivan 1997:74), or less likely,

---

[14] On the issue of I-' verbs with *'u-*'aleph in their prefix forms, see the views mentioned in *UBC* 1.268 n. 93; Sivan 1997:18, 45, 47, 116; *UG* 611–13. A major issue involves the coincidence of this feature in a limited number of *I-'* verbs in Ugaritic and Hebrew. Sivan 1996 plausibly proposes that the second *u*-vowel may have developed as a result of vowel harmony with the initial *u*-vowel in the prefix (cf. nominal forms apparently with various forms of *u*-vowel harmony (e.g., *r'umm, 'uṣb't, 'ulp*). However, this explanation would pertain to the Ugaritic forms only and would not explain the comparable forms in Hebrew.

[15] See *CAD A/1*:182 #9e, and 183 #10b and #11b; *CAD I/J*:230, #2' a'.

"like (the deity) Star."[16] Under the first translation, the word is seen as a *Š*-stem infinitive meaning "to illuminate, set fire to, to shine" (cf. *DUL* 212, Dietrich, Loretz, and Sanmartín 1975:554; and BH Hiphil of **bʿr*), or as a verbal noun meaning "torch" (see the preceding paragraph). The interpretation of the word as an infinitive varies. For some, Qudsh himself begins to glow (e.g., Pardee 1997a:259; *CML*[1] 95; Watson 1978:398; *Baal* 95), but for others he merely lights the way, presumably with an instrument of fire (i.e., a torch; see Gordon 1977:93: "to light the way").

Other scholars have interpreted *šbʿr* as meaning, "to lead" (e.g., Coogan 1978:99; Dietrich and Loretz 1997:1158; *ANET* 133; de Moor 1987:52). Where this meaning comes from is not entirely clear. We are aware of no cognates with this meaning. Gordon proposed it in *UT* 19.495 for 1.14 II 48 and IV 27; and 2.31.55 (= *UT* 1002:52), as well as our passage. However, the verb in the Kirta passages of 1.14 is much more likely to have a meaning, "to leave, to hand over," rather than "to lead" (see *DUL* 212, *bʿr II*; Dietrich, Loretz and Sanmartín 1975). In addition, the context of 2.31 is too broken to render with confidence. Thus such an understanding of this passage seems very tenuous.

If we place this colon into context with the second line of the bicolon, we can suggest a plausible interpretation. The second line (line 17) lacks a verb, which indicates that *yʾuḫdm* governs this clause as well. Since the phrase *kkbkb* describes Qudsh-wa-Amrar, then it seems likely that its parallel *šbʿr* is also a noun describing the deity and must be part of the imagery of light. We would tentatively conclude that the two words, *yʾuḫdm šbʿr* most likely are both related to the idea of fire or flame, and we have translated the bicolon: "Qudsh flared up as a flame/Amrar like a star." This seems more likely than the other primary suggested rendering of the first colon, "Qudsh seizes a torch." The latter interpretation does not fit well as a parallel with "Amrar like a star," since it leaves the second colon without a governing verb, nor does the comparison in the line make much sense in relation to the first colon in this case.

The colon concludes with the phrase *lpnm*. This form is unique in the Ugaritic texts by not having an expressed object connected to it (see *DUL* 676). It thus has an adverbial function here, presumably

[16] Stieglitz (1990:86–87, esp. n. 37) compares an Eblaite deity Kabkab—perhaps a title of the god Athtar—with BH *kôkāb*, apparently a divine name, in Amos 5:26.

"in front," or "ahead." There is some uncertainty about whether the word belongs with the bicolon in lines 16–17 or the following one in lines 18–19. It has usually been connected to the previous colon as we have done here and is interpreted as describing Qudsh's position in front of Athirat as guide (e.g., *TO* 1.203; Dietrich and Loretz 1997:1158; *Thespis* 182; Gordon 1977:93; Pardee 1997a:259). This is a quite plausible way to interpret the word, syntactically, grammatically, and poetically, since it flows logically from the context, and it allows the second line of that bicolon to be approximately the same length as the first (3/10 and 3/11). However, some scholars have suggested that the phrase belongs more naturally with the bicolon in lines 18–19 (e.g., *UL* 31; *Baal* 95–96). See the discussion below.

In any case, the resultant picture is a servant leading his mistress and burning in some sense "like a star." Cazelles (1960:231–32) infers that Athirat needs a light because her destination is subterranean and dark. However, divine servants may indeed appear as fiery in form regardless of the terrain covered. Gibson (*CML*^{2} 59 n. 2) compares the fiery appearance of Yamm's messengers in 1.2 I 32–33. For parallels, Mann (1977:98) cites the shining vanguard that precedes some Mesopotamian deities. In cultic processions, divine journeys include the harnessing of an animal and the shining of the accompanying entourage (Mann 1977:76, 87). One Sumerian hymn describes the goddess Nininsinna's journey to Nippur to the temple of Enlil in order to secure the determination of her fate for the year (Falkenstein and von Soden 1953:68–70, #8). Her procession (lines 8–13) is presented by Mann (1977:87):

> Her benevolent protective spirit of the 'High Palace' goes behind,
> the benevolent Udug of the father Enlil goes at her right,
> the benevolent spirit of the lord Nunamnir goes at her left.
> Her emblem goes forth like a heavenly light before her.
> Schumach, the benevolent chamberlain of the 'High Palace' goes before her,
> purifies for her the street, the market place,
> purifies for her the city.

This hymnic passage captures the divine procession of the goddess and the accompanying servants to the abode of a higher god, the same basic scene presented in 1.4 IV 16–18. In particular, the image "like a star" in line 17 finds a suitable parallel in the simile above "like a heavenly light before her." Perhaps lying in the background of the description here of the fiery divine attendant was the image of a torch as part of

an evening cultic procession (attested, for example, in Emar 369.63; see Fleming 1992:24, 56, 108 n. 120).[17]

Lines 18–19 describe the divergent paths Anat and Baal take as Athirat and her servant depart. Anat travels with the party to El's abode, but Baal, as he has consistently done, does not go before El to present his case. Again the text appears to illustrate the etiquette in such matters. As discussed above in the Commentary on 1.3 III (pp. 214–5), it presumably was deemed inappropriate (perhaps embarrassing) either for Baal to present his request directly to El or to be present while another deity did so.

As mentioned above, the first line of this bicolon may or may not include the last word of line 17, *lpnm*. Connecting *lpnm* to the previous bicolon makes the first line of this bicolon a bit short in relation to the following line. Placing the word with line 18 makes the second colon of lines 16–17 significantly shorter than the first, but that could be explained as an example of incomplete parallelism. The phrase *lpnm* is not necessary in that situation. If *lpnm* belongs to lines 18–19, then the most likely translation would be, "ahead," or perhaps "forward" (so *UL* 31 and *Baal* 399). In many ways, the issue of locating *lpnm* centers on the meaning of the following word, *ʾaṯr*. If it is understood as a locative, "behind," then it describes Anat's position in relation to Athirat in the group heading toward El. In this case, *lpnm* is best understood as describing Qudsh-wa-Amrar's position leading the company, while Anat follows at the rear. Such an interpretation is plausible. However, *ʾaṯr* could also be a well-attested verb of travel, usually rendered, "to go." In this case, the form would be an infinitive absolute, which would be a fine parallel with the verb denoting Baal's travel in line 19, *tbʿ*, "to depart." If this is correct, then there is no contrast being made between Qudsh and Anat's positions vis-à-vis Athirat, and therefore no compelling reason for *lpnm* to be part of the first bicolon. It would quite plausibly fit with line 18. No firm conclusion can be reached on this issue. But it should be noted that descriptions of the relative positions

[17] For further discussion of fiery divinities, including the disembodied *lahaṭ haḥereb hammithappeket*, the whirling fiery sword of Gen 3:24, see Hendel 1985; *UBC* 1.307. Berrin (2001:426 n. 19) notes the use of BH *lhwb* for flame and blade, as well as a related usage in 1QM 6:3, *šlhbt ḥrb*. The lexical connection may have inspired an implicit homology between flame and blade, which perhaps lies behind the image in Gen 3:24. One may suspect a comparable connection behind Song of Songs 8:6 in its line, *rĕšāpêha rišpê ʾēš šalhebetyâ*. Here the image of the fiery weapon appears in a variant mode (echoed [?] in 1QM 6:3).

of deities who are traveling in a group are a popular *topos* in Near Eastern literature. The Sumerian text cited above is a good example. Watson (1978:399) quotes an Akkadian text that is thematically similar to what may be in our passage:

> In front of it (= a chariot) marches Madanu
> Behind it marches Il-Martu.

Additional examples for the semantics of "in front"//"behind" are cited by de Moor and van der Lugt (1974:17).[18] The popularity of this *topos* leads us to lean toward a similar interpretation of our passage. But the other view is plausible, too.

While Anat then proceeds to El's abode with Athirat, Baal heads off in line 19 to his own home on Mount Sapan. Maier (1986:13–14) argued that both Anat and Baal are the subjects of the two verbs *ʾṯr* and *tbʿ*, and believed that both traveled to Sapan. But this is quite unlikely. Even though Anat is not mentioned during the scene in which Athirat asks for El's permission, she is described in 1.4 V 20–24, directly after Athirat instructs that Baal should be informed of the decision, as rejoicing and departing to Mt. Sapan to bring the news to Baal (25–35a). Thus she is clearly not at the latter location, and, since she appears actually to hear Athirat's speech, she is most logically to be located at El's abode.[19] It should not be surprising that she stays in the background of the story, since Athirat is the central character here. And within the context of the story, Anat's previous visit and her lack of success would warrant her staying in the background during this conversation.[20] So while Anat's destination goes unnamed here in 1.4 IV 18, it is evident that Anat accompanies Athirat on her journey to El's home.

---

[18] Perhaps clarifying the larger cultural understanding of *lpnm*, Mari texts mention caravans with the gods (their images) proceeding in front (Durand 2002:170, 172). A.4363.10 (Durand 2002:170) uses *i-na pa-ni-ka* for this idea, which compares to the Ugaritic expression here *lpnm*.

[19] If Pope's interpretation (1971) of the iconography on the drinking mug is correct, the presence of the bird in the scene would likely be symbolic of Anat's presence there.

[20] This last suggestion may be reading more authorial intent here than the text warrants. But there is clear evidence throughout the poem that the poet is concerned with issues of appropriate behavior in the divine/royal court and may assume that his audience understands when characters are present, but silent.

Lines 20–30: Athirat's Journey and Arrival at El's Abode

In this section the traveling party makes its way to El's tent, and Athirat comes into the presence of the old ruler of the gods. This passage focuses directly on Athirat, with all the verbs in lines 20–26 being 3rd fem. sg. These lines contain the formulaic description of a journey to El's home. The same language appears for Anat's trips there in 1.3 V 5–9 and 1.17 VI 46–51 and for Kothar's travel there in 1.1 III 21–25 and 1.2 III 4–6 (see *UBC* 1.184–90, 225–34; for further discussion, see the Commentary on 1.3 V 5–9 above on pp. 337–9). As in the parallel passages, the poet here describes Athirat's arrival at El's tent, her immediate audience with him and her obeisance before him. Athirat's travel to El's abode suggests that the two deities, though husband and wife, do not dwell together. Few commentators have addressed this particular question. Van Selms (1954:69) is a notable exception in this regard. He considered the two deities to have a "*Muntfrei*" marriage, in which the husband has no legal power over his wife, and thus she may live separately from him. In addition, van Selms (1954:65), suggested that by indicating this separation between the two, the Ugaritic poets intended

> to convey that the period of sexual intercourse between the father god and the mother god was of the past, something which occurred before the beginning of the present era with its multitude of younger gods and goddesses, the offspring of the old couple.

Pope (*EUT* 37) interpreted this passage through the lens of the Hittite Elkunirsha text (in which El and Athirat show serious marital problems) to suggest that the two deities are estranged from one another here as well. This is problematic, since the story of Elkunirsha is strikingly different in the way that it portrays the characters of El, Athirat and Baal compared to the Baal Cycle. Interpreting either one of these texts via the other seems problematic. Indeed, recent scholars have questioned both ideas. Wiggins (1993:58–59) has argued that van Selms is reading too much into the text. He suggests that the story is not intended to provide information about El and Athirat's marital status at all, but rather it uses the motif of the long journey to El in order to emphasize the uniquely high status, the holiness and the sanctity of the god. We also would point out that there is otherwise no evidence for the "*Muntfrei*" type of marriage at Ugarit. Like Wiggins, Binger (1997:75–76) argues that there is no reason to suggest that that this scene indicates an estrangement between the two deities.

One may easily note that El's reaction to her arrival and his succeeding speech (lines 27–39) indicate great affection for Athirat, and there is nothing in what she does in this scene that indicates any less affection on her side. Why, then, do they live apart? We suggest that this might be related to the way people in the Near East understood the relationship between the gods and their temples. It seems that the reason the poet and others assume that Athirat is not normally at home with El is because they believed that she (like the other major deities) has a temple/palace of her own, and that she would spend most of her time there, receiving the offerings of her people and granting them various blessings. Certainly within the Baal Cycle it appears quite clear that each god lives at a distance from the others. While the Ugaritic texts refer several times to a temple of El (*bt ʾil*, 1.119.14; 4.341.5; *qdš ʾil*, 1.119.6; cf. Pardee 2000:1077–78; Pardee 2002:50–53) in the city of Ugarit, there is no attestation to a temple of Athirat there.[21] The only temple of Athirat found in the Ugaritic texts is mentioned in the Kirta Epic, 1.14 IV 34–36, "he (Kirta) arrived at the sanctuary of Athirat of the Tyrians (*lqdš ʾaṯrt ṣrm*),//at the goddess of the Sidonians (*lʾilt sdnym*)." Her temple there, if it were the primary one in the minds of the ancient authors of Kirta and the Baal Cycle, is located far from Ugarit (where El's temple presumably represents his abode symbolically at the springs of the Deep); this distance between the abodes of Athirat and El might be the underlying explanation for the idea that she lived a long distance away from her husband. In any case, it appears unlikely that the poet was particularly interested in delineating the marriage relations between the two deities. Furthermore, lacking any confirmatory evidence, one cannot use this passage to suggest that the circumstances here reflect a type of marital custom among the human population at Ugarit, as van Selms suggested.

We now reach the climax of the story that has held the poet's attention since 1.3 III. Will El grant Baal permission to build a palace? Athirat appears to be the god's last hope for persuading El. Anat's attempt

[21] A temple of *ʾilt*, "the goddess" is mentioned in 1.41.24//1.87.26, in which a sacrifice to Athirat may have been made. But the unnamed goddess of the temple may not be Athirat, since offerings to numerous other deities are listed (1.41.24–35// 1.87.27–39) before the point where the sacrifice to Athirat may appear. Furthermore, both tablets are broken at this point, so that only the letters]*rt* are preserved, making the restoration [*ʾaṯ*]*rt* uncertain. See Pardee 2002:56–65 for these texts. The only other offerings to Athirat that are specifically located by the texts in a temple are found also in 1.41.38–40//1.87.42–43, where they are made in the temple of El.

(1.3 V) was a complete failure. Will the great Lady be able to change El's mind? Lines 27–30a describe El's reaction to Athirat's unexpected arrival. As we have seen elsewhere, the poet first discusses the physical reaction of the god (lines 27–30a), before detailing his verbal response (lines 31–39). Unlike the previous two examples of a deity's reaction to a surprise visit (1.3 III 32–IV 4; 1.4 II 12–26), this one is a joyous affair. El's body language of laughter and movement of feet and fingers conveys his great pleasure at the sight of Athirat. Any doubt that this description refers to a joyful reaction is eliminated by examining the use of the same formulae elsewhere. In 1.6 III 14–16 two of the lines appear as El rejoices (*šmḫ*) in having perceived that Baal has returned to life. Danil likewise reacts to the news that El will grant him a son with laughter and stamping his feet (1.17 II 10–11). Danil's physical reaction is supplemented in 1.17 II 8–9 by the following bicolon: "As for Dan'il, his face lit up,//and above, (his) brow shone" (cf. *UNP* 55). Clearly Dan'il's response is one of joy (Gruber 1980:565, 570–76). El's follows suit. Gruber (1980:556, 613–14) views the god's putting his feet on the footstool as the joyful antithesis to the mourning practice of getting off the chair and removing one's feet from the stool and sitting on the footstool or the ground.

El's physical reactions to Athirat's arrival are three-fold (lines 28–30). The first reaction is *yprq lṣb wyṣḥq* (line 28). The third word, *wyṣḥq*, "and he laughed," is the best understood word in this line. Its placement in the line suggests that the preceding two words serve as preparation for laughter. The verb **prq* means "to loosen, separate" (see Aramaic *prq*, "to separate, remove, take off; untie"), as noted by Ullendorff (1951:272), followed by van Zijl (1972:60), Pope (in Smith 1998b:656) and *DUL* 681. The particularly difficult word is *lṣb*. Arabic **lṣb* means, "to be narrow," according to Ullendorff 1951:272 (cf. *UT* 19.1393). Ugaritic uses *lṣb* in CAT 1.114.29, where the word delineates the location on a person where a medicine, *šʿr klb*, "hair of a dog," is placed. The word also appears in an omen text (CAT 1.103+1.145.49) related to the Akkadian *šumma izbu* series, which explains the meanings of the appearances of malformed animal fetuses. In line 49, the malformation discussed is the appearance of an animal with its eye(s) *blṣbh*, "in its *lṣb*." There have been two primary lines of thought concerning the word. Several scholars have identified it with the region of the mouth, specifically "the opening between the rows of teeth" (*UT* 19.1393), "the narrow passage between rows of teeth and the jaws" (Maier 1986:15; see also Loewenstamm, *CS* 380, 413). If this is correct, it is difficult to find a

suitable single word to translate *lṣb* and many translators rely on "jaw, mouth, throat" (*ANET* 133; *CML*[1] 97; *Thespis* 184; Greenfield 1959:143, *EUT* 36; Gruber 1980:614; Wiggins 1993:58) or the like. American speakers of English might say that El cracks a smile and laughs (so Gordon 1977:94). The other common proposal is to relate the noun to the brow, forehead or temples (*TO* 1.204, n. f; Dietrich and Loretz 1997:1159; Pardee 1997a:259; Wyatt 1998:99; Lewis, *UNP* 196). The latter understanding seems to be more likely than the former, in view of the contexts in which the word appears in 1.114.29' and 1.103+ 1.145.49. In the former, the medication for curing a hangover appears to include placing "the hairs of a dog" onto the *lṣb*, while a mixture of a plant and olive oil is to be drunk by the patient. It seems more likely that the hairs would be placed on the forehead than into the gap between the teeth, although the latter is not impossible (an unpleasant item like the hair could be placed in the mouth and then washed down with the drink that is described in the following two lines). The reference in 1.103 +, however, seems stronger evidence for "brow." Here the malformed fetus being described has eyes in the wrong place on its head: *ʾaṯrt ʿnh wʿnh b lṣbh*, "…the place of its eyes, and its eyes are in its *lṣb*" (see Pardee 2002:140). It seems unlikely that the omen is suggesting that the animal's eyes are in the gap between the teeth. Here the meaning, "brow, forehead" seems considerably more likely. Pardee (1988a:69) cites a parallel to this passage from the Sumero-Akkadian version of *summa izbu*, which reads, *BE iz-bu IGI.MEŠ-šu ina SAG.KI-šu*, "If the fetus' eyes are in his forehead." He also notes that there is no parallel in the Mesopotamian version to an omen concerning eyes of a fetus in the mouth. But the vagaries of interpreting the kinds of texts represented by 1.114 and 1.103+ force us to refrain from complete certainty here (see Renfroe 1992:126 for his cautions).

El's second physical reaction in these lines has to do with moving his feet with respect to his footstool (line 29). The verb, *yṯpd*, is usually associated with BH, *šāpat*, "to set, place." Although there are uncertainties about this etymology (cf. *TO* 1.204, n. g), the meaning certainly fits the context; thus "He placed his feet on the footstool" is the standard translation for the line (e.g., *ANET* 133; Gordon 1977:94; *CML*[2] 59; Gruber 1980:614; Maier 1986:15; Wyatt 1998:99). Without additional contexts, it is impossible to determine whether something more emphatic is indicated by the verb (cf. Ahlström 1978:100–01; Renfroe 1992:153–54). Pope (*EUT* 36) suggested "stamps his feet," while Pardee (1997a:259) proposed "taps." Whatever its actual connotation,

it is clear that El's gesture is a positive expression of body language (Gruber 1980:613–14).

The third reaction depicted in these lines is El's twirling of his digits (line 29b–30a). The meaning of the verb, *ykrkr*, "to twirl" or "to twiddle," is not in doubt. This root refers to rotation, whether of twirling fingers, as in El's case here, or of the whole body, as in David's dance (*měkarkēr*) before the ark of the covenant (2 Sam 6:14,16; Ahlström 1978a:100). Renfroe (1992:152 n. 6) characterizes the verb as "reduplication to signify repetitive action." While the action of the verb seems clear, there has been some disagreement about the exact meaning of *ʾuṣbʿth*. Most translators take the noun as "fingers" (e.g., Albright 1934:121; Gruber 1980:614; Dietrich and Loretz 1997:1159; Pardee 1997a:259; Sivan 1997:176–77). However, Cross (*CMHE* 37), followed by Seow (1989:110), took the word to refer to the god's toes, which is philologically defensible (BH *ʾeṣbaʿ* is used of both fingers and toes, cf. 2 Sam 21:20) and arguably suitable, given parallelism with the preceding parallel line involving feet. It may be wiser to remain with the more common meaning for the direct object, however. The image of twirling or twiddling seems more appropriate for fingers than for toes. This particular physical act especially denotes particularly El's great joy or excitement, since this reaction is absent from the other two similar descriptions of body language expressing joy (1.6 III 14–16; 1.17 II 10–11).

Lines 30–62: El's Greeting and Athirat's Plea

In lines 30–39 El addresses Athirat. Lines 31–32 provide an excellent example of how context can significantly affect the meaning of a formulaic passage. Here we find the double question, "Why has PN arrived/come?" In the previous two occurrences of this question (Anat asking in 1.3 III 36, and Athirat in 1.4 II 21–24), it has a negative, fearful connotation. The visitors are initially perceived as unwelcome. In addition, the question is not directly asked of the visitors, but is part of the reaction of the speaker upon seeing the visitors approaching. But here the identical question is clearly used as a greeting, an exclamation of welcome and enthusiasm for Athirat's visit. Whether or not this question represents a common element of greeting in Ugaritic society is unclear. In the two parallel passages, there is little indication that the question is part of a standard welcome to one's house. But here, it prefaces a traditional offer of food and drink to the traveler.

On the other hand, since El's final hospitable offer in the speech (sex in lines 38–39) is obviously not part a standard welcoming formula, these opening lines may not be either. They may be more closely related to the way an intimate couple would address one another than to court etiquette.

In lines 33–38, El offers Athirat food and drink. There is a noticeable tenderness about this part of the speech, as it emphasizes El's concern that Athirat has suffered hunger and thirst on the long trip. In these lines, as in the previous three bicola (lines 27–32), the poet dwells upon El's enormous fondness for his wife. These lines perhaps represent some of the most accomplished and natural dialogue (from a literary perspective) in the Ugaritic corpus. The questions in lines 33–34 are formed in the common style we have seen before: no clear interrogative element in the first clause and *hm* preceding the second (Held 1969:74–75; on the common construction of finite verb preceded by the infinitive absolute of the same root, see Sivan 1997:123–25). There is some uncertainty about the etymology and meaning of the verbs, *tġt// ʿs[t]*, that end the two lines. Several scholars interpret the verbs as referring to traveling (Driver, *CML*[1] 96–97; Gibson, *CML*[2] 59; Dietrich and Loretz 1997:1159 n. 54; Pardee 1997a:259). As support for this understanding, Driver cited Hebrew *taʿâ//*Aramaic *tĕʿê*, "to wander, stray" (*CML*[1] 152 n. 24) and Arabic *ʿašā*, "to go by night" (*CML*[1] 140 n. 17). Given the light that Qudshu-wa-Amrar provides in lines 16–17 above, this interpretation could fit the overall context (but see the reservations raised above about whether darkness on the trip is to be assumed). However, on semantic grounds, Held (1969:74–75 n. 35) rejected Driver's etymology of *tġt* with BH *tʿh*, "to journey afar," and he further objected that a putative Ugaritic root **ʿsw* "could not be philologically related to Arabic *ʿašā*." The phonological reason for Held's objection to the latter is clear: Ugaritic *s* and Arabic *š* do not correspond in etymologies (*UT* 5.13). As a result, Held (1969:74–75) rendered these verbs quite differently: "Are you hungry and *fa[int]*, or are you thirsty and *pa[rched]*?" Held did not provide cognates to support his interpretation of these words, nor did his source for the renderings, Ginsberg, *ANET* 133. Instead, he appealed to some BH phrases that relate faintness to hunger and thirst. Cross (cited in Maier 1986:16) offered some support to Held's view by understanding *ʿs[t]* as "parched" and comparing Arabic *ʿasā*, "grow hard, dry." Held's objections hardly ended the issue of the verbs' etymologies. Pope (1981b:321; also in Smith 1998b:656) compared Arabic *ʿassa*, connected with night patrol (Lane 2039–40) and

Arabic **ʿ(w)s*, "to roam (at night time)" (the former is noted also by Maier 1986:16). Pope also proffers Arabic **tġy*, "to perish" for the first verb, as well as the semantically suitable BH *tʿh*. In short, it is possible to salvage Driver's original suggestion with Pope's better philological basis, and at this point this seems to represent the best option. At the same time, the reconstructed character of the second form *ʿs[t]* makes it difficult to reach firm conclusions about this word.

Following the double-question of lines 33–34, El invites Athirat to eat and drink (lines 35–38a). It is a very elegant invitation; the four lines build nicely. The first (line 35a) opens with a double offer: "eat, indeed drink" (*lḥm hm štym*). A similar opening offer is made in 1.23.6–7: *lḥm blḥm ʾay //wšty bḫmr yn ʾay*, "Eat of food whatsoever, and drink of fermented wine whatsover." 1.23.6–7 and lines 35–38a differ, however, as the direct objects are not spelled in the initial line of our passage, but in the lines that follow it. The second (lines 35b–36a) expands the offer of the first imperative, while the third and fourth lines (lines 36b–38a) expand the offer of the second imperative. The food and drink are the typical fare of a divine feast (see 1.4 III 40–43, VI 56–59).

In the bicolon of lines 38b–39, El makes one final offer to Athirat, that of sex. It is an intimate proposal, but one quite appropriate from a husband to a wife. Using another double-question, El asks if he arouses her sexually (**ḫss//*ʿrr*). The Akkadian verb **ḫss*, has a range of meanings, "to think, be mindful of, remember; be intelligent, wise" (*CAD H*:122–25; Pentiuc 2001:58–59). Ugaritic shows a comparable range: the root in the craftsman-god's binomial *kṯr wḫss* means "wise one"; and in 1.15 III 25, the verb *tḫss* means "she is mindful of" or "she remembers." The semantic development from these meanings to "to excite" or the like, as indicated by the context of El's question, is not entirely clear, but it has semantic analogies. As van Selms (1954:67 n. 23) notes, the development of **ḫss*, "to be wise, intelligent," here arguably parallels the root **yd*ʿ, "to know," but also "to be intimate (sexually)." In this connection, van Selms would also compare the BH verb **zkr*, "to remember," and the BH noun *zākār*, "male." In the case of **ʿrr*, the meaning is clearer. In 1.24.30, **ʿrr* may mean to "stir up" (Marcus, *UNP* 217; cf. Akkadian *êru*, "to be awake," *CAD E*:326a–27a and *erūtu*, "wakefulness," *CAD E*:327b).[22] The *D*-stem of **ʿ(w)r* occurs

[22] Not to be confused with Akkadian *erû*, "to be pregnant, to conceive" (*CAD E*:325).

also in Song of Songs 2:7, 3:5, 8:4. The root there is generally taken to bear a different nuance, "to stir up," hence "to disturb" or the like, as opposed to the sexual sense, "to arouse," but it is possible that it puns on the sexual sense (Pope 1977b:386) or actually has a sexual sense (so *BDB* 735). Elsewhere the BH root bears a nuance of excitement (though not of a sexual nature), for example in Job 31:29 (so *BDB* 735). The parallel verb is **šmḫ*, "to rejoice," perhaps suggesting that excitement and joy belong to a larger shared field of emotional experience.

In this double question in lines 38–39, the nouns for love, namely *yd* and *'ahbt*, are hardly abstract in meaning, but are quite concrete, referring to passion (MHP) or making love. The word *yd* bears a further nuance of El's particular lovemaking organ (CAT 1.23.33–35). Both senses seem involved here, not one or the other (for full discussion, see the Commentary on 1.3 III 5–8, above on pp. 219–20; cf. de Moor and van der Lugt 1974:14). El refers to himself in the third person as "Bull El" (*ṯr 'il*). This title is conventional, but in this context it may evoke his sexual prowess, since the bull was famous for its sexual power (cf. Enki's sexual exploits in "Enki and the World Order" compared to the lust of "an attacking bull" (Leick 1994:23–25; for further mythological examples, see Leick 1994:48, 74, 91).

Athirat, however, wishes to discharge her errand before accepting any of these offers (lines 40–57). Several scholars have understood her intentional ignoring of El's invitations (especially the offer of sex) as a brusque rejection of the offers (cf. de Moor 1987:53 n. 235; *EUT* 37; the discussion in Binger 1997:75). Such a conclusion is entirely unwarranted. It is not unusual for a divine visitor to deal with the business of his or her trip before sitting down to a meal. Such a situation has just occurred in 1.4 III 23–39, where considerable business is done before the gods enter the banquet. Athirat first wants to fulfill her obligation to Baal before accepting El's offer of food, and presumably the sex. There is nothing in this passage that suggests any kind of rebuff on the part of Athirat. While it is true that the text never describes either the succeeding meal or amorous behavior, this is because the focus of the story after El grants his permission for the palace switches to Anat and her trip to Mt. Sapan to tell Baal the news.

So Athirat makes her plea. She opens her speech by praising El's wisdom (the tricolon in lines 41–43). She then acclaims Baal's kingship (the two bicola in lines 43b–46), and finally, presents Baal's lament that he lacks a palace (lines 47–57). Athirat's words here precisely parallel

Anat's speech to El in 1.3 V 29(?)–52 (see the Commentary there for discussion of the units, and see the Introduction for a discussion of the parallel structures). Although modern tastes may find this kind of long repetition to be dull, it is important to remember that this device was a very popular technique in ancient Near Eastern storytelling. Each repetition has its own unique context, and usually the final proclamation of the passage has a climactic function within the story. One can see this kind of dramatic build-up to a final repetition of a passage in the Aqhat Epic, where the lament concerning Danil's lack of a son is repeated several times, until in its final appearance it turns into a celebration of El's granting of a son to Danil (1.17 I 15–II 23). Our passage too is an excellent case of carefully constructed storytelling. We have heard Baal's lament, spoken by Baal to Anat (1.3 IV 48–53), by Anat to El (1.3 V 35–44), by Qudsh-wa-Amrar to Kothar-wa-Hasis (1.4 I 4–18), and perhaps by Anat to Athirat (in the lacuna at the beginning of 1.4 III). Now in Athirat's mouth, the lament has one last chance to convince El. For the storyteller, this is no simple rote repetition, but a suspense-building device that carries his audience with substantial tension up to the climactic point of El's definitive response.

And that response occurs in IV 59–V 1. The poet once again shows storytelling prowess by having the initial part of El's speech suggest that Athirat's plea has failed. In his first words, El appears unmoved and actually offended, suggesting that granting her request would damage his (and Athirat's) status. However, it seems clear from the following bicolon (IV 62–V1) that in fact, El is only delaying, and he actually intends to approve the request (although some have suggested that he is intending to be harsh and only concedes permission begrudgingly). The poet has employed the same tension-building technique he used in 1.4 III 27–32, where he has Athirat initially appear unwilling to accept Baal's gifts, when in fact (unbeknownst to Baal and Anat) she intends to do so. Here (as throughout this section), the poet may be characterizing El as a quickwitted and playful husband, whose love for his wife is shown in his willingness to grant what she asks.

There are some grammatical and vocabulary ambiguities in the initial response (lines 59–62). With rare exceptions (e.g., *Baal* 98), scholars have recognized that lines 59–60 are questions (or ironic exclamations, *CML*^{2} 60; Pardee 1997a: 259). Some, however, read the third line (lines 61–62a) as an indirect command, "Let a handmaiden of Athirat make the bricks" (e.g., *UgM* 4; *CML*^{1} 97), or "If Athirat is a handmaid, let her mold bricks," (Aistleitner 41). This understanding seems unlikely, since

nothing comes of the supposed command. No handmaids of Athirat are involved in the building of the palace.

That we have a series of questions here seems very likely from the appearance of *hm* at the beginning of the third colon, a standard marker for the final question in a series, where the previous question(s) appear unmarked (Ginsberg 1946:35; Held 1969:72). Building on Held's insight, we have tentatively offered the following translation:

A	*pʿbd ʾan ʿnn ʾaṯrt*	So am I a servant, Athirat's slave?[23]
B	*pʿbd ʾank ʾaḫd ʾulṯ*	So am I a slave who handles tools?
A'	*hm ʾamt ʾaṯrt*	Or is Athirat a maidservant?
B'	*tlbn lbnt*	Does she make bricks?"

Lines 59–62a constitute a complex double rhetorical question. Both of the lines of the first bicolon begin with the particle *p-*, "and, so" (cf. Arabic and ESA *fa*; Nebes 1995).[24] The two lines are also connected by the repetition of *ʿbd*, followed by the variant first person singular pronouns: *pʿbd ʾan//pʿbd ʾank*. They are linked to the third line through the parallel use of the feminine noun *ʾamt*, "handmaid" (cf. the parallel pair, *ʿbd//bn ʾamt*, in Kirta, 1.14 II 2–3; Avishur 1984:436–37). It is perhaps best to see in this parallelism an indication that the first and third lines may represent the basic double question (A and A' above): A—is El a servant; and A'—or, is Athirat a maidservant? The repetition of Athirat's name in A and A' poetically reinforces the relationship between these two lines. In apposition to the questions of A and A' stand two descriptions of physical labor, namely B, a nominal clause, and B', an asyndetic relative clause. Thus B and B' build on and link syntactically and semantically El's two basic questions. Accordingly, it might be argued that A and A' represent the main level of the double

[23] An alternative reading of the first line (line 59a) might be proposed: "So am I a servant, Athirat a slave?" If correct, the first part of this initial line (line 59a) is expanded by *pʿbd ʾan ʾaḫd ʾulṯ* in the second line (line 60), while *ʿnn ʾaṯrt* in the second half of the first line (line 59b) is expanded by *hm ʾamt ʾaṯrt tlbn* in the third line (line 61). However, two considerations militate against this interpretation: if Athirat is the *ʿnn*, then a feminine form of the noun might be expected; and if a contrastive rhetorical question is involved in the initial line, it might be expected to be marked by *hm*. Either consideration, though not water tight, casts some doubt on this otherwise aesthetically plausible reading of the unit.

[24] Some scholars (Dahood 1970:410; van Zijl, *Baal*, 101–2) also suggest a cognate *p* in BH, e.g. in Ps 50:10 where in view of the phrase *bĕharĕrê-ʾēl* in Ps 36:7, many commentators reread **bĕharĕrê-ʾēl* and place *pa-* with the following verb in the next colon instead of MT *bĕharĕrê-ʾālep*). Others do not find the proposed occurrences compelling (cf. *HALOT* 907).

question, with B and B' as further questions operating at a subordinate structural level.

An alternative translation for the third line (in lines 61–62a) proposes that El continues his rhetorical description of himself, rather than shifting the question to ask if Athirat is a maidservant. This rendering reads like the following: "Or (am I) a handmaid of Athirat who makes bricks?" (*TO* 1.206; Coogan 1978:101; Dietrich and Loretz 1998:1161; Gordon 1977:95; de Moor 1987:54; Wyatt 1998:101). This is a plausible interpretation. We prefer the former rendering, however, because of the verb *tlbn*, in the 3rd fem. sg., which might be more comfortably used in reference to Athirat, rather than continuing the image of El as a handmaid. But this is hardly a conclusive argument. Both renderings are possible.

However one reads lines 61–62a, it is clear that the context of the larger passage argues strongly for this series of questions to be understood as an ironic joke, rather than a serious objection. The suggestion that El might believe that Baal would expect him actually to construct the palace for him is ludicrous. Obviously, nothing in the preceding speech by Athirat suggests anything like that. Such a hyperbolic understanding of the request is on the face of it absurd, and El's immediate granting of the request directly after this passage clearly indicates that what has been said here is not taken seriously. Instead, the lines are probably intended to give a brief moment of suspense and doubt before the god grants Athirat's petition.

It is generally presumed that *ʾaḫd ʾulṯ*, which parallels *tlbn lbnt* refers in some way to brickmaking, a profession well attested at Ugarit (^{LU}*la-ba-nu*, in RS 16.257+16.258+16.126 III 55, *PRU* III, 202; Sivan 1997:70). El's discussion of this labor is compared by Hurowitz (1992:104–5) to the work of the Annunaki on Marduk's palace in Enuma Elish VI:60 (*CAD A/1*:357):[25]

^{d}*Annunaki itruku alla*	The Annunaki applied the implement;
šattu ištēt libittašu iltabnu	For one whole year they molded bricks.

Perhaps like Akkadian *allu*, Ugaritic *ʾulṯ* is a tool for working with bricks (trowel? so *CML*^{2} 60) or for making bricks (a brick-mold? so Held 1969:72). In favor of the second alternative, Held (1969:72 n. 17)

[25] For further passages, see citations in *CAD A/1*:357. See also Gudea Cylinder A, V:6, VI:6–8 (Falkenstein and von Soden 1953:143–44; Edzard 1997:72).

suggested that *ʾaḫd ʾulṯ*, might be semantically parallel to BH *hḥzyq mlbn*, "seize the brick-mold," in Nah 3:14 (cf. 2 Sam 12:31; see also *BDB* 527). Ugaritic *ʾulṯ* also appears in a list of cargo on a "ship of Ala[shiya] which (is) in Ataliga" (CAT 4.390.7). Assuming that the word refers to some sort of tool, one can plausibly derive the word from **lwṯ* (BH *lwš*, "to knead," Arabic *lāṯa*, "to mix," cf. Renfroe 1992:79; Akkadian *lâšu*, "to mix, knead," *CAD L*:110; see *DUL* 67). As a less likely alternative, one might compare it with Akkadian *unūtu* (OB), *enūtu* (Mari), *anūtu* (NA), "tool, equipment," including that of craftsmen (see *CDA* 423; note also Moran 1992:300 n. 6). The oddities of phonological correspondence required (*l*/*n*, and *ṯ*/*t*) are not impossible and not without parallel, especially if a loan process were involved (with the OB form being the one most proximate to the Ugaritic word).

It is clear that high gods do not take part in the construction of temples in Near Eastern mythology (cf. Atrahasis I:1–6, 189–97; Enuma Elish VI:1–8). This sort of labor belongs instead to lower ranking divinities (e.g., the Igigi-gods as in the passage from Atrahasis, cited above). Other texts likewise indicate the menial status of such construction. An Egyptian collection of spells for a mother and child dating to around 1700 BC includes one incantation that addresses an illness in the form of a child (Borghouts 1978:42) as "the one who spends the day moulding bricks for her father Osiris." Apart from its particular expressions of exorcism, the spell regards brick making as a dirty job, which may befit a demoness but not anyone of high status. Exod 1:11–14 describes brick making as the labor of slaves.

Following his questions in lines 59–62a, El finally gives permission for Baal's palace by proclaiming in the passive voice (Sivan 1997:127): "let a house be built for Baal like the gods', a court like the children of Athirat's." The bicolon in 1.4 IV 62–V 1 directly echoes the first couplet of Baal's lament, "For Baal has no house like the gods',//No court like Athirat's children's." In so reusing the opening words of Baal's lament, which runs throughout the building saga up to this point, El's decision directly addresses Baal's desire.[26]

---

[26] There is a similar passage in 1.8.3–5, in which the imperative *tn* is used instead of *ybn*. From this comparison, it is evident that El has the authority "to give." Behind the use of **ytn* may lie an echo of the technical usage of WS **ytn*/*ntn* for royal land grants, a usage found in Ugaritic royal documents. Greenfield (1977a:88) describes these: "in the two royal grants in Ugaritic (PRU 2 8 and 9)…the king has *ytn* 'taken' (lit. 'given') the field of PN_1 and given it *ytn.nn* to PN_2." Akkadian documents from Ugarit likewise use **nadānu*, "to give," for land grants. A similar usage has been argued

In accordance with Baal's complaint (1.3 IV 47–48, V 38–39; 1.4 I 9–11; IV 50–51), his house is to compare with the dwellings of "the gods"//"Athirat's children." It is interesting to note that in the Baal Cycle, a narrative evidently devoted to Baal's exaltation, his palace is not here accorded a status or grandeur superior to the dwellings of the other deities, only one that is on par with theirs. The subsequent description of the palace when it is built suggests, however, that it is more spectacular than others. If the repetition of the phrase from the lament has any special significance here, it is presumably a reminder that Baal as coregent is still part of the younger generation and is not equivalent to the older king, Father El (see the larger discussion of the relationship between El and Baal in the Introduction, pp. 16–21).

The story continues on column V without any break.

---

for some biblical texts as well (Greenfield 1977a:89–90). Whether such usage lies behind El's declaration about Baal's palace cannot be confirmed, but the royal role and authority assumed by royal land grants would fit this instance of divine permission for the building project.

Textual Notes

CTA numbered the lines of column V consecutively from column IV. CAT on the other hand begins the number of column V with line 1, as in the other columns. We have followed that practice, but in the textual notes provide the CTA line numbers after the slash.

Line 1 is discussed with column IV.

Line 4/66. {ṯ} šbt. Ilimalku wrote a /ṯ/ as the first letter of the line, but recognized his mistake and placed the left wedge of the /š/ over it. Most of the /ṯ/ is preserved, however.

Line 5/67. rḫnṅt. The fourth letter of the line is /n/, rather than the /t/ of CTA. The edges are peculiarly vague among otherwise fairly well preserved letters to the right and left. The evidence for the multiple wedges is visible along the upper line of the letter, and in the interior. Perhaps, as CAT suggests, this is a dittography by Ilimalku, who slightly smudged it, then wrote the correct /t/ after it. Note, however, /rḫnn/ in CAT 7.57.2, a broken context, but one that may suggest the text as it stands is correct.

/dx/ The letter denoted by the /x/ is badly deteriorated. We are reluctant to agree with CAT that it is a /t/. There is a long horizontal area, but it appears to have hints of at least two wedges. In addition, there is a wedge above the horizontal that may be the damaged upper edge of a horizontal.

Line 6/68. mṭrh The /h/ has four wedges.

Line 7/69. bʿl The first letter, /b/, was damaged, apparently before the tablet dried (see below). The clay has been pushed up from the bottom and has smudged the letter badly. Clear wedge elements are preserved only on the right side, with the right tip of the right vertical

and the right tip of the horizontal still visible. The left line of the left vertical may be preserved. Context assures the reading.

t̲kt The middle letter of this word has often been emended to /r/, making it *t̲r(!)t*. The text as it stands can mean "ship" or "barque," but this image seems out of place in the context (see *UBC* 1.53 and the Commentary below).

There is a noticeable horizontal dip in the surface of the tablet from line 8 through 11 on the left margin and 9 through 14 at the right margin. It is about the thickness of a finger. The depression only affects column V. It seems as if a person held the tablet after it had been inscribed, but before it dried, slightly depressing the surface with a finger. This explains the flattened appearance of several letters, particularly on the right. The fingertip on the left side of the column apparently pushed the clay upward, damaging the first letter of line 7, as noted above.

Line 9/71. l'arṣ.brqm The letters /ṣ.brq/ are very shallow because of the above-mentioned depression.

Line 10/72. ḅt There does seem to be some disturbance at the beginning of the line, as noted by CAT, which proposes that a /d/was first written, then replaced with a /b/. There seem to be three horizontals in the letter, and some hints of a possible vertical to the left of the two preserved ones. The scribe may have written a /d/, then smudged out the left vertical to correct his error.

ʾảrzm The line along the upper edge of the crack clearly shows two horizontals of the /ʾa/. There are no traces on the lower fragment.

The final word of the line, ykllnh, has sustained the flattening of the finger damage.

Line 11/73. lbṉṯ The /t/ is certain, though only its lower line is preserved.

y°ʿmsnh The upper right line of the /ʿ/is preserved, but nothing else.

There is finger damage on /msnh/.

Line 12/74. l'al'iynbʿl The letters /ynbʿl/ have almost been obliterated by the finger damage.

Line 13/75. /bbhmk/ should be emended to /bbhtk/. See lines 29–31 and 36–37 in the column for parallels.

Line 27/89. yṯn The /t/ is largely chipped away. Only the left edge of the horizontal is clearly preserved. There is no hint of a left vertical, which should be visible if the letter were a b (as reconstructed by CTA). The context supports /t/ over /ʾa/ or /n/, which are epigraphically possible. The /n/, on the edge of the tablet, is either a four-wedged example, or the leftmost wedge is the right tip of the preceding /t/.

Line 32. mḫmd. The word is followed by a clear word divider.

Line 39/101. lḫmd /lḫmd/ is an error for /mḫmd/. See lines 16 and 33. Sivan (1997:31) posits a possible phonological dissimilation and rejects a scribal error, since the signs for /m/ and /l/ are so dissimilar. This explanation seems unlikely, given that the correct forms in the same expression appear in the same column (line 16).

Line 40/102. ʾudrʾilqṣm Contrary to CTA and CAT, there is no word divider after /ʾudr/.

Line 41/103. yʾak Scribal error for /ylʾak/ (so also CTA, KTU, CAT; *CML*² 61; *TO* 1.210; *MLC* 203; Pardee 1980:280; 1997a:260 n. 165).

lk̲tr The /l/ has four wedges.

Following line 41 is a double horizontal line across the column, marking off the note "Return to the recitation about when the lads are sent." A single horizontal line follows line 43 to indicate the end of the note.

Line 42/104. mspr. There are actually two word dividers after /lmspr/, perhaps intentionally to indicate the following is a quotation. But see the commentary below, pp. 574–76.

ktlʾakn Both the /l/ and the /n/ have four-wedges.

Line 48/110. šṯ[Only the upper line of /t/ survives along the edge of the break. We see no trace of the following /y/ proposed by CAT.

Line 49/111. [ ]yʿn.ʾảl̊[The upper line of the two wedges of the /ʾa/ survives. The letter is certain. With light shining directly from above,

one can see to the right the top line of a single vertical wedge (not visible on the photograph). Context assures the reading of /l/.

Line 50/112. [ ]b[ ] x[The /b/ shows up fairly well, with only the top of the letter and the right end having been broken. There are no traces of the /ʿ/ or the word divider proposed by CAT.]x[There is what appears to be the base of a partially preserved horizontal, but CAT's proposed /k/ relies on the accidental direction of the breakage.

Line 51/113. ḫš With a light shining directly from the right, one can see the corners of the right and lower wedges of the /ḥ/, assuring the reading.

bhtm.[Only the lower tip of the word divider survives. We see no traces beyond the word divider. This is likely because the adhesive securing the modern reconstruction of the broken column has come over the broken edge here.

Line 54/116. px[The first letter is composed of only two horizontal wedges, making it a /p/. This, of course, might be a scribal error for the three-wedged /h/, as proposed by CTA and CAT, and followed here.

/x/ All that remains of this letter is the lower left corner of a horizontal wedge.

Line 58/120. ẘyʿn. The /w/ is badly broken but the upper line of the upper left wedge and upper line and tip of the right wedge survive.

/wḫsṡ/ The final /s/ is damaged, but a few lines of the upper wedges are discernable, as well as some of the interior of the sign. Some of the reddish reconstruction clay may be covering other evidence.

Line 59/121. s̆mʿ Only the upper line of the right wedge of the /š/ survives, but the context assures the reading.

Line 61/123. bbẖ[The /h/ is epigraphically uncertain. There is a large horizontal that could either be /t/, or the lowest wedge of an /h/. The context suggests the latter, although /bbt/ would not be impossible here. There may be the trace of the middle wedge of an /h/ above the clear wedge. But one should note that the low wedge is larger than the low wedge of most /h/'s on the tablet.

Line 65/127. [ ]ṅ.ḅḳṛḅ.ḥḵ[The upper line of the /n/ is preserved and certain, as in CAT. The lower parts of all the other letters of this line are also missing. Only the upper left wedge of the /k/ is preserved.

Translation and Vocalized Text

Athirat Proclaims the Permission for Baal's Palace

[Line 1 is discussed with column IV]

2	And Lady Athirat of the Sea answered:	wa-ta'nî rabbatu 'aṯiratu yammi
3–5	"You are great, O El, so very wise; The gray hair of your beard so instructs you, The soft ones (?) o[f] your chest.	rabbata 'ili-ma[1] la-ḥakamta/ šêbatu daqini-ka la-tisaru-ka raḫânvnātu (?) dū[tu(?)] lê-'irti-ka
6–7	So now may Baal make his rain abundant, May he make the water greatly abundant in a downpour,	wa-na 'ap 'addina[2] maṭara-hu ba'lu ya'addinu 'addinu ṯarrata bi-galaṯi
8–9	And may he give his voice in the clouds, May he flash to the earth lightning.	wa-<ya>tin[3] qāla-hu bi-'urpāti šaraha lê-'arṣi baraqīma
10–11	Is it a house of cedars that he would complete, Or a house of bricks that he would construct?	bêtu 'arzīma[4] yakalliluna-hu himma bêtu labināti ya'ammisuna-hu

---

[1] Zeeb (1993:513–14) reads *rbt 'ilm* as a continuation of the narrative introduction: "Die 'Lady' dem El." In addition to the highly irregular variation in line-length within this putative bicolon, it might be a difficulty to see *'il-m* as an indirect object ungoverned by a preposition. Then Zeeb reads the rest of the unit as a bicolon: *lḫkmt šbt dqnk*, "Weise ist die Grauheit deines Bartes"//*ltsṛk rḫnt dt l'irtk*, "Es belehrt dich die 'Leidenschaft,' die in deiner Brust ist." The reading of the bicolon is grammatically plausible, despite the longer length of the second line compared with the first. But the assumed syntax involves some difficulty.

[2] For a discussion of this form as an example of the precative perfect, see *UBC* 1.51–53.

[3] The translation of Ginsberg (*ANET* 133), "and <he will> peal," implies the emendation to *w<y>tn* (so CTA), in which case **yqtl* would be involved, either an indicative (as in Ginsberg's rendering), a jussive form or a precative perfect **yatana*.

[4] For the syllabic evidence for this form (with evident pretonic vowel syncope), see Huehnergard 1987b:109.

12	Indeed, let it be told to Mightiest Baal:	la-yurgam lê-'al'iyāni ba'li
13–14	'Call a caravan into your house, Wares inside your palace.	ṣûḥ ḫarrāna[5] bi-bahatī-ka 'idabāta bi-qirbi hêkali-ka
15–17	Let the mountains bring you abundant silver, The hills, the choicest gold. Let the finest ore be brought to you.	tabilū-ka ǵarūma mu'da kaspa gaba'ūma maḫmada ḫurāṣi yubalu[6]-ka 'udduru[7] 'ilqaṣīma
18–19	And build the house of[8] silver and gold, The house of purest lapis lazuli.'"	wa-bnî[9] bahatī kaspi wa-ḫurāṣi bahatī ṭuhūrīma[10] 'iqni'īma[11]

Anat Delivers the News To Baal

20–21	Adolescent Anat rejoiced; She planted (her) foot, the earth shook.	šamāḫu batulatu 'anatu tid'aṣu pa'na wa-tarra 'arṣu
22–24	So she headed out For Baal on the heights of Sapan, Across a thousand acres, a myriad hectares.	'iddaka la-tatinu panīma 'imma ba'li maryāma ṣapāni bi-'alpi šiddi ribbati[12] kumāni

---

[5] So vocalized at least since Albright (1934:124 n. 119) to *DUL* 405, citing Akkadian *ḫarrānu*. See Watson 2000a:569 for other cognates and the possibility that a loanword might lie behind this word.

[6] Following Dobrusin 1981, who argues against a 3rd masc. pl. prefix form beginning with *y-*, a singular collective for the subject and verb is reconstructed here. This rendering issues in a more proximate understanding between *mḫmd* and *'udr*, although the parallelism need not be so precise. The form below in line 38 argues in favor of a plural form.

[7] A vocalization instead as a qutl form is also possible. A number of qutl nouns express abstraction, which would work in this context.

[8] Or one could render, "with," both here and in the next line.

[9] For the sake of consistency, one might expect a vocalization, *wa-binî*. However, the initial vowel is considered particularly short (so *UG* 429), and with a proclitic it might be lost.

[10] For the syllabic forms, see Huehnergard 1987b:131; Sivan 1997:45; *UG* 176.

[11] In view of Akkadian *uqnû* (discussed below), the word might be vocalized *'iqnu'īma*, but the initial 'aleph suggests regressive vowel assimilation (cf. **'uṣbu'ātu* underlying *'uṣb'i*).

[12] Sivan 1997:63.

25–26	Adolescent Anat laughed, She raised her voice and declared:	ṣaḥāqu batulatu ʻanatu tiššaʾu gā-ha wa-taṣûḥu
26–27	"Receive the news, O Baal, Good news I bring you!	tabušširu baʻli bašarata-ka yabaltu[13]
27–29	'Let a house be given you like your brothers', A court, like your kin's.	yutan bêtu lê-ka kama ʾaḫḫī[14]-ka wa-ḥaẓiru kama ʾaryi-ka
29–31	Call a caravan into your house, Wares inside your palace.	ṣûḥ ḫarrāna bi-bahatī-ka ʻiḏabāti bi-qirbi hêkali-ka
31–33	Let the mountains bring you abundant silver, The hills, the choicest gold.	tabulū-ka ǵarūma muʾda kaspa gabaʻūma maḥmada ḫurāṣi
33–35	And build the house of[15] silver and gold, The house of purest lapis lazuli.'"	wa-bnî bahatī kaspi wa-ḫurāṣi bahatī ṭuhūrīma ʾiqniʾīma

Baal's Preparations for the Building of His Palace

35–37	Mightiest Baal rejoiced; He called a caravan into his house, Wares inside his palace.	šamaḫa[16] ʾalʾiyānu baʻlu ṣāḥa ḫarrāna bi-bahatī-hu ʻiḏabāti bi-qirbi hêkali-hu

[13] The suffix is dative. This clause could be passive (so Smith, *UNP* 130): "good news is brought to you (*bašaratu-ka yubalat*)." However, active verbal forms are the case in the biblical passages, which also use the singular form of the noun (see BH *bĕśôrâ* in 2 Sam 4:10, 18:20, 22, 25, 27; 2 Kgs 7:9). All but the last of these passages use nominal and verbal forms of the root in the same context as in this bicolon.

[14] For the plural base, see *UG* 176. For a discussion of this plural base in connection with Akkadian *aḫu*, see Huehnergard 1987a:186.

[15] This could also be rendered, "with," both here and in the next line. Cf. lines 18–19 above.

[16] In view of the preceding narrative infinitives in line 20 and 25, an infinitive would be possible here, but usually a narrative infinitive follows a prior narrative finite verb with the same subject (Gai 1982). This condition is not met in the immediate context. The difficulties with understanding the syntax of the narrative infinitive have been noted (e.g., Moran 2003:56 n. 143).

38–40	The mountains brought him abundant silver, The hills, the choicest gold; The best ore was brought to him.	yabulūna-nu[17] ǵarūma mu'da kaspa gaba'ūma maḫmada ḫurāṣi yubaluna-nu 'udduru 'ilqaṣīma
41	He <s>ent for Kothar wa-Hasis.	yi<l>'aku lê-kôtari wa-ḫasīsi
42–43	And return to the recitation (about) when the lads are sent.	wa-ṯûb lê-maspari kī-tul'akūna/ǵalamūma[18]
44–46	Then Kothar wa-Hasis arrived; An ox was set[19] before him, A fatling right before him.	'aḫra maǵiya kôṯaru wa-ḫasīsu šūta 'alpu qudma-hu marī'u wa-tôka panī-hu
46–48	A throne was set up and he was seated, At the right hand of Mightiest Baal, As [the gods] ate, dran[k].	tu'dabu kissi'u wa-yuṯaṯibu lê-yamīni 'al'iyāni ba'li 'adê laḥāmu šatā[yu 'ilūma]
49	[And] Mighti[est Baal] spoke up:	[wa-]ya'nî 'al'i[yānu ba'lu]
50–52	"[…] Quickly, the house [build,] Quickly erect the pal[ace].	[ ] ḥūšu bahatīma [binî[20]] ḥūšu rāmim hêka[līma]
53–55	Quickly shall you buil[d] the house, Quickly shall you erect the pal[ace], Amid the summit of Sapan.	ḥūšu bahatīma tabnî[na] ḥūšu tarāmimuna hêka[līma] bi-tôki ṣirarāti ṣapāni

[17] The prefix indicative 3rd masc. pl. verbal form usually has prefix t- (Dobrusin 1981); so one might suspect here the sg. form with nunation. However, the context does not favor this interpretation.

[18] Or, to be vocalized as dual forms: *tul'akāni ǵalamāmi*.

[19] Or, arguably (so Smith, *UNP* 131 and 171 n. 127), "He (i.e., Baal) set an ox before him." See the Commentary below.

[20] Another possible reconstruction might be *[kôṯari]* (so Smith 1985:347 and in *UNP* 131; Pardee 1997a:260), following the type of climactic parallelism found also in 1.2 IV 8–9 (cf. 11–13). Here the addressee is named in the first line, while verbs appear in the second and third lines. The remains of line 50 are consistent with a reconstruction like the following: *[ḥš.]b[h]t[m kṯr]*, "Quickly, the house, O Kothar."

56–57	A thousand fields let the house cover, A myriad hectares, the palace."	'alpa šidda 'aḫada[21] bêtu ribbata kumāna hêkalūma
58	And Kothar wa-Hasis replied:	wa-ya'nî kôṯaru wa-ḫasīsu
59–60	"Hear, O Mightiest Baal, Understand, O Cloud-Rider:	šama' la-'al'iyāni ba'li bîn la-rākibi 'urpati
61–62	Shall I not install a window in the hou[se], An aperture inside the palace?"	bal 'ašîtu 'urubata bi-baha[tīma] ḫillāna bi-qirbi hêkalīma
63	And Mightiest Baal answered:	wa-ya'nî 'al'iyānu ba'lu
64–65	"Do not install a window in [the house], [An aper]ture inside the pala[ce]."	'al tašît 'urubata[22] bi-[bahatīma] [ḫillā]na bi-qirbi hêka[līma]

[Perhaps up to three lines are missing.]

Commentary

Poetic Parallelism and Word/Syllable Counts

		semantic parallelism	word/ syllable count
2	wa-ta'nî rabbatu 'aṯiratu yammi	a b	4/12

The line is extra-metrical, but it is perhaps deliberate that Athirat's title *rbt* appears here, just before the next colon which refers to El with the same root. It also seems that although this sort of speech-opening formula is extra-colonic, it is produced in such a way so as to maintain the relative line-length of the preceding and/or following units.

3–5	rabbata 'ili-ma la-ḫakamta/	a b a'	3/10
	šêbatu daqini-ka la-tisaru-ka/	c d e	3/12
	raḫânvnātu (?) dū[tu] lê-'irti-ka	c' d'	3/11

[21] For this form as an example of the precative perfect, see *UBC* 1.52.

[22] The Ugaritic form apparently shows vowel harmony of the first consonant (Albright 1934:126 n. 132). Cf. Latin transcription of Hebrew *orobbo* versus MT *'arubbâ*, discussed in Sivan 1997:67. Cf. Arabic *'araba*, "to combine, link"; Greek loan *arabbe*; so Loewenstamm 1984:193–94.

The last two lines are tied together in their syntax (as well as some sonant elements, including *d-* at the head of a word, *-ka* suffix, endings in *-tu, -atu* and *-ātu*, and sonant parallelism between *tisaru* and *'irti*). In contrast, the first line shows a different sort of syntax. By the same token, the parallelism between the three lines is tighter than the notation perhaps conveys, since the last two lines expand the theme of wisdom signaled with the last word of the first line. (Within the first line, the notation of a b a' is designed to show how wisdom is an expression of the god's greatness in this context; see the Commentary below for discussion.) The first line is further tied to the second by virtue of a notable sequence of shared components: noun in the nominative case, plus noun in the genitive (assuming that the vocative indeed takes the genitive; see p. 279 n. 6) plus particle ending in an *-a* vowel, plus *la-* with verb.

6–7	wa-na 'ap 'addina maṭara-hu/ba'lu	a b c d e	5/12
	ya'addinu 'addinu ṯarrata bi-galaṯi	b (x, y) c' c''	4/14

Ginsberg (*ANET* 133), Gibson (*CML*^{2} 60), *TO* (1.207), *MLC* (202) and Wyatt (1998:101) divide the bicolon with *y'dn* governing the first half and the second occurrence of *'dn* the second half. De Moor (1987:54) and Wiggins (1993:61) take Baal as the subject of the second line. The resulting imbalance in line-length does not favor either of these proposed divisions of the lines (see the Commentary below for further discussion). The subject of the first line carries over to the second, and the lines use the same verbal root in **qtl//*yqtl* parallelism (see Held 1962). If the emendation of the text is correct (*ṯkt* to *ṯrt*), the lines also have direct objects, *maṭara//ṯarrata*, belonging to the same semantic field of storm precipitation and sharing *r* and *t* (and vowels, if the vocalization is correct).

8–9	wa-<ya>tin qāla-hu bi-'urpāti/	a b c	3/10
	šaraha lê-'arṣi baraqīma	a' c' b'	3/10

Assuming the reconstruction of the initial verb, the bicolon shows precise balance in length. The construction of the two lines is nearly identical in syntax, and the semantics are quite complementary. The chiastic structure of the direct objects and prepositional phrases ties together the effects of Baal's thunder ("voice") in the sky and lightning on the ground. A smaller note of sonant parallelism: *b* and *r* occur in the final units in each of the two lines.

10–11	bêtu ’arzīma yakalliluna-hu/	a b c	3/11
	himma bêtu labināti ya‘ammisuna-hu	d a b’ c’	4/14

The balance of elements is exact, except for *hm* in the second line. At first glance, *hm* has no balancing element in the first line, but this is standard for double questions in Ugaritic, as pointed out by Ginsberg (1946:35) and Held (1969). Otherwise, the two lines look very similar, with their identical word order and even the similar nominal forms (*bt* in construct to plural nouns, with gender balance) and *D*-stem verbs plus 3 masc. sg. resumptive object suffixes.

12	la-yurgam lê-’al’iyāni ba‘li	a b (x, y)	3/10

This line might be viewed as the first line of a tricolon with the following two lines.

13–14	ṣûḥ ḫarrāna bi-bahatī-ka/	a b c	3/9
	‘iḏabāta bi-qirbi hêkali-ka	b’ c’ (x of y)	3/11

This bicolon shows a classic pattern of Ugaritic poetry, both in terms of syntax and semantics. As expected, the B-line contains the more obscure direct object compared to the first line.

15–17	tabilū-ka ǵarūma mu’da kaspa/	a b c d	4/11
	gaba‘ūma maḥmada ḫurāṣi/	b’ c’ d’	3/10
	yubalu-ka ’udduru ’ilqaṣīma	a’ c’ d’	3/11

In lines 31–33, the third line of this tricolon is not repeated, which perhaps suggests that the basic unit here is a bicolon to which a third line has been added. It is perhaps for this reason that the verb of the first line is resumed in the third line, a relatively uncommon construction for the third line of a tricolon in Ugaritic poetry. The third line is parallel in a further way. Its verb has been rendered in the passive, since the prefix of the **yqtl* verbal form is more likely singular and not plural (see Dobrusin 1981; but see *yblnn* in line 38), in agreement with *’udr* and not *ǵrm//gb‘m*. If correct, the third line also shows classic parallelism of a passive verbal form with an active form of the same root (see Held 1965a). All three lines show fine semantic parallelism, with the third line culminating with the rarest vocabulary found in the noun phrases of the tricolon. The density of endings in *-a* is also maintained through all three lines.

18–19	wa-bnî bahatī kaspi wa-ḫurāṣi/	a b c (x + y)	4/11
	bahatī ṭuhūrīma ʾiqniʾīma	b c' (x, y)	3/11

The classic parallelism shown in this bicolon includes repetition of *bht* in construct to noun-phrases that are semantically parallel, with metals in the first line corresponding to stone in the second. Syntactically, the parallel construct phrases show a variation between a coordinated phrase in the first line and an appositional phrase in the second.

20–21	šamaḫu batulatu ʿanatu	a b	3/10
	tidʿaṣu/paʿna wa-tarra ʾarṣu	c d e f	4/10

There is no semantic parallelism in this unit that would indicate whether it constitutes a bicolon or a tricolon. In view of the line-length based on syllables, it would appear that a bicolon rather than a tricolon is involved. Final *-u* is characteristic of this bicolon, especially in the first line; consonantal *t* is also notable.

22–24	ʾiddaka la-tatinu panīma/	a b c	3/10
	ʿimma baʿli maryāma ṣapāni/	d e f	4/10
	bi-ʾalpi šiddi ribbati kumāni	g h	4/11

This tricolon stacks up three standard travel formulas without generating semantic parallelism.

25–26	ṣaḥāqu batulatu ʿanatu	a b	3/10
	tiššaʾu/gā-ha wa-taṣûḥu	a' (x + y)	3/9

At first glance, the two lines have little in common semantically. Each contains rather conventional expressions. The second line in particular is a common speech-opening formula. Upon further examination, it is evident that both lines are very much concerned with communication; all three verbs or verb-phrases depict the goddess' verbal expression (for a similar point, see the discussion of lines 35–37 below). So it would appear that the first line leads semantically into the second and conveys the mood of the following speech introduced by the formula of the second line. Perhaps with this understanding in mind, the two lines may be viewed as enjoying a dynamic sort of semantic relationship, even if it is not parallelism of the standard sort. With this view of the bicolon, lesser elements binding the two lines are apparent. The name

of the goddess in the first line is resumed in the second line by the pronominal suffix. On the sonant level, the number of both nominal and verbal forms ending in *-u* is particularly pronounced. Furthermore, the first and third verbs show slight sonant parallelism.

26–27	tabušširu ba'li/	a b	2/6
	bašarata-ka yabaltu	a c	2/8

The scanning offered does not adequately convey the semantic parallelism operative in this bicolon. Semantically the lines begin with the same root, but vary expression by using different forms of the root. The name of the god in the first line is picked up on the sonant level in the second line, especially in the verbal form. The use of the same root in the initial word of the two lines also generates strong sonant parallelism. This is furthered by the morphological components with *ta-* (in the first line)//*-ata* (in the second line). Sonant parallelism extends to the second word in the two lines, as each one uses *b* and *l*. It is to be noted further that the shorter line-length demarcates this unit from the preceding or following units. Perhaps here form follows function: this departure in line-length may be designed to highlight the announcement of news.

27–29	yutan/bêtu lê-ka kama 'aḫḫī-ka	a b c d e	5/11
	wa-ḥaẓiru/kama 'aryi-ka	b' d e'	3/9

This bicolon (like 1.4 IV 62–V1) echoes the opening bicolon of Baal's lament. Here, however, the poet uses a third person jussive of the *G*-stem of **ytn*, "to give," in the initial syntactical slot (see the Commentary below for discussion), compared to the form *'in* in the lament and *ybn* in El's declaration of permission. A new parallel pair in the comparative phrase (*'aḫk//'aryk*) makes an appearance here.

29–31	ṣûḥ ḫarrāna/bi-bahatī-ka	a b c	3/9
	'iḏabāti bi-qirbi/hêkali-ka	b' c' (x of y)	3/11

See the discussion of this bicolon in lines 13–14 above.

31–33	tabilū-ka ǵarūma/mu'da kaspa	a b c d	4/11
	gaba'ūma maḥmada/ḫurāṣi	b' c' d'	3/10

See the first two lines of the tricolon in lines 15–17. The third line of that tricolon is not repeated here.

33–35	wa-bnî bahatī kaspi/wa-ḫurāṣi	a b c (x + y)	4/11
	bahatī ṭuhūrīma/'iqni'īma	b c' (x, y)	3/11

See lines 18–19 above.

35–37	šamaḫa 'al'iyānu/ba'lu	a b	3/9
	ṣāḥa ḫarrāna bi-bahatī-hu/	c d e	3/10
	'iḏabāti bi-qirbi hêkali-hu	d' e' (x of y)	3/11

These lines may be considered a monocolon (cf. the similar line 20a) plus a bicolon (attested in lines 13–14//29–31). Some binding between the three lines is achieved by virtue of the fact that the two verbs both involve expression on the part of the storm-god (for a similar observation, see the discussion of lines 25–26 above). Some minor sonant echoing may be detected, especially with the initial *ha-* in the second word of the second line corresponding in position to the final *-ha* of the verb in the first line. To be noted as well are *ba-/bi-* and final *-u* in the three lines.

38–40	yabulūna-nu ǵarūma mu'da kaspa/	a b c d	4/11
	gaba'ūma maḫmada ḫurāṣi/	b' c' d'	3/10
	yubaluna-nu 'udduru 'ilqaṣīma	a' c' d'	3/11

See lines 15–17 for discussion. The only major difference involves the switch to third person indicative verbal forms for narrative.

41	yi<l>'aku lê-kôṯari wa-ḫasīsi	a b (x + y)	3/11

This line presently stands as a monocolon, but perhaps in view of what the text assumes, as indicated by the following prose insertion, this colon might have originally belonged to a larger unit.

42–43	wa-ṯûb lê-maspari
	kī-tul'akūna/ǵalamūma

As marked by the scribal lines preceding and following these words, this is a scribal, prose insertion (see the Commentary below).

44–46	’aḫra maǵiya kôṯaru wa-ḫasīsu/	a b c (x + y)	4/12
	šūta ’alpu qudma-hu	e f g	3/7
	marī’u/wa-tôka panī-hu	f’ g’ (x of y)	3/9

On the face of it, the first line is a monocolon, to which are appended the next two lines, a nicely balanced bicolon that may be scanned: a b c//b’ c’ (x of y). Essentially the same bicolon appears in 1.3 IV 40–42 (prefixed to these two lines is a different monocolon with rather different semantic content). Despite the semantic difference between the first line on the one hand, and the second and third lines on the other, the figure of Kothar named in the first line and referenced by pronominal suffixes in the second and third provides some semantic continuity. It is perhaps too much to suggest seeing sonant parallelism in *ma-…wa-* and *koṯaru* and *tôka* in the first and third lines.

46–48	tu‘dabu kissi’u/wa-yuṯaṯibu	a b a’	3/11
	lê-yamīni ’al’iyāni/ba‘li	d e (x, y)	3/10
	‘adê laḥāmu šatā[yu ’ilūma]	f g (x, y) h	4/11

There is virtually no semantic or morphological parallelism in this tricolon. Instead, contrasting sorts of verbal forms in the first line on the one hand and in third line on the other frame the verb-less second line. There is perhaps to be noted some sonant echoing of the second line in the third (*l…-am* and *l…-am*).

49	[wa-]ya‘nî ’al[’iyānu ba‘lu]	a b (x, y)	3/9

This line appears to be extra-colonic. As with other examples of extra-colonic speech-opening formulas, this one maintains the basic line-length of the preceding unit (and perhaps of the following colon as well). This may not be without some poetic sensibility (perhaps in order to proceed with little interruption).

50–52	[ ]	?	?
	ḫūšu bahatīma [binî (?)]	a b c	3/8 (?)
	ḫūšu rāmim hêka[līma]	a c’ b’	3/8

A tricolon evidently underlies these lines. One might suggest that the first line read something like, *ḫš bhtm kṯr*, “Quickly, the house, O Kothar.” The two extent lines balance nicely. Semantically, the corresponding terms in the two lines are either identical (*ḫš*) or word-pairs (*bhtm//hklm*, and

bny*//rwm* in the *L*-stem). Syntactically, the single variation in parallelism involves a chiasm. Within this chiasm the dominant consonance involves the bilabials *b* and *m*.

53–55	ḫūšu bahatīma tabnî[na]/	a b c	3/9
	ḫūšu tarāmimu-na hêka[līma]/	a c' b'	3/11
	bi-tôki ṣirarātī ṣapāni	d e f	3/10

The first two lines reiterate the preceding two lines, but with a switch of verbal forms. The third line is not semantically parallel, but serves instead to specify the setting for the activity commanded. The syntax and morphology likewise set off the third line. Final *i*-vowels are, however, notable in the third line, and perhaps they pick up sonantly the *i*-vowels in the first two lines. Noegel (2004:10) emphasizes the poetic clustering of reduplicated forms in this unit, specifically in *tarāmimu-na* and *ṣirarātī*.

56–57	'alpa šidda 'aḫada bêtu/	a (x, y) b c	4/9
	rabbata kumāna hêkalūma	a' (x, y) c'	3/10

This unit shows classic parallelism, with the objects fronted for emphasis. The parallelism includes singular and plural forms in the word-pair, *bt*//*hklm*, a word-pair that carries over from the preceding two units.

58	wa-ya'nî kôṯaru wa-ḫasīsu	a b (x + y)	3/10

As with other examples of extra-colonic speech-opening formulas, this one maintains the line-length of the preceding unit.

59–60	šama' la-'al'iyāni ba'li/	a b (x, y)	3/9
	bîn la-rākibi 'urpati	a' b (x of y)	3/8

Very tight parallelism, in terms of both syntax and morphology, mark this colon. The only significant difference in syntax involves the divine titles, one an appositional phrase and the other a construct phrase. The final words in each of the two lines show partial sonant parallelism.

61–62	bal 'ašîtu 'urubata bi-baha[tīma]/	a b c	4/13
	ḫillāna bi-qirbi hêkalīma	b' c' (x of y)	3/10

This bicolon shows one of the more common patterns of Ugaritic poetry, both in terms of syntax and semantics. The verbal phrase in the first line governs both lines, and the second line shows a longer prepositional phrase.

63	wa-ya‘nî ’al’iyānu ba‘lu	a b (x, y)	3/9

As with other examples of extra-colonic speech-opening formulas, this one maintains the line-length of the preceding unit.

64–65	’al tašît ’urubata bi-[bahatīma]/	a b c	3/12
	[ḫillā]na bi-qirbi hêka[līma]	b’ c’ (x of y)	3/10

This unit closely follows the bicolon of lines 61–62.

Introduction

This column directly continues the action of column IV. El grants his permission for Baal to construct a palace (line 1). Athirat, through whom this permission has been obtained, then praises El for his wisdom. This expression of praise additionally declares that this palace will allow for Baal to perform his cosmic duties. Athirat then announces (to Anat specifically?) that Baal is to be informed of the decision (lines 2–19). Anat journeys to Mount Sapan, and gives the good news to Baal (lines 20–35a). He in turn begins the preparations for construction, most importantly summoning Kothar-wa-Hasis to supervise the project (lines 35–57). This section includes a note (lines 42–43) indicating a significant abridgment of the written form of the story. The note contains very brief instructions on what needs to be added by the storyteller at this point in the narrative, i.e., Baal’s instructions to the messengers whom he sends to Kothar, their journey to the god’s abode, their delivery of the message, Kothar’s response and journey to Mt. Sapan. The scribe then moves directly (line 44) to Kothar’s arrival at Baal’s home and commissioning by Baal. The column ends with a discussion between Kothar and Baal about whether a window should be put in the palace. Kothar wishes to insert such an opening, but Baal is opposed to it (lines 58–65).

The story of the palace, its construction and dedication in 1.4 V–VII is a central moment in the Baal Cycle. The palace/temple of Baal is

clearly viewed in the narrative as the central symbol of legitimation for Baal's role as leader of the divine assembly. Its completion in column VI is portrayed as a military victory, somewhat similar to the way Baal's defeat of Yamm in CAT 1.2 is depicted. It is followed by all the signs of victory—a glorious feast for the gods (1.4 VI 38–59; cf. 1.3 I) and a triumphal tour across the world in which town after town acknowledges him as king and his enemies flee (1.4 VII 7–14; 25–37).

While it possesses its own unique character within the context of the Baal Cycle, the story of the palace's construction adheres to a well-attested literary pattern of building narratives that stretches across the literature of the ancient Near East. Hurowitz (1992) dealt extensively with this pattern and has amply demonstrated how columns V–VII contain the basic elements of the pattern (cf. also Hurowitz 1985:26–29; *RSP III*:277–84; Kapelrud 1963; see also our Introduction, pp. 35–7). We draw heavily on Hurowitz' careful work in the following. Four particular elements in 1.4 V–VII may be compared with those of building narratives from Mesopotamia and from Israel. Our primary parallel examples for the following are the Bilingual Inscription B of the Old Babylonian king Samsuiluna (Frayne 1990:374–78; Sollberger and Kupper 1971:222–23), the Tiglath-Pileser I annals vii 71–viii 88 (Grayson 1991:28–31), and the biblical tabernacle and temple building stories, while other narratives are occasionally noted:

1. A decision to construct a building with an expression of divine sanction: El gives permission in 1.4 IV 59–V 1 and the news is conveyed to Baal in 1.4 V 2–35a. Samsuiluna receives a divine command to build Sippar and the Shamash temple, Ebabbar (lines 1–38). In an exceptionally elaborate version of this narrative element, the Gudea Cylinder A (I 17–XII 11) describes Ningirsu appearing in two visions to Gudea to inform him that he is to build the temple Eninnu and to give him instructions on how to proceed (Edzard 1997:69–76; Falkenstein and von Soden 1953:137–49; Hurowitz 1992:38–40). Similarly, Anu and Adad command Tiglath-Pileser I to rebuild their temple in Ashur (VII 60–75). In the Sippar cylinder of Nabonidus (I 8–22), Marduk appears to the king in a dream and tells him to rebuild the temple of Ehulhul, Sin's temple in Harran (*COS* 2.311; Langdon 1912:218–19). Besides these Mesopotamian examples, Hurowitz (1992:97–100) compares a few West Semitic texts as well, although few are clearly parallel to this element. Perhaps there is reference to divine commissioning of construction in

the Amman Citadel Inscription, line 1, and in the Pyrgi Inscription (lines 5–6; cf. *KAI* 277). In addition to these, one might also note the Panammu Inscription, lines 13–14 (KAI 214), where Hadad apparently calls on Panammu to build something (his temple?). Yahweh likewise commissions Moses to build the tabernacle and reveals its plan (*tabnît*; see Exod 25:8–9, 40, etc.). The divine commissioning of the temple in Jerusalem is more complex, in that the primary narrative (2 Sam 7:5–13) seeks to explain why the great founder of the dynasty, David, did not build the temple, while Solomon his son did. Thus, Yahweh refuses to give permission to David, but commissions Solomon in advance. In 1 Kgs 5:16–20 when Solomon begins the process, he is quoted as referring back to the commission in 2 Samuel 7. 1 Chron 28:2–19 elaborates the story further by asserting that the plan of the temple was actually revealed to David, who passed it on to Solomon.[23]

2. Preparations for the building project, including the drafting of the labor force and acquisition of building materials. Informed of El's permission, Baal summons a caravan for securing the building materials and a craftsman (Kothar) to be in charge of the construction in 1.4 V 35–57. Kothar sends for wood from the Lebanon mountains (1.4 VI 18–21). Similarly, Samsuiluna employs his army and makes the bricks for the reconstruction of the wall of Sippar and the Ebabbar temple (lines 74–78). The inscription of Tiglath-Pileser I describes very briefly the making of bricks for the Anu and Adad temple and ignores the contribution of anyone besides the king in the construction of the temple (all the verbs in the description of the building of the temple in VII 75–114 are in the 1st person sg.). Preparations for the tabernacle appear in Exod 35:20–36:7. Here the narrative describes how the people

[23] Some scholars (e.g., Kapelrud 1963:59–61) have suggested that the dream report in 1 Kings 3 was originally an account of Yahweh commissioning Solomon to build the temple. Later, they suggest, the commission was replaced with the current account of Yahweh giving Solomon wisdom. This is quite speculative, and assumes that the pattern discerned in narratives like that of Gudea must have been adhered to in the case of the Solomon story. It also assumes that a more complex commissioning narrative than we have in 2 Samuel 7, and 1 Kings 5 cannot be original since there is not an exact parallel in other texts. See Hurowitz 1992:165–66. In fact, however, an indirect commissioning such as we find in 1 Kings 5 is not extremely dissimilar from our passage in column V, where El's permission is passed to Athirat, then to Anat, who informs Baal. Clearly a direct encounter between the commissioner and the one commissioned is unnecessary.

contribute the materials for the sanctuary, and how Moses appoints Bezalel and Oholiab to oversee the project. Solomon's preparations for the Jerusalem temple are described in 1 Kgs 5:20–32. Here the materials are sent by Hiram from the Lebanon mountains, and Solomon places the laborers under the supervision of Adoniram.

3. The edifice is built and described, often in substantial detail. In our passage the description of the palace is rather vague (1.4 VI 22–38). The construction of the Ebabbar temple and its description are also fairly short and vague in Samsuiluna B, lines 82–92. On the other hand, the building narrative of Tiglath-Pileser I refers to numerous details concerning the aspects of the temple renovated by the king (VII 85–114). But none of these second millennium descriptions compare in detail with those found in the Hebrew Bible from the first millennium. 1 Kings 6 gives a remarkable description of Solomon's temple, and Exodus 25–27 and 36–38 provide an even more detailed depiction of the tabernacle.

4. The dedication ceremonies and official entry of the god(s) into the temple. In 1.4 VI–VII, Baal provides a divine feast for the gods (VI 38–59) and later issues his voice (thunder) from his throne in the temple (VII 27–42), indicating that he has taken possession of his palace. In Samsuiluna B (lines 88–92), the gods make their entry into the Ebabbar "amidst joy and rejoicing," i.e., during a dedication ceremony. The inscription of Tiglath-Pileser I does not mention the dedication ceremony, but does refer to the king bringing the gods Anu and Adad (that is, their statues) into the temple and setting them on their thrones. The dedication of the Israelite tabernacle takes place in Exod 40:9–15, followed by the description in Exod 40:34–35 relating the arrival of the Cloud that represents Yahweh's presence in the tabernacle (cf. the account in Leviticus 8–10; Numbers 7). Solomon dedicates his temple with a massive feast in 1 Kgs 8:62–66, and in the description in 8:10–13, the divine cloud enters the temple, marking the arrival of Yahweh's special presence.

The construction materials described in 1.4 V–VII also have a reflex in Mesopotamian literature. Bricks, mentioned in our text in 1.4 IV 61–62 and V 11, are commonly the primary constituent of such a building, and many Mesopotamian accounts refer to them (e.g., Gudea Cylinder A:xix, lines 13–21; Samsuiluna B, lines 77–78;

Tiglath-Pileser I:vii, lines 75–80; 103–4).[24] Several precious materials are additionally listed, including silver, gold, lapis luzuli, as in our passage (1.4 V 15–19, 31–35; VI 35–38). The latter three elements are also found in the description of Gudea's restoration of the Eninnu temple for Ningirsu (Cylinder A:xvi, lines 18–24 and xxiv, lines 15–17; cf. Edzard 1997:79, 84), as well as in that of the Dublalmah temple restored by Amar-Suen as found on three door-socket inscriptions of the latter (Frayne 1997:254, lines 28–29). For a palace of gold and lapis lazuli in Egyptian literature, see the Instructions of Amenemhet iii 1ff. (Lichtheim 1973:137; *ANET* 419). One should also note the Babylonian king, Burna-Buriyash's request to Nibhurrereya (Tutankhamun) for gold for a temple in EA 9:6–18.

In addition to these overall similarities, Hurowitz (1985:28–29) added a number of particularly close parallels between the Baal account and the tabernacle building narrative in Exodus 34–36. Both accounts have the deity give the command concerning the temple to someone who acts as a messenger to inform others of the commission. Thus Anat is given the message to take to Baal (1.4 V 12–35), while Moses is told to inform the people of the command to build the tabernacle (Exod 34:29–35:19). Both accounts also describe the recruitment of a person to be in charge of the construction: Kothar in the Baal Cycle in 1.4 V 41–48), and Bezalel and Oholiab in Exod 35:30–36:2. This element, also found to an extent in the reference to Adoniram as the supervisor of the laborers for the temple in 1 Kgs 5:14, is not a characteristic of the building accounts from Mesopotamia (Hurowitz 1992:102–3). It thus seems to be a feature specific to West Semitic stories. Taken together, all of these elements demonstrate that the building of Baal's palace in 1.4 V–VII adheres to traditional ancient Near Eastern patterns used for building narratives.

Lines 2–19: Athirat's Proclamation of the Palace for Baal

[Line 1 constitutes the conclusion of El's speech to Athirat at the end of the previous column. It is discussed there.]

---

[24] For bricks and brick-making, see Excursus II: Brick-Making in Pre-Industrial Cultures, on pp. 623–5 below.

El's permission in 1.4 IV 59–V 1 is met understandably by Athirat's favorable reply. The goal of her trip has been successfully achieved, and she has fulfilled her obligation to Baal that she took upon herself by accepting his gifts. Her speech in lines 3–19 may be treated in three parts: (1) praise of El's wisdom (lines 3–5); (2) the prospect of Baal's rains, thanks to the palace (lines 6–10) and (3) an order for El's decision to be conveyed to Baal (lines 10–19). The first section consists of a tricolon in praise of El's greatness and wisdom. The initial word of the tricolon evokes the god's greatness, as expressed also in the PN, *rb'il* (*PTU* 179) and Amorite *rabi-il*, "El is great" (J. J. M. Roberts 1972:31). With the second verb in the line, *lḥkmt*, Athirat salutes El's wisdom, echoing her earlier acknowledgement of El's sagacity (1.4 IV 41–43a). Superlative wisdom is a mark of divinity, as the statement made to Enkidu in the story of Gilgamesh would suggest: "Thou art [wi]se, Enkidu, art become like a god!" (*ANET* 75; cf. OB version in II:11, in *ANET* 77). Despite differences in context and sentiment, this statement matches Athirat's initial praise of El's wisdom in both semantics and syntax (second masc. sg. verb + vocative + second masc. sg verb).

In line 4, Athirat adds a further image to express her praise of El's wisdom. She states: "The gray hair of your beard instructs you." The word *dqn*, translated here as "beard" (so most other translators, e.g., *TO* 1.207; Dietrich and Loretz 1997:1161; *MLR* 84: Pardee 1997a:259; Wyatt 1998:101), can also mean "chin" in Ugaritic (Loewenstamm 1974, 1982; Marcus 1977:56–58). However, in this context, "beard" seems much more likely. The clearest occurrence of the word as "chin" is found in 1.6 I 3–4, where as part of her mourning for the dead Baal, Anat cuts her "cheeks and chin," *lḥm wdqn* (Loewenstamm 1974, 1982; Marcus 1977; *DUL* 278, 494. De Moor (*SPUMB* 193) has argued strenuously against this rendering, suggesting that the passage refers to Anat cutting off "side-whiskers and beard." For de Moor, this indicates that Anat was viewed as both a male and female figure. Loewenstamm (1974 and 1982), along with Marcus (1977) showed clearly how unlikely this proposal is. A few scholars (*BOS* 2.132; *Thespis* 185; de Moor 1987: 54; cf. *SPUMB* 112) have related *dqn* to Hebrew *ziqnâ*, or *zĕqunîm*, both meaning, "old age." While Marcus (1977: 56–57) argued against this interpretation, a relationship to *zĕqunîm* is plausible, although "beard" still seems more likely in the context.

The point of the saying is certainly to recall the widespread equation of age with wisdom. El is portrayed throughout the Ugaritic literature as an elderly patriarchal figure with a beard (cf. 1.3 V 2 and 25). The

famed stela from Ugarit showing a bearded, elderly deity sitting on a throne almost certainly represents El (see *ANEP* #493; the caution expressed in Marcus 1977:58 about identifying the deity with El seems unnecessary). According to Dijkstra (1997:92), *d-ṯb* = **zû šība(ti)* in the Serabit el-Khadem inscriptions refers to "the Grey(-haired) One," possibly a title of El (identified with Ptah). The idea that wisdom comes with age is a truism questioned by Job (12:12; 32:9). The second passage in Job is arguably pertinent to Athirat's praise here, as they share a number of terms (although with different meanings): "Seniors (*rabbîm*) may not be sage (*yeḥkāmû*), /Nor elders (*zĕqēnîm*) understand aright" (Pope 1973:240). The role of seniors as sages extended to the legal sphere. Juridical documents at Ugarit (e. g., RS 17.86 + 241 +208, in *Ugaritica V*, p. 263; RS 17.235 in *Ugaritica V*, p. 264) append a list of witnesses each called *šību*, whose base meaning is "old man, elder" (see *CAD Š/2*:390–94, #A, 2), but which commonly is used as a term for "witness" (see *CAD Š/2*:394–99, #A 3, esp. f). Elsewhere "the fathers of Ugarit" (*[ami]labbîM alu-ga-ri-it]*) are asked to provide a witness in order to help adjudicate a case (e.g., RS 17.424 C + 397B, lines 24–27, in *PRU* IV, 219). The elders' legal role evidently stems from their status as patriarchs of their household units, where they exercised the domestic role of making rulings. Perhaps it is the role of the patriarch issuing rulings in the corresponding unit of the divine family that Athirat is evoking here with her praise of El. Her association of his wisdom with "the gray hair of your beard" (*šbt dqnk*) would have been at home in the society of ancient Ugarit. The verbal root **ysr* (< **wsr*)[25] in biblical wisdom literature denotes divine discipline (for example, Isa 28:26, cited by Albright 1934:123 n. 114; and Prov 3:11), and it fits praise of El's wisdom.

The final line of the tricolon (line 5) poses some significant difficulties. As discussed above, the epigraphic reading of the line is *rḫnn̊t. dx.l'irtk*. The smudged appearance of the second *n* of the first word has led a number of scholars to believe that it is a partially rubbed-out scribal error, corrected by the writing of the following *t*, and that the word should read *rḫnt* (e.g. CAT, p. 18; *TO* 1.207, n. s; Dietrich and Loretz 1997:1161, n. 69; *DUL* 739). The appearance, however, of *rḫnn[* in a

[25] Cf. *ywsrnn* in 1.16 VI 26 (note *DUL* 943, which compares BH **ysr* and Akkadian *esēru*) and the possibly related form, *ystrn*, in 1.4 VII 48. For the first *w-* root consonant, compare the BH *N*-stem forms in Ps 2:10; Prov 29:19, etc., and the *Nt*-stem form in Ezek 23:48. For discussion of the root in the *G* and *D* stems, see Ginsberg 1946:48.

badly broken context in CAT 7.57.2 suggests the possibility that the form *rḫnnt* is in fact correct. Nonetheless the word is quite obscure, with no clearly identifiable cognate elsewhere in the Semitic languages. Several scholars have suggested that it might be related to Arabic *raḫama*, "to be gentle of voice" (*TO* 1.207) or Hebrew *rāḥam*, "to be compassionate" (e.g., Dietrich and Loretz 1997:1161; de Moor 1987:54; Wiggins 1993:61; Wyatt 1998:101). However, the proposed phonological change of *m* > *n* before *t* assumed by the citation of Arabic *raḫama* and Hebrew *rāḥam* appears unwarranted. A number of scholars have simply decided not to offer a translation at all (e.g., Ginsberg, *ANET* 133; Gaster (*Thespis* 185) and Gordon (1977:95). Other scholars have also tried to connect the final *t* of *rḫnnt* to the next word. For example, *TO* (1.207 n. r) reads *rḫnt td[y] l'irtk* and renders, "Tu [fais sortir] de la poitrine une voix douce," relating the second word to the Akkadian verb *nadû*, "to throw, hurl." This is extremely unlikely, as there is word divider clearly after and not before the *t*. Pope related *rḫnt* to Arabic **rḫw*, "to be soft," and he rendered the line: "Gently (?) the w[hiskers (?)] on your chest" (Pope in Smith 1998b:656–57). While the rendering of the second word must be rejected due to space considerations on the tablet (he reconstructed *d[qn]*, when there is room for only one letter), the connection of *rḫnnt* with **rḫw* cannot be ruled out. Pardee (1997a:259–60) assumes the same cognate, but understands it in more abstract terms (and arguably less befitting the parallelism with the previous line): "the respite that is yours alone (surely instructs you)." Largely following Pope's lead, we very tentatively propose a related reading that takes into account the parallel above, *šbt dqnk*, and propose "the soft ones whi[ch] (belong) to your chest" (*rḫnnt d* ⌜*t*⌝ *l'irtk*). In other words, the gray hair of El's chin is parallel to the hair of his chest. However, even this remains problematic, since the etymology of *rḫnnt* remains uncertain, and the proposed reading of the second word as *d* ⌜*t*⌝ is also problematic (see Textual Notes above).

In the next section of her speech (lines 6–9), Athirat shifts her attention from El to the reason why his decision is such a wise one. In these two bicola, the goddess asserts that the building of the palace will allow Baal to fulfill his function in the cosmos, the sending of the life-giving rains upon the earth. This emphasis on the close connection between Baal's temple and his functioning as storm god is a central aspect of the story, first brought up here, but then made the climax of the building narrative in 1.4 VII 27–37.

The first bicolon (lines 6–7) is demarcated from the previous section as a separate topic, by the double particles, *wn ʾap* (Watson 1994a). Apart from these particles, every word in the first bicolon except *mṭrh* has occasioned substantial debate. Fortunately, *mṭr* indicates that rain is the subject of the bicolon, which is compatible with the "voice" (i.e., "thunder"; cf. Ps 29:3–9), clouds and lightning mentioned in the following bicolon (lines 8–9). Two basic approaches have been taken to the rest of the first bicolon, largely from the interpretation of the attestations of **ʿdn*. Many scholars take *ʿdn* as "time, season," based on Akkadian *adanu/adannu* (*CAD A/1*:97–101), Aramaic *ʿiddānā*, "time" and Arabic *ʿaddana*, "to fix the time of public distribution" (Leslau 56; see *UT* 19.1823; *CML*² 60; *SPUMB* 148; de Moor 1987:54; *CMHE* 149; Loretz 1995c:117–18; Pardee 1997a:260; Wyatt 1998:101). This is a plausible interpretation. The issue of the timing of Baal's rains is, of course, a major theme, and the sending forth of his voice from his completed palace at the climax of the building narrative in column 1.4 VII 27–37 is certainly the fulfillment of the thoughts expressed in this passage.

The second approach was proposed originally in the *editio princeps* of Virolleaud (1932:133, 140; cf. also Gaster 1933:119, n. 1; cf. Albright 1934:124 n. 116). While it was largely ignored for decades, more recently it has reemerged as a genuinely possible interpretation. Here *ʿdn* is related to BH and Aramaic *ʿdn*, "to be abundant, luxuriant," in the *D*-stem "to make abundant," and Arabic *ʿadānat*, "numerous party" (Ginsberg 1946:37; cf. Zadok 1993:320; also ESA **ʿdn*, "well-being," cited in Biella 354). The revival of this interpretation occurred with the publication of the Tell Fekheriyeh inscription. As Greenfield (1984b) immediately grasped, this Akkadian-Aramaic bilingual inscription provides strong support for it. The opening list of titles and common attributes of Hadad (a cognomen of Baal in the Ugaritic texts) includes the epithet *mutaḫḫidu kibrati*, the one "who makes the whole world luxuriant," in the Akkadian text (line 7), which is paralleled in the Aramaic (also line 7) by *mʿdn mt kln*, "the one who makes all lands luxuriant" (Greenfield and Schaeffer 1983:112–13). The word appears here very clearly in the context of Hadad's watering of the world, which makes the world "abundant, luxuriant." With the close contextual relationship between this passage and ours in 1.4 V, it seems quite plausible to argue in favor of understanding the latter in a similar way. In addition, this interpretation of the verb also works quite plausibly in 1.14 II 32–33,

as noted by Ginsberg (1946:37). In the latter, the root appears as an imperative, *ʿdn ngb wyṣʾi*, "Make abundant the supply and go forth." A similar meaning in BH is clear in Ps 36:9, and it probably is the meaning of the name Eden in Genesis 2 (cf. Greenfield 1984b: 224; Millard 1984, *BDB* 727). The root occurs in the Amorite onomasticon (Huffmon 1965:191; Zadok 1993:320). A BH Yahwistic name with the *ʿdn* element, Yĕhôʿaddan, is also attested in 2 Kgs 14:2 (Qere) and 2 Chr 25:1 (cf. Ezra 10:30), and one of the Wadi ed-Dâliyeh papyri contains the PN *ʾbyʿdn*, probably meaning, "My father has given abundance" (cf. Aufrecht and Shury 1997:63). An early ninth century seal, probably Aramaic, contains the name *bʿlʿdn*, "Baal has given abundance" (Aufrecht and Shury 1997:60, 62–63). On the whole, the second interpretation seems more likely, and we have used it in our translation, but it should be noted that the first interpretation is also quite plausible.

The division of the lines of this bicolon has also been a matter of substantial disagreement. The primary issue is whether *bʿl* and *yʿdn* belong to the first or second line. The most common arrangement has been to put both words in the first line (e.g., Aistleitner 41; *TO* 1.207; Coogan 1978:101; Dietrich and Loretz 1997:1161; Gordon 1977:95; *LC*^{2} 49; Wyatt 1998:101). This, of course, creates a substantial discontinuity between the lengths of the two lines, and while such unbalanced lines are attested, they are relatively rare. *TO* (1.207) and Wyatt (1998:101) have proposed a solution to the imbalance by suggesting that the opening words, *wn ʾap*, are extracolonic, so that the first line of the bicolon ends up as, *ʿdn mṭrh bʿl/yʿdn*. This, too, cannot be ruled out entirely, since such extracolonic elements seem to be attested elsewhere. De Moor (1987:54) and Wiggins (1993:61) place *bʿl yʿdn* in the second colon, but in so doing create the problem of a short first line and long second one. We have followed Cross (*CMHE* 148) and Olmo Lete (*MLC* 202) in taking the name *bʿl* with the first line and the verb *yʿdn* with the second line. We understand the first occurrence of *ʿdn* to be a precative perfect verb, with Baal as subject. The precative is paralleled then in the second line with the **yqtl* form of the same verb (on the use of **qtl*// **yqtl* forms of the same verb in bicola, see Held 1962; note also the discussion in *UBC* 1.51–53). While the former proposals cannot be dismissed, the latter seems preferable and provides a considerably better scansion of the bicolon.

At least four interpretations have been offered for *t̲kt* in line 7. First, some render the word as "ship" or "barque" (de Moor 1987:54; *SPUMB* 150–51; *CML*^{2} 60–61; Gordon 1977:95; Tuell 1993:101–02; for a depic-

tion of Syrians on a ship, see *ANEP* #111). Proponents promote the notion that Baal has, metaphorically speaking, a boat in the clouds; from there he dispenses his precipitation. The rendering has etymological support, but Loretz (1996:170) rightly criticizes the interpretation on the basis of the parallelism and questions its suitability in this context. Second, there is a proposal is to emend the *k* of *ṯkt* to an *r* (the two letters are closely related in form), thus producing **ṯrt*, a fem. sg, noun from **ṯry*, "to water" (cf. Arabic **ṯry*, "to be moist, well-watered" and *ṯaran*, "moist earth, ground";[26] ESA *ṯry*, "surplus" (?); see Lane 335–36; Wehr 103; Biella 549–50; *DUL* 904, 933). This view is the most popular among commentators (e.g., *CML*[1] 97, 151; Løkkegaard 1955:21 n. 10; *CMHE* 148–49; *TO* 1.207 n. t; *MLC* 202; *UBC* 1.53; Pardee 1997a:260 n. 159), for understandable reasons. The semantics of such a noun, meaning "water, gushing," or the like, admirably suit the context here. Moreover, the root **ṯry* appears in 1.101.7–8 in parallelism with *bglṯ*, the word that follows *ṯkt* in line 7. In 1.101, which is unfortunately somewhat broken and uncertain of translation, we find the following in a description of Baal:

r'išh bglṯ bšm[m]	"His head (is?) in the torrent from/in the heav[ens],
[ʿm (?)] 'il ṯr 'iṯ	[with (?)] the god is (?) the watering.

It is the combination of **ṯry* and *glṯ* (see the discussion of the latter directly below) predicated of the storm-god in 1.101.7–8 that particularly militates in favor of the emendation in our passage. A third interpretation was proposed by Maier (1986:21), who avoids emendation by understanding *ṯkt* as related to Akkadian *šikkatum*, "harrowed land," and views it as referring to the dry land that is to receive Baal's rains. But this etymology is impossible, given the Arabic cognate *sikkatun*, "ploughshare" (Lane 1387). Fourth and finally, Loretz (1996), followed by Wyatt (1998:101) and Wiggins (2000:583), interpret *ṯkt* as a term for a chariot, as found in CAT 4.81 and 4.366, and possibly cognate with Hurrian/Akkadian *šukitu* attested at Nuzi (for references, see Loretz 1996:171, also equated with Amarna *šuḫītu* in EA 34:21). This interpretation suggests the picture of Baal's storm chariot. However, there is some question about the meaning of Akkadian *šukitu*. Some scholars define it as "spear" rather than "wagon" (Negri Scafa 1995:54; see also *CAD Š/3*:218; cf. *AHw* 1263; see Loretz 1996:171 n. 32). In short, this

[26] Cf. Akkadian *šer'u*, "furrow, cultivated field" (*CAD Š/2*:327).

proposed etymology remains problematic. Overall, the emendation to *ṯrt* appears preferable, thanks to the root's use with *glṯ* elsewhere in Ugaritic; no other proposal enjoys greater contextual support.

The last word of line 7, *glṯ*, has also been the topic of much discussion. It appears elsewhere in Ugaritic in close relationships to water and to Baal. In 1.92.5, a verbal form is used to describe the watery abyss, *wtglṯ thmt*. There is little doubt there that the word describes the movement of the water. Greenfield (1969b:99 n. 36) rendered 1.92.5: "The abyss was roiled." Pope (1977b:459–60) proposed that the word might have the sense "to surge, to stream." It also appears as a noun in CAT 1.101.7–8 as part of a meteorological interpretation of Baal's body, as described above (cf. Irwin 1983:56; Pope and Tigay 1971:129; Pardee 1988a:125, 145–47). One may also note the biblical attestation of the root **glṯ* (BH **glš*) in Song of Songs 4:1 = 6:5, where the poet compares his beloved's hair to "a flock of goats that stream down (*gālĕšû*) from Mount Gilead (Ginsberg 1974:9). Greenfield (1969b:99 n. 36; cf. Tuell 1993:100) also notes MH **glš* in the meaning, "to boil, seethe," in reference to water (bT. Pes. 37b as well as Palestinian Aramaic, cited in Jastrow 251). Perhaps more pertinent is the use of this word for water boiling over from a pot in Palestinian Aramaic (Kohelet Rabbah 19d, Pes. 31a; Sokoloff 1990:131). What appears common to the biblical usage and the Palestinian Aramaic cases is water overflowing or streaming from its source. Tuell (1993) argued for a somewhat different aspect of water movement. He proposed that the root **glṯ* has to do with waves, rather than a sense of streaming or flowing down. Thus he renders our passage, "the season of the ship (*ṯkt*) on the wave." Such a translation, however, seems to have little relationship to the previous parallel word (*mṭrh*) in line 6. It seems more likely that a noun related to the sense of water streaming or flowing down is the closer parallel. Thus we would render *glṯ* as "torrent, downpour" (cf. Pardee 1997a:260, "driving showers"). This also seems superior to another common interpretation of the noun, which is to relate it to *ṯlg*, BH *šeleg*, "snow," assuming it is a metathesis of the latter (so *SPUMB* 181 n. 105; *CMHE* 149; *CML*[1] 97; *CML*[2] 60; DUL 299; cf. Hoch 1994:264–65). But there is nothing in the context here or in the other attestations of the root to suggest a connection with snow or cold. This is particularly clear in its occurrence in 1.92.5, where it describes *thmt*.

In the next bicolon (lines 8–9), Athirat picks up the imagery of the thunderstorm, Baal's signature means for bringing the rain. The meta-

phor of Baal's voice for the thunder is a common one, and the expression **ytn ql* in this context is well attested also. It appears again in 1.4 VII 29 in the description of Baal's triumphant theophany that climaxes in the completion of the palace. The voice of a god as thunder also appears in several biblical passages (e.g., Pss 18:14; 29:3–9). It is to be expected that Baal expresses his "voice" in the clouds, since his standard epithets include *rkb ʿrpt*, "Cloud-rider." Line 9 poses no grave difficulties. The word *brqm* is common for "lightning" (*UT* 19.524; Akkadian *birqu*, Arabic *barq*, "flash of lightning;" ESA *brq*, "lightning storm," in Biella 58), with other cognates meaning "flashing" (Akkadian *barāqu*; BH *bārāq*) and "sparkling" (Aramaic *brq*, Eth *baraqa*; cf. the loan-word into Egyptian for "sparkling" eyes or water, discussed in Hoch 1994:101–2). In contrast, the word *šrh*, is relatively rare. Ginsberg (1943:109–10 n. 1), followed by Pope (MHP) and Greenfield (1984b:221–22), detected it, however, in Job 37:3, within a passage (verses 2–6) that focuses on Yahweh's thunder (*qôl*):

> Hearken to the thunder of his voice (*rōgez qôlô*),
> And the rumbling that comes from his mouth.
> Under the whole heaven he lets it go (*yišrēhû*)
> And his lightning (*ʾôrô*) to the corners of the earth.
> After it his voice (*qôlô*) roars,
> He thunders with His majestic voice,
> And he does not restrain them when His voice is heard.
> God thunders wondrously with His voice;
> He does great things that we cannot comprehend.
> For to the snow he says, "Fall on the earth";
> And to the shower (*gešem māṭār*) and the rain (*gešem miṭrôt*),
> "Be strong."

This passage is another example of *ql*, "voice," used for thunder, and it illustrates the sense of Ugaritic **šrh*, "to release (lightning)." In turn, Ugaritic *šrh* would suggest, as Ginsberg noted, that what the MT treats as an *-h* suffix on *yišrēhû* is actually the third radical of the BH root.

Baal's capacity as a provider of water is the hope of humanity. Baal's rain is proverbial for its fructifying effects on the earth (1.16 III 7–8; see above pp. 14–16):

> Sweet (*nʿm*) to the earth is the rain of Baal,
> And to the field, the rain of ʿAliy.

To lose Baal's help is to lose his rains, as the curse from 1.19 I 42–46 illustrates (see *ANET* 153; Held 1974:108 n. 8; Schwemer 2001:542):

> For seven years may Baal curse you,
> Eight the Cloudrider:
> No dew, no rain,
> No upsurging of the double-deeps,
> No sweetness (*nʿm*) of Baal's voice.

This passage emphasizes the vital relationship between the construction of Baal's palace and the manifestation of his rains mentioned above (in addition to other scholars cited above, see also Bronner 1968:72–73; Neiman 1969:246–49). This is the first time in the Baal Cycle (insofar as it is preserved) that Baal's role in bringing the rains explicitly appears, and while, up to this point in the narrative, the issue of political status has played the primary role in the story of the palace, it is clear from this passage and the following account of the palace's construction that the function of Baal as provider of fertility is a related central concern of the narrative of CAT 1.3 and 1.4. The poet never attempts to explain the link between the temple and the sending forth of the rain, but assumes that the audience understands it.

The close relation between the earthly temple/heavenly palace of a god and fertility on earth is also found in Mesopotamia. In the Gudea Cylinder A xi, lines 1–27, the god Ningirsu promises Gudea that in every step of building the Eninnu temple in Lagash, the god will provide an abundance of fertility for the land (Edzard 1997:75–76; cf. Hurowitz 1984:322–23):

> When you, O true shepherd Gudea, will effectively start (to build) my House for me, the foremost house of all lands, the right arm of Lagash, the Thunderbird roaring over the whole sky, my kingly Eninnu, then I will call up to Heaven for a humid wind so that surely abundance will come to you from above and the land will immediately (or: under your reign) gain in abundance (lines 1–9).

Generally in the ancient Near Eastern world, it was assumed that a parallelism existed between the heavenly palace of the storm-god and his earthly temple. In part, this relationship is expressed by the vocabulary that they share; house (*bt*) and palace (*hkl*) apply to both cosmic palace and terrestrial temple. The earthly temple provides the location to express cultic devotion to the storm-god, while the heavens remain a source of divine blessing. Expanding this notion, the picture of the heavenly palace, especially with its window in the palace, provides a conceptual mediating point between human dedication to the deity and the deity's response of blessing to the world. The heavenly palace,

and especially its window, serves as the place from which the storm-god is conceived as manifesting his power in lightning and thunder as well as his blessing in the rains (for a comparable association, see 2 Kgs 7:2, 19). The connection between the heavenly palace and the divine blessing of rain also underlies the Israelite understanding of the heavenly palace and earthly temple. In 1 Kgs 8:35–36 Solomon prays for a divine blessing of rain when anyone properly prays for forgiveness in the direction of the temple. Mal 3:10 correlates the exchange of divinely given rains from the heavenly window and the humanly provided tithe to the temple (cf. also the blessing in Deut 28:12). The rains are also experienced in the context of the temple, as the easterly procession of Yahweh's storm in Psalm 29 dramatizes. The storm issues in the community's recognition of Yahweh's theophany, indicated by *kābôd* (usually rendered "glory" but better understood as the divine "effulgence"). This survey of sources indicates the widespread belief in the underlying fundamental association between the divine provision of the rain and the presence of the storm-god in his palace.

Interestingly, while it is obvious that the rain is the means of bringing fertility to the earth, the account of Baal's actions at the completion of the palace with its window emphasizes not so much the rain, but rather his power as manifest in his thunder. This is where the two themes of the narrative (Baal's status as king and his function as bringer of fertility) come together. The thunder and lightning are indicative of the coming rain, but they themselves particularly emphasize the god's power and glory. Thus when Baal sends forth his voice in the thunder, he affirms his kingly status while announcing the coming of fertility to the world. The relationship between thunder and lightning and the royal status of the deity can be seen very explicitly also in Psalm 29.

In lines 10–19 Athirat directly addresses the matter of the palace, in announcing, presumably to Anat (since the latter reacts to the announcement directly afterward in lines 20–21), that Baal should be informed of El's positive decision. She prefaces her proclamation with a bicolon (lines 10–11) that is usually rendered as a pair of statements that Baal may build "a house of cedars"//"a house of brick" (e.g., Aisleitner 41; *TO* 1.208; Dietrich and Loretz 1997:1161; Maier 1986:21; de Moor 1987:55; Pardee 1997a:260; Wyatt 1998:102). But the syntax of the lines, in particular the presence of *hm* at the beginning of the second line, strongly suggests that the bicolon is a pair of questions rather than statements. This type of double question, recognized by Held

(1962:71–73), has already been discussed in the Commentary to 1.4 IV 33–34 and 59–62 (see also 1.14 I 41–43). The nominal phrases for the palace stand at the beginning of each line, and therefore the translation should reflect this fronting (with resumptive pronouns on the verbal forms). Thus we have rendered the bicolon: "Is it a house of cedar that he would complete//Or a house of bricks that he would construct?" The answer to the rhetorical questions is clearly affirmative, as Athirat now instructs that Baal should be informed of El's decision. It is possible, however, that there is more to these questions. There may be a tinge of irony here, somewhat as we have seen in the use of questions in the previous episodes of Athirat's conversation with Baal and Anat in III 28–32 and El's question to Athirat in IV 59–62 (see the discussions above, pp. 481 and 523–6). One may note that Athirat's instructions in lines 13–19 conclude with the command to build the palace of silver and gold/lapis lazuli (lines 18–19). It may be that the two questions in lines 10–11 are meant to say, "Is it just a house of cedar that he would complete,//or only a house of brick that he would construct? Instead, he should build a house of silver and gold, a house of purest lapis lazuli!" The lines may thus be intended to emphasize the expansive scale of El's permission. Athirat may be instructing Baal possibly to "think big" about his palace. This may also be Athirat's way of emphasizing the extent of her success in her mission to El. Not only has she fulfilled her obligation to Baal; she has perhaps exceeded it through the unlimited scope of the permission that she has received from El. Thus his palace may be greater than those of Athirat's children, not simply like theirs, as his request had been.

This context is the first to mention *'arzm*, usually rendered "cedars." A cautionary note regarding the meaning of this word needs to be sounded. It is usually thought to have been cedar, and the translations reflect this understanding. However, de Moor (*SPUMB* 167) maintains that elsewhere the word refers to a species of fir and is not cedar (note also *DUL* 113). In contrast, Moorey (1994:349–50) concludes that cedar remains a defensible understanding of the term. Yet, as the cautionary discussion of Nibbi (1996) indicates, firm conclusions cannot be expected in the precise identification of species. Still, Liphshitz and Biger (1991:169) point out the large amount of cedar recovered from the excavation of the Middle Bronze palace and the Late Bronze temple at Lachish, indicating its popularity in such constructions. This fact and the note in 1.4 VI 18–21 that the *'arz* for Baal's palace comes

from the region of the Lebanon and Anti-Lebanon ranges would support the traditional translation.[27]

In lines 12–19, Athirat conveys the announcement in three parts. First, line 12 provides the command to have the following message relayed to Baal: "Let it be told (*lyrgm*) to Mightiest Baal." This is a standard formula for announcing a message by using the *G*-passive stem (Sivan 1997:126). The root **rgm* for an announcement is used similarly in the divine birth-announcement in 1.23.52: "Word (*rgm*) to El is brought, [two] wo[men] of El have borne" (cf. 1.10 III 32–36 for a different introduction to a birth announcement). The same text (in line 12) uses **rgm* in the passive voice to give directions for ritual recitation. Athirat's use of **rgm* may be compared also to the active verbal use of this root at the beginning of messages from one party to another. In these contexts, the verb is used in the imperative to instruct the messenger to give the message to the appropriate person: "To PN say (*rgm*)" (e.g., CAT 2.4.1–2; 2.10.2–3; 2.11.1–2; 2.12.1–3).

This is followed by Athirat's instructions to Baal for building the palace He is first to gather the materials for the construction (lines 13–17), and then to actually build it (line 18–19). The first step in the process is to call a caravan (*ḫrn*) "into your house" (*bbht(!)k*). The house referred to here may either be Baal's dwelling on Mt. Sapan, in which he has lived (cf. 1.3 I and IV 37–46; cf. Ginsberg *ANET* 133 n. 23), but which is inadequate for his current position, or it could be a reference to the building site for the new palace. The term used for "supplies," *ʿḏbt*, is also found several times (as **ʿizbônîm*) in Ezek 27:12–33, where it designates ship cargo.[28] In the Baal Cycle, at least some of the cargo for Baal's house is to move from Lebanon and Sirion (see 1.4 VI 18–21).

Lines 15–17 focus not on the cedar and bricks of lines 10–11, but rather on precious metals from the mountains. They are listed in

---

[27] Cf. the issue in interpreting the name of the site in Lebanon in OB Gilgamesh II–V often called the "Cedar Mountain." The issue is whether Akkadian *erēnu* means "cedar," or "pine" or whether it represents a broader category of tree; see Dalley 1991:126–27 n. 20.

[28] *TO* 1.208 n. y; *Baal* 122–24; *MLC* 559; Pope in Smith 1998b:657; cf. *DUL* 152–53. For a full discussion, see Dietrich and Loretz 2002a:95–101. The word is regarded as cognate with Ugaritic **ʿḏb* and BH *ʿzb*, "to prepare," by *UT* 19.1818; Dietrich, Loretz and Sanmartín 1973:94–95; see also ESA **ʿḏb*, "to repair" in Biella 354. The forms of **ʿḏb* appear to belong to the same root; for examples, see the verb and cognate accusative used for Baal's preparations for his feast in 1.4 VI 39 (with discussion below on p. 626); and the verbal form *ʿḏbt* in 1.100.71 (Pardee 1988a:219).

parallel form in this tricolon as "much silver" (*m'id ksp*)//"choice(st) gold" (*mḥmd ḫrṣ*)//"finest ore" (*'udr 'ilqṣm*). As mentioned above (p. 553), such items are commonly cited as important elements for building a temple. Both words of the last item in the tricolon pose interpretive difficulties. The term *'udr* has been interpreted in four primary ways. Several have related it to Akkadian *udru*, "camel" (*TO* 1.208; *BOS* 2.132; Coogan 1978:101; Maier 1986:21–22). A second proposal has been to connect it to the root, **ndr*, and to render the word, "slope" (de Moor and Spronk 1982:159 n. 55; de Moor 1987:55). Watson proposed a third interpretation (1999b:39), taking the word from a root **dry*, "to cut," and translating it as "quarry" (Gordon 1977:95 renders the word this way also, but does not discuss the etymology; *UT* 19.94; cf. also Wyatt 1998:103). All three of these proposals assume that *'udr* should be understood as a parallel to *ǵrm* and *gb'm*, "mountains" and "hills," in the first two lines as a source of the precious materials used to build the palace. The fourth interpretation is quite different. Here the word is related to **'dr*, "noble, great, glorious," and is seen as the first member of a construct chain with *'ilqṣm*, literally "the noble of nuggets," i.e., "the finest of nuggets" (cf. Albright 1934:125; Dietrich and Loretz 1998:1161; *CML*[1] 97; *MLC* 203; *MLR* 84; Pardee 1997a:260). The latter interpretation seems the most likely. The parallel lines also use two-word construct expressions, *m'id ksp* and *mḥmd ḫrṣ*, to denote the metals: the first word expresses quality and the second identifies the actual metal. Given that the Ugaritic root **'dr* denotes quality elsewhere, in this context it would be suitable in the parallelism if each of the two-word expressions in the three lines were to characterize the high quality of metal ore. In view of the noun's *'u*-aleph, it may be that vowel harmony has affected its form, assuming it is to be vocalized **'uddur*-; as noted above, it is possible that the form is instead *qutl.

The final word on the line, *'ilqṣm*, appears in Ugaritic only here and in line 40. Its meaning remains uncertain. Most translators have used a term like "gems, precious stones" (e.g., *TO* 1.208; Dietrich and Loretz 1997:1161; *CML*[2] 61; Pardee 1997a:260), but, as Caquot and Sznycer note (*TO* 1.208 n. a), the rendering is conjectural, based on the context. Sanmartín (1978b:351) proposes relating *'ilqṣm* to "common Semitic" **lqṭ* (e.g., Akkadian **laqāṭu*, "pick up, gather, collect") and translates it as "Auserlesenste," i.e., "the most exquisite things." De Moor and Spronk (1982:159 n. 56) prefer to compare a different word from the same root, Arabic *laqaṭ*, "a piece of gold and silver found in mines" (Lane 2670). In a tricolon like this one, we would expect the

parallel on the third line to be closely related to the corresponding words on the first two lines. Often in Ugaritic poetry, the second or third line provides specification of a parallel term that appears in the first line. If this guideline is applicable in this context, the more specific meaning afforded by the interpretation of de Moor and Spronk would appear preferable to Sanmartín's interpretation. The semantics of their suggestion also suit the context, allowing a plausible translation of "nuggets, ore." At the same time, it is to be noted that the irregular correspondence of the consonants between *'ilqṣm* and Arabic **laqaṭ* is problematic, which makes the proposed etymology uncertain. However, such a variation may not be unexpected with names of metals, which are sometimes loan-forms (see Albright 1934:124 n. 122; Dijkstra and de Moor 1975:208, esp. n. 305).

The metals listed in the tricolon of lines 15–17 are said to derive from the mountains. The wealth of the mountains is a traditional literary image with a long history in Mesopotamia (Waldman 1981:180; see J. P. Brown 1969a:176–80; Moorey 1994:350–51). Gudea of Lagash reports how he obtained gold, silver, carnelian and alabaster from various mountainous regions (Cylinder A: xvi, lines 18–24; see Edzard 1997:79). In his prism inscription (viii 11–16), Tiglath-Pileser I describes his transport of obsidian, ḫaltu-stone, and haematite from the mountains of Nairi (Grayson 1991:29). *Lugale-e* II:28 (van Dijk 1983; *CAD B*:229) refers to the mountain region as a supplier of silver and gold: "may it (the mountain region) bring you its yield, silver and gold, in great amounts." Another bilingual (*CAD B*:229) reads: "may the produce-bearing mountain region bring you its gold." The close connection between mountains and various riches is also found in a prayer from Emar (775, with a Sumerian duplicate at Ras Shamra), which includes the following blessings invoked upon the monarch:

> May a rich rain rain on you from the heavens,
> May a plant of joy grow for you.
> *May the mountain bring you its tribute*,
> May the waves carry to you their produce.
> May year after year, month after month, day after day, entrust life to you.[29]

The kind of wealth referred to in our passage was not foreign from the earthly palace of the kings of Ugarit. EA 126:4–6 mentions that fine

[29] So Arnaud (with our italics). See also Sigrist 1993:407.

boxwood was exported from the mountainous environs of Ugarit. In EA 89:48–51, Rib-Adda of Byblos describes the magnificence of the palace of the ruler of Tyre by comparing it to the palace in Ugarit: "It is like the palace of Ugarit. Exceedingly great is the wealth in it." And there is little doubt that the same lavishness was poured upon the temple of Baal in the city.

Athirat's instructions end (lines 18–19) with the imperative: "Build the house of silver and gold"//"the house of purest lapis lazuli." As mentioned above, these lines may be intended to contrast with lines 10–11. Rather than merely having permission to build a house of cedar and brick, Baal may build a superlative palace of silver, gold and lapis. In fact, the description of the final phase of the construction in column 1.4 VII 22–38 describes the house being heated as if in a furnace for seven days, until the silver and gold form the outline of the palace. Baal's final word in lines 36–38 is, "My house I have built of silver,//my palace of gold." This calls to mind the lavishness of the use of gold and silver in the gifts that Kothar makes for Athirat in 1.4 I 25–37. It is possible that audience of this poem would recognize in Athirat's reference to the precious metals a further reciprocation to Baal for his gifts to her. As mentioned in the Commentary on column I (see pp. 407–8), court etiquette would expect Athirat to return an appropriate gift to Baal. While her primary gift was her intercession with El, it may also be that here she herself is suggesting an additional gift of silver and gold to Baal as well. To respond to a gift by giving a bigger one honors both the one who receives and the donor (Liverani 1990:220–23).

The word that Athirat uses for "house, *bht*, is actually a plural form, but clearly used as a singular. Previously in the text, in Baal's oft-repeated lament and in El's permission speech (1.4 IV 62–V 1), the singular form, *bt*, is used. But following Athirat's use of *bht* here, the latter is regularly employed when the palace is mentioned (cf. 1.4 V 33–35; 50–55; 61–62; VI 4–9; 16–17; 22–33; 36–40; VII 17–19; 25–27; 42). Perhaps this is done to emphasize the magnificence of the temple/palace. 1 Chron 28:11 refers to the Solomonic temple as having "houses," *bāttîm*, alongside other components. Also comparable in usage is *miškĕnôt* for the Israelite temple (Pss 43:3; cf. 46:5) and shrine (Ps 132:5, 7; see Virolleaud 1932:117 n. 2; *CMHE* 97 n. 24, 116 n. 16; *UBC* 1.235). ESA appears to have a similar usage of the plural with *'byt* used to refer to a shrine (so *UT* 19.463; see *CS* 71 n. 85).

Besides the reference to silver and gold in this bicolon, we find mention in line 19 of *ṯhrm ʾiqnʾim*, "purest lapis lazuli." The three items appear as elements of the dowry that the god Yarikh pays for Nikkal in 1.24.19–22. In that passage *ʾiqnʾim* is qualified by *zhrm*, an allomorph of *ṯhrm* in our bicolon. The word *ʾiqnʾim* is well known as the term for lapis lazuli (Blau 1972:74–77), cognate with Akkadian *uqnu*, itself attested in Ras Shamra texts and elsewhere (*AHw* 1426; RS 17.383 and 422 in *PRU* IV 221–25; *DUL* 93; for the phonology of the initial vowel see Sivan 1997:44, 73), and with Phoenician *ʾqn* (see Cross 1979:44 for the question of the precise sense involved). The word does not conform to a generative Semitic root-pattern and is likely a loanword or *Kulturwort* into second millennium Semitic languages (see the proposed cognates in Hittite, Linear B and Greek listed in *DUL* 93). Lapis lazuli was not indigenous to the ancient Near East (another reason to assume a loanword here); it was imported from Badakhshan in Afghanistan (Herrmann 1968; Majidzadeh 1982; Ohshiro 2000; Akkermans and Schwartz 2003:239–40, 270–71). An administrative quarter of Palace G of Early Bronze Ebla yielded both worked pieces and unworked chunks of lapis (Pinnock 1988). The word *ṯhrm* has been generally understood as "pure" (see Virolleaud 1932:142; Huehnergard 1987b:58; for the vocalization **ṯuhūrūma*, see Sivan 1997:45, 69); Akkadian *uqnû ebbu* for "pure lapis" appears to be related to *ṯhrm ʾiqnʾim* (Blau 1972:74–77; Ginsberg 1946:39; for the syntax of the adjective preceding the noun, see Sivan 1997:207–8). Pardee (1977:13) has suggested that *ṯhrm* may also have the further nuance of "genuine" lapis lazuli. In Ugaritic records, fake lapis was known to be a problem. King Ammishtamru once sent fake lapis to his Hittite overlord, Tudhalias IV who was understandably angry (CAT 3.1.23, 28, 32; RS 17.383 and RS 17.422, in *PRU* IV, 221–25; see Rainey 1965:111; Lackenbacher 2002:90–92). EA 11 (rev.):24–34 likewise qualifies the lapis sent by Burna-Buriyash to Naphururea (Amenophis IV) as "genuine" (Moran 1992:22 and 23 n. 21; cf. "schönem" in Knudtzon 1915:1.99). An ivory figurine from Ugarit used lapis for the inlays: "curls of lapis lazuli, silver locks of hair and eyes of copper and lapis" (Gachet 1992:71). Lapis was a major luxury item in the international trade relations among the great kings of the Amarna Age, and thus, here in the Baal Cycle, it also represents a mark of wealth.

Some hint as to how the lapis might have been envisioned as a building material for Baal's house may be found in Exod 24:10. In this scene,

at the climax of the story of Israel's making its covenant with Yahweh, the elders of Israel are invited to ascend the holy mountain to share a meal with God: "And they saw the god of Israel, and beneath His feet was like brickwork (*libnat*) of *sappîr* (lapis lazuli or sapphire) and it was like the very heavens in its purity (*lĕṭōhar*)." This description of the floor of Yahweh's heavenly palace (or possibly his footstool, as suggested by K. L. Roberts 2000:638–39) as being paved with *sappîr*, which may be another term for lapis (see *BDB* 705; *HALOT* 764), is quite possibly a parallel to how Baal's palace was envisioned. In Mesopotamia bricks were glazed with the color of lapis for use in pavements (see *CAD A/1*:162b #1e). One would expect the god's palace to have the real thing. The color of lapis would also conjure up the picture of a blue sky (see *BOS* 2.132; Brenner 1982:168), which is, of course, the primary locale of Baal's realm. The Hebrew word for pure, *ṭāhôr*, when used in the context of precious stones, sometimes refers not only to the purity of their quality, but also to their brightness and luminosity (van der Toorn 1985:28–29; cf. Smith 1985:321–23; note the comparable range for Akkadian *ebbu* discussed in Wilson 1994:80–82).

Lines 20–35: Anat's Delivery of the News to Baal

It is Anat who will travel to Mt. Ṣapan to give Baal the news. She has not been mentioned in the text since 1.4 IV 18, where the poet indicates that she joined Athirat on her journey to see El. Because she plays no role in the scene with Athirat and El in column IV, it is not surprising that she goes unmentioned. There are few indications in the text to determine where she might have been during the meeting between El and Athirat. However, some observations can be made. It may be that the poet envisioned Anat as waiting in a different room from that in which El entertains his wife. There is certainly no hint in the text that any other deities are present during the scene. Only Athirat is described as bowing down before El upon arrival (IV 25–26). And she is the only one who is offered a meal in El's presence (33–38). In addition, Anat is portrayed as reacting not to El's announcement of permission, but rather to Athirat's, which suggests that she did not hear the original announcement. On the other hand, one should note that Ugaritic narrative rarely includes descriptions of persons not directly involved in the action of a scene, even though there are often cases where one must assume that other characters are present (e.g., Baal's victory feast in 1.3

I, where there may have been other deities present besides the servant and Baal's women, the only ones mentioned here). So it is possible that Anat was nearby in the scene. Indeed, if Pope (1971) is correct in identifying the scene painted on a mug from Ugarit as a depiction of the scene in 1.4 IV, then it would suggest that Anat listened into the conversation disguised as a bird. If correct, this feature remains in the background of the scene here, as the text does not indicate this feature. In sum, the context of this scene provides no information as whether any other deities were in the room with Athirat and El.

Anat is described in line 20 as rejoicing (*šmḫ*), an appropriate emotion in view of the long and complex maneuvers that have finally reached fruition. The identical emotion will be ascribed to Baal as well in lines 35–36. One might remember that Anat uses this verb in the context of the construction of a palace in her conversation with El in 1.3 V 19–21, where she says threateningly: "In the building of your house do not rejoice (*ʾal tšmḫ*)//Do not rejoice (*ʾal tšmḫ*) in the construction of your palace!" Immediately the goddess sets out for Mount Sapan (lines 20b-24). Lines 22–24 contain standard formulas for travel (see 1.1 III 21–22; *UBC* 1.167–68, 184). Only the language of lines 20b–21a is particular to Anat. This planting of her feet issuing (perhaps implicitly) in her shooting upward from the earth, is the same language used in 1.3 V 4–5 (see the Commentary on pp. 335–7). The poet omits any description of her arrival before Baal and immediately has Anat address the god with the good news (lines 25–35a). The two-line introduction (lines 25–26a) conveys the joyful character of her speech.

Anat's speech in lines 26b–35a differs from Athirat's message of lines 12–19 in three ways. The first is Anat's announcement of glad tidings in lines 26b–27a, which expands Athirat's less affective speech-opening words back in line 12: *lyrgm l'al'iyn bʿl*. The preface of glad tidings is stressed by its double use of **bšr* in lines 26b–27a (for *tbšr* as *tD*-stem imperative, either **tabaššar* or **tabaššir*, see Sivan 1997:138). The same root appears in another announcement that Anat makes to Baal in 1.10 III 33–38:

> Aloud to Baal she cries:
> "Of the great (*ʾil*) news (*bšrt*) be informed (*bš[r]*), [O Ba]al,
> Indeed, receive the news (*bšr*), O Progeny of Dagan:
> 'For a bull to Baal [is bo]rn,
> A buffalo to the Cloudrider'."
> Mighty Baal rejoices (*šmḫ*).

In both passages Anat brings the news to Baal prefaced with the proclamation of glad tidings and then communicates the content of the news. These passages illustrate both the particular use of **bšr* for good news (in the passive voice) in the context of the delivery of a message, as well as the reasonable reaction of joy by Baal (1.4 V 35b–36a and 1.10 III 37). The root appears a number of times in BH as **bśr* for good news (McCarthy 1964). In Isa 40:9–10 God instructs Zion "who brings glad tidings" (*měbaśśeret ṣiyyôn*) to ascend a high mountain to proclaim the message of joy (cf. Isa 41:27; 52:7; 61:1). The proclamation of good news is a conventional role of messengers (cf. Luke 2:10–11). It is modeled on the role of human messengers, as illustrated by many Lachish letters (*šlm*, "peace," in KAI 192:1–2, 193:2–3, 197:2; *ṭb*, "good," in KAI 194:1–2; both *šlm wṭb* in 195:2 if correctly read): "May Yahweh cause my lord to hear tidings of peace/good" (*ANET* 322). Yet this role not uncommonly falls to women, as it does to both the goddess Anat and Jerusalem, who in Isa 40:9–10 is personified as a woman. Indeed, Ps 68:12 refers to a great company of women who bring glad tidings (*měbaśśĕrôt*) of victory in battle. It is this role as messenger and not only as sister that may explain the place of Anat in 1.10 III and 1.11.

The second difference between Athirat's message and Anat's recounting of it to Baal is the bicolon in lines 27b–29a. This bicolon is a new variation on the bicolon in Baal's lament, "For Baal has no house like the gods', no court like Athirat's children's.'" Like El's version of this bicolon in 1.4 IV 62–V 1, Anat uses a passive, jussive verb to announce the permission that has been granted. Here the verb is *ytn* rather than El's *ybn*. Also new are the comparatives at the end of each line, "like your brothers," and "like your kin," instead of "like the gods" and "like Athirat's children." This illustrates the types of variations that are possible within even a highly formulaic passage.

The third variation in Anat's speech vis-à-vis the version given by Athirat is that lines 31–33 repeat the two cola of lines 15–16, but Anat's speech does not contain the third line (line 17) of the tricolon (*yblk ʾudr ʾilqṣm*), which had further described the precious metals to be used in the construction of the palace. There is no obvious reason why the line should have been left out here.

Lines 35–65: Baal's Preparations for the Building of His Palace

Baal's response to Anat's news is described in a rather abrupt monocolon: *šmḫ ʾalʾiyn bʿl*, "Mightiest Baal rejoiced." This is immediately

followed by the account of him summoning the caravan into his house, i.e., performing the instructions given by Athirat through Anat (lines 36–40). Having finally reached the conclusion of an effort that has taken up the story of nearly two tablets, one might expect a speech of triumph or satisfaction from Baal at this point. In fact, such a speech appears in virtually all the thematically similar scenes in Ugaritic poetry. One might look, for example, at the story of Dan'il and his desire for a son in the Aqhat Epic, CAT 1.17 I 1–II 23. It too contains a lament about the lack of a critical element in the character's life that others possess (Dan'il, "who has no son like his brothers, no offspring like his fellows," in comparison to Baal, who "has no house like the gods, no court like Athirat's children"). The lament is brought by Baal to El, who in turn grants the request for a son. A messenger, perhaps Baal himself, is sent to Dan'il to give him the good news. Upon hearing it, Dan'il's face rejoices (*pnm tšmḫ*), he laughs (1.17 II 8–12) and gives a full-scale speech that is actually composed of the lament now turned into rejoicing (1.17 II 12–23). Another similar example occurs at the conclusion of the construction of Baal's palace in 1.4 VI 35–38, where the poet again notes, "Mightiest Baal rejoiced." This is followed by a brief speech from the god. Similarly, when El has a dream that indicates that Baal has returned to life in 1.6 III 10–21, he rejoices (*šmḫ*) in line 14 and then gives a speech (lines 18–21). Why do we not get a speech of satisfaction from Baal at his moment of rejoicing, when such a speech appears to be part of the regular formula? It is evident that the text here represents a slightly abridged version of the narrative. There is no way to answer this question with certainty. Having repeated Baal's lament several times in the previous columns, and having given the speeches by El, Athirat and Anat, perhaps Ilimalku (or the scribe whose text Ilimalku is copying) is ready to pass over one more discussion of the palace. It is perhaps significant that six lines later the scribe (or the tablet he is working from) will simply omit a significantly larger formulaic passage, leaving a note to any storyteller who might be using this text as a guide to fill in what he has not repeated in writing.

Lines 36–40 describe the preparations for building the palace, parallel to the instructions of Athirat in lines 13–17. Then Baal sets in motion the next step, which is not outlined in the previous speeches: he summons the craftsman-god Kothar wa-Hasis to oversee the construction of the palace (line 41). This seems to be a well-established function for this god. Kothar was similarly called upon in CAT 1.1 III to build a palace for Yamm, and an Egyptian text of the New Kingdom

period now in Budapest (Kákosy 1990:146–47, Col. C, lines 4–6) also portrays Kothar as the builder of an Egyptian shrine in the context of an incantation.[30]

At this point in the text, Ilimalku drew a double horizontal line across the column and wrote an instruction clearly intended for any storyteller who might be using this tablet as a guide to insert here an account of the sending of the messengers to Kothar (lines 42–43), an account that would be made up largely of formulaic material. The note is followed by a single, horizontal line across the column, below which the scribe resumes the story with the arrival of Kothar at Baal's abode. Two understandings of the instruction in lines 42–43 have been proposed. Some interpret it as referring to a written passage located elsewhere in the cycle, which would then be recited by the storyteller. In this interpretation, the last two words are generally viewed as a direct quotation of the line that the storyteller should find in the text: "When the lads were sent" (e.g., Aistleitner 42; Albright 1934:125; *TO* 1.105; Coogan 1978:102; *MLR* 85; Pardee 1997a:260). In the alternative interpretation, the note is less specific, telling the storyteller to make use of the standard narration about messengers being sent to a god. Thus the last two words are not seen as a direct quotation (e.g., Dietrich and Loretz 1997:1163; *ANET* 134; de Moor 1987:56; *MLC* 203). The assumption would be that the storyteller would know the formulas well enough to adapt them to the particular context required here. He would not need to actually turn to a fully written passage to read out to his audience.

This brief passage raises the question of the actual function of the literary tablets written down by Ilimalku. Were they supposed to be used as a source that could be read aloud verbatim to the audience (if one may assume this sort of use for the Baal Cycle)? Or, were they primarily aids to memory or general versions of the stories that would help a younger oral poet learn the basic lines of the plot, without the notion that the text on the tablet should be memorized in detail? If the former case were true, then the note might refer directly to a specific point on one of the tablets that the reciter would turn to at this point in the story. Perhaps this would explain the peculiar situation that *mspr* is followed by two word dividers, which could be interpreted as an indication that the two words that follow are a quotation. However,

[30] We thank James Ford for pointing out this text to us.

one should point out that there is no indication in Ugaritic script that anyone ever thought of marking off quotations. This would, then, be a unique occurrence. One should also note that a line beginning, "When the young men were sent," as the proposed quotation reads, would not make sense contextually at this location in the story. The second interpretation therefore seems more likely. We have seen a previous instance (in 1.3 III between lines 31 and 32) where a double line across a column appears to mark a place where an abridgment has taken place in the narrative that needs to be filled in by the storyteller. In that location the text appears to be missing the account of the messengers' journey to Anat's abode. In addition, we have just noted the possibility of an unmarked omission of a speech by Baal after lines 35b-36a. These gaps in the narrative strongly suggest that the written forms of the literary works were not intended to be understood as complete, final or canonical texts. The specific instructions written here in lines 42–43 indicate that the person reading the tablet is expected to be one who understands (and tells?) the full story, not just reads along. Thus the tablets appear to be a general guide, presumably for performance, rather than an attempt to put down for posterity the complete text of a literary work. If this is so, then Ilimalku would simply be relying on the probability that storytellers using this work could provide this section of the story from their knowledge of how such messenger narratives should be told and how they are regularly incorporated into the overall narrative. We could also assume that the storytellers had some latitude as to how this part of the narrative might be told. If this is so, it also means then there is no absolutely set text for the Baal Cycle.

The marked omission in 1.4 V 42–43 appears to have been quite substantial. It presumably includes Baal's summoning and commissioning of the messengers, their journey to Kothar's abode, their arrival in his presence and delivery of the message, Kothar's response and announcement of his departure, and his journey to Baal's abode. We can only speculate about the details of the passage that the scribe assumed the storyteller would insert here. Of course, in an oral performance, a storyteller would be free to extend or condense the details of his story, depending on his audience or on his own inclinations. But there are parallels elsewhere in the text that may provide hints as to the basic story line. It seems quite plausible, since Baal actually asks Kothar to build the palace once the latter has arrived at Mt. Sapan (1.4 V 50–57), that Baal's message to Kothar would be parallel to the message found in the account of El's summons to Kothar that leads to El personally

commissioning the latter to build a house for Yamm (cf. 1.1 III 5–16). The same message is sent by Baal to Anat in 1.3 III 8–31. This message only asks the god to come, but does not say why. That would appear to fit the context here too. The messengers' journey would probably parallel the similar passage in 1.3 VI 12–20. Kothar's response and his journey to Mt. Sapan might generally approximate the passage in 1.1 III 17–25 or 1.3 IV 32–38.

The initial part of the scribal instruction, *wṯb lmspr*, literally "and return to the recitation," finds a partial parallel in a line on 1.19, written along the side of the tablet that is part of the Aqhat story (1.19 IV 63, beginning opposite 1.19 IV 23): *whndt yṯb lmspr*, "and here one returns to the story" (Parker, *UNP* 78). But its context is not the same, since it does not appear to mark an omission in the text. The words are found also in a ritual text, 1.40.35, as a direction that a recitation is to be repeated (de Tarragon 1980:93; Pardee 2002:80, 83). Albright (1934:125 n. 127) and Cassuto (*BOS* 2.132) compared Judg 7:15 (cf. v 13), which uses *mispar* to refer to the recounting of a dream.

The narrative then picks up with the arrival of Kothar (line 44). The text says nothing about Kothar doing obeisance before Baal. This may be a signal that by virtue of his anticipated service to Baal, the craftsman-god is an honored guest, for the present moment hardly regarded as lesser in rank (see Smith 1984b). The craftsman god is feted immediately (on *'aḫr*, see Pope 1986; and the Commentary to 1.4 III 23–24 on p. 480). The description of the food in lines 45–46 is identical to that provided to Anat when she arrives at Baal's abode in 1.3 IV 40–42. Baal sets an ox "before" the god (*qdmh*),//"a fatling right in his face (*wtk pnh*)" (so Pope in Smith 1998b:657), or less literally, "a fatling right before him." The **'i-* in *mr'i'a* is a not a root letter but a "mater lectionis," an extra 'aleph indicating the internal vowel (cf. BH *mārî'*, Sivan 1997:13). As seen by Pope (1953; see also in Smith 1998b:657), the placement of the *w-* preceding the phrase *tk pnh* is attested as a way to denote emphasis (hyperbaton). It may also be found in BH and Arabic. Another case of an emphatic position for *w-* to highlight a noun mid-line appears in 1.4 VI 18 noted above: *y[t]lk llbbn w'ṣh*. While it might be translated literally as, "he [se]nds to Lebanon and its wood," this rendering makes little sense. It seems clear that *w-* here is not used to coordinate the terms "Lebanon" and "its wood"; instead, it is emphasizing the exact aspect of Lebanon that is important in the sentence, i.e., "to Lebanon, in particular its wood." There are a number of other cases, in nominal clauses, for example,

1.5 II 12: *ʿbdk ʾan wdʿlmk*, "your servant I am, indeed, forever yours" (see also 1.23.42, 46, 49).

The verb *šṯ* may be understood as an active 3rd masc. sg. form, "He set an ox before him." In this case, Baal would be the subject (so *UNP* 131 and 171 n. 127; similar language is found in 1.3 IV 40–42, where this understanding seems almost certain). One could understand this action literally, where Baal himself places the food on the table. If so, this indicates the esteem in which Kothar is held by the storm-god. The close relationship between the two gods evident in the account of Kothar's support for Baal against Yamm in 1.2 IV supports this interpretation. At the same time, these lines could simply be the way one refers to the ruler signaling to his servants to serve the dinner. The ruler is credited with giving the meal, although servants actually do the work. A different understanding of the verb is possible when one notes that the subject of the first line of the tricolon is Kothar, and it would be unusual (though not impossible) to have an unmarked shift in subject on the second line. So it might be more plausible to understand the verb *šṯ* as a passive form, i.e., "An ox was set before him." This would also match the pair of verbs in the following line (lines 46b–47a), which are clearly passive. It is worth noting that the language of this feast is similar to the language of sacrifice to the gods. Cassuto (*BOS* 2.133 n. 78) noted the comparable context of Mic 6:6: "Shall I come before him (*haʾăqaddĕmennû*) with burnt offerings, with year-old calves?" It is in any case the sort of divine banquet customary for the pantheon, as the cliché of line 48 would suggest (for this line, see 1.4 III 40b–41 and the Commentary there).

A distinctive feature of this account is the description in lines 46b-48a of Kothar being set on a throne beside Baal. This is another indication of the close friendship between the two gods. The motif appears also in a ritual text (CAT 1.106.27–28): *wlll tʿrk ksʾu*, "and for *ll* (DN) a throne is arranged" (see de Tarragon 1980:117; cf. Emar 369.40; Fleming 1992:67). That *tʿdb* is in the passive is made clear by the nominative case ending of *ksʾu* (Sivan 1997:126). There are similar constructions in BH related to thrones in such passages as Dan 7:9. It would be theoretically possible to render the second verb *yṯṯb*[31] in the active voice, if one understands this form as being in the third person

[31] For the shift of the *š*, the marker of the *C*-stem in *yṯṯb*, > *ṯ* due to assimilation to following *ṯ*, see Sivan 1997:28–29.

plural impersonal, "and they seated (him)" (for the two possibilities, see Sivan 1997:154).

Seating arrangements at banquets, of course, have a significant relationship to status. Two Sumerian temple hymns refer to seating arrangements at divine banquets (cited in Ferrara and Parker 1972:38–39). The first, Gudea Cylinder B (xix:17–21) describes the banquet of Ningirsu which Gudea of Lagash prepared for the god:

> For Ningirsu he (Gudea) prepared a fine banquet, Anu sat at the 'big side'. Next to Anu was Enlil, next to Enil was Ninmah.

The second, a hymn to Enki's temple, describes the feast that Enki holds after the construction of the temple É-engurra:

> In the shrine Nippur, Enki prepared a banquet for his father Enlil. Anu sat at the "place of honor." Enlil was next to Anu. Nintu sat at the "big side" (of the table). The Anunna seated themselves at their places.

To be seated at the right hand of the host is to be accorded the place of honor at a feast. Following his own obeisance before Bathsheba, Solomon seats his mother at his right hand in 1 Kgs 2:19. In Ps 110:1 Yahweh tells the king of Judah, "Sit at my right hand until I make your enemies your footstool" (see also Mark 12:36; 1 Esdras 4:29). The risen Jesus is accorded the place of honor at the right hand of his heavenly Father (Rom 8:34; Heb 10:12; 1 Peter 3:22), an expression echoed in the Christian credal formula: "and he is seated at the right hand of the Father." For other Jewish and Christian texts attesting the motif of heavenly thrones, see Davila 2000:155–56. The description of the meal for Kothar ends with the common line 48: *'d lḥm šṯ[y 'ilm]*. Here this stereotypical line is used to close a (sub)section, somewhat unusual, since the line usually serves as a subsection-opening line (e.g., 1.4 III 40, VI 55) in the description of divine feasting.

After the meal, Baal asks Kothar to construct his palace (lines 49–57). In a parallel context in 1.2 III 8–10 El commands Kothar to build a palace for Yamm with very similar instructions (see *UBC* 1.234–38). The instructions in lines 51–57 are particularly notable for their four-fold repetition of *ḥš*, "quickly." Four-fold repetitions are relatively rare but not unknown,[32] and here the repetition conveys an urgency on Baal's part. According to the bicolon of lines 56–57, the palace is to "cover

[32] Examples include: *hlh* in CAT 1.23.32–33 observed by Watson 1982:267; *ṯm* in 1.22 I 4–9 noted by Tuttle cited in Pope 1977a:168; and *k-* in CAT 1.169.3–4.

(*'aḫd*) a thousand acres"//"ten thousand hectares" (for these measures, see 1.3 IV 38; see also *UBC* 1.169, esp. n. 69). This is, of course, a formulaic pair that basically means "a huge amount or distance." The pair is used quite often for distance. For example, Baal's messengers are to maintain this distance when they bow down before Mot (1.4 VIII 24–27). This is also the distance from which Dan'il first sees the approach of Kothar wa-Hasis (1.17 V 9–11). Like the members of the pantheon and their measures of travel, the size of Baal's palace is superhuman in scale (Smith 1988).

The meaning for the verb **'ḫd* in this passage, "occupy, take up," is rare, if not unique, in the Ugaritic texts (as noted by the listing in *DUL* 37). In spite of that, however, the context supports the meaning. It is proximate to Akkadian *aḫāzu* attested in the meaning, "to occupy, possess (a territory)" (*CAD A/1*:177, #3c), and to a lesser extent to BH *'ḥz* "to hold property" in the *N*-stem (Gen 34:10, 47:27; Num 32:30; Josh 22:9; *DCH* 1:187). It is unclear though whether the technical sense of land occupation found in these texts informs Baal's words to Kothar in lines 56–57.

Kothar does not even bother to explicitly assent to the invitation. He immediately turns to an apparently architectural issue, specifically whether the palace should have a window (lines 58–62). Kothar opens his speech with two imperative clauses (lines 59–60), "Hear, O Mightiest Baal"//"Understand, O Cloudrider." This introduction underscores the importance of the question that Kothar is about to pose to Baal. The use of the imperative *šmʿ* is fairly common in introducing the content of a speech (e.g., 1.4 IV 2–4; 1.15 IV 3; 1.16 IV 10–12, 1.17 V 16). The usage is also known from the famous biblical Shema (Deut 6:4): *šĕmaʿ yiśrāʾēl yhwh ʾĕlōhênû yhwh ʾeḥād*, "Hear O Israel: Yahweh (is) our god, Yahweh (is) one/alone" (for the possible latter sense, cf. *'aḫdy* in 1.4 VII 49; for full discussion, see Loretz 1995a). Usually, however, in the Ugaritic literature, this imperative is followed by a series of other imperatives. Here it is followed by a question. In addition, *šmʿ* is normally used as the only introductory imperative, while here it is paralleled with *bn*, "Understand!" which suggests that a very serious issue is about to be raised by Kothar. The choice of the term *bn* here perhaps marks a reciprocal relationship between Baal and Kothar in this scene: Baal asks Kothar to "build" (**bny*) in line 53, while Kothar in turn in line 60 urges Baal to "understand" (**byn*).

In lines 61–62 Kothar raises the matter of the window, called *'urbt* and *ḫln* (BH *ḥallôn* < **ḥll*, "to pierce" + *-ān* sufformative; see pp. 39–41

above). Windows are well-known architectural features, as indicated by the generic reference to "windows," *'urbtm* (in parallelism with *ʿmdm*, "columns") in CAT 1.169.3 (see Pardee 2002:160). A window (*'urbt*) is mentioned as the site of offerings to a number of important deities, including *'il'ib*, Baal, Dagan, the "Helpers of Baal" (*tʿdr bʿl*), Anat and Resheph, in 1.109.19–23 (see Pardee 2000:609; 2002: 31). In Israelite tradition, perhaps the best-known windows are found in Gen 7:11, "the windows of heaven," which are elements in the great dome of the sky (on this verse, see Kselman 1973). The same windows appear in Mal 3:10, *'ărubbôt haššāmayim*, where God promises to open them and pour down blessings upon the people, if they bring in their tithes (cf. *'ărubbôt mimmārôm* in Isa 24:18). The verbs used for the installation of the window include **šyt* in 1.4 V 61, 64, VI 5, 8, and VII 15, and **ptḥ* in VII 17 and 25. The latter verb occurs in contexts with windows also in BH in Gen 7:11, Isa 24:18 and Mal 3:10, but in none of these cases does it refer to the construction of the windows as in 1.4 VII. In 1 Kgs 6:4 and 2 Kgs 7:2, 19, one "makes" windows (**ʿśh*). In both the Hebrew and Ugaritic texts, the heavenly windows are imagined as functioning to allow the cosmic waters to reach the earth. It has been thought that Gen 7:11 assumes the technical language of irrigation (for discussion and further parallels, see Greenfield 1958:222 n. 34; Weinfeld 1977–78:244–45; cf. Neiman 1969:244); if so, the windows in Gen 7:11 are imagined, to an extent, as cosmic sluice gates. The biblical passages do not specify the location of Yahweh's windows apart from the "heavens" (*šāmayim*) or the "height" (*mārôm*). In contrast, the narrative of 1.4 V–VII identifies Baal's window with a break in the clouds (1.4 VII 17–20, 25–29), presumably hovering around his palace on the top of Mount Sapan (cf. 1.4 V 55).

The motif of constructing a window in a shrine has recently emerged in RS 94.2953, an Akkadian text found in the house of Urtenu (Arnaud 2007:201–02; see also del Olmo Lete 2006). The fourteen-line text is a first-person report of a vision in which the god Ea commands the unnamed narrator to take a hoe and axe and make a window "on the foundations of stone," presumably a temple (lines 1–6). The narrator immediately acts upon the command, making the window just as Ea ordered (lines 7–12a). He reports that Ea returned to find everything completed (lines 12b–14). Although Arnaud (2007:42–43) explicitly relates this text to the Baal Cycle (he calls the text "Cycle de Baʿal", p. 201), the fact is that Baal is not mentioned in the text, only Ea, who in the god lists is equated with Kothar (see Pardee 2002:14-CAT

1.118.15//RS 20.024.15—p. 17—CAT 1.148.30//RS 92.2004.11). Texts such as the Budapest Kothar Papyrus (Kákosy 1990) show that Kothar was connected with temple building more generally and not uniquely to the Baal temple in our cycle. None of the language within the command to build the window in RS 94.2953 is parallel to that in 1.4 V or VII. Nor is the person to whom the command is given a god. Although he is never named, the standard context of this type of literature strongly argues that he is a human king. Thus the text does not have a mythological environment like the Baal Cycle. There is also no hint of a controversy about the construction of the window here. The recipient of the vision sets about the task without question and fulfills it. There is no indication about the identity of the temple, and although it could be referring to the Baal temple at Ugarit, the fact that it is written in Akkadian does not allow us to be assured that it actually comes from Ugarit or refers in any way to Ugarit. The primary significance of the text is that it suggests that remodeling projects for temples could specifically focus on the opening of windows in the older walls.

While virtually all commentators interpret Kothar's question in lines 61–62 as an offer to install the window, Margalit (*MLD* 45–50) interpreted the lines as a refusal by Kothar to build the window that Baal desires. The crucial interpretational issue involves the particle *bl*. It is generally a negative particle (Phoenician *bl*; cf. BH poetic *bal*; cf. BH *bĕlî*), which would allow for a translation, "I will not put" (*bl 'ašt*), as Margalit has proposed. Since contextually such a reading seems unlikely, some commentators have proposed that *bl* may be understood as an asseverative: "I will surely put" (cf. Albright 1934: 126; *ANET* 134; Gordon 1977:97). The most popular and perhaps most likely solution is to regard Kothar's words here as a question, "Shall I not put…?" (Aistleitner 42; Dietrich and Loretz 1997:1164; de Moor 1987:57; Wyatt 1998:104) or "Must I not put…?" (Pardee 1997a:261). The contextual indicator that illustrates that Kothar is offering to put in a window here involves the craftsman's prediction that Baal will come around to his view (1.4 VI 2, 15; cf. VII 24–25). When the window is installed, Baal admits in the end that this is happening "according to the word of Kothar wa-Hasis" (*'l h[wt] kṯr wḫss*) in 1.4 VII 20. In addition, the verb-preposition combination **ṯwb l-*, which Kothar uses in the conversation, is best understood to mean, "you will pay attention to," or better "you come around to," i.e. "reconsider" (Pardee 1975:374, 1997a:261; 1.3 IV 54–55 may be interpreted similarly). The term **hwty* here means

"my word" (see above p. 226), yet in context it may bear the further connotation of "my suggestion, recommendation" or the like (cf. "my view" in Pardee 1975:374, 1997a:261).

Baal refuses Kothar's offer (lines 63–65), using the same language found in the craftsman-god's original question (lines 61–62). The tablet breaks off at line 65, and there could be two or three lost lines. But it is also possible that the column ended at this point. The story flows directly into the opening line of column VI, without an obvious break. However, it is possible that Baal gave an explanation for his refusal here, similar to the one found in VI 10–13 after Kothar asks a second time. The issue of the window and whether it should be installed in the palace, which continues into column VI and resurfaces finally in column VII, is given a great prominence in the narrative. There is no parallel to this focus in any other building narrative from the ancient Near East (cf. Hurowitz 1985, 1992). Further discussion of the meaning of the episode will appear below in the Commentary on 1.4 VI 1–15.

CAT 1.4 VI

[Between 2 and 5 lines are missing.]

Textual Notes

Line 1.]s CAT reads another /s/ to the left of the final letter of the line. But there are no traces of that letter preserved on the tablet. The indentations are all breakage.

Line 2. tṯb The lower part of the /b/ is destroyed, but context assures the reading.

Line 3. k[ ]ẘḫss The left two wedges and the upper left line of the right wedge of the /k/ survive. Context assures the reading. The right tip of what is surely a /w/ is visible about midway up the line of the /ḫ/.

Line 4. l'a[ ]ẙn There are no longer any traces of the /l/ following the /'a/. It was apparently visible to Virolleaud. On the other hand, the right edge of the right half of the /y/ does still survive, though CTA did not record it. Two of the wedges are certain. Context assures the reading /l'a[l'i]yn.

Line 5. 'uṙ[ ]ṫ. Only the left parts of the two left wedges of the /r/ and the deep interior of the upper middle wedge are preserved. The letter is epigraphically uncertain, but the context assures the reading. Only the right tip of the /t/ is preserved. Context again assures the reading.

Line 6. ḥln The /n/ has four wedges.

bqr[ ]l̊m There is no trace left of the /b/ after the /r/ in bqr[. CTA is correct against CAT here. The /l/ following the break is partially preserved. Part of the right line of the middle wedge is visible, alongside the complete right wedge. Context assures the reading. For [hk]lm, see 1.4 V 62, 65.

Line 8. 'al.tšt.'ů[Of the /'u/, only the left vertical and upper left edge of the middle vertical are preserved. The horizontal has been completely chipped away, although superficially its looks as if it were there.

Line 9. ḥln.bq̇[A long horizontal chip that runs from the bottom of the /l/ through the /n/ makes the /l/ look superficially like a /d/. The left horizontal of the /q/ is preserved, along with a tiny bit of the upper left side of the *Winkelhaken*.

]k̊lm Only the right tip of the /k/ is preserved, but the context assures the reading.

Line 10. ’al.tx[Three verticals of the letter marked as /x/ are attested here, but the tablet is broken away where potential horizontals might appear. Thus the letter may be /l/, /d/ or /u/.

]ẙ Only the lower right wedge and a small piece of the right middle wedge are preserved. The context assures the reading.

Line 11. [ ]xx[The first letter is either /h/ or /ʾi/. Its lower left side, where the small vertical of the /ʾi/ would be, is broken. The second letter is either /ṭ/ or /ḥ/. Again, the lower part of the letter, where the differentiating wedge would be located is lost.

]ẙ The /y/ is preserved only in the lower right part of the right half of the letter. But context assures the reading.

Line 13 [ ]q̊lṣn The lines of the right wedge of the /q/ are preserved. The letter could theoretically be /ẓ/, but context argues for /q/.

Line 15.]t̊tb The right side of the /t/ is preserved. Context assures its reading.

Line 16. [ ]bhtm Unlike CAT, we find no traces of an /ʾi/ at the beginning of the line. Nor are there traces of a word divider before /bhtm/.

Line 17. x[The deep interior of a horizontal wedge is preserved at the beginning of the line.

Line 18. ẏ[The left half of the /y/is well preserved, and the left side of the right wedges are visible at the break.

]k̊ This letter could be a /k/ or an /r/. The right wedge and the right tip of an overlapping upper left wedge are preserved. Most restorations favor /k/.

Line 19. l[ ]r̊yn Only the right tip of the right horizontal of /r/ is preserved, but the context assures the reading.

Line 20. hx[Only the tiniest lower left line of a horizontal wedge is preserved after the /h/. It is compatible with CAT’s reading, /n/, but could also be read as several other letters.

Line 21. šr̊yn Only the lower left horizontal of the /r/is preserved, but the context assures the reading.

Line 22. tšt̊[The /t/ before the break is only preserved as the left edge of a horizontal. Context argues for /t/.

]'išt The right tip of the vertical wedge of the /'i/ is preserved, though poorly. It does not show up clearly in the photograph, but when the light is shone from the right, it is visible.

Line 24. hn[ ]ẙm Only a single short vertical of the /y/ survives, but context assures the reading.

Line 26. bhk[ ]ṁ The upper line of the horizontal of the /m/ and the head of its vertical are preserved.

kb‘ The /k/ is a scribal error for /r/ (haplography of two horizontal wedges).

Line 27. t'ikl̊[Only two wedges of the /l/ are left: the lower tip of the left wedge, and the left side of the middle wedge.

]šṯ The right wedge of the /š/ is well preserved, as are the top and right lines of the middle wedge. Only the deep interior of the left wedge still remains.

Line 28. nbl'a[ ]bhklm There are no traces of the /t/ after /nbl'a[, contrary to CAT.

Line 29. ḫmš.i̲[ ]t̲ The first two letters, /ḫm/, are both certain, although the lower part of the /ḫ/ is broken, as is most of the horizontal of the /m/. We see no traces of a /d/ between the two /t̲/'s, contrary to CAT.

Line 30. 'iš[Both CTA and CAT read a /t/ after the /š/. There is an indentation to the right of the /š/, but it appears to be part of the breakage, not the remains of a wedge. Nor is there a word divider preserved, as CTA reads after the /t/. Virolleaud's drawing (CTA fig. 16) shows a clear /t/, but no word divider. This may be an example of a letter that was still visible when the tablet was first discovered, but has later been destroyed.

Line 31. ḅ[ ]lm The two vertical wedges of the /b/ are preserved, but the horizontals are lost. CAT reads a /k/ at the break before /lm/. But again, we find no evidence of any part of a wedge along the break.

Line 32. bšb[Here too,we see no traces of /ʿ/ read by CAT after /bšb/.

]ẏ[/ The bottom parts of both sets of the /y/'s wedges are preserved.

Line 33. ṅ[Only two wedges of the letter are preserved, but context assures the reading.

Line 35. nsb CTA has a typo here, giving the letter as /ṣ/instead of /s/. But there is no question about the reading of the letter.

Line 37.]ḏṫm After the break, the /d/ and /t/ are damaged. But in both cases, the upper lines of the horizontals are preserved along the break.

Line 40. 'alpṁ[The left line of the /m/'s vertical is visible on the edge of the break.

Line 41. ṯrm[ ]m̊ The /m/ to the left of the break still retains the left side of the vertical and the complete lower tip. The /m/ to the right of the break only has the right side of the vertical. But context assures the reading.

Line 43. l̊[ ]'im Only the left vertical and the left line of the middle wedge of the /l/ are preserved, but the reading is certain.

Line 44. 'a[ ]ẙh CTA is probably correct that no traces remain of the letter that follows the /'a/ at the break. It is possible that the corner of the lower left wedge of an /r/ is preserved, but close inspection could not identify any certain traces. The indentation there appears to be damage. Context, however, assures the restoration of an /r/ in the break. The right half of the /y/ that follows the break is fairly well preserved. The reading is confirmed by context.

Line 47. špq'ilm There is no word divider after /špq/. On the epigraphic issues of lines 47–54, see the Commentary below, pp. 630–34.

yx[Only the lower left corner of a horizontal wedge is preserved after the *y*. The interior lines are comparable to what one sees in an /n/ (cf. the /n/ in line 46), making that or /ʾa/ the most likely candidates here. But one cannot exclude /t/, /m/, /ḥ/, /ṭ/, /q/or /ǵ/. There is space for one or two letters after the /y/ here.

Line 48. ḫprt[There is very little space after the/t/ for the commonly proposed restoration /yn/.

Line 49. ẏ[Only the left half of the letter survives.

Line 50. 'ilht. The /'i/ was smudged while the tablet was still wet.

'arḫt[There is very little room between the /t/ of /ʾarḫt/ and the margin to place the commonly proposed restoration, /yn/.

Line 51. 'ilm The /'i/ is also smudged here.

y[Although CTA, CAT and Pardee (1997a:262 n. 178) read an /n/ at the end of the line, there are no surviving traces of wedges after the /y/. All of the depressions following the /y/ are breakage.

Line 52. ksʾat There is no evidence to suggest any further writing on this line. The word /ksʾat/ is not followed by a word divider, and there is well-preserved surface to the right of the /t/ that could hold most, if not all of a succeeding letter, but it is blank. Thus the proposed restoration /yn/ is excluded.

Line 54. dkr There is no writing on the line after this word. The proposed /t/ at the end of the line in CTA is clearly tablet damage in the form of an indentation and not a letter. The nature of the damage is such that one would expect still to be able to see traces of the upper line of a /t/ if it were there. It is also clear that no other letters were written at the end of the line. The surface of the tablet is fairly well preserved on the far side of the break, and there simply is no writing there.

Line 55. 'ilm̊ The final /m/ is assured only through the context. Only the upper left tip of the horizontal is preserved to the left of the

break. What appears to be the top of the vertical to the right of the break is in fact chipping. In any case, it would be too low on the line to be part of the vertical of an /m/.

Line 56. t̰ḏ /d/ is uncertain, but probable. Two vertical wedges, plus parts of two horizontals are preserved. The spacing suggests /d/, rather than /b/.

Line 57. qṣ̊[The /ṣ/ remains epigraphically uncertain. There are two certain vertical wedges side by side, which could be read as a /ṣ/ But there are traces of a possible third vertical to the left of the other two, and possible interiors of two horizontals below the certain verticals, which also leave open the reading of /d/. However, the parallel (1.4 III 42) to the passage gives the edge to /ṣ/.

]r̊ Only the upper and right elements of a horizontal are preserved here, but context argues for /r/.

Line 58. krp[ ]n̊ The right tip of a horizontal is preserved at the end of the line. /n/ fits the context well.

Line 59. [ ]s̊.ḫr̊š̊ḏ[This is all based on context (see IV 38). But the traces are all compatible with the reading. We see no traces of the /k/ that precedes the /s/.

Line 63.]xt CTA/CAT recorded final letters of five lines at the end of this column. We, however, only see remains of four. The proposed /n/ that is presented as the end of a line 63 in CTA/CAT does not appear to exist. There is some damage just below the /t̰/ of line 62, but it appears to be breakage, and is too close to line 62 to be part of a letter on a different line. Thus we see the signs of their line 64 as being line 63.

/x/ This is not likely to be a wedge belonging to the same letter as the final horizontal. It is too pointed and separate to be a wedge of an /ʾa/ or /n/. It must be the end of another letter that has a single horizontal on the right (/k, w, r, t, ʾa, n/).

Translation and Vocalized Text

Kothar and Baal Debate Over Installing A Window

1	And Ko[thar wa-Has]is replied:	wa-yaʿnî kô[ṯaru wa-ḫasī]su
2	"You will reconsider [my word], O Baal."	taṯûbu baʿli lê-[hawati-ya]
3	Again Ko[thar] wa-Hasis spoke:	ṯanî ragama kô[ṯaru] wa-ḫasīsu
4–6	"Please listen, O Mi[ghti]est Baal: Shall I not install a win[dow] in the house, An aperture ami[d the pala]ce?"	šamaʿ maʿ la-ʾa[l'i]yāni baʿli/ bal ʾašîtu ʾuru[bata] bi-bahatīma/ ḥillāna bi-qir[bi hêka]līma
7	And Migh[tiest] Baal answered:	wa-ʿanâ ʾal'i[yānu] baʿlu
8–9	"Do not install a wi[ndo]w in the house, An aperture a[mid the pa]lace.	ʾal tašît ʾu[ruba]ta bi-bahatīma/ ḥillāna bi-qi[rbi hê]kalīma

10–11	Lest [Pidr]ay, Daughter of Light,…	’al…[pidr]ayu bittu ’āri/
	…[Tall]ay, Daughter of Showers…	…[ṯall]ayu bittu ribbi…
12–13	[The Be]loved of El, Yamm.…	[mê]dadv ’ili yammv…/
	…abased me,	…qalaṣa-nî
	And spat…”	wapaṯa-ma[…
14–15	And Kothar [wa-Hasis] replied:	wa-ya‘nî kôṯaru/[wa-ḫasīsu]
15	“You will reconsider my word, O Baal.”	taṯûbu ba‘li lê-hawati-ya

The Construction of the Palace

16–17	[Quickly] his house was built,	[ḥūšu] bahatū-hu tubnûna/
	[Quickly] his palace was erected.	[ḥūšu] turāmimū hêkalū-hu
18–19	He [we]nt to Lebanon for its trees,	yi[tal]iku lê-libanāni wa-‘iṣṣī-ha/
	To [Si]ryan for its choicest cedars.	lê-[ši]ryāni maḥmada ’arzī-ha
20–21	[Le]banon for its trees,	h[—[1] li]banānv wa-‘iṣṣī-ha
	Siryan for its choicest cedars.	širyānv maḥmada ’arzī-ha
22–23	A fire was set in the house,	tūšâtu ’išitu bi-bahatīma/
	A f[l]ame in the palace.	nab[l]a’atu bi-hêkalīma
24–26	There! For a day and a second,	hvnnv[2] yôma[3] wa-ṯanî
	A fire burned in the house,	ta’kulu/’išitu bi-bahatīma
	A flame in the pa[l]ace.	nabla’atu[4]/bi-hêka[lī]ma
26–28	For a third and a fourth day,	ṯalīṯa[5] rabī‘a yôma/
	[A f]ire burned in the house,	ta’kulu [’i]šitu bi-bahatīma/
	A fla[me] in the palace.	nabla’a[tu] bi-hêkalīma
29–31	For a fifth and a si[x]th day,	ḫamīša ṯa[dī]ṯa yôma
	A fir[e] burned [in] the house,	ta’kulu/’iši[tu bi]-bahatīma
	A flame a[mid the pal]ace.	nabla’atu/bi-[qirbi hêka]līma

---

[1] See the Commentary below.

[2] For this particle, see *UG* 737–38; Sadka 2001.

[3] So based on the syllabic form, Huehnergard 1987b:133; Rainey 1987:401; *UG* 188.

[4] Without the second a-vowel as proposed in the reconstruction here, there would be three consonants without any vowel between, which would be abnormal for Ugaritic. For the vocalization *nab(a)lat-*, see *UG* 50.

[5] A **qātil-* base for ordinals is plausible, according to *UG* 364–66. However, the evidence cited there derives from languages outside the West Semitic group, which (esp. BH) would seem to favor **qatīl-*.

31–33	Then on the seven[th] d[ay], The fire went out in the house, The f[la]me, in the palace.	makka/bi-šabī[ʿi] yô[mi-ma] taddî ʾišitu/bi-bahatīma na[bla]ʾatu bi-hêkalīma
34–35	The silver had turned to plates, The gold had turned to bricks.	sabba kaspu lê-raqqīma ḫurāṣu/nasabba lê-labināti
35–36	Mightiest Baal rejoiced:	šamaḫa/ʾalʾiyānu baʿlu
36–38	“My house I have built of silver, My palace of gold.”	<ba>hatī-ya banîtu/dūti kaspi hêkalī-ya dūti-ma/ḫurāṣi

Baal Prepares a Divine Banquet

38–40	[Baa]l made arrangements for [his] house, Hadd made [arrange]ments for his palace.	ʿadabāta bahatī-[hu baʿ]lu/ya‘dubu haddu ʿadaba [ʿada]bāta/hêkalī-hu
40–43	He slaughtered large stock [as well as] small: He felled bulls [and] fatling rams, Calves a year old, Sheep by the flock with k[i]ds.	ṭabaḫa ʾalapīma [ʾap]/ṣaʾna šaqîla[6] ṯôrīma [wa-]ma/rʾīʾī ʾili[7] ʿigalīma dū[ta]/šanati ʾimmirī qamaṣi la[li]ʾīma[8]
44–46	He invited his brothers into his house, His ki[nf]olk inside his palace; He invited the seventy, the children of Athirat.	ṣāḥa ʾaḫḫī-hu bi-bahatī-hu ʾa[r]yi-hu/bi-qirbi hêkalī-hu ṣāḥa/šibʿīma binī ʾaṯirati
47–48	He provided the gods with suckling(?) rams, Provided the goddesses with ewes.	šapîqa ʾilīma karrīma yān[iqīma?]/ šapîqa ʾilahāti ḫaparāti
49–50	He provided the gods with bulls, Provided the goddesses with cows.	šapîqa ʾilīma ʾalapīma ya/šapîqu ʾilahāti ʾarḫāti
51–52	He provided the gods with thrones, Provided the goddesses with chairs.	šapîqa ʾilīma kaḥaṯīma ya/šapîqu ʾilahāti kissiʾāti

---

[6] For the semantics of this verb, see *UBC* 1.154 n. 69. For 1.1 IV 28–32 and 1.22 I 12–14, the parallels to this passage, see *UBC* 1.154–55.

[7] Elsewhere within this stereotypical language, this word’s form is plural (1.22 I 13; cf. 1.1 IV 31 where the word falls in a lacuna). The context would conform better to the plural.

[8] For the animals, see *UBC* 1.154–55, *DUL* 72–73, 498; for discussion of *ʾimr* and *lʾu*, cf. Akkadian *imeru* and *lalû* (Landsberger 1960:Excursus I:57–59; see also Morrison 1981:272). The linguistic structure of two identical initial radicals for Ugaritic *lʾim* is irregular for Semitic words. Cf. the discussion of M. Cohen 1947:183, #433.

53–54	He provided the gods with jars of wine, Provided the goddesses with vessels.	šapîqa ’ilīma raḥbāti yêni/ šapîqa ’ilahāti dakarā<ti>
55–58	As the gods ate, drank, A suckling of breast was provided, With a salted knife, a cut of [fa]tling.	‘adê laḥāmu šatāyu ’ilūma/ wa-pûqa maraǵǵiṯu-ma ṯadi/ bi-ḥarbi malūḥati qaṣṣu [ma]rī/’i
58–59	They drank [wi]ne from gob[lets], [From] gold [c]ups, the blo[od of trees].	tištayū karpa[nīma yê]na/ [bi-kā]sī ḫurāṣi da[ma ‘iṣṣīma]

[*Lines 60–63 are unintelligible. An additional 2 to 5 lines are missing.*]

Commentary

Poetic Parallelism and Word/Syllable Counts

		semantic parallelism	word/ syllable count
1	wa-ya‘nî kô[ṯaru wa-ḫasī]su	a b (x + y)	3/10

This speech-opening formula begins a series of one-line units within the larger context of Kothar’s communication with Baal.

2	taṯûbu ba‘li lê-[hawati-ya]	a b c	3/10

This monocolon theoretically could have been prefixed to the tricolon in lines 4–6. Instead, it is here demarcated as a one-line unit, perhaps to punctuate the point made by Kothar. This line reappears in line 15 below and in 1.4 VII 24–25; so it is apparent that it plays a larger role in structuring the conversation about the window between Baal and Kothar.

3	ṯanî ragama kô[ṯaru] wa-ḫasīsu	a b c (x + y)	4/12

This is the third monocolon in a row (see the Commentary for further discussion).

4–6	šama‘ ma‘ la-’a[l’i]yāni ba‘li/	a b (x + y)	3/10
	bal ’ašîtu ’uru[bata] bi-bahatīma/	c d e	4/13
	ḫillāna bi-qir[bi hêka]līma	d’ e’ (x of y)	3/10

With this tricolon, the column enters into a more conventional style of parallelism. The initial line sets up the strongly parallel second and third lines (see also below lines 8–9). The second line shows a high density of the consonants, *b* and *t*.

7	wa-‘anâ ’al’i[yānu] ba‘lu	a b (x, y)	3/9

Once again a monocolonic, speech-opening formula.

8–9	’al tašît ’u[ruba]ta bi-bahatīma/	a b c	4/12
	ḫillāna bi-qi[rbi hê]kalīma	b’ c’ (x of y)	3/10

This bicolon follows the patterns in lines 5–6 and is identical to 1. 4 V 64–65.

10–11	’al…[pidr]ayu bittu ’āri/	a [b] b c (x of y)	5/ (?)
	……[ṯall]ayu bittu ribbi…	[a’] b’c’ (x of y)	4/ (?)

The divine names and titles are evidently parallel (especially *bittu*//*bittu*), and presumably they reflect parallel syntax and basic morphology.

Lines 12–13 are too fragmentary to scan.

14–15	wa-ya‘nî kôṯaru/[wa-ḫasīsu]	a b (x + y)	3/10

While this line is a standard extra-colonic speech-opening monocolon, it is followed by another monocolon of identical length. The only other instance of this poetic arrangement is the same set of monocola in lines 1–2, where they serve as the conclusion to the first exchange between Baal and Kothar about the window (1.4 V 58–VI 2). In view of this distinctive feature, it would appear that Kothar’s response is designed to be aurally striking. It thus aids the audience in keeping this saying in mind, thereby preparing for the eventual fulfillment of the prediction in the next column, in 1.4 VII 14–25.

15	taṯûbu ba'li lê-hawati-ya	a b c	3/10

This section-closing monocolon maintains the line-length of both the preceding and following cola.

16–17	[ḥūšu] bahatū-hu tubnûna/	a b c	3/9
	[ḥūšu] turāmimū hêkalū-hu	[a'] c' b'	3/10

The narrative here echoes the commands in 1.4 V 51–55 (see the discussion of the poetry there), although this bicolon uses passive voice verbs. According to Noegel (2004:10), *tbnn* (**bny* with energic *-n*) creates a geminate "ballast" with *trmm* (and also with *lbnn* in the following unit).

18–19	yi[tal]iku lê-libanāni wa-'iṣṣī-ha/	a b c	3/13
	lê-[ši]ryāni maḥmada 'arzī-ha	b' c' (x of y)	3/10

The unit shows classic syntactical and semantic parallelism. The unusual feature is the syntax of *w-*, which carries over to the second line (an instance of gapping of a particle); for a discussion of the usage here, see the Commentary below. From a poetic perspective, it may be noted that this *w-* stands out not only syntactically, but also in terms of the sounds of this bicolon, since it is the only instance of this consonant in the unit.

20–21	h[li]banānv wa-'iṣṣī-ha/	a b c	3/10 (?)
	širyānv maḥmada 'arzī-ha	b' c' (x of y)	3/9

This unit matches the preceding almost word-for-word, except for the opening word.

22–23	tūšâtu 'išitu bi-bahatīma/	a b c	3/11
	nab[l]a'atu bi-hêkalīma	b' c'	2/9

The parallelism of syntax and morphology is nearly perfect, with feminine-marked subjects followed by prepositional phrases both consisting of *b-* plus plural nominal forms. In a small way on the sonant level, the first line wraps around to the beginning of the second line, as the internal vowels of the first line's final word is echoed by the internal vowels of the second line's first word.

24–26	hvnnv yôma wa-ṯanî	a b c	3/7
	ta'kulu/'išitu bi-bahatīma	d e f	3/11
	nabla'atu/bi-hêka[lī]ma	e' f'	2/9

The second and third lines build on the preceding bicolon, but there is a switch of verbal root. The initial line is distinctive from the rest of the unit. The ending of the second word in the first line, *-ma*, is echoed at the ends of the other two lines. That word, *yôma*, becomes the final word of the first colon of the next three tricola.

26–28	ṯalīṯa rabī'a yôma/	a b c	3/8
	ta'kulu ['i]šitu bi-bahatīma/	d e f	3/11
	nabla'a[tu] bi-hêkalīma	e' f'	2/9

This tricolon largely follows the preceding. The placement of *yôma* at the end of the first line produces end-rhyme throughout the unit.

29–31	ḫamīša ṯa[dī]ṯa yôma	a b c	3/8
	ta'kulu/'iši[tu bi-]bahatīma	d e f	3/11
	nabla'atu/bi-[qirbi hêka]līma	e' f'	2/9

This unit closely matches the preceding tricolon.

31–33	makka/bi-šabī['i] yô[mi-ma]	a b (x, y)	3/9
	taddî/'išitu bi-bahatīma	d e f	3/10
	na[bla]'atu bi-hêkalīma	e' f'	2/9

This tricolon contains many of the features found in the preceding three tricola, but departs in some important ways. Apart from the different numeral, the temporal marking in the initial line is distinctive, and the switch in verb in the second line is notable. The different numeral, *šabī['i]*, arguably generates a minor resonance with *bi-* located in roughly the same position in the second and third lines. It might be suggested that the particle *makka* adds to the effect of *-ma* elsewhere in the unit. The change of syntax in the first line in this unit, compared to the preceding units, with the prepositional phrase, slightly alters the end of the initial line on the sonant level. Instead of *yôma* as in the initial lines of the two preceding units, the initial line here has *yô[mi-ma]*; if correctly reconstructed, then the end-rhyme is extended from *-ma* as found in the preceding two units to *-īma*.

34–35	sabba kaspu lê-raqqīma	a b c	3/8
	ḫurāṣu/nasabba lê-labināti	b' a' c'	3/11

This beautifully constructed bicolon matches element for element, with chiasm at the head of the lines. The verbs match *G*-stem//*N*-stem suffix forms of the same root (as noted by Held 1965a), resulting in perfect sonant parallelism (*sabba//-sabba*).

35–36	šamaḫa/'al'iyānu ba'lu	a b (x, y)	3/9

This line is used here as an extra-colonic speech-opening formula. The verb elsewhere appears in a similar context preceding what may be called a climactic speech in 1.17 II 8–12 and 1.6 III 14–17. But in those cases it occurs in the first line of a five-line description of rejoicing that ends with *yš'u gh wyṣḥ*, "He lifts up his voice and shouts." Here it performs the double duty of indicating Baal's mood as well as introducing his response to the completion of the palace. In addition to approximating the line-length of the surrounding units, this line evidently maintains the **qtl* verbal form as found in them.

36–38	<ba>hatī-ya banîtu/dūti kaspi	a (x) b c (of y)	4/11
	hêkalī-ya dūti-ma/ḫurāṣi	a' (x) c' (of y)	3/10

The scanning by letters above fails to capture the construct relationship (x of y) in the two lines, because the verb in the first line is interposed between the two parts of the construct (this is the reason for the unusual designation of the construct relationship above, usually labeled x of y). Due to morphological parallelism, this bicolon also enjoys a particularly high density of words ending in *-i*.

38–40	'adabāta bahatī-[hu ba']lu/ya'dubu	a b c d	4/13
	haddu 'adaba ['ada]bāta/hêkalī-hu	c' d' a b'	4/13

This bicolon is perfectly balanced in length and in its various components, including the classic parallelism of *b'l//hd* and of **yqtl//*qtl* of the same root (Held 1962), used in a chiastic arrangement. Also notable (assuming the correctness of the reconstruction), is the identical cognate accusative used in both lines. Moreover, *b* and ' are prominent in the both lines, which echoes the god's name, *b'l*. In the second line, *h* and *d* are somewhat prominent, echoing the god's title *hd*.

40–43	ṭabaḫa ’alapīma [’ap]/ṣa’na	a b c	4/10
	šaqîla ṯôrīma [wa-]ma/r’ī’ī ’ili	a’ b’ c’ (x of y)	4/12
	‘igalīma dū[ta]/šanati	b’’ (x of y)	3/9
	’immirī qamaṣi la[li]’īma	b’’’ (x of y) b’’’’	3/10

This unit is the same as in 1.1 IV 30–32 (*UBC* 1.154–55). Generally, the terms for the animals dominate this unit, which is very well balanced. The first two lines are headed by verbs plus double-objects. There is an interesting variation of particle between the sets of objects. The second set of two lines elaborate the objects, the first in a standard construct relationship, and the second with a stacking up of object nouns. The consonant *-m* runs through all four lines.

44–46	ṣāḥa ’aḫḫī-hu bi-bahatī-hu	a b c	3/10
	’a[r]yi-hu/bi-qirbi hêkalī-hu	b’ c’ (x of y)	3/10
	ṣāḥa/šib‘ima binī ’aṯirati	a’ b’ (x, p of q)	4/11

The first two lines show classic parallelism. The third line picks up the verb of the first line and generates a parallel direct object, longer in length and without any following prepositional phrase. As a result, the emphasis in this unit falls on the identity of the guests. This tricolon may perhaps be viewed as providing a transition between the preceding four-line unit and the series of bicola that follows.

47–48	šapîqa ’ilīma karrīma yān[iqīma] (?)/	a b c	4/13 (?)
	šapîqa ’ilahāti ḫaparāti	a’ b’ c’	3/10

The larger unit of lines 47–54 is particularly notable for its sustained description of the items provided for the guests at the banquet, which is unparalleled in Ugaritic literature. The *C*-stem forms of **pwq* in particular (interpreted as cases of **qtl*//**qtl* in lines 49–50 and 53–54 framing two cases of **qtl*//**yqtl* in lines 49–50 and 51–52), combined with the similar syntax throughout the rest of the units, strongly bind together the four bicola. Each bicolon balances masculine and feminine plural indirect objects (in each case *’ilīma*//*’ilahāti*), as well as masculine and feminine direct objects. Each of the direct objects is further tied together on the sonant level in sharing at least one consonant.

49–50	šapîqa ’ilīma ’alapīma	a b c	3/10
	ya/šapîqu ’ilahāti ’arḫāti	a’ b’ c’	3/10

51–52	šapîqa 'ilīma kaḥaṯīma	a b c	3/10
	ya/šapîqu 'ilahāti kissi'āti	a' b' c'	3/11
53–54	šapîqa 'ilīma raḥbāti yêni	a b c (x of y)	4/11
	šapîqa 'ilahāti dakarā<ti>	a b' c' (x of y)	3/11

The shift in the verb-forms in lines 53–54 back to the **qtl*//**qtl* forms of lines 47–48 may be designed to mark the climax of this section of narrative. The longer words in the second line balance the shorter but greater number of words in the first.

55–58	'adê laḥāmu šatāyu 'ilūma	a b (x, y) c	4/11
	wa-pûqa maraǵǵiṯu-ma ṯadi	d e (x of y)	3/10
	bi-ḥarbi malūḥati qaṣṣu [ma]rī/'i	f (x, y) e' (x of y)	4/12

For this unit, see the discussion of 1.4 III 40–43. The second and third lines of this colon expand on the initial mention of eating in the first line.

58–59	tištayū karpa[nīma yê]na	a b (x of y)	3/9
	[bi-kā]sī ḫurāṣi da[ma 'iṣṣīma]	c b' (x of y)	4/11

For this unit, see the discussion of 1.4 III 43–44. This bicolon expands the initial mention of drinking in line 55. It is to be noted that the syntax of the second line in this colon parallels the syntax of the third line of the preceding colon. In this way, the eating and the drinking are further linked poetically.

Introduction

The story of the construction of Baal's palace continues from column V and stretches through the entire column VI. For a detailed discussion of the general characteristics of ancient Near Eastern construction narratives, see above pp. 550–53. The column begins with a continuation of the conversation between Baal and Kothar about whether a window should be installed in the palace (lines 1–15). This is followed by the account of the palace's construction (lines 16–38). Baal then prepares a banquet in honor of the completion of the palace, inviting the children of Athirat, i.e., the entire pantheon of deities, to the feast (lines 38–59). The construction narrative concludes in column VII with Baal's triumphal tour of the earth (lines 7–14) the installation of the window and Baal's grand theophany (lines 14–42).

Lines 1–15: The Debate Over the Window Continues

At the end of column V Kothar strongly suggested that he install a window in Baal's new palace, but Baal rejected the idea (1.4 V 58–65). Kothar's response to Baal begins in column VI. In an unusual single-line quotation (line 2), Kothar offers a prediction, literally, "You will return, O Baal, to my word." (*tṯb bʿl lhwty*)." Here the word "return" (**ṯwb*) may more properly be understood to mean either to "heed" or "reconsider" (cf. the same root as used in 1.3 IV 54–55; cf. **tĕšûbâ* for "answer" in Job 21:34, 34:36). The appearance of this speech as a monocolon is a striking and rare occurrence in Ugaritic narrative poetry and is probably intended to focus the audience's attention on the speech. Kothar repeats the prediction in line 15 as well, and its fulfillment is extensively discussed in 1.4 VII 19–25, where first Baal mentions it (line 20), then Kothar happily reminds Baal that he knew the latter would reconsider the issue (lines 23–25).

In lines 3–6 Kothar asks his question a second time (**ṯn rgm*). Kothar emphasizes the importance of the question by adding *mʿ*, often rendered "please," to the imperative *šmʿ*, repeated from 1.4 V 59. The appearance of *mʿ* with an imperative indicates that the imperative is to be understood as a request rather than a command (cf. 1.4 I 20–21 for another example). The parallel to line 4 in 1.4 V 59 is followed by an additional colon (line 60) that does not appear in the reiteration of the speech here. Lines 5–6 repeat Kothar's question from 1.4 V 61–62.

Baal responds again with a refusal (lines 7–13). Lines 8–9 are a repetition of Baal's words in 1.4 V 64–65. Baal then apparently gives his reasons for not wanting the window in the unfortunately broken lines 10–13. It is not clear whether these lines were also given in his initial response to Kothar in the lacuna at the end of column V. It is possible that Baal gives no reason for his refusal during the first response, and only gives it now. However, there is no evidence to help to adjudicate the issue. Since these lines are the only place in the story in which Baal's motivation is directly discussed, it is particularly unfortunate that they are so broken. Their obscurity compounds the ambiguity of the episode about the window. The scene concludes in lines 14–15 with a repetition of Kothar's prediction (from lines 1–2) that eventually Baal will reconsider the proposal.

This is an appropriate place to consider the question of the meaning of the episode about the window (1.4 V 58–VI 15, VII 14–42). The motivation for Baal's actions with regard to the window in his palace has been the subject of a great deal of speculation over the decades.

Cassuto (*BOS* 2.135) produced a very influential explanation in 1938, arguing that Baal's concern about the window reflects his fear that his enemy, Mot, who becomes the god's great antagonist in the last part of the cycle, will attack him by slipping into the palace through the window. The primary support for this explanation was found in the extraordinary biblical passage, Jer 9:20, which appears to make allusion to an attack by Mot (Death) upon a fortress into which he enters through a window: *kî ʿālâ māwet bĕḥallônênû bāʾ bĕʾarmĕnôtênû*, "for Death has come up into our windows, he has entered our citadels." Cassuto saw this verse as a reminiscence of the story of Baal and Mot. This explanation of Baal's reluctance was widely accepted (e.g., Ginsberg 1943:113–14; Albright 1969:196 n. 45, Loewenstamm, *CS* 1–6; Petersen and Woodward 1977:239–40; cf. Saracino 1984; Paul 1968:373 n. 6 for further references; see also Margalit, *MLD* 45, who uses this view of the window to bolster his idiosyncratic view of the passage noted above).

A number of scholars, however, have rejected a relationship between the Baal Cycle and Jer 9:20. Several significant problems for the proposal may be noted. Most importantly, many have pointed out that the passage in 1.4 VI 10–13, Baal's own explanation of his reluctance to install a window, refers not to Mot, but rather to Yamm as the object of his uneasiness. In addition, Yamm is referred to again in the broken passage, VII 1–6, in a context that deals with Baal's establishment of his dominion over aspects of the world. Mot does not enter the story until after the palace is completed (see *Thespis* 188–9; Pope 1966:236; Paul 1968; cf. Talmon 1978:122–24; Pardee 1997a:261 nn. 168, 173). One may also note that the window in Baal's palace plays no role in the story of Baal and Mot (1.4 VII–1.6 VI), and Mot's fatal attack on Baal does not take place in Baal's palace, but rather in Mot's own realm (1.5 V). The link between the narrative of 1.3–1.4 and the following section in 1.5–1.6 is not the window, but the palace itself as the indicator of Baal's dominion. In columns VI and VII his dominion is accepted by the deities in heaven and by humans on earth, but not yet in the netherworld. The final part of the cycle deals with the issue of Baal's status in that region. When Baal sends his message to Mot (1.4 VIII 29–37), he begins by directly calling attention to his palace (not the window), because the palace is the symbol of his power, while the window is only a part of that symbol. Because he now has the palace, Baal expects Mot to recognize his dominion. Mot's refusal to do so propels the plot of 1.5–1.6. But none of this has any relationship to the window as such. There simply is no discernable link between the story of the window and Mot or Jer 9:20.

The influence of Cassuto's interpretation has lingered, however, even where the main lines of it have been rejected. Without embracing Cassuto's full view of the window, Caquot and Sznycer (*TO* 1.211 n. g) proposed that the window allows both Baal's rains and his descent into Mot. Gordon also (1977:99) saw the window as tied to Baal's fall to Mot, and Pardee (1997a:261 n. 168) stressed the "rather clear link between the palace, the window, and Ba'lu's eventual demise—so important to the overall structure of the myth." However, the cycle makes no statement that the window is the avenue or means by which Baal descends into the maw of Mot. As a result, relating the story of the window to the subsequent narrative of Baal and Mot misconstrues the function of the window episode within the structure of the cycle.

Once it is recognized that the window itself plays no role in the subsequent events involving Baal's conflict with Mot, then one can look back on the preceding story to find its meaning. When that is done, it becomes evident that the episode is the conclusion to the narrative of Baal's palace. It is, in fact, the climax of this entire part of the cycle. Careful consideration shows that Baal's concern about the window is a major issue in 1.4 V 58–VI 15. Whatever is its underlying cause, it is successfully resolved by 1.4 VII 14–25, so that the episode concludes triumphantly with Baal's use of the window in his theophany. The window is a subplot that focuses on the establishment of Baal's function as giver of rain for the earth. Its literary function is completed by the theophany, and it plays no further explicit role in the subsequent part of the epic. With this in mind, we will examine three aspects of the episode: first, the issue of why Baal does not want the window; second, the question of the circumstances that cause Baal to change his mind; and finally the meaning and significance of the window itself within the context of the narrative (for an earlier discussion of these issues, see Smith 1985:340–46).

As mentioned above, Baal's concerns about the window are directly addressed in 1.4 V 10–13, lines that unfortunately are severely damaged. Lines 10–11 mention two of Baal's women, namely [Pidr]ay, the daughter of light(ning?), and [Tall]ay, the daughter of showers. These two goddesses are very closely connected to Baal. They appear with him also in 1.3 I 22–25, where they are singled out as attending the victory feast of Baal following his defeat of Yamm (see the Commentary on pp. 115–20). They are also called upon to accompany Baal, along with his clouds, thunderbolts and rains, in his journey to Mot's abode in the netherworld when he has been defeated (1.5 V 10–11). The only other words surviving in these lines are *'al tx[* in line 10 and two uncertain

letters in line 11, the second and third of the probable verb for the line. The first letter could be either *h* or *ʾi*, and the second could be *ṭ* or *ḥ*. The word *ʾal* is a negative particle that customarily precedes **yqtl* forms of verbs. As a result, lines 10–11 may well constitute negative purpose clauses following an imperative: "Do not install a window . . . lest Pidray do X," or passive, "lest she be X-ed." Several suggestions for restoring the verb in line 10 have been made. The damaged letter following *t* could be read as *l*, *d* or *ʾu*, since three vertical wedges are preserved, but the lower part of the letter is destroyed. Several scholars propose reading it as *d*. In this case, some relate the word to **ndd*, "to flee" (*TO* 1.212; Dietrich and Loretz 1997:1165; *CML*[1] 99; *CML*[2] 62; Gordon 1977:98). Others connect it to **ndy*, or **ydy*, "to depart" (e.g., *Thespis* 189; cf. 1.4 VI 32, where this root is fairly clearly attested). Others have proposed reading *ʾal tʾu[mr*, "lest she be seen" (*ANET* 134) or "lest she see," or "look out" (Tsevat 1978b:156–57). Tsevat suggested that Baal is concerned that if Pidray and Tallay were to look out of the window, they would desire to return to their former domiciles. This view has gained little support. The proposed form *tʾumr* is otherwise unattested for the root **ʾmr*, "to see, look" (see the discussion in Smith 1985:331–33). In addition, there is not enough room to reconstruct the five letters, *mr pdr*, in the broken patch of the line. While the reading of the letter *d* may be somewhat more likely, one must admit that the proposed interpretations of the verb do not inspire much confidence. There is nothing in the Ugaritic literature that suggests a strained relationship between Baal and Pidray, Tallay (and Arsay) that would compel Baal to fear that they might try to escape from his presence through a window if it were installed. It has seemed wisest to us (and to others, including Albright 1934:126; Aistleitner 43; Coogan 1978:103; Pardee 1997a:261) simply not to attempt a reconstruction here. It appears likely that Baal's fear is that the women might be harmed in some way, rather than that they might escape from him.

The second bicolon (or tricolon), lines 12–13, focuses on Yamm, referred to in line 12 with his standard epithet, *[m]dd ʾil*, "Beloved of El." The two verbs preserved in line 13, *]qlṣn.wpṯm*, are also found together in Baal's description of the feast during which he was grossly insulted by a god (1.4 III 12–14). The verb **qlṣ*, "to scorn, abase" has been discussed in the Commentary on 1.3 V 28, p. 352 (see also the Commentary on 1.4 III 12). On *wpṯm* see the Commentary on 1.4 III 13, p. 473. The first verb may have been a **yqtl* form, perhaps preceded by *ʾal* like the verb in line 10. It is not clear whether these two words belong on a single line together, or whether, like 1.4 III

12–14, they belong on two lines of a tricolon. What these verbs suggest is that these lines describe a concern of Baal that Yamm in some way might be able once again to humiliate Baal if the window were built in the palace. It also seems quite likely that the two threats described here, one concerning Pidray and Tallay, and the other concerning Yamm, are related to one another, and that Yamm is here presented as a threat to Baal's women. But the relationship between lines 10–11 and 12–13 remains obscure.

Gibson (*CML*² 62 n. 4) offered another interpretation of the threat that Yamm poses here. For him, the reference to Yamm in line 12 signals a fear that "the chaos waters may break through" the window. While possible, one must note that none of the surviving text suggests this motivation. The preserved language in line 13 deals with status and honor rather than the surging of the deep. While there are certainly parallels in Mesopotamian and Israelite texts to the relationship between windows in heaven and water seen as existing above the sky (Weinfeld 1977–78), in the absence of evidence, it is not possible to confirm this line as a reference to this concept.

Between the changes that occur from the time Baal refuses to permit the window to be installed (1.4 V 64–VI 15) to the point in 1.4 VII 14–20 when he allows it, there are a number of important events: the palace is built (except the window; 1.4 VI 16–38); Baal hosts a dedicatory banquet for the family of the gods (1.4 VI 38–59); Baal deals in some way with Yamm (1.4 VII 1–4); and Baal takes a tour of power around the earth (1.4 VII 7–14), at which point he changes his mind about the window (1.4 VII 14–20). It seems likely that each one of these events is a stepping-stone toward Baal's achievement of divine dominance (and perhaps feelings of security that finally free him from fear). The successful completion of the spectacular palace of gold and silver, without any interference or problems, constitutes a landmark moment for the god. The grand banquet inaugurating the palace, attended by the seventy children of Athirat (i.e., the major deities) clearly indicates their recognition of his kingship and thus suggests stability in the pantheon. The broken reference to Yamm in the center of the scenes of triumph allow us to propose that these lines indicate a neutralizing of Yamm's potential danger that Baal fears in 1.4 VI 12–13. The damaged condition of 1.4 VII 2–5a does not allow us to draw conclusions about the exact nature of Baal's success against Yamm. The passage seems rather short to describe any type of actual battle between the two. But there seems little doubt that Yamm is no longer a problem from this point onwards. Perhaps, as proposed by Gibson (*CML*² 64,

n. 1), these lines constitute a declaration by the assembled children of Athirat rejecting Yamm's claims and assuring Baal of their support. Whatever the passage describes, it is clear that while Yamm was central to Baal's concern about the window, in these lines that concern is put to rest. And finally Baal's tour of cities of the world, in which each of them submits to the young king, assures his status upon earth. From the end of CAT 1.2 until this point, we have watched Baal's slow rise to power. But now, with universal support for his kingship in heaven and on earth, Baal is ready to install the window that will serve as the conduit for his life-giving rains.

We now turn to the issue of the meaning of the window itself. Several general interpretations have been proposed, often related to the overall conceptual framework the scholars have used to interpret the cycle as a whole (for a survey of the major approaches see *UBC* 1.60–96). De Moor (*SPUMB* 162–3) argued, as part of his seasonal interpretation of the cycle, that the window episode represents the occurrence of the late rains in the spring (shortly before the death of Baal in the summer). Gaster (*Thespis* 195), in accordance with his ritual interpretation, proposed that the narrative about the window originated in a rain-making ceremony at the Baal temple in Ugarit, in which windows in the temple were opened in the autumn to bring the rains after the dry summer (see also Gray 1979a:18 and n. 39). Gibson (1984:214–15) emphasized the literary dimension of the story of the window, in arguing that Baal's initial refusal is intended to increase tension within the narrative and to emphasize his independence of action (Engnell 1967:116 and Kapelrud 1952:95–96 also noted this literary function). Following in the footsteps of Gaster, Robertson (1982:318–19, 338–39) suggested a ritual basis in the window, but thought that the opening of the window indicates the conclusion of the rainy season rather than its continuation in the spring (de Moor) or the beginning of the season in the fall (Gaster). For L. R. Fisher (1965, 1969), the building of the palace represents an aspect of the creation of the universe. Margalit (*MLD* 51–74, esp. 58), who saw 1.4 merely as a prelude to the story of Baal and Mot, understood the installation of the window as an act of hubris by Baal (against the advice of Kothar!) that leads directly in 1.4 VII 35–58 to Baal's defeat by Mot.[9] In the end, the complexity of the meaning of

[9] Gordon (1966b:22 n. 14) suggested a historical background to the story of the window, arguing that windows were not known in the Late Bronze Age in Syria, but had long been used in the architecture of Crete, Kothar's home. For Gordon, Kothar's advocacy for a window represents cultural influence coming from the Mediterranean

myth requires that we not try to fit the palace narrative or the window subplot into a single interpretive framework. Several of the proposed insights in the previous paragraph are mutually plausible. The views of the Baal Cycle—seasonal, ritual, cosmogonic, life versus death—are hardly incompatible with one another or with the understanding of the cycle as the story of Baal's kingship. Some of these ideas appear to be supported by more evidence in the text than others.

The most critical passage for understanding the function of the window is 1.4 VII 25–35. Here the window is equated with a break in the clouds through which Baal issues his voice, the thunder, the sign of approaching rains. There can be little doubt then that the key function of the window involves Baal's primary characteristic as fertility deity. Indeed, this part of the story may be regarded as aetiological, in giving a mythic understanding of how Baal fulfills his primary divine duty. With this in mind, we can see (as mentioned above) that the opening of the window is the climax of the entire story of the construction of the palace, just as Athirat's speech in 1.4 V 6–9 indicates. It is only with the construction of Baal's palace (presumably related in some way to his temple at Ugarit) that his sovereignty is made manifest and that he is able to fulfill his capacity as provider of the rain. The importance of rain for the life of the people of Ugarit (and elsewhere) cannot be overestimated, and thus it should not be surprising that the story of how Baal came to deliver the rains to humanity should be so comprehensively described as we find it here in 1.3–1.4.[10]

In addition, as also mentioned above, it is clear that in focusing on Baal's sending forth of his voice (thunder) from the window in 1.4 VII 25–42, the poet is equally interested in emphasizing Baal's power and authority. This climactic scene superbly links together the two elements of fertility and kingship, building on the point made by the previous

---

world, while Baal's resistance to this suggestion would be natural for a Syrian god. It is true that the examples of the so-called *bīt ḫilāni* are known better for the Iron Age in Syria (see *RLA* 4:406–9; Akkermans and Schwartz 2003:368–70), but the same style has been argued for a large building in the northwestern part of Emar (Akkermans and Schwartz 2003:345), and a palace at Alalakh has a two-column portico entrance, characterized as a "prefiguring" of the *bīt ḫilāni* type (Akkermans and Schwartz 2003:334).

[10] The appearance of this motif at Ugarit has been ascribed to the direct role of rain in the Levantine agriculture. In contrast, Mesopotamia, which is driven considerably less by direct rainfall (Neiman 1969:244), tends to employ the imagery of irrigation in its mythological expressions involving water (Weinfeld 1977–78).

two scenes, 1.4 VI 38–59 where the gods show their acceptance of Baal as king, and 1.4 VII 7–14 where the earth's population does the same. Baal's kingship is thus the foundation for his role as provider of rain and sustainer of the earth, and the episode of the building of the palace ends in triumph. This aetiological aspect of the window story may be understood as quasi-cosmological in intent. At this point in the narrative, the window constitutes the culmination of a process of cosmological significance (stressed in *UBC* 1.77, 105, but questioned in Pardee 1997a:261 n. 168).

But why does the story pay so much attention to Baal's initial reluctance to install the window? It seems likely that Engnell (1967:116), Kapelrud (1952:95–96) and Gibson (1984:214–15) were correct in focusing attention on the literary function of this element. We have seen throughout the story in 1.3–1.4 that the poet places obstacle after obstacle in the way of the successful completion of the palace, each one potentially disastrous to the goal, but each eventually overcome. Thus El initially refuses Baal's request (1.3 IV–VI); Athirat initially seems ill disposed to help him secure El's support (1.4 II–III, especially her speech in III 27–32), but then agrees to go to El on his behalf. El's initial response to Athirat's request appears to be negative (1.4 IV 58–62), but then he gives his permission. And in the climactic moment of the story, Baal refuses to put in the window, evidently because he is not yet sure that he has control of the universe. From the narrative's perspective, not to install the window will mean that the whole effort to build the palace will end in failure. This provides the story with a final element of suspense, which subsequently is resolved when Baal announces his change of mind.

This kind of narrative strategy is common in the Ugaritic narratives, as well as in thematically related biblical stories. Thus the Aqhat Epic opens with a childless Dan'il, whose desire for a son seems hopeless. However, through Baal's intervention, El grants him a son. But all of this appears in vain when Aqhat is murdered by Anat. The use of suspense to keep the story interesting is an important element here. Similarly, the Kirta Epic begins with an apparently hopeless situation in which Kirta has lost his entire family. El once again intervenes and helps Kirta regain a family line. But everything is almost scuttled by Kirta's failure to fulfill his vow to Athirat, so that she places a curse on him. El once again intervenes and things return to normal briefly. But then the appropriate transfer of power from one generation to the next

is jeopardized by the attempt of Yassib, his son, to usurp the throne. Here too the narrative probably ended with equilibrium being returned. The Abraham cycle in Genesis 12–33 presents similar episodes in which the goal of the narrative is continually placed in jeopardy, but always manages to be fulfilled. The window episode here also appears to be the final suspenseful moment, when the goal toward which the narrative has been moving takes one last turn toward potential failure. Of course, the story requires that Baal will install the window so that he can send the rains. His delayed decision provides the suspense.

Lines 16–38: The Construction of the Palace

The building of the palace is described in surprisingly vague terms. Only two phases of construction are discussed: the bringing of cedar wood from the Lebanon and Siryan (Anti-Lebanon) mountain ranges (lines 18–21); and the rather obscure burning of the palace that leaves it formed of silver plate and gold brick (lines 22–35).

The section opens in lines 16–17 with a general statement that the palace was built. We have reconstructed both lines of the bicolon with an initial *ḥš*, "quickly," on the basis of the very similar lines in Baal's commission to Kothar (1.4 V 53–55). The two verbs are best understood as passives. The lines provide a summary of the actions that succeed in lines 18–38. Lines 18–21, which describe the gathering of cedar wood for the palace, resume the account of the collecting of materials for the palace. This account began in 1.4 V 38–40 with the description of the arrival of the valuable metals, but is interrupted by the narrative of Kothar's commissioning (1.4 V 41–VI 15). Hurowitz (1985:28–29) notes that the account of the construction of the Tabernacle in Exod 35–36 provides a striking parallel to our passage. In Exod 35:20–29, the people bring materials for use in the Tabernacle, but the account is interrupted by Moses' commissioning of Bezalel and Oholiab as the craftsmen who will oversee the building of the shrine (Exod 35:30–36:2a). The description of the gathering of the materials is then resumed and completed in Exod 36:2b–7. The close similarity here suggests that these story elements were part of the West Semitic formula for construction narratives (cf. the discussion above, pp. 35–36).

Cedar wood (*ʾarz*) from the Lebanon and Anti-Lebanon (Siryan) mountain ranges is collected for the palace (lines 18–21; on the exact meaning of *ʾarz*, see the Commentary on 1.4 V 10 above). The cedars

here are called "choice" (*mḥmd*) in lines 19 and 21, similar to the usage of *mibḥar ʾărāzêkā*, "your choice cedars" in Jer 22:7 (note also 2 Kgs 19:23; Isa 37:24; noted in *BOS* 2.135 n. 86). The geographical terms used here, *lbnn* and *šryn*, are also paired together in Israelite literature (Ps 29:6; cf. Ben Sira 24:13, which uses Hermon for Siryan, see Boadt 1978:492–94). The prized nature of this wood for construction is widely attested in Mesopotamian, Egyptian and West Semitic sources. Its importance in Mesopotamian tradition goes back to the third millennium (Waldman 1981:177–78; see J. P. Brown 1969:176–80; Moorey 1994:350–51). The earliest literary text on the subject comes in a text attested from Ebla with a duplicate from Abu Salabikh (Krebernik 1992:82): "The foreign lands yielded lapis lazuli and silver, the cedar forest yielded (pure) wood, boxwood and cypress, exquisite emblems (?)." Gudea of Lagash Cylinder A: xv, lines 27–34; Statue B: v, lines 21–40) reports how he obtained cedar wood from the Amanus, the Cedar Mountain (Edzard 1997:78–79 and 1997:33; *ANET* 268–69; Brown 1969:176–77; Moorey 1994:350–51). Mesopotamian monarchs, such as Gilgamesh, Sargon of Akkad, Gudea of Lagash, Yahdunlim of Mari and Shamshi-Adad I of Assyria, all make journeys to the Lebanon for its riches (Malamat 1965; Brown 1969:177–78; see *ANET* 267–68; for wood from Lebanon for the kingdoms in the mid-Euphrates region, see Durand 2002:63; for cedars of Lebanon taken by neo-Assyrian and neo-Babylonian monarchs, see Elayi 1988). From the third millennium down to the New Kingdom, Egyptian kings likewise patronized the import of cedar wood from Lebanon (see Brown 1969:175–79; for examples, see *ANET* 227, 240, 254; for a depiction from the Great Temple in Karnak showing Syrians cutting down trees, see Nibbi 1996:52, fig. 5a). Phoenician kings also went to the Lebanon for cedar. Josephus records an account derived from Menander of Ephesus in *Antiquities* VIII, 5, 3, paragraphs 144–46 (Thackeray and Marcus 1934:649–51) and *Contra Apion* I.119 (for the latter, see Thackeray 1926:209–11). The passage from *Antiquities* reads:

> These two kings are also mentioned by Menander, who translated the Tyrian records from the Phoenician language into Greek speech, in these words: "And on the death of Abibalos, his son Eiromos [Hiram] succeeded to his kingdom, who lived to the age of fifty-three and reigned thirty-four years. He it was who made the Eurychoros (Broad Place) embankment and set up the golden column in the temple of Zeus. Moreover, he went off and cut timber from the mountain called Libanos for the roofs of the temples, and pulled down the ancient temples and erected new ones to Heracles and Astarte."

Solomon's temple is famous from the Bible for its cedar wood (1 Kings 6:9, 15–20; cf. 2 Sam 7:2, 7; 1 Kgs 5:20, 23–25, 28). A temple at Bethel likewise is praised for its cedar from Lebanon as well as its lapis lazuli in an Aramaic text written in Demotic script (Papyrus Amherst 63, col. VIII, lines 8–10; translated by Steiner in *COS* 1.315). Administrative texts from Ugarit also mention the transport of wood from this region to the city. An Akkadian letter to the king of Ugarit from a certain Ewri-kili (evidently from Beirut) discusses ships hired by the former to transport wood to Ugarit (Arnaud 1991:219): "My lord, regarding the wood when you wrote, 'Much wood convey to me,' now my ship is here ready to depart and all the requests of my lord will be in my ship." The verb of transport here, *šu-bi-la-an-ni*, is the *C*-stem of **wbl*, the same root used in 1.4 V 15, 17, 31, 38 and 40.

A significant interpretational issue in lines 18–21 concerns the fact that these lines lack an expressed subject, so that it is not entirely clear whether Baal or Kothar or simply a group of workers journeys to the mountains to obtain the wood. In the Mesopotamian construction narratives, the king is usually the one depicted as the gatherer of the materials (see Hurowitz 1992:210–12). This may suggest that Baal should be understood as the subject of the verbs here. If this is the case, then the passage could either suggest that Baal himself went to find the appropriate wood, as some of the great monarchs of Mesopotamia are portrayed as doing, or it could presuppose rather that he simply commissioned a group of envoys to do so. For the latter interpretation, a comparable expedition is attributed more explicitly to Solomon in 1 Kgs 5:28: *wayyišlāḥēm lĕbānônâ*, "and he sent to Lebanon…" (perhaps with an enclitic *mem* apparently on the verb in view of the direct object that follows). However, the fact that West Semitic building narratives often depict a craftsman who is put in charge of the construction certainly raises the possibility that the overseer is expected to gather the materials. Thus Kothar, who is the subject of the last active verbs before this passage (lines 14–15), cannot be ruled out as the subject here.

Line 18 (repeated in line 20) provides another case in which the conjunction *w-* is used to emphasize a noun: *y[t]lk llbbn w'ṣh*. Our translation above renders the line rather conventionally: "he [se]nds to Lebanon for its trees." However, this translation does not fully reflect the intent of the *w-*. As discussed above in the commentary on 1.4 V 45 (p. 576), the particle in this context is not used to coordinate Lebanon and its wood, but rather to emphasize the latter: "to Lebanon, in particular its wood" (see the important article of Steiner 2000). It is not clear

whether the nouns, *ṣ//'arz*, are meant to be understood as singular ("wood"//"cedar") or plural ("trees"//"cedars"), or perhaps even as alternating singular and plural nouns ("wood"//"cedars"). With the pronominal suffixes, the singular and plural forms are indistinguishable. The plural form is used in other poetic texts. For example, Ps 29:5 refers to the "cedars of Lebanon." The related phrase, *mibḥar 'ărāzêkā*, "your choice cedars" in Jer 22:7 (see also 2 Kgs 19:23; Isa 37:24; noted in *BOS* 2.135 n. 86) shows a plural *'rz*, but a singular *mbḥr*. For *ṣ*, the situation is even less clear. The plural is adopted here, albeit tentatively.

Perhaps the greatest difficulty in lines 18–21 concerns the question of how to reconstruct the beginning of line 20. The particle *hn* has been read (so CAT; Dietrich and Loretz 1997:1165; Gordon 1977:98; de Moor 1987:58; *MLC* 205; *MLR* 87; Wyatt 1998:106; for this particle, see *UG* 736; Sadka 2001). As indicated in the Textual Notes above, this reading is possible, but not certain. Thus reconstructed as *h[n l]bnn*, the line would be understood as a simple nominative clause, with the place-names as adverbial accusatives: "Behold/Lo, to Lebanon for its trees,//to Siryan (for) its choicest cedars." Another approach taken has been to see some sort of verb here. Ginsberg (*KU* 35) raised the possibility of reconstructing *h[lk l]bnn*, "they/he/one went to Lebanon" (though the reconstruction required would be *h[lk ll]bnn* or the like). Held (1962:288) supported this reading on the analogy of other cases of the appearance of **yqtl*//**qtl* forms of the same verb in Ugaritic poetry. However, there is not enough room in the lacuna for all those letters. Cassuto (*BOS* 2.135 n. 86) suggested *h[pl]*, offering Isa 10:34 as a possible comparison (*wĕhallĕbānôn bĕ'addîr yippôl*, citing RSV, "and Lebanon with its majestic trees will fall"). Also assuming a verb is Pardee's cautious proposal, "[They X] Lebanon…" (1997a:261). In the end, the interpretation of the lacuna remains inconclusive.

Lines 22–35 constitute the only actual descriptive passage concerning the construction of the palace. But it is not an ordinary construction. The palace is set aflame and burns for seven days. At the end of the process, it is complete, now overlaid with silver and constructed of bricks of gold (lines 34–35). There is a great deal of uncertainty as to how this passage should be understood. The dominant imagery of this section is the fire in a palace, with the use of the verb **'kl*, "to eat, consume," usually found in contexts of destruction, both in BH (see Exod 3:2; Ezek 15:4) and in Akkadian (see *CAD I/J*:230). The Akkadian usage is found in a report of a fiery conflagration at Ugarit (EA 151:55–57): É LUGAL ^{URU}*Ugarit*^{ki} *ikul išātum*, "fire has consumed

the royal palace of Ugarit" (*CAD I/J*:230b; Moran 1992:238–39, esp. n. 4). A Mari text (*ARM X* 150:9–11; Marzal 1976:23) cites a proverb with this idiom: "Now (these) men are like what the proverb (says): 'The fire consumes (*i-ša-tum i-ka-al-ma*) the reed and its companions pay attention.'" Some of the early translators interpreted this passage as describing the destruction of a previous palace or temple in preparation for the new building (e.g., Albright 1934:127; cf. also Cassuto, *BOS* 2.135). But the context shows this to be impossible. The fire is clearly a process for fabricating the finished palace. Cassuto (*BOS* 2.189) thought of the work of the fire as smelting. Bernhardt suggested the picture of a smelting furnace combined with a kiln for firing bricks (Bernhardt in Beyerlin 1975:229 n. 63). Pardee (1997a:261 n. 174) characterizes the scene as "a giant casting process." Something along these lines seems the most likely interpretation of the fire. (For further discussion of the possible background for this picture, see Excursus II below.) It is the means that Kothar uses for casting the silver and gold into the materials for constructing the palace (cf. also Gordon 1977:98; de Moor 1987:59 n. 262).[11] Some scholars have argued that the burning scene is a mythologizing of a regular ritual at Ugarit (e.g., de Moor 1987:59 n. 262; Robertson 1982:336–38). While such a connection with ritual cannot be ruled out, there is also very little evidence for it. No such ritual is attested in the Ugaritic texts, and none of the proposed parallel fire ceremonies from other cultures (see most significantly Robertson 1982) shows any relationship to the type of context found in our passage. Most fire rituals involve cleansing from sin, rather than any aspect of palace or temple construction. Other scholars have suggested that the appearance of the completed palace at the end of the seven days of burning is a quasi-magical occurrence, similar to the spontaneous appearance of the golden calf out of the molten gold in Exod 32:24 (e.g., *BOS* 2.136; Gordon 1977:98), but this too seems an unlikely interpretation. The presence of Kothar as the builder of the temple, while unexpressed directly in this passage, can hardly be doubted. We most likely have here a description of Kothar's brilliant metallurgical work in forming a spectacular palace of silver overlay and gold brick.

---

[11] Gold bricks are mentioned in the Amarna Letters (*libit ḫurāṣe*), although they are certainly not the type of bricks used for construction as we have in our passage (e.g., EA 19:38). However, silver-plated bricking (e.g., *agurru*, kiln-fired brick, plated with *zaḫalū*-silver, in *CAD A/1*:162a, #1d) is attested.

The "fire" (*'išt*)//"flame" (*nbl'at*)[12] burns for a week (lines 24–33). The seven-day unit is, of course, a well-known one in ancient Near Eastern literature. It occurs very commonly in Ugaritic literature itself, for example, in 1.14 III 2–5, 10–16 (cf. IV 31–48); V 3–8; 1.17 I 5–16; II 32–40; 1.22 I 21–26; cf. Loewenstamm 1965 = *CS* 192–209; D. Freedman 1970–71:65–81), to convey either a complete or appropriate amount of time (on the significance of the number seven, see Kapelrud 1968; Pope, 1962:294–95; for examples in Mesopotamian literature, see Hallo 1996:128–29). In these instances (where the text is clearly preserved, cf. 1.22 I 21–26), the seventh day marks a shift in the activity in the scenes. Marching on days one through six gives way to arriving in 1.14 III 2–5, 10–16. King Pabil sleeps no more on the seventh day in 1.14 V 3–8. In 1.17 I 5–16, on the seventh day Baal draws near to Dan'il after six days of lamentation. In 1.17 II 32–40, the Kotharat depart on the seventh day after six days of feasting.

Biblical scenes have been compared as well. Hurowitz (1992:227) would further note the seven years taken for the building of Solomon's temple (1 Kgs 6:38). This case differs in using years rather than days, and it is evident that the symbolic use of the number seven does not mark a shift in activity in the seventh year. The case of Genesis 1 seems more proximate to the Ugaritic examples. L. R. Fisher (1963:40–41) compared the seven-day sequence here with the seven days of creation in Genesis 1:

> Now it is extremely interesting that it took seven days to build the house of Baal 'in the midst of the heights of Sapân'. Baal's house is also of cosmic proportions, and from it he controls the Heavens. If these temples were constructed in terms of "seven" it is really no wonder that the creation poem of Gen. i is inserted into a seven-day framework.

By noting the parallel to the first chapter of Genesis, Fisher means to suggest that it illuminates the construction of Baal's house as a cosmic creation that gives structure and meaning to the whole of the universe. Like Baal's house, Yahweh's creation issues in a fertile, habitable world previously lacking in conditions favorable to humanity (Fisher 1963, 1965). Baal's house is not, however, an act of creation or cosmogony in the sense in which Fisher, Clifford and other scholars employ the terms

[12] With problematic 'aleph, Ugaritic *nbl'at* is cognate with Akkadian *nablu* and Ethiopic *nabal*, according to Albright 1934:127 n. 132b; Held 1965a:277 n. 211; Leslau 383; MHP. For further proposed cognates, see M. Cohen 1947:187, #460.

(see *UBC* 1.77–87). Baal's palace is not presented as a primordial event of creation like Yahweh's creation. Instead, the narrative concerning Baal's palace in 1.3–1.4 assumes a world already inhabited by people, who stand to benefit from his rains.

Despite these thematic differences, it would indeed appear that Genesis 1 uses the seven-day pattern to mark six days of one activity, in this case divine creation, plus a seventh day with a different activity, namely divine ceasing or rest. For this reason, the variant reading in Gen 2:2 of God completing the work on the "sixth" day rather than the "seventh," as in the MT, is understandable (see LXX, Samaritan Pentateuch and Peshitta); the MT does not maintain what appears to be the older convention. The shift in the activity on the seventh day in the Ugaritic contexts would appear to preclude understanding **klh* in Gen 2:2 as bringing to conclusion the final act of the activity on the seventh day, unless the author of this chapter sought to depart from the traditional convention in narrating the creation story. For this reason, one may propose that LXX and the other versions have the correct reading, as this would comport better with the Ugaritic usages. However, Genesis 1 in using **klh* is introducing a new element into the seven-day pattern, at least by comparison with the Ugaritic cases; it would seem that the root is intended to mark the end of one set of actions from what follows (cf. Exod 39:32, 40:33). Since **klh* does not appear in the Ugaritic cases, the question for Genesis 1 cannot be resolved only by appeal to them.[13] Still, in support of the reading of the versions in Gen 2:2, it is clear that Exod 31:15–17 and 35:2–3 fit better with their understanding rather than that of the MT.

In the Ugaritic cases, ordinals are used throughout this pattern, with the exception of the first day and perhaps the seventh. Ugaritic has no numeral for "first," and line 24 simply uses *ym*, "a day," to denote the first day, as in Gen 1:5 (see *CS* 13–16). There is uncertainty about how to interpret the phrase *b šbʿ ymm* (found also in 1.17 I 15, II 39). Sivan (1997:94) understands *šbʿ* as the ordinal here, with the second *m* of *ymm* being understood as an enclitic (so at an earlier time Loewenstamm, *CS* 16): "On the seventh day." However, Mario Liverani (cited by Loewenstamm, *CS* 194 n. 4a) argued that *šbʿ* here is the cardinal number and that the phrase should be rendered literally as, "in seven days." He pointed out parallels in the Idrimi inscription and in Phoeni-

[13] We wish to thank Avigdor Hurowitz for bringing this issue to our attention.

cian. This rendering has also been accepted in *UG* 348. While leaning toward the understanding of Liverani, we have chosen to translate, "on the seventh day," because that represents standard English usage. One unusual feature of this passage, when compared to other seven-day sequences, is the use of a different verb (*tšt*) in the first line of the passage (line 22) from that (*t'ikl*) used in the following lines (cf. 1.17 I 1–16; II 30–40, where the same verb is used throughout the repetitions over the seven days). The use of *tšt* in line 22 may be due to the strong alliterative effect that it produces in conjunction with the noun, *'išt*, at the beginning of the seven-day sequence (Smith 1985:335).

The burning process concludes on the seventh day (lines 31–33). The verb, *td*, used to describe the conclusion (line 32) is likely from **ndd*, "to leave, depart, go away" (cf. BH *nādad*, " to flee, escape;" see Tropper and Verreet 1988:345–46). However, it could also be derived from **ndy*, "to throw down, leave, abandon," (cf. Akkadian *nadû* and Syriac *ndā* [*LS* 415]; see Paul 1993:255–56). A related usage of this root is found in 1.17 I 3–5 and 13–15, where Dan'il throws down or leaves his cloak for the night. It could also be a passive form from the root **ydy*, also attested at Ugarit in 1.16 VI 10–28 and 1.169.1, 9, which would mean "to be thrown, to be expelled" (see Ginsberg 1973:132–34; Tropper and Verreet 1988:340–43; Fleming 1991:142). The first proposal seems the most likely. A connection with Akkadian *nadû* seems improbable, since Akkadian phrase, *išatam inaddi*, is actually an idiom for "to set on fire, to burn," just the opposite of what the context calls for here in our passage (see Held 1965a:276 n. 19).

The finished palace is described very briefly in lines 34–35. The fire has allowed for the palace to be constructed of gold bricks and silver presumably overlaid upon the cedar wood. The word *rqm*, "thin sheets, plates, overlay," is certainly derived from **rqq*, "to be thin" (cf. Akkadian *raqāqu*, "to become thin," "to thin, flatten," and the adjectival form *raqqaqu*, both used of metal, as noted by MHP; see *CAD R*:167–68) and Leslau 473; note also Akkadian *ruqqu/riqqu*, "hammered metal" in *CAD R*:418; cf. *AHw* 995: "(Metall-)Kessel, Schale," noted first by Virolleaud 1932:150). Ugaritic *lbnt*, "bricks," has long been compared to Akkadian *libittu* and BH *lĕbēnâ* (Albright 1934:127 n. 134; Held 1965a:277 n. 25).

The root **sbb* is used here twice, first in *G*-stem **qtl* form, *sb*, then in the *N*-stem **qtl*. This is in contrast with the previous verbs in the passage, which are all prefix forms. The use of active and passive forms of the same verb in parallel cola is well attested in both Ugaritic and

Biblical Hebrew and is probably intended to indicate the climactic moment of an episode (see Held 1965a; Smith 1991:69; see Introduction, p. 28). Sivan (1997:202, 203) suggests that **sbb* in these lines is acting as a copula for the nouns here, and that one could consider each line of the bicolon to be essentially a non-verbal clause. He points out a similar example of what he identifies as a "dynamic copula" in 1.103+1.145:52, where the verb *thpk*, "to turn into" comes to mean, "to become." Such a reading seems unnecessary for our passage, but cannot be ruled out.

The construction episode is completed with a statement of Baal's satisfaction in lines 35–38. The god first rejoices (lines 35b–36a) and proclaims the house completed. The **qtl* indicative verbal forms, *šmḫ* and *bnt*, mark the conclusion of the action, just as in lines 34–35 (see Moran 2003:30 n. 72; cf. 1 Kgs 6:2). Baal's speech uses a well-attested formula. Solomon makes a similar statement at the dedication of Yahweh's temple in 1 Kgs 8:20: "I have built the house for the name of Yahweh, the God of Israel" (see also 1 Kgs 8:13). It should not be a surprise that in these statements the king takes credit for the work of building the temple. It is, of course, a regular feature of royal discourse. Similar statements are also well attested in Mesopotamian tradition, both in mythological and historiographic contexts. In Inanna and Ebiḫ (line 171; Limet 1971:18, 21, 27), Inanna says, "I have built a palace." In the Gudea Cylinder B II 21–22, Gudea states: "Ningirsu, I built you Your House, may you enter it in joy" (Edzard 1997:90). A similar statement is preserved in the Bar-rakab inscription from the Iron Age, KAI 216:14–16 (Hurowitz 1992:103; *ANET* 655):

wby(t).ṯb.lysh.l'bhy.mlky.šm'l	And my fathers, the kings of Sam'al, had no good house.
h'.byt.klmw.lhm	They had the house of Kilamuwa;
ph'.byt.stw' lhm	So it was a winter house for them,
wh'.byt.kys'.	And it was a summer-house (for them).
w'nh.bnyt.byt'.znh	But as for me, I have built this house.

It is at this point that Baal can rejoice. The symbol of his power has been completed. Despite the laconic style of the depiction of the palace, the overall image presented in the narrative is clear. It is a massive building of divine proportions: "A thousand fields may the house cover"//"A myriad hectares, the palace" (1.4 V 56–57). The walls are made of golden bricks, the roof of cedars, apparently overlaid with silver. The purest lapis lazuli has been used in its décor. While Anat refers to the palace as "a house like your brothers', a court like your kin's"

in 1.4 V 27–29, it seems likely that this palace is perceived to be considerably greater than those of the other gods. Its magnificence makes Baal's dominion obvious to the deities who enter it. When Baal sends a message to Mot in column VIII, certainly to demand his obeisance, he opens the message by referring directly to the palace.

While theologically there is certainly a significant relationship between the heavenly palace and the earthly temple of the god in Ugarit, the two buildings themselves are by no means actually comparable in size or splendor. The lack of any details about the structure of the heavenly palace keeps us from being able to say whether or not the people of Ugarit simply saw it as a larger version of Baal's temple in their city. The theological identification of the two places may in fact have had little to do with the physical form of the temple at Ugarit. A brief examination of the Ugaritic ritual texts and the archaeological remains at Ugarit may be helpful in this discussion. The ritual texts recovered from Ugarit speak primarily of temples of El (*bt ʾil*) and of Baal (*bt bʿl ʾugrt*). The temple of El is an important locus for offerings in CAT 1.41.38//1.87.42 (cf. Pardee 2002:56–65), and in 1.119 the offerings of the ritual alternate in their locations between the temple of El (lines 6, 14) and the temple of Baal (lines 3, 9, and probably 22'). The temple of "Baal of Ugarit" is also mentioned in 1.109.11, the closely related 1.130.11, and probably 1.46.16, as the locus of sacrifices to numerous deities, including ʾIlʾibu, El, Anat, Pidray, Yariḫ, Dagan, and Rashap (see Pardee 2002:26–33). CAT 1.105.6' also mentions Baal's temple. A few other temples are mentioned in the texts: the temple of ʾIlatu, "the goddess," perhaps Athirat, in 1.41.24//1.87.26, the temple of the Lady of the High Houses, *bt bʿlt btm rmm* in 1.41.37//1.87.40–41 (see Pardee 2002:60–61, 64), and the house of the star gods, *bt ʾilm kbkbm*, in 1.43.2–3. The preserved texts certainly do not provide a comprehensive list of temples at Ugarit, but there seems little doubt that the temples of Baal and El were the most important, since the king was regularly involved in the rituals occurring there. In addition, the preserved texts provide references to large numbers of offerings to these two gods: sixty offerings made to El, and 419 to Baal (under the names *bʿl, bʿlm, bʿl ʾugrt* and *bʿl ṣpn* (see Pardee 2000:963, 970–73).[14]

[14] The only other individual deity whose offerings approach these numbers is the mysterious *ʾilʾib*, who received 126 offerings in the preserved texts (Pardee 2000:965–66).

Two major temples were found on the acropolis during excavations in the 1930s. They have generally been attributed to Baal and Dagan, based on inscriptional and iconographic materials found in and near them (Busink 1970:478–80; Yon 1984:43, 1992b:702–3). The temple on the northwest part of the acropolis has been linked to Baal. Two stelae, the famous "Baal with his thunderbolt" stela and an Egyptian stela dedicated to "Baal of Sapan," were found in the vicinity.[15] The temple compound was surrounded by a temenos wall that enclosed a courtyard on the south with a large, well-constructed altar (see the detailed description of the temple in Yon 2006). The temple itself was composed of two rooms and was situated on a podium. The first room (the vestibule) opened onto the courtyard and was entered via a staircase from the courtyard. Its interior dimensions were almost square. The back room (the cella) was larger than the vestibule and was a broad and rectangular chamber. In the east side of the room were the remains of a substantial staircase that evidently led to the roof of the temple, with traces along the north and west walls that indicate that the staircase extended around those parts of the room too. Yon (1992b:702–3) believes that above the back room was a tower that rose at least sixteen to twenty meters high. She suggests that rituals such as those described in texts like the Kirta Epic (1.14 II 21–22) as taking place "at the top of the tower," would have been performed here (cf. 1.41.50 in Pardee 2002:60, 65, where the king performs offerings "on the roof"). She also suggests that the tower acted as a landmark and perhaps a lighthouse for sailors bringing their ships into port. Seventeen stone anchors were found in the temple compound, likely votive offerings to the god by sailors for a safe trip on the sea (Frost 1991:356). It would be natural for Baal, as conqueror of Yamm, to be thanked by sailors for their successful journeys across the Mediterranean.

The second temple on the acropolis is similar in size to the temple of Baal. Unlike the latter, virtually none of its superstructure has been preserved, only its thick foundation walls, which give it a different

[15] The Egyptian stela, erected by a royal scribe named Mami, was found broken inside the temple complex (Schaeffer 1931:10; 1939:39–41). The Baal stela was found along the western slope of the acropolis, apparently in dump from the temple area (Yon 1984:45; cf. Schaeffer 1933:122–24; 1949:87–89, 121–30), placed there in the early twentieth century when a Turkish governor dug up part of the temple in search of treasure (cf. Schaeffer 1931:9–10). His interests apparently did not include stone inscriptions and reliefs. There is little doubt that the Baal stela came originally from the temple compound.

initial appearance compared to the other temple. Yet its basic form is quite similar. It too is oriented toward the south, with a courtyard, a squarish vestibule and a larger, rectangular cella that also has traces of a staircase. It too probably had a high tower (Yon 1984:45). This temple has traditionally been attributed to Dagan on the basis of the discovery of two stelae (CAT 6.13, 6.14; see Feliu 2003:272–74) in the courtyard that were dedicated to that god (Schaeffer 1935:155–56, pl. XXXI; Yon 1984:45). The presence of these stelae in the temple compound constitutes strong support for identifying the occupant of the temple as Dagan, but unlike the situation for the temple of Baal, here there are arguments against attributing the temple to Dagan. The ritual texts seem to be problematic with regard to Dagan. Although Dagan was certainly given cult at Ugarit (there are forty-one offerings to him listed in the texts; Pardee 2000:975–76; see also Feliu 2003:266–72), there is no reference to a temple of Dagan, a surprising omission if the great temple on the acropolis belonged to him.[16] In addition, Dagan plays no role in any of the mythological texts found at Ugarit, except as the patronym of Baal. In contrast, there are a number of reasons favoring El as the god of this temple (see Niehr 1994). El was clearly a major deity in the Ugaritic cult. His temple, as described above, is mentioned several times, and in 1.119, the rituals alternate between the temple of Baal and the temple of El, which would be particularly appropriate if the temples neighbored each other, as do the acropolis temples. A close proximity of the two temples is also suggested in 1.41.38–43//1.87.42–47, where a set of offerings is given in the house of El (lines 38–40), then the officiant is to "return to the altar of Baal" to make additional offerings. Of less value is the parallel reference to the temples of Baal and El in the Aqhat Epic's list of a son's duties (1.17 I 31–32 and parallels): "To eat his portion in the house of Baal, his share in the house of El." Niehr (1994:424–25) assumes that Ilimalku is the author of the poem and that he is thinking of Ugarit in this passage. This view is far from certain, however, and it would be imprudent to give these lines much weight in the discussion of the temples on the acropolis. The overall evidence, however, suggests that the second great temple belonged to El rather than Dagan. The appearance of the two

[16] The damaged passage in 1.104.13, which reads *bt.dxn*, was read as *bt.d* [*g*]*n* in the original KTU, but this is impossible. The fragmentary wedge to the left of the break is clearly a horizontal. See Pardee 2000:566. CAT has corrected this error.

stelae dedicated to Dagan in the courtyard of the temple of El would not be particularly surprising, since it is clear that not every deity had her or his own temple. The ritual texts show that offerings were made to numerous deities at a single temple (cf. 1.41//1.87; 1.119; 1.105; 1.109; 1.130; 1.46; and texts such as 1.148 that do not mention the location of the sacrifices). The stelae to Dagan then could have been placed in the El temple because there was no individual temple for Dagan at Ugarit.

We can now return to the question of how the people of Ugarit viewed the relationship between the mythological, heavenly palace of Baal and the physical temple of Baal. If, as we have seen, there is good reason to believe that the southeastern temple on the acropolis was dedicated to El, then we can argue that the physical form of the earthly temples had little to do with the imagined form of the heavenly abodes of the gods. Nothing about the temple of El at Ugarit is reflected in the descriptions of El's abode. As we have seen, El is portrayed in the Baal Cycle as living in a tent, rather than a solid palace. The structure of the tent is such that there are seven chambers, the innermost being where El dwells (1.3 V 10–12, 25–27). The temple gives no indication of having a similar structure. The mythological abode of El provides no hint of a tower or of rooftop rituals. It thus seems likely that the Ugaritians did not conceive of the temple on earth as an exact copy of the one in heaven (this is in contrast to the Israelite tabernacle account, where there is a heavenly model for the earthly shrine, Exod 25:9, 40; 26:30; 27:8). The mythological imagery of the heavenly temples/palaces of the Ugaritic gods is in fact a combination of the architecture of both temple and royal palace. On earth the architectural styles of these two building types are very different from one another. In heaven they can merge into one another (see the discussion about the banquet below, pp. 634–36). The earthly temple may not physically resemble the heavenly one, but in religious and ritual language and thought, it can become the latter whenever needed.

One final interpretation of lines 22–35 should be discussed. While we have proposed above that the imagery of the fire in the palace is likely to be related to the image of metallurgy, it is also possible that the poet here is at the same time drawing on the image of baking bricks. The use of fire to create durable brickwork goes back to the third millennium BCE, and the connotation of permanence and strength related to baked bricks may be an additional background to this passage. Discussion of this picture is offered in the following excursus.

Excursus II: Brick-Making in Pre-Industrial Cultures

In ancient Egypt, mud, straw and sand were mixed to make bricks, although the custom of baking bricks did not become common there until the Roman period (so Spencer 1979). The tomb of Rekhire at Thebes contains a scene depicting the process of mixing mud and making rows of bricks by the use of wooden moulds (*ANEP* 115; Spencer 1979:3). Brick was used for several temples in ancient Egypt, notably during the 18th–20th dynasties (for citations, see Spencer 1979:3, 59–82). In modern rural Egypt, bricks consisting of mud mixed with chopped straw and sand and shaped by moulds are stacked into massive squares left to dry or be burned (Spencer 1979:3, 140). In 1984 co-author Smith witnessed a large, square stack of bricks being burned in a rural village south of Cairo.

Brickmaking in early 20th century Iraq and Iran also appears to have maintained the age-old traditions, thus providing insight into the ancient techniques (Delougaz 1933:5–7; Salonen 1972:34–35). Baked bricks were a feature of Mesopotamian practice as early as the third millennium, a considerably earlier period than in Egypt (Delougaz 1933:1–2; Salonen 1972:197; Moorey 1994:304–09; Paulus 1985; see Aurenche 1993:71–85 for early evidence of brick making down to ca. 6000).[17] Mesopotamian bricks were in many cases about 10 cm. thick.[18] The other dimensions varied a great deal, from place to place and period to period; baked bricks, since they were often used for pavements, tended to be square (as were mud bricks in many periods). A common size in Babylonia was 30–35 cm. square.[19]

Aurel Ionica (letter to Smith dated 9/2/1997) observed an example of pre-industrial eastern European brick making in the mid-twentieth century. We are grateful to be able to include the following account, cited here with permission:

> I saw brick kilns during the 1950's and 1960's in the southern part of Romania, a plain along the Danube River where the main source of fuel is made up of remains from harvesting such as straw and corn stalks. Unlike ordinary kilns, a brick kiln is not made of a permanent and

[17] Bricks could also be kiln-fired (see *CAD A/1*:162), although this seems to be less common. For the lack of evidence for kilns, see Moorey 1994:306.

[18] Information here, courtesy of Richard Ellis. On Mesopotamian bricks and brickmaking, see also Sauvage 1998.

[19] For brick-making in ancient Israel, see Kelso 1948:33–34. Many of the references in this paragraph come courtesy of Richard Ellis.

reusable structure that is repeatedly "filled" and "emptied," but rather by stacking bricks on a flat surface. Ideally a brick kiln approximates a cube because this shape has one of the smallest outside surfaces compared to its volume (surpassed only by a sphere) so that the loss of heat through the outside surface is minimal. In reality a kiln looked more like a ziggurat or a truncated pyramid with very steep sides receding inside. Bricks are stacked in layers so that each brick rests on the side which is the longest and narrowest and has the largest surface in vertical position and at a distance of about half an inch from the next brick so that heat can circulate between bricks and be absorbed by them through their largest surfaces. The bricks that form the next layer are placed on top of the previous layer in the same position but at right angles so that the structure is as steady as possible in spite of the empty spaces between bricks. The burning chamber consists of cavities left in the lowest part of the kiln. They look like tunnels with vaulted roofs resembling an inverted V going from one end of the kiln to the other. One end of each burning chamber is sealed and the other is left open and used to feed fuel. For better heat distribution, after some time the burning chamber is fed at the opposite end. Each burning chamber is provided with vents that go up through the roof of the chamber, then horizontally through layers of bricks, then up to the next layers, then horizontally again, and so on, like a serpentine pipe, until it reaches the top of the structure allowing for the smoke to go out. The number of burning chambers depends on the size of the kiln; a mid-size kiln would probably have about four or five. The kiln is coated and sealed on the outside with a thin layer of mud mixed with chaff so that the air and the heat can circulate only inside the kiln. After the kiln is fired and has cooled down, the bricks are removed layer by layer in the reverse order, that is, starting from the top, so that all that is left from the kiln is the initial flat surface.

Firing a brick kiln takes days and that is necessary for two reasons. First, the temperature inside the kiln builds up slowly because a kiln has a huge mass and because bricks are good insulators and therefore absorb and release heat slowly. Consequently the temperature inside the kiln does not depend so much on the power of the fire used but on how long the fire is applied. Usually straw is an ideal fuel because it burns easily and is abundant in agricultural areas where bricks rather than stones are used for building. Secondly, a long burning time is necessary for a sufficient temperature to permeate the whole structure so that even bricks in the remotest parts of the kiln reach the necessary temperature. No matter how long the process may be, however, the temperature will not be the same everywhere. For instance, a brick which is on the outside will be baked only on one side at best so that the opposite side remains dark, while bricks that make the inner walls of the burning chambers may reach the melting point and stick together so that they can no longer be separated. In order to prevent bricks from sticking together, coarse sand is sprinkled over each layer of bricks before starting a new layer above.

> Sand keeps a tiny space between bricks and has a higher melting point; therefore bricks can be easily separated. The hardness of bricks depends not only on the firing temperature, but on how long that temperature is applied as well. Therefore, when the kiln has reached the desirable temperature, the chambers are filled with hard wood, sealed, and left to smolder for weeks until bricks cool down enough to be handled safely. Although bricks are not all of the same hardness, the differences are small and actually only the bricks that are on the outside of a kiln may be discarded. In a building, the bricks that are baked the most are placed at the foundation while those less well backed are placed in the higher parts of the walls as the building progresses. The size of the kiln is decided by the amplitude of the building project and there is virtually no limit as to how large it can be. Although it cannot exceed a certain height (the initially sun dried bricks cannot support too much weight), the base of a kiln can be as large as one wants, and actually the larger the kiln, the more efficient it is. The ones I saw were a little over two meters tall and had a base of about four by four meters.

While this description of modern techniques for firing bricks may not correspond precisely to the ancient practices (see the warning in Moorey 1994:306), the general outlines of the modern practice may correspond broadly to the poetic, evocative picture of our passage, if the poet's intent was to depict the workings of a brick kiln.

Lines 38–59: The Banquet Celebrating Baal's Palace

The completion of the palace calls for a divine celebration that corresponds in other building narratives to dedication ceremonies (lines 38–59). The sequence of events in this passage is a common one for divine banquets: preparations for the feast (lines 38–43); invitation to the participants of the banquet (lines 44–46); and the feast of food and wine (lines 47–55; see Lichtenstein's 1968 discussion of these motifs). Prov 9:1–6 makes use of the same motifs in which the figure of Wisdom prepares her feast of food and wine, and then issues her invitation (Lichtenstein 1968:19–21; on the translation of Prov 9:1, see also Greenfield 1986). For Proverbs 9 the pursuit of Wisdom is likened to participating in a rich feast. CAT 1.15 IV 15–28 contains the same sequence in its description of the banquet prepared by Hurraya. The set of motifs is also found in Mesopotamian texts, including the myth of Nergal and Ereshkigal (MB version, lines 1–6; Foster 2005:509; *ANET* 103–4; cf. Lichtenstein 1968:22–23). In this myth the gods prepare a banquet, then send a message to Ereshkigal to have her messenger come

fetch her portion of the meal. In one of the Hittite myths of Iluyanka (Version 1: A i 14–B i 12 in Hoffner 1998:11–12; *ANET* 125–26), the goddess Inara prepares a lavish feast and issues a personal invitation to the great serpent she intends to kill. He and his offspring arrive and eat and drink.

The preparations are described in three bicola, the first one (lines 38b–40a) providing a general introduction and the other two (lines 40b–43) describing the slaughter of the animals for the meal. The first bicolon uses the pairing of "Baal"//"Hadd" for the subject of the clauses. The latter name actually appears quite rarely in the Baal Cycle (besides here, only 1.1 V 4, 17; 1.2 I 46; 1.4 VII 36, 38; and 1.5 I 23; II 22; IV 7). The key root in this bicolon is **ʿdb*. Nominal and verbal forms from this root appear four times here. The root means, "to prepare, arrange," as a verb and "preparations, arrangements" as a noun. Thus a literal translation of the lines would run as follows: "Preparations in his house Baal prepared, Hadd prepared preparations in his palace." The root can refer to a wide range of preparations. Thus in 1.4 IV 7, 12 it refers to preparing an animal for riding, and in 1.4 V 46 it is used for the arranging of a throne for Kothar. Often the word applies to food preparation (1.14 II 27, IV 9; 1.17 V 16, 22; cf. Tsevat 1978a:26* n. 22; Pardee 1997a:261 n. 176). In 1.4 VIII 14b–20a Baal's messengers are warned to be careful lest Mot "prepare you" (*yʿdbkm*) like a lamb in his mouth (cf. 1.23.63–64); this is exactly the "preparation" that in 1.6 II 22–23 Mot says he made of Baal. According to Tsevat (1978a:26*), the word refers to food offered (**nšʾu*) in 1.23.54: *šʾu ʿdb lšpš rbt wlkbkbm*, "lift up an arrangement (an offering) for Lady Shapshu and the stars" (cf. line 65, *šʾu ʿdb tk mdbr qdš*, "lift up an arrangement for the holy outback/steppe of Qadsh"). The verb **ʿdb* used in the context of El's feasting in 1.114.6–8 has been understood in this way as well (Lewis, *UNP* 194; on this verb, see also Renfroe 1992:21; Dietrich and Loretz 1993; Dietrich and Loretz 2002a:94). Indeed, the preparation of animals for the feast immediately follows these lines.

There has been considerable disagreement on the interpretation of this bicolon in 1.4 VI 38–40. Several scholars understand it as the conclusion to the preceding account of the building of the palace and take the arrangements described here as Baal's furnishing of the palace (Dietrich and Loretz 1997:1166 n. 102; *CML*^{2} 63; de Moor 1987:60; Pardee 1997a:261, esp. n. 176). The context of the food that follows seems to argue against this understanding. The feast is the immediate context, not furnishings. Additionally, lines 35–38, which describe Baal rejoicing, seems to conclude the preceding unit detailing the completion

of the palace. Hence, our bicolon in lines 38–40 does not continue the discussion of the house in the form of furnishings as these commentators would have it. That the preceding unit, in lines 35–38, finishes the section can be shown also from the two other examples of a climactic moment in which the protagonist is said to rejoice (*šmḥ*) and give a speech. In these instances the speech is the conclusion of that part of the story, and a new episode begins directly. Thus in 1.17 II, Dan'il receives word that he will receive a son (lines 1–8). He rejoices (lines 8–12) and gives a speech of gratification at the turn of events (lines 12–23). Directly after the speech the story moves to the next episode, in which he returns to his house/palace and prepares a seven-day feast for the Kotharat (24–40) in language reminiscent of the scene in our passage. In 1.6 III, El has a dream that indicates Baal's return from the dead (lines 4–13). Upon awakening he rejoices (lines 14–17), then gives a speech of satisfaction (lines 18–21). This is followed by a change of narrative direction, as El calls to Anat and sends her to speak to Shapshu (1.6 III 22–IV 5). Thus the parallels point to the speech of satisfaction as the conclusion of the episode. This seems a likely way to interpret the situation in our passage as well. Thus the bicolon of 1.4 VI 38b–40a is best viewed as the beginning of the following episode.

A few scholars find the root *ʿdb* to have a particular cultic sense, and they interpret 38b–40a as a reference to a ritual that Baal undertakes (e.g., Wyatt 1998:106, esp. n. 148; cf. Levine and Tarragon 1993:81–82). Wyatt in particular proposes a reading such as, "The offerings of his house Baal presented; Hadd presented the offerings of his palace." But this too seems problematic. There is only one context (1.23.54, 65) in which the root appears in a fairly clear cultic setting, "lift up an arrangement (*ʿdb*) to the Lady Shapsh /to the holy desert."[20] A supposed usage of the verbal form, *yʿd[b]*, in the Ugaritic ritual text 1.41.10 (CAT p. 78; Levine and de Tarragon 1993:89; Wyatt 1998:106 n. 148) has been shown by Pardee (2000:145–46) to be virtually impossible epigraphically. Pitard, following his own examination of the tablet, concurs with Pardee on this reading.[21] What is clear from the numerous examples of the root described above is that it does not have a specifically cultic

[20] The appearance of the root in 1.114.4, 7 is set in a narrative context much like the one in our passage, a banquet of the gods. It is not used in a cultic context within the narrative.

[21] While CAT reads *yʿd[b.lʿnt]*, it is clear on the tablet that the last letter before the break is not a *d*. With Pardee we would read the letter as a probable *l*. However, it is clear from the tablet that Pardee's reading, *y⌈l⌉* is not complete. There is room for, and there are clear traces of, another letter between *y* and *l*, which may be an *ʿ*.

connotation. In the context of our passage, the use of the root fits the common motif of preparation of food for a banquet. Within the story, the slaughter of the animals is not a sacrificial offering, but a meal for guests. Of course, there is an underlying religious connotation related to the poem as a whole, but in this passage, as elsewhere, that connotation is submerged in the story. In sum, these lines act as an introduction to the banquet, stating that Baal makes preparations for it.

The animals slaughtered for the feast (lines 40–43) fall into two categories: the larger animals (or, in Pardee 1997a:261, "bovids"), here called *ʾalp̲m, t̲rm* and *ʿglm*; and the smaller animals (Pardee's "caprovids"), namely *ṣʾin, ʾil* (= "ram"), *ʾimr* and *llʾim* (Levine 1963:108 n. 19). As Levine notes, *ʾalp̲m* and *ṣʾin* in the first colon serve as general designations for the larger and smaller animals, respectively. The parallel colon, lines 41b–42a, also alternates between large and small animals, this time with more specific terms, *t̲rm* and *ʾil*, "bulls and rams." In the next bicolon, lines 41b–43, the first line refers to large animals (*ʿglm*), while the second names small ones (*ʾimr, llʾim*). In contemporary Hatti, the dividing line between a calf and a grown bull was set at two years of age (The Hittite Laws #57; *ANET* 192). These two bicola occur in virtually identical form in 1.22 I 12–14 and in 1.1 IV 30–32 (a broken passage), indicating that they are formulaic (see the earlier Commentary on these lines in *UBC* 1.154–55; for these animals in offerings at Emar, see Fleming 1992:135). The verbs pose no interpretational problems. The verb *ṭbḫ* means, "to butcher," and occurs quite commonly, but by no means exclusively, in the context of sacrifice. Here that context is submerged in the narrative. The parallel verb, *šql*, has no attested usages in a cultic sense in the preserved Ugaritic texts (*šql* < **qyl* in the *C*-stem; see 1.1 IV 30, 1.22 I 12; cf. 1.16 VI 32, 44; 1.17 VI 44; 1.23.10; see *UBC* 1.154).

Once the preparations have been made, Baal invites his "brothers"//"kinfolk" (lines 44–46), the seventy children of Athirat, as they are also called, to the banquet. There can be no doubt that the three parallel objects in this tricolon refer to the same group. This is clear from Anat's variant on the opening lines of Baal's lament in 1.4 V 27–29, where she substitutes "brothers"//"kinfolk" in the lines where the lament had "the gods"//"the children of Athirat." That the term *bn* in the phrase *bn ʾat̲rt* should be rendered "children" rather than "sons" is clear from the fact that they are described as both males and females in lines 47–54. It would seem that technically in view of the absolute plural (and not construct) form of *šbʿm* in line 46, the nouns

following the verb stand in apposition ("the seventy, the children of Athirat") rather than a long construct phrase ("the seventy children of Athirat"). For the sake of convenience or concision in English, one might still render the phrase along the lines of the second translation (e.g., Smith, *UNP* 134), but such a translation does not convey the sense that in this context, as "the seventy" stands as a demarcated group. Seventy is a conventional number for a generally large, but well-defined group (see Judg 9:5; 2 Kgs 10:1, both of which refer to seventy sons; cf. also Exod 1:5; 24:9; KAI 215:3; see Montgomery 1933:120; Pope 1962:295; Fensham 1977). In the narrative of Elkunirsa, a West Semitic myth written in Hittite, Ashertu's children number 77//88 (Hoffner 1998:91), the same number of Baal's divine rivals in 1.12 II 48–49. At Emar the traditional number of gods in the pantheon is seventy (Emar 373.37–38; Fleming 1992:73, 242; 2000b:57–59, 238–39; see *UBC* 1.92, esp. n. 180). This corresponds quite closely to the idea in our passage that the seventy children of Athirat represent the primary pantheon at Ugarit. The Tel Dan inscription refers to "seventy kings" defeated by the Aramaean king (Biran and Naveh 1995:12–13, 16; Parker 1997:46, 58). The usage of seventy in this manner enjoyed a long history; it occurs a number of times in Josephus's *Wars of the Jews* (e.g., *BJ* II 482, 570; IV 336, 341; *Vita* 79). The number of gods perhaps was transmuted in the later Jewish notion of the seventy angels, one for each of the seventy nations (1 Enoch 89:59, 90:22–25; see further *TO* 1.214 n. k; J. Day 1993:183–84). From these cases, it may be deduced that groups of seventy commonly represented royal polities, both divine and human, sometimes still subject to a higher level of authority, often in the form of a king, and sometimes not. In the case of the seventy children of Athirat, the group serves as a general designation for the divine family, virtually the totality of the great gods, but under El and Athirat. The relationship between Baal and the seventy involves no small amount of friction, as Baal is an outsider to this collective (see Introduction, pp. 47–49). One might note that in Judg 9:5 and KAI 215:3, the number of seventy kin plays a role in a dynastic conflict. In these cases, the number expresses the entirety of a family line that may be threatened with extinction, precisely the issue raised at one point in the Baal Cycle. When Athirat first sees Baal and Anat coming to her in 1.4 II 21–26, her reaction is one of fear and her words express her concern over whether Baal might murder her children. The presence of the divine family at Baal's feast is a major event, as it implies their general acceptance of his kingship. This feast follows a long path to

kingship for Baal, beginning with his victory over Yamm, and developing through Anat's, then Athirat's proclamation of his kingship, to El's eventual acceptance of Baal (with his decree allowing the building of Baal's palace), the construction of the palace, and finally the culmination in the divine feast within the palace for the entire pantheon. Now all of heaven recognizes Baal's dominion.

Lines 47–54 describe the feast. These lines pose substantial problems for interpreters. The subject is evidently Baal, as the verb **p(w)q* in the *C*-stem, "to provide," is transitive (for the root, see above 1.4 III 41 on p. 483); here Baal is the consummate host. The objects in lines 47–54 include "the gods" (*'ilm*)//"the goddesses" (*'ilht*). The main difficulty involves the syntactical understanding of the various nouns for animals, furniture and jars. Numerous scholars, including Albright (1934:128), Ginsberg (*KU* 37; *ANET* 134), Gaster (*Thespis* 191–92), Gibson (*CML*[2] 63 n. 4), Gordon (1977:99), Jirku (50), del Olmo Lete (*MLC* 206–7), Xella (1982:117–18), Dietrich and Loretz (1997:1167), Pope (MHP), and Wyatt (1998: 107) have viewed these nouns as modifiers of the deities at the feast and rendered them as "ram-gods, ewe-goddesses, ox-gods, cow-goddesses, throne-gods, jar-gods" and the like. This creates the question of what Baal provided to these deities. The answer for most of these commentators was wine (*yn*), read or reconstructed at the end of each of the lines 47–54. Montgomery (1933:120–21), followed by Albright (1934:128 n. 139), proposed reading *ym* throughout instead; for them, the repetition signaled an eight-day feast comparable to the Feast of Sukkot (Tabernacles). This understanding, however, is ruled out by the clear reading of *yn* at the end of line 53. The resulting picture of such animal-deities feted at Baal's house hardly inspires confidence. The seventy children of Athirat constitute the high pantheon, not minor deities such as this interpretation would suppose. To suggest that the main narrative of this important feast would focus on Baal's serving these deities, while the seventy are simply forgotten strains credulity. In addition, the notion that there are multiple "ram-deities," etc. (lines 47–50), or "throne-deities" (lines 51–52), or "jar-deities" (lines 53–54) at Ugarit is a view without any support elsewhere in the Ugaritic texts (as noted by Pardee 1997a:262 n. 178).[22]

[22] The closest parallel to such deities would be the gods Uṯhatu, "Censer" and Kinnāru, "Lyre," who appear in the god lists 1.47:31–32; 1.118:30–31, 1.148:9; and the Akkadian RS 20.024:30–31 and RS 92.2004:36–37 (Pardee 2002:14–19). However, these are perceived as individual deities with proper names. There is no evidence of multiple "lyre-gods" or "censer-gods." See also Pardee 2000:310–311.

It is much more syntactically and contextually plausible to see the animals, furniture and jars as direct objects of the verb and therefore as the elements of the banquet provided to the gods and goddesses (so *TO* 1.214; *BOS* 2.137; Coogan 1978: 104; *CML*[1] 101; *CML*[2] 63; *MLR* 88; Pardee 1997a:262). This fits the context much better. Yet a number of these scholars who have rejected the idea of the "ram-gods," etc., still argue that the word *yn* should be read at the end of each line. They understand the deities as being provided with wine alongside each item mentioned in the lines, thus, "He provided the gods with rams (and) wine" and so on (e.g., *CML*[1] 101; *CML*[2] 63–64; *MLR* 88; Pardee 1997a:262). As evidence they point to the appearance of *yn* at the end of lines 47 and 53, as well as *y* at the broken ends of lines 49 and 51. Certainly *špq* (cf. BH *hēpîq//ntn* in Ps 140:9, as well as Phoenician **pwq*; see Greenfield 1984a:243; *DNSWI* 2.903; Renfroe 1992:138; *DUL* 677) could govern two objects, but it is quite peculiar that there is no coordinating *w-* between any of the animal, furniture and jar nouns and the proposed occurrences of *yn*. This represents a significant impediment to the theory.

The difficulty with this view is further evident when we examine line 53, the only certain appearance of the word *yn*, "wine," in the passage. Here the line reads quite naturally, *špq ʾilm rḥbt yn*, "He provided the gods with jars of wine." In this sentence, *yn* is in construct with *rḥbt* and is free from any grammatical problems (for *rḥbt* as a "broad" container of liquid, see also 1.6 I 66, 1.15 IV 4–5, 15; see further *UT* 19.2317; *DUL* 737). This is quite different from the proposed syntax in lines 47–52. We would argue first that there is no reason to reconstruct *[yn]* at all in lines 48, 50 and 52. None of these contexts provide the slightest reason for adding the word to the sentence (cf. Wyatt 1998:107, who only restores *y[n]* in lines 47, 49, 51). More importantly, examination of the tablet itself argues against such reconstructions on these lines (see Images 72–73). On lines 48 and 50 the *t*'s of both *ḫprt* and *ʾarḫt* are broken off on the right. Once the space for the rest of each *t* is taken into consideration, there is very little space to add a word divider and the letters *yn* on either line. Even more telling is line 52, where the word *ksʾat* ends well before the break. It is not followed by a word divider, and there is unused space easily large enough for most of the proposed *y* before the tablet breaks off. There can be little doubt that *ksʾat* ended line 52. This clear case casts serious doubt on the reconstructions of lines 48 and 50. In lines 47, 49, and 51, a reconstruction of *y[n]*, while epigraphically possible, remains syntactically and grammatically suspect.

An alternative proposal obviates several, though not all, of these difficulties. Cassuto (*BOS* 2.137–38) offered a solution many years ago, but apart from a handful of interpreters, it has been left unconsidered in the secondary literature (*TO* 1.214; *UBC* 1.50; Pardee 1997a:262 n. 178). Cassuto suggested that in lines 47–52, *yn* should not be read at all. He argued that only animals (lines 47–50) and furniture (lines 51–52) are provided to the deities in these lines, while wine is served in lines 53–54. Cassuto rejected the reconstruction of *y[n]* at the ends of lines 47, 49, and 51. Instead, in Cassuto's view, the *y* at the end of each line represents the first letter of a **yqtl* form of *špq*, alternating with the **qtl* form of the same root in each bicolon (for this stylistic feature of Ugaritic poetry, see *BOS* 2.128 n. 56, 149–50; Held 1962). With this interpretation, the six instances of reconstructed wine in lines 47–52 (*yn*) disappear. There is wine at the feast, mentioned in line 53, after the presentation of the food, as is common in the banquet *topos* (Lichtenstein 1968:24–28).

The celebration requires large quantities of wine for the seventy deities in attendance. The scene compares nicely with 1.15 IV–V, which depicts a banquet that Kirta holds for his seventy nobles, who likewise consume meat and wine, the latter of which is also characterized as *rḫbt yn*. Like Ginsberg (*KU* 37), Cassuto reconstructed *dkr[t yn]* in the following line 54, but *yn* is unnecessary here, and circumstances of the tablet argue against it. There is certainly room for a *t* on the line, but traces of it should be visible if it were there. The same is true of the proposed *yn* since the right end of the line is fairly well preserved, but no traces of writing exist. Thus line 54 ends with the word *dkr*, and the fact that the vessel was filled with wine is understood rather than stated. Overall Cassuto's approach not only avoids the multiple reconstructions of *y[n]/[yn]*. It also produces a verbal syntax well attested for Ugaritic poetry (**qtl//*yqtl* of the same root). As an additional major advantage, Cassuto's interpretation generally fits the epigraphic data better (his interpretation was adopted by *TO* 1.214, n. l; Coogan 1978:104; Smith *UNP* 134–35).

There remain issues concerning Cassuto's proposal that require discussion. The first is the likelihood that line 47 reads *yn[* at the end (see the Textual Notes above). There can be little doubt that on this line there is another word following *krm*, so that here we cannot accept Cassuto's interpretation. However, we do not need to assume that the word here is simply *yn*, "wine." There is room between the break and the margin for two, perhaps three squeezed letters. (For a case of

letter-squeezing at the end of a line elsewhere, see *-h* on *qdqdh* at the end of 1.4 VII 4. This example is particularly interesting, as the scribe did not calculate until he reached the final *-h* that he would have to squeeze in this letter; the other letters are not squeezed in.) This leaves open the possibility of a word here that is in some way related to *krm*. Because the parallel word in the second line of the bicolon (line 48) is *ḫprt*, "baby lamb" (cf. the Akkadian cognate, *ḫurāpu*, "spring lamb/kid," *CAD Ḫ*:245), one might propose a reading of *yn[qm]*, "sucklings." Thus we could read: "He provides the gods with suckling rams,/provides the goddesses with baby lambs." This is, however, a highly speculative reading without parallel in the Ugaritic corpus. It also relies on the supposition that these letters were all crammed into the lacuna at the end of the line, which cannot be demonstrated. Whether or not the word here is *yn[qm]*, the major point to be made is that "wine," which is awkward in the context of this line (and in lines 48–52), is not the only possibility here.

The second issue to consider is whether it can plausibly be argued that Ilimalku might have placed the prefix *y-* at the end of one line and the rest of the verb on the next. Did Ilimalku manipulate the ends of lines so as to create series of identical beginnings of lines? While he did not do so consistently, there are, in fact, examples where he leaves uninscribed the ends of lines in order to begin the following line with the same word that began the previous one. For example, in 1.4 VIII 2–4 each line begins with the word *ʿm*. Examination of Image 81 shows that at the end of both lines 2 and 3 there was ample room to write the word *ʿm*. Clearly here Ilimalku has chosen to leave those spaces blank specifically to start each line with the same word. A second clear example of this from 1.4 is IV 52–55 (Image 49), where each line begins with the noun *mṯb*. Here too there was ample room on lines 52–54 to write the word *mṯb* at the end of the line, but Ilimalku evidently wanted to begin each line with the word. This is most obvious on line 54, where virtually the last third of the space for the line is left unused. Lines 51–54 of column V are certainly another example of this scribal feature, although the ends of the lines are broken (cf. 1.15 III 7–12, where a similar situation obtains). These examples clearly show that Ilimalku could and did vary the ends of lines in order to create sets that began with the same word. We do not, however, have a parallel to the proposed idea that he actually split words in order to do this. But there are examples where he splits verbs in this way, including 1.17 II 30–31: *wy/ššq*; and 1.17 V 12–13: *yš/rbʿ* (*C*-stem, thus *yš-* is prefix).

One can also find examples of verbs being divided within their roots, e.g., 1.17 II 34–35: *yšl/ḥm*. This evidence shows that there is nothing implausible about suggesting, as Cassuto did, that Ilimalku intentionally divided the lines of this section so as to begin each with the same sequence, *špq*. The fact that the *y* in lines 49 and 51 is not directly at the right margin does not exclude the possibility that they are the prefix of the following verb. In taking this modified version of Cassuto's interpretation, we now propose the following schema: the bicola in lines 47–48 and 53–54 make use of the **qtl* forms of *špq* in both lines of each bicolon. They act as frames for the two interior bicola, lines 49–50 and 51–52, which alternate **qtl*//**yqtl* forms. The grammatical and logical problems of the supposed repetition of *yn* disappear, and the standard formulaic pattern of the passage is visible. While this view is not free of uncertainties, it seems to represent the best of the options.

The items for the feast mentioned in lines 47–54 are all typical of this kind of scene. The customary food of the banquet is meat, though the variety described here is exceptionally, in fact uniquely, large. When one combines the animals mentioned in lines 40–43 with those of lines 47–50, one finds ten different terms. This is fitting for the importance of the banquet and its members within the narrative. Although two of the terms in lines 47–53 are unique to this passage (*ḫprt* and *dkr*), there is no controversy about their meanings. The serving of food and drink frames the enthronement of the guests. The somewhat unexpected sequence of food, seats and wine is apparently not problematic in Ugaritic storytelling, as the serving of food precedes the setting up of a throne for Kothar as well in 1.4 V 45–48. The language of lines 56–59 closely matches 1.4 III 40–44 (see the Commentary above), and in both passages these lines seem to close the scene of feasting.

The portrayal of this magnificent feast is not entirely the stuff of fantasy. Near Eastern texts provide indications of feasts in the real world perhaps as spectacular (though from later periods). In the year 879, the completion of Ashurnasirpal II's palace in Calaḫ occasioned a celebration whose menu included 1200 oxen, 14,000 sheep, 1,000 cattle, 1,000 lambs, 500 deer, 500 gazelles, 34,000 fowl, 10,000 fish, and 10,000 eggs as well as milk, butter, vegetables, nuts, grain and cakes of various kinds and a guest list of 69,574 (see Wiseman 1952:31–32; Barnett 1981:11). The biblical account of the celebration in honor of the completed temple in Jerusalem states that Solomon sacrificed 22,000 oxen and 120,000 sheep during the ceremony (1 Kgs 8:63).

These examples indicate the importance of such celebrations in both the political and religious spheres. These texts also hint at a meshing of the images of both palace and temple in our narrative. For Baal, the building of his palace and the celebration of its completion with the other gods is very much a political event, along the lines of Ashurnasirpal's feast. At the same time, its foundational meaning is certainly religious, in that ultimately the palace is understood as the conduit through which the rains come to the earth. The imagery of the banquet also seems to merge the practices of the palace and the temple. Banquet halls are attested in Late Bronze Age palaces, including the royal palace at Ugarit. The probable banquet hall in the palace of Ugarit ("Court VI") was a large roofed room quite impressive in size and had a raised section, upon which the king and his closest associates presumably dined, above the level of the other banqueters (see the palace description in Yon 2006:38–43). Such a hall might be the implied setting for the banquet in our passage. The temples at Ugarit do not have rooms that can be identified as banquet halls, but it seems probable that feasts in which certain citizens of Ugarit ate and drank in the presence of the gods were held in the courtyard, or perhaps in adjunct buildings.

Such banquets are attested at Emar, in the ritual for the installation of the NIN.DINGIR-priestess of the Storm God. In Emar 369:11–13, an ox and six sheep are sacrificed before ^{d}IM (= Baal?). Part of the food is offered to "the gods," while the rest is given to a group of officials, who "will eat and drink at the temple of ^{d}IM" (Fleming 1992:12, 50, 110). A separate feast appears to be set up "at the gate of the temple of ^{d}IM, in the house of the NIN-DINGIR-priestess," probably an adjunct room, rather than a full, independent house (lines 15–19; see Fleming 1992:111–12). One might compare the banquet of lines 11–13 to our passage, in that it can be understood as a banquet presided over by ^{d}IM (Baal), who welcomes the gods (and humans) into his house by providing them (through his human servants) with a fine meal (see Fleming 1992: 156–57). In some ways, however, it seems that our banquet scene might be based somewhat more heavily on a royal palace model, rather than on the imagery of a temple dedication. Unlike the accounts of temple dedications, where the god is portrayed as entering the temple for the first time, the celebration here has Baal already present in the palace and preparing for his guests. This is more in line with life in the royal palace, where the king plays host to his guests, rather than arriving to

be honored. The poet uses the motif of the temple dedication later in 1.4 VII 25–42, as Baal makes his great theophany and is enthroned in the palace (line 42).

As already mentioned, the status of the guests reflects upon the status of the host. In turn, the lavishness of the banquet reflects both the honor in which the guests are held and in turn the honor in which the host is perceived. The spectacular meal, the grand thrones and the free-flowing wine may be considered gifts of honor for the guests, comparable in many ways to the gifts Baal and Anat brought to Athirat in 1.4 I–III. The acceptance of these gifts by the pantheon of the gods commits them to recognize Baal in his new status as leader of the divine council (cf. the modern analogies in Grantham 1995). Although he was proclaimed king by a few gods in 1.2 IV, he does not actually become fully treated as king until now. The theme of recognized kingship in the context of a banquet may allow us to recognize in this passage the earliest prototype in West Semitic literature of what will eventually develop into the concept of the Messianic Banquet in later Jewish and Christian tradition (cf. *UBC* 1.xxvi–xxvii).

[About 7 lines are missing.]

Textual Notes

Line 1.]ʾi̊q̊ṅʾi̊[The first /ʾi/ is identifiable only by context. The right tip of the lower horizontal is all that remains. The outline of the /q/ is easily visible, although most of the surface is destroyed. The left edge and lower line of the left wedge of the /n/ are visible, as is the lower

line of the right wedge. The second /ʾi/ is represented by much of the upper horizontal, the right tip of a lower one, and the deep interior of the vertical wedge.

CTA (p. 29) suggested that there might be a line above this one, but that seems unlikely. Line 1 runs along the very top of the upper edge of the tablet, parallel to the first lines of the other three columns.

Line 2.]ʾảlʾiyn Only the right wedge of the /ʾa/ is preserved, but the context assures the reading.

bʿl The horizontal wedges of /b/ are preserved, as is part of the right side of the left vertical.

Line 3. k̊ [ ]xk Two small horizontal wedges, one above the other, are all that remains of the letter at the beginning of the line. They indicate that the letter is either /k/ or /r/. The size of the lower wedge is more compatible with a /k/than an /r/ (cf. the /k/ on the other side of the break). The letter cannot be /b/, as proposed by CAT, since the upper wedge is clearly horizontal and is not in the right location to meet the lower horizontal. The /x/to the right of the break is a large horizontal. Since its left side is broken, there are numerous possibilities for this letter: /t/, /'a/, /n/, /k/, /r/.

Line 4. y[There do not appear to be any surviving traces of an /m/ after the initial /y/, as CAT proposed.

qdqdh The /h/ at the end of the line has four wedges, and is very stunted horizontally to fit inside the margin line.

Line 5. ʾil[The /l/ is broken on the right, so that the left wedge, the upper half of the middle wedge, and the upper left corner of the right wedge are all that remain.

]r̊ḥq The /r/ seems probable by context, although the letter is almost completely obliterated. The interior of a right horizontal wedge is discernable, eliminating the other proposed reading, /ṣ/.

Line 7. ʿbr.l[The /b/ has been read as /d/, primarily because of its width. See *CML*² 64 (cf. *MLC* 96). However, there are only two verticals in the letter, along with a vague depression that resembles the upper left corner of a wedge in the middle of the letter, which does not appear to have been fully impressed into the clay. It may have been a false start for the right wedge, but considered too close to the left wedge.

Line 8. t̲b.lpḏ[ ]drm The /d/ before the break is epigraphically uncertain. One vertical and two horizontals are preserved, thus allowing /b/ as a possibility. However, context argues for /d/. No traces of the /p/ to the right of the break survive, although Virolleaud's drawing (CTA fig. 17) suggests that the two right tips of the horizontals were still preserved when the tablet was newly discovered. Unfortunately, the early photo from the 1930s does not show this area to advantage.

Line 9. ʾàḫd The /ʾa/is certain, although only the lower line of the two wedges is preserved.

Line 10. šbʔ The supposed /ʿ/ in /šbʿ/ is problematic. The context urges this reading, but the surviving wedge is in a very odd stance for an /ʿ/, with its vertical right side. It looks more like the right wedge of a /q/ or /ẓ/. Is a scribal error involved here?

Line 11. bʿl.ṁ[The /m/, unnoticed in CTA, appears certain. The lower left corner of the horizontal and the lower tip of the vertical are visible.

Line 13. bṯ[This is by far the most probable reading at the beginning of the line, rather than CAT's /bbt/. Driver (*CML*[1] 100) suggested reading /bkm.t̲b/, "Forthwith he did return," based on VII 42, and others have followed his lead (cf. *Thespis* 195; Coogan 1978: 104; de Moor 1987:62; Pardee 1997a:262). But the second letter cannot be a /k/ (cf. CTA p. 29 n. 5). CAT apparently takes what we read as /t/ as the left horizontal of a /b/. But the horizontal is complete and solitary and much too large to be part of a /b/. There is a pockmark above the /t/, which CAT may have interpreted as part of a vertical. But it is only damage. There are no further traces of their purported /t/.

]ḅ.bʿl Most of the /b/ after the break is preserved. We see no hint of an /r/ before that /b/, as read by CAT. There is room in the lacuna for three letters, Thus reconstructions like *[ʿr]b* (CAT) or *[yt̲]b* (see the Commentary) seem a little short for the space.

bqrḅ The final /b/ on the line consists only of the left horizontal wedge, and the lower left corner of the right horizontal. For efforts at reconstruction, see the Commentary below.

Line 15. b̊l̊[.]'aštm. The surface of the tablet has chipped off on the left side of this line. All that is left of /bʿl/ is the interiors of the wedges. But they can all be made out on the tablet.

ktrbn There is no word divider after /ktr/.

Line 16. ym̓.kṯr Again the left side of the line is badly preserved. The vertical of /m/ is only barely discernable, and /kṯ/ only preserve their deep interiors, which, however, are visible.

Line 17. yṗṯḫ The left side continues to be poorly preserved. The signs of /ptḥ/ are very badly damaged. The upper wedge of /p/ is discernable, but badly broken. The /t/ has no edges surviving, but the deepest part of the head of the letter seems preserved. The outline of /ḥ/ is clearly observable.

ḥln A stray vertical wedge is visible under the right tip of the /n/.

bbhtm̓ The horizontal of the /m/ is partially filled with an encrustation. The vertical was placed in the left margin line, which is itself damaged.

Line 18. 'ů̊r̊b̊ṫ The damage on the left side of the column continues. The /ʾu/ is pretty certain from context, but the damage to the horizontal wedge makes it impossible epigraphically to decide whether it is made up of one, two or three wedges. Traces of three verticals narrow the possibilities to /ʾu/ or /d/. Only the two left horizontals of the /r/ are clear, though perhaps the deepest interior of the right horizontal is discernable. The /b/ is also very poorly preserved. The outline of the horizontal wedges has survived, and possibly the deepest interiors of the heads of two verticals are preserved as well. Only the lower line of the /t/ is preserved, but makes the letter certain.

ḫkl The /h/ is very shallow, probably due to an ancient smudge when the tablet was still wet. Only two wedges are visible.

Line 19. m.w[ ]ṫḫ There are no traces of a /y/ following the /w/, as in CTA, nor are there any remains of /p/ following the latter, as in CAT. Presumably the supposed trace of the /y/ is a pockmark to the right and above the end of the /w/. But it is certainly breakage and not the remains of a wedge. The /t/ is only visible in its lower line. The /ḥ/ survives almost completely, although the surfaces of the wedges are all broken away. Any of the popular reconstructions—*w[yp]tḥ, w[tp]th*,

or *w[ʾiṗ]th*—would fit into the lacuna. Tropper's insistence that there is only room for one letter between /w/ and /t/ is simply mistaken (2002b:800–1). See Image 76, which clearly shows that there is ample space for two letters.

For the reconstruction *w[ʾiṗ]th*, with Baal as the subject, see Prosser 2001 following translations by Albright, Aistleitner and Ginsberg. The argument is largely contextual based on the narrative in lines 27–28 where Baal is said to open the break in the clouds. See the Commentary below for discussion.

Line 20. ʿl.ḫ[ ].kṯr.wḫss The reading of /ḫ/ before the break is epigraphically uncertain. Only a thin, low long horizontal is preserved. This could be either /h/ or /p/. The top is chipped away, so there is no way to determine how high the letter was. The /w/ proposed by CAT as following the possible /h/ is an illusion created by a break in the tablet. There are no traces of it or of a following /t/. With many commentators, we reconstruct h[wt], with the context in mind regarding the "word" (*hwt*) of Kothar wa-Hasis (1.4 VI 15, VII 27). The restoration proposal ʿl p[k] appears unlikely because of the lacuna's large space that suggests two letters in the break, besides the /h/ or /p/.

Line 21. k̲ṯṙ.ẇ These four letters are badly damaged, but all of them are discernable. The left wedges of the /w/ are filled with encrustation.

Line 22. yšʾu.ġḫ The word divider seems preserved in its upper and left lines., but filled with an encrustation. The /g/'s surface is gone but the interior of the letter assures the reading. The /h/ is epigraphically uncertain, since only a single long horizontal, high on the line, survives. But the context assures the reading.

ẇyṣḥ The shape of the /w/ survives generally, with a few hints of the upper left wedge and part of the large right wedge. The left half of the /y/ has been filled with the encrustation, but the outline of the surface is almost completed preserved.

Line 23. lrgṁ[ ] Several signs in this line are badly damaged, but all are certain. The /m/ has lost most of its surface, but the deep indentations of both wedges are visible. The surface of the /t/ is also gone, but much of the line of the wedge is discernable. No traces of a word divider after the /t/ are preserved.

]i̇̀k Traces of the left and right wedges of the /l/ are visible, assuring the reading. The interiors of the two left wedges of the /k/ are quite visible, although the surface lines are damaged.

Line 24. yn.bʿi̇̀ The /l/ is only preserved in the interior of the wedges, but is certain.

tt̲bṅ The upper line of the /t/ is preserved along the edge of a deep chip. The /t̲/ is the least well preserved and is epigraphically uncertain, represented only by a deep roundish indentation to the right of the /t/. The lower lines of the two right wedges of the /n/ are preserved, as is the left line of the left wedge.

Line 25. lhẇtẏ[Again several letters are badly damaged, but there is nothing uncertain of reading. The /w/'s interior is damaged, but the line of the edges indicates the certainty of the reading. Only the right side of the /y/ has any remnants preserved. We see no traces of a word divider between this /y/ and the one to its right.

]ẏpi̇ḥ.ḥ While damaged, five of the wedges of the /y/ are discernable. The lower line of the /t/, as well as the interior of the wedge are visible.

Line 27. hkl̊[ ]ẙp̊tḥ Traces of only two wedges of the /l/ are preserved, but the reading is assured by context. We discern no surviving remnants of the succeeding /m/ read by CAT. There are two possible indentations that may represent the two lower wedges of the left half of a /y/. The right tips of the probable /p/ seem partially preserved, though only the vague lower line of the lower one is visible. The parallel in line 17 above supports the reading.

Line 28. bdqṯ[The /t/ is badly damaged, but pieces of its line are preserved.

]ʿr̊p̊t The first three letters of the word are very fragmentary and epigraphically uncertain. However, the parallel in line 19 strongly supports these readings. Only the deep interior of the /ʿ/ is left, but the traces are certainly compatible with that reading. A small piece of the edge and the deep interior of the /r/'s right wedge is all that remains of that letter. What appears to be the upper left corner of the top wedge of the /p/ is also visible.

Line 29. qdš[ ]ḫʿ[ ]ytn The word divider after /qdš/ is lost in breakage. The lower line and left line of the /ʿ/ are partially preserved. The wedge is filled with an encrustation. The /l/ that follows is entirely lost in a deep gouge, contra CAT. The /y/ is certain. The deepest interior of the left half of the letter is still visible, as is the right side of the upper two wedges of the right half.

Line 30.]š̊pth Clear traces of what is most likely the right wedge of a /š/ that connects to the left edge of the lower wedge of the /p/. The upper wedge of the /p/ is considerably smaller than the lower wedge, but this is a fairly common form of the letter (cf. Ellison 2002:2.72, figs. 243, 248, and 2.73, figs. 249, 252).

Line 31. qlh.q[ ]k̊p̊r̊.'arṣ The center of this line is very badly damaged. The reading here remains tentative, but fits the preserved traces. Probably two letters have been completely destroyed after the second /q/. Then the remains of a midsized high horizontal are visible, consistent with a /k/ or /w/ more than an /r/. There are also possible traces of both the lower horizontal and the left line of the large right horizontal of a /k/. We see no clear hint of a second horizontal that would identify the letter as /w/, but this reading cannot be ruled out. To the right is the upper line of a long horizontal, high on the line, which suggests /p/ or /h/. Its height on the line and the evident thinness of the wedge argue against reading it as a /t/. Most likely it is /p/. Enough traces of the succeeding /r/ are preserved to assure its reading. Ben-David (1980) had already suggested reading. *ʔpʔr.'ars*, and proposed a parallel with Isa 24:19. With the apparent /k/ in front, that parallel does not seem likely. But it would hold if the reading here were/wpr/).

Line 32. q̊l̊[The first two letters are uncertain, but likely. The lower part of a *Winkelhaken* is clearly visible, at approximately the same location as the *Winkelhaken* in the line above. To its right are vague hints of two long verticals, which suggest a /ṣ/ or /l/. A repetition of the word *ql* is compatible with the context.

]xg̊rṁ[The letter preceding the /ġ/ is represented by what appears to be the wide head of a vertical wedge with a hint of another vertical to its left. One might suggest /d/ /ʾu/, or /b/ as most likely here, although other letters are possible. The /ġ/ is certain since the oblique wedges are preserved in part. The horizontal of the /m/ is fairly well preserved, and the upper left corner of the vertical survives.

]ṯẖšn The reading of the last word here is assured, not by the current photograph in this edition, but by the original Louvre photo taken in the 1930s. This is an example of a tablet section that has significantly deteriorated between the 1930s and today. The original photo of the reverse of the tablet, when enlarged, clearly shows a well preserved /ẖ/ and /n/, neither of which survive today. Virolleaud read the first letter of this word as /ʾa/, while Herdner (CTA p. 29, n. 13) argued for reading a word divider and a /t/. Unfortunately, the original photo does not show this letter well, and all that can be said now is that it is a horizontal letter with either one or two wedges, i.e., either /t/ or /ʾa/. The context argues for /t/.

Line 33. rtq[The reading of /t/ is clear (cf. CTA: /rḥq/). The fact that it is a single wedge is clear from the smooth, finely preserved line of the interior. There is no trace of a word divider after the /q/.

Line 34. ʾà[The bottom line of the /ʾa/ is preserved and assures the reading. Contra CAT, there are no traces of an /r/ following.

Line 36. šn'u.hd The /h/ has four wedges.

Line 38. hdṯ CAT has proposed that there is another letter underneath the /t/. There are traces of what appears to be the lower left outlying parts of a /ṯ/ along the left side of the letter (compare the /ṯ/ directly below in line 39). But these may simply be damage.

Line 39. lm.tẖš.nṯq.dmrn This line is perfectly clear. CTA has two typos in the line (ḥ for /ẖ/ and /m/ for /n/ at the end of the line).

Line 41. bymnh The /h/ has four wedges.

Line 44. drktyštkn There is no word divider after /drkt/, as proposed in CAT.

Line 46. ʿddlydd There is no word divider after /ʿdd/, as proposed in CAT.

Line 49. bgngnh The /h/ has four wedges.
ʾaḥdy CTA has a typographical error, reading /ẖ/ for /ḥ/.

Line 51. ʾi̊lm The /ʾi/ is broken on the left, so that the distinguishing lower left vertical is not preserved. But the context assures the reading.

Line 53. [ ]m̊h The /m/ is uncertain. The top of the vertical appears to be visible, with perhaps a hint of the right tip of the horizontal. But the vertical seems very low on the line to be an /m/. At the same time, one may compare the very low placement of the /l/ in Column VIII, line 32 in relation to /ʾi/ in /ʾil/.

Line 55. [ ]ẙm The /y/ is represented only by the top two wedges of the right half of the letter.

Line 56. [ ]h̊br[The /t/ proposed by both CTA and CAT just before /h̊br/ appears to be merely the break in the tablet. The first preserved letter is most likely /h/ rather than /ʾi/ (as in CTA and CAT). There is no clear evidence of the low vertical required to make it an /ʾi/. A vertical crack runs down the left corner of the letter, giving a slight appearance that there might be a low vertical. But there is plenty of room on the preserved surface of the tablet for traces of the vertical, were it here. There are a few examples of an /ʾi/ with a vertical substantially below and to the left of the horizontals, but they are rare (cf. Ellison 2002:2.189, figs 764, 765). In a parallel passage, 1.8.9, the text clearly reads /ʾibr/. However, neither reading produces an obvious translation of the word. Thus it seems best to keep open the possibility that both passages might read either *hbr* or *ʾibr* and that one text contains a scribal error.

]g̊nt. CTA and CAT have read an /m/ for the first letter of this word, rather than /g/. There is damage on the left side of the letter, but there is no evidence of the horizontal of an /m/. In fact, there is probably too little space between the end of the /r/ and the preserved vertical for a horizontal to fit, particularly if one assumes a word divider belongs after /hbr/. Here, as with the previous word, the readings *gnt* and *mnt* do not produce obvious translations. There is a word divider at the end of /gnt/, though nothing follows.

Line 57. [ ]ʿ̊rpt The upper half of the /ʿ/ is well preserved along the edge of the break.

Line 58. [ ]ṯḥt Part of the upper line of a large horizontal is preserved before the /ḥ/. /t/ is only one possibility. A reading of /m/ would match the passage found in 1.8.12 (*mʿṣrm.ḥ[ ]*), but is not likely, since the horizontal is low on the line, and there is little room for the vertical.

Line 60. [ ]x A thin horizontal wedge is certain, and perhaps a hint of a lower horizontal. The letter is more likely to be /p/ or /h/ than /t/.

---

[2] Sivan 1997:66.

[3] It is theoretically possible that the verb is active and not passive, especially in view of the following bicolon. See the following note for discussion.

[4] As indicated by the vocalization, the third person active is possible, with *bdqt* as the direct object. Another plausible reconstruction here is *w[ʾip]th*, the 1st s active. In this case, the line would read: "And let me open a break in the clouds." See the discussion in the Commentary.

The Window Is Installed

25–28	An aperture was opened in the house, A window inside the palac[e]. Baal opened a break in the clouds,	yuptaḥu ḥillānu bi-bahatīma 'urubatu bi-qirbi hêkal[īma] yiptaḥu ba'lu bidqata 'urpāti
29–30	Baa[l] gave forth his holy voice. Baal repeated the is[sue of (?)] his [li(?)]ps,	qāla-hu qudši ba'[lu] yatinu yaṯanniya ba'lu ṣi['ata ši]ptê-hu
31–35	His ho[ly (?)] voice covered (?) the earth, [At his] voice . . . the mountains trembled. The ancient [mountains?] leapt [up?], The high places of the ear[th] tottered.	qālu-hu qu[dši] kapara 'arṣa qalv[-hu]ǵārūma taḫûšūna rtq[ṣ? ǵārūma (?)]qadmiyyūma bamātū 'a[rṣi] taṭṭiṭūna
35–37	The enemies of Baal took to the woods, The haters of Hadd to the mountainsides.	'ibū ba'li tu'ḫadū ya'arīma šāni'ū haddi guppāti ǵāri
37–38	And Mightiest Baal spoke:	wa-ya'nî 'al'iyānu ba'lu
38–39	"O Enemies of Hadd, why do you tremble? Why tremble, you who wield a weapon against the Warrior?"	'ibî haddi lama taḫûšū lama taḫûšū nāṯiqî damirāni
40–41	Baal looked forward; His hand indeed shook, The cedar was in his right hand.	'âna ba'lu qadma yadu-hu kī-taǵdû 'arzu bi-yamīni-hu
42	So Baal was enthroned in/ returned to his house.	bi-kama[5] yaṯibu ba'lu lê-bahatī-hu
43–44	"Will it be a king or a non-king Who establishes dominion in the earth (netherworld)?	'ô[6]-malku 'ô-bal-malku[7] 'arṣa darkata yištakinu
45–47	A herald I will indeed send to Divine Mot, An envoy to El's Beloved, the Hero,	dallala 'al 'il'ak lê-bini 'ili-ma môti 'ādida lê-yadīdi[8] 'ili ǵāziri

[5] See *UG* 745.
[6] See *UG* 188, 792.
[7] For *bl* + noun to form a complex noun, see *UG* 817.
[8] The term *ydd* is apparently **qatil*-base (cf. BH *yādîd*). See the Commentary for further discussion of the term.

47–49	That he may proclaim to Mot into his throat,	yiqra'a môta bi-napši-hu
	Inform the Beloved in his insides:	yistarrana yadīda bi-gangani[9]-hu
52–52	It is I alone who reign over the gods,	'aḫdu-ya[10] dū-yamluku 'alê 'ilīma
	Indeed fatten gods and men,	la-yimra'u 'ilīma wa-našīma
	Who satis[fy] the earth's multitudes."	dū-yišba['u] hamulāti 'arṣi
52–53	Aloud to his l[a]ds Baal declared:	gā-ma lê-ǵa[la]mī-hu ba'lu kī-yaṣûḥu

	sons of ẓlmt, the exalted princess(?)	banî ẓlmt/ramti par'ati

[*Lines 57–60 are too broken, and about seven additional lines are missing.*]

Commentary

Poetic Parallelism and Word/Syllable Counts

		semantic parallelism	word/ syllable count
Lines 1–6 are too broken for purposes of poetic analysis.			
7–8	'abara lê-['îri] 'arīma	a b c	3/9
	ṯāba lê-pad[ri pa]darīma	a' b' c'	3/9
9–10	ṯitti lê-ṯittīma 'aḫada 'îra	a b c d	4/11
	šib'īma šab'i padarīma	b' a' d'	3/9

The two lines show close syntactical, morphological and semantic parallelism. The notable feature involves alliteration within each line, namely *ʿ* and *r* in all three words in the first line, and bilabials *b, p* and *m* in the second line.

[9] See *UG* 146. See also the discussion below.
[10] See *UG* 344, also pp. 217, 228.

The numbers fronted at the heads of the lines stand in a chiastic arrangement, perhaps designed to emphasize them. The poetic syntax is reminiscent of 1.4 V 56–57. Dentals predominate in the first line, bilabials in the second.

11–12	ṯamāniyīma baʿlu…	a b (?)	(?)
	tašʿīma baʿlu…	a' b (?)	(?)

The two lines here constitute a bicolon that seems to be structured in a way similar to the preceding bicolon.

13–14	[ʿara]ba baʿlu bi-qirbi bêti	a b c (x of y)	4/10

Given the difficulties with the beginning part of line 13, not to mention lines 11–12 (see the Commentary below), remarks on this line's poetics cannot be made.

14–15	wa-yaʿnî ʾaliʾyānu/baʿlu	a b (x, y)	3/9

This is extracolonic, a common speech-opening line.

15–16	ʾasîtu-mi kôṯari bini/yammi	a b c (x of y)	4/11
	kôṯari bini-ma ʿidati	b c' (x of y)	3/9

At first glance, the parallelism here is classic, whether one views *bn ym//bnm ʿdt* as divine titles (as rendered here) or as expressions for time. Yet the repetition of the divine name is not the norm (the poet might have used the craftsman-god's epithet *ḫss* in the second line). The expressions following the divine name also repeat the element *bn//bn*. So the bicolon shows two examples of repetition of the same element. These elements contribute also to sonant parallelism, further enhanced by final *-mi/-ma*; final *-i* is particularly dominant, generated largely by the case endings.

17–20	yuptaḥ ḥillānu bi-bahatīma	a b c	3/10
	ʾurubatu bi-qirbi hêkalī/ma	b' c' (x of y)	3/11
	wa-[y/t/ʾip]taḥ bidqata ʿurpāti	a' b'' c''	3/9
	ʿal ha[wati] kôṯari wa-ḫasīsi	d e f (x + y)	3/11

This unit largely follows the pattern of 1.4 V 61–62, 64–65 and VI 5–6 and 8–9. (Otherwise one might read this unit as two bicola, e.g.,

Ginsberg, *ANET* 135; Smith, *UNP* 136.) The major difference here is the initial verb, which slightly enhances the sonant patterning with bilabials and dental *t*'s in this bicolon. One may also notice the switching here of the A and B words for "window," in comparison to the parallels. The parallel structure of the third line emphasizes the identity of the window and the break in the clouds. The fourth line echoes Kothar's statement in VI 2 and 15 above and anticipates the repetition of it in lines 24b–25a below.

21–22	ṣaḥaqa kôṯaru wa-ḫasīsu	a b (x + y)	3/10
	yiššaʾu gā-hu wa-yaṣûḥu	a' (x + y)	3/9

Essentially the same bicolon, with Anat as the subject, appears in 1.4 V 25–26. In both cases, the first line represents a reaction to the preceding event, while the second line opens the following speech. At the same time, the two lines are linked in communicating the sentiment of the divine subject.

23–25	la-ragamtu lê-ka la-ʾalʾi/yāni baʿli	a b c (x, y)	4/13
	taṯûbuna baʿli/lê-hawati-ya	d c e	3/11

On the face of it, these two lines are not parallel semantically, as the first makes an assertion about a speech (in American English, "I told you so!") and the second line the content of that speech. However, the prepositional phrases are syntactically and morphologically parallel, the name of Baal occurs in both lines, and there are various *l-* particles and *l-* consonance.

25–28	yuptaḥu ḥi/llānu bi-bahatīma	a b c	3/11
	ʾurubatu/bi-qirbi hêkal[īma]	b' c' (x of y)	3/11
	yiptaḥu/baʿlu bidqata ʿurpāti	a' d b'' (x of y)	4/11

This is the narrative execution of what is ordered in lines 17–19. As Fenton (1969) has shown, the narrative execution uses the indicative verb form proximate to the volitive form used in the speech; in this case, the jussive **yqtl* form in the speech is followed by the prefix indicative **yqtl* form.

29–30	qāla-hu qudši ba[ʿlu] yatinu	a (x of y) b c	4/10
	yaṯanniya baʿlu ṣi[ʾata ši]ptê-hu	c' b a' (x of y)	4/12 (?)

This bicolon is a fine example of chiastic structure (assuming the correctness of the reconstruction in the second line). There is excellent sonant parallelism between the verbs in the two lines, and the two objects of the verb are balanced constructs.

31–35	qālu-hu qu[dši] kapara 'arṣa	a (x of y) b c	4/9 (?)
	qalv[-hu]ǵārūma taḫûšūna	d [e?] c' b'	
	rtq[ṣ? ǵārūma (?)]qadmiyyūma	b''[f?] c'' (x + y)	
	bamātū 'a[rṣi] taṭṭiṭūna	c''' (x+y) b'''	3/9

These four lines are closely related to one another, describing the tumultuous reaction of the earth to Baal's voice. The middle two lines are too broken to determine the syllable count; in each there is room for an additional word in the break, and in the third line the form of the verb is uncertain. But assuming that the overall reconstructions are generally correct, they join the others to follow a common parallel structure. The primary discontinuity between the lines is the fact that the geographical term in the first colon is the object of the verb, while the parallel term in the other three lines is the subject. As will be discussed below in the commentary, the root **qdm* appears in the phrase *harĕrê qedem*, "ancient mountains," in Deut 33:15. If the third line here is correctly reconstructed, such a phrase (like our proposed *ǵrm qdmym*) would offer a reasonable parallel to *bmt 'arṣ* and would pick up on the single-word subject of the first line.

35–37	'ibū ba'li tu'ḫadū/ya'arīma	a (x of y) b c	4/11
	šāni'ū haddi guppāti/ǵāri	a' (x of y) c (x of y)	4/10

The bicolon enjoys classic parallelism in syntax, morphology and semantics. Sonant parallelism generated apart from these sorts of parallelism is arguable between *ya'arīma* and *ǵāri*.

37–38	wa-ya'nî 'al'iyānu ba'lu	a b (x, y)	3/9

This line is extra-colonic.

38–39	'ibī haddi lama taḫûšū	a (x of y) b c	4/9
	lama taḫûšū nāṯiqī damirāni	b c a' (x of y)	4/12

This bicolon echoes and extends the bicolon in lines 35–37. The appearance of *lama taḫûšū* in each colon significantly marks the parallelism here, and the other components, though not identical, are strongly parallel.

40–41	ʻâna baʻlu qadma	a b c	3/6
	yadu-hu/kī-taǵdû	a' d	2/6
	'arzu bi-yamīni-hu	e a"	2/7

This unit is hardly parallel in its syntax, but references to parts of the body help bind it together. It has been argued that this unit is really a bicolon: "Baal's eye precedes (is before) his hand" (*ʻn bʻl qdm ydh*)//As the cedar shakes in his right hand (*ktǵd̲ 'arz bymnh*). This approach is appealing in part because of the parallelism that it generates:

ʻênu baʻlu qudma yadi-hu	a (x of y) b c	4/9
kī-taǵ´addû 'arzu bi-yamīni-hu	d e c'	3/11

This arrangement generally comports better with the line-lengths in the surrounding context, and it yields better parallelism. Despite these advantages, the grammatical discord between the subject and verb in the second line (masculine subject, feminine verb) would seem to preclude this approach. Grammatical discord is attested in various Semitic languages, but working from the exception rather than the norm offers weak support. For further discussion, see the Commentary below.

42	bi-kama yaṯ̲ibu baʻlu lê-bahatī-hu	a b c d	4/13

As noted above, this monocolon serves to highlight a narrative high-point and conclusion.

43–44	'ô-malku 'ô-bal-malku	a a'	2/7
	'arṣa darkata yištakinu	b c d	3/9

This unit shows no parallelism from the first line to the second. The semantic parallelism of *malku* and *darkata* is attested. It appears to be one of the rare examples of enjambment in Ugaritic poetry. Since this bicolon serves as the introduction to the third primary episode of the Baal Cycle (the Baal/Mot conflict), this unusual setup may be intentional to make obvious the shift to the new subject.

45–47	dallala 'al 'il'ak lê-bini/'ili-ma môti	a b c (x = p of q, y)	6/14
	'ādida yadīdi/'ili ǵāziri	a' c' (x = p of q, y)	4/11

The rather long lines of this bicolon show a traditional sort of parallelism. Standard semantic, syntactical and morphological parallelism is evident. The repetition of words for divinity balance a singular form in the first line, *'ili-ma*, with a singular form in the second, *'ili*. Moreover, alliteration with *d* is particularly strong in the second line, anticipated with only a single instance of the consonant in the first line. In contrast, alliteration with *l* is particularly strong in the first line, and weakly echoed in the second. Together these features generate a subtle sort of sonant chiasm. Noegel (2004:10–11) suggests that in this unit, *dll, 'dd* and *ydd* (as well as *ydd* and *gngn* in the following unit) also reflect geminate roots clustering poetically in this section of 1.4 VII. The observation further highlights the prominence of the alliteration with *d* in these words.

47–49	yiqra'a môta/bi-napši-hu	a b c	3/9
	yistarrana yadīda/bi-gangani-hu	a' b' c'	3/12

This unit enjoys exact syntactical and morphological parallelism, including two of the same elements in the prepositional phrases (*bi-, -hu*). The second line is slightly distinctive with its minor alliteration with *n*.

49–52	'aḫdu-ya dū-yam/luku 'alê 'ilīma	a b c	4/12
	la-yimra'u/'ilīma wa-našīma	b' c' (x + y)	3/11
	dū-yišba/['u] hamulāti 'arṣi	b'' c' (x of y)	3/10

A basic syntactical and morphological parallelism runs through the unit. In addition, the semantics of the objects is interlocking from line to line: the first mentions only deities, the second deities and humans, and the third a longer expression for humans. The particles fronting the clauses show some repetition of *d*, at least in the first and third lines. The morphologically parallel verbs are further parallel in each containing a bilabial.

52–53	gā-ma lê-ǵa/[la]mī-hu ba'lu		
	kī-yaṣûḥu	a b c	4/13

This is an unusual speech-opening colon, attested elsewhere in 1.8 5–6 1.14 V 13; 1.15 IV 2; 1.17 V 15; 1.19 II 49. The last several lines have been a speech of Baal essentially to himself, perhaps envisioned by the poet as having been thought in Baal's mind rather than spoken. So now the poet makes it clear that Baal turns and speaks to his messengers.

53–56	ʿînā/[gapni] wa-ʾugari … …	a b (x + y)	3/8

The initial line, consisting of an imperative plus a vocative, is followed apparently by further lines, the meaning of which is very difficult to determine. In view of the interpretational difficulties (see the Commentary below), we prescind here from any further poetic analysis for these lines.

Lines 56–60 are too poorly preserved for the purposes of poetic analysis.

Introduction

In this column the construction narrative that began in column V reaches its conclusion, with a depiction of divine blessing and power in the account of the storm-god's mighty theophany (see the discussion of Near Eastern building narratives, pp. 550–53). The construction narrative is in turn the final scene of the long story of Baal's acquisition of his palace that began in 1.3 III. Within this column the final elements of the tale are told, providing the climax of both the account of the construction of the palace and the larger story as a whole. Having feted the gods in his new palace at the end of column VI, Baal proceeds (following some actions in the broken lines 1–6) to march across the cities of the world to obtain their submission (lines 7–13). Having returned to his palace (lines 14–25), he announces to Kothar that he has changed his mind and will allow the installation of a window (on the entire window episode, see the discussion above, pp. 602–10). The window is installed, and through it (lines 25–42) Baal sends forth his voice, the thunder (and the rains that surely accompany it). At the overwhelming intensity of his voice, the earth trembles and Baal's enemies are scattered, while Baal sits enthroned in his palace. His rule has been established in heaven, on earth and in the sea; it has been recognized generally by deities and humans. This vivid description of Baal's power marks the end of one storyline and acts as the bridge to

the third and final act of the Baal Cycle, the account of Baal's conflict with Mot. This story begins in lines 43–52 with a speech in which Baal states (to himself) the issue that will drive the action of the next two tablets: will Baal establish his dominion in the netherworld? The controversy begins when Baal determines to send a message to Mot that clearly claims control over the latter's realm. At the end of the column (lines 52–60), Baal summons his messengers Gapn and Ugar and begins to instruct them about the message that they will take to Mot. These instructions continue in column VIII.

From an exegetical point of view, column VII has been one of the most controversial sections of the Baal Cycle to interpret. In part this is due to damage on the tablet, particularly at the beginning and at the end of the column. But there have also been considerable differences of opinion about the meanings of numerous key words in the text, which have led to widely variant interpretations of the events depicted here. Lines 1–6 are badly broken, and their exact meaning, as well as their relationship to the preceding and following events, is not clear. The relationship between Baal and his enemies in lines 35–41 has received startlingly different interpretations, and there has been considerable difference of opinion about the meaning of Baal's speech concerning Mot (lines 43–52), despite the fact that the lines are almost perfectly preserved.

Lines 1–6

The last legible lines on column VI described the great banquet Baal gave for the children of Athirat (lines 38–59). This is followed by between six and nine lines that are virtually or actually destroyed at the end of the column. The first six lines of column VII are also badly damaged, so that it is not clear whether the twelve to fifteen lines here continued the story of the banquet or moved into a new scene. Lines 1–6 make reference to Baal, Yamm, and the gods, but the context is very obscure. One important conclusion about the narrative can be drawn, however: we can say with some assurance that Baal's concern about Yamm's threat to his well-being, voiced in his explanation for the refusal to allow Kothar to install a window in the palace (VI 12–13), is resolved in this passage, since those concerns no longer apply in VII 14–20. Some scholars have argued that lines 2–4 describe a final combat between Baal and Yamm, in which Baal delivers a devastating blow to Yamm's head that ends any threat from the latter (e.g.,

BOS 2.138; *Thespis* 192–93; *DW* 33–34; *CML*[1] 16; *SPUMB* 154 n. 10). While this is certainly possible, such a battle in this context seems out of place, and the description of the battle would have been remarkably short. Gibson (*CML*[2] 64 n. 1) suggests that these lines may be part of a declaration by the assembled gods that their allegiance belongs to Baal and not to Yamm, thereby assuring Baal that Yamm is no longer a threat. This seems quite plausible, but no firm conclusion can be drawn. Whatever the case, it is clear that from this point Yamm is no longer an issue for Baal.

A few comments can be made about each of these lines. Line 1 preserves part of only a single word, the reconstructed, *[ʾi]qnʾi[m]*, "[l]apis lazu[li]." The word appears above in the previous column as one of the materials for Baal's new palace. Line 2 provides only the common title, *ʾalʾiyn bʿl*, "Mightiest Baal." Line 3 contains *mdd ʾil*, the epithet of Yamm in 1.3 III 38–39 (*mdd ʾil ym*), and probably his epithet here too, since the beginning of line 4 is likely (but not absolutely certainly) to be reconstructed *y[m]*. Mot is called *mdd ʾil* in VIII 23–24, but the *y* in line 4 makes an identification with Mot here very unlikely. A similar, but distinct title, *ydd ʾil ǵzr* "the beloved of El, the Hero," regularly applies to Mot (1.4 VII 46–47; VIII 31–32; 1.5 I 8, 13–14, II 9; 1.6 VI 30–31 and 1.133.16–17). The key difference involves the form of the initial term: Mot's title *ydd* is apparently **qatīl*-base (**yadīd-*; cf. BH *yādîd*) while Yamm's epithet *mdd* is evidently *m-* preformative form (**mêdad-*, on analogy with BH *mêdad*; or, **mêdud*, so Sivan 1997:123 on analogy with the Arabic *maqtūl* passive participle; cf. the proposal of Vaughn 1993:426 to read it as a *D*-stem passive participle, *muddadu*).

The end of line 4 reads *lẓr qdqdh*, "on the top of his head," which is reminiscent of 1.2 IV 24–25: *ylm qdqd zbl ym*, "it (the weapon) struck the head of Prince Yamm" (cf. 1.16 VI 54–57; 1.18 IV 22; 1.19 II 30, where *qdqd* appears in contexts of conflict). It thus seems plausible to see this line as referring to the wounding of Yamm in the head. But it is also possible that the line could refer to placing a crown on Baal's head, although no parallel passages are known.

If the events described in lines 1–4 take place at the banquet, as seems possible, then lines 5–6 can easily be interpreted as describing the departure of the gods from Mount Sapan. Line 5 contains the root *rḥq*, which as a verb in Ugaritic means, "to go away" (see also 1.14 VI 14 and parallels; *DUL* 738). The other suggested reading of the verb, *ṣḥq*, "to laugh, make merry" (originally proposed by Virolleaud 1932:153; cf. CTA p. 29, n. 2 which has a mistaken publication note;

CML[1] 100; *Thespis* 193) must now be excluded on epigraphic grounds. Some scholars have suggested that the first line of the bicolon refers to Baal, while the second has the gods as its subject: "The god [Hadd de]parted from the mountain,/while the gods X-ed on Sapan" or the like (Dietrich and Loretz 1997:1168; de Moor 1987:61; see also *DUL* 738 for the first clause rendered along these lines). But the word *'il* at the beginning of line 5 is not necessarily complete, since the area directly after the *l* is broken, and thus reading it as a plural, *'il[m]* is plausible. In addition, the proposed reconstruction *'il[.hd]* is problematic, since this phrase, "the god Hadd" is not attested elsewhere in the Baal Cycle. It seems more likely that the gods constitute the subject of both lines.

The form *km* at the beginning of line 6 is ambiguous. It could be the conjunction "when," in which case the colon would be a temporal clause connected to the following line. But it could also be the adverbial, "thus, so," indicating the conclusion of the banquet scene. Or, it could be the emphatic *k* particle with enclitic *m*, "indeed, truly." None of the verb for the line has been preserved. It seems most likely that it would have been a parallel to *rḥq* in the previous line, but certainty is impossible. The ambiguity of the preposition *b* means that it gives us no help in reconstructing the verb.

Lines 7–13: Baal's Victory Procession

This section describes Baal's victory march through the towns and villages of his domain. The first bicolon, lines 7–8, introduces the scene. Line 7 reads *'br* (see the Textual Notes above); in contrast, philological investigation has not yielded a suitable sense for the proposed reading of *'dr* (cf. *MLD* 55; *SPUMB* 156). Most scholars have emended the reading to *'br* anyway. The apparent parallelism with **t̲(w)b*, "turns," in the following line fits with *'br*, "to cross, travel, pass." The verb indicates that Baal is not journeying to a specific town, but is going from one town to the next in a steady procession (cf. 2 Chr 30:10 for a parallel usage of the verb). This passage appears to make use of the imagery of the divine warrior's campaign against his enemies (cf. similar imagery in Deut 33:2, Judg 5:4–5 and Ps 68:8–9, 18–19; cf. *CML*[2] 64; *Thespis* 193; de Moor 1987:61 n. 275). However, Baal's processsion does not seem to be a true military campaign, since there is no real indication of resistance by the towns. It rather seems to be a victory tour in which all the cities and towns demonstrate their submission to the conqueror. There are no clear references here to battle or carnage

as is found, for example, in 1.3 II, the account of Anat's defeat of her human enemies.

In lines 7–10, the poet uses the terms *ʿrm* and *pdrm* for the settlements that submit to Baal. The first term is easily identifiable as cognate with BH *ʿîr*, and related terms, ultimately derived from Sumerian *uru*, and is usually translated "cities." The more difficult term is *pdr*, which does not seem to have a Semitic background or cognates. De Moor (*SPUMB* 156–57), followed by *DUL* (662), related it to Mycenean *po-to-ri*, taken to be the antecedent form of Greek **p(t)ólis* (*polis*) and cognate English forms such as "metropolitan." The close parallelism of the word with *ʿr* strongly supports the interpretation of the word as "town, village" or the like. They appear together also in the Kirta Epic (1.14 III 6–7, IV 49–50; where they refer to dependencies of the capital city of Udum; and in 1.16 VI 6–7, and probably V 47–48). It cannot be determined with certainty at this point if the parallel terms *ʿr* and *pdr* designate different sizes of settlements, but it is likely that they are simply synonyms. The BH term *ʿîr*, can refer to large, fortified towns and small unfortified villages (cf. most clearly Deut 3:5). Similarly, the Akkadian equivalent, *ālu*, does not indicate size (cf. *CAD A/1*:381, 1c, 1': "75 strong walled cities of Kaldu and 420 small cities which are situated around them"). It seems likely then that each term in our passage can refer to any size of settlement, large or small.

The grammatical usage of *ʿr* and *ṗdr* in the first bicolon of this passage (lines 7–8) is not entirely clear. In each line the word appears twice, with its first occurrence preceded by the preposition *l*, and the second occurrence suffixed with *-m*. Most scholars have simply rendered the words from the general context as "from city to city//from town to town" or the like (*TO* 1.215; Dietrich and Loretz 1997:1168; *CML*[1] 101; *Thespis* 193; *CML*[2] 64; Gordon 1977:99; de Moor 1987:61; *MLC* 208; *MLR* 89; Pardee 1997a:262; Wyatt 1998:108).[11] To get this rendering, one might interpret the construction as follows: *l-* here means "from," and the second usage of the noun would be an adverbial accusative, giving it the sense of "to." The *-m* on the second occurrence of the word in this case would be enclitic. However, we are aware of no

[11] De Moor cited 2 Chron 30:10 as a parallel for this passage, since it uses the verb *ʿbr*, followed by twin use of *ʿrm*: "runners were passing from town to town (*ʿōbĕrîm mēʿîr lāʿîr*) in the land of Ephraim and Manasseh, and as far as Zebulun." However, one will note that each occurrence of *ʿîr* is governed by its own preposition, unlike in our passage.

parallels to this construction. The text seems better interpreted as a pair of construct chains, *lʿr ʿrm* and *lpdr pdrm*, "to the city of cities" and "to the town of towns," the phrases being understood as superlatives (cf. Pardee 1997a:262 n. 180), i.e., the most important, or chief, city/town. We would suggest that these lines refer to Baal's arrival first at a major city, from which he receives submission; then lines 9–10 and probably 11–12 (see below) describe the subsequent submission of the dependent towns and villages.

It is worth noting that cities of the second millennium BCE in the ancient Near East were quite small, in no way comparable to cities of the modern era. The population of the kingdom of ancient Ugarit, a great center of the Late Bronze Age Syria, has been put by Heltzer at around 25,000, with the capital city's population estimated at about 7500–8000 and the rest of the population spread over approximately 190 villages (see Heltzer 1976:103–12). Yon (1992a:113) and Bunimovitz (1994:6) both accept Heltzer's population estimate, although Yon believes that there were only about 150 villages in the kingdom of Ugarit. For the city of Ugarit, Garr (1987) examined three methods for estimating population that produced numbers at 13,555, 7,635 and 3,115 depending on population density parameters. Of the three, Garr found the middle estimate the most plausible, which matches Heltzer's population figure. Whatever the merits of these estimates are, they serve to illustrate the huge difference between what existed in antiquity and what the modern word "city" may suggest.

In the next bicolon (lines 9–10), the poet makes use of a traditional numerical formula to describe the number of cities and towns that Baal takes possession of (*ʾaḫd*). Numbers such as 66//77 are clearly intended not to be taken literally, but to mean a large number in general (see 1.5 V 20–21; cf. 1.12 II 49–50). The third bicolon, lines 11–12, apparently raises the level to 80//90 towns, assuming that these numbers continue the specific sequence begun in the previous bicolon (see below for an alternative interpretation of these lines). The progression of 80//90, otherwise unattested in Ugaritic literature, appears to emphasize the vastness of Baal's terrestrial conquests. From a literal point of view, these numbers are not particularly large. As noted above, the kingdom of Ugarit itself contained at least ca. 150 towns and villages. But within the poetic formula, these numbers are as large as are necessary to make the point (only the pair *ʾalp* and *rbt*, "thousands" and "myriads" goes higher). They certainly are intended to suggest that Baal's conquests go beyond any conventional numerical scale; he is king over all the earth.

The verb in this bicolon is **ʾaḫd*, "to seize, take possession of." It is not often used in military contexts in Ugaritic (cf. 1.127.30; 1.103.7), or in BH (cf. *HALOT* 31–32) or Akkadian (*CAD A/I*:173–83, esp. 3c), and there is no indication that it necessarily infers conquest in battle. It is not part of the regular Akkadian vocabulary for the royal military campaign reports and does not appear to mean, "to conquer by force" in that language. One can "seize" or "take possession of" a city through its voluntary submission as well. Thus these lines do not require us to envision Baal's tour as a violent conquest of the peoples of the earth (so *DW* 34–35; Dietrich and Loretz 1997: 1168; de Moor 1987:61). It appears to focus on taking hold or possession of the cities, without specifying the amount of violence required to do so.

Unfortunately, the latter parts of lines 11 and 12 are broken away. The last word of line 11 begins with *m*, and the first two letters of the last word of line 12, *mr*, survive. Most scholars who suggest restorations for these lines assume that the two broken words are verbs (*TO* 1.216; Coogan 1978:104; Dietrich and Loretz 1997:1168; CAT 20; *SPUMB* 156; de Moor 1987:61; Pardee 1997a:262). This interpretation is plausible. The most common restorations are *m[ḫṣ*, "to strike, crush" in line 11 and *mr[r* "to drive out, or pass through" in line 12. The verb *mrr*, translated as "to pass through" might fit in with the verbs of lines 7–8. If *m[ḫṣ* and *mr[r* (translated as "to drive out") are correct, then the passage as a whole takes on a more violent hew, with the destruction of cities and expelling of populations. While this is possible, it is by no means certain. If the function of Baal's trip is to gain recognition of his dominion, then battles need not be central to the story. However, lines 35–39 make reference to enemies of Baal, who could be the remnants of those defeated in lines 9–12. In any case, it is quite plausible to understand these lines as continuing the numerical count of cities that submitted to Baal.

However, another interpretation of lines 11–14a is possible. It emerges from the examination of related narrative motifs. However we interpret the details of lines 7–12, the general picture yielded by these three bicola is of the triumphant god sealing his dominion on earth as he has in heaven. One may compare this in some ways with the campaign accounts of the Assyrian kings. For example, in the Prism Inscription of Tiglath-Pileser I, the king describes his movements from kingdom to kingdom, where he either fights a battle to conquer the land, or he accepts the submission of the king and people without conflict (for the latter, see e.g., ii 36–57, ii 89–iii 6; Grayson 1991:15–17). The

imagery here also clearly relates to that of the divine warrior in his conquests. By examining these thematic parallels, a different proposal for interpreting lines 11–14a can be made. This proposal emerged out of a brief comment made in P. D. Miller's discussion of this passage in *DW* 34–35 (cf. Mann 1977:98–100) in which he describes lines 7–12 as Baal's march

> to his palace conquering cities and towns on his way. It is quite probable that Ba'al was accompanied by his various hosts, *il t'dr, ġlmm, ḫnzrm, rpum*, etc. He enters his house as the mighty warrior, hesitant no longer to put windows in the palace.

The suggestion that his retinue might accompany Baal in this journey (see 1.5 V 6–9 for their mention and also 1.22 I 8–10) is an intriguing one and suggests a potential understanding of lines 11–14a in which part of the retinue is described. To understand the proposal we must first examine line 13–14a, *bt[ ]b.b'l.bqr[b]/bt*. If we assume that the end of line 12 is a verb related to the capture of cities, then all of line 13 and the first word of 14 must fit together. Almost certainly the break in line 13 conceals a verb, and the most likely reconstruction here is *['r]b*. Thus we could turn the passage into a bicolon reading:

bt ['r]b b'l	Into the house Baal enters,
bqrb bt	Inside the house.

The expression would be a bit stilted for Ugaritic poetry, and it is not particularly persuasive. The problem revolves around the repetition of *bt* at the beginning and end of the line. However, there is a way of taking the first *bt* as belonging to the preceding colon that would allow the rest of line 13 and 14a to be seen as a colon itself. In this proposal one would not see lines 11–12 as a continuation of the numbering of captured cities, but as a reference to Baal's military retinue:

ṯmnym.b'l.m[hrm?]	(With) eighty lords of tr[oops?],
tš'm.b'l.mr[k]/bt	Ninety lords of cha[ri]otry,
['r]b.b'l.bqrb.bt	Baal [ente]rs into the house.

In this understanding, lines 7–10 describe the victory procession, while lines 11–14a depict the entrance of Baal and his retinue into the palace following the march. The use of such numbers for military personnel also appears in the description of "my seventy captains" (*šb'm ṯry*)//"my eighty chiefs" (*ṯmnym zbyy*) summoned into Kirta's house (1.15 IV 6–7; translation, Greenstein, *UNP* 27). Not only the parallelism of numbers with leaders, but also the context of coming to Kirta's house fits

the scene in our passage. Apart from questions about its content, this proposal has two virtues. It accounts for all of the letters that are read for these lines. Furthermore, in view of the line length of *[ʿr]b.bʿl.bqrb. bt* in line 13, it makes sense that *bt* at the beginning of line 13 is to be read with the preceding line in some manner. The proposal also has its drawbacks. There are no parallels to these proposed members of Baal's retinue, and the usage of the word *bʿl* to refer first to members of the retinue, and then to Baal in the third line has no parallel either. Moreover, the first two lines as proposed are lacking grammatically: they are neither nominal clauses in their own right, nor are they linked syntactically to the third line.

In the final analysis, lines 11–12 remain uncertain in meaning, with more than one possible reconstruction. The common understanding, with reconstructed verbs, creates a problem with the reading of *bt* at the beginning of line 13. The proposal for seeing the lines as referring to Baal's retinue solves the problem of *bt*, but is awkward in its construction. We have simply decided not to reconstruct the passage and to leave open the question of its meaning.

Many scholars have seen in this passage a reflection of a ritual in which Baal's statue from the temple at Ugarit was taken to visit shrines in the surrounding towns (e.g., Dietrich and Loretz 1997:1168 n. 112; de Moor 1987:62 n. 277). This seems plausible, although it cannot be confirmed. Another possibility is that it might reflect a ritual, attested particularly at Emar and Mari, which uses the weapon of the storm god in processions. At Emar the divine weapon, apparently an axe (see Fleming 1992:50 n. 7, 206 n. 12) plays a significant part in a number of rituals (e.g., Emar 369, 403, 420, 446, 447; see Fleming 1992:119, 164–66). In Emar 369, a long ritual for the installation of the *entu*-priestess, the weapon stays with her through the ritual (Fleming 1992:165). The fragmentary ritual Emar 403 refers to the divine weapon and then to the god Dagan. Also quite broken, Emar 420 mentions the king, the divine weapon and the gods more generally. Emar 446 is a sustained ritual that mentions how the divine axe takes up residence in the temple of Dagan and then exits in ritual procession (100', 102'–103'; cf. also lines 15, 40, 43, and 88; see Fleming 2000:268–75). Though fragmentary, Emar 447 describes how the divine axe goes after all the offerings made at various temples, including those of Baal and Dagan. From the Emar texts, it is evident that the divine weapon played a part in rituals with processions; by the same token, it is unclear that the weapon is always to be associated with the storm-god

(Fleming 1992:166). Epistolary evidence from Mari is perhaps more telling about the storm-god's divine weapon. Writing from Terqa, one Sumu-Ila reports to Zimri-Lim the king of Mari that the weapons of Addu of Aleppo have arrived in Terqa and they are in the temple of Dagan (A.1858; Durand 2002:15; Malamat 2002). These are evidently the weapons said to have been used by the Storm-god Addu to defeat the Sea and later given to the king when he ascended his father's throne (A. 1968, lines 2'–4'; Durand 1993, 2002:134–35; Bordreuil and Pardee 1993:69–70; *UBC* 1.108–9; Fronzaroli 1997:286–88; Malamat 1998:18, 151–56). In the case of Sumu-ila's letter, the presence of the weapons in Terqa may be viewed as a symbol of its subservient status to Mari; in short, their travel to Terqa may convey Mari's political domination over it. In both the Emar and Mari material, divine weapons move from one site to another, as an expression of divine and human power. Perhaps the literary presentation of Baal's victory tour in 1.4 VII was informed by similar processions involving the divine weapons. At the same time, it is to be noted that the weapon does not go out of town in any of the ritual contexts described above to denote dominance over other towns. Therefore, the parallel drawn stands at a relatively general level of correspondence.

However one reconstructs lines 11–12, it is clear that Baal triumphantly returns to his palace in line 13. As mentioned above, most scholars have read the verb *[ʿr]b* here: "Baal entered into the midst of the palace." One might also propose *[yṯ]b* as a possibility, pointing out its appearance in the somewhat similar line 42 below. Whichever verb was there, the poet uses this line to shift the focus of the story once again to the palace, in order to complete the episode concerning the window, which immediately follows in lines 14–42.

Lines 14–25: Baal's Reversal of His Decision about the Window

Upon entering his palace, Baal announces to Kothar that he has had a change of heart about installing a window in his new home. In the first bicolon of his speech (lines 15b–16), Baal states his decision in a single word, *'aštm*, "I will put/install" (on the meaning of the verb here, see below). The rest of the bicolon is taken up by the name Kothar and two phrases of uncertain meaning. The window is not explicitly mentioned until the following tricolon (lines 17–19). The name Kothar is followed by the expressions, *bn ym//bnm ʿdt*. Of the various proposals for interpreting these phrases (see the surveys in *Baal* 138–41; *SPUMB*

160–61), two general ideas have emerged as plausible. The first is to take them as epithets of Kothar, understanding *bn//bnm* as "son of." The second is to see them as temporal expressions: "this day . . . this very hour" (e.g., Ginsberg, *ANET* 134; de Moor, *SPUMB* 159–61; Pardee 1997a:262). This view assumes that *bn* is not "son," but the preposition *b-* plus sufformative *-n* (so too for *bnm*, with additional mimation). Both interpretations have problems, and certainty about the meaning of these phrases is impossible with our present knowledge. The first problem understanding them as temporal expressions is that *ʿdt* is hardly a term for a period of time in Ugaritic. Instead, it is a spatial one in the preserved texts (cf. 1.15 II 7, 11; 1.100.3) denoting a meeting place or assembly (< **wʿd*).[12] In 1.100.3 it refers to the meeting-point or confluence of the "Double-Deeps," the cosmic oceans (*thmtm*). This makes it an appropriate parallel term to *ym*, "sea." So the known meaning of *ʿdt* in Ugaritic argues for rendering these phrases as "Son of the Sea"//"Son of the Confluence" (MHP), which would then be epithets for Kothar.[13] The second problem is the lack of any unambiguous appearance of the preposition *b* with the *n* sufformative (cf. *UG* 781). On the other hand, the problem with accepting the phrases as epithets is that these titles would be unique in the preserved Ugaritic corpus. Although Kothar appears numerous times in the literature, he is never otherwise referred to with these epithets. Nor are they obvious descriptions of the god.

The significance of such putative titles is not easy to discern. Smith (1985:105–14) has argued that information about Kothar in Ugaritic texts and later literature associate him with the sea and that these epithets could reflect such an understanding. Kothar's abodes are Egypt (*ḫkpt*) and Crete (? *kptr*) mentioned in 1.1 III 1*–1 (*UBC* 1.167, esp. n. 92) and 1.3 VI 14–16 (see the Commentary above on pp. 378–9) lying across the Mediterranean from Ugarit. The corresponding Phoenician figure

---

[12] Cf. BH *môʿēd* (*UBC* 1.232, 286–87) and post-biblical *waʿad* (Jastrow 374).

[13] Not necessarily "son of Yamm," i.e., the god (see Pardee 1997a:262 n. 182). It is to be noted that *bn ym* occurs in one other context, namely 1.23.59 where it is plausibly rendered either "sons of the sea" or "sons of a day" (i.e., "one day old" infants). Many commentators prefer the latter since the "beautiful gods" are newborns. Others observe that they seem to be born near the sea. This title seems to be juxtaposed to *ʾagzrm ym*, which has been taken to be "cleavers of the sea" or the like (*CML*[2] 126). No proposal has been made that would support this possibly parallel title as a temporal expression. Even if the temporal interpretation for *bn ym* were to be preferred in 1.23.59, it may have no real relation to the *bn ym* in our passage.

Chousor was thought, according to the euhemeristic reckoning of Philo of Byblos, to be the first of all men to sail (PE 1.10.11; Attridge and Oden 1981:44–45; on this and the following points, see *UBC* 1.255–56). Ptolemy's History records a river Chousor named according to this god. Finally, there is the enigmatic reference to Kothar in relationship to Shapshu and to Tunnan, the dragon image of Yamm/the sea in 1.6 VI 49–53 (see above p. 248). The information about Kothar's maritime background is thus quite wide and varied, but not well understood. Moreover, it cannot be said that such information proves that *bn ym* and *bnm ʿdt* in 1.4 VII 16b–17 are divine titles. However, viewing them as epithets is contextually and grammatically compatible with initial addresses in divine direct discourse, and the use of *ʿdt* elsewhere in Ugaritic comports with this interpretation. We have thus tentatively translated them this way.

A few scholars have translated the verb *ʾaštm* in line 15 as "I will appoint," rather than "I will install" (e.g., *CML*[1] 101; *TO* 1.216; Pardee 1997a:262) and take Kothar as the object of the verb, rather than as a vocative. While grammatically possible, this seems rather unlikely. Kothar is clearly present since he directly responds to Baal's speech. Thus it seems more likely that Baal is addressing Kothar in these lines, rather than speaking of him in the third person. Furthermore, the verb **šyt* has been used with the meaning "to install" four times in the previous discussion of the window (1.4 V 58–VI 15), and thus it seems more likely that it retains that meaning here.

The first two lines of the tricolon in lines 17–19 use language similar to that in the previous rounds of conversation over the window (1.4 V 61–62, VI 5–6, 8–9). The only changes involve the use of the verb *yptḥ* here rather than *ʾašt* (the poet has already used the latter in line 15) and the switching of the order of the word-pair *ḥln//ʾurbt*, which appears as *ʾurbt//ḥln* in V 61–62, 64–65, VI 5–6, 8–9. The verb **ptḥ* is used in lines 17 and 19, then again in 25 and 27. In line 17, the form has been taken as either active or passive. Since it seems most likely that Baal is addressing Kothar directly in lines 15–16 (Kothar, after all, directly responds to Baal in lines 21–25), then it is unlikely that Baal would refer to Kothar in 3rd masc. sg. active in these lines. It is much more likely that *yptḥ* should be read as passive. The reversal of the word-order of *ḥln//ʾurbt* in lines 17–19 was taken by Gevirtz (1963:39–40), followed by Watson (1981a:182 n. 12), as a poetic means of indicating Baal's reversal of his previous stand about having a window. While this is plausible, it may be reading too much into this change.

Line 19 concludes the tricolon by repeating the verb (**ptḥ*) from line 17 and substituting *bdqt ʿrpt* for the reference to the window in the palace. The clear parallelism of this line with the preceding two indicates the close relationship between the window and the "break in the clouds" described here. While the broken *[ ]tḥ* can be confidently reconstructed with the verb **ptḥ*, there is less certainty about whether the verb should be read as 3rd ms, 3fs, or 1st s, i.e., *[yp]tḥ*, *[tp]tḥ*, or *[ʾip]tḥ*. All three have been proposed. Those restoring *[yp]tḥ* have interpreted it in two primary ways. Some (*TO* 1.216; *CML*[1] 101; Pardee 1997a:262) understand the references to Kothar in lines 15–16 not to be direct address, but objects of the verb *ʾaštm*; thus "I will charge Kothar…let him open a window…and open a break in the clouds." In this case, the subject of *[yp]tḥ* is Kothar. A second interpretation of reading *[yp]tḥ* understands it as an impersonal or passive form (cf. Dietrich and Loretz 1997:1168, based on their reconstruction in CAT 20; *CML*[2] 64; Smith, *UNP* 136): "Let a break in the clouds be opened." One could instead take the verb as a passive here and reconstruct *[tp]tḥ* for the verb (since *bdqt* is almost certainly feminine), which is plausible epigraphically and contextually. Thus, the proposal to read *[tp]tḥ* is quite reasonable. Construing the form *[yp]tḥ* as impersonal results in the translation, "Let one open a break in the clouds." This rendering is grammatically possible, though awkward in the context. The final proposal, first offered by Albright (1934:129), is to take the verb as first singular, "and I will open a break in the clouds" (see also Albright 1934:129; Aistleitner 45; Prosser 2001:472–73). The best argument for this reading is the fact that in the following narrative about the building of the window//break (lines 25–29), the poet explicitly names Baal as the one who makes the break in the clouds. Thus it is natural that in his speech authorizing Kothar to build the window, the verb in line 19 should refer to Baal (cf. Prosser 2001:472–74). One final proposal that should be mentioned is Tropper (2002:801–2), who inexplicably[14] insists that the lacuna in line 19 only preserves room for one letter between

[14] Tropper appears to rely much too heavily on Virolleaud's facsimile, apparently unaware that Virolleaud never attempted to provide accurate placements of the letters in the drawing. A simple comparison of his facsimile of 1.4 VII 18 and 19 with our photo shows this clearly. On the tablet, the last letter of line 18, *l* is largely over the final letter of line 19, while in Virolleaud's drawing it is situated over the *r* of *ʿrpt*. Virolleaud, following the tradition of his time, drew relatively standardized versions of the letters and did not try to depict the individual characteristics of each letter. Another good illustration is his drawing of 1.21, where line 5 appears to break across the margin

the *w* and *th*. He thus proposes either *[p]tḥ* or *[ʾi]tḥ* as the reading. But there is easily enough room in the lacuna for any of the three proposals discussed above. It seems to us that none of the readings (except Tropper's) can be rejected out of hand. However, the reconstruction *[yp]tḥ* seems the least likely. Those who take Kothar as the object of *ʾaštm* are forced to give a very different meaning to that verb (i.e., "I will appoint Kothar"), which seems unlikely, as discussed above. The reconstruction *[yp]tḥ* as a passive or impersonal seems unlikely, since as a passive it does not agree in gender with the presumed subject, while an impersonal rendering seems unnecessarily awkward. Thus *[tp]tḥ* as a passive, matching the passive of line 17, "Let a break in the clouds be opened," or *[ʾip]tḥ*, matching the active voice of its parallel in line 27b–28a, "Let me open a break" seem to be the most likely restorations. While the latter would match the narrative account in line 27, we cannot be certain that the speech and the narrative fulfillment correspond that completely, so both possibilities must be left open.

The word *bdqt*, "break, rift, fissure," only occurs in this passage (lines 19 and 27), but its meaning seems certain. One can compare BH *bedeq*, "fissure, break, rent," used for cracks in the temple walls in need of patching in 2 Kgs 12:6–9, 13, 22:5, and for seams in a ship in need of caulking in Ezek 27:9, 27, as well as the denominative verb **bdq*, "to repair (cracks)" in 2 Chron 34:10 (cf. Greenfield 1958:219 n. 11, 221 n. 24). Pope (MHP) noted that Akkadian *batāqu* is used in the context of piercing dikes and canals to divert water (*CAD B*:163). The verb sometimes appears with the cognate noun *butuqtu* for cutting a sluice or diverting water to a channel (*CAD B*:357). Pope (MHP) also noted Arabic *fataqa*, "to undo the sewing (of a garment)," "to rip open," "to slit open" (citing Wehr 694). Pope also noted the nominal form *fatq* includes not only a rip or tear in a fabric, but also a cleft, crack or fissure (citing Wehr 695). Leslau (87) also compared Geez *bedeq, bedaq*, "cracks in a wall." Similarly, BH *bedeq* refers to a breach, whether in a temple (2 Kgs 12:6, 7, etc; 22:5) or in a ship (Ezek 27:9, 27; *DCH* 2:97). Post-biblical Hebrew *bidqâ* applies to a burst of water from a broken dam or a sudden shower of water. Setting the *bdqt* in the clouds here in 1.4 VII 19 evidently applies an architectural sense to an explicitly

---

line on the right. In reality, the line ends well to the left of the margin line. The same thing occurs in the drawing of 1.22 (see Pitard 1992a:48, fig. 13; 62, fig. 25).

atmospheric context. The close relationship of this line to the previous two reveals what the audience knew and assumed of the narrative, that the window of the storm-god's heavenly palace is none other than the break in the clouds that produces the rains. It may reflect that fact that one can often see rain falling from one part of a large storm cloud. This looks like a particular break in the cloud through which the water is pouring. It also seems likely that this image presupposes that the rain comes from the cosmic waters that exist above the sky, a similar concept to that in the Enuma Elish and Genesis 1.

The noun *ʿrpt* is regularly understood to mean, "cloud" (see H. R. (C.) Cohen 1995:9–10). Fleming (2000a:493–95) has suggested a further nuance for the word, based on the occurrence of a possibly-related Akkadian term, *ḫurpatum*, which at Mari means "tent" or "tent cover" cf. the discussion of this word in Durand 1988:114–15). He suggests that the use of *ʿrpt* in Baal's title and here in the passage might evoke the sense of the cloud as a tent moving across the sky. This seems possible, but remains speculative, since there is no clear hint discernable in the texts that *ʿrpt* has any relationship to tents in Ugaritic.

In line 20, Baal ends his speech with an acknowledgment of Kothar's earlier position on the matter. This line represents Baal's nod of acquiescence to Kothar's previous urging. Kothar's response (lines 21–25) is another of the rare delightful pieces of simple character exposition. He laughs, clearly at his prediction having been shown to be right, and, almost certainly in a good-natured way says, "I told you so!" In the final line, he quotes his earlier prediction (1.4 VI 2, 15) almost verbatim, but with an additional energic *n* to the verb, thus giving an additional emphasis to it: "I truly told you, O Mightiest Baal, 'You *will* reconsider my word."' The first line of Kothar's speech could also be rendered as a question: "Did I not tell you, O Mightiest Baal?" Kothar has a knack for making predictions that come true (Smith 1984c; *UBC* 1.336). In 1.2 IV 8–10, the craftsman-god informs Baal that the storm-god will defeat Yamm (see Obermann 1947; Smith 1984c:379). Chousor (= Ugaritic Kothar) had the gift of prophecy, according to Philo of Byblos' *Phoenician History* (*PE* 1.10.11; Attridge and Oden 1981:44–45; Baumgarten 1981:14): he "practiced verbal arts including spells and prophecies" (*logous askēsai kai epōdas kai manteias*). Kothar's speech perhaps holds a particular efficacy, a sort of verbal or incantational magic analogous to the marvels that he works with weaponry (1.2 IV), metals (1.4 V) and wood (1.17 V).

Lines 25–42: The Installation of the Window and Baal's Victorious Theophany

Finally, in lines 25b–29 the window is installed. The tricolon in lines 25–28 is the narrative execution of what is ordered in lines 17–19. As Fenton (1969) has shown, the narrative depiction commonly uses the indicative verb form proximate to the volitive form used in the speech; in this case, the jussive **yqtl* form in the speech is followed by the prefix indicative **yqtl* form. We have argued that the form in line 17 is passive, so it seems likely that the form in 25 is also. If so, the subject is understood and may be Baal, who is explicitly named as the subject of the same verb in line 27b–28a. In line 27, *yptḥ* is certainly active, "Baal opened," which may indicate that the damaged verb in line 19 was also active, and thus *ʾiptḥ*, "I will open." However, it is also possible that both appearances of **ptḥ* in lines 17 and 19 are passive, while both verbs in lines 25 and 27 are active. In either interpretation, the identity of the implicit subject of lines 25–26 is uncertain; it may be either Baal or Kothar. Kothar is presumably the actual builder of the window, but the tradition of attributing royal building to the king (cf. 1.4 VI 36–38) also allows for this passage, which is after all fairly cursory in its description, to be understood as referring to Baal as the builder (i.e., official sponsor). A few scholars have interpreted lines 25b–27a (and sometimes more) as a continuation of Kothar's speech: "Let an aperture be opened in the house, a window amid the palace" (Dietrich and Loretz 1997:1169; *UL* 36; *Thespis* 197; de Moor 1987:63; Wyatt 1998:109). But this seems unlikely, since it would mean that the poet does not actually narrate the installation of the window in the story. That would be surprising because of the importance of the event. It seems preferable to view these lines as narrative.

With the window built, the palace complete, Baal issues his voice, the thunder, across the world, announcing his royal (and implicitly his fructifying) presence to the world. The description of Baal's grand theophany may be divided into three parts: (1) the uttering of Baal's voice (lines 29–30); (2) the quaking of the earth in response (lines 31–35a) and (3) the fleeing of Baal's human enemies (lines 35b–37a), Baal's taunting question for them (lines 37–39) and the final, climactic image of the god facing his enemies with his cedar spear (which is the lightning) lifted in his hand (lines 40–41). This general motif is attested elsewhere in West Semitic literature (see, for example, Isa 24:18–22; 2 Sam 22:8–18 = Ps 18:8–16; see *CMHE* 147–63).

This portrait of Baal is certainly the one that was central to his cult at Ugarit. This is the ruler of the earth whose home was on Mt. Sapan and in the temple on the acropolis within the city. Although the mythic cycle may also show Baal defeated for a while by Mot, myth is not conceived in strictly linear terms. Baal is always the mighty king who sends the rains and who terrifies his foes with his thunder. This image of Baal is the central point of the Baal Cycle (*UBC* 1.98–99) the Yamm episode moves toward it, the palace episode explicitly deals with it, and the Mot episode will also confirm it in its concluding scene (1.6 VI 22–35).

The palace/temple of Baal on Mount Sapan was clearly conceived as the central location for the god mythically, cultically, and legally. His presence on the mountain is of course quite important in the Baal Cycle. But Baal of Sapan (or in Akkadian, Mt. Ḫazi) is an important figure in both the ritual and legal texts from Ugarit. In the sacrificial lists, *bʿl ṣpn*, "Baal (or: the Lord) of Sapan," as the object of offerings occurs quite often (e.g., 1.46.14; 1.109.9, 29; 1.112.22–23; 1.130.7, 9; 1.148.10, 27). In the legal texts, he is called upon as guarantor of contracts under the name *ᵈIM bêl ḫuršān Ḫazzi*, "Baal, the lord of Mt. Hazi" (cf. RS 16.144:12, 16.157:27; 16.238:18; in *PRU* III:76, 83–84, 107–08). (The equivalence of the Ugaritic and Akkadian mountains is indicated by the god lists, 1.47.5, 1.118.4 and the parallel Akkadian version RS 20.024:4; cf. Pardee 2002:14.) He is certainly the same god who is also called *bʿl ʾugrt* in the liturgical texts (e.g., 1.119.3, 12, 21'–22'; 1.112.23; 1.130.11). This seems most clear in the god lists, where *bʿl ṣpn* is listed after El and Dagan, and *bʿl ʾugrt* does not appear at all (1.47.5//1.118.4; 1.148.27). The identification of these two manifestations of Baal suggests that on occasion the locations of Mount Sapan and Ugarit were ritually merged, and the identity of the temple in which the king worshipped the god was joined with that of the divine palace on Sapan. The process of identifying Mount Sapan, the god's primordial mountain, with his temple in the royal city finds a striking analogy in Ps 48:3, which identifies the recesses of Sapon with Jerusalem. A connection between Yahweh's waters, Sapon, and the clouds is also found in Job 26:7–8 (Pope 1973:163, 165; Weinfeld 1973:425–26). With the capital city implicitly associated with the mountain, Baal's theophany emanates from his heavenly palace on Mount Sapan, but also through the sacred sanctuary in the city. The use in the Hebrew Bible of the same names for the storm-god's abode, not to mention the same divine enemies such as Yamm, Leviathan and Tannin, indicates

that Israelite religious literature belongs to the long West Semitic literary tradition to which the Ugaritic religious narratives are an earlier witness (see Koch 1993a; Fauth 1990).

The account of the theophany begins with Baal's sending forth of his voice, the thunder (lines 29–30). In line 29, it is called *qlh qdš*, "his holy voice," emphasizing the sacral nature of the thunder and the thunderstorm within the context of the narrative. The idiom "to give the voice" (*ytn/ntn ql*) is well attested in West Semitic contexts, including the Hebrew Bible (e.g., Ps 18:14//2 Sam 22:14; Ps 46:7; Jer 25:30; Amos 1:2; Joel 4:16). In a letter of king Abimilki of Tyre to his Egyptian suzerain, Akhenaten (EA 147:13–15), the vassal compares his lord with the Egyptian sun-god, Re, and the Syro-Palestinian storm-god, Baal. The Egyptian king is one "who gives (**nadānu*) his cry (*rigmašu*) in the heavens like Addu and all the whole land trembles at his cry" (*ša iddin rigmašu ina šamê kīma Addi u tarkub gabbi māti ištu rigmašu*) (see Moran 1992:233; *ANET* 249; *Thespis* 196; *CMHE* 150–51; Weinfeld 1973:423 n. 23; Kloos 1986:49; cf. the Commentary to 1.4 V 6–9 above on pp. 560–61).

The reconstruction of the second line is uncertain, but the commonly accepted proposal, *yṯny bʿl ṣ[ʾat š]pth*, literally "Baal reiterates the ut[terance of] his [li]ps" is quite plausible and makes a suitable parallel for *qlh qdš*. The verb **ṯny*, "to do again, repeat, reiterate," fits nicely into the context, as thunder continually rolls across the land. It also forms wonderful sonant parallelism with *ytn* in the previous line.

As a result of Baal's thunder in lines 29–30, all of nature is convulsed. Lines 31–35a describe this reaction of the earth with powerful, formulaic imagery. All four cola in this section are broken, but with the new readings recorded above, the general flow of each line is discernable. Most commentators reconstruct the first part of line 31 as *qlh q[dš]*, a suitable restoration given this phrase in line 29 (e.g., *CMHE* 149; Dietrich and Loretz 1997:1169; *Thespis* 197; *ANET* 135; de Moor 1987: 63; *MLR* 89; Pardee 1997a:262; Smith, *UNP* 136; Wyatt 1998:109). The rest of line 31 has been more problematic. Our new, somewhat tentative reading of the verb, *kpr*, here meaning, "to cover," fits into the context reasonably well (cf. Arabic *kafara*, "to cover," BH *kāpar*, "to cover" in Gen 6:14, and *D*-stem *kippēr* in Gen 32:21, "let me cover his face," and as the underlying meaning of "to atone," i.e., "to cover one's sin"). One cannot entirely rule out a reading of *wpr*, assuming a verb derived from *prr*, "to be broken, powerless" (cf. Akkadian *parāru*; cf. Cross *CMHE* 149; Ben-David 1980). Also slightly possible is *wtr*,

proposed by de Moor (*SPUMB* 162), from the root **trr*. This reading has the advantage of being attested with *ʾarṣ* in the Baal Cycle (1.4 V 21, *wtr ʾarṣ*, where we translated, "the earth shakes"; see also 1.17 VI 46). The problem with this reading is that the horizontal wedge that would be read as *t* seems too thin and too high on the line to be that letter. Our proposal to read *kpr* appears to follow the traces more closely. If this reading is correct, then *ql* is the subject of the sentence. One should note the description of Marduk as Adad in Enuma Elish VII:119–121, where Adad's voice, the use of a verb, "to cover," and perhaps even the break in the clouds all appear together: "Adad shall be his name, the whole sky may he cover, may his beneficent roar ever hover over the earth, may he cut the shape of the clouds" (Weinfeld 1977–78:245 n. 15). If *wpr* is correct, then *ʾarṣ* is the subject, and the line would read, "At his holy voice, the earth was powerless."

Our new readings of lines 32–35a help to clarify the picture in this unit. The recognition of *ql* at the beginning of the line indicates the repetition of the word, "voice" in line 32, which ties the line to the previous one. The following word is broken away, but the reading and meaning of *ǵrm tḫšn* are clear: "the mountains tremble." The missing word is most likely an adjective modifying *ql[h]*. Line 33 is the most damaged line, with only the first three letters, *rtq*, preserved. It seems, however, pretty clear that the word *qdmym* at the beginning of line 34 belongs to the same colon as *rtq[*. Since it appears that the following line (34b–35a) shows a very close parallel relationship with line 32, it seems reasonable to assume a closely parallel colon in line 33–34a. Line 32 refers to mountains (*ǵrm*), and 34 talks about "the high places of the earth" *bmt ʾarṣ*. Thus it seems probable that line 33 referred to a geographical feature of a similar type. We have thus reconstructed *ǵrm] qdmym*, "the ancient mountains" (so de Moor 1987:63; *MLR* 89; Dietrich and Loretz 1997:1169; Wyatt 1998:109). The idea of ancient mountains is a formula found in BH, especially in the phrase *harĕrê qedem*, "ancient mountains," in Deut 33:15. For the use of *qdmym*, "ancient" at Ugarit, see the two references to "the ancient rapiʾuma," *rpʾim qdmym*, in 1.161.8, 24. Other understandings of *qdmym* have been proposed. A number of scholars have read the letters as two words, *qdm ym* "east (and) west" (Aistleitner 45; *CML*[1] 101; *Thespis* 197; *ANET* 135; *DW* 35). While this is possible, the meaning is not obvious for the context of the parallel cola, nor are there other attestations of these two words used in such a fashion in Ugaritic. Others have rendered the unit as "before Yamm" or "along the sea" (*TO* 1.217; *CMHE* 149;

MLC 209). Again, the broken context cannot rule this out, but there is no other reference in this passage to divine enemies that would place a reference to Yamm into a reasonable context, nor any other reference to the sea that could support the other reading. Overall, the greatest likelihood is that *qdmym* is an adjective modifying a word relating to mountains or the like.

The reading at the beginning of the line, *rtq[*, is certain, but the meaning is very obscure. There is an attested root **rtq*, which in its cognate forms in Arabic, Akkadian and BH means, "to join together, bind" (cf. *HALOT* 1300; *CAD* R 218; *DUL* 749). The word seems rare, appearing only in a lexical text in Akkadian, and probably only once in the Hebrew Bible (Nah 3:10; cf. the Qere of Qoh 12:6). Such a meaning in our context is not impossible, and we could read the word as a *G*-stem passive participle, *rtq[m ǵrm] qdmym*, "the ancient mountains are bound." But the other two verbs around this line have to do with shaking; thus "to be bound" seems awkward here. We most tentatively propose reading *rtq[ṣ*, here, a *Gt*-stem form from the root **rqṣ* meaning "to leap up" (attested in Ugaritic, cf. 1.2 IV 13, 15, 20, 23), or perhaps *rtq[d*, a similar form from **rqd*, "to skip, dance," known also in Ugaritic (*mrqdm*, either a musical instrument accompanying dance or dancers, cf. 1.19 IV 27; 1.108.4–5) and from BH and Akkadian (cf. *HALOT* 1288; *CAD* R 166–67). The image of mountains leaping or dancing during a thunderstorm theophany is found in Ps 29:6: "He makes Lebanon skip/dance (*yarqîd*) like a calf" (see also Ps 114:4, 6). This imagery would be perfectly at home in our passage. The primary problem is identifying the grammatical form of the word in such a case. The attested *Gt*-stem suffix forms in Ugaritic all have a prosthetic *ʾ*aleph (*UG* 528–29), so we would expect *ʾirtqṣ* here in that case. The infinitive form of the *Gt* is not certainly attested, and perhaps our form could be such. However, this remains problematic, so the reconstruction must remain very tentative indeed.

The reading of the final line of this unit, line 34b–35a, seems secure. The expression *bmt ʾa[rṣ] tṯṯn*, "the high places of the ea[rth] tottered," may be compared with Ps 99:1b, as part of a theophany, "the earth quakes" (*tānûṭ hāʾāreṣ*). BH **nwṭ* seems to be a biform of Ugaritic and Modern South Arabian **nṭṭ* (*TO* 1.166 n. b; Leslau 409; see also Rendsburg 1987:627). The Ugaritic verb **nṭṭ* describes the trembling of feet in fear (1.3 III 30; 1.4 II 17; see also 1.82.9; *DUL* 653).

In lines 34–35, Ugaritic *bmt ʾa[rṣ]* is a construct phrase. The first word is a feminine plural noun that has more than one meaning. The

primary meaning of the word appears to be anatomical, referring to the "back" (Emerton 1997:118–19; Kogan and Tishchenko 2002:321–23, 331), as attested in 1.4 IV 14–15 and 1.19 II 10–11. In 4.247.17 the word appears in a list of meat deliveries, including *ʿšt bmt ʾalp mrʾi*, "ten rumps of fatted cattle." The other attestations of the Ugaritic word also conform to this meaning. Emerton (1997:118) objects to this interpretation of the word in 1.5 VI 21–22, arguing that El would have to be a "contortionist" if the passage in which he gashes himself on his *bmt* refers to his back. But laceration of one's back is not as difficult as Emerton evidently imagines. The phrase *bmt ʾarṣ*, perhaps literally, "the back of the earth" (cf. Kogan and Tishchenko 2002:331–32) enjoyed a long literary career in its association with storm-theophany. Crenshaw (1972) noted the pertinent biblical passages, but did not include a discussion of the helpful backdrop to them provided by our passage. In Deut 32:13 (*CML*[2] 65 n. 5; cf. Hab 3:19), the poet describes Yahweh as having caused Israel to ride (**rkb*) upon the "back of the earth," the context suggesting that this means "the heights of the earth" (Ketib: *ʿal bāmôtê ʾāreṣ*; Qere: *ʿal bomotê ʾāreṣ*). The metaphorical context plays on the old traditional storm theophany, captured also in Baal's title, "Cloudrider" (*rkb ʿrpt*). Both this title and Deut 32:13 presuppose the tradition of the divine chariot driven by the Storm-god, a picture also underlying the reference to the divine horses in Hab 3:15. The divine warrior's treading or marching is an alternative expression for the manifestation of the storm-theophany at "the heights of the earth." According to Amos 4:13 and Micah 1:3, Yahweh is said to tread on "earth's heights." The doxological description of the divinity in Amos 4:13, according to Crenshaw (1972:43), "refers to Yahweh's conquest of his foes." In this respect, this conclusion resonates with Baal's conquest of his enemies below in lines 35–37. (Crenshaw's further suggestion, that this presentation of conquest in Amos 4:13 specifically involved "Canaanite-influenced sanctuaries," exceeds the evidence.) The background of this image might lie in the meteorological fact that eastward rain-bearing clouds coming from the Mediterranean release more moisture on the higher mountain ridges. Perhaps storm-gods, both Yahweh and Baal, drop more rain on "the high places of the earth," thus experienced as the central site of theophany (cf. Psalm 29). The storm-gods are also conceived as taking their stand on mountains in battle against terrestrial enemies (*EHG* 54). Micah 1:3, however, uses the image of divine treading in a theophany not of Yahweh as storm-god with rains, but as the god of the dry scirocco-storm (Fitzgerald

2002:108 n. 82). In this case, the image of divine treading on the heights was extended in its application. In his discussion of the biblical texts, Crenshaw (1972:52) regarded the use of this language as metaphorical, except in the case of Hab 3:15. At the same time, metaphorical language is rooted in religious experience, and given the earlier attestation in Ugaritic and in the later metaphorical uses in the Bible, it may be asked whether Israelite religious tradition in-between possessed a full-blown mythic tradition of Yahweh as the storm-god on the heights or "high-places." The question of the relationship between these poetic contexts in the Bible and the so-called cultic "high places" (*bāmôt*) lies beyond this discussion (for bibliography and discussion, see Emerton 1997). Based on the earlier Ugaritic and Hebrew poetic references, it would appear that mountain heights as the site of storm-theophany served to designate cultic installations, much as the "holy mountain" (see above p. 58) as a conceptual designation for sanctuaries. One might speculate that the criticism of the installations designated by this word in the Deuteronomistic History may reflect competition between local *bāmôt* and the national shrine in Jerusalem.

Lines 35b–37a describe the reaction of Baal's enemies to his thunderous manifestation: they take to the woods and the mountainsides. Yahweh's enemies likewise hide in the rocks before his theophanous appearance (Isa 2:10, 19; Rev 6:15–16). The fleeing foes of Baal are here called *'ib* (cognate with BH *'ôyēb*, "enemy" but patterned like *gēr* and the abstract *'ēbâ*, "emnity"; cf. Ezek 35:5) and *šn'u* (probably the *G*-stem active ptcp., cognate with BH **śn'*; cf. *BDB* 971, #3; Ringgren, *TDOT* 214); the latter term may carry a legal nuance designating those in league with others against someone, not simply an emotional expression (see Szubin 1995). These figures are not explicitly specified as to whether they are human or divine. Ps 104:7–9 names the cosmic waters as the one who flees at the sound of Yahweh's thunder. Yet the topographical features mentioned in lines 35b–37a and the overall context suggest human rather than divine foes.

Baal responds to the flight of his enemies by lines 37b–39 with an ironic, taunting question to them: why are you trembling? There can be little doubt about the tone in which the question is proffered. The image of the god taunting his enemies is also found in Israel, particularly in Ps 2:1–6, esp. v. 4: "The one who dwells in heaven laughs, the Lord mocks them." Cross (1998:54–55, n. 7) has proposed an alternative interpretation of these lines, suggesting that *lm* is not the interrogative, "Why?" but rather the emphatic *l* with and enclitic *-m*. He

would thus read, "You, O enemies of Hadd, shall indeed tremble." This too is plausible and fits the tone of Baal's response quite well. One of the terms for the enemies is different from those in lines 35–36. It is *nṯq*, probably a participle in construct, "those who wield a weapon" (cf. BH *nōšĕqê qešet*, "those who wield a bow" in 1 Chr 12:2; 2 Chr 17:17). Baal is referred to in this bicolon with an unusual parallel pair, *hd*{*t*}*//dmrn*. The first seems to be a scribal error for *hd*, a name of Baal that usually appears as the "B-word" parallel to the "A-word" *bʿl*. The title *dmrn*, "the Powerful One," is quite rare, only attested otherwise in a somewhat unclear context, apparently in parallelism with Baal (1.92.30–31; cf. 7; see Dijkstra 1994:121). The root appears without coalescence of **ḏ* > **d* in two PNs, *ḏmrbʿl*, "Baal is powerful" (4.75 II 5; 4.731.1; cf. 4.261.8) and *ḏmrd*, "Hadd is powerful" (4.682.10; 4.775.3) as well as in the PN *ḏmrn* (4.423.1), spelled with final *-n*, comparable to the form of Baal's title, *dmrn*. As first observed by Cassuto (*BOS* 2.188–92), this Ugaritic word almost certainly underlies the title, Demarous, given to Zeus (the Greek name used for Baal-Hadd), in Philo of Byblos' *Phoenician History* (*PE* 1.10.18–19; Attridge and Oden 1981:54–55; see the discussion in *SPUMB* 166–67. The verb form *ḏmr*, indicates that the connotation of the strength in this title focuses on strength for protection, more than for combat as such. Soldiers in 1.3 II 13–15 are called *ḏmr//mhrm*, perhaps suggesting a defensive function for these battalions (see the Commentary above on pp. 157–58). Other etymologies suggested for *dmrn* (surveyed by Wyatt 1992b:411–12) are unconvincing.

Lines 40–41 are difficult and have produced a great deal of controversy. Several scholars have interpreted them as a continuation of Baal's speech in lines 38–39 (some add line 42, thus producing a speech of Baal from line 38 to 52; so Aistleitner 45; *CML*[1] 101; *Thespis* 197–98; *CML*[2] 65; *MLC* 209; *MLR* 90; Pardee 1997a:263). But the third-person references to Baal in these lines suggest that the poet is reverting back to narrative action here (so *TO* 1.218; Coogan 1978:105; Dietrich and Loretz 1997:1170; *ANET* 135; Gordon 1977:100; de Moor 1987:64; Wyatt 1998:110–11). The second major interpretational issue centers on the question of how the words should be divided into cola. Several authors have construed them as a bicolon: *ʿn bʿl qdm ydh/ktġḏ ʾarz bymnh*, with a translation like "The eye of Baal directs/precedes his hand, As the cedar shakes in his right hand" (e.g., *TO* 1.218; *ANET* 135; Gordon 1977:100; *MLC* 209; Pardee 1997a:263; Xella 1982:119). There is a grammatical problem with this view: *ʾarz* is masculine but the verb *tġḏ* is feminine (**ġḏy*, "to shake, move"; see *DUL* 317; cf. Pardee

1997a:263 n. 191; Wiggins 2000:589). Renfroe (1992:33–34; see also Pardee 1997a:263) tries to deal with this problem by suggesting that the "eye" of Baal in the first line is also the subject of the verb in the second line. Thus he translates: "The Lord's eye is in front of his hand, When it *speeds* the cedar from his right." In terms of the parallelism, this rendering seems a bit forced, and the understanding of the cedar "from" the right as opposed to being "in" the god's right hand fits less well with the iconographic depictions known for the storm-god that we will discuss below. Other interpreters (e.g., de Moor 1987:64; Dietrich and Loretz 1997:1170; and Wiggins 2000:589) have taken the lines as a tricolon. This approach solves the problem of the subject/verb agreement, and, although it still remains uncertain, is followed in our translation. The resulting syntax, with a nominal clause following a verbal clause in parallelism in the same colon, is found elsewhere in Ugaritic poetry (e.g., 1.3 I 18–19; 1.23.8–9).

One other suggestion to deal with the problem of *ktġḏ*, while allowing for the unit to be read as a bicolon, was proposed by Sanmartín (1978a). He compared *ktġḏ* with Akkadian *kutāḫu*, "lance" (*CAD K*:603), which he posited as a Hurrian loan-word **kutāġ(u)ḏ-* with a sufformative **ssi* that shifts to *-ḏ* in the Ugaritic word. He thus read, "Das Auge des Bʿl kommt seiner Hand zuvor,/eine k.-Lanze aus Zedernholz in seiner Rechten." The proposal, while possible, requires accepting some uncertain assumptions. It seems preferable to derive *tġḏ* from **ġḏy*, to see *yd* as the subject, as it is the immediately antecedent feminine noun, and to understand this unit as a tricolon. One last ambiguity centers on the interpretation of the word *qdm* here. It could be understood in this context either as "forward" or "eastward." Because we know of no reason why Baal in this particular situation should look toward the east, we have chosen to render it, "forward," assuming that it means that as he holds his spear, ready to send it forth, he is looking directly toward his cowering enemies.

In spite of the ambiguities of interpreting these lines, it is clear that they present the figure of Baal standing with his cedar weapon raised in one hand. This seems closely related to the depiction of the god on the famous "Baal au foudre" stele found near the temple of Baal at Ugarit, which depicts Baal brandishing a mace in his upraised right hand and a stylized tree/spear in his left hand pointed downward (*ANEP* #490; see *UBC* 1.107; Bounni and Lagarce 1998: figures 92, 2–3, comparing a stele from Qadbun also showing the storm-god with spear in his left hand pointing downward). The same pose appears on a cylinder seal

excavated at Ras Shamra: the storm-god with a mace raised in his left hand and in his right hand a spear, described by Cornelius (1994:172, pl. 45, BM 5; see also Amiet 1992:81, figure 158; cf. Amiet 1992:78, figure 142): "with the sharp end pointing down, the top of the shaft spreads out into a plant at the top." The North Palace at Ras ibn Hani has yielded a similar seal impression (Bounni and Lagarce 1998: figure 91, 6; see also figures 103–104). Late Bronze Age Emar iconography of the "Syrian Baal" holding his weapon varies from being upraised (as in this passage of the Baal Cycle) or simply being held with the point upwards (see especially F13 in Beyer 2001:303–5). Hehn (1913:86) discusses a lapis lazuli statue of Adad, with lightning in his right hand and at his feet two dragon-like winged monsters.[15]

A Ugaritic text also explicitly refers to this spear of lightning, which is clearly distinct from Baal's *ṣmd(m)*, "weapons" (1.2 IV 11, 15, 18, 23; 1.6 V 3)[16] or *ktp*, "mace" (1.6 V 2) which appear in other stories of conflict[17] (see *UBC* 1.98, 180, 347–48). CAT 1.101.4 appears to call Baal's weapon *ʿṣ brq*, "a tree (or perhaps less literally, a spear) of lightning" (*CMHE* 148; see also Pardee 1988a:120–25, 135–39; Irwin 1983:53–58; Weinfeld 1983:139 n. 94; Lambert 1985b:441–42). The Egyptian magical text, Papyrus Leiden I 343 + I 345, presents a version of the West Semitic conflict myth pertinent to our passage (cited in Borghouts 1978:18–19, #23; see also *ANET* 249; Massart 1954:65):

> The raging of Seth is against the *ʿakḫu*-demon; the grudging (*ḥ̲nd̲n*) of Baʿal is against you! The raging of the thunder-storm—while it thirsts after the water in heaven—is against you!…Then you will taste the things the Sea tasted through his hand. Then the [lion] will make his approach [to you (?)]. Baʿal will hit you with the pine-tree (*ʿš*)[18] that is in his hand. He will treat you again with the pinewood (*ʿš*) spears that are in his hand!

---

[16] For the possible meteorological background of *ṣmd(m)* in this passage, see *UBC* 1.330, 338–41.

[17] For Egyptian evidence for West Semitic *ktp* as a weapon (e.g., Papyrus Leiden I 343, obverse II, lines 2–4), see O'Callaghan 1952, Hoch 1994:337–38 and *UBC* 1.360 n. 255. This word for weapon is attested in western peripheral Akkadian *katapu* at Emar (clearest in 44.14, 17, 18) and at Mari (A.3992.20; Durand 2002:114, 117 with further references). According to *CAD K*:30–31, the word elsewhere refers to a container or the like (see Emar 45.7, 9, 11, said to be of bronze in lines 7 and 9; 46.1–8; 47.1'–5', 7', 10').

[18] Although Egyptian *ʿš* has been traditionally identified as "cedar," Nibbi 1996:42–44 has argued strenuously that it must mean pine instead.

It thus seems likely that the tricolon in lines 40–41 is a verbal representation of the common iconographic motif of the storm god wielding his cedar/pine spear that represents the lightning. This depiction constitutes the conclusion of Baal's great theophany, and is the climactic image of Baal in his full power that the poet wishes to leave with the audience.

A few authors have given a very different interpretation of the final section of the theophany (lines 35–41). They suggest that this section tells of an attack on Baal's land by his enemies, in which they capture the forests and the mountains, and Baal appears powerless to stop them (see *UL* 36; *MLD* 63; de Moor 1987:63–64; Gordon 1977:100). This seems extremely unlikely, as it ignores the larger context of the theophany motif, in which flight of enemies is a significant and common element. Furthermore, it ignores the close relationship between the description of Baal holding his cedar spear and the iconographic depiction of this motif, which is certainly intended to portray the triumphant Baal, not a Baal who is losing his lands to the enemy.

Line 42 appears to act as a summation of the entire story of the construction of Baal's palace: "So Baal sat enthroned in his palace," or "So Baal returned to his palace." Both renderings are possible. The first assumes that *yṯb* here derives from the root **yṯb*, while the second relates it to **ṯwb*. The question might be raised as to whether **yṯb l-* can mean, "to be enthroned in." While the preposition *b-* is often used for enthronement (e.g., CAT 1.101.1–4; 1.108.3–4; Ps 2:4; see Pardee 1975:352, 353; 1976:246), both Ugaritic and biblical texts show that *l-* was also a possible preposition to use for that meaning (1.6 I 58; Ps 9:5). 1.6 I 57–61 represents another example of the ambiguity of the verb-preposition combination. In this passage Athtar ascends Mount Sapan to see if he can measure up to Baal as king. Although he could "turn to" to the throne, it seems much more likely that Athtar "sits on" (**yṯb l-*; so *DUL* 995) the throne, since we are told that his feet do not reach the footstool and his head does not reach the head-rest. In 1.6 V 5–6, as in our passage, the context is amenable to either interpretation. Elsewhere, context might be viewed as favoring **ṯwb l-*, for example, in 1.10 III 13–14 (*UNP* 185) and 1.16 VI 22 (*CMHE* 94 n. 14).[19] In 1.10 III 13–14, Baal seems to be returning to a throne after being away from his house. In 1.16 V 22, the context is slightly more

[19] Note also *lammārôm šûbâ* in Ps 7:8.

ambiguous, yet here Kirta arguably returns to his throne after having been ill. However one translates the line, it is still best to see it as the concluding statement of the story of the building of Baal's palace. The word *bkm* can best be understood as *b* + *k(n)* +*m*, "In this way, thus." It emphasizes the summary nature of the sentence, making it clear that line 42 is not describing a sequential event that follows Baal's hefting of his spear, but rather is drawing the story to its end. It might be compared to the final sentence of the story of Solomon's succession to the throne in 1 Kgs 2:46: "So the kingdom was established in the hand of Solomon."[20]

Lines 43–52: The Conflict Between Baal and Mot Begins: Baal's Soliloquy

This speech of Baal constitutes the beginning of the third episode of the Baal Cycle, the story of Baal's conflict with Mot. Now having established his dominion over heaven (i.e., the divine council) and earth, the storm-god turns his attention to the only area of the universe that has not acknowledged him, namely the netherworld. In this speech Baal shows his determination to notify Mot of his claim to leadership in that realm too. The episode that begins here continues through CAT 1.5 and 1.6, and it is the concluding story of the cycle as we understand it. In those tablets it becomes clear that Baal will not gain full control over the netherworld, death and drought. He will ultimately have to coexist with Mot, but not as equals. Mot will eventually recognize Baal as the superior god thanks in no small measure to El's intervention (1.6 VI 33–35). Baal and Mot will eternally struggle with one another, with the hope and ultimate expectation that life, represented by Baal, will normally prevail over death.

Some scholars have characterized Baal's determination to subdue Mot as an act of hubris on his part (e.g., Pardee 1997a:261 n. 168). However, there is no support for that view in the poem itself. Instead, it appears better to look at how the myth works. It was obvious to the people of the ancient Ugarit that the force of life and fertility was balanced by the force of death and sterility. Most of the time, the rains

[20] A very different proposal for understanding line 42 has been made by Watson (1992b:365), who suggests that line 42 serves "to introduce an interior monologue" for Baal's speech in the following section.

and sun were benevolent and allowed for the people to grow food and prosper. Sometimes the rains would fail, and this would result in lost crops and deprivation. This was part of their everyday existence. It was also natural for them to see this as a struggle between the god of fertility and the god of sterility. The theologians of Ugarit insisted, not surprisingly, that even though death might periodically achieve the upper hand, in the long run, Baal and life would be stronger than Mot and death. Thus the story of Baal and Mot proceeds naturally from the experience of the community and represents the notion that life should seek to overcome death, even if that turns out to be impossible. The people of Ugarit would expect Baal to challenge Mot as part of his character and his divine role in the universe. That he might temporarily lose does not indicate that he acted inappropriately. It is merely part of the easily observable battle between the two gods.

The speech begins in line 43 without any introduction. This is unusual, but not unattested. In cases where the speaker has been the subject of the narrative, the standard speech opening formulae may be omitted (cf. 1.2 I 11–14, 40–41; 1.6 I 4–8; 1.17 I 15–18; 1.19 II 12–15, 19–22). The opening bicolon (43–44) has been variously interpreted, primarily because of the ambiguity of the syntax. The first issue centers on whether the sentence here is a statement or a question. Most translators take it as a question (cf. *TO* 1.218; Dietrich and Loretz 1997:1170; *CML*[1] 101; *CML*[2] 65; de Moor 1987:64; *MLC* 210; Pardee 1997a:263; Wyatt 1998:111), but several see it as a declarative sentence (Coogan 1978:105; *Thespis* 198; *ANET* 135; Gordon 1977:100–01; *MLD* 63; *DW* 36). While the syntax is ambiguous, it seems likely that the bicolon is to be understood as a question. Of those who render it as a statement, only Gordon and Margalit (*MLD*) avoid a significant problem. The others render the bicolon along the following lines: "Neither king nor non-king shall establish the earth as a dominion." The significant problem is that there is no negative particle here to set up the construction, "neither . . . nor." The particle *ʾu* is clearly cognate with BH *ʾô*, "or," and its double use, as in line 43, means "either . . . or," or "both . . . and," or even, "whether . . . or" (see 1.23.63–64; 1.40.19–22; see further the apparent multiple attestations of *ʾu* in *ʾulp* in 1.40). It is not attested with the meaning "neither . . . nor." Instead, that rendering would require a negative particle with the verb. Gordon and Margalit both avoid this problem, but in doing so, they incur unlikely interpretations of the surrounding context.

The two nouns of line 43 are easily understood as *mlk*, "king" and *bl mlk* "non-king." The use of the negative *bl* on a noun is also attested in *bl mt*, "non-death," which is parallel to *ḥym*, "life" in 1.17 VI 28–29. The exact referents of these two words will be discussed below. They constitute the compound subject of the verb *yštkn* in line 44. That verb is generally understood in the sense "to establish," although there is uncertainty about its etymology. One could view the form as a *Ct*-stem verb from **kwn* "to be" (cf. the *C*-stem form in 1.16 V 27), meaning, "to create, or establish for oneself." Or, it could be a *Gt*-stem derived from **škn*, which would likely have a very similar meaning, i.e., "to set up for oneself" (cf. *DUL* 815).

The next ambiguity concerns the relationship between the words *ʾarṣ* and *drkt* in line 44. Are they a construct chain functioning as the direct object of the verb, "the land of dominion" (so *CML*^{2} 65; de Moor 1987:64; *MLC* 210; Pardee 1997a:263)? Or, is *drkt* the direct object (cf. BH *derek*; see 1.2 IV 10 discussed in *UBC* 1.128 n. 22), while *ʾarṣ* is an indirect object, "shall establish dominion on the earth" or the like? The second proposal appears the more likely; the proposed construct "the land of dominion" appears to be quite awkward, with no parallels attested for the idea of "establishing a land." On the other hand, to establish dominion in/on the earth seems to make for a more logical clause (so *CML*^{1} 101; *LC*^{2} 52; Wyatt 1998:111; *Baal* 145).

Based on these grammatical considerations, it seems best to render lines 43–44: "Shall a king or a non-king establish dominion in the earth?" However, the precise identity of the figures is in question: exactly who are the king and non-king of the sentence, and what does this question mean within the context of Baal's speech? Most translators see this question as a general, programmatic, rhetorical challenge to anyone who would try to usurp Baal's dominion over the earth. Many render "non-king" as "commoner," so that the question may be translated, "Can any (other) king or commoner establish dominion on the earth?" or the like (see *CML*^{2} 65; Smith, *UNP* 137). The obvious answer it, "Of course not!" This understanding of the question is plausible. We, however, propose an alternative, which suggests that the question refers specifically to the primary issue of the story that is being introduced here. We would first note that the term *ʾarṣ* is a common name for the netherworld, Mot's realm. It is used twice in 1.4 VIII 8 and 9 very clearly as the designation for Mot's land. We also note that Baal is now thoroughly established as king of heaven and

earth, but has not been recognized by Mot, who sits on his throne in the netherworld as a rival. It may be that this question deals explicitly with the issue of rule over the netherworld: "Shall a king (i.e., Baal) or a non-king (i.e., Mot, as Baal views him) establish dominion in (i.e., over) the netherworld?" If this is the correct understanding of the passage, then it specifically introduces the theme of the story, and it flows directly into the next sentence (lines 45–47) where Baal decides to send messengers to Mot demanding his obeisance. Certainty about the meaning of the question cannot be reached, but it seems more likely that the question has a specific rather than general meaning here at the beginning of the new episode.

To determine the answer to his question, Baal decides to send a message to Mot to demand his obeisance. He expresses his intention to do so in lines 45–49a. The first bicolon, lines 45–47a, involves Baal's means of communicating. He will send a *dll*//*ʿdd* to Mot. Neither word appears elsewhere in this type of context. The second word, *ʿdd*, is readily identified as a word for "messenger." It appears to be related to *tʿdt*, "legation," used of Yamm's messengers in 1.2 I 22, 26, 28, 30 (see also Greenfield 1971:176; *UBC* 1.282, esp. n. 103), and which Ginsberg (1958:62*) and Ross (1970:4–6) both relate to *ʿddn*, in KAI 202:12. It may also be cognate with the damaged verb form *yt(?)ʿdd* in 1.4 III 11, which apparently has a meaning related to speaking. Becking (1986) understands *šlmy hʿd* on a Persian period seal as a PN plus the epithet "the messenger," based on *ʿdd* in this passage (for other first millennium WS PNs with **ʿdd* see *WSS* 520).

If this understanding of *ʿdd* is correct, then *dll* is presumably also a term for a messenger or delegation. The Akkadian verb *dalālu* means, "to proclaim, glorify" (*CAD D*:46–47) and thus provides a suitable cognate. Caquot and Sznycer (*TO* 1.218 n. r) prefer quite plausibly "ambassador," "courtier" based on Arabic *dallāl*, which can mean "courtier" (see *DUL* 270). Albright (1934:130 n. 154) suggested translating it as "guide," based on Arabic *dalīl*, with that meaning. The problem with this rendering is that there is no indication in the story that anyone needs or uses a guide. The situation is complicated by the fact that Ugaritic has a verb *dll* that means, "to oppress, subdue" (cf. its use in 1.40:21', 30', 38'; 1.103.46; cf. Pardee 2002:77–83, 135–40). On the basis of this root, Ginsberg (*ANET* 135) took *dll* to be "tribute" and *ʿdd*, "dispatch" and interpreted the bicolon to be a refusal of Baal to send tribute to Mot. But the notion that the king of the gods of heaven and earth needs to send tribute to the god of the netherworld is not clearly

delineated anywhere in the text and seems somewhat improbable. It appears much more likely that the passage refers to the messengers that he will summon immediately below in lines 52–56. Ginsberg's interpretation is possible because of the ambiguity of the particle *'al* which precedes *'il'ak* in line 45. It can either be the prohibitive, "do not," or a positive emphatic in volitive statements, "indeed, surely." Most scholars read it as the latter, and our translation reflects this understanding (cf. its appearance in 1.4 VIII 1, below, in a context in which it is clearly the positive emphatic).

The other primary elements of lines 45–47 are the two titles for Mot, *bn 'ilm mt*, "Divine Mot"// *ydd 'il ǵzr*, "El's Beloved, the Hero." These are the two primary epithets of this character throughout 1.5 and 1.6. The phrase *bn 'ilm* literally means "son of the gods" or "son of El" (see *UBC* 1.287, esp. n. 116). In either case, the title represents his membership in the pantheon. The second title, *ydd 'il*, "the beloved of El," is similar to the title of Yamm, *mdd 'il* (1.3 III 38–39; 1.4 II 34, VII 3–4, and probably VI 12). Although this title suggests an intimate relationship between El and Mot, El does not support Mot against Baal in this story, as he had supported Yamm in 1.1–1.2 (cf. 1.5 VI 11–25 and 1.6 III 1–21).

The final epithet is *ǵzr*, "hero, mighty one," which is commonly described as deriving from a root meaning, "to be strong, mighty" (see V. Sasson 1982:204–8). It may be cognate with Arabic *ǵazîr*, "abundant,"[21] and BH *ʿzr* (for example, 1 Chr 12:1; Ezek 12:14, probably also *ʿēzer* in Ps 89:20).[22] While most commentators have assumed that this word is here a title of Mot,[23] Vaughn (1993) has questioned this view, in arguing that here *ǵzr* is a title of El. Vaughn's teacher, P. D. Miller (*DW* 51–56, 205), had already made the argument for a largely lost tradition of El as a warrior based mostly on various titles and epithets: the Ugaritic PN *'ilhr*, "Il is a warrior" (*PTU* 156); the title *'ēl gibbôr* in Isa 9:5 and 10:21 (so too *CMHE* 40 n. 159); and the tradition in Philo of Byblos' *Phoenician History* that Elos (i.e., El) fought against Ouranos (Attridge and Oden 1981:48–51). Since the word *ǵzr* follows the mention of El,

[21] Løkkegaard 1953:229; V. Sasson 1982: 204–05; but see the caveats in Held 1965a:278–79 n. 31; P. D. Miller 1970b:160–61; cf. Rainey 1973b:140.

[22] See Held 1965a:278–79 n. 31; Miller 1970b:160–61; Rainey 1973b:140; V. Sasson 1982:204–5.

[23] For example, Løkkegaard 1953:229; Rainey 1973b:140; Pardee 1997a:263; Xella 1997:436 n. 5.

Vaughn regards it as standing in apposition to El as his own epithet. Vaughn appeals further to Hebrew PNs, such as *'l'zr* (e.g., Exod 6:23) and the less helpful *'ly'zr* (e.g., Exod 18:4). Finally, he notes that there is no other example in Ugaritic texts of a construct chain epithet (like *ydd 'il*) followed by a second epithet. Rather he notes the use of *ǵzr* as an epithet to a personal name in the example of *'aqht ǵzr*, "Aqhat the hero," and argues that *ǵzr* thus describes El, rather than Mot. This is an intriguing proposal.

There are weaknesses in Vaughn's arguments, however. First, there remains considerable uncertainty about the idea that El at one time was understood to be a warrior deity. South Levantine texts (from the Iron Age or later) viewed as militating in favor of El as a warrior (Isa 9:5 and 10:21) are restricted to names and titles, probably vestigial at best and irrelevant at worst. The well-placed cautionary remarks of J. J. M. Roberts (1972:95–96 n. 233) may be noted in this context: If any warrior features accrued to El, it "may be the result of a partial coalescence of 'El, the creator and clan leader . . . with Baal . . ., the cosmic warrior." Second, it is to be noted that Ugaritic contains little or no such martial tradition for El apart from the single PN (cf. J. J. M. Roberts 1972:95–96 n. 233: see also Smith 2001a:44, 220 n. 34, with bibliography).[24] Indeed, the appeal to PNs is hardly compelling. Remove it from the base of data, and the "evidence" such as it is, is quite slim. Indeed, if *'ilmhr* were to be understood as "(My) god is a warrior," then there would be no Ugaritic evidence. Third, the interpretation of El as the referent of *ǵzr* incurs its own difficulties. As Pardee (1997a:263 n. 192) rightly observes, such an epithet befits a younger warrior and not an old god like El. Epithets are stereotypical, but their selection in specific contexts is not necessarily arbitrary. In this context, Baal as the warrior-king of the cosmos challenges Mot's power. Both are warriors, as 1.6 VI renders them in hand-to-hand conflict. Accordingly, *ǵzr* suits Mot in this context; in contrast, if this epithet were to be assigned to El, it would bear relatively little meaning in this context. Since this epithet is never applied to El elsewhere in the cycle, it would in fact seem quite

[24] J. J. M. Roberts also notes some data in the Mesopotamian record: *Ilum-qurad*, "Il is a warrior" (see *CMHE* 13–14; Huffmon 1965:15), but this name may be rendered "The god is a warrior." Attempts to draw the martial evidence for Ilaba (*^{d}A.MAL*) into the discussion (so Roberts 1972:95–96) suffers from the fact that this deity may not be identified with El, but with *'il'ib* (Lambert 1981). As a result, the East Semitic evidence for El as a warrior is also slim. Roberts (1972:95–96 n. 233) observes: "The Old Akkadian Il is conspicuously lacking in any of the warlike traits . . .".

odd that it should make its appearance in this context, where El's virility plays no role in the story. We cannot, however, entirely reject Vaughn's proposal on this point, since the epithet *ǵzr* is also used of the elderly Danil in the Aqhat Epic (e.g., 1.17 I 17–18, 35, 37, II 29 etc.). Fourth, an appeal to Philo of Byblos' description of Kronos as a fighter (*PE* 1.10.29; Attridge and Oden 1981:54–55) is misplaced. In this context Philo describes conflict in royal succession, not a particular martial capacity of any of the figures mentioned. (Even more speculative is the view of Wyatt 1992b:411, who, based on the identification of El with Kronos and Ouranos [!], with the latter's battle, suggests that El and Yamm were combatants at one time). Fifth, the syntactical argument hardly resolves the issue in favor of Vaughn's view, since "the beloved of El, the Hero" (*ydd 'il ǵzr*) is exceptional according to all of Vaughn's syntactical categories, even if *ǵzr* is related to El. Vaughn marshals no other cases of "construct chain epithet" (CE) + "epithet name" (EN) that could support his view either. Given the anomaly (no matter how one takes the referent of *ǵzr*), the syntactical analysis does not solve the issue. Instead, the parallelism of the bicolon suggests that Mot is the *ǵzr*, not El: *bn 'ilm//ydd 'il* and *mt//ǵzr*. Given these points, there is no reason to depart from the older view that *ǵzr* in this context is Mot's title.

The bicolon in lines 47b–49a has been taken as a shift in the narrative subject to Mot, here also called *ydd*, "the beloved." In this view, Mot is said to be speaking "in his soul" (*npš*), a word that can refer to a person (4.338.1–2), his throat or appetite, all meanings applicable to Mot (Pope 1978a; cf. Akkadian *napištu*, BH *nepeš*). Ginsberg (*ANET* 135), Gaster (*Thespis* 197–98) and Pope (1978a:25–27) understood the verb-prepositional phrase *yqr'a… bnpšh* as Mot speaking to himself. This view seemed suggested by the similar expression, **wysrnn ggnh*, in 1.16 VI 26 (cf. **'mr blb* in Ps 14:1 = Ps 53:1; Isa 14:13; cf. Ps 36:1; etc.). This Ugaritic passage describes the speech of Yassib, Kirta's son, as he speaks to himself about rebelling against his father. Pardee (1997a:263, and n. 193) offers what is perhaps the most appealing translation following this line of interpretation: "(For) Môtu is always proclaiming, The beloved one (of 'Ilu) is always claiming: I am the only one…". Although this approach to *qr'a… bnpšh* and *ystrn gngn*, is attractive, it does not account for the volitive form of *yqr'a* (cf. Sivan 1997:104). This form would seem to indicate that this is a purpose clause dependent on the preceding bicolon (see Introduction, p. 30). Comparable syntax also with a volitive form occurs in 1.6 V 19–20: *tn 'aḥd b'aḫk 'isp'a*, "Give up

one of your brothers that I may eat." 1.4 VIII 14b–20a likewise shows the syntax of imperative (*ngr*) plus purpose clause expressed by *'al* + **yqtl* volitive (*y'dbkm*). If correct, this observation rules out the interpretation of Mot as the subject of this sentence. Instead, the bicolon is not a statement about Mot's own intention to invite Baal into his throat or an introduction to lines 49–52 as a self-description of Mot, but a purpose clause concerning the mission of the envoy. The poet is providing an "interior monologue" of Baal in which he formulates his plan (cf. Watson 1992b:365).

The terms, *npš*//*gngn*, in lines 48–49 evoke Mot's well-known capacity as a mass consumer (see 1.6 II 2–3). All who come into contact with the god of Death risk the threat of descent into his throat (*npš*), parallel here to *gngn*. On the basis of context, Ginsberg rendered "soul"//"heart" (*ANET* 135).[25] The parallelism works well with the proposed Arabic cognates, *janan*/*janjan*/*jinjin*, "interior, breast, chest" (see Pope 1978a:26 = 1994:146; *DUL* 303). Others, including Loewenstamm (1966:86; *CS* 230) and Renfroe (1992:105), have focused instead on BH *gargĕrōtêkā* (Prov 3:22) and *gārôn* (Isa 58:1) for the derivation. The context of the latter passage, with the verb **qr'* as in Baal's speech here, adds appeal to this proposal. Renfroe (1992:105) also compared Akkadian *gangurītu* (*gaggurītu*; cf. *CAD G*:9, "part of the body of an animal . . . possibly referring to the gullet"). For Renfroe, the variation in the Akkadian forms provides an indication of Ugaritic *gngn* having assimilated *r* > *n* and the Hebrew form *gargar* having assimilated *n* > *r*. Renfroe sees these words as unrelated to the proposed Arabic cognates. Yet another approach favored by a few scholars is to relate *gngn* to Arabic *jinn*, *janan*, "demon, spirit" (for the proponents, see *TO* 1.218 n. u; *SPUMB* 169–70; *MLD* 70; cf. this view of *ggn-* in 1.16 VI 26 used with the same verb, in Greenstein, *UNP* 40, 47 n. 163; cf. *CS* 231). Despite the apparently similar context in 1.16 VI 26 (see further below), this etymology seems arguably weak, in lacking the reduplication that the other proposals show. The reference in these lines to Mot's throat and insides perhaps anticipates the later instructions to his messengers that they remain at a distance from Mot lest he crush them like a lamb in his mouth (*ph*)//gullet (*qnh*) (1.4 VIII 16–20a).

---

[25] In his earlier treatment (*KU* (41), Ginsberg cited Akkadian *gegunu*, "grave." However, the word is listed as *gegu(n)nû* in *AHw* 284 as "Hoch-tempel" and in *CAD G*:67–670 as *gigunû* as "a sacred building erected on terraces, also poetic designation of the temple tower." Both dictionaries further regard it as a Sumerian loanword into Akkadian.

There has also been controversy over the verb in the second line of the bicolon (line 48). Many take *ystrn* as a *Gt* form from **wsr*, "to instruct," and note the possibly similar clause in CAT 1.16 VI 26, *ywsrnn ggnh*, which describes Kirta's son as he ponders to himself whether to rebel against his father. In this passage there is no doubt that the verb derives from **wsr*, and the clause can be translated, "his gullet instructed him." However, as noted by de Moor, *ystrn* should not derive from **wsr*, since a *Gt* of **wsr* should be **yittasiru* and there would no morphological explanation for the metathesis of the *s* and *t* in our form (*SPUMB* 169, followed by *CS* 230). One might argue that reasons of euphony played a role in this metathesis. Despite the somewhat *ad hoc* basis for the explanation of the metathesis, and especially in view of the similarity of the line with 1.16 VI 26, one might continue to prefer this view (see Watson 1987:310). However, other interpretations have been offered. Preferring **str*, "to hide," de Moor (*SPUMB* 164) translates: "to hide me in his tunnel." Gibson (*CML*^{2} 65–66) renders similarly: "(That) the Beloved hide him within himself." Such translations work poorly with the parallel **qr' bnpš*, and their sense is dubious. Equally problematic in terms of context is the proposal **srr*, "to be rebellious" (*TO* 1.218 n. t; for other problems with this and other less probable proposals, see *SPUMB* 169–70). The same root in Arabic, however, shows meanings closer to the context here. *DUL* (770) cites Arabic *sarra, tasarra* (Lane 1337–38), "to entrust someone with a secret, to inform someone confidentially," and suggests the meanings, "to instruct oneself, meditate." Tropper (*UG* 523, 677) favors this etymology ("anvertraue" ["entrust"]). *DUL*'s rendering, apparently influenced by the scholarly discussion about **wsr*, basically gives the meaning of the latter to **srr*. But such a translation is not very close to the Arabic cognate. The aspect of secrecy or confidentiality of the Arabic could provide an interesting counterpoint to the verb of the first line, *yqrʾa*, "to proclaim." It is possible that the Ugaritic form does not preserve the connotation of secrecy, but if it does, then the two lines may be contrastive, "that he may proclaim to Mot into his throat, that he may confidentially inform the Beloved in his gullet." We have chosen to simply use "inform" in the translation, making no further assertion about the nuance.

Like the preceding bicolon, the tricolon in lines 49b–52a belongs to Baal's speech and not to Mot. Here in his ponderings Baal states the rationale for his planned actions, specifically that he alone is the ruler of heaven and earth, in charge of both gods and humanity, and provider of fertility for the earth. The objects of the verbs in the three lines of the

tricolon shift in stairstep fashion. Line 1 talks about the gods, line two, both gods and humans, and line three, humans. The opening phrase establishes the syntax that governs all three lines: *'aḥdy d-*, "I alone am he who…" or better, "It is I alone who…" (Sivan 1997:218–9 explains the clause as a cleft sentence). The first word is the number "one" plus *-y*, the first person pronominal suffix. The sense, "alone," or "the only one," accepted generally by commentators (see Sivan 1997:14), points to Baal's singular status with respect to the pantheon. A claim of singular action is made similarly by Biridiya of Megiddo (Magidda) who declares: "Only I: *ia$_8$-ḫu-du-un-ni* (by myself) furnish corvée workers" (EA 365:24–25; Moran 1992:363). It is possible that a similar claim of divine status is involved in the Shema of Deut 6:4, as suggested by Loretz (2002a:83). There *'eḥād* is traditionally taken to refer to God as "one," but it is possible that it was a statement of Israel's attachment to its god alone: "Yahweh is our God, Yahweh alone." Baal's claim to rulership over the gods is also echoed in the proclamation of Yahweh's kingship over the gods in Ps 95:3. Marduk's names include Lugaldimmerankia, meaning "king of the gods of heaven and earth" in Enuma Elish VI:28, 139 (Foster 2005:470, 474; cf. *ANET* 68–69, esp. n. 91).

The second line of the tricolon (lines 50b–51a) describes an action of Baal on behalf of both "gods and humans." The phrase "gods and humans" is attested throughout the Near East as the description of all the sentient beings in the universe. For example, Telepinu's absence from the land issues in the hunger of "humans and gods" (Hoffner 1998:15). The same expression (in the order "gods and humans,") occurs twice in Jotham's famous parable of the trees in Judges 9:8–15, with reference to olive oil, which "honors gods and humans" (v. 9) and to wine, which "makes gods and humans rejoice" (v. 13). The phrase, "gods and humans," indicates that divinities and humanity are generally considered incommensurate categories (see also Gen 32:29). The common Semitic term for "god," represented already in the oldest Semitic languages, is *'l*, (Akkadian *ilu*, Ugaritic *'il*, BH *'ēl*). The most likely etymology is **'y/wl*, "to be strong" (with reservations, see *EUT* 16–21; Smith 2001a:6, 135). If this is correct, it reflects the widespread notion that deities are by definition "strong," i.e., stronger than human beings. This difference is stated in the biblical corpus, in Hosea 11:9 when Yahweh reminds Hosea's audience: "For I am god and not a man" (*kî 'ēl 'ānōkî wĕlō'-'îš*; cf. Job 9:32).

The third line (lines 51b–52a) shifts specifically to Baal's relationship to humanity, referred to here as *hmlt 'arṣ*, "the masses of the earth" (see

UBC 1.290; BH *hamullâ*, "crowd, multitude"; *SPUMB* 108; cf. Watson 1996b:73–74 for a different interpretation). The two verbs *lymr'u//*yšb[ ]* in lines 50–52a have been interpreted in two ways. Some scholars, noting that the parallel verb in the first line, *ymlk*, deals with ruling, assume that these two have similar meanings (Gordon *UL* 37, cf. n. 1; 1977:101, cf. n. 72; Gray, *LC*[2] 54). Under this view *ymr'u* is taken from **mr'*, "to command," attested in Aramaic and ESA (cf. Aramaic **mārē'* and ESA *mr'*, "lord, master;" see further Hoch 1994:133–34). A related noun may be attested at Ugarit in the office title *mr'u*, also found in syllabic form in Akkadian texts from Ugarit as *mur'u* (discussed in *UT* 19.1543, Heltzer 1982:154–56, Huehnergard 1987b:148–49; Sivan 1997:66; see further Lackenbacher 2002:250 n. 853; and *DUL* 571–72, especially for citations). But its etymological relationship to *mr'*, "command" is far from certain (see *SPUMB* 171; *DUL* 571–72). The *mur'u*, as depicted in the Ugaritic texts, do not particularly appear to be in command of matters (see Heltzer's description in 1982:154–56). The only certain root **mr'* attested at Ugarit means "to fatten," and is particularly found in its nominal form *mr'u*, "fatling animal" (cf. *DUL* 571). The other forms of *mr'u* (i.e., *mr'u* II and III in *DUL* 571–72), which include the office just described, may, as *DUL* suggests, derive from "to fatten" as well or from a Hurrian context. Finding a verb with a connotation "ruling" to reconstruct in the third line, which reads *yšb[ ]*, is an even bigger problem. Gordon proposed reading *yšb[m]*, which he understood to mean "to dominate" (*UL* 37 n. 1, 1977:101 n. 2). However, **šbm* apparently means "to muzzle" rather than "to dominate" (see 1.3 III 40 above), which does not fit this context. Gray compared Arabic *nasaba*, "to arrange, regulate" (*LC* 45 n. 2), which is plausible, although the root is otherwise unknown in Ugaritic.

The more common interpretation of these verbs is to see them as referring to the positive function of Baal in the universe, his granting of fertility across the world. Thus *mr'* is taken to mean, "to fatten," while *yšb[ ]* is reconstructed as *yšb[ʿ]*, "to satisfy" (e.g., *TO* 1.219; Dietrich and Loretz 1997:1170; *CML*[1] 101; *ANET* 135; de Moor 1987:65; Pardee 1997a:263; Wyatt 1998:111). This fits the parallelism quite reasonably, since both ruling and providing for one's subjects are fundamental characteristics of the kingship of a god or a human (so Loretz 1995c:111, which compares Ps 65:12). This sense accords well with the imagery of Baal as giver of abundance (**ʿdn*) in Athirat's speech in 1.4 V 6–7, and here one may compare the description in Akkadian texts of Adad as "lord of fertility" or "who bestows fertility on the land" (*CAD Ḫ*:168).

Marduk, too, is one "who bestows abundance upon the gods" (*CAD Ḫ*:168; cf. Inanna's title, "sustainer of multitudes" in the "Exaltation of Inanna," Hallo and van Dijk 1968:22–23, line 63). Yahweh, too, is one "who satisfies" (*hammaśbîaʿ*) with "good" (*haṭṭôb*) (Ps 103:5; cf. **śbʿ* predicated of the deity also in Ps 145:16, Job 38:27 and Isa 58:11). The latter way of interpreting the verbs seems substantially more likely than the former. It is possible, however, that *ymr'u* involves "Janus parallelism," conveying a double-entendre of "he commands" (in accordance with the parallelism with "reigns" in the preceding line) and "he fattens" (in keeping with the parallelism with "satis[fies]" in the following line). Accordingly, in *UNP* 137, the word "order" was used in the translation as an attempt to cover both possible meanings of the verb, following a suggestion of S. B. Parker (personal communication). But English does not have a word that adequately covers both meanings, so we have reverted to the more likely and primary meaning, "to fatten" here.

The *l-* preceding *ymr'u* is understood as either asseverative *l-*, "truly," or an error for *d-*, "which," found in both the preceding and following lines. It seems preferable to avoid emendation when the text makes sense as it is (see Albright 1934:130 n. 156; Ginsberg 1936:182; Seow 1989:133 n. 168).

If we are correct in reading the verbs in the second and third lines as relating to "fattening" and "satisfying," then this understanding virtually eliminates the idea that Mot is the speaker of these lines. Neither phrase suits the god of death, and he is certainly not the one who satisfies the earth's masses. This job description fits Baal very well.

Lines 52–60: Baal Speaks to His Messengers

With lines 52b–60, Baal now to turns to his messengers, Gapn and Ugar, and prepares them in an extensive speech that continues into column VIII to travel to the netherworld where they will deliver Baal's message to Mot. Most of these lines are badly damaged and poorly understood. A fair amount of lines 54b–57 can be reconstructed plausibly on the basis of CAT 1.8. Until recently, this small fragment had been interpreted as a piece of a separate tablet related to the Baal Cycle, or as a school text that contained at least three "quotes" (or near-quotes) from 1.4 I 20–22 (or III 28–30), IV 62–V 1, and VII 52–57). Now Pardee (i.p.) has shown that 1.8 actually is the beginning of 1.3 VI, where the text describes Baal's plan to have Kothar-wa-Hasis make fine gifts for Athirat, which he will use to convince her to support his petition to El

for a new palace and his summoning of Gapn and Ugar to give them instructions for taking a message to Kothar about his plan (on the interpretation of 1.8, see above, pp. 369–77). Lines 5b–11a parallel VII 52b–57, and it is slightly possible that 1.8.11b–17 preserve parts of the continuation of our passage in lines 58–60 and following, but after 11a (*ʿrpt*) there is no more overlap in the preserved texts.

The first two cola of this passage are clear. The first (lines 52b–53a) introduces Baal's speech to Gapn and Ugar, using a fairly rare speech-opening formula (e.g., 1.6 III 22; 1.14 V 13; 1.15 IV 2; 1.17 V 15; 1.19 I 49, along with the close parallel of 1.8.5–7). The use of *gm*, "aloud," here may be intended to contrast the following speech with Baal's previous, silent musings (lines 43–52).

The speech itself opens (lines 53b–54a) with an imperative, *ʿn*, "See!" addressed to Gapn and Ugar. For the next two cola (lines 54b–56a), see the discussion above (pp. 372–73) for the explanation of our proposed translation. While before the placement of 1.8 into 1.3 VI, scholars have commonly suggested that these lines refer to aspects of Mot's threatening appearances in the realm of Baal, it is now clear that such interpretations must be abandoned. It seems most likely that the two cola are made up of epithets of Gapn and Ugar, likely referring to their divine mother. While the text of Line 54 reads *bǵlmt*, instead of 1.8.7's *bn. ǵlmt*, and could be read as "in darkness," the new context of 1.8 suggests much more strongly that the 1.8 reading is correct, and that both contexts should be translated, "sons of the Lass."

Even with the added context of 1.3 VI, we are still unable to make any real sense out of lines 56b–57. These lines, along with perhaps line 58, can be partially reconstructed from 1.8.9–12, but the meaning of these lines remains very obscure. Several scholars (*ANET* 135; *CML*^{2} 135; Dietrich and Loretz 1997:1171; de Moor 1987:65) have taken a number of the words in these lines as references to birds. Thus *ʾibr* perhaps means "pinions" (cf. BH *ʾēber*). As discussed above in the Textual Notes, however, the reading in line 56 seems to be *hbr* and not *ʾibr* (as opposed to 1.8.9, where *ʾibr* is found). It is not clear which of the two readings is correct. Our reading, *hbr*, would presumably be related to the verb that means, "to bow." Unfortunately, the reading of the next word, probably *gnt*, produces no obvious meaning that would illuminate the sentence. Assuming that line 57 can be reconstructed on the basis of 1.8.10, we have *[ṣḫrrm.ḥbl.]ʿrpt*, the second word of which is rendered "flock" by these commentators, as in 1.18 IV 31, *ḥbl dʾiy[m]*, "the flock of hawks" (cf. also *ḥbl kt[r]t*, "band of the Kotharat," in 1.11.6). In

addition, if line 58 is to be reconstructed on the basis of 1.8.12, *ʿṣrm*, the common Ugaritic word for "bird" appears to occur here. But the preserved traces in this case do not seem to fully follow the reading of 1.8 (see the Textual Notes above).

From line 57 to the end of the column in line 60, the damaged text provides little context for interpretation. What can be said is that these and the missing seven or so lines following continue the introductory speech of Baal that prefaces his actual commissioning of Gapn and Ugar to journey to Mot's abode (1.4 VIII), similar in its beginning to Baal's speech in 1.3 VI. Many commentators have seen this passage as filled with signs of gloom and danger for Baal (see de Moor *SPUMB*; 1987:65; *MLD* 68; Dietrich and Loretz 1997:1170–71). But the context as we understand it presents Baal at the height of his power. It appears more likely that the overall tenor of the speech is quite optimistic, emphasizing Baal's control of things, since he is about to send Mot a message demanding Mot's submission (so also *CML*^{2} 12, n. 2).

CAT 1.4 VIII

Textual Notes

Note: Damage on the left edge of this column, from lines 9 to 12, looks ancient and could be another place where a finger damaged the tablet while it was still wet.

Line 9. ṙdm.'arṣ The /r/ is damaged and thin, but still legible. The lower left wedges and the larger right wedge are easily visible.

Line 11. qrth The /h/ has four wedges.

Line 14. nḫlt The /n/ has four wedges.

Line 24. d.'i[ ]m The /d/ has four pairs of wedges, rather than three. The word divider following it is horizontal, rather than the usual vertical. The /'i/ has four horizontal wedges. Close inspection of the damage where an /l/should follow /'i/ shows that none of the letter has survived.

Line 26. lpʿn̊ The /n/ is virtually gone, but traces of the left wedge (its lower left side and lower line) and the lower left tip of the middle wedge are discernable.

Line 29. ẘrgm /w/ The two left wedges are preserved, but the middle wedge that would assure the reading seems completely destroyed. Both chipping and an encrustation cause the problem.

Line 30. lbn{ƀ}'ilm Between /lbn/ and /'ilm/ is an erased /b/ or /d/. As was possibly the case in column V, line 5, the scribe perhaps did not recognize his error until after he had completed the line, thus leaving the offending letter with its own space. A further stray horizontal wedge is visible beneath the /n/ of /lbn/.

Line 31. l̇ydd The lines of the left and right verticals of the /l/ are preserved fairly well, but only the lower tip of the middle wedge is visible. Most of the letter is filled with an encrustation.

Line 32. ’il.ǵzr Note the unusually low placement of the /l/ in relation to the /’i/. Encrustation has filled in much of the interior of /.ǵzr/, but the outlines of the wedges are generally quite clear.

Line 33. ’al’iyn.bʿl The /y/ has been filled to the edges with the encrustation.

Line 34. [ ]ṯ. What we read as /t/ actually looks very much like a /ǵ/. Even a close examination of the tablet did not dispel the impression that the oblique lines here were genuine wedges. However, the context overwhelmingly argues for /t/.

Line 35. [ ]bhtybnt Only the verticals of the first /b/ survive. The horizontals have been completely broken away. There is no trace of a word divider between /bhty/ and /bnt/. The /t/ at the end of the line crosses the margin lines into column 7.

Line 37.]l̊y The only surviving fragment of the probable /l/ is the lower part of a single long vertical. Context assures the reading.

Line 38. ʾåḫy The /ʾa/ is not epigraphically certain. While the hint of two wedges is preserved, one cannot exclude the possibility that the letter is a /n/.

Line 40.]xy The /x/ is simply a large right horizontal. It could be any of a number of letters.

Line 41.]xb. /x/ could either be /k/ or /r/. Three wedges are preserved, looking like a /k/, but the letter could have had two additional wedges to the left, which would make it an /r/.

Line 42.]̇.ṣḫt The word divider, while largely effaced, is certainly there.

Line 43.]xt The only survival of /x/ is a right vertical, with no hint of a horizontal below it. It could thus belong to /ṣ/, /l/, or /m/.

Line 44.]x.’ilm The /x/ is only the deep interior of a horizontal wedge, which gives no indication as to the letter to which it belongs. It touches the upper left tip of the word divider.

Line 45.]x'u.yd Again we have the right tip of a horizontal wedge high on the line, with no additional information.

Line 46.]x This /x/ is either /k/ or /r/. The three preserved wedges look like a /k/, but the break makes it possible to suggest it is an /r/. There is a vague dip to the left of the upper left wedge that might suggest a trace of an additional wedge. If so, then /r/ is probably the better reading. But visual inspection suggests that there is no certain trace of a wedge in that area.

After line 47 there are remains of four horizontal lines, rather than the two that have usually been observed. The two everyone sees are the two middle lines. The upper additional line is less well preserved, but is visible along the left half of the preserved area of the tablet, at about the same distance above the second line as the latter is above the third. Only a fragment of the fourth line is preserved, a little closer to the third line than the third is to the second.

Line 49. Some two lines down from the horizontals, a single oblique wedge is preserved, breaking into the margin line. Its stance is not horizontal, and thus cannot a /t/, as CAT proposes. It seems most likely to be the right wedge of a /š/.

The colophon on the edge of the tablet:

[ ]y.nqmd.mlk.'ugrt There are no remains of the /ʿ/ before the /y/ as suggested by CAT.

Translation and Vocalized Text

Baal Sends Messengers to Proclaim His Kingship to Mot

1–4	"Then you sha]ll head out To Mount Trǵzz, To Mount Thrmg, The twin hills at Earth's edge.	'iddaka 'al tatinā panīma 'imma ǵāri trǵzz (?) 'imma ǵāri ṯrmg (?) 'imma tillê-ma ǵaṣra 'arṣi
5–6	Lift the mountain on your hands, The hill on top of your palms.	ša'ā ǵāra 'alê yadêmi ḫalba lê-ẓāri raḥatêmi
7–9	And descend to the House of Servitude, the Netherworld; Be counted among those who descend to the Netherworld.	wa-ridā bêta ḫupṯîti 'arṣa tusapparā bi-yāridī-ma 'arṣi[1]
10–12	Then you shall head to his town, the Watery Place,	'iddaka 'al tatinā panīma tôka qarîti-hu hamriyi
12–14	Low, the throne where he sits, Phlegm, the land of his heritage.	makku kissi'u ṯibti-hu ḫāḫu 'arṣu naḥlati-hu
14–17	But take care, divine servants: Do not get too close to Divine Mot,	wa-nǵurā[2] 'anî-na 'ilêma 'al tiqrabā lê-bini 'ili-ma môti

[1] Possible accusative. However, comparable BH idiom uses the construct phrase.
[2] For the root (with discussion of the syllabic evidence), see Huehnergard 1987b:153. On the issue of the vocalization, see above p. 538 n. 9.

17–20	Lest he take you like a lamb in his mouth, Like a kid, you be crushed in the chasm of his throat.	'al ya'dub-kumā ka-'immiri bi-pī[3]-hu ka-lali'i bi-ṯabri-na qani-hu tuḫta'â-na[4]
21–24	The Divine Lamp, Shapsh, is red; The heavens are weak in the hands of the Beloved, Di[vi]ne Mot.	niratu[5] 'ilīma šapšu[6] ṣaḥrvrat[7] la'a šamûma bi-yadi mêdadi bini 'i[li]-ma môti
24–29	From across a thousand acres, a myriad of hectares, At the feet of Mot bow down and fall, You shall prostrate yourselves and honor him.	bi-'alpi šiddi ribbati kumāni lê-pa'nê môti huburā[8] wa-qîlā tištaḥwiyā wa-kabbidā huwata
29–32	And say to Divine Mot, Repeat to El's Beloved, the Hero:	wa-rugumā lê-bini 'ili-ma môti ṯanniyā lê-yadīdi 'ili ǵāziri
32–35	'Message of Mightiest Baal, [Wor]d of the Mightiest of Wa[rriors]:	taḫmu 'al'iyāni ba'li [hawa]tu 'al'iyi qa[rrādīma]
35–37	'My house I have built [of silver], My pa[lace, of gold…].'	bahatī-ya banîtu [dūti-kaspi] [dūti-ma ḫurāṣi hêka]lī-ya

Lines 38–48 are too broken to translate and another twenty or so lines are missing. It may assumed that in this section, Baal completed his message, Gapn and Ugar journeyed to Mot's abode and delivered the message, and Mot responded with a message of his own that concludes in the first eight lines of 1.5 I. Since all of this could not fit easily into the lacuna, it seems relatively certain that the multiple horizontal lines

---

[3] For monoconsonantal *p-*, "mouth," BH *peh*, Akkadian *pû*, etc., see *DUL* 657. Some monoconsonantal nouns (as well as the relative pronoun *d-*), and some biconsonantal nouns lacking a corresponding verbal root in Semitic languages (e.g., *dm* and *'ab*), might be traced back to a very early stratum of the Afro-Asiatic family. For Ugaritic *p-*, see the cognates proposed by M. Cohen 1947:171, #380.

[4] An energic form (so *UG* 446, 460) rather than a long form of the **yqtl* would suit the parallelism with the jussive in the first line. For the verb, see *DUL* 413.

[5] *UG* 190 favors the plausible reconstruction *nûratu* (<**nuwrat-*), but the admittedly difficult syllabic evidence would suggest *niratu* compared to the BH base of *nēr*; see Huehnergard 1987b:152.

[6] For the syllabic evidence, see Huehnergard 1987b:183.

[7] For the form, see *UG* 680.

[8] As noted in Sivan 1997:121.

following line 47 are the scribe's indication that he has left out the formulaic description of the messengers' journey, and in this case, probably the account of their delivery of the message. Most of the lacuna apparently is taken up with Mot's response, which is then repeated to Baal by Gapn and Ugar in 1.5 I 12–35. We thus can reconstruct a large part of the lacuna.

Mot's Invitation to Baal as His Guest and Main Course

["Message of Divine Mot,]	[taḥmu bini 'ili-ma môti]
[Word of El's Beloved, the Hero:]	[hawatu yadīdi 'ili ǵāziri]
['Is my appetite the appetite of lions in the wild,]	[pa-napšî napšu labî'īma tuhwa[9]]
[Or the desire of the dolphin in the sea?]	[himma biriltu 'anḫiri bi-yammi]
[Or is it a buffalo's when it goes to a pond,]	[himma ru'umi-ma barikaya takšudu]
[Or it is a hind's as it travels to a spring,]	['ênа kaḏāda 'ayyalati]
[Or, truly, truly,]	[himma 'imta 'imta]
[does my appetite consume like an ass?]	[napšu ballât[10] ḥimra]
[So would I truly eat with both my hands,]	[pa-'imta bi-kil'atê yadê-ya 'ilḥamu]
[Or, are my portions in a bowl seven-fold,]	[himma šabi'u yadāti-ya bi-ṣa'i]
[Or, does my cup mix a river?]	[himma kāsî yimsaku nahara]
[So invite me, O Baal, with my brothers,]	[kinna ṣûḥ-nî ba'li 'imma 'aḫḫī-ya]
[Summon me, O Hadd, with my kin,]	[qara'a-nî[11] haddi 'imma 'aryi-ya]
[To eat food with my brothers,]	[wa-laḥāmu-ma 'imma 'aḫḫī-ya laḥma]
[And drink wine with my brothers.]	[wa-šatî-ma 'imma 'aḫḫī-ya yênа]

[9] *UG* 192.
[10] *UG* 559, 669.
[11] The end of the speech provided without reconstruction in 1.5 I 26 suggests imperative plus *-a* volitive ending plus 1 c. sg. suffix. Cf. *UG* 622.

[So let us drink, O Baal,]	[pa-naštî ba‘li]

[*The edge of the tablet has the following prose colophon:*]

[The scribe is Ilimalku,	[sāpiru ’ilimalku[12]
student of Attenu, the diviner,	lāmidu ʾattēni prln
the *t̰ʿy*-priest of Niqmaddu,	ṯā‘i]yu niqmaddi
king of Ugarit.	malki ’ugariti[13]

Commentary

Poetic Parallelism and Word/Syllable Counts

		semantic parallelism	word/ syllable count
1–4	’iddaka ’al tatinā panīma	a b c	4/10
	‘imma ǵāri Trgzz	d e (x, y)	3/(?)
	‘imma ǵāri Ṯrmg	d e’ (x, y)	3/(?)
	‘imma tillê-ma ǵaṣra ’arṣi	d e’’ f	4/9

Among the four lines of this unit, the middle two lines show the greatest parallelism. Especially with *‘imma* in initial position, the fourth line largely follows the middle two lines; there is also the notable sonant parallelism of *ǵaṣra* in the fourth line with *ǵāri* in the middle two lines. The first line is standard for travel-opening formulas.

5–6	ša’ā ǵāra ‘alê yadêmi	a b c	4/9
	ḫalba lê-ẓāri rahaṭêmi	b’ c’ (x of y)	3/9

This bicolon exhibits one of the classic patterns of Ugaritic poetry. The parallelism is more highly involved than the scanning indicates, since it does not indicate the parallel prepositions, the sonant parallelism of

[12] The vocalization for this name standard in Ugaritic studies has been *’ilimilku*. However, arguments have been made for *’ilimalku*. For this discussion, see van Soldt 1991:21 n. 182, 28–29; *UBC* 1.3 n. 6. The evidence for **malku* is admittedly not definitive for a proper name. See the discussion below in the Commentary.

[13] For the syllabic evidence for this name, see *UG* 182.

ǵāra//zāri, or the morphological parallelism of the final nouns in the two lines or the four-fold occurrence of *ê*.

7–9	wa-ridā bêta ḫupṯîti/'arṣa	a b (x = p of q, y)	4/10
	tusapparā bi-yā/ridī-ma 'arṣi	a' b' (x [= a!] of y)	3/11

The two verbs are not precisely parallel, but their context expresses a generally parallel sense. This is based on the objects that they govern, which include the strikingly parallel *ridā* and *yāridī-ma* as well as *'arṣ*, which ends both lines.

10–12	'iddaka 'al tatinā/panīma	a b c	4/10
	tôka qarîti-hu/hamriyi	d e (x, y)	3/9

This is one version of a rather standard, but fluid, travel formula. The bicolonic version here is also found in 1.3 VI 12–14 (cf. also 1.3 IV 37–39). A tricolonic version is found in 1.5 I 9–12, and a quadracolonic version is attested in 1.5 II 13–15. In the latter case the parallel to our first line acts as the second line and is closely parallel to the first line of the quadracolon, while the parallel to our second line acts as the fourth line there and is closely parallel to the third colon. Thus the lack of parallelism in our short version may be the result of abridging an originally longer formula.

12–14	makku kissi'u/ṯibti-hu	a b c	3/8
	ḫāḫu 'arṣu/naḥlati-hu	a' b' c'	3/8

The formula here is paralleled in 1.3 VI 14–16. In both bicola, there is very close syntactical, morphological and semantic parallelism. In the case of our passage, the initial terms in each line add consonance within lines: *makka kissi'u*; and *ḫāḫu*…*naḥlati*.

14–17	wa-nǵurā /'anî-na 'ilêma	a b (x, y)	3/9
	'al/tiqrabā lê-bini 'ili-ma môti	c d (x = p of q, y)	4/12

In some respects, the two lines would seem to be quite opposite in semantics. However, they express the same point in different terms. Moreover, the divine titles, though belonging to different sets of figures, resonate as parallel. This is strongest with *'ilêma//'ili-ma*.

17–20	’al ya‘dub-kumā/ka-’immiri bi-pī-hu	a b c	4/12
	ka-lali’i bi-ṯabri-na/qani-hu tuḫta’â-na	b’ c’ (x of y) a’	4/15

These rather long lines show a classic pattern of syntactical and morphological parallelism, especially marked by the elements, *ka-*, *bi-* and *-hu*. In addition, it is arguable that the ends of *’immiri* and *ṯabri* show sonant parallelism. Within the first line the suffix on the verb flows sonantly into the following prepositional phrase: *-kumā ka-’immiri*.

21–24	niratu ’ilīma šapšu ṣaḥrvrat	a (x of y) b c	4/11
	la’a šamûma bi-yadi mêdadi bini ’i[li]-ma môti	d e f g (x, y)	7/15

See the discussion of this bicolon in 1.3 V 17–18 on pp. 345–49. The surprising length of the second line is due to the addition of the word *mdd* into the set of epithets, a word that does not appear in the other two appearances of this passage (1.3 V 17–18 and 1.6 II 24–25. It thus may be an error here. It is particularly suspicious since *mdd* is elsewhere the epithet of Yamm, not Mot. Perhaps our poet got caught up with the assonance of *bi-yadi mêdadi*.

24–29	bi-’a/lpi šiddi ribbati ku/māni	a (x, y) b (x, y)	4/11
	lê-pa‘nê môti/huburā wa-qîlā	c (x of y) d d’	4/11
	tištaḫwiyā wa-ka/bbidā huwata	d’’ d’’ c’	3/11

This tricolon is rather standard as a formula (see 1.3 VI 17–20; for the second and third lines, see also 1.3 IV 25–26). The difference of Mot’s name does not add or detract much from the parallelism (unless one were inclined to make a point of the sonant parallelism of this divine name in the second line with *ribbati* in the first line, as both words contain a bilabial followed by *-ti*).

29–32	wa-rugumā/lê-bini ’ili-ma môti	a b (x = p of q, y)	4/12
	ṯanniyā lê-yadīdi/’ili ǵāzīri	a’ b’ (x = p of q, y)	4/12

See 1.3 VI 21–23 for the same bicolon, except for the divine titles. The parallelism is magnified in lines 29–32 by *’ili-ma//’ili*, a plural form parallel to a singular form of the same noun.

32–35	taḫmu ’al’iyāni ba‘li	a b (x, y)	3/8
	[hawa]tu ’al’iyi qa[rrādīma]	a’ b’ (x of y)	3/10

This is a common way to introduce messages (see the same bicolon in 1.3 V 24–25). The syntax and morphology generate close parallelism, which is enhanced in this case by the titles of Baal, in particular the two elative forms of *'al'iyāni//'al'iyi*.

35–37	bahatī-ya banîtu/[dūti-kaspi]	a b c	4/11
	[hêka]lī-ya/[dūti-ma ḫurāṣi]	a' c'	3/10

This bicolon cites Baal's speech from 1.4 VI 36–38:

<ba>hatī-ya banîtu/dūti kaspi	a b c	4/11
hêkalī-ya dūti-ma/ḫurāṣi	a' c'	3/10

In both instances, the scanning by letters above does not express the construct relationship (x of y) in the two lines, because the verb is interposed between the two parts of the construct.

Lines 38–48 are too broken to translate or scan. The reconstructed speech of Mot translated above is restored from the parallel passage in 1.5 I 12–27. Thus the poetic analysis of these lines will be treated in the third volume of this commentary, *UBC* 3.

The colophon on the edge of the tablet is extra-metrical:

[sāpiru 'ilimalku lāmidu ʾattēni prln ṯā'i]yi niqmaddi malki 'ugariti

Introduction

This column continues Baal's speech to his messengers that began in VII 53. In lines 1–14 Baal gives them directions to Mot's abode. He then instructs them to do obeisance before Mot at a cautious distance (lines 14–29), and finally provides them with his message to Mot (lines 29ff.). Unfortunately, the column is broken off after line 35, so that between lines 36 and 49, only a few letters are extant at the ends of the lines. After line 49, some twenty lines are completely lost. Lines 36–37 can be reconstructed from parallels, but the rest of the partially preserved lines cannot. A set of four horizontal lines after line 47 suggests another scribal abridgement; presumably the scribe has dropped the account of the messengers' journey to the Netherworld and their delivery of the message. Thus most of the lacuna afterwards can be

reconstructed with the first part of Mot's reply, which is repeated by Gapn and Ugar to Baal in 1.5 I 12–27. On the left edge of the tablet is a short colophon, presumably of Ilimalku, as can be reconstructed on the basis of similar colophons at the end of 1.16 VI left edge, 1.17 left edge, 1.6 VI 54–58 and RS 92.2016.

Baal's instructions to Gapn and Ugar in 1.4 VII 53–VIII 47 constitute the most elaborate version of the formula for sending messengers that has been preserved in the Ugaritic tablets (cf. particularly 1.2 I 11–19; 1.3 III 4–31; 1.3 VI lacuna–25f; and 1.14 V 12–45). The elements of this formula are:

	1.2 I	1.3 III	1.3 VI	1.4 VII–VIII	1.14 V
Sender summons messengers	11	lacuna	lacuna	52–53	lacuna
Prefatory remarks			…–6	53– …	
directions	13–14	lacuna	7–16	1–9, 10–14	29–31
unusual circumstances upon arrival		4–8(?)		14–24	
command to do obeisance	14–15	8–10	17–20	24–29	
command to speak	15–17	11–12	21–23	29–32	32
introductory formula to speech	17	13–14	24–25	32–35	33
content of message	18–19	14–31	lacuna	35–47(?)	34–45

There are parallels to each element in the instructions of 1.4 VII–VIII, but no other example contains all of the ones found here. In particular, our passage possesses two elements that seem to be rare: the prefatory remarks and the description of unusual circumstances upon arrival. This will be discussed below.

In this column the word *ʾarṣ* is clearly used to refer to the land under the surface of the earth, the netherworld. Since it is also the standard word for the earth itself, its exact referent must be determined by context. In some places we are unable to determine with certainty whether "earth" or "netherworld" is the more appropriate translation (e.g., 1.4 VII 44). While the distinction between these two renderings is certainly real, there was some haziness about where the boundary between the upper and lower worlds actually occurred. Mot's domain is not simply the realm of the dead, traditionally located in a great city under the earth. His power extends to the entire area below the ground, as well as the places on the earth that are dry and sterile, that can encroach upon the lands of the living when Baal is dead, i.e., the desert and the

steppe-land at the periphery of the earth. Thus the multivalent meanings of the word *ʾarṣ* are used in this poem to indicate the ambiguity of the extent of Baal and Mot's domains. So in 1.4 VII 52 Baal explicitly uses the word for his domain in the land of the living, while using the same word for Mot's kingdom in 1.4 VIII 7–9. The boundary between the two realms is described in line 4 as *ǵzr ʾarṣ*, "the boundary of *ʾarṣ*." Is this the boundary of the earth or the boundary of the netherworld? Probably the word carries both meanings in this line. Because there is a sense in which *ʾarṣ* means the entire part of the universe below the heavens, the question raised and discussed in the story of Baal's conflict with Mot can be viewed as asking whether Baal's dominion stretches to all of *ʾarṣ* or not.

Lines 1–9: Baal Gives Directions to the Netherworld

Baal's directions to Gapn and Ugar concerning where they are to take his message are more detailed than most other parallel sets of directions. The first part of these directions (lines 1–9) deal with how they are to enter the netherworld in general; the second part (10–14) then instructs them to go to the great city of the netherworld, where they will find Mot himself. As mentioned just above, the netherworld was generally understood to be a vast place, much larger than the city of the dead. This passage indicates that idea quite clearly. The first part of the journey requires the messengers to travel to two mountains with unusual, non-Semitic names, *trǵzz* and *ṯrmg*, located at the boundary of *ʾarṣ*. The names have occasioned considerable discussion in the literature. Albright (1934:131 nn. 157, 158) suggested that they may derive from South Anatolian (Luwian). Gaster (*Thespis* 119, 197) identified them with the names of the Hittite deity Tarḫu and the Hurrian-Hittite Sharruma (also Astour 1980:229). Tsevat (1974:71) criticized the latter proposal, noting that the two gods adduced here are weather gods, and are thus unlikely to be related in any way to the netherworld. Nor do the names account for the endings *-zz* and *g* on *trǵzz* and *ṯrmg*. Tsevat rather related the names to Hurrian terms related to the sun and sun-god, identifying *ṯrmg* with the sun-god Shimigi (*LHA* 232; attested in the *Ugaritica V* polyglot), and *trǵzz* with the term *tǵzt* that he thought existed in 1.24.3 and which he related to the sun. The word in 1.24.3, however, is *ʾaǵzt*, and thus has little in common with the mountain name. The loss of one of his two cognates substantially weakens Tsevat's arguments. Margalit (*MLD* 75) argued that *trǵzz* was

parallel to the name *šrġzz* in 1.107, a text dealing with Shapsh and the curing of snake bites. However, the identification of the two seems unlikely. The phonemes at the beginnings of the names are different, although it is possible that the spelling of foreign names might vary like that. More problematic, the character, *šrġzz*, in 1.107 is clearly a person who has been bitten by a snake, not a likely personification of a mountain at the boundary of the netherworld. None of the proposals seems compelling, and it is possible that the names are not specifically related to any other terms.

There are two somewhat ambiguous words in line 4: *tlm* and *ġṣr*. The first word is generally assumed to be related to BH *tel*, "mound, hill" and is translated thusly (e.g., Aistleitner 46; *TO* 1.219; *CMCOT* 79; Dietrich and Loretz 1997:1171; de Moor 1987:66; Pardee 1997a:263, see esp. n. 195; Wyatt 1998:112). But Tsevat has suggested that the word is cognate with Akkadian *talīmu*, which can mean "twin." He argues that this is an epithet of the two mountains just mentioned in lines 2–3, "the twins," and correlates this idea with Mount Mašu, the twin peaks at the edge of the world in the Gilgamesh Epic (IX:37–41), which also appear to mark the boundary between the upper lands and the netherworld. Both of these etymologies appear plausible, and whichever one is correct, the image developed in these lines is basically the same—two mountains (perhaps explicitly called "twins") that mark the entrance to the land below. The motif of twin-mountains between which Shamash rises from below the earth is well attested in Mesopotamian iconography (e.g., Frankfort 1939:pl. XVIIIa, k; XIXa; cf. de Moor 1965:362 n. 67; cf. Lipiński 1971:49–50). The same image may survive in Job 17:2 (see Pope 1973:128), where *htlm*, vocalized by the Masoretes as *hătūlîm*, "mockers," is perhaps better recognized as a reference to the "mounds" that act as the threshold of the netherworld: "The Mounds loom before me."

The term *ġṣr* is generally understood to mean, "boundary, border, edge" (e.g., *TO* 1.219; Dietrich and Loretz 1997:1171; *CML*^{2} 66; de Moor 1987:66; *MLD* 75; Pardee 1997a:263, cf. n. 195) and to be related to Arabic *ġaḍara*, "to cut, to separate" (cf. *TO* 1.219, n. b.). Pope (in Smith 1998b:657), Clifford (*CMCOT* 79) and Coogan (1978:106) saw a different nuance to the word, also based on the Arabic root *ġḍr*, which can also mean, "to hinder, prevent, cut off." They render the word as, "to block the way, to stop up, to plug," emphasizing a sense of the mountains as an obstacle to entering the netherworld. Pope thus describes it: "The mountains serve as the gates to Sheol frequently men-

tioned in the Bible, but since the entrance is downwards, the opening of the gates is likely the lid or stopper of a container." He also noted bT Pes. 94a and Ta'an. 10a, which compare the whole world to a pot leading to the netherworld. This interpretation seems as plausible as the first. Loewenstamm (*CS* 527, n. 8), followed by Wyatt (1998:112), took *ǵṣr* as an epithet of Mot, "ruler of the netherworld," based on the BH verb *ʿṣr* II, "to rule" (cf. 1 Sam 9:17; Tsevat 1974:73). While this proposal cannot be entirely rejected, the context of the passage seems to fit better with a geographical term here rather than an epithet of Mot. The first two proposals seem much more likely (as already noted by Pardee 1980:281).

The connection between mountains at the edge of the earth and the entrance into the netherworld is well attested in Mesopotamian and Hebrew literature. Besides the twin-peaked Mount Mašu in the Gilgamesh Epic (IX ii 1–4; see *ANET* 88), which marks the subterranean route by which the sun traveled eastward during the night, the Sumerians often referred to the netherworld specifically as *KUR*, "mountain," and early on, apparently viewed the mountains to the north and east (which were foreign regions to the Sumerians) as the location of the land of the dead (Katz 2003:102–12). In the Sumerian poem *Edina-Usagake* the mother of the dying god Damu walks along with him toward the netherworld, which is referred to as "the dark mountain" (iv:1–9; Katz 2003:316). The name *KUR* continued to be used of the netherworld in Mesopotamian literature, even during the time when the netherworld was understood to be located below the earth (Katz 2003:105). In Israelite tradition, Jonah 2:7 suggests that the entrance to the netherworld is beneath the mountains (cf. *MLD* 76): "At the edges of the mountains (*lĕqiṣbê hārîm*) I descended to the underworld (*hā'āreṣ*)." Those who connect the names of the mountains in lines 2–3 to Anatolian or Hurrian backgrounds sometimes suggest that the mountains of the passage must have been located in the north (e.g., *Thespis* 197–98). However, the Mesopotamian tradition adduced above from Gilgamesh, along with the clear indication in CAT 1.161 that Shapsh has a role in bringing the dead to the netherworld in Ugaritic thought, suggests rather that at Ugarit these mountains were more likely viewed as being located in the west.

Lines 5–6 describe the method by which the messengers are to descend to the underworld from the mountains. The verb used in this bicolon, *šʾa*, is most naturally identified as an imperative from ***nšʾ***, "to lift." The image that appears to be given here is of the messengers

raising up the mountains in order to enter the subterranean world. Thus Pope's interpretation (in Smith 1998:657) of the mountains as lids or stoppers fits the image quite admirably. Such a means of entry into the netherworld, however, seems rather odd and is not elsewhere attested. The Mesopotamian iconographic imagery that shows the twin peaks at the edge of the world appear to show Shamash coming up from behind the peaks rather than from under them (cf. Frankfort 1939: XVIII a, k; XIX a). Margalit (*MLD* 77) felt this oddness very strongly and argued that *šʾa* should be derived from Arabic *ša'a*, "to overtake.' He rendered line 4, "Scale the mountain on (your) two hands." This translation certainly fits the more natural idea that one enters the netherworld by crossing the mountains at earth's edge. There are problems, however, with this interpretation too. First, the verb **šaʾa* does not otherwise appear in the preserved Ugaritic corpus. Secondly, the image of the messengers crawling over the mountains on their hands and knees seems as peculiar as the image of them lifting up the mountain to enter the netherworld. Third, the derived meaning, "to scale," is not an obvious one from a verb that means, "to overtake," and thus is questionable. It therefore appears that in spite of its unusual imagery, rendering the verb from **nšʾ* seems the more likely choice. It is possible that we have here an idiom that we do not understand. In the myths the gods can certainly do such a mighty feat, and even if this image is not the standard one, it may have been used here to emphasize the inaccessibility of Mot's abode from the earth.

The netherworld is provided with the epithet *bt ḫpṯt* in line 7, for which there is a BH parallel, *bêt haḥopšît* (2 Kgs 15:5). However, the meaning of *ḫpṯt* and *ḥopšît* has been the subject of controversy. Some commentators note the BH word, *ḥopšî*, which means "free" (1 Sam 17:25; esp. Job 3:19 and Ps 88:5–6 where it appears in the context of death) and suggest a meaning of "freedom" for *ḫpṯt* and *ḥopšît*, thus "house of freedom" (e.g., *CML*[2] 66; *CS* 527, 531; de Moor 1987:66). If this is the correct understanding of the word, then the epithet is most likely to be understood as a euphemism, in fact, suggesting the opposite of what was really thought about the netherworld (see Pope 1994:279–91 for euphemisms in West Semitic literature). This rendering of *bêt haḥopšît* in 2 Kgs 15:5 would provide a similar euphemism for the isolation facility in which the leprous King Azariah lived (for the comparison, see also Pope 1994:130; and the discussion further below). A related understanding is found in studies of Dietrich and

Loretz (1982a:84; 1997:1171), as well as in *DUL* (401–02), who focused on the usage of the Akkadian cognate, *ḫupšu*, as the designation for a social class in some of the Alalakh tablets (for the texts, see Dietrich and Loretz 1969:84, 87, 89–90, 91; cf. also Liverani 1975:148–52; *AHw* 357, sub. *ḫupšu* 3). Dietrich and Loretz argue that members of this social class were called "free ones," which to them meant that they had escaped from their responsibilities to the king by becoming runaways or fugitives. They interpret the noun *ḫpṯt* not as an abstract singular (i.e., "freedom"), but rather as a plural. They thus suggest for our phrase the meaning, "house of escapees." Others have rendered the phrase as "house of seclusion," based primarily on the context of *bêt haḥopšît* in 2 Kgs 15:5 as the isolation facility for Azariah (*TO* 1.220; *MLC* 211; Pardee 1997a:263; cf. Coogan 1978:106, "sanitorium"). Albright (1934:131 n. 162), on the other hand, connected *ḫpṯt* to the Arabic root **ḫbṯ*, "to be base, vile" and proposed rendering the phrase as "subterranean house, basement." Pope (1964 = 1994:141), following Albright, translated "infernal charnel house." Assuming the same root, Gray (following Gaster, see below) proposed "house of corruption" (*LC*[2] 55, n. 5).

Several scholars have divided the letters of this phrase differently, arguing that because there is no word divider, it is better to read it as the preposition *b* + *thpṯt*, and interpreting the latter part as a noun from **hpṯ*, with a *t*- preformative (Aistleitner 46; *CML*[1] 103; *Thespis* 199; Gordon 1977:101; see the discussion in Tromp 1969:158). Most of these scholars render the phrase "(in)to the depths of the earth," or something similar, assuming the etymology proposed by Albright, although Aistleitner (46) translated "zu den unreinen Gegenden."

Of these proposals, several seem plausible. The rendering, "house of freedom," while not an obvious epithet, remains possible as a euphemism for the netherworld, since the term *ḥopšî*, "free" is found in contexts of death and the netherworld in biblical literature. Likewise, "house of corruption, baseness," cannot be ruled out, nor can "into the depths." On the other hand, the rendering of Dietrich and Loretz (along with *DUL*) appears to be based on a view of the social group *ḫupšu* at Alalakh that is not widely accepted (see below). In addition, by taking the word *ḫpṯt* as a plural rather than a singular abstract, they make the word feminine, a form unlikely in this context. "House of seclusion" appears to be an attempt at using a literal English word for the meaning of the euphemism, but while it may describe the phrase

bêt haḥopšît in 2 Kgs 15:5, there is no reason to assume that the connotation of seclusion as such is the literal meaning of the word, or the sense of the word in our passage.

Although we find the translation of Dietrich and Loretz uncompelling, it does seem worthwhile to examine the meaning of *ḫpṯt* within the context of the social class *ḫupšu* at Alalakh and *ḫpṯ* at Ugarit. Schloen (2001:302–4) has shown that the class of people called *ḫupšu* at Alalakh were persons of low social status who were subject to forced labor and military service to the government. They are distinguished from people called in Hurrian *eḫelena*, who were apparently exempt from such service (cf. Liverani 1975:146–53). The Ugaritic term *ḫpṯ* appears in 1.14 II 37 clearly denoting soldiers in active service to the king (as also 2.72.10). It thus seems possible that the abstract form of the noun could mean, "service, servitude." Using this meaning for our phrase, the house of servitude would then refer to the netherworld as a place of servitude to the god of death. But as with the above plausible meanings, this one too remains uncertain.

The use of the verb **yrd*, "to go down, descend," appears regularly in contexts describing the descent into the netherworld. In CAT 1.114.22, El, in an inebriated state, is compared to "one who descends to the underworld" (*kyrdm ʾarṣ*); he is, to use a dynamic English equivalent, "dead drunk." In the funerary ritual text, 1.161.20–22, someone or something is commanded to "go down into the netherworld (*ʾarṣ rd*), go down into the netherworld and be low in the dust." In 1.5 VI 24–25, El, in his lamentation over the death of Baal, states (see Tromp 1969:32, esp. n. 58; Anderson 1991:63–65): "After Baal I shall descend to the netherworld" (*ʾard bʾarṣ*). It is also commonly used in BH (see, e.g., Pss 22:30; 30:10; 88:5; Job 7:9) and Akkadian (e.g., Ishtar's descent described as *a-na KUR.NU.GI ú-ri-du*, "she descended to the netherworld," in Ishtar's Descent, line 63; Borger 1963:II 90; cf. Foster 2005:501).

Lines 10–14: Baal's Directions to Mot's City

While lines 1–9 have focused on the process by which Gapn and Ugar will travel to the netherworld in general, lines 10–14 center on the journey to Mot's city once they have arrived in the netherworld. The geography of the netherworld depicted here is based upon the geography of the political states of the Late Bronze Age. Mot's city is here understood to be the capital of the larger principality of the netherworld, as one would expect to find in any earthly kingdom. In

Mesopotamian myth, the capital city of the netherworld goddess Ereshkigal was viewed both as the location of her palace and administration, and as the place of habitation for the spirits of the dead. It is described in *Ishtar's Descent to the Netherworld* as a great city surrounded by seven concentric walls, through whose seven gates one entered, usually never to leave again (lines 1–63, Foster 2005:499–501; see also *Nergal and Ereshkigal* vi 18'–30', Foster 2005:522–23). Similar imagery of the abode of the dead in the netherworld as a walled city with gates is found in Israelite tradition (e.g., Job 38:17, Isa 38:10).[14] Albright (1956:81, 196 n. 29) also believed that the Phoenician DN Melqart meant "king of the city," namely the underworld.

Mot's city is described as *hmry* in line 12. The meaning of the word is again the subject of some discussion. Most scholars have considered it to be a proper name for the city, and several have related it to the Arabic *hamara*, "to pour (rain, water)," which suggests a sense of wetness for the name. Thus they have proposed such translations as "Miry" (*LC*^{2} 55), "Ooze" (*CMCOT* 81), "Slushy" (Pope 1994:141), "Swamp" (Coogan 1978:106), "Watery" (Pardee 1997a:264) or "Muddy" (Wyatt 1998:113). The root's connection with water can also be seen in the probable Akkadian cognate, *amirānu*, "standing water (after a flood)" (*CAD A/II*:63). A word apparently from the same root, *mhmrt*, occurs in 1.5 I 7–8, where it is parallel to *npš*, "the throat" of Mot and probably is best rendered, "gullet," i.e., the moist esophagus. A parallel to the latter word is found in Ps 140:11, where *mahămōrôt* is clearly to be understood as a pit or hole: "Let him drop them into the *mahămōrôt* from which they shall not rise." Assuming the etymology described above is correct, these pits would be understood as being wet or watery in character (see the discussions in Ginsberg 1936:183; van Selms 1975b:482; Pope 1978a:146–48, 1964 = 1994:133–43; Loretz 2001b:317–18). The root may also appear in Job 17:2, as suggested by Pope (1973:127–28). Here, too, if interpreted correctly, the word, *hmrwtm*, would mean a watery pit that represents death or the netherworld. Held (1973:188), on the other hand, argued strenuously against the relationship between Ugaritic *hmry* and *mhmrt* and Arabic *hamara*, primarily on the grounds that the word *mahămōrôt* in post-Biblical Hebrew means "pit" or "grave" without any connotation of water or rain. But even if that is true of

[14] For later use of this imagery cf. Wisdom of Solomon 16:13; Ben Sira 51:9; Matt 16:18; see Lewis 1992; Tromp 1969:152–54.

the later usage, it does not mean that the earlier forms did not have a watery context, which was lost over time. Held almost certainly objected to a watery image here because he assumed that the West Semitic view of the netherworld was basically identical to that in Mesopotamia, where the land of the dead was always portrayed as dry and waterless. Thus a name "Watery" for the city of the dead would seem to make no sense. However, there are a number of indications in West Semitic, especially biblical, literature that these cultures did not have exactly the same view as in Mesopotamia. Several passages in the HB closely connect the netherworld with water imagery (cf. Jon 2:3–6; Pss 69:2–3, 14–16; 88:7–8; see Tromp 1969:54–69). There is, in fact, no reason to doubt that *hmry* is related to Arabic *hamara* and that it should be rendered as "miry, watery, slimey" or the like. The *-y* suffix on the word is presumably the *-y* place ending (Richardson 1978), or less likely an old feminine ending also attested on the names of the goddesses Pidray, Tallay and 'Arsay and elsewhere (see Layton 1990:241–45; also *CMHE* 56 n. 45; Pope 1978a:30 n. 8).

The next bicolon, lines 12b–14, provides two additional descriptive names of Mot's city (*mk* and *ḫḫ*), along with two formulaic phrases that refer to Mot's kingdom, *ks'u ṯbth*, "the throne where he sits" (lit. "of his sitting"), parallel with *'arṣ nḥlth*, "the land of his patrimony." The latter phrases are used to describe Kothar's abode in 1.3 VI 14–16. The apparent place name, *mk*, is generally related to the root **mkk/mwk*, "to be low," but its exact connotation is variously rendered: "low, dilapidation, the Ruin, the Pit" (cf. *TO* 1.220; Dietrich and Loretz 1997:1172; *CML*[1] 103; *Thespis* 200; *CML*[2] 66; *ANET* 135; *LC*[2] 55; de Moor 1987:67; Wyatt 1998:113; see the discussion in *CS* 528, n. 12 for rejecting the interpretation of *mk* as the presentative particle, "Behold!"). Note the root's usage in 1.2 IV 17 and Eccles 10:18, where it means, "to sink, collapse" (*UBC* 1.350). The other name, *ḫḫ*, is generally interpreted in one of two ways. The most common has been to relate it to Akkadian *ḫaḫḫu*, "spittle, slime." From this etymology, Albright (1934:132, esp. n. 166) proposed translating the word as "filth," which has been followed by many others (e.g., *CML*[1] 103; *Thespis* 200; *CML*[2] 66; *ANET* 135; de Moor 1987:67). However, there seems little warrant for using "filth" as the translation, which has connotations of unsavory bodily excretions quite different from the Akkadian cognate, which focuses particularly on expectorations from the mouth, "spittle, saliva, etc.," as noted by Pope (1994:142). If Pope was correct in relating *ḫḫ* to Akkadian *ḫaḫḫu*, then the word should probably be rendered, "phlegm"

(so Coogan 1978:106) or "slime" (so *CMCOT* 81). Other scholars have related the word to Arabic *ḫawḥa*, "opening (in a wall)" (*TO* 1.220 n. g; Gordon 1977:101; *CS* 528; Pardee 1997a:264, n. 197) and have read it as "hole." Some have proposed that the occurrence of *ḥăwāḥîm* in 1 Sam 13:6, which appears in a series of words denoting hiding places (caves, rocks, tunnels, etc.), also should be rendered as "holes." The evidence for rendering *ḫḥ* as "hole" is relatively weak for two reasons. First, the Arabic word does not mean a vertical hole, but a horizontal opening in a wall. Secondly, the interpretation of *ḥăwāḥîm* in 1 Sam 13:6 as "hole" seems dubious, since the word *ḥôʿḥ* elsewhere in BH means "thornbush, thistle" (e.g., 2 Kgs 14:9; Isa 34:13; Hos 9:6; Song 2:2). That translation can be applied quite naturally to 1 Sam 13:6, i.e., one can hide among the thornbushes or thistles (cf. McCarter 1980:226). Thus, while the second interpretation, "hole, pit," cannot be fully discounted, the first seems considerably more likely. The meaning, "phlegm, spit," would fit into the wet imagery that we saw in the first name of Mot's city, *hmry*. But whatever the exact nuances of the three names in lines 12–14 are, they all are clearly negative and emphasize the grimness of the location to which the messengers are being sent.

Lines 14–24: Baal's Cautions to His Messengers

In these lines Baal carefully warns his messengers about the danger of approaching Mot too closely. In the ancient Near East the land of the dead was generally considered "the land of no return" (*erṣet lā tāri*, in Mesopotamia; cf. Tallqvist 1934:15–16; *CAD E*:310; Held 1973:180 n. 56; see further Katz 2003:24–25); *kol-bāʾêhā lōʾ yĕšûbûn*, "all who enter it (the netherworld) do not return," Prov 2:19, in Israel).[15] Thus it was dangerous for anyone, divine or human, to venture into that realm with the hope of leaving afterward. Baal's warning here is an example of a well-attested motif in literary texts dealing with the netherworld,

[15] See also 2 Sam 12:23; Job 7:9, 10:21, 16:22; 2 Macc 12:43–44; Tromp 1969: 189–90; Anderson 1991:67. There were actually numerous exceptions to this rule. In Mesopotamia, ghosts of ancestors whose descendents were not providing the appropriate food offerings to the dead could return to earth to punish their negligent relatives (cf. Scurlock 1988:233–36, line 79; 260–67, line r 9; 301–07, line 39; 307–10, lines 12–21, for examples of family ghosts returning from the netherworld). Also demons were believed to be able to go in and out of the netherworld (although they appear to have been thought to live, not in the city of the dead, but in the outskirts of the underworld).

particularly preserved in Mesopotamia. In the first millennium version of the story of *Nergal and Ereshkigal*, Ea instructs Nergal on how to avoid being trapped in the netherworld in col. ii 36'–48' (Foster 2005:515–16). In these instructions, Nergal is not to accept any of Ereshkigal's hospitality. In the much earlier Sumerian tale of *Gilgamesh, Enkidu and the Netherworld*, Gilgamesh also carefully instructs Enkidu on how to avoid capture when he enters the netherworld to recover the *pukku* and *mikku* that have fallen into it (lines 181–205; see George 1999:184). In this case the instructions are for Enkidu to try to blend into the crowd of the dead as much as possible, and avoid drawing attention to himself. In our passage, Baal tells his messengers to keep a safe distance away from Mot, lest the latter simply devour them. It is interesting to note that in *Nergal and Ereshkigal*, Anu's messenger Kakka is sent to the goddess of the netherworld and comes directly before her without any indication he is in danger (Late Version, i 16'–29', Foster 2005:513). This may suggest that the peril to Baal's messengers may be unusual and perhaps is related to the fact that their message calls for Mot to surrender his sovereignty to Baal, a proposal likely to anger him considerably.

The verb in line 14, *ngr*, "take care," is equated with the cognate Akkadian word *naṣāru*, "to guard," in the *Ugaritica V* polyglot (Huehnergard 1987b:73, 153); also cognate are BH **nṣr* and Aramaic **nṭr*, "to guard," Arabic *nazara*, "regard, look, see," ESA *nẓr*, "observe" and Ethiopic **nṣr*, "look, observe" (*DUL* 624).[16] The image of Mot potentially devouring Gapn and Ugar is clearly part of the larger motif of Death's endless appetite (cf. 1.5 II 2–3; 1.6 II 15–19). Baal's warning to the messengers ironically mirrors the language of 1.6 II 22–23, which describes the very fate that befell their master. Indeed, these lines may be seen as anticipating Baal's own crucial meeting with Mot. The command (lines 15b–17a) not to get too close to Mot is followed (line 17b–18) by the negative *'al* + **yqtl*, which here could be understood in one of two ways. It may be a parallel volitive: "Do not let him take you." Or, it may be an expression of negative purpose: "so that he may not take you." As noted in the Introduction (p. 29), comparable syntax for the latter interpretation is clearly attested in 1.3 V 22, *'al*

[16] The base PS root is **nṭr*. For discussion of the West Semitic evidence, see Rainey 1973a:47; Sivan 1997:142–43; cf. Loewenstamm 1969b:52. For comparative Semitic evidence, see especially Leslau 406.

ʾaḫdm by[mn]y, "lest I seize it with my [right han]d" (cf. 1.4 VI 10–11, which may also be read in this manner).

The bicolon in lines 17b–20a seems to use the image of a large predator such as a lion attacking and devouring a lamb of a flock. This image appears even more clearly in 1.6 II 19–23, where Mot describes his killing of Baal, making use of these two lines as the climax of that description:

> I arrived at the pleasant place, the steppe-land,
> At a beautiful field in the Realm of Death.
> I approached Mightiest Baal.
> I took him like a lamb in my mouth,
> Crushed him like a kid in the chasm of my throat.

Note here the imagery of Mot stalking Baal in the steppe-land, very much like a lion. Similar imagery is found in the Hebrew Bible. For example, Isa 38:13 reads *kaʾărî kēn yĕšabbēr kol ʿăṣĕmôtāy*, "Like a lion he breaks all my bones." Note the occurrence here of *yĕšabbēr*, the Hebrew cognate of *ṯbr*, which occurs in the lines under discussion (1.4 VIII 19), as well as the motif of crushing the victim. Jer 50:17 reads, "Israel is a scattered sheep whom lions have driven away. First the king of Assyria devoured him, and afterwards, Nebuchadrezzar king of Babylon devoured his bones." Ezek 22:25 reads: "Its princes within it are like a roaring lion tearing up the prey; they devour the spirit (*nepeš*)." And Amos 3:12 similarly declaims: "As the shepherd snatches away from the mouth of the lion two legs, or the piece of an ear, so shall the children of Israel be snatched away" (see also Ps 17:12; Isa 31:4; Jer 4:7; Hos 13:8; Nahum 2:13; Job 38:39).

The phrase **ʿdb bph* also appears in 1.23.63–64 in describing the appetite of El's two newborn sons: "They take—both left and right—in their mouths" (*ʸʿdb ʾuymn ʾušmʾal bphm*). The use of the verb **ḫtʾ*, "to crush," in the following colon emphasizes the strength of Mot's maw. The verb also appears in a letter, CAT 2.10, where it is used in the context of a serious epidemic (Lipiński 1983; Pardee 1987). In the letter the writer, Ewari-šarri, inquires about the health of two other persons:

5–6	*ltrġds/w.l.klby*	Regarding Targudissa and regarding Kalbiya,
7–8	*šmʿi.ḫtʾi/nḫtʾu*	I have heard that they have been sorely smitten.

Turning to the situation in his own town in lines 11–13 Ewri-šarri says (see Lipiński 1983:124; Marcus 1974:406; Pardee 1987):

11–12	*w.yd/'ilm.*	Also the hand of the gods
12–13	*p.kmtm/'z.m'id*	(is) here, like death/Mot, exceedingly strong.

Thus in this letter we have the appearance of the root **ḫt'* in a context dealing with disease, one of Mot's manifestations (Jer 9:20; Hos 13:12; Smith 1988), and a reference to death or possibly Mot himself. This indicates a close relationship between the god and this verb, although the latter is used in 2.10 in a very different sense, without the imagery of jaws or eating.

The image of Mot as a ferocious devourer, introduced here, continues in 1.5 (I 6–8, 14–16; II 2–6, 21–24) and 1.6 (II 15–23). Here the poet refers to Mot's mouth (*ph*) and the "chasm of his esophagus" (*ṯbrn qnh*). The first noun, related to **ṯbr*, "to break, shatter," appears to mean, "opening, chasm" here. The use of this term in relation to the esophagus/gullet may recognize the fact that the back of the throat remains closed until it is used for eating. At that point, one can often feel the throat "break" open. Dietrich and Loretz (2002b) have emphasized the basic meaning of **ṯbr* as "breaker" and so translate *bṯbrn qnh* "durch die/den 'Brecher' seiner Speiseröhre." The word *qnh* is attested in BH with the meanings "reed, stalk, beam, shaft." It is used in Talmudic Hebrew in an anatomical sense as the name of the windpipe (Ginsberg 1936:183–84). Here there is little question that it refers to the esophagus.

The motif of death's insatiable appetite is well attested throughout the Near East. Isa 5:14 reads: "Therefore Sheol has enlarged its appetite; it has opened wide its mouth beyond limit." The Babylonian text *Ludlul bēl nēmeqi*, in describing the suffering author's salvation reads: *ultu pî muti īkimanni*, "he (Marduk) snatched me from the mouth of death." Another Akkadian text refers to *nišik mūtim*, "the bite of death" (see *CAD M/2*:318, sect. e). Death devours all life in the end, and therefore may be seen as exercising an appetite capable of engulfing all living things, including the very god who embodies life, namely Baal.

As we have argued above, lines 17–20 appear to use the imagery of Mot as a lion. Other scholars have suggested that the god is portrayed in the Baal Cycle as a dragon-snake (e.g., Margalit in *MLD* 83, 102, 106, etc., Williams-Forte 1983:32–39). Margalit (*MLD* 83) particularly emphasizes the image in 1.5 II 2–3, which describes Mot have having one lip to earth, one lip to heaven. However, such imagery does not require seeing Mot as a snake. The phrase is also used in describing the newborn children of El in 1.23.61–62, and there is little reason to

imagine them as dragons/snakes. The image could be just as appropriate in referring to a ravenous lion, whose mouth also opens extremely widely. That would fit more closely the other imagery used of Mot (cf. Clemens 2001b:702–3, who also argues that there is no explicit evidence for the snake as an emblem for Mot). Another argument for seeing Mot as a dragon/snake is found in the NA text sometimes called "A Vision of the Netherworld" or "The Underworld Vision of an Assyrian Prince" or the like (Foster 2005:832–39). In this narrative, the author describes fifteen deities that act as courtiers in the royal palace of Ereshkigal. One of the courtiers is Death (*[d]mu-u-t[u?]*), who is described as having the head of a *mušḫuššu*-dragon as well as the hands (and feet?) of a human (von Soden 1936:16, reverse, line 43 = reverse, line 3 in Livingstone 1989:70–71; see also see *ANET* 109; *CAD* M:270; Foster 2005:835). But this text is somewhat weak evidence for understanding the imagery of the Ugaritic Mot. In the first place, the minor deity Mūtu in the Assyrian text hardly corresponds to the powerful ruler of the Ugaritic myth. Secondly, as Wiggerman (1996:219) has pointed out, the "Vision of the Netherworld" is a highly idiosyncratic text, whose portrayal of the netherworld and its denizens shows very little relationship to other texts or to the iconography concerning the netherworld. Particularly the descriptions of the courtiers appear to be unique to this text, perhaps conceived by the author. Thus the description of Death with the head of the *mušḫuššu*-dragon in this Neo-Assyrian text cannot be used as direct evidence for the imagery of Ugaritic Mot.

Lines 21–24 contain a formulaic passage that is also found in 1.3 V 17–18 and 1.6 II 24–25.[17] Its interpretation is very difficult and its meaning in this context is obscure. See the Commentary on 1.3 V 17–18 (pp. 345–49) for detailed discussion of the vocabulary. The lines most probably emphasize Mot's power, even in relation to Shapshu. In the context of Baal's warning to Gapn and Ugar, this appears to be a further explanation of why they need to be careful in approaching Mot. Even Shapshu and the heavens themselves are weak compared to the power of Mot.

[17] Cf. Wiggins 1996:331, with a dubious syntactical view for the governing of the final prepositional phrase.

Lines 24–37: Instructions of Obeisance and Speech

Lines 24b–35a contain common formulaic instructions for the messengers to perform obeisance before a deity and to present the speech to its addressee (see *UBC* 1.167–69, 287–88). These lines are closely paralleled in 1.3 VI 17–20 in Baal's instructions to his messengers when he sends them to Kothar. In both instances the messengers are to bow down to the god while still at a very great distance. In the case of Kothar in 1.3 VI, this appears to be intended to honor the god. Here, the distance is certainly related to Baal's warning above about staying at a safe distance from Mot. At the same time, the behavior to be displayed by the messengers is clearly expected to be in accordance with all courtly protocol. Baal's message is introduced to the addressee in standard fashion: "Message of Mightiest Baal, word of the Mightiest of Warriors." Unfortunately, only the first bicolon of the speech survives in lines 35b–37, telling Mot: "My house I have built [of silver]/My pa[lace of gold]." These lines echo Baal's words from 1.4 V 36b–38a, and here serve as Baal's proclamation of his kingship before Mot. The following ten lines are badly broken, with only the extreme right side of the column preserved. Thus the majority of Baal's message is beyond recovery. Lines 38–47 contain a few discernible words: *'aḫy*, "my brother(s)" (lines 38 and 39); *ṯḥt*, "I have called" (line 42); *'ilm*, "gods" (line 44); *yd*, "hand" (line 45); and *w'ugr*, "and Ugar" (line 47). These suggest that part of the subject matter of the message concerned the gathering of the gods at his new palace (1.4 VI 38–59) and presumably also his kingship over the gods. Little more can be said with confidence about these lines. It seems certain that the message ends at least by line 47, since the latter is followed by the quadruple lines that almost certainly indicate that the scribe has omitted from the written version of the story the account of the messengers' journey to the netherworld and their delivery of Baal's message (see above, pp. 704–05). Such lines for indicating abridgements of the story are also found after 1.3 III 31 and 1.4 V 41, in both cases indicating the deletion of the accounts of messengers' journeys and, in the case of 1.4 V, the delivery of the message, as is apparently the case here.

Lines 38–48: Lacuna and Colophon

A lacuna of about twenty lines follows the set of horizontal lines, but most of them can be reconstructed with confidence. The beginning of

1.5 I opens with the last several lines of Mot's response to Baal's message, the nearly complete response being preserved in lines 12 to ca. 35, where Gapn and Ugar relate it to Baal. By inserting the early lines of Mot's speech into the lacuna of column VIII, we can reconstruct at least sixteen of the twenty lines (cf. Pardee 1997a:264 n. 201). The two versions of the speech, where they both survive (1.5 I 1–4//27–30), indicate identical wording, and it is likely that little variation occurred in the two recitations of the speech. Since the passage is attested in 1.5 I, the Commentary on the reconstructed speech will appear in the third and final volume, *UBC* 3.

The colophon, which identifies the scribe responsible for the tablet, appears on the left-hand edge. Other colophons of Ilimalku are attested on the left edges of 1.16 and 1.17—only the last word of the colophon survives on 1.17: *p]rln*, but the one of 1.16 is completely preserved and reads, *spr.ʾilmlk.tʿy*, "The scribe is Ilimalku the *tʿy*." A much more substantial colophon is found in 1.6 VI, at the end of the final column of the Baal Cycle. It also identifies the scribe as Ilimalku, and there is no doubt that the scribe of 1.6 is the scribe of 1.4. A fifth Ilimalku colophon is preserved on RS 92.2016.40"–43" (= CAT 9.432), also written at the end of a column, as is the one in 1.6. Like the colophon in the latter, it too is fairly long, but besides the first line, *[spr . ʾilmlk . šˀ]ʳbʾny . lmd . ʾatn . prln*, "[The scribe is Ilimalku the Sh]ubanite, student of Attenu Prln (= the Diviner?)," there are no parallels to what is found in the rest of it. Unfortunately, the fact that the left side of the tablet is lost makes it difficult to understand the other three lines of the colophon. In contrast to the colophon at the very end of 1.6 VI, which is made up entirely of a list of names and titles, the colophon on RS 92.2016 appears to discuss the function of the text that is written on the tablet:

41	*]r . bbʳ- ʾ.w. mspr . hnd . hwt.*	in…and this account, a word(?)
42	*]ʳ- - -ʾrbh . w. ʾind ylmdnn*	…and there was no one who taught him.
43	*[ ]b spr*	]in the document.

Scholars have almost universally reconstructed the colophon of 1.4 as a rather brief one somewhat similar to that on 1.16: *[spr.ʾilmlk.t]ʿy.nqmd. mlk.ʾugrt*. There are good reasons to reject this reconstruction. First, as discussed elsewhere (pp. 386–89), it seems unlikely that Ilimalku, a student just beginning his career as a scribe, was also the *tʿy*-priest of the king, a position that should have belonged to a well-established

courtier. That title almost certainly belonged to Attenu, and thus we should expect this colophon to mention the latter. Secondly, scholars have failed to take into account the location of the surviving part of the colophon on the tablet. A look at Images 27 and 87 shows that the preserved section of the colophon appears slightly over halfway down the side of the tablet. Thus the *y* of *ṯʿy* appears at the level of Column I line 13, and the *ṯ* of *ʾugrt* is parallel with line 28. The other two colophons that Ilimalku placed on the left edge (1.16 and 1.17) both suggest that he regularly began the colophon near the top edge of the tablet. That is where the complete colophon of 1.16 is located, and the fairly certain reconstruction of the 1.17 colophon also requires that the scribe began near the top. If this is the case here, then the standard reconstruction is far too short. It seems most likely that this colophon follows the examples of three of the other four Ilimalku colophons in referring to his teacher Attenu and that the epithet preserved at the end refers to the latter. We thus reconstruct the colophon as follows: *[spr.ʾilmlk.lmd.ʾatn.prln.ṯʿ]y.nqmd.mlk.ʾugrt*, recognizing that it could in fact be a little longer, perhaps containing *šbny*, "the Shubanite," after the name of Ilimalku, as in 1.6 and RS 92.2016 (see Pitard, i.p.).

In regard to the issue of Ilimalku's status, it is perhaps significant that in the one colophon that he does not mention Attenu (1.16), he calls himself merely *ṯʿy*, not *ṯʿy* of the king. This would indicate that as a student of Attenu, he was being trained not just to be a scribe, but a *ṯʿy* too. It seems likely that the colophon here indicates that Ilimalku is just a standard *ṯʿy* , and not one especially attached to the king. We might otherwise expect him to note such an honor here, since titles appear to have been important to people at Ugarit.

Some scholars interpret *spr* at the beginning of these colophons as a ***qtl* verb, "Ilimalku wrote (this)" (e.g., Aistleitner 46; *CML*[1] 103; Dietrich and Loretz 1997:1173), or as a passive participle, "Written by Ilimalku" (e.g., *ANET* 135; *TO* 1.221). Both interpretations are certainly possible. However, the colophon on 1.6 VI argues in favor of seeing it as an active participle, which equals the title, "scribe." In the colophon there, we find a series of titles that begins with *spr.ʾilmlk.šbny* and continues with:

lmd.ʾatn.prln.	student of Attenu *prln*,
rb khnm	chief of the priests,
rb.nqdm	chief of the shepherds,
ṯʿy.nqmd	*ṯʿy* of Niqmaddu,
mlk ʾugrt	king of Ugarit,

ʾadn ỿrgb	lord of Yargub,
bʿl.tṛmn	master of Tharmanu.

With all these titles, it seems more likely that *sṗr*, at the beginning of the list, is Ilimalku's own title, "scribe," rather than a verb (so *CML*[2] 67; Gordon 1977:102; de Moor 1987:69; *MLC* 212; *MLR* 92; Wyatt 1998:114; Xella 1982:121; Rainey 1968:128). One may also note that the Akkadian colophons at Ugarit regularly contain the epithet "scribe" (*[lú]DUB.SAR* or *[lú]A.BA*) as an identifier (van Soldt 1988:314–17). The participle is used in the same way in BH for the term, "scribe" (e.g., Ps 45:2; Jer 36:26, 32; 1 Chr 27:32; for first millennium epigraphic evidence on seals, see *WSS* 467. Caquot and Dalix (2001:397) render the word, "Document." While this is possible, there do not appear to be any parallels to the appearance of a noun meaning, "document" in any of the Akkadian colophons from Ugarit (see van Soldt 1988). For scribes at work, see *ANEP* #230–236; *ANEP* #235 shows two scribes standing, one with a clay tablet and stylus in hand, one with a brush, writing on parchment. On the scribal profession, see Rainey 1968; Heltzer 1982:157–60).

The name of the scribe has been vocalized generally as Ilimilku, but a strong case can be made in favor of Ilimalku (see van Soldt 1991:21 n. 182; *UBC* 1.3, esp. n. 6; Lackenbacher 2002:237 n. 808). Both pronunciations of the element *mlk* are attested in Akkadian writings of Ugaritic names: *[a]-bi-ma-al-ku* (*PRU* VI, 79:17), *[d]IM-ma-lak*, (*PTU* 157), alongside three feminine names, *[f]mi-il-ka-ia* (*PRU* III, pp. 66 = RS 16.252:5), *[f]mi-il-ki-[i]n-a-RI* (*PRU* III, pp. 54–56 = RS 15.92:16; see van Soldt 1991:8, n.70) and [f]NIN-mi-i[l-ki] = Aḫatu-milku, the Amorite queen of Ugarit (see van Soldt 1991:14–15). Although the name that is written *ʾilmlk* in the Ugaritic script also appears in Akkadian texts, it is usually written with Sumerian logograms as DINGIR.LUGAL (see RS 17.61.22 = *Ugaritica V*, 13 and RS 17.67.15' = *Ug V*, 15), thus providing no evidence for pronunciation. But two exceptions to this are now known. One is *[d]DINGIR.mil-ku*, the name of a royal messenger in *PRU* IV, 294:8, which supports the *i*-pronunciation, although it is possible that the sign *mil* could also be read mal_x (see *UBC* 1.3, n. 6). The second has been found by Carole Roche in an as-yet-unpublished Akkadian list of personal names from Ugarit, where it is written *DINGIR-ma-al-ku*, more definitively supporting the *a*-pronunciation.[18] In addition to this

[18] We thank Carole Roche and Dennis Pardee for providing us with this information.

evidence, it is worth noting that the polyglot vocabularies from Ugarit provide the pronunciation of the word "king" as *malku*. The evidence for rendering the element as *milku* seems weaker than that for *malku*. Van Soldt (p.c.) has noted that the name *ᶠmi-il-ki-[i]n-a-RI* is best understood as Hurrian rather than Semitic and that Aḫatu-milku's name reflects a pronunciation from Amurru, the queen's homeland, rather than from Ugarit. In addition, the *mil*-sign of *ᶠDINGIR.mil-ku* remains at least somewhat ambiguous. This leaves *ᶠmi-il-ka-ia* as the only secure piece of evidence for that pronunciation at Ugarit. On the other hand, the appearance of *DINGIR-ma-al-ku* and *A-bi-ma-al-ku*, alongside the rendering of the word in the polyglot vocabulary suggests to us that *malku* is the more likely pronunciation at Ugarit.

The vocalization of the first element of the name, *ʾil*, as *ʾili* comes from the occurrence of several names with this element at Ugarit (van Soldt 1991:21, n.182). But in *ʾilmlk* it could also simply be *ʾilu*, and the name could mean, "El is king," or "The god is Mlk" (see Moran 1992:382). It seems more likely that the name means, "My god is king," or "My god is Mlk." We thus vocalize it as *ʾilimalku*, while recognizing that the evidence is far from definitive. The name itself was fairly common across the Levant. It appears in the Amarna letters (EA 151:45; cf. 286:36, where it is probably a mistake for Milkilu; cf. Moran 1992:382) and in the HB as 'Elimelek (Ruth 1:2, 3, etc.).

The fact that (if our reconstruction here is correct) four of the five colophons of Ilimalku refer to the scribe as a student/apprentice of Attenu strongly suggests that *t̲ʿ]y.nqmd*, the title that appears at the beginning of the preserved portion of the colophon, clearly a high and prestigious position, belongs not to Ilimalku, but to his teacher. As discussed above, the scribal weaknesses seen on 1.4 support the idea that Ilimalku was still early in his career, rather that at its height. The title appears in 1.6 VI 57 also in a context in which it is most plausibly identified as a title of Attenu (on this see van Soldt 1988:320; Pitard i.p.).

The meaning of the word *t̲ʿy* (reconstructed here on the basis of the colophons on 1.6 and 1.16) has been the subject of a great deal of discussion. The word has been interpreted in at least five different ways (cf. *DUL* 894). Some have seen it as a verb with the meaning "to present, donate." Ginsberg (*KU* 162; *ANET* 135; cf. Aistleitner 46; *TO* 1.221 n. k), followed by Greenstein in his rendering of the colophon in 1.16 (*UNP* 42), translated, "donated by Niqmaddu" and assumed that this referred to the king's sponsorship of the writing of the tablets.

Driver (*CML*[1] 103) rendered it, "Niqmad king of Ugarit has presented (it)." But this seems unlikely in view of the colophon of 1.16, which reads simply, *spr ʾilmlk ṯ̲ʿy*, thus omitting the name of the supposed donor. Most scholars have seen it as a noun, but interpret it in a variety of ways. Gordon initially (*UT* 19.2713; *UL* 38) and Rainey (1968:127) viewed the word as a gentilic on the basis of Kirta's title, *ṯ̲ʿ*, thus "the Thaʿite." Here one might compare the PN *bn ṯ̲ʿy*, the name of a priest (Rainey 1968:128). Yet Ilimalku's gentilic in 1.6 VI 54 would seem to be *šbny*, "the Shubanite." Several scholars have related *ṯ̲ʿy* and Kirta's title, *ṯ̲ʿ* to Hebrew *šōʾʿ*, "noble," which is used as a title for one of the leading segments of Israelite society in Job 34:18–19 and Isa 32:5 (see Greenfield 1969a:60–61; cf. V. Sasson 1982:201–2, 207–8). Thus the word has been rendered "the master" (*CML*[2] 67) and "the noble" (Heltzer 1982:69 n. 157). Van Soldt (1988), on the other hand, equated this word with the title SUKKAL/*sukallu* (?) in the colophons of Akkadian texts from Ugarit, a title that often was used for a high-ranking scribal or bureaucratic office. Similarly, Dietrich and Loretz (1987:34–36; cf. also 1997:1173, n. 153) argued that the word is a designation for a high-ranking official in the royal government, "minister, vizier, secretary" (see also Zevit 1991:1714 n. 34). The final major proposal views the title as one particularly related to the priesthood. The root *ṯ̲ʿy* is used at Ugarit to mean "to offer, offering" in several ritual texts (cf. 1.40.24, 32, 40–41; 1.161.27–30; 1.90.23; see de Tarragon 1980:59; Xella 1981:330; Fleming 1991:146; cf. ESA *ṯ̲ʿy*, "offering of incense," so Biella 548). In 1.169.2, *ṯ̲ʿy* seems clearly used as the title of a priest who performs rituals (del Olmo Lete 1995:41; Pardee 2000:23–28; 2002:160; Freilich 1992). Fleming (1991:141) has noted that the apparent religious position of the scribe parallels the same type of joint activities as the Mesopotamian *āšipu*, the "incantation priest." At this point the evidence remains too ambiguous to decide whether the title *ṯ̲ʿy* specifically belongs to the priestly or the bureaucratic sphere in this context. It may, of course, belong to both.

The final part of the colophon mentions the king, "Niqmaddu, King of Ugarit" (*nqmd mlk ʾugrt*). The royal name derives from **nqm* plus the theophoric element of Addu (Hadd) (see *PTU* 17, 168; cf. J. J. M. Roberts 1972:13; for the variant writing of the name with ^{d}Iš-kur, see Arnaud 1999). The recent discovery of four king lists in the house of the high official Urtenu (see Arnaud 1999) shows that there were four kings of this name who ruled over Ugarit between the fifteen and thirteenth centuries. Most commentators have tended to identify our Niqmaddu

with traditional Niqmaddu II, now III (see Arnaud 1999:163) who reigned in the mid-fourteenth century. However, with the discovery of RS 92.2016, with its Ilimalku colophon, among the tablets in the late thirteenth century house of Urtenu, several scholars now suggest that the scribe flourished during the reign of the final Niqmaddu in the late thirteenth century (Dalix 1996; Pardee 1997a:241, n. 3; cf. Yon 1995 for a discussion of the house, and Bordreuil and Malbran-Labat 1995 and Lombard 1995 concerning the discovery of the tablets). No firm conclusion is yet possible. As mentioned in the Introduction above, two Akkadian texts found in the house of Rašapabu list $^{\text{I}}$DINGIR.LUGAL as their scribe (RS 17.61 and 17.67: *Ugaritica V*, texts 9, 10, pp. 13–16). This person may be the Ilimalku of the Ugaritic tablets. Both tablets contain additional names that can be securely dated to the fourteenth century (see van Soldt 1991:27–28). However, this $^{\text{I}}$DINGIR.LUGAL is not necessarily the Ilimalku of the Baal Cycle. There is no reason why there could not have been two scribes named Ilimalku, one in the fourteenth and one in the thirteenth centuries. Thus, until we have further evidence, the question of the date of Ilimalku and the Baal tablets themselves remains unresolved.

The city name Ugarit has been related to Akkadian *ugaru*, "field" (cf. the name of Baal's messenger, *ʾugr*, which likely means "field," in relationship to *gpn*, "vine"; cf. Zamora 2000:631). The word *ugaru* at Nuzi was used for a specific area of land belonging to a town (see Maidman 1994:42). But this etymology is not secure.

FOREWORD

The rapidly rising interest in Ugaritic studies is not due merely to the novelty of the subject: for the fact is that the clay tablets from Ugarit are the most important corpus of ancient literature discovered so far in the twentieth century.

Between 1928 and the outbreak of World War II, French archeologists unearthed the tablets at Ugarit, situated on the north coast of Syria where the mainland comes closest to Cyprus. The texts date from the early fourteenth century B. C. and are couched in a previously unknown Semitic language and inscribed in a previously unknown cuneiform alphabet. The texts include prose and poetry. The poems comprise mythological compositions about the gods, as well as legends whose main characters are human although the gods are constantly mingling with them and affecting their destiny. The prose tablets are quite varied and include epistles, hippiatric prescriptions, and especially a large number of administrative documents dealing with taxation, conscription, statistics, professional guilds, land ownership, rations, wages and other aspects of public and private life.

Ugarit was a port and the capital of a kingdom, bearing the same name, in the Amarna Age of the fifteenth and fourteenth centuries B. C. The little realm has been known to scholars since shortly after 1887 when the Amarna tablets were found in Egypt. One of those tablets shows that Ugarit was a well-known, though minor, country; another, that the capital had been severely damaged by fire; the third, that the ruler of Byblos could not import, for Egypt, any prized logs from Ugarit because a hostile ruler named Aziru, who controlled the towns of Ṣumur and Arqat, enjoyed trading with Ugarit and controlled the sea so as to prevent Byblos from trading with Ugarit [1].

Situated in the north, Ugarit fell squarely within the Hittite sphere of influence; not in the Egyptian, nor in between, where she might have pitted the Hittites and Egyptians against each other as so many more southerly chieftains did. King Nqmd of Ugarit paid

[1] See tablets 1, 126 and 151 (cf. also 45, 89 and 98) in J. A. Knudtzon, *Die El-Amarna Tafeln* (Leipzig, 1915) or S. A. B. Mercer, *The El-Amarna Tablets* (Toronto, 1939).

tribute to the Hittite King Shuppiluliuma (118[1]) and thereby won a mutual defence arrangement which provided a measure of security worth the cost of the tribute. So far, King Nqmd's known international correspondence is limited to his overlord, Shuppiluliuma. He might well have corresponded with the king of Carchemish (as another king of Ugarit did [2]) and with other rulers who were included in the Hittite Empire defence system. But unless unexpected evidence to the contrary comes to light, we may assume that Nqmd was not so foolhardy as to plot against Shuppiluliuma with the rival empires of Egypt, Mitanni, Assyria or Cassite Babylonia, all of which were too distant to be counted on in any struggle against the great Hittite king. However, purely cultural and social contacts, including correspondence in Babylonian, between Nqmd and sovereigns far afield, are not out of the question in the Amarna Age when internationalism characterized the times.

This book aims at providing a comprehensive translation of all the texts, poetry and prose, with just enough explanation and notes to bring out the literary and sociological content of the texts including the underlying concepts and institutions [3].

Italics indicate doubtful translations; parentheses mean that the included words have been added in translation; while brackets mark restorations of parts now illegible or lost; scribal omissions are enclosed in ⟨ ⟩, scribal plusses in ⌈ ⌉. The scholar, who of course is not expected to be satisfied with translations alone, should use this book together with the edition of the texts in UH, to which the references on the left of the translations refer [4]. Small fragments that have resisted every reasonable attempt to make sense of them or to fit them into any framework supplied by other texts, are omitted. Likewise, lists of names and numerals are not included, because they present no translation problem and anyone interested in such specialized material will want to read the Ugaritic original.

I have no theories to defend, nor would I wittingly take liberties with the texts. Unfortunately, many words, and not a few whole passages, are still obscure. But instead of cluttering up the translations with a lot of question marks, I have indicated the obscurities

[1] Unless otherwise stated, text numbers refer to the Ugarit tablets as edited in UH (see the list of abbreviations).

[2] E. Dhorme, 'Lettre du rois de Kargamish au roi d'Ugarit', *Mélanges Syriens*, I 203-207.

[3] In revising my manuscript, I have taken the liberty of adding a few peripheral notes of orientalistic interest.

[4] A number of proper names are given in more or less familiar English form rather than in scientific normalization from the Ugaritic. The selection of such names is somewhat arbitrary but no confusion will result if the reader uses this book together with the transliterated texts in UH.

by *italic type*, which will not mislead the cautious reader. However, even where italics have not been used, the translations need not be precise. To take a simple illustration: there are a couple of land measures written *šd* and *kmn* in the consonantal alphabet. Since *kmn* appears after *šd* climactically, it is probably the larger. I translate *šd* and *kmn* as 'acre' and 'hectare', respectively: the absence of italics means only that *šd* and *kmn* are land-measures, as are 'acre' and 'hectare'; no identity in size is implied nor could we expect English to have words expressing the area-units of old Ugarit. Furthermore, *šd* and *kmn* are commonly used to express distance (instead of area), in which case 'mile' and 'league' would be a more logical translation. However, I have decided to render the terms consistently as 'acre' and 'hectare'. It is too bad that we must sacrifice either consistency or logic; but a translator is often obliged, by the nature of his task, to make such decisions. Perfect translation is not attainable, even from well-known modern languages, let alone a newly-discovered language like Ugaritic, where the last word, on many points (some, quite basic), remains to be said (1).

(1) Minor inconsistencies in my translation may have the redeeming virtue of indicating alternative possibilities in dealing with doubtful points in the lexicon, syntax and prosody.

Sometimes my translations are literally possible but not exegetically clear. Though this leaves much to be desired, it is better than a smooth English version that violates the Ugaritic original.

PART I

POETIC TEXTS

CHAPTER I

INTRODUCTION

A lush oriental literature, like the poetry of Ugarit, is bound to have a goodly share of poetic license. Thus when King Krt's tears are said to drop like shekels, we properly indulge the bard in his hyperbole and let it go at that. But while poetic license was a privilege enjoyed by the bards of Ugarit, we must not overestimate its extent. It is all too easy for us to miss the real logic of a passage and attribute the apparent illogic to poetic considerations. For example, at first blush it would be tempting to explain Krt:8-9, where a stichos mentioning 'seven brothers' is paralleled by a following stichos mentioning 'eight sons of one mother', as illogical poetic license whereby 'x' is paralleled climactically by 'x + 1' (UH § 17. 9). However, closer examination shows us that the arithmetic is correct, for 'eight sons of one mother' parallels not 'seven brothers' but the king plus his seven brothers who total eight sons of one mother.

Similarly, the equation in Krt:198-9 of 'Asherah of the Tyrians' with 'The Goddess of the Sidonians' is not contradictory if we understand the terms; for 'Sidonians' are not just the people of Sidon but all of the southern Phoenicians (1).

When literal meaning is brushed aside as poetic license in order to make room for predilection, prejudice, theory or outside parallels, the results are bad, although they may gain wide credence for a long time. As an object lesson, we may turn to the accepted view of the fertility god Baal who is incorrectly identified with a mixture of real and imaginary motifs including the Dying God of Frazer's *Golden Bough*. Every year with the onslaught of the summer drought, Baal is supposed to be killed by Môt, the god of death; and every year, Baal is revived with the return of the rains and fertility (2). The

(1) See GdA II, 2 63.

(2) See De Langhe I 364; I accepted the same erroneous view in *The Loves and Wars of Baal and Anat* (Princeton 1943). Cf. *Golden Bough* II 118-119 and IV 5; note also IV 7 where Tammuz is said to die and revive *annually*: a generally accepted idea for which I can find no support in the Mesopotamian mythological texts; annual celebrations prove nothing, for holidays tend to be annual affairs; no one would maintain that Columbus rediscovers America every year because Columbus Day is celebrated every October 12th.

evidence for this is of the most specious character. The Adonis myth has an embellishment, known from Greek sources, to the effect that Zeus settled the rivalry of Persephone and Aphrodite over Adonis, by assigning the beautiful god part of every year to Persephone in the underworld, and the other part of every year to Aphrodite above. Before the discovery of the Ugaritic texts, this Greek version was read back into Phoenician mythology and now it is read still further back into Ugaritic mythology in clear opposition to the plain meaning of the Ugaritic texts. The texts tell us nothing of any annual death and revival of Baal. Indeed the widespread notion that the year in Canaan is divided into a fertile and a sterile season is false. No part of the year is sterile: thus, figs and grapes ripen toward the end, and hence worst part, of the long summer drought; and much is made of the summer fruits in Ugaritic (77) and in other sources from Canaan such as the Gezer Calendar (1), to say nothing of many biblical passages. Famine is therefore not a seasonal phenomenon; nor did the normal sequence of the seasons in a reasonably good year hold any terrors for the people. It was the abnormally bad year; or, worse still, a series of bad years; that reflected the failing of Baal (2). Moreover, drought and famine are regularly represented as seven-year scourges in the Ugaritic texts. Thus Daniel curses the site of his son's murder with seven (or, climactically, eight) years of drought through the withholding of Baal's waters (1 Aqht : 44-46). In the myths, the languishing of the earth (67 : II : 5-6) is, to be sure, explained by the death of Baal, the god of fertility. However, even in this case, we are not dealing with seasonal phenomena since the tablets (49 : V : 8) state that the resultant drought or blight lasted seven years. The duration of these calamities is like the seven years of famine in the Joseph story; and, by the same token, we might compare 'seven years the god is full' (75 : II : 45) with the seven years of plenty in the Joseph story; though that is as far as the analogy with the Joseph story goes. To sum up: Baal is a fertility but not a seasonal god; on only one occasion (67 : II) do we know he was killed, later to be

(1) All the months of the Gezer calendar are named after useful agricultural events. There is no 'month of famine' or 'month of sterility' or the like. My friend, Professor H. L. Ginsberg, was the first to recognize the dual forms in the Gezer Calendar, thus establishing its completeness for the year (AO 8 1936 146). I take this ocasion to note that Ginsberg, by reading *out of* the Ugaritic texts, has contributed much more to our understanding of them than all of the comparativists put together, who have read so much *into* them. Comparison is a basic function of good scholarship, but the sound scholar must first understand the things he compares.

(2) Furthermore, since famines also resulted sympathetically on account of Krt's sickness, and (with the help of Daniel's curse) Aqht's death, such scourges are not uniquely associated with Baal. Cf. 126 : III : 13-15; 1 Aqht : 42-46.

revived (49 : III); the recorded droughts and famines associated with Baal's misfortunes or hostility are calamities lasting seven years, plainly ruling out a yearly cycle of Baal's death and revival.

It is significant that Baal is not the only god on whom fertility may depend; nor is he indispensable in fertility rituals. He is not even mentioned in text 52 which deals with the inauguration of a new seven-year cycle, to assure its fertility by considering the closing cycle one of privation. The idea is that if one seven-year period ends in real or simulated famine, it will be followed by seven years of plenty. That the Hebrews reckoned with such cycles is clear not so much from the Joseph story (which has a romantic and foreign setting), but from passages like Ezekiel 39 : 9–10 and especially from the seven-year Hebrew cycle that ends in the sabbatical year. In the sabbatical year the land is to lie fallow (Lev. 25 : 4–5) not because of any principles of soil chemistry, but because the ending of one cycle without a harvest was believed to bring on a seven-year cycle of plenty (1).

The Ugaritic parallels to the Bible already constitute a subject in its own right with an extensive literature. The parallels affect whole institutions as well as details. As an illustration we may note, in both the Bible and Ugaritic literature, the idea of punishing or humiliating a city by blinding its inhabitants in one eye. This barbaric usage, which is what Saul saved the people of Jabesh Gilead from (1 Sam 11 : 2), is now attested in Ugarit (1 Aqht : 165-168) for Daniel curses the town of 'Abilûma with blindness in one eye because it was the site where his son was murdered. The town's responsibility for a crime perpetrated within its territory is, in turn, an institution attested in the Bible and cuneiform records, and persists in the modern Middle East (2).

The cultic use of a tabernacle (harking back to nomadism) is a well-known phenomenon in early Hebrew life; and is clearly attested in Krt : 159, where King Krt, though living in an age of roofed houses (Krt : 80), is to practice certain rituals in a tent. Nor is this to be wondered at in view of the general tendency of religion toward

(1) *A fortiori,* after seven seven-year cycles (Lev. 25 : 8 ff.) the land was again to lie fallow (: 11) in every fiftieth or Jubilee year, in spite of the serious difficulties that would arise from two successive years (49th and 50th) of wilful unproductivity.

A. S. Kapelrud (*Joel Studies*, Uppsala 1948 118-120) is right in insisting on the plurality of *šānîm* 'years' in Joel 2 : 25, which refers to a succession of locust years. The passage contains the idea that good years will come equaling the number of the lean years (cf. Psalm 90 : 15), which constitutes the psychological background for the Sabbatical Year.

(2) See C. H. Gordon, 'An Akkadian Parallel to Deuteronomy 21 : 1 ff.', RA 33 1936 1-6 (texts II and III are not applicable!).

conservatism; compare the Feast of Tabernacles which still evokes the use of a tent or booth among observant Jews. The Ugaritic evidence militates against the theory that the biblical Tabernacle was a retrospective adaptation of the Temple to pre-Śolomonic times.

The bearing of Ugaritic literature on the higher criticism of the Bible is considerable. The criterion of variant names (specifically for God) as an indication for differences of authorship must be drastically discounted in the light of Ugarit. In one and the same poem, Baal may be called Baal, Aliyn Baal, Dagân's Son, Rider of Clouds, etc. If it be argued that these are not different names but simply a name and its epithets, this can not be said of the alternation of Baal and Hadd (e. g., 75 : II : 54-55). Indeed the parallelistic nature of the poetry calls for such variant names. It is against the background of Ugaritic that we must evaluate the multiplicity of God's names: El, Eloah, Elohim, Yahwe, Yah, El-Shadday, Adonay, etc. *Per se*, Elohim and Yahwe need not imply dual authorship in a chapter of the Bible any more than Baal and Hadd do in a Ugaritic myth.

Another exaggerated criterion of divergent authorship is style. The fact is that changes of topic may call for corresponding changes of style. For example, when the Ugaritic poet begins Baal's plea for a house, he uses well-balanced stichoi in the best literary tradition; but as soon as the poet, in the course of the same plea, enumerates the houses of other gods (e. g., 51 : IV : 52-57), he gives a jejune listing, as unsatisfying to the modern esthete as Homer's Catalogue of the Ships is to most modern lovers of Homer. The specifications of Noah's ark (Gen. 6 : 14–16) are widely attributed to late authorship ([The] P[riestly Code]) on stylistic grounds. There is no doubt a sharp change in style; but the stylistic change, according to ancient Middle East usage, is called for by the change in subject matter. We cannot fail to notice a corresponding change when the specifications of Utnapištim's ark are given in the Mesopotamian Flood Epic (1). In other words, if we insist on a P stratum on such stylistic grounds in the Bible, we should be forced by the facts to maintain a sort of 'P' stratum on corresponding grounds in Babylonian and Ugaritic literatures. No one denies that diverse antecedents make up any literary composition; but the rediscovery of the lost literatures of the Bible World shows us that most biblical books could be accepted in Israel as single compositions, in much the same way as the Gilgamesh Epic, with all its stylistic diversity, was in

(1) See Gilgamesh Epic 11:55-70. It is interesting to note that *qnym* (Gen. 6 : 14), which is to be read *qānîm* 'reeds' in the so-called P description of Noah's ark, must go back to a pre-Hebraic Mesopotamian source. It has been garbled into *qinnîm* by Hebraic tradition because the Hebrews had lost all memory of reed construction as illustrated by the house and ark of the 'Babylonian Noah' Utnapištim.

Mesopotamia. The importance of clarifying this subject warrants another clear-cut example: No one questions that Hammurabi's Code is a single composition in spite of the fact that the prologue and epilogue are not only written in poetry (as against the prose of the laws) but in a different dialect from the laws, because the poetry calls not only for different style but even for different grammatical forms.

The magnificent structure of Old Testament higher criticism is not to be brushed aside; but its individual results can no longer be accepted unless they square with the Hebrew text as we can now understand it in the light of parallel literatures from the pagan forerunners and contemporaries of the Hebrews, in the Bible Lands.

It has long been recognized that many narratives in the Bible are etiological, to explain something already in existence. For example, the reputed mourning of the Egyptians for Jacob is associated in Genesis 50:11 with the town of Abel-Mizraim ('Mourner of Egypt') to explain the name of the place. Sometimes etiological narrations are genuine; but in the large majority of cases, the story is attached to, or even invented for, the more ancient element to be explained. Thus the town of 'Abilûma ('Mourners') is associated etiologically with the expression of grief for the murdered Aqht (3 Aqht:8)(1).

The Legend of Aqht is also made to explain a sacrifice called *hrnmy*. Daniel, who bears the epithet *mt hrnmy* 'Man of Hrnmy', makes the sacrifice in the Legend because Aqht was killed. Thus the *hrnmy* sacrifice is traced to Daniel with the help of an etiological epithet. As a rule, when a ritual is associated with a myth or legend, the ritual is the older, for the myth or legend tends to be an explanation of the already existing ritual.

Natural phenomena tend to be etiologized theologically, when the physical explanations are unknown. The Hebrews, who were unaware of spectral physics, explained the rainbow as God's sign of His vow not to punish mankind with another flood (Gen. 9:12-17). Similarly, the Ugaritians explained the mysteries of nature mythologically: Thus when the goddess 'Anat washes ('nt:IV:86-88), her water is not the commonplace water used by mankind; it is none other than the dew on earth and the stars in heaven, which are thus explained alike as drops of water worthy of the *toilette* of a beautiful goddess.

The mating of Baal with his sister 'Anat (132:1 ff.) did not disturb their devotees in Ugarit. Those deities were probably regarded as half-brother and half-sister, sired by the same father but not born of the same mother; for 'Anat (with reference to Baal) is called *ybnt abh* ('nt:IV:84), which seems to mean 'the daughter of his father'. In any event, the marriage of half-siblings, provided they had different

(1) This was first observed in class by a student of mine, Mr. H. M. Kamsler.

mothers, was tolerated by the Hebrews not only in the days of the Patriarch Abraham (Gen. 20:12) but at least as late as Davidic times (2 Sam 13; N. B. verse 13); although the biblical legislation that became binding for Judaism outlawed it (Lev. 18:9; Deut. 27:22).

The fact that what is moral differs tremendously according to time, locality, and social group is a commonplace. However, it would be worth our while to distinguish terminologically between significant and non-significant moral criteria, depending on time, place and social group. For example, that it was no crime for men to copulate with animals in Ugarit is indicated by the fact that the favorite god Baal impregnated a heifer (67 : V : 17–22), a myth, which, for all we know, may have been enacted ritually by reputable priests. To the Hebrews, on the other hand, copulation with beasts was a heinous crime calling for the death penalty (Ex. 22:18; Lev. 18:23; Deut. 27:21). Moreover, the Bible tells us that the Hebrews' pagan neighbors practised beastiality (Lev. 18:24), as we now know to be literally true from the Ugaritic documents. All this implies that if we discuss Hebrew criminology, we should include beastiality, for in Hebrew society it was a crime. However, there is no basis for including beastiality in a treatment of the criminology of Ugarit, since it was not a crime there. Among the Hebrews it was significant as a distinct crime; among the Ugaritians, it was criminologically non-significant. The test of the significance of a social phenomenon is this: Does the group in question make an issue of it? Illegitimate children are born in the U. S. A. and Sweden; in the U. S. A., where a social issue is made of illegitimacy, it is significant; in Sweden, where nobody cares, it is not[1]. That is to say, in the U. S. A. it is of social importance whether a person is of legitimate birth; but not in Sweden. While it is natural for us to draw on our background for understanding newly-discovered cultures, there is no virtue in jumbling the non-significant with the significant. Just as linguists make a distinction between phonemes (i. e., distinctive sounds in a given language) and sounds (irrespective of their significance in controlling meaning in a given language), I would suggest coining the word 'socieme', meaning a social phenomenon significant in a given cultural pattern. Thus *sociological* observations might include the significant and non-significant; whereas *sociemic* observations would be confined to the significant (or, if one prefers, distinctive) elements of a given society.

[1] See LCC 210; I have brought out a considerable number of oriental and occidental social attitudes in LCC.

CHAPTER II

THE BAAL AND ʿANAT CYCLE

The literary texts are characterized by verbal repetitions with variations, which though often small, show that the repetitions fit into different episodes, and are not simply scribal variants of the same text; e.g., ʿnt : IV : 77 ff. and ʿnt : pl. ix : III : 18 [1] where the phraseology is the same except for the place names *uġr* || *inbb* (ʿAnat's abode) and *kptr* || *ḫkpt* (Ktr-and-Ḫss's abode) respectively. This raises a question regarding the literary fragments, particularly the shorter ones: Are they simply scribal variants of other texts that they resemble or do they belong to different episodes which happen to be worded similarly? Either answer is conceivable. However, where there is any appreciable differentiation in wording, we shall assume that the texts belong to different episodes. The first problem is to group the fragments according to the literary cycles. It is usually easy to identify a Krt tablet, because King Krt is only mentioned in the legend that bears his name. Similarly, the mention of Aqht's name enables us to assign a fragment to the Legend of Aqht without further ado. But in the case of the Baal and ʿAnat Cycle the problem is not so simple. Baal and ʿAnat are likely to appear in any literary text; for example, they figure in the legends of Krt and Aqht. Furthermore, there is no proof that what we call the Baal and ʿAnat Cycle was in antiquity ever conceived as a unit. Our difficulties are aggravated by the fragmentary character of so many of the tablets as well as by the far-from-logical nature of mythology. But since it is our task to restore order, rather than to accept chaos, we shall try to arrange the Baal and ʿAnat fragments so as to form a continuous narrative, as far as possible. Though, needless to say, in Ugaritic studies there is no merit in injecting continuity into unrelated compositions, such as FitzGerald did with Omar Khayyam's quatrains.

Text 129 reflects a time when the god Sea was entitled to a palace (: 8–9) befitting the sovereignty (: 22) he then enjoyed.

In text 137, Sea sends messengers to the divine assembly with an arrogant demand that Baal be surrendered to Sea presumably because Baal had not paid Sea tribute. The divine assembly, with bowed heads, subserviently received the messengers, whereupon Baal rebukes the assembly and gets the gods to raise their heads. The emissaries, acting on Sea's orders, come and deliver the message without even showing ʾIl, the head of the pantheon, the customary respect. ʾIl agrees to hand over Baal as a tributary and slave to

[1] In UH, the restoration of *uġr* is an error for *kptr*, as proved by ʿnt : VI : 13-16ʿ

Sea. Baal, infuriated, grabs a knife to slash down the emissaries but is held back by a couple of goddesses who seize his hands and tell him that he simply must not smite Sea's messengers.

Possibly text 133 comes next, since it tells of Baal's proceeding to Sea, whom he vanquishes by using two magic clubs fashioned by Ktr-and-Ḫss for the battle described in text 68 [1]. By slaying Sea, Baal succeeds as king (68 : 32). The ʿnt text relates how the goddess ʿAnat, after battling victoriously (: I–II) is invited by Baal to his mountain, Ṣapân, where he promises to reveal a secret to her (: III). When ʿAnat sees Baal's messengers, she at first fears that he has been attacked by a foe but on being informed of the message, she hastens to comply and Baal receives her lavishly and asks her to help him get a palace (: pl. vi : IV) so as to live up to his newly won kingship [2]. ʿAnat accordingly extracts authorization for the palace from ʾIl (: V), and Asherah's messengers are sent to the divine craftsman Ktr-and-Ḫss, with Baal's request (: VI). ʿnt : pl. ix–x is fragmentary but contains Ktr-and-Ḫss's hastening to ʾIl (: III : 18 ff.) for further instructions.

Texts 130 and 131 run parallel to parts of ʿnt; both 130 and 131 deal with ʿAnat's victorious battling; 130 also has Baal's invitation to ʿAnat.

Text 51 tells of Ktr-and-Ḫss in his workshop, making luxurious gifts (: I : 24–44) to buy preliminarily the intercession of Asherah (: II : 27) and finally the consent of ʾIl. ʾIl's permission is obtained (: V) and Ktr-and-Ḫss constructs the house and the housewarming is at last celebrated (: VI). Although Baal at first resists Ktr-and-Ḫss's suggestion that a window be installed (: V–VI) he is at last persuaded (: VII). Thereupon Môt menaces Baal, who refuses to pay respects to him; and Baal, who is cautioned against destruction in the underworld, communicates with Môt who has laid rival claims to the kingship (: VII–VIII). Baal then goes down to the underworld [3], where Môt reigns, and there Baal, after mating with a cow, meets his death to the detriment of terrestrial nature and to the sorrow of ʾIl and ʿAnat (67 : VI; 62). ʿAnat in her grief locates, with the Sun goddess's help, Baal's corpse and performs the fitting rituals for the dead (62 : obv.). An inadequate successor is chosen to rule in Baal's stead (49 : I). ʿAnat locates Môt, and after he admits killing Baal, ʿAnat slays, dissects and plants Môt in the ground (: II). Then Baal returns to life so that nature responds with abundance once more (: III). Baal thereupon vanquishes Môt and after seven years Môt protests his misfortunes to Baal, whom he blames (: V). A battle between Baal and Môt ensues but it is broken up by Sun (: VI) who frightens Môt off [4].

A few other texts deal with the mating of Baal. No. 76 relates how ʿAnat visits Baal who mates with a cow and retires to his moun.

[1] Cf. J. Obermann, 'How Baal Destroyed a Rival', JAOS 67 1947 195-208.

[2] In a much appreciated private communication, Mr. S. Smith, then of the British Museum, pointed out to me that it was Baal's newly-won kingship that necessitated his getting a palace.

[3] The theme of summoning to the underworld a god who has been disrespectful to the emissaries of the underworld deity, is familiar from the Babylonian myth of Nergal and Ereškigal.

[4] Perhaps there was thought to be a struggle between Baal and Môt before every seven-year cycle; a victory of Baal meaning seven years of plenty; a victory of Môt meaning seven years of famine.

tain where ʿAnat at last brings the news that a bull calf is born to him. Text 6 may in some way be related, in that a cow, ʿAnat and conception are mentioned; however, there are so many other elements that the significance and position of this tablet are far from clear. Text 132 deals with Baal's coupling with ʿAnat.

Of the remaining fragments, the most extensive is 75 which deals with the fall of Baal after seven (or climactically eight) years of plenty. Since 136 mentions Baal, the palace and death, it seems that the subject is the tragedy that befell Baal after the construction of his palace. No. 8 tells of Sun's searching for someone (:5-6) on a sad occasion (:10-11), which suggests her aforementioned search for Baal. Text 135, which also deals with Sun, is too fragmentary for further identification.

Text 100 is a benediction for peace and abundance contained in a message of Baal. The tone is such that it might have been recited as part of a prologue or epilogue in the performance of a religious drama.

The texts of the Cycle in translation follow:

129 :1 [ ] father [ ]
[ ] to [ ]
[ ]
[Thereupon] he sets face toward ʾIl
At the courses [of the Two Rivers
In the midst of the streams of the Two Deeps.
:5 He enters] the abode of ʾIl
And comes into the domicile of the King, [Father of Šnm.
At the feet of ʾIl he bows] and falls
Prostrates himself and honors [him].
[ ]
Ktṛ-and-Ḥ[ss] house of Sea
[ ] palace of Judge River (1)
Thy bosom [ ]
Build the house of Prince Sea
[Ere]ct the pala[ce of Judge] River
In the midst of [ ]
:10 [ ] build [ ]
[ ] erect [ ]
[ ]
[ ] lad to the fields, words
[ ] in the sea.
Sea [ ] ʿAṯtar *of* [ ]
[ ] fire

(1) Count du Mesnil du Buisson has made the interesting observation that River's epithet 'Judge' harks back to the river ordeal, whereby the river-god gives legal verdicts. Thus in CH the river, when mentioned for ordeals, has the determinative for gods before it.

[ ] bring [ ] son(s)
129 : 15 [ ] the Luminary of the Gods, Sun
She lifts her voice
And [shouts:
'Hear!]
Tôr-'Il, thy father,
To the presence of Prince Sea
[Judge Riv]er
Will not Tôr-'Il, thy father, hear thee?
Will he not remove [the props of thy throne?
Nor up]set [the chair] of thy kingship?
Nor break the scepter of thy government?'
And [ ] replies:
'[ ] against me, Tôr-'Il, my father.
As for me, [I have] no house [like] the gods
: 20 Nor a court like [the deiti]es!
(To) the *womb* I'll descend
When I'm *reborn* the Ktrm will wash me
In the hou[se] of Sea
In the palace of Judge River.'
Tôr-'Il, his father, [ ] Judge [ ]:
'[Judg]e River, thou art king!
[ ] mayest thou reign!
Lo, there is no wife [ ] like [ ]
[ ] Prince Sea
[ ] Judge River
[ ] he will send me.'
: 24 And 'Aṯtar replies: [ ]

[ ]
137 : 3 Thou hast *arisen against* [ ]
[And] Aliyn Baal [replies]:
'[ ]
On thy head, Aymr [ ]
[On thy pate, Ygrš (1)]!'
[And] Judge River [replies]:
'May [Ḥoron] break, [O Baal]!
[May Ḥoron break] thy head
Astarte-[Name-of-Baal, thy pate]!'
[ ]staff fall in *By[blos*]
: 10 [ ]two women [ ]
messengers sends Sea [ ]

(1) Aymr and Ygrš are the names of magic clubs; see text 68.

in - - - - - - - - - [ ]
- - break also they.
'Depart, lad[s!
Be sure to return!
Then] ye shall surely set [face]
Toward the Convocation of the Assembly
In the mi[dst of the mountain of Ll.
137 : 15 At the feet of 'Il] do not fall
Do not prostrate yourselves before the Convocation [of the Assembly]
[ ]
And declare your views!
And say to Tôr, [his] father, ['Il!
Declare to the Convocation] of the Assembly:
"The message of Sea, your lord,
Of your master Judge River:
'Give up, O gods, him whom ye *harbor*
Him whom the multitudes *harbor*!
Give up Baal [and his *partisans*]
Dagân's Son, so that I may inherit his *province*!'" '
The lads depart
And return.
: 20 [Then] they set [face]
Toward the mountain of Ll
Toward the Convocation of the Assembly.
The gods had even sat down
The deities, to dine.
Baal was standing before 'Il.
As soon as the gods saw them
Saw the messengers of Sea
The emissaries of Judge River
The gods lowered their heads upon their knees
Yea upon the thrones of their lordships.
Baal rebukes them:
'Why, O gods, have ye lowered
: 25 Your heads on top of your knees
Yea upon the thrones of your lordships?
Let a *few/couple* of the gods *read*
The tablets of the messengers of Sea
Of the emissaries of Judge River!
O gods, lift up your heads
From on top of your knees
Yea from the thrones of your lordships!
And I shall answer
The messengers of Sea
The emissaries of Judge River.'

The gods lift their heads
From on top of their knees
Yea from the thrones of their lordships.
137 : 30 After there arrive the messengers of Sea
The emissaries of Judge River
At the feet of 'Il they do not fall
They do not prostrate themselves before the Convocation of the Assembly
Arise [ ] they declare their views.
A fire, two fires!
He sees a brandished sword!
[ ]them.
They say to Tôr, his father, 'Il:
'The message of Sea, your lord,
Of your master, Judge River:
"Give up, O gods, him whom ye *harbor*
Him whom the multitudes *harbor*!
: 35 Give up Baal and his *partisans*
Dagân's Son, so that I may inherit his *province*!"'
[And] Tôr, his father, 'Il [replies]:
'Baal is thy slave, O Sea!
Baal is thy slave, [O S]ea!
Dagân's Son is thy captive!
He will bring thy tribute like the gods
He will bring[ ]
Yea the deity, thy gift!'
But Prince Baal is infuriated.
[A knife he tak]es in the hand
A dagger in the right hand.
To smite the messengers he *flo[urishes them/it]*.
: 40 ['Ana]t seizes [his right hand]
Astarte seizes his left hand:
'How [canst thou smite the messengers of Sea
The emis]saries of Judge River?
The messengers - - - - - - [ ]
[ ]messengers on the shoulders
word of his lord and [ ]'
But Prince Baal is infuriated.
Fields in [ ]
[ ] for the messengers of Sea
The emissaries of Judge River [ ]
: 45 *I have* spoken to Sea, your lord,
[Your] ma[ster, Judge River.]
[ ] Gmr-Hadd - - [ ]
[ ]bow down[ ]

133 : 6 *thunder* [ ]
[obv.] whichever [ ]
: rev. 1 [ ]
he raises it [ ]
king (*of*) his hill [ ]
the bull of all of them which is unto him [ ]
: 5 let (be) give(n) not/verily alongside its Baal
Or a bow in the presence of Hadd [ ]
to me, on/in the sea/day Baal - - - [ ]
raise, *hypocrites, cur*[*ls*]
king, river, - - - [ ]
: 10 Prince Baal, the lad [ ]
the youth (*of*) Hadd - - [ ]
And to River *he proceeded* [ ]
[ ] ʾIl

68 : 1 [ ] dead[ ]
[ ]alive[ ]
I shall bring them out
Also I shall drive out
[ ]and in the sea[ ]
In the sea two bosoms [ ]
[*Judge*] River [ ] there two swords - - - I shall kiss
[ ]
: 5 ʿTo the earth let *our mighty one* fall
Yea to the dust, *our* strong one.ʾ
From his mouth the word went forth
From his lips, his utterance
And (as) his voice was given forth
Prince Sea *fell* at the throne.
And Kṯr-and-Ḫss declared:
ʿDid I not tell thee, O Prince Baal,
Nor declare, O Rider of Clouds?
"Lo, thine enemies, O Baal,
Lo thine enemies wilt thou smite
Lo thou wilt vanquish thy foes
: 10 Thou wilt take thine eternal kingdom
Thine everlasting sovereignty!"ʾ
Kṯr brings down two clubs
And proclaims their names.
ʿThy name, even thine, is Expeller!
Expeller, expel Sea
Expel Sea from his throne
River from the seat of his sovereignty!
Thou shalt swoop in the hands of Baal

Like an eagle in his fingers!
Strike the shoulders of Prince Sea
68 : 15 'Twixt the hands of Judge River!'
The club swoops in the hands of Baal
Like an eagle in his fingers.
It strikes the shoulders of Prince Sea
'Twixt the hands of Judge River.
River is strong
Sea is not vanquished
His *joints* do not *fail*
Nor his *frame collapse.*
Ktr̂ brings down two sticks
And proclaims their names.
'Thy name, even thine, is Driver!
Driver, drive Sea
: 20 Drive Sea from his throne
River from the seat of his sovereignty!
Thou shalt swoop in the hands of Baal
Like an eagle in his fingers!
Strike the head of Prince Sea
'Twixt the eyes of Judge River!
Let Sea *sink*
And fall to earth!'
And the stick swoops in the hands of Baal
Like an eagle in his fingers.
: 25 It strikes the head of Prince [Sea]
'Twixt the eyes of Judge River.
Sea *sinks*
Falls to earth
His *joints fail*
His *frame collapses.*
Baal *pounces*
And *drinks* Sea
Destroys Judge River [ ].
By name, Astarte rebukes:
'Shame, O Aliyn Baal,
Shame, O River of Clouds!
For Prince Sea was our *captor*
: 30 For Judge River was our *captor.*'
And there went out *B[aal]*
Verily ashamed is Aliyn Baal
And [ ] Sea is indeed dead
So let Baal rei[gn]!
Heat for the [ ] and [ ]
views Sea, verily dead [ ]
: 35 for [ ] and she answ[ers]

those lords [ ]
for the [ ]
in his head [ ]

ʿnt:I:1 'Do not lower [ ]
Serve Aliyn Baal
Honor the Prince, Lord of Earth.'
He arose to prepare
:5 So that I might feed him.
He put a breast before him
With a keen knife
A slice of fatling.
He proceeded to prepare beverages
So as to give him to drink.
:10 He set a cup in his hand
A goblet in both his hands.
From the mighty cherub we - - - - - .
The men of heaven saw *not* the sacred cup
:15 The women of the goblet eyed *not* Asherah.
A thousand pitchers he took from the wine
A great (drink) he mixed of its mixture.
He arose to sing and chant
With cymbals in the hands of the Good One
:20 The lad, good of voice, sang
About Baal in the heights of Ṣapân.
Baal views his daughters
He sees Pdry, girl of light
:25 Also Ṭly, girl of rain

[(4 lines missing)]

:II:2 Like the fruit of seven daughters
The *scent* of *kids* and *hares*
Both doors of ʿAnat's house.
:5 And the lads chance upon the Lady of the Mountain
And lo ʿAnat is fighting violently
Battling between the two cities
She smites the people of the *seashore*
Destroys mankind of the sunrise.
Beside her are heads like *grasshoppers*
:10 By her are hands like locusts
Like *thorns* of *ġrmn*, the hands of troops.
She *piles up* heads on her back
She ties up hands in her bundle.

School of Theology Library

Knees she plunges in the blood of soldiery
'nt : II *Thighs* in the gore of troops.
: 15 With a stick she drives out *foes*
Against the flank she *draws* her bow.
As soon as 'Anat reaches her house
Yea the goddess enters her palace
She smites it to satiety
: 20 With violence she fights between the walls.
She arranges chairs for the troops
Arranging tables for the soldiers
Footstools for the heroes.
Much she fights and looks
Battles and views.
: 25 'Anat *gluts* her liver with laughter
Her heart is filled with joy
'Anat's liver *exults*,
For knees she plunges in the blood of soldiery
Thighs in the gore of troops.
Until she is sated she fights in the house
: 30 Battles between the two tables
Shedding [ ] the blood of soldiery
Pouring oil [ ] from a bowl.
The Virgin 'Anat washes her hands
The Sister-in-Law of Nations, her fingers.
She washes her hands in the blood of soldiery
: 35 Her fingers in the gore of troops.
[Arran]ging *portions by* the chairs
Tables *by* the table
Footstools she arranges *by* the footstools.
She *gathers* water and washes
With dew of heaven
Fat of earth
: 40 Rain of the Rider of Clouds.
The dew of heaven is her oblation
The rain of her ablution is the stars.
The *hares leap* by the thousand acres
The *ẓuh-fish* in the sea, [by the myriad of hectares].
[ ]
'[ ]
: III : 1 Place corals on her chest as a gift
For the love of Aliyn Baal
The affection of Pdry, girl of light,
The devotion of Ṭly, girl of rain,
: 5 The love of Arṣy, girl of Y'bdr.
Like lads and [*harbin*]*gers*
At 'Anat's feet bow and fall

Prostrate yourselves and honor her.
And say to the Virgin ʿAnat!
Declare to the Sister-in-Law of Nations:
ʿnt : III "The message of Aliyn Baal
: 10 The word of Aliy Qrdm:
'*Put bread* in the earth
Place *mandrakes* in the dust
Pour a peace offering in the midst of the earth
A *libation* in the midst of the fields!
: 15 Thy *ḫš*
Thy tree(s)
Thy *ʿbṣ*. (1)
To me let thy feet run
To me let thy legs *hasten.*
For I have a word that I'll tell thee
A matter that I'll declare to thee
: 20 'Tis the word of the tree
Yea the whisper of the stone
The murmur of the heavens to the earth
Of the deeps to the stars.
I understand lightning which the heavens do not know
A matter that men do not know
: 25 Nor the multitudes of the earth understand.
Come and I shall show it
In the midst of the mountain of me, god of Ṣapân, in the sanctuary
In the mountain of mine inheritance, in the good place
In the hill of Tliyt.'"'

As soon as ʿAnat sees the gods
: 30 On it the feet *stamp*
On the plain she breaks the back
Above, her face sweats
The *joints* of her back *fail*
Her vertebrae are *agitated.*
She lifts her voice
And shouts:
'Why have Gupan and Ugar come?
What enemy has arisen against Baal
: 35 Or foe against the Rider of Clouds?
Did I not crush 'Il's Darling, Sea?
Nor destroy River, the great god?

(1) These three articles are ᶜAnat's symbols or insignia that she carries with her. Other gods have different triple insignia.

Nor muzzle Tannîn full well?
I crushed the writhing serpent
ʿnt : III The accursed one of seven heads.
: 40 I crushed Môt, the darling of the earth gods
Yea Môt, the calf of ʾIl, - - -
I crushed Fire, the bitch of the gods.
I destroyed the daughter of the god Žbb.
I fought and got the gold (1)
: IV : 45 Of the one who drove out Baal from the heights of Ṣapân
Depriving like a bird of its *nest*
Who drove him out from the seat of his kingship
From the dais, from the throne of his sovereignty.
What enemy has risen against Baal
Or foe against the Rider of Clouds?'
And the lads indeed reply:
: 50 'No enemy has risen against Baal
Nor a foe against the Rider of Clouds.
(Here is) the message of Aliyn Baal
The word of Aliy Qrdm:
" *Put bread* into the earth
Set *mandrakes* in the dust
Pour a peace offering in the midst of the earth
A *libation* in the midst of the fields!
: 55 Thy *ḫš*
Thy tree(s)
Thy *ʿbṣ*.
Unto me let thy feet run
Unto me let thy legs *hasten*!
[For I have a word] that I'll tell thee
A matter [that I'll declare to thee
The word] of the tree
The whisper [of the stone
A word] that me[n do not kn]ow
: 60 [Nor the multitudes of the ea]rth understand.
[The murmur of the heavens to] the earth
Of the deeps [to the stars.
I understand lightning] that the [heav]ens do not [know].
[Come and I shall show it
In the midst of the moun]tain of me, god of Ṣapân; in the sanc[tuary]

(1) It is interesting to note that by fighting one (or more) of the foregoing dragons, ʿAnat obtained gold, which was evidently guarded by the dragon(s). In Icelandic literature, the theme of a dragon guarding gold was so familiar that gold can be called 'the bed of the dragon' (for the dragon lies on the treasure he guards).

ʿnt : IV In [the mountain] of mine [in]heritance."'
: 65 And the Virgin ʿAnat [replies]
[The Sister-in-Law] of Nations responds: [ ]
'I shall *put bread* [in the earth]
[I shall] set *mand[rakes]* in the dust
I shall pour [a peace offering] in the midst of the earth
A *lib[ation]* in the mids[t of the fi]elds.
: 70 Let him set [ ] Baal his *thunderbolts* flash
[ ] I shall *put*.
I shall *put* [bread] in the earth
I shall set *mandrakes* [in the] dust
I shall pour a peace offering in the midst of the earth
: 75 A *libation* in the midst of the fields.
Also another matter I would tell,
Go! Go! O *retainers* of the gods
Ye are slow
But I am fast!
Uġr is distant, O gods!
Inbb is distant, O deities!:
: 80 Two *stages* under the springs of the earth
Three *marches* (*aloft in*) *the hills*.'
Thereupon she sets face toward the Lord of Ṣapân's crest
By the thousand acres
Myriad of hectares.
Baal sees the going of his sister
Yea the course of his father's *daughter*.
He sends away women to her presence (1)
: 85 Setting an ox before her
A fatling in front of her presence.
She *gathers* her water
That she may wash
With dew of heaven
Fat of earth
The dew of heaven is her oblation
The rain of her ablution, the stars.
The *hares leap* by the thousand acres
[The *ẓuh-fish* in the sea by the myriad of hectares.]
: pl. vi [ ]
: IV . 1 '[ ]like the sons [of Asherah:
The dwelling of 'Il
The shelter] of his sons

(1) 'He sends away the women from his presence' is also possible. However, Professor J. Obermann (*Ugaritic Mythology*, New Haven, 1948 42) makes the good point that it is in keeping with oriental courtesy to send out women to greet a lady visitor.

The dw[elling of Lady Asherah of the Sea],
'nt : pl. The dwelling of Pdry, [girl of light,
vi : IV The shelter] of Ṭly, girl of r[ain,
: 5 The dwelling of Arṣy], girl of Y'bdr.
[The dwelling of the] *renowned* [brides].'
And [the Virgin 'Anat] replies:
'Tôr-'Il, my father, will reconsider
Reconsider for my sake and his
: V : 10 [Lest I] trample him like a lamb to the earth
[Make] his grey hair [run] with blood
The grey of his beard [with gore] (1)
Unless a house be given to Baal like the gods
[Yea a cour]t like the sons of Asherah.'
[She *springs* with f]oot
[And *leaves*] the earth.
Thereupon [she sets f]ace [toward 'Il]
At the courses of the Two River[s
: 15 The mid]st of the st[rea]ms of the Two [Deep]s.
She enters the abode of 'Il
Comes into the [domic]ile of the King, Father of [Šnm].
The territory [ ] - - -
The premises [ ]lord [ ]
Her voice [*is given forth to*] Tôr-'Il, her father,
In the seven rooms
: 20 In the eight chambers
[ ]
eyes of Tôr [ ]
Above [ ]
At the feet of the lads [ ]
much [ ]
: 25 The Luminary of the Gods, Sun, [burn]s
The heavens *glow* on [*account* of the god Mô]t.
And the Virgin 'Anat replies:
'[ ] O gods [ ]
Do [not re]joice!
Do not rejoice! [ ]
: 30 Be not glad]
In the *greatness* of - - - - -
[ ]thy head.
I shall make thy grey hair run with blood
The grey of thy beard with gore.'
'Il replies
In the seven rooms

(1) In the Gilgamesh Epic (6:94-100) Ištar similarly goes to Anu and by threats of violence secures the means of wreaking revenge.

ʿnt: V In the eight chambers:
: 35 'I know thee, my daughter, that thou art *impetuous*
That there is no *forbearance* among goddesses.
What dost thou wish, O Virgin ʿAnat?'
And the Virgin ʿAnat replies:
'Thy word, 'Il, is wise;
Thy wisdom, unto eternity;
Lucky life, thy word.
: 40 Our king is Aliyn Baal
Our ruler, there is none above him.
Let both of us drain his *chalice*
Both of us drain his cup!'
Loudly cries Tôr-'Il, her father,
'Il, the king who brought her into being;
: 45 There cry Asherah and her sons,
The goddess and the band of her brood:
'*Lo* Baal has no house like the gods
Nor a court like the sons of Asherah:
The dwelling of 'Il
The shelter of his sons
The dwelling of Lady Asherah of the Sea
The dwelling of [Pdr]y, girl of light,
: 50 [The shelter] of Ṭly, girl of rain
The dwelling [of Arṣy, girl of Y'bdr].
: VI: 1 [ ]
[ ]*thy* [*h*]*ead*[ ]
[*'twixt your eyes*]
[ ]a thousand
: 5 [ ]a myriad
[ ]in the rivers
[Cro]ss *Byblos*
Cross Q'l
Cross Iht
Soul of blemish!
: 10 *Proceed,* O fisherman of Asherah!
Go, O Qdš-Amrr!
Then shalt thou surely set face toward all the god's Ḥ(q)kpt
: 15 — Caphtor is the throne on which he sits
Ḥkpt(1), the land of his inheritance —
By the thousand acres
Myriad of hectares!
At the feet of Kt(r) bow and fall

(1) The *Kft-yw* 'Cretans' of the Egyptian texts, contains the same base *k-p/f-t* as 'Caphtor' and 'Ḥkpt'. Students of the Minoan texts should look for x + A and A + y, wherein A = stem *kft*, x = prefix *ḥ-*, and y = suffix *-r*.

'nt : VI Prostrate thyself and honor him!
: 20 And say to Ktr-and-Ḫss!
Declare to Hyn of the Handicraft:
"The message of Ali[yn Baal]
: 25 The w[ord of Aliy Qrdm]:

[(rest missing)]

'[ ]
: pl. ix [Thy *ḫš*
: II : 1 Thy tree(s)
Thy *'bṯ*]
Let thy feet [run t]o me
[To me let] thy legs [*hast*]*en*!
[ ] - - - and set
[ ]
: 5 [l]apis lazuli
[ ]lift, in the midst
[ ]prisoner captor
[ ]O Môt
[ ]like a gust
: 10 [ ]prepare for the earth
[ ] - - - prepare
[ ]pass
[ ]thy god
[ ]Inbb in a thousand courts[ ]
: 15 [At the fe]et of 'Anat [they bow and fall
Prostrate] themselves and [honor her.
They lift their voices
And] shout:
'The message [of Tôr-'Il, thy father,
The word of L]ṭpn, thy begetter:
"*Put bread* in the earth
: 20 Set [*mandrakes*] in the du[st
Pour a peace offering] into the midst of the earth
[A *libation* into the midst of the] fields.
Thy *ḫš*
[Thy tree(s)
Thy *'bṯ*
To me] let thy [fe]et run."'
[Thereupon she sets face] toward the mountain
[ ] - - number
: 25 '[ ]
: III : 1 — [Caphtor] is throne [whereon he sits
Ḥkpt, the land of his inheritance] —

By the thousand acres
My[riad of hectares.
At the feet of Ktr] bow and fall
ʿnt : pl. [Prostrate yourselves and honor him]!
ix : III And say to Kt[r-and-Ḫss!
: 5 Declare to Hyn] of the Handic[raft:
"The message of Tôr-'Il, *thy* father.]
The word of Lṭpn, [*thy* begetter, [ ]
[Ktr [ ]
Place - - - - - [ ]
Put - - - - - [ ]
: 10 Thy *ḫš*
Thy tree(s)
[Thy] *ʿb*[*š*.
Let thy feet run to me]
To me let thy legs *hasten!*
[ ] the mountain of the cup.
For [I have] a w[ord that I shall tell thee]
A matter that I shall declare to thee
['Tis the word of the tree
And the whisper of the stone]
The murmur of the heavens to [the earth
Of the deep to the stars]
: 15 A word that men do not know
[Nor the multitudes of the earth understand].
Come and I shall show [it
In the midst of the mountain of me, god of Ṣapân]."'
And Ktr-and-Ḫss replies:
'Ye are slow
But I [am fast!
Caphtor] is distant, O gods!
Ḥkp[t is distant, O deities]!
: 20 Two *stages* under [the springs of the earth
Three *marches* (*aloft in*)] *the hills.*'
Then he set[s face toward Lṭpn], God of *Mercy,*
In the midst of the mountai[n]
He enters the abode of 'I[l
And comes into the domicile of the King], Father of Šnm.
At [the feet of 'Il he bows and falls]
: 25 Prostrates himself [and honors him]
Tôr-'Il [ ]
Hurry [ ]
thy house [ ]
: 29 build [ ]
[ ]

: 9 [ ]she plunges into blood
[ ]

[(opening lines broken)]

51:I: 13 '(There are) the dwelling of 'Il
The shelter of his sons
: 15 The dwelling of Lady Asherah of the Sea
The dwelling of the *renowned* brides
The dwelling of Pdry, girl of light,
The shelter of Ṭly, girl of rain,
The dwelling of Arṣy, girl of Y'bdr.
: 20 Also something else I'll tell thee:
Go to!
Beseech Lady Asherah of the Sea
Entreat the Creatress of the gods!'
Hyn goes up to the bellows
: 25 In the hands of Ḫss are the tongs.
He casts silver
He smelts gold
He casts silver by thousands (of shekels)
Gold he casts by myriads
: 30 He casts *ḫym* and *tbṯḫ*
'Il's *crown* of two myriads
'Il's *crown studded* with silver
Adorned with red gold.
'Il's throne
: 35 A dais above 'Il's footstool
Which *glisters* in *purity.*
'Il's shoes of *reception*
Unto him he brings them.
The gold of 'Il's table which is full
: 40 Whatever - - - - - of the earth's foundations.
'Il's bowl as fine as *amr*
Set like the *ḫwt* of Yman (1)
In which there are buffaloes by myriads (2).

(1) Yman is a place parallel to Ṯrmn (2:19); and the latter is known to be in King Nqmd's Ugaritic realm (62:57).

(2) Bowls with animals modeled on the inside have been found in various Middle East excavations. I personally supervised the unearthing of one of painted pottery in a level of Tepe Gawra that antedates the Ugaritic texts by about two thousand years.

51:II:1 [ ]
:2 [ ] stone [ ]
She takes hold of her spindle
The spindle of *utility* in - - [ ]
:5 He *favors* her with the covering of her flesh
She puts on her clothing
On the second day
He *favors* her in the two rivers.
She sets a *wand* on the fire
A *staff* on top of the coals.
:10 She *propitiates* Tôr, God of *Mercy,*
Entreats the Creator of Creatures.
On lifting her eyes
She sees
Asherah sees Baal's going
:15 Yea the going of the Virgin ʿAnat
The tread of the Sister-in-Law [of Nations].
On it the feet *stamp*
On the plain [she breaks her] back
[Above], her [f]ace s[weats]
The [*joint*]*s* of her [ba]ck *fail*
:20 [Her] vertebrae are *agitated*
She lifts her voice
And shouts:
'Why has Aliyn Baal come?
Why came the Virgin ʿAnat?
:25 Is it that my smiters or the smiters of my sons
[ ] the band of my kin [ ]?'
Asherah sees the silver
The shadow of silver
And the [*gleam*] of gold.
Lady Asherah of the Sea is glad,
Aloud to her lad [she cries]:
:30 'I shall entice the eye of the Skilled One [ ]
Fisherman of Lady Asherah [of the Sea]!
Take a net in thy hand
[The] of the Lady on the hands
[ ] in ʾIl's Darling
:35 In the sea of ʾIl [ ]
The conception of ʾIl [ ]
Aliyn [Baal]
The Virgin [ʿAnat]

[(about 14 lines missing)]

:5 [ ]let him not tempt
51 : III [ ]to found thee
[ ]and forever
[- - - - - -
[ ] O god(s) of king(ship)
:10 [ ] Aliyn Baal
[ ] the Rider of Clouds
[ ]he goes and *reviles*
He arises and *spits* in the midst of the assembly of the gods:
:15 'I have drunk [disgrace] from my tables
Scorn from a cup did I drink.
Baal hates two sacrifices
Three, the Rider of Clouds:
The sacrifice of shame
:20 And the sacrifice of *baseness*
And the sacrifice of the *murmur* of handmaids (1)
For therein shame is *seen*
And therein the *murmur* of handmaids.'
After Aliyn Baal came
(And) came the Virgin 'Anat,
:25 They besought Lady Asherah of the Sea
Yea entreated the Creatress of the Gods.
And Lady Asherah of the Sea replied:
'How can ye beseech Lady Asherah of the Sea
:30 Yea entreat the Creatress of the Gods?
Have ye besought Tôr, God of *Mercy,*
Or entreated the Creator of Creatures!
And the Virgin 'Anat replied:
'We do beseech Lady Asherah of the Sea
:35 We entreat the Creatress of the Gods.
[ ]we beseech him
[ ]Aliyn Baal
[ ]Lady Asherah of the Sea
[ ]the Virgin 'Anat [ ]
[The gods] eat (and) drink
:40 And those that suck [the breast are *nourished*]
[With a ke]en [knife]
A slice [of fatling.
They drink] wine from a goblet
[From a cup of gold, the bl]ood of vines,
[(9 lines broken)]
:IV : 1 Tôr-[']Il Lady]

(1) T. H. Gaster colorfully interpretes this as 'low-class bawdry' (BASOR 101 1946 24).

Asherah [of the Sea]
And[Lady]
51 : IV Asherah of the Sea [declares:
: 5 'Saddle an ass],
Hitch a donkey!
Put [on harness of] silver
[Trappings] of gold
Prepare the harness of my jennies!'
Qdš-and-Amrr hearkens.
He saddles an ass
: 10 Hitches a donkey
Puts on harness of silver
Trappings of gold
Prepares the harness of her jennies.
Qdš-and-Amrr embraces
He sets Asherah on the back of the ass
: 15 On the beautiful back of the donkey.
Qdš begins to light the way
Even Amrr, like a star.
Forward *goes* the Virgin 'Anat
And Baal departs for the heights of Ṣapân.
: 20 Then she sets face toward 'Il
At the courses of the Two Rivers
At the midst of the streams of the Two Deeps.
She enters the abode of 'Il
And comes into the domicile of the King, Father of Šnm.
: 25 At the feet of 'Il she bows and falls
Prostrates herself and honors him.
As soon as 'Il sees her
He breaks *formality* and laughs.
His feet he sets on the footstool
: 30 And (beckons by) rolling his fingers.
He lifts his voice
And shouts:
'Why has Lady Asherah of the Sea come
Why came the Creatress of the Gods? (1)
Art thou hungry?
Then *have* [*a morsel*]!
Or art thou thirsty?
Then *have* [*a drink*]!

(1) In this passage it would be possible to translate the first word as 'how' which is what its cognate means in Hebrew) instead of 'why', thus making the question a polite one ('How was your trip?'). However, other passages (as Ginsberg has always insisted) necessitate the meaning 'why'. I accordingly retract the stand I took in UH 58 n. 5.

: 35 Eat!
51 : IV Or drink!
Eat bread from the tables!
Drink wine from the goblets!
From a cup of gold, the blood of vines!
If the love of 'Il *moves* thee
Yea the affection of Tôr *arouses* thee!'
: 40 And lady Asherah of the Sea replies:
'Thy word, 'Il, is wise;
Thou art wise unto eternity;
Lucky life is thy word.
Our king is Aliyn Baal
Our judge, and none is above him.
: 45 *Let both of us drain* his *chalice*
Both of us drain his cup!'
Loudly Tôr-'Il, her father, shouts,
King 'Il who brought her into being;
There shout Asherah and her sons
: 50 The goddess and the band of her kin:
'*Lo* there is no house unto Baal like the gods
Nor a court like the sons of Asherah:
The dwelling of 'Il
The shelter of his sons
The dwelling of Lady Asherah of the Sea
The dwelling of the *renowned* brides
: 55 The dwelling of Pdry, girl of light,
The shelter of Ṭly, girl of rain,
The dwelling of Arṣy, girl of Y'bdr.'
And Lṭpn, God of *Mercy,* replied:
'Am I both to act as a *lackey* of Asherah
: 60 And am I to act like the holder of a *trowel*?
If the handmaids of Asherah will make the bricks
[: V A house shall be built for Baal like the gods
Yea a court like the sons of Asherah.'
And Lady Asherah of the Sea replied:
: 65 'Thou art great, O 'Il,
Thou art verily wise!
The grey of thy beard hath verily chastened thee!
(Here are) *pectorals* of [ ] for thy breast.
Lo, also it is the time of his rain.
Baal sets the season – – – – – – –
: 70 And gives forth his voice in the clouds
He flashes lightning to the earth.
As a house of cedars let him complete it
Or as a house of bricks let him erect t!
Let it be told to Aliyn Baal:

51 : V "Call the *bulls* into thy house
: 75 The *gazelles* in the midst of thy palace! (1)
The mountains will bring thee much silver
The hills, the choicest of gold;
The *mines* will bring you *lapis-lazuli.*
: 80 And build a house of silver and gold
A house of lapis gems!"'
The Virgin ʿAnat rejoices.
She *jumps* with the feet
And *leaves* the earth.
: 85 Then she sets face toward the Lord of Ṣapân's crest
By the thousand acres
Yea myriad hectares.
She lifts her voice
And shouts:
'Be informed, Baal!
Thy news I bring!
: 90 A house shall be built for thee as for thy brothers
Even a court as for thy kin.
Call the *bulls* into thy house
The *gazelles* in the midst of thy palace.
The mountains will bring thee much silver
: 95 The hills, the choicest of gold.
And build a house of silver and gold
A house of lapis gems!'
Aliyn Baal rejoices.
He calls the *bulls* into his house
The *gazelles* in the midst of his palace.
: 100 The mountains bring him much silver
The hills, the choicest of gold;
The *mines* bring him *lapis-lazuli.*
Kṯr-and-Ḫss is sent.

: 105 And return to the story: when the lads are sent.

After Kṯr-and-Ḫss arrived
He sets an ox in front of him
A fatling directly before him.
A chair is placed
And he is seated

(1) 'Bulls' and 'gazelles' are suggested tentatively in the light of 128 : IV : 6-20, where the guests are so called. In text 51, however, two apparently non-Semitic words occur (*ḫrn* and *ʿžbt*), which have not yet been identified. My attempt to define them is admittedly a last resort.

:110 At the right of Aliyn Baal
51 : V Until they have eaten
(And) drunk.
And Aliy[n Baal] declares:
'[ ]
[Hur]ry, let a house [be built]
Hurry, let a pal[ace] be erected!
:115 Hurry, let a house be built
Hurry, let a palace be erected!
In the midst of the heights of Ṣapân!
A thousand acres the house is to comprise
A myriad of hectares, the palace.'
:120 And Ktr-and-Ḫss declares:
'Hear, O Aliyn Baal!
Perceive, O Rider of Clouds!
I shall surely put a window in the house
A casement in the midst of the palace!'
:125 And Aliyn Baal replies:
'Do not put a window in the house
A casement in the midst of the palace!'
: VI : 1 And Ktr-and-Ḫss replies:
'Thou wilt return, Baal, to [my word].'
Again Ktr-and-Ḫss spoke:
'Hear, O Aliyn Baal!
:5 I shall surely put a window in the house
A casement in the midst of the palace!'
And Aliyn Baal replies:
'Do not put a window in the house
A casement in the midst of the palace!
:10 Let not ⌜Pdr]y, girl of light, - - -
Nor [Ṯl]y, girl of rain, [ ]
[ ]'Il's [bel]oved Sea [ ]'
[ ]he *reviles* and *spits* [ ]
:15 And Ktr-[and-Ḫss] replies:
'Thou wilt return, Baal, to my word.'
[*Of cedars*] his house is to be built
[*Of bricks*] is his palace to be erected.
He [*goe*]*s* to Lebanon and its trees
Syria (and) the choicest of its cedars.
:20 *L*[*o*], Lebanon and its trees
Syria (and) the choicest of its cedars.
Fire is set on the house
Flame on the palace.
Behold a day and a second
:25 The fire eats into the house
The flame into the palace.

A third, a fourth day
The fire eats into the house
The flame into the palace.
51 : VI A fifth, a sixth day
: 30 The fire eats into the house
The flame in[to the pala]ce.
Behold on the seve[nth] d[ay]
The fire departs from the house
The flame from the palace.
Silver turns from *blocks*
: 35 Gold is turned from bricks.
Aliyn Baal rejoices.
'My house I have built of silver
My palace of gold I have made.'
His house, Baal prepares
: 40 Hadd prepares the *housewarming* of his palace.
He slaughters great [and] small cattle
He fells oxen [and] ram-fatlings
Yearling calves
Little lambs (and) kids.
He called his brothers into his house
: 45 His kinsmen into the midst of his palace
He called the seventy sons of Asherah.
He satisfied the sheep gods with wi[ne]
He satisfied the ewe goddesses with [wine].
He satisfied the bull gods with w[ine]
: 50 He satisfied the cow goddesses with [wine].
He satisfied the throne gods with wine
He satisfied the chair goddesses with [wine].
He satisfied the jar gods with wine
He satisfied the jug goddesses with [wine].
: 55 Until the gods had eaten and drunk
And the sucklings, been satisfied
With a keen knife
A slice of fatling.
They drink [win]e from a gobl[et]
[From a cup of gold, the blood of vines].

: VII : 1 [lapis] lazul[i]
[ ] Aliyn Baal
[ ] 'Il's Darling, Sea,
[ ] on top of his head
: 5 'Il [ ] laughed *in envy*
Like [ ] gods in Ṣapân
- - - to [ ]towns

Return to[ ]cities
51 : VII He took sixty-six towns
: 10 Yea seventy-seven cities
Eighty, Baal [ ]
Ninety, Baal [ ]
As Baal [*went*] into the midst of the house
: 15 Aliyn Baal declared:
'I would install, Ktr, son of the sea,
Yea Ktr, son of the Assembly!
Let a casement be opened in the house
A window in the midst of the palace
And let a *cleft* of the clouds be opened
: 20 On the *op*[*ening*] of Ktr-and-Ḫss.'
Ktr-and-Ḫss laughed.
He lifts his voice
And shouts:
'Did I not tell thee, O Aliyn Baal
: 25 That thou wouldst return, Baal, to my word:
"Let a casement be opened in the house
A window in the midst of the palace
Baal's [op]ening a *cleft* of the [*cloud*]*s*!"'
His holy voice he gives forth in [the heavens]
: 30 Again Baal [ ] his
His h[oly] voice [ ] earth
[ ] mountains. I shall *invade*
[ ]
: 35 the early ones, the back [ ] they *jump*.
The enemies of Baal seize the forests
The foes of Hadd, the fringes of the mountain.
And Aliyn Baal declares:
'Enemies of Hadd, why do ye *invade*
Why do ye *invade* the *arsenal* of our defence?'
: 40 Baal's eyes are before his hands
(Witnessing) that they *wrest* the cedar from his right hand.
Weeping, Baal returns to his house:
'Whether king
Or commoner
Be *invested* with sovereignty *over* the land
: 45 *Respects* I shall not send to the god Môt
Nor *greetings* to 'Il's beloved, the hero!'
Môt calls from his throat
The Beloved meditates in his inwards:
: 50 'I alone am he who will rule over the gods
Yea command gods and men

Even domin[ate] (1) the multitudes of the earth.'
Aloud Baal cries to his l[ad](s):
51 : VII 'Look, Gupan-and-Ugar, son(s) of Ġalmat,
: 55 *Errand lad(s)*, son(s) of Ẓalmat
The lo[fty (and) *distinguished*!
[scorched, a flock] clouds
[under]
[(2 lines broken)]
: VIII : 1 Then surely set face
Toward the mountain of Trġzz
Toward the mountain of Ṯrmg
Toward the furrow of the - - - of the earth.
: 5 Lift the mountain on the hands
The hill on top of the palms
And go down into the nether-reaches of the earth
So that ye will be counted among those who go down into the earth! (2)
: 10 Then shall ye set face
Toward his city, Hmry.
Lo the throne on which he sits
The *heart* of the land of his inheritance
: 15 And the guards of the *defence* of the gods.
Do not draw near the god Môt
Lest he make you like a lamb in his mouth
: 20 Like a kid in his *jaws* ye be *crushed*!
The luminary of the Gods, Sun, burns
The heavens *glow* on account of 'Il's Darling,
: 25 By the thousand acres
Yea myriad hectares!
At the feet of Môt bow and fall
Prostrate yourselves and honor him!
: 30 And say to the god Môt!
Declare to 'Il's Beloved, the Hero:
"The message of Aliyn Baal
: 35 The [wor]d of Aliy Q[rdm]:
'My house I have built [of silver

(1) Restore *šb*[*m*] (not *šb*[*'*] 'satisfy' as has formerly been read; e. g., UH). This affects the meaning of the preceding parallel verb, which is 'command' (not 'nourish'); cf. *mrum* 'commanders' (a grade of army officers). Thus all three verbs are synonymous: 'rule || command || dominate'.

(2) The entrance of the god of fertility through a hill, to die in the underworld, is to be compared with the rescue of the dead god of fertility from the underworld, for revival, as depicted in the glyptic art of ancient Mesopotamia; cf. CS 105-108 and pl. XIX a, c, d, XXI a.

My palace of gold]
[ ] my brother(s)
51:VIII [ ] my brother(s)
:40 [(2 lines broken)]
[ ] I invited
[ ]
[ ] gods
:45 [ ] *love/hand*
[ ] thee. ' " '
Gupan]-and-Ugar

[ ]
[the T]'-ite; Nqmd, king of Ugarit.

51:frag. 'How can they beseech Lady Asherah [of the Sea]
(1):1 Even entreat the Creatress of the Gods
That a house be given to Baal like the gods
:5 Even a court like the sons of Asherah?'
Aloud Baal shouts to his lads:
'Look, Gupan-and-Ugar, sons of Ġalmat,
Errand lads, sons of Ẓalmat
The lofty (and) *distinguished*!
:10 - - - [ ] scorched, a flock [ ]
clouds under [ ]
birds [ ]
- - - - - - [ ]
- - *lightning* [ ]
:15 *O Môt/die* [ ]
as[ked]

67 : I : 1 'Because thou didst smite Lôtân, the writhing serpent
Didst destroy the crooked serpent
The *accursed one* of seven heads
The heavens - - - - - - -
:5 [ ]
I shall eat - - - - - - - - so that I die.
Thou shalt indeed go down into the throat of the god Môt
Yea into the *gullet* of 'Il's Beloved, the Hero!'
The gods depart and return.
:10 Then they set face toward Baal of Ṣapân's crest
And Gupan and Ugar say:

(1) This fragment is of value for restoring the wording of the end of 51 : VII, even though the latter fits into an entirely different episode.

'The message of the god Môt
The word of the dearest of 'Il's sons, the Hero:
67 : I : 15 *Prepare him* a sheep (for) the soul of the lioness of the *chaos*
Or (for) the appetite of the *dolphin* in the sea
Or the *pools* that the buffaloes *crave*
Yea the spring of the *craving* of the hinds
Or *forsooth, forsooth*, the soul
Yea the *appetite* of ass[es]
: 20 With both my hands I shall eat *them*
My *seven* portions from the bowl
Or the cup that *River* mixes.
Let Baal *laugh* with my brothers
Yea *Hadd sport* with my kin.
So eat bread with my brothers
: 25 And drink wine with my kin.
And *I* shall place, O Baal,
Yea I shall verily *load* thee
[ ]
Because thou didst smite [Lôtân], the [writh]ing [serpent],
Didst destroy [the crooked serpent]
The *accursed one* [of seven heads]
[The heavens] - - - - [ ]

[(about 30 lines missing)]

: II : 2 [A lip to ea]rth
A lip to heaven
[*And to*]*ngue* to the stars
So that [Baa]l may enter his inwards
Yea descend into his mouth
: 5 As scorched is the olive
The produce of the earth
And the fruit of the trees.
Aliyn Baal fears him
The Rider of Clouds dreads him.
Depart! Speak to the god Môt
Declare to 'Il's Beloved, the Hero:
: 10 'The message of Aliyn Baal
The word of Aliy Qrdm:
"*Hail*, O god Môt!
Thy slave am I
Yea thine forever."'
The gods depart and return.
Then they set face toward the god Môt
: 15 Toward his city, Hmry.

Behold the throne of *his* sitting (1)
Yea the land of his inheritance!
They lift their voices
And shout:
'The message of Aliyn Baal
The word of Aliy Qrdm:
"*Hail*, O god Môt!
67 : II Thy slave am I
: 20 Yea thine forever!"'
The god Môt is glad.
[He lifts] his [voice]
And shouts:
'How can he *govern*
[ ] Hadd
[ ] my battles
[(about 25 lines broken)]
: III : 2 [Gre]at is the sitting [ ]
Great is the sitting [ ]
[ ] land of Ḫšn [ ]
: 5 [ ] shall [ ] shall destroy [ ]
the *bricks* will be [ ]
of thy *brickwork* [ ]
compound like stars [ ]
Moreover Môt I shall call [ ]

Who has sent [ ]
Sent [ ]

[(about 12 lines broken)]

: V : 1 [ ] Aliyn
[Baal] - - - - -
[ ]
[ ] soul of a calf [ ]
:5 I shall put him in the *niche* of the ghosts of the earth.
And thou, take thy clouds
Thy wind, thy *storm*, thy rains ! (1)
With thee thy seven lads
Thine eight swine
:10 With thee, Pdry, girl of light
With thee Ṯly, girl of rain.
Then thy face shalt thou set toward the mountain of Knkny.
Lift the mountain on the hands
The hill on top of the palms

(1) Baal's three (?) symbols or insignia.

: 15 And go down into the nether-reaches of the earth
67 : V So that thou mayest be counted among those who
go down into the earth
And *Ill* may know that thou art dead!'
Aliyn Baal hearkens.
He loves a heifer in Dbr
A young cow in the fields of Šḫlmmt
: 20 He lies with her seventy-seven times
[Yea] eighty-eight times
So that [she concei]ves
And bears a lad,
- - [ ] clad him
[ ] for him intercede
: 25 [ ] for her bosom
[(about 35 lines broken)]
: VI : 5 We came to the goodness of the land of Dbr
To the beauty of fields of Šḫlmmt
We came upon Baal prostrate on the earth.
Dead is Aliyn Baal
: 10 Perished is the Prince, Lord of Earth!
Thereupon Lṭpn, God of *Mercy*,
Goes down from the throne
Sits on the footstool
And from the footstool sits an the earth.
: 15 He pours the *ashes* of *grief* on his head
The dust of wallowing on his pate
For clothing, he is covered with *sackcloth*.
He *roams* the mountain in *mourning*
Yea through the forest in *grief*
He cuts cheeks and chin
: 20 He lacerates his forearms
He plows the chest like a garden
Like a vale he lacerates the back.
He lifts his voice
And shouts:
'Baal is dead!
Woe to the people of Dagân's Son
: 25 *Woe* to the multitudes *of* Baal!
I shall go down into the earth.'
Also 'Anat goes
And treads every mountain to the midst of the earth
Every hill to the midst of the fields.
She comes to the good[ness of the land] of Dbr
: 30 The beauty of the fields of [Šḫl]mmt
She [comes] upon Baal prostra[te on the ea]rth.

[For clothing] she is covered with *sack[cloth]*
62:1 ⌈ Pertaining to Baal. ⌋

The mountain in *mourning* she *roams*
In [gr]ief [through the forest].
She cuts cheeks and chin
[She lacerates] her forearms
She plows like a garden the chest
Like a vale she lacerates the back.
'Baal is dead!
Woe, to the people of Dagân's Son,
Woe, to the multitudes *of* Baal!
Let us go down into the earth.'
With her goes down the Luminary of the Gods, Sun.
Until she is sated with weeping
:10 She drinks tears like wine.
Aloud she cries to the Luminary of the Gods, Sun:
'Load Aliyn Baal on to me!'
The Luminary of the Gods, Sun, hearkens.
She lifts Aliyn Baal
:15 On the shoulders of 'Anat she places him.
She raises him into the heights of Ṣapân
She weeps for him and buries him
She puts him in the *niche* of the ghosts of the earth.
She sacrifices seventy buffaloes
:20 As an offering for Aliyn Baal.
She sacrifices seventy oxen
[As an off]ering for Aliyn Baal.
[She sacr]ifices seventy head of small cattle
[As an of]fering for Aliyn Baal.
[She sac]rifices seventy deer
:25 [As an offering] for Aliyn Baal.
[She sacrifices se]venty wildgoats
[As an offering for Al]iyn Baal.
[She sacrifices seventy] *asses* (1)
:29 [As an offering for Aliyn Baal.]

[(rest of obverse broken)]

49:I:1 [ ] Aliyn Baal [ ]
[ ] and muzzle [ ]
[ ] a brother-in-law to the gods.

(1) Ginsberg ingeniously restores the text to [*y*]*ḫmrm* 'deer' on the ground that *ḫmrm* 'asses' were not sacrificial animals in Israel. I now prefer to stick to 'asses', because *yḫmrm* are not otherwise attested in Ugaritic and because the Canaanite nations, such as Israel and Ugarit, had considerable cultic differences.

49 : I : 5 [The]n she sets face toward ʾIl
At the courses of the Two Rivers
In the midst of the streams of the Two Deeps.
She enters the *abode* of ʾIl
Goes into the *domicile* of the Father of Šnm.
At the feet of ʾIl she bends and falls
:10 Prostrates herself and honors him.
She lifts her voice
And shouts:
'Let Asherah and her sons rejoice
The goddess and the band of her brood!
For dead is Aliyn Baal,
:15 For perished is the Prince, Lord of Earth!'
Aloud cries ʾIl to Lady Asherah of the Sea:
'Hear, O Lady A[sherah] of the Sea!
Give one of thy *so*[*ns*] that I may make him king!'
And Lady Asherah of the Sea replies:
:20 'Let us not (1) make king one who knows how to *govern*!'
And Lṭpn, God of *Mercy*, declares:
'One feeble of *frame* will not *vie* with Baal
Nor brandish a spear against Dagân's Son.'
When the parley is finished,
:25 Lady Asherah of the Sea declares:
'Let us make ʿAṯtar the Terrible king!
Let ʿAṯtar the Terrible reign!'
Thereupon ʿAṯtar the Terrible
Goes up into the heights of Ṣapân
:30 That he may sit on the throne of Aliyn Baal.
His feet do not reach the footstool
Nor his head reach its top.
And ʿAṯtar the Terrible says:
'I cannot rule in the heights of Ṣapân!'
:35 ʿAṯtar the Terrible goes down
Goes down from the throne of Aliyn Baal
That he may rule in all the god's earth.
[ ] draw in flagons
:II : 1 [d]raw in jars
Not [ ]
And *not* [ ]

(1) One of the most vexing aspects of Ugaritic is the fact that most of the negative adverbs can also stand for positive assertion. Here the question is whether they want a capable king or an incompetent one to take Baal's place. My interpretation implies that they purposely choose an incompetent one (who, as it is related a few lines below, turns out to be quite inadequate for the throne) in anticipation of, and perhaps also to facilitate, Baal's restoration.

A pitcher [ ]
A pitcher [ ]
49:II:5 they pass [ ]
She approaches him
As with the heart of a cow toward her calf
As with the heart of a ewe toward her lamb
So is the heart of ʿAnat *toward* Baal.
:10 She seizes Môt in *ripping* (his) garment
She *grabs* [him], in tearing (his) clothes.
She lifts her voice
And [shou]ts:
'Come, Môt, yield my brother!'
And the god Môt replies:
'What dost thou ask, O Virgin ʿAnat?
:15 I was going
And *roaming*
Every mountain to the midst of the earth
Every hill to the midst of the fields.
A soul was missing among men
A soul of the multitudes of the earth.
:20 I arrived at the gôodness of the land of Dbr
The beauty of the fields of Šḫlmmt.
I *meet* Aliyn Baal
I make him like a lamb in my mouth
Like a kid in my *jaws* he *is crushed.*'
The Luminary of the God, Sun, glows
:25 The heavens *gleam* on account of the god Môt.
A day, two days pass
From days to months.
The Maiden ʿAnat meets him
As with the heart of a cow toward her calf
As with the heart of a ewe toward her lamb
:30 So is the heart of ʿAnat *toward* Baal.
She seizes the god Môt
With a sword she cleaves him
With a *pitchfork* she winnows him
With fire she burns him
With millstones she grinds him
:35 In the fields she plants him
So that the birds do not eat his *flesh*
Nor *anyone* destroy his *portion*
Flesh calls to *flesh.*

:III '[ ]
:2 And if A[liyn Baal] is alive

And if the Prince, Lor[d of Earth], exists,
49 : III In a dream of Ltpn, God of *Mercy*,
:5 In a vision of the Creator of Creatures
Let the heavens rain oil
The wadies run with honey
That I may know that Aliyn Baal is alive
That the Prince, Lord of Earth, exists.'
:10 In a dream of Ltpn, God of *Mercy*,
In a vision of the Creator of Creatures
The heavens rain oil
The wadies run with honey.
Ltpn, God of *Mercy*, rejoices.
:15 His feet he sets on the footstool
He breaks *formality* and laughs.
He lifts his voice
And shouts:
'Let me sit and rest
And let my soul repose in my breast
:20 For Aliyn Baal is alive
For the Prince, Lord of Earth, exists.'
Aloud shouts 'Il to the Virgin 'Anat:
'Hear, O Virgin 'Anat:
Say to the Luminary of the Gods, Sun:
: IV : 25 "*Over the furrows* of the fields, O Sun,
Over the furrows of the fields let 'Il set thee.
As for the Lord of the Plowed *Furrows*,
Where is Aliyn Baal?
Where is the Prince, Lord of Earth?"'
:30 The Virgin 'Anat departs.
Then she sets face toward the Luminary of the Gods. Sun.
She lifts her voice
And shouts:
'The message of Tôr-'Il, thy father
:35 The word of Ltpn, thy begetter:
"*Over the furrows* of the fields, O Sun,
Over the furrows of the field let 'Il [set thee]!
As for the Lord of the *Furrows* of his Plowing,
Where is Aliyn Baal?
:40 Where is the Prince, Lord of Earth?"'
And the Luminary of the Gods, Sun, replies:
'*Fields of wine well up* in the - - - [ ]
At night, thy kinsman [ ]
And I shall seek Aliyn Baal.'
:45 And the Virgin 'Anat answers:
'(*As for*) *me*, *'tis not I*, O Sun!
(*As for*) *me*, *'tis not I*, (*but*) 'Il *summ*[*ons thee*]

:48 May [ ] guard thee [ ]

49 : IV [(3 lines broken)]

: V : 1 Baal seizes the son of Asherah
The great one he smites on the shoulder
The *tyrant* he smites with a stick.
Môt *is vanquished*
Reaches earth.
:5 [*Baal returns*] to the throne of his kingship
[*Dagân's Son*] to the seat of his sovereignty.
From [days] to months
From months to years
[Lo] in the seventh year
:10 And the god Môt [*addresses himself*] to Aliyn Baal.
He lifts his voice
And shouts:
'Because of thee, O Baal, I have experienced humiliation
Because of thee, experienced scattering by the sword
Because of thee, experienced burning in fire
:15 Because of thee, experienced grinding in the millstones (1)
Because of thee, experienced [ ] - - -
Because of thee, experienced [ ]in the fields
Because of thee, experienced being sown in the sea[ ].
:20 After I shall eat and - - - [ ]
[ ]
I shall look - - [ ]
Behold[ ]I shall *prosper* [ ]
[ ]I shall destroy [ ]
:25 [ ]destroy the multitud[es]

[(3 lines broken)]

: VI : 1 [He ex]pels him[ ]
[He dr]ives him out [ ]

[(2 lines broken)]

:5 [ ]Môt
[ ]nations
[ ]the god Môt

(1) It is interesting to note that a taboo persisted among heathen Syrian women into Islamic times, against eating anything ground in millstones during the period of mourning for the dead god. Cf. *Golden Bough* II 119. (Millstones might have been used to kill Baal too.).

[ ]his seven lads
49 : VI [ ]the god Môt
: 10 *And lo, (as) a brother of Sea* Baal is given
As a retribution for the *destroyed* sons of my mother.'
He returns to the Lord of the heights of Ṣapân.
He lifts his voice
And shouts:
'*A brother of Sea* thou art made, O Baal!
: 15 *As a retribution for* the *destroyed* sons of my mother!'
They *shake each other* like *gmr*-beasts
Môt is strong, Baal is strong.
They gore like buffaloes
: 20 Môt is strong, Baal is strong.
They bite like serpents
Môt is strong, Baal is strong.
They kick like steeds
Môt is down, Baal is down.
Up comes Sun
She cries to Môt:
'Hear, O god Môt!
: 25 How canst thou fight with Aliyn Baal?
How will Tôr-'Il, thy father, not hear thee?
Will he not remove the *support(s)* of thy throne?
Nor upset the seat of thy kingship?
Nor break the scepter of thy rule?'
: 30 The god Môt is afraid,
'Il's Beloved, the Hero, is frightened.
Môt is roused from his prostration
[ ]Baal sets him [ ]
: 35 His kingship [ ]
His sovereignty [ ]
[ ]
[ ]behold[ ]
[ ]years(s) [ ]

[(6 lines missing)]

62: : 41 [ ]thou shalt not proceed
[rev.] *fresh* [*bread*]
Also thou shalt not eat the [br]ead of *entreaty*
Nor drink the wine of intercession.
: 45 The Sun *looks after* the deities.
The Sun *looks after* the divinities.
Unto thee, O 'Il, behold Môt!
Unto thee (*is*) Ktr, thy companion
Yea Ḥss, thine acquaintance!

62 : 50 In the sea is Arš and Tannîn (1).
Ktr-and-Ḫss proceeds
Ktr-and-Ḫss *leaves.*

The scribe is ʾIl-Mlk, the Šbn-ite.
: 55 The narrator is Atn-Prln, chief of the priests (and) chief of the herdsmen, the Tʿ-ite.
(Dated in the reign of) Nqmd, King of Ugarit, Master of Yrgb, Lord of Trmn.

76 : I : 1 [ ]the Virgin ʿAnat

: II : 1 [Is Baal in his house
ʾIl-Hadd in the mid]st of his palace?'
And the lads of Baal reply:
'Lo Baal is in his house
: 5 ʾIl-Hadd in the midst of his palace.'

(1) Tannîn is a sea dragon (|| Leviathán in Isaiah 27 : 1) invoked for magical purposes in 126 : V : 31–32 ; a pagan usage that persisted among the Jews of Babylonia as late as the Amoraim who built up the Babylonian Talmud under Sasanian rule ; cf. the magic bowls published by J. A. Montgomery (*Aramaic Incantation Texts from Nippur*, Philadelphia 1913 text 2 : 4,6) and C. H. Gordon (*Orientalia* 10 1941 273-4 text 11 : 7,9).

His bow he takes in his hand
Even his arc in his right hand.
Thereupon he sets face toward the *marsh of fish,*
76 : II fu[ll of buff]aloes.
: 10 The Virgin ʿAnat lifts wing
She lifts wing
And *leaves* in flight
Toward the *marsh of fish,* full of [buffaloes].
And Aliyn Baal lifts his eyes
Yea lifts his eyes and sees
: 15 Yea sees the Virgin ʿAnat
The fairest among Baal's sisters.
In her presence he proceeds to arise
At her feet he kneels and falls
And he lifts his voice
And shouts:
: 20 'Mayest thou live, O my sister!
And *prospe*[*r*]!
The horns of thy *strength,* O Virgin ʿAnat
Let Baal anoint the horns of thy *strength*
Let Baal anoint them in flight.
We have planted my foes in the earth
: 25 In the dust, those who rise against thy brother.'
And the Virgin ʿAnat lifts her eyes
She lifts her eyes and sees
Yea she sees a cow.
And she *proceeds* in walking
Proceeds in walking
And *proceeds* in *dancing*

CHAPTER III

THE BIRTH OF THE GODS

This text is the libretto of a religious drama with music [1]. The mythological content is the birth of two pairs of gods. The occasion is the close of one seven-year cycle and the beginning of another. The purpose of the performance is to assure that the new cycle will be one of abundance with bread to eat and wine to drink.

The sections of the tablet, which include stage directions, are lined off by the scribe and precisely because there are serious obscurities, we must take no liberties with the scribe's demarcations.

The first section is a greeting and welcome to the dignitaries, *dramatis personae* and chorus with an invocation to the gods, good and fair. The mention of bread and wine is a sort of *leitmotif,* suggesting the underlying theme of the drama to be fulfilled at the finale.

Section 2 (: 8–11) describes the representative of privation and bereavement (i. e., misfortune personified) who is beaten and felled. [2] This signifies, in the light of section 10, the close of an evil seven-year cycle, or rather the beginning of a good seven-year cycle.

Section 3 (: 12) is a stage direction to the effect that the following is to be sung by the chorus seven times (once for each enactment of the ritual).

Section 4 (: 13–15) deals with a sevenfold sacrificial meal, cooked by sturdy youths over a flame in the field of the gods, specifically of Asherah-and-Raḥm (Raḥm 'Maiden' = the Virgin 'Anat).

Section 5 (: 16–18); Raḥmaya (= 'Anat), famous for her victories in combat, grapples with a goodly hero. The verb used is *ḥgr* derived from the word for belt. Whether the grappling consists of belt-wrestling (attested on the seal cylinders of Mesopotamia and Sumerian statuettes) [3], or whether the term merely harks back to belt-wrestling cannot be settled from such an uncircumstantial text.

Section 6 (: 19–20): The scene shifts to the dwelling of the gods, where a sevenfold action takes place.

(1) Cf. T. H. Gaster, 'A Canaanite Ritual Drama' JAOS 66 1946 49-76.

(2) With imaginative oriental spectators, this role may have been dangerous. In Iran, the villanous roles, such as that of Yezid, have been on occasion so convincing that the public more than once killed the actors who played those parts.

(3) Belt-wrestling was widely practiced in the ancient Middle East. I deal with the subject in a number of published and forthcoming articles. Here I wish only to add that the best portrayals are in P. E. Newberry *Beni Hasan* II, London, 1894, pl. VIII and XV (N. B. 4th row 11th group from left, where 'Black' holds up 'White's' belt, showing that an aim of the sport was to strip the opponent of his belt).

Section 7 (:21-22): a declaration of zeal for the names of the Sons of Šrm. The latter name is not clear. If it be pure Semitic, it would mean 'sons of singers' = 'singers', just as Heb. *bné 'ĕlîm* 'sons of gods' = 'deities'. However, it is also possible that *šrm* = *dšar-ru-ma* of the Hittite texts, who, according to J. Friedrich (*Bibliotheca Orientalis* 2, March 1948 p. 51 a), is the son of the storm god and who has many subservient deities [= our *bn šrm* ?] to mediate between him and mankind. Indeed, Friedrich has suggested that the diminutive Šarrumanni 'little Šarruma' means 'son of Šarruma'.

Section 8 (:23-27): An invocation to the good gods sucking the breasts of the goddess(es); and a greeting to the choristers and attendants bearing a sacrifice.

Section 9 (:28-29): The scene shifts back to the field of the gods, the field of Asherah-and-Raḥmaya.

Section 10 (:30-76) is the main scene to which all the preceding is introductory. By the seashore around a fire are 'Il and his two wives (whom he perhaps creates from two embers). 'Il would impregnate them but (apparently on account of his old age) is unable to do so. He then goes through a ritual which consists of shooting down a bird from the sky and roasting it over the fire. A threefold pronouncement follows in the pattern A-B-A: While the bird broils, the women first address 'Il as wives to a husband and declare that he is not ready to impregnate them. Discouraged for the time, they then address him as daughters to a father. In conclusion they revert to their wifely roles and address him as a husband, whereupon he impregnates them. They consequently bear 'Dawn' and 'Dusk'. 'Il is informed that his wives have given birth and he, in his omniscience, knows that the children are Dawn and Dusk (1). The latter are taken up to their proper places in heaven by the Sun and stars (:54). 'Il then reimpregnates his wives who accordingly bear the goodly sea gods suckled of the Lady (= Asherah-and-Raḥmaya ?). These sea gods gape with one lip to heaven and the other to earth, so that they devour fowl of heaven and fish from the sea. Instead of being directed to heaven like Dawn and Dusk, the Good Gods are dispatched to the Wilderness of Kadesh, whence they proceed and get the Guardian of the Sown to let them enter where they are greeted by plenty, with bread to eat and wine to drink.

52:1 I invoke the gods good and fair
Sons of *Šarru[ma*]and *votaries.*
Honor on high! [ ]
In the wilderness, *hills* [ ]
:5 to their head and [ ]
Eat of the bread, ho!
And drink of the liquor of wine, ho!
Mayest thou have peace, O king!
Peace, O queen!
Choristers

(1) For a close Mesopotamian parallel in phraseology, note the Creation Epic *Enúma Eliš* I:101.

And servitors.

Mt-and-Šr sits;
In his hand is the staff of privation
In his hand is the staff of bereavement.
They prune him with the pruning[s of the vine
52 : 10 They switch him with the switches of the vine
He is felled in his field like a vine.

Seven times it is to be recited to the accompaniment of the lute and the choristers declaim:

And the field
The field of the gods
The field of Asherah-and-Raḥm!
By the fire, seven times the heroes
Coo[k a *ki*]*d* in milk
A *lamb* in butter
: 15 And by the flame, seven times, the offer[ing]

Raḥmaya goes and *roams* [ ]
She grapples with the goodly hero [ ]
And - - - the choristers [ ]

The dwellings of the gods, eight [ ]
: 20 seven times:

I have zeal for the names
of the sons of *Šarruma*

I invoke the good gods
[*Islanders*, sons of the s]ea,
Who suck at the nipples of the breasts of Asherah
[ ]
: 25 Sun *illumines* their doors [ ]
and the grapes.
Peace, O choristers, servitors!
Going with a goodly sacrifice.

The field of the gods
The field of Asherah-and-Raḥmaya
[ ]

[ ] the shore of the sea
: 30 And *roams* the shore of the deep.
['Il takes] two kindlings

Two kindlings from the top of the fire.
Lo she is at the bottom
Lo she rises
Lo she cries 'Father, father!'
Lo she cries 'Mother, mother!'.
'Let 'Il's hand be long like the sea
Yea, 'Il's hand like the *flood*!'
'Il's hand became long like the sea
52:35 Yea, 'Il's hand like the *flood*.
'Il takes two kindlings
Two kindlings from the top of the fire.
'Il takes and *puts* (*them*) in his house.
'Il lowers his rod
'Il *lets down* the staff of his hand.
He raises, he shoots heavenward
He shoots in the heavens a bird
He *cleans* and sets it on the coal(s).
'Il would tup the two women.
Lo both women shout:
:40 'O husband, husband!
Thy rod has fallen
Lowered is the staff of thy hand!'
Lo the bird roasts on the fire
Broils on the coals.
The two wives of 'Il, wives of 'Il,
Wives of 'Il and his forever!
And lo the wives shout:
'O father, father!
Thy rod has fallen
Lowered is the staff of thy hand!'
Lo the bird roasts on the fire
:45 Even broils on the coals.
The two daughters, daughters of 'Il
Daughters of 'Il and his forever.
And lo the two wives shout:
'O husband, husband!
Thy rod has fallen
Lowered is the staff of thy hand!'
Lo the bird roasts on the fire
Even broils on the coals.
The two wives, wi[ves of 'Il],
Wives of 'Il and his forever.
He bends, he kis[ses] their lips
:50 Lo their lips are sweet
Sweet as grapes.
From kissing and conception

From the embrace of childbirth
They go into tra[vail]
So that they bear
Dawn
And Dusk.
Word is brought to 'Il:
'The wi[ves] of 'Il have b[or]ne!
What have they borne?'
'My two children
Dawn and Dusk!'
Lift up, prepare for Lady Sun
And for the stars [ ]
52:55 He bends, their lips he kisses
Lo their lips are sweet.
From kissing and conception
[From] embracing and childbirth
They again [ ]
count(s) to five [ ] the combination of the twain
Go into travail
And they bear
They bear the goodly [gods]
The *islanders*, sons of the sea,
Who suck from the nipples of the [Lady's br]easts.
Word is brought to 'Il:
:60 'Both wives of 'Il have borne
What have they borne?'
'The goodly gods [ ]
The *islanders*, sons of the sea,
Who suck from the nipples of the Lady's breasts!'
A lip to earth
A lip to heaven
And there verily enter into their mouth
Birds of heaven
And fish from the sea.
And there proceed [ ]
Set(s) both right and left in their mouth
'The wives I have wed have borne my *satisfaction*.
:65 O sons I have begotten!
Lift up, *prepare*
In the midst of the wilderness of Kadesh
There you would be a *client*
Of the stones
And of the trees
Seven complete years

Yea eight cycles
Until the goodly gods walk the field
Roam the corners of the desert.
And the guard of the sown *meets* them.
And they call to the guard of the sown:
52:70 'O guard, guard, open!'
And he opens a crevice behind them
And they enter [ ]
'If [there is]bread
Give, that we may eat!
If there is [wine]
Give that we may drink!'
And the guard of the sown answers them:
'[There is bread to eat]
There is wine to drink in [ ]
[ ] - - - - for a *hîn* (1)
A *lôg* of his wine [ ]
And his companions, full of wine [ ]

(1) Hin and lôg are both measures known from the Old Testament and have found their way into the English dictionary.

CHAPTER IV

THE WEDDING OF NIKKAL AND THE MOON

The bard opens with the declaration that he sings of the *dramatis personae:* the bride Nikkal (1), the groom Yariḫ = the Moon, and Ḫrḫb the King of Summer who acts as intermediary to arrange the match. The time is a fitting one: when the Sun goes down and the Moon rises. The wedding is indicated because the bride-to-be is destined to bear a son. The Ktrt are informed of the situation for they are to celebrate joyous occasions like marriages in song. The intermediary is instructed to procure the bride for whom Yariḫ is ready to pay a price of a thousand shekels of silver, even a myriad of gold, plus gems of lapis-lazuli. The prospective groom also promises to be a good husband, and cultivate his beloved, even as a farmer transforms a field into a fertile vineyard. The intermediary suggests a couple of other goddesses who could be obtained as brides without difficulties, but Yariḫ is steadfast in his desire to wed Nikkal. The wedding is performed by the weighing of the marriage price by the bride's family. The bard sings to the bride, who is to be illumined by the light of her groom.

After a scribal line across the tablet, the text concludes with the poet's singing of the Ktrt descending among the flowers to Lṭpn, the head of the pantheon. Then the bard mentions the counting of the dowry and trousseau.

77 : 1 I sing of Nikkal-and-Ib [ ]
Ḫrḫb, King of Summer
Ḫrḫb, *Estival* King
When the Sun sets
The Moon *rises*
– – [ ]
: 5 A virg⌜in] will give birth [
[To the K]ṯrt
Daughters of *shouting*
[Swallows].

(1) From Nin-gal, a Sumerian lunar goddess Very few Sumero-Accadian deities penetrated into Canaan and Egypt. Nikkal is an exception attested in Ugarit and Egypt (UH § 18.1310). She is also called Ib or Nikkal-and-Ib in this poem.

Lo a maid will bear a s[on (1)]
answers/sees *lo* for his love she *is* [ ]
[ ]for her flesh, my blood [ ]
77:10 And wine like/and one wed [ ]
'Hear, O Ktr[t] goddesses [ ]
[ ] for his love, she *is* [ ]
for her lord [ ]
Dagân [ ]
:15 '[Hea]r, O Ktrt!
⟨Daughters⟩ of *shout[ing*
Swal]lows!
The Moon, illuminator of heaven, sends to Ḫr[ḫ]b, King of Summer:
'Give Nikkal!
Moon would wed Ib
Let her enter his house.
:20 And thou shalt get her for marriage by paying her father
A thousand (shekels) of silver
A myriad of gold.
I'll send lapis gems.
I'll make her field into vineyard
The field of her love into *orchard.*'
:25 And Ḫrḫb, King of Summer, replies to the favorite of the gods:
'O son-in-law of Baal!
Wed Pdry, gi[rl of light]!
I'll bring thee near her father, Baal.
'Aṯtar would *agree* to marry off to thee Ybrdmy
:30 The daughter of his father.
The Lion (2) may *be appealed to.*'
And there replies the Moon
Illuminator of Heaven
And it was answered:
'With Nikkal is my wedding!'
After Moon weds Nikkal
Her father sets the beam of the balances
:35 Her mother, the trays of the balances
Her brothers arrange the *ingots*
Her sisters are for the stones of the balances.
To Nikkal-and-Ib do I sing.
The Moon is bright

(1) Such annunciations are common in Ugaritic and biblical literature. The earliest one in Scripture is that by an angel to Hagar, predicting the birth of Ishmael (Gen. 16:11).

(2) As noted by Count du Mesnil du Buisson (*Jaarbericht* 10 1945 48 406), the 'Lion' is 'Aṯtar.

And may the Moon shed light on thee!

77:40 I sing of the Ktrt goddesses
Daughters of *shouting*
Swallows
Daughters of the *New Moon*
Lord of the *Sickle*! (1)
Going down among the *flowers*
Among the *plants of* - - - - - - -
:45 To Ltpn, God of *Mercy.*
Lo in my mouth is their number
On my lips, their counting.
Her dowry
And her trousseau
[ ]to(ward) - - - - -
[ ]to(ward) - - - - -
:50 The fairest, the youngest of the Ktrt.

(1) These epithets are problematic. I have translated *bnt hll* two ways: 'daughters of shouting' when followed by 'swallows', and 'daughters of the New Moon' when followed by 'Lord of the Sickle' (= epithet of the Moon God in Accadian, as pointed out by A. Goetze; see UH § 18.475). *Hll* is the consonantal spelling of both 'to shout' and 'the new moon' and there may possibly be a play on the different meanings.

CHAPTER V

THE LEGEND OF KRT

A king named Krt lost his entire family: brethren, wife and progeny. Bemoaning his plight, he sobs himself into a sleep, during which 'Il appears in a dream. The god instructs Krt to perform rituals, organize an expedition and besiege Udm, whose king, Pbl, has a daughter, Ḫry, who is to wed Krt and bear him offspring. 'Il tells Krt not to accept gifts that Pbl will offer him to raise the siege and depart; but to insist on Ḫry's hand in marriage. Krt follows the instructions which include a vow, en route, to Asherah in southern Phoenicia that if she blesses his mission with success, he will give the goddess much gold and silver. He then proceeds to Udm, where he lays siege, rejects Pbl's offer and insists on wedding Ḫry.

The wedding is attended by the pantheon, whose chief Lṭpn (= 'Il) blesses Krt, over a cup of wine, predicting the birth of seven sons and 8 daughters; and assuring Krt that one of his sons will be suckled at divine breasts so as to qualify as a successor to the throne. The prophecy is fulfilled but Krt fails to keep his promise to Asherah: whence the woes that are in store for Krt. But meanwhile, on this joyous occasion when all his hopes are fulfilled, Krt instructs his wife to invite guests to eat and drink. The guests are the dignitaries of Ḫbr, probably a coastal city south of Ugarit [1]. Whether a royal house of Ugarit, such as Nqmd's line, originated in Ḫbr, or whether this poem is simply a literary work imported from abroad (or only one with a foreign setting) has not yet been decided. However, since Krt belongs to the tribe of Tʿ, which is prominent at Ugarit, it is possible that the poem has a political *raison d'être:* the glorification of Nqmd's line [2]. In favor of this view is the fact that the high priest Atn-Prln [3] (62 : 54) is of the tribe of Tʿ and, since it was a common practice for a member of the royal family to be invested with the highpriesthood [4], Nqmd may well have been

[1] The fact that Ḫbr and Udm are divisible into Great Ḫbr/Udm and Little Ḫbr/Udm favors their coastal location; for characteristic of many of the ancient Syro-Lebanese cities is their division into a larger community on the shore and a smaller community on a well defended isle near the shore. In antiquity the best illustration was Tyre (whose site has been joined to the shore since Alexander the Great built a causeway); nowadays the best example is Arwad farther north.

[2] Cf. H. L. Ginsberg, *The Legend of King Keret,* BASOR *Supplementary Studies* Nos. 2-3, New Haven, 1946 8, who cites J. Pedersen on this point.

[3] My query (UH § 18.340) as to whether Ugaritic *atn* ever stands for the name of the Eg. god 'Aton' is to be answered in the negative.

[4] Egypt of the XXI[st] Dynasty provides the best illustration of the consecration of royalty to the highpriesthood (GdA II, 2 21). It it perhaps worth recalling that David had sons of his appointed as priests (2 Sam. 8:18).

a T-ite claiming descent from the deified King Krt. Unless the omission of Nqmd's father's name is an accident due to the paucity of references to the king, Nqmd may have been a usurper at Ugarit; and precisely for that reason his claim to royalty may have required divine claims from outside Ugarit, as are provided by the Krt legend.

After the banquet in celebration of the restoration of his family, Krt falls ill, presumably due to the displeasure of Asherah, who is angry at being forgotten by the king she had granted success to on the strength of his vow, whose fulfilment is overdue. Krt's illness, with its threat of death, fills his son Ilḫu with unhappy misgivings: Is it possible that his deified father can die like mortals? (It must often have occurred to the more questioning ancients — particularly in Egypt, where so much was made of immortality in the flesh — that such notions as the deification of kings were make-believe, even though such skepticism had not enough momentum to eradicate those deeprooted, accepted notions.) Krt instructs Ilḫu to go his sister 'Octavia' (for thus may we translate her Ugaritic name Ttmnt). She comes and bewails her father's plight. The realm languishes in famine because of its deified king's sickness. At last Ltpn undertakes to cure the king. A female, Šṯqt ('Remover'), is accordingly summoned and it is she who exorcizes the disease and restores to health Krt, who once more sits upon his throne. Meanwhile, the crown prince, Yṣb, is impelled to go to request his father, who because of sickness has been neglecting the government of the realm, to abdicate and let him rule in his stead. Krt accordingly heaps a hearty malediction on his presumptuous son. The rest of the legend is lost.

Krt: 1 [Pertaining to K]rt.

[(3 lines broken)]

: 5 [ ]'Il [ ]
[ ] *of* the river, *mothers*
[ ] *female shades*
Destroyed is the house of the [*k*]*ing*
Who had seven [br]others
Eight sons of one mother.
: 10 Krt, our scion, *is impoverished*
Krt *despoiled of a place.*
His rightful wife he could not get
Nor his proper spouse.
A woman did he betroth
But she departed.
: 15 *Siblings germane he had for himself*
A third died *at birth*
A fourth, of disease
A fifth Reshef gathered in
: 20 A sixth were youths (*victims*) of the sea
A seventh, lo they fell by the sword.
Krt sees his progeny

He sees his progeny *impoverished*
Greatly *despoiled* of his seat and house.
Lo a family is perished
Krt : 25 And in his *stead* (perished is) an heir.
He enters his chamber, he weeps
While uttering words, sheds tears
His tears are poured
Like shekels earthward
: 30 Like pieces-of-five on the bed.
As he weeps, he falls asleep
As he sheds tears, *drowsiness*
Yea sleep *overcomes him*
And he lies down *in drowsiness*
: 35 Yea he *slumbers.*
And in his dream 'Il descends
In his vision the Father of Man.
And he draws near while asking Krt:
'Who is Krt that he should weep
: 40 The Good One, Lad of 'Il, that he should shed tears?
Does he wish the kingship of Tôr, his father?
Or sovereignty, *li[ke the Fa]ther of M[an]?*

[(10 lines missing)]

A *portion* of her *estate*
: 55 An eternal slave
A team of three horses
A chariot from the yard of a handmaid's son.
[ ] I shall *obtain*
[ ] exalt, I'll increase
[ ] Tôr, his father, 'Il
: 60 [ ] in weeping, Krt
In shedding tears, the Good One, Lad of 'Il.
Thou shalt wash
And rouge thyself!
Wash thy [ha]nds to the elbow
From [thy] finge[rs] to the shoulder!
: 65 Enter [the shade of the tent]!
Take a lam[b in thy hands]
A lamb of sa[crifice in] the right
A kid in b[oth]
Loaves of [thy] b[read] of - - -
: 70 Take the *entr[ails]* of a bird of sacrifice
Po[ur] wine [into a c]up of silver
Honey into a cup of [g]old
And rise to the top of the [to]wer
: 75 Ride the shoulders of the wal[l]

Lift thy hands heavenward
Sacrifice to Tôr, thy father, 'Il
Present Baal with thy sacrifices
Dagân's Son with thy *victuals!*
Krt : 80 And let Krt go down from the roof(s)
Prepare food for the city
Wheat for the community
Bake bread for the fifth
Provisions of the sixth month.
: 85 Let the host of the Negeb go out
The soldiers of Negeb's troops
And let the host of M' go out
Thy soldiers, a great *army*:
Three hundred myriads
: 90 *Crack-troops* without number
Second-line troops without reckoning.
Behold *ḫžž*-troops by the thousand
And *kmyr*-troops by the myriad.
Arrayed in twos
: 95 Lo all of them *arrayed* in threes!
Let the solitary man close his house
The widow indeed be hired
The invalid carry the bed
: 100 The one-eyed indeed - - - -
Let the newly-wed groom come bring forth
Yea conduct his wife to another
To a stranger his well-beloved
Like locusts they shall occupy the field
——————————————————— (1)
: 105 Like grasshoppers, the corners of the desert.
Go a day and a second
A third, a fourth day
A fifth, a sixth day
Lo at sunrise on the seventh
Thou wilt reach Great Udm
: 110 And Little Udm.
And *occupy* the towns
Invest the cities
Capture the man gathering wood in the fields
The woman picking straw on the threshing floors

(1) It may be that the scribe was copying this text and at this point reachep the end of one of the tablets from which he was copying; whence this line. In any case, the line does not mark a natural division of the text (see the parallel in :192-194). In this book all scribal lines are reproduced as a matter of editorial policy.

Capture the woman who draws at the well
Who fills at the spring!
Then a day and a second
Krt: 115 A third, a fourth day
A fifth, a sixth day
Thou shalt surely send aloft thine *arrows* toward the city
Yea the sling shot of thy hands.
And behold at sunrise on the seventh
: 120 King Pbl will not be sleeping
At the sound of the bellowing of his bull
At the voice of the braying of his ass
At the lowing of his plowing ox
The barking of his *watch* dog
He will send messengers (saying):
"Go to Krt!
: 125 *Declare to him:*
'So says King Pbl:
"Take silver
Even gold
A *share* of her *estate*
And a permanent slave
A team of three horses
A chariot from the yard of a handmaid's son
: 130 Take, Krt, peace offerings in peace
And depart, King, from my house
Be distant, Krt, from my court!
Do not besiege Great Udm
And Little Udm!
: 135 Udm is a gift of 'Il
A present of the Father of Man."'"
And send the messengers back to him (saying):
"What use have I for silver
Even of gold
A *share* of her *estate*
: 140 And a permanent slave
A team of three horses
A chariot from the yard of a handmaid's son?
But what is not in my house shalt thou give!
Give me Lady Ḫry
The well-bred
Thy first-born
: 145 Whose charm is like 'Anat's charm
Whose loveliness is like Astarte's loveliness,
Whose *pupils* are lapis-lazuli
Ey[es], bowls of *alabaster!*
Let her gird me [ ]

That I may repose in the view of her eyes.
Krt: 150 For in my dream 'Il has granted
In my vision, the Father of Man,
That a scion be born unto Krt
Yea a lad to the Servant of 'Il."'
Krt *awakes,* and 'twas a dream
: 155 The Servant of 'Il, and 'twas a theophany.
He washes
Yea rouges himself
He washes his hands to the elbow
From his fingers to the shoulder.
He enters into the shade of a tent
: 160 He takes a lamb of sacrifice in his hands
A kid in both hands
Loaves of his bread of/which ---
He takes the *entrails* of a bird of sacrifice
He pours wine into a cup of silver
: 165 Honey into a cup of gold
And he goes up to the top of the tower
He rides the shoulders of the wall
He lifts his [ha]nds unto heaven
He sacrifices to Tôr, his father, 'Il
: 170 He presents [Baa]l with his sacrifices
Dagân's Son with his *victuals.*
Krt goes down from the roof(s)
He prepares food for the city
Wheat for the community.
He bakes bread of the fifth
: 175 *Provisions* of the sixth month.
[There goes forth] the host of Negeb
The [soldiers] of Nege[b's] troops
[And the host] of M' [goes out]
His [so]ldiers, a [great] ar[my]:
Three hundred myriads.
: 180 Behold by thousands *ḫžž*-troops
Yea, by the myriad, *kmyr*-troops
Arrayed in twos
Lo all of them *arrayed* in threes.
: 185 The solitary man closes his house
The widow indeed is hired
The invalid carries the bed
The one-eyed indeed ---
And the newly-wed groom brings forth
: 190 Yea conducts his wife to another
Even to a stranger his well-beloved.
Like locusts they occupy the field

Like grasshoppers the corners of the desert.
Krt:195 They go a day and a second
After sunrise on the third
They r[each] the shrine of A[sherah] of the Tyrians
Yea the Goddess of the Sidonians.
:200 There Krt of Tʿ makes a vow:
'*As* Asherah of the Tyrians *lives*
Even the Goddess of the Sidonians!
If I may take Ḫry to my house
:205 Yea cause the girl to enter my court
I'll give twice her (weight) in silver
Even thrice her (weight) in gold!'
They go a day and a second
A third, a fourth day
After sunrise on the fourth
:210 They reach Great Udm
And Little Udm.
He *occupies* the towns
Invests the cities
Captures the man gathering wood in the field
:215 And the woman picking straw on the threshing floors.
Captures the woman who draws at the spring
And her who fills at the well.
Then a day and a second
A third, a fourth day
:220 A fifth, a sixth day
Lo at sunrise on the seventh
King Pbl could not sleep
For the sound of the bellowing of his bull
:225 For the voice of the braying of his ass
[For the lowing] of his plowing ox
The barking of his *watch* dog.
[*Thereup*]*on* [*King Pbl* cries alo]ud to [his] wife
'Hear, O [ ]!
:230 Wife ⌜ ⌝: ⌜ ⌝
The message ⌊ ⌋

[(2 lines broken)]

[ ] verily/not prepared
:235 [sling] shot of his hands
[ ] shall I not send
[ ] aloud to his [lads] he cries:
:239 [hit]ch an ass

[(3 lines broken)]

[ ] sacrifice

[(3 lines broken)]

Krt:247 'Go] to [Krt of T]ʿ!
And s[ay to Krt of T]:
"The message [of King Pbl]:
:250 'Take [silver
Even go]ld
A [*share*] of her [*estate*]
An [eternal] slave
[A team of three] hor[ses
A chariot] from [the yard of a handmaid's son]!
:255 [Take, Krt, peace offerings in peace!
Do not besiege Great Udm
And Little Udm
Udm is the gift of ʾIl
Yea a present of the Father of Man.
:260 So depart, O King, from my] house
[Be distant, Kr]t, from my c[ou]rt!

[(5 lines missing)]

They l[ift their voices
And shout]:
'The messa[ge of King Pbl]:
"Take si[lver
:270 Even go]ld
[A *share* of her *estate*]
And an [eternal] slave
[A team of three] horses
[A chariot] from the yard [of a handmaid's son]!
:275 Ta[ke], Krt, [peace offerings in] pea[ce]!
Do not [besiege] Great Udm
And [Lit]tle U[dm]!
Udm is a gift of ʾIl
A present of the Father of [Ma]n.
Be distant, King, from my house
:280 Depart, Krt, from [my] cour[t]!"'
And [K]rt of [T]ʿ answered:
'What use have I for silver
Even go[ld]
A *share* of her *estate*
:285 An eternal slave
A team of three horses
A chariot from the yard of a handmaid's son?
But what is not in house shalt thou give!
Give me Lady Ḫry
:290 The well-bred
Thy first-born

Whose charm is like ʿAnat's charm
Whose loveliness is like Astarte's loveliness
Whose pupils are lapis-lazuli
Krt:295 Eyes, bowls of *alabaster.*
Whom ʾI[l] gave in my dream
In my vision, the Father of Man:
A scion is to be born unto Krt
:300 Yea a lad the Servant of ʾIl!'
The messengers depart
Yea return.
Then they set face toward King Pbl.
They lift their voices
And shout:
:305 'The message of Krt of Tʿ
The word of the [G]ood One, [Lad of ʾIl]:
" [(rest missing)]"'

128: I:1 [ ] *hand* [ ]
- - - - - *by the hand she took*
She caused him to - - - [ ]*in judgment*
To Krt *say as follows*:
:5 'As the cow moos to her calf
So do the sons of soldiery (cry) to their mothers
As the Udmites groan.'
And Krt of Tʿ replies:

:II:1 [[
[ ]Tôr
[Ali]yn Baal
[ ] Moon, the prince
:5 [Kt]r-and-Ḫss
[ ] Raḥmaya, Reshef the prince
The [asse]mbly of the gods threefold.
[There]upon Krt of Tʿ *pa[ss]es* into his house
He *drinks,* he enters, his [ ]
:10 He gives and [ ] gives
There arrives the assembly of the gods
[And] Ali[yn] Baal declares:
'[ ]depart, O Lṭpn, [God] of *Mercy,*
:15 Wilt thou not bless [Krt] of Tʿ
Nor protect the Good One, [Lad] of ʾIl?'
A cup he takes [in] his hand
A goblet in [the right]
He indeed blesses Krt of Tʿ
:20 [Protects] the Good One, Lad of ʾIl:

'The wi[fe thou take]st, O Krt,
The wife thou takest to thy house
The girl thou causest to enter thy court
Will bear thee seven sons
128 : II Yea octuple (an) eight(h)!
: 25 To thee she will bear the lad Yṣb
One who sucks the milk of Asherah
Who suckles the breasts of the Virgin [ʿAnat]
The wetnurs[es *of the gods*].

: III : 1 [ ]
[Be most exalted], O Krt!
[In the midst of the deities] of the earth
[In the gathering] of the assembly of Dtn.
: 5 [And she] will come to term to bear
[ ] *she* will go
She will bear the Girl [ ]
She will bear the Gir[l]
She will bear the Gir[l]
: 10 She will bear the Gi[rl]
She will bear the Gi[rl]
She will bear the Gi[rl]
Be most exalted, [O Krt]!
In the midst of the deities of the ear[th]
: 15 In the gathering of the assembly of Dtn.
I shall make the youngest of them the first-born.'
The gods bless, they go
The gods go to their tents
The assembly of ʾIl to their tabernacles.
: 20 And she comes to term to bear him a son
And she comes to term to bear him two sons.
Lo! in the seventh year
The sons of Krt were as she had promised
: 25 Also the daughters of Ḫry were so.
And Asherah *is mindful of* her vows
Yea the Goddess [*of her promises*].
And she lifts her voice
And [shouts]:
'Look! Will Kr[t] even [*break his word*]
Or[ ]change [his] vows?
: 30 I shall break [then my agreement]
[ ]'
: IV : 1 [He sets his] fe[et on the footstool]
Aloud [he shouts] to [his wife]:
'Hear, [O Lady Ḫry]!

128 : IV Slaught[er] the sleeke[st] of thy fatlings!
: 5 Open a fl[a]gon of wine!
Invite my seventy bulls
My eighty gazelles
The bulls of [Gre]at Ḫbr
: 9 Of [L]it[tle] Ḫbr

[(4 lines broken)]'

Lady [Ḫ]ry hearkens.
: 15 She slaughters the sleekest of her [fat]lings
She opens a flagon of wine
Into his presence she ushers in his bulls
Into his presence she ushers in his gazelles
The bulls of Great Ḫbr
: 20 Of Little Ḫbr.
They enter the house of Krt
To *his dwelling they come*
Even to the tents *of myrrh* they approach.
She stretches a hand into the bowl
A knife she puts into the meat.
[And] Lady Ḫry announces:
'I have invited you [to ea]t, to drink
Krt, your lord, [has a feast].'

: V [(5 lines broken)]

: 6 [ ]dwelling[ ]
[they approach.
She stret]ches a hand into the bowl
She puts [a knife] into the meat
[And] Lady Ḫry [announces]:
: 10 '*I have invited* you [to ea]t, to drink
[ ]bless [ ]
Ye shall weep [over] Krt.
[Even as] the bulls had said
[ ]the dead ye shall weep
: 15 [ ]and in the heart ye shall *bu*[*ry*]
[ ]dead, finger[s]
[ ] - - - - - 'Il, sunset
Verily reaches the setting sun Krt
: 20 Our Lord, and he rules
[ ]our lord and he [ ]
[Kr]t of T[*upon us in Ḫr*
[ ]thy wife on
[ ]he causes to go out
: 25 [ ]Great Ḫbr
[Littl]e Ḫbr

]
[ ]full
[ ]*complete*
:1 Hear [ ] - - - - - [ ] - - -
128 : VI They are still e[*atin*]*g* (and) drinking
And Lady Ḫry announces:
'I have invited you to e[a]t and to dr[ink]
:5 [Krt], your lord, [has] a fea[st].'
Into the presence of Krt *they come*
As the bulls had said
Their word in the vision[ ]Krt
[ ]

125 : 1 [ ]Krt
'Like a [d]og in thy house do we slink
Like a cur, (in) thy *bower.*
Father, wilt thou even die like mortals
:5 Nor we be allowed to pass through thy *bower*
By the women, O Father, *in* the heights
(Who) mourn thee, Father, in the mountain of Baal Sapân?
The holy *dirge* is *loud*
A mighty *dirge*
A *dirge, wide of wing* (1).
:10 Also, is [K]rt a son of 'Il
The scion of Lṭpn-and-Qdš?'
Into the presence of his father he enters
He weeps and *moans* for him
He gives forth his voice in weeping:
'In thy life, O our father, would we rejoice
:15 Thine immortality, we would be glad therein!
Like a dog in thy house do we slink
Like a cur, (in) thy *bower.*
O Father, wilt thou also die like mortals?
Nor we be allowed to pass through thy *bower*
By the women, O Father, *in* the heights?
:20 How can it be said
Krt is 'Il's son
The scion of Lṭpn-and-Qdš?
Or do gods die
Nor Lṭpn's scion live?

(1) The translation is only tentative; but if it is right, we might compare the winged shrines on bulls' backs on Mesopotamian seal cylinders (CS pl. XXII g, i); one such unpublished seal in the Iraq Museum has an inscription that identifies the winged shrine with priestly musicians (whose song thus rises as if on wings).

And Krt of Tʿ replies:
125 : 25 'My son, do not weep for me
Do not grieve for me!
Do not exhaust, O my son, the well of thine eyes
Nor the brain of thy head with tears!
Summon thy sister Octavia
: 30 From the house of her *gentle guardian*
So that she may weep and mourn for me.
My lad, do not tell thy sister
[ ] thy sister.
I know that she is kind
Let her not put her waters in the field
: 35 Nor the outpouring of her soul in the *meadow* [ ]
[*When*] Lady Sun will be setting
Yea the Lady gleaming (with) glow
Then say to thy sister Octavia:
: 40 "Our Krt is making a feast
The king is giving a party
Take thy - - - in the hand
Thy - - - in the right.
Go, abide in the heights of thy sire
: 45 Cause [ ]to draw near with thy entreaty
And he will *agree* to everything."'
Thereupon the hero Iliu
Takes his [l]ance in the hand
His [sp]ear in the right
[ ]he draws near *running* (to) her
: 50 [ ]he reaches her.
And the lad *attracts* his sister
She goes out and espies his lance [ ]
He sets his face
Goes out of the door.
As soon as she sees her brother
She breaks her [back] on the earth
: 55 [ ]her brother, she weeps
'[ ]is the king [s]ick
[ ]is Krt. thy sire [ill]?'
And the hero Iliu replies:
'The king is [*not*] sick
: 60 [*Nor* ill] is Krt thy sire.
[Our Krt is g]iving a feast
[The king is m]aking a party.

[(4 lines broken)]

Gir[ ]
Go[ ]

127 : 1 '[De]ath, then, *be stilled*!
Šṯqt, then, *prevail*!'
And Šṯqt departed.
She verily enters the house of Krt
Weeping she goes in and enters
:5 *Sobbing* she comes inside.
The towns she enters - -
The cities she enters - - -
With a wand she *strikes the malady*
The illness on its head.
:10 And she returns to wash him of sweat.
His appetite she opens to eat
His desire to dine.

Death, then, *is stilled.*
Šʿtqt, then, *prevails.*
127:15 And Krt of Tʿ gives orders
He lifts his voice
And shouts:
'Hear, O Lady Ḥry!
Slaughter a lamb that I may eat
A lambkin that I may dine!'
Lady Ḥry hearkens
:20 She slaughters a lamb that he may eat
A lambkin that he may dine.
Lo a day and a second
Krt returns to his *audience hall*
He sits on the throne of his kingship
On the dais, on the chair of sovereignty.
:25 Also Yṣb returns to the palace
And his inwards instruct him:
'Go to thy father, Yṣb:
Go [to] thy [fa]ther and speak!
Repeat to K[rt of Tʿ]:
"Liste[n]
:30 And be alert [of ear]!
For dost thou administer like *the strongest of the strong*
And *govern* (like) the [moun]tains?
Thou hast let thy hands fall into *negligence*
Thou dost not judge the case of the widow
Nor adjudicate the cause of the broken in spirit.
:35 Because thou art a brother of the bed of sickness
Yea a *companion* of the bed of disease.
Descend from the kingship that I may rule
From thy sovereignty, that I may be enthroned thereon!"'
The lad Yṣb departs
:40 Into his father's presence he enters.
He lifts his voice
And shouts:
'Hear, O Krt of Tʿ!
Listen
And be alert of ear!
Dost thou administer like *the strongest of the strong*
And *govern* (like) the mountains?
:45 Thou hast let thy hands fall into *negligence*
Thou dost not judge the case of the widow
Nor adjudicate the cause of the broken in spirit
Nor drive away *those who prey* upon the poor!
Before thee thou dost not feed the fatherless
:50 Nor behind thy back the widow.

For thou art a brother of the bed of sickness
Yea a *companion* of the bed of disease.
Descend from the kingship that I may rule
From thy sovereignty that I may be enthroned thereon!'.
And Krt of Tʿ replies:
127:55 'May Ḫoron break, O my son,
May Ḫoron break thy head
Astarte-Name-of-Baal, thy pate!
May there fall in *Byblos*
Thy years in thy - - -
And mayest thou *see* [ ]

CHAPTER VI

THE LEGEND OF AQHT

A king named Daniel, craving a son, sought the company of gods, whom he wined and dined for a week. Baal at last appeared to him in a dream produced by the technique of incubation; and Baal together with other satisfied deities, secures the blessing of 'Il, so that the forthcoming conjugal embrace of Daniel and his wife, Dnty, will result in a model son (1). The lad Aqht is born and the happy father summons the Ktrt to celebrate at a banquet lasting seven days. Thereafter, as Daniel upholds justice and mercy in his court, located on a threshing floor (2), Ktr-and-Ḫss brings him a wondrous bow for Aqht. The god is honored with a feast prepared by Dnty and then departs. Aqht, now grown, is approached by 'Anat, who promises him silver and gold in exchange for his bow. Instead of acceding, however, Aqht tells her to take the raw materials to Ktr-and-Ḫss, who will make another bow for her (3). 'Anat, unwilling to be dissuaded, promises Aqht immortality for his weapon but he persists in his refusal and declares that he knows full well that man's lot, at best, is to die with a hoary head. He then commits the sin of haughtiness toward a deity, chiding 'Anat with the disabilities that go with her sex; for how can she, a mere female, hope to draw his bow fashioned for a male hero? Failing to make him reconsider, 'Anat warns him that for his ὕβρις, she will lay him low at her feet. Thereupon she goes to 'Il, from whom she extorts permission to fulfil her threat. At length she instructs Yṭpn to assassinate Aqht as he dines by a well in the precincts of the city of 'Abilûma. By a touch of her scabbard, she transforms Yṭpn into an eagle, poises him among a flight of eagles over Aqht, whom he strikes dead. 'Anat thus obtains the coveted bow. It was apparently her intention to restore Aqht to life, but Ṣml, the mother eagle, had managed to devour Aqht's corpse.

The scene reopens with Daniel again ruling justly in his court, when his daughter Pġt, sighting the eagles overhead, divines the tragedy. She mourns and initiates her father into mourning, whereupon he invokes a seven-year drought on account of Aqht's misfortune. After Daniel performs a ritual, harbingers bring him the news of Aqht's

(1) J. Obermann, *How Daniel was Blessed with a Son*, *American Oriental Society Offprint Series* No. 20, New Haven 1946.

(2) Threshing floors, being spacious, were often used for holding court, whether royal (1 Kg. 22:10) or judicial (*Orientalia* 12 1943 65 n. 1).

(3) Albright & Mendenhall first recognized that the text deals with the making of a composite bow (*Journal of Near Eastern Studies*, I 1942 227 ff.); see also the subsequent notes of Y. Sukenik (BASOR 107 1947 11-15).

death (1). Stricken with grief, he now sets himself to retrieving for burial Aqht's remains from the guilty eagle's gizzard. Sighting the flock, he invokes Baal to fell them at his feet. He then splits them open and failing to find Aqht's remains, he invokes Baal to repair the eagles whereupon they fly off. He then sights Hrgb, the father of the eagles, with the same results. But after sighting and bringing down Sml, the mother of the eagles, he finds in her crop the remains of Aqht which he removes and buries. Daniel proceeds to curse the spot where Aqht suffered his fate; he curses the well, the arbor and finally the city of 'Abilûma. Then he retires to his palace where for seven years he grieves for Aqht in the company of a band of wailing women. Thereupon Pgt, sped on her mission by the sacrifices and blessings of her father, goes off to avenge her brother's murder. Pgt dons a hero's attire, sword and all, but conceals it by an outer female garment. She is ushered into the presence of Ytpn who greets her with wine and assures her that his hand, which has smitten Aqht, is ready to slay thousands of the lady's foes. Whether in the dusk that had followed the sunset (1 Aqht : 210–211) the lass (Pgt) had succeeded in concealing her sword, is not certain. That, in the sequel now broken away, she avenged Aqht by slaying Ytpn is quite likely (even as 'Anat slew Môt to avenge her brother Baal). That 'Anat eventually had Aqht's remains restored to life (much as Baal restored the eagles that Daniel had split open, and much as Baal himself was revived) is also likely, especially since it seems to have been her original intention to get the bow but spare Aqht.

Texts 122, 121, 123, 124 deal with the deities who are called, among other designations, Rpum (= 'shades'). They ride by chariot to accept Daniel's invitation on the threshing floor. 'Anat bags meat for the festive board, which was also well equipped with wine so that the Rpum enjoy a week of banqueting, climaxed by Baal's appearance. Where these texts fit into the Legend of Aqht remains to be determined.

[ ]

2 Aqht The gods will eat the *offerings*
: I : 3 The deities [will drink the *offerings*].
: 5 He proceeds, [ascends *to his loft*]
And he lies down
He proceeds [ ] spends the night (2).
Lo a day [and a second]
[The *offerings*], the gods, Daniel!
[The gods] eat the [*offerings*]
The deities [drink the *offerings*].
A third, a fourth day
: 10 [The *offerings*, the g]ods, Daniel!
[The gods] eat the *offerings*
The de[ities] drink the *offerings*.

(1) Such passages as this show that *bšr t)* refers to news (bad as well as good); not necessarily 'glad tidings' as is the case with the Hebrew cognate.

(2) Emend *ynl* to *yln* in accordance with the parallel below.

A [f]ifth, a sixth day
The *offerings*, [the gods], Daniel!
The gods eat the *offerings*
2 Aqht : The deities drink the [*offerings*].
I : 15 [Dan]iel proceeds *to his loft*
He proceeds to his loft (and) ascends
And he lies down [*clad in*] a garb
And spends the night.
Behold on the seventh day
Baal drew near while he *supplicated.*
The *wretchedness* of [Da]niel, Man of Rp',
The sigh of the Hero, [Man] of Hrnmy,
: 20 Who has no son like his brothers
Nor a root like his kinsmen.
May he have a son like his brothers
Even a root like his kinsmen!
The gods eat the *offerings*
The deities drink the *offerings.*
May they bless him to Tôr-'Il, my father,
: 25 Defend him to the Creator of Creatures
So that a son of his may be in the house
A root in the midst of his palace.
One who sets up the stela of his *ancestral gods* in the shrine
Who lays his *people to rest* on the earth
Sends out his incense from the dust
The soldier of his post
: 30 Who heaps the tablets of his *office*
Expels him who eats the supper of his spending the night
Who [t]akes his hand in drunkenness
Who carries him [when] sated with wine
Who eats his *meal* in the house of Baal
His [*por*]*tion* in the house of 'Il
Who plasters his roof on the day of [rai]n
Who washes his clothes on the day of mud.
: 35 [ ] 'Il takes his servant.
He blesses [Danie]l, Man of Rp',
Protects the Hero, [Man of H]rnmy:
'By my soul, may Daniel, [Man of Rp]', live
By my spirit, the Hero, Man of Hrnmy!
[ ] *may* he *prosper*!
On his couch he ascends [ ]
: 40 [ ] in kissing his wife
[ ] in embracing her, childbirth
[ ] bearing, childbirth [ ]
And his son will be [in the house
A root] in the midst of his palace

I : 45 [One who sets up the stela of his *an*]*cestral gods* in the shrine
2 Aqht [*Who lays* his *people to rest* on the e]arth
Sends out [his incense from the dust
The s]oldier of his p[o]st
[Who heaps the tablets of his *office*
Expels] *him who eats the supper* [*of his spending the night*]

[(several lines missing)]

: II : 1 *Who la*[*ys to rest* thy *people* on the earth
Sends out thine incense] from the dust
The soldi[er of thy post
Who heaps] the tablets of thine *office*
Expels him who eats the supper of thy spending the night
Who eats thy *meal* in the house [of Baal
: 5 Thy *portion*] in the house of 'Il.
Who takes thy hand in [drunkenness]
Who carries thee when thou art sated with wine
Plas[ters] thy roof on the day of rain
Washes thy clothes on the day of mud.'
On Danie[*l*], the face rejoices
Yea above, the temp[le] *gleams*.
: 10 He breaks *formality*
And laughs.
Feet on the footstool he sets.
He lifts his voice
And shouts:
'I shall [s]it and rest
And my soul shall repose in my breast
: 15 For a son is born unto me like my brothers
Even a root like my kin:
One who sets up the stela of my *ancestral gods* in the shrine
Lays to rest my *people* on the dust
The soldier of [my] post
Who heaps the tablets of mine *office*
Expels him who eats the supper of my spending the night
: 20 Who takes my hand in drunkenness
Who carries me when I'm sated with wine
Who eats my *meal* in Baal's house
My [*portion*] in the house of 'Il
Plasters my roof on the day of rain
Washes my clothes on the day of mud.'
Daniel goes to his house
: 25 Daniel reaches his palace.
There enter his house the Ktrt
The daughters of *shouting*, the swallows.
Thereupon Daniel, Man of Rp',

2 Aqht Straightway the Hero, Man of Hrnmy,
II : 30 Slaughters an ox for the Ktrt.
He feeds the Ktrt
He gives the daughters of *sho[ut]ing*, the swallows, to drink.
Lo a day and a second
He feeds the Ktrt
And gives the daughters of *shouting*, the swallows, to dr[in]k.
A third, a fourth day
: 35 He feeds the Ktrt
And gives the daughters of *shouting*, the swallows, to drink.
A fifth, a sixth day
He feeds the Ktrt
And gives the daughters of shouting, the swallows, to [drink].
Lo on the seve[nth] day
: 40 There depart from his house the Ktrt
The daughters of *shouting*, the swallows.
[ ]the beauty of the couch
[ ]the loveliness of the couch [ ]
Daniel returns [ ]
[ ]
[ ]
: 45 A third, a four[th]
month, he reaches [ ]
[(2 lines broken)]

: V : 2 'I bring a bow [ ]
I fetch an arc
And behold on the *seve[nth]* day
: 5 Thereupon Daniel, Man of Rp',
Straightway the Hero, Man of Hrnmy,
Picks himself up
Yea he sits
In the opening of the door
Alongside the dignitaries who are in the threshing-floor (1)
He judges the case of the widow
Adjudicates the cause of the fatherless.
On lifting his eyes
He perceives
: 10 By the thousand acres
Myriad hectares

(1) I am unable to accept S. Smith s interpretation of this passage (*Palestine Quarterly* 1946 8). For *adrn* here, see UH § 18.70.

He spies the going of Ktr
He spies the course of Ḫss.
Lo he brings a bow
Behold he fetches an arc.
Thereupon Daniel, Man of Rp',
2 Aqht Straightway the Hero, Man of Hrnmy,
V : 15 Shouts aloud to his wife:
'Hear, Lady Dnty!
Prepare a lamb from the *flock*
For the soul of Ktr-and-Ḫss
For the appetite of Hyn of the Handicraft!
: 20 Feed, give drink to, the god(s)
Serve and honor them/him
Lord(s) of Ḫkpt
God(s) of all of it!'
Lady Dnty hearkens
She prepares a lamb from the *flock*
For the soul of Ktr-and-Ḫss
: 25 For the appetite of Hyn of the Handicraft.
After Ktr-and-Ḫss comes.
In the hands of Daniel he sets the bow
On his knees he places the arc.
Thereupon Lady Dnty
Feeds, gives drink to, the god(s)
: 30 She serves and honors them/him
Lord(s) of Ḫkpt
God(s) of all of it.
Ktr departs to his tent(s)
Hyn departs to his tabernacles.
Thereupon Daniel, Man of Rp'
: 35 Straightway the Hero, Man of Hrnmy.
The bow he [ ]
[ ]upon Aq[h]t [ ]
'*Bag* thy *quarry*, O my son [ ]
Bag thy *quarry*, lo [ ]
: VI *Quarry* into *his palace* [ ]

[(3 lines broken)

: 4 [With a] kee[n k]nife
[A slice of fatling]
: 5 [They drink] wine [from a goblet]
From a cup of gol⌈d, the blood of vines].
[ ]goblet on [ ] a day
And there goes up *must*
[ ]wine *of supper* from Ḫbš
: 10 [ ] - - - she answers - - - - ⌈]

On lifting her eyes
She sees
[ ]her back
[ ] - - - - - the deeps, lightning
[ ]the bow is set between [ ]
2 Aqht VI : 15 [ ] like a serpent he hisses
[ ] *on* the earth, garment - - - - [ ]
[She lifts her voice]
And shouts :
'Hear, [O Aqht the Hero !
Request silver and I'll give thee
[Gold, and I'll en]dow thee !
But give [me thy] bow
Let the Sister-in-Law of Nations [ta]ke thine [a]rc !'
: 20 And Aqht the Hero replies :
The mightiest of sinews of the Lebanons
The mightiest of tendons from buffaloes
The mightiest of horns from wildgoats
- - - - - *from the sinews* of a bull
The mightiest stems of reeds :
Give (such) to Ktr-and-Ḫss
So that he may fashion a bow for thee
: 25 An arc for the Sister-in-Law of Nations.'
And the Virgin 'Anat replies :
'Request life, O Aqht the Hero !
Request life and I'll give thee !
Immortality, and I'll endow thee !
I shall cause thee to count years with Baal
With the god shalt thou count months
: 30 Like Baal as he lives !'
He pours out drinks *mocking*
He pours out and gives her to drink.
The Good One chants
Yea sings about her.
[And she] declares :
'I would even immortalize Aqh[t the Her]o !'
But Aqht the Hero replies :
'Do not beguile me, O Virgin !
: 35 For to a Hero thy lies are loathesome !
As for man, what does he get as his destiny ?
What does man get as his fate ?
Hoariness is poured [on] the head
Whiteness on top of my pate.
[And] I'll die the death of everyone
Yea I shall surely die !
[Also anoth]er thing I shall tell :

VI:40 The bow [is a *weapon* of h]eroes
2 Aqht Could a female really hunt therewith?'
'Anat laughs [*alo*]*ud* [ ]
But in the heart she - - - - [:
'Recon]sider, O Hero Aqht,
Reconsider, for my sake and thine!
[*Otherwise*], shall I not meet thee on the path of sin
[ ] nor fell thee on the path of pride
:45 At [my feet], O Good One, strongest of men?'
[She *jumps* with the feet]
And *leaves* the earth.
[Then she sets fac]e toward 'Il
At the courses of the Two Rivers
[At the midst of the streams] of the Two Deeps.
She enters the *abode* of 'Il
[Comes into the *do*]*micile* of the King, Father of Šnm.
:50 [At the feet of 'Il she] bows and falls
Prostrat[es herself and honors him].
She slanders Aqht the Hero
[*Maligns* the child of Dan]iel, Man of Rp'.
And [the Virgin 'Anat] declares
[She lifts] her [voice]
And shouts:
'The word [ ]Aqht[ ]
:55 [ ]

3 Aqht: And [the Virgin 'Anat] answers:
'rev':1 '[ ] O gods [ ]
[ ] do not rej[oice]
[do not] be glad [ ]
:10 [in] the greatness of [my] *len*[*gth*]
I shall make [thy grey hair] flow [with blood]
[The grey of] thy [beard] with gore
And[ ]Aqht
And he will save thee, son [of Daniel]
Yea rescue thee from the hand of the Virgin ['Anat].'
:15 And Ltpn, God of *Me*[*rcy*], replies:
'I know thee, my daughter, that thou art *impetuous*
And there is n[o] *forbearance* [among goddesses].
So depart, *my daughter* - - -
[*Gratify thy*] heart
The joy that there is in thy liver
Thou shalt put in [the midst] of thy breast.
Let thy *heels* surely *thresh.*'
:20 The [Vir]gin 'Anat [laughs]

Then she sets [face toward] Aqht the Hero
By the thousand acr[es]
[Myriad] hectares.
And the Virgin [ʿAnat] laughs
[She lifts] her voice
And shouts:
'Hear, [O Aqht the Her]o!
3 Aqht: Thou art my brother
'rev' And I [am thy sister]!
:25 [ ]thy seven *relatives*
[ ]my father
I *have proceeded*[ ]the king
Thou shalt go on the hunt [ ]
[ ]man - - - - [ ]
[ ]I shall teach thee [ ]
:30 The City of Mourners, ʾA[bilûma,
The city of Prince M]oon.
For great [ ]
[ ] city [ ]
[ ]
[ ]fly[ ]
:35 [ ]

3 Aqht: 1 [ ]
:'obv.' [ ]he breaks [ ]
[ ] - - - - - [ ]
[The Virgi]n ʿAnat to all [ ]
:5 The Virgin ʾAnat[ ]to Yṭpn, Soldier of the L[ady]
She lifts her voice
And shouts:
'Let Yṭpn return [ ]
The City of Mourners, ʾAbilûna,
[The City of Prince Moon].
How will he not renew the moon
:10 [ ]with its right horn?
Savagely [*thou shalt strike*] his head.'
And Yṭpn, [Soldier of the Lady], replies:
'Hear, O Virgin ʿAnat!
Wilt thou on [account of his bow]
Smite him (for) his arc
(But) himself wilt thou not [let live]?
The Good One, the Hero, has set dinner and [ ]
:15 *I shall cast light* on the *area so that we may* - - [ ].'
And the Virgin ʿAnat declares:
'Return, Yṭp, and [ ]

Go, I make thee like an eagle with [my] shea[th]
Like a bird with my scabbard.
3 Aqht: Aqht, [as he will sit down] to eat
'obv.' Yea the son of Daniel to dine
:20 [Over him] eagles will soar
There will hover [a flight of b]irds
Among the eagles I shall be flying
[Ove]r Aqht I shall poise thee
Strike him twice on the head
Thrice on the ear!
Spill, like a *slayer*, blood
Like a slaughterer on his knees.
:25 Let his soul go out like wind
Like a *gust*, his spirit
Like smoke out of his nose!
Also his *aid* I shall not keep alive.'
She takes Yṭpn, Soldier of the Lady,
She makes him like an eagle with her sheath
Like a bird with her scabbard.
As Aqht is seated to ea[t]
:30 The son of Daniel to dine
Over him eagle[s] soar
There hovers a flight of bird[s.
Among] the eagles soars ʿAnat
Over [Aqht] she poises him
He strikes him twice [on the head]
Thrice on the ear.
:35 He sp[ills like] a *slayer* his blood
Like a slaughter[er on his knees].
[His] ṣoul goes out like wind
[Like a *gust*], his spirit
Like smoke, [out of his nose.]
ʿAnat, as her soldier strikes [ ] Aqht
Yea she weeps [ ]:
:40 '[Aqht] I shall repair
Yea for [the bow *was he smitten*
Only indeed for] the arc
But thou shalt surely *l*[*ive*]'
And perished, *flying* [ ]

1 Aqht Pertaining to Aqht (1).
:1 [ ]to the midst [ ]waters
she falls [ ]heart

(1) This line simply labels the tablet; cf. 'Pertaining to Krt'.

1 Aqht She br[ea]ks the bow [ ]
He breaks eight [ ]
The Virgin ʿAnat returns/brea[ks]
Lift *mounds* - - - [ ]*her hands*
Like the *so*[*ng*] of the *harp* of his fingers
Like the *whiteness* of the stones of his mouth
She takes his teeth and the food in - - -
She *puts whiteness* like the heart of the gods
And two - - - - - - - - - - - [ ]
Aqht, he answers/sees - - - - - - [ ]
for I *appear* god in the *fences* - - - *for* his staff
For I smote him - - on account of his bow
I smote him on account of his arc
Him would I *verily* have kept alive.
Also his bow was not given to me
and - - [ ] - - - - - [ ]
[ ]summer fruit - - - ear [in] its husk
Thereupon Daniel, [Ma]n of Rp',
Straig[ht]way the H[er]o, [Man of Hrn]my
Picks himself up
[Sits in the opening of the g]ate
[Al]ongside [the dignitaries who are on the threshing floor.
He] judges [the case of the widow]
Adjudicates [the cause of the fatherless]

[(2 ½ lines broken)]

[On lif]ting her eyes
She sees
[ ]in the threshing floor it dries (1) [ ]
He lowers, he - - - - - [ ]
Eagles so[ar] over the house of her father
There hovers a flight of birds.
Pġt weeps in her heart
She sheds tears in the liver
She tears the garment of Daniel, Man of Rp',
The garb of the Hero, Man of Hrnmy.
Thereupon Daniel, Man of Rp', imprecates:
'Clouds in the *heat* of *evil*
The early rains
Clouds that rain on the summer fruit
Dew that falls on the grapes!
Seven years may Baal fail

(1) Perhaps Pġt had used some material (like wool) for divination; its being dry meant that Aqht was dead. For the technique, see Judges 6:37-40.

Eight, the Rider of Clouds!
Without dew
1 Aqht Without rain
:45 Without *surging* of the Two Deeps
Without the goodness of Baal's voice!'
As she tears the garb of Daniel, Man of Rp',
The garment of the Hero, Ma[n] of Hr[nmy]
Aloud to his daughter [he shouts]:
:50 'Hear Pgt!
Who shoulders wat[er]
Sweeps the dew *from* the barley
Kno[ws] the course of the stars!
Saddle an ass
Hitch a donkey!
Place my trappings of silver
My saddlery of gold!'
:55 There hear[kens] Pgt
Who shoulders water
Sweeps the dew [*from* the barl]ey
Knows the course of the stars.
Weeping she saddles an ass
Weeping she hitches a donkey
Weeping she lifts her father
She sets him on the back of the ass
:60 On the beautiful back of the donkey.
- - - - turns his - - - -
He sees in - - - - - - -
He sees in - - - - - - - -
He [embrac]es and kisses the - - -
'*Would that* I were - - - -
:65 - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - -
May the hand of Aqht the Hero gather thee
May it set thee in the midst of the *granary.*'
- - - - turns his food
He sees the ear in the food
:70 The ear in the - - - - -
He embr[aces] and kisses the ear:
'Would that I were the e[ar]!
Let the ear - - - in the food
Let *light* - - [in]
May the hand of Aqht the Her[o] gather thee
Let it put thee in the midst of the *granary.*'
:75 The word had scarcely gone out of his mouth
From his lips, [his utterance]
When on lifting her eyes

She sees
There is no [ ]
[ ]going --[ ]in my pot go[es out]
[ ]goes out and does *not* go out
Strike(s) [twice on the h]ead
1 Aqht Thrice on the ea[r].
:80 [t]ies the locks of his head [ ]
On the locks of the prisoner
[ ]curls.
And [his] weep[ing] is poured out like quarter-shekels [ ]
Their face - - - - - - - [ ]
Their face [ ]
:85 my - - - - - - [ ]
I bring you news, *Dan[iel*]
head [ ]
[*Like a wind, my* [*soul*]
Like a gust, my spirit [ ]
arrive [ ]
They lift [their] voice
[And shout]:
:90 'Hear, O Daniel, Man [of Rp']!
Aqht the Hero is dead.
The Virgin 'Anat [has caused his soul to go out] like [wind]
Like a *gust*, his spirit.'
[On it the feet] *jump* [ ]
:95 He [breaks] the back [ ]
[His vertebrae] are *agitated.*
[He lifts his voice]
And shou[ts]:
[ ]smiter[ ]
[(6 lines broken)]
:105 On lifting [his eyes
Yea he sees[
[ ]*enter*[ ]
[He lifts his voice[
And shouts:
'May Baal break [the wings of the eagles]
May Baal bre[ak their pinions]
That they may fall at my feet!
:110 I'll spli[t their inwards and] look
If there is fat
If there is bone
I shall weep
And bury him
I'll put (him) in the *niche* of the ghosts of the earth.'

The word had scarcely gone from his mouth
From his lips, [his] utterance
1 Aqht When Baal broke the wings of the eagles
: 115 Baal broke their pinions
So that they fall at his feet.
He splits their inwards and [looks]
There is no fat
There is no bone.
He lifts his voice
And shouts:
'May ⟨Baal⟩ repair the wings of the eagles
May Baal repair their pinions!
Eagles!
: 120 Flee!
And fly!'
On lifting his eyes
Yea he sees
He spies Hrgb
Father of the eagles.
He lifts his voice
And shouts:
'May Baal break the wings of Hrgb
May Baal break [his] pinions
: 125 So that he may fall at my feet!
I'll split [his] inwar[ds] and look
If there is fat
If there is [bone]
I shall weep
And bury him
I'll put (him) in the *niche* of the gh[osts of the earth.'
The word had scarcely gone from his mouth
From] his [lip]s, his utterance
When Baal broke the wings of Hrgb
Baal broke his pinions
: 130 So that he falls at his feet.
He splits his inwards and looks
There is no fat
There is no bone.
He lifts [his] voice
And shouts:
'May Baal repair the wings of Hrgb
May Baal repair his pinions!
Hrgb!
Mayest thou flee
[And] fly!'
On lifting his eyes

: 135 Yea he sees
1 Aqht He spies Ṣml
Mother of the eagles.
He lifts his voice
And shouts:
'May Baal break the wings of Ṣml
May Baal break her pinions
That she may fall at my feet!
I'll split her inwards and look
If there is fat
: 140 If there is bone
I'll weep
And bury him
I'll put him in the *niche* of the ghosts of the earth.'
The word had scarcely gone from his mouth
From his lips, his utterance
When [Ba]a[l] broke] the wings of Ṣml
Baal broke her pinions
So that she fel[l at] his feet.
He splits her inwards and looks
: 145 There is fat
There is bone
And he takes Aqht *therefrom*
– – – – – –
He weeps and buries
He buries him in a *sepulchre*
In an *u*[*rn*]
And he lifts his voice
And shouts:
'May Baal break the wings of the eagles
: 150 May Baal break their pinions
If they fly over the grave of my son
To *disturb* him in his sleep!'
(At) the well of w[ater] the king *shouts*:
'Woe unto thee, O well of water
Along[side which] Aqht the Hero was smitten
Who abided longest in the house of 'Il.
Now he has fled for eternity
Now and forever more!'
: 155 He prepared Destiny (1)
The staff of his hand.
He went to the *arbor of date clusters* (2)

(1) For the naming of staffs, cf. text 68.

(2) My present interpretation of *mrrt ṯġll bnr* differs so much from that in UH that some explanation is necessary. *Mrr* is 'to protect, defend' and the noun

He lifts his voice
And shouts:
'Woe unto thee, *arbor of date clusters*!
1 Aqht Alongside which Aqht the Hero was smitten!
: 160 May thy roots not flourish in the earth
My head is lowered through thy *perfidy*.
Now he has fled for eternity
Now and for evermore!'
He prepared Destiny
The staff of his hand
He proceeds to the City of Mourners, 'Abilûma,
The City ot Prince Moon
He lifts his voice
And shouts:
: 165 'Woe unto thee, City of Mourners
Near which Aqht the Hero was smitten!
May Baal make thee one-eyed
From now and unto eternity
Now and for evermore!'
He prepared Destiny
The staff of his hand.
¡And behold the house: one returns to the story! (1)
: 170 Daniel proceeds to his house
Daniel reaches his palace
The weeping women enter his palace
The mourning women, his court *Pẓġm Ġr* (2)
He weeps for Aqht the Hero
: 175 Sheds tears for the child of Daniel, Man of 'Rp.
From days to months
From months to years
Until the seventh year
He weeps for Aqht the Hero
: 180 Sheds tears for the child of Daniel, Man of Rp'.
In the seventh year
[Daniel, Man] of Rp', declares:
The Hero, M[an of Hrnmy], proclaims:
[He] lifts his voice

---

mrrt is here taken to mean 'an arbor' (that protects one from the sun: cf. *mẓll* 'house' whose literal meaning is 'shade-giver'). *Ġll* (UH § 18.1569) can mean 'grapes' and the derivative *tġll* might mean 'fruit clusters'. *Bnr* in Egyptian means 'date tree', although conceivably in Ugarit it could refer to another fruit tree or even the grape vine. An arbor of fruit clusters near a spring would be a likely spot for Aqht to have selected for lunching.

(1) This is a scribal notation; not part of the story.

(2) Professor J. A. Montgomery plausibly takes this to be the name of the palace.

And shouts:
'De[part], weeping women, from my palace
Wailing women, from my court *Pẓġm Ġr*!'
1 Aqht And he *ma[kes]* a sacrifice of the gods
:185 Offers up an offering into heaven
The *offering* of Hrnmy, [that of the s]tars
[(3 lines broken)]
:190 Then declared Pġt
Who shoulders water:
'*Make*, O father, a sacrifice to the gods
Offer up an offering into heaven
The offering of Hrnmy, that of the stars!
Thou shalt bless me that I may go blessed
:195 Protect me that I may go protected!
I'll smite the smiter of my brother
Yea destroy the destroyer of my [s]ibling!'
And Daniel, Man of Rp', replies:
'By my soul let live [Pġt]
Who shoulders water
:200 *Sweeps* dew *from* the barley
Knows the course of the stars
[ ] may she *prosper*!
Mayest thou smite the smiter [of thy brother]
Destroy the destroyer of [thy] sibling!'
[ ] *heart of the sea.*
She wash[es]
And rouges herself
With a rouging from the husk of [ ]
:205 Of a thousand acres, the *ẓuh-fish in the sea* [ ]
She dons a hero's garb
She puts [(some weapon)] (in) *its holder*
A sword she puts in [its] scabbard
And over (it) she wears a woman's garb.
:210 [From] the rising of the Luminary of the Gods, Sun [ ]
- - fields
To the setti[ng] of the Luminary of the Gods, Sun.
Pġt reach[es] the tents.
Word *is brought to Yṭpn*:
'Our mistress has come into thine *abode*
[*Pġt*] has come hither.'
:215 And Yṭpn, [Soldier] of the Lady, answers:
'Receive her and give her to drink
The wine of the cup in my hand
The chalice in my right hand
Receive Pġt and give her to drink!'

She se[es the cup] in his hand
The chalice in his right hand
And Yṭpn, [Soldi]er of the Lady, declares:
1 Aqht 'By the wine our god Ilš – [*Ilš*] drinks
:220 Who *created* the *abode*,
The hand that smote the Hero A[qh]t
Will smite thousands of my lady's foes! [ ]
The *lady of sorcery* to the tents.'
P[ǵt] like – – – – her heart
Like a serpent, h[issing]
Twice she drinks that mixture
Drinks [that mi]xtu[re].

122:1 [ ] my – – – –
'Go to my house, [shades
To] my [palaces] I invite you, I call [you].'
[those who des]troy his place.
The shades [his place]
There go verily/not the deities.
:5 [ ] my – – – –
Thereupon – – – [ ]
you, my shepherds; now/lo I go [ ]
thirty, I proceed to the house
[ ] my palace.
And 'Il replies:
'Go to my house, shades
:10 [To my palace I invi]te, I call you.'
[those who destr]oy his place
The shades [ ] his [place]
The de[ities] (do not)/(verily) go.
[ ]
[ ] on/to earth [ ]

[ ]
:II:1 eight in the midst of my palace [ ]
they go to his place, the de[ities] go [ ]

the grooms of horses (1) harness [ ]
They mount on their chariots
They co[me]
They go a day and a second
After su[nrise on the third day]
The shades come to the threshing floors [ ] plantings.
And Daniel, [Man of Rp'], replies:
The Hero, Man of Hrnmy, retorts [ ]:
121:II 'On the threshing floors, O gods, in the midst of [ ]
:10 wherein they come, they will surely eat [ ]
apple(s), - - - - - - [ ]'

123:1 and [ ]
in my palace [ ]
'Go to my house, O sh[ades
:5 To my palace I] call, I invite you.'
[ ] his place
The s[hades]
The de[ities] do not/verily go
The soldiers of Baal
And the soldiers of 'Anat.
'Go to [my] ho[use, O shades
To my palace] I call, [I invite] you.' [ ]
:10 to my palace, [his] place, [shades]
his place, [the deities] do not/verily [go]
bare-foot - - [
Hear ye [ ]
:15 day/sea (where) for - - [ ]
oil - - - [ ]
he vows them, a day [ ]
- - - - - - - [ ]
the dais, the throne of [sovereignty]
I call the shades [ ]
:20 in the midst of [my] pa[lace]
they go to his place [ ]
the chariot[eers]
they mount on their cha[riots]
their cities/asses [ ]
:25 in [ ]

[ ]
124:2 him, behold thy son, behold [ ]
sons of the sons of thy place, behold [ ]

(1) In Ugaritic literature, riders mount asses but not horses; the latter are only used for drawing chariots.

thy hand(s) - - - kiss thy lips, there
124 : 5 shoulder to shoulder, brothers *resurrected of* 'Il
in running there - - - - the name of 'Il, men
- - - - blessing the name of 'Il, heroes there
[ ] There are the shades of Baal
Soldiers of Baal
And soldiers of 'Anat.
: 10 There, go *bare-foot the forces* of the Prince
Of King 'Ilmy.
As 'Anat goes to hunt
She *takes off* in flight heavenward.
Slaughtered are great and small cattle
Felled are oxen and fatling rams
Year-old bullocks
Tiny lambs, kids.
: 15 Like silver for merchants
Olive-oil of gold for merchants
Like *fields of fruit* of the table
The daintiest of dainties of kings.
Behold a day he pours wine of *tmk*
Must, the wine of *srnm*
Wine, not of gleanings
Wine, *first-class*
: 20 Of *giants of the range* of the Lebanons
Wine-dew 'Il has plowed,
Lo a day and second
The shades eat
They drink
A third, a fourth day
< The shades eat
They drink >
A fifth, a sixth day
The shades eat
They drink
In the dining hall
In - - - [ ]
: 25 In the heart of Lebanon
Lo on the seventh day
[ ] Aliyn Baal
[

PART II

SEMIPOETIC AND PROSE TEXTS

CHAPTER VII

RELIGIOUS TEXTS

Aside from the mythological texts, there is a number of tablets of a religious character such as lists of gods, sacrifices and rituals.

Text 17 is a list of deities, including the Assembly of the Gods, which is treated as a unit.

No. 107 contains (1) a list of divine names made of groups (notably pairs) of deities, or made of 'Il preceded or followed by another name or word, or made of Baal plus a place name; and (2) a list of oaths each invoking a different instrument of destruction belonging to 'Il. Apropos of the pairs of deities, we may note that in Ugarit such are frequently combined so that they may be treated as a single entity. 'Il-and-Asherah is handled as a unit in 107 : 5, for 'Il and Asherah are the most important married couple in the pantheon; that each is a distinct personality is of course obvious from the myths. Similarly Tkmn-and-Šnm is treated as a unit in 107 : 4 as also in a number of other passages, but again each of the elements can occur separately as a name (see the Glossary in UH). Asherah's messengers, Qdš and Amrr, are often fused into a single entity called Qdš(-and-)Amrr [1]. Baal's pair of messengers, Gupan-and-Ugar, are usually treated as two distinct gods. Asherah is ordinarily kept quite distinct from 'Anat Raḥmaya. However, since both of them function as divine wetnurses (128 : II : 26-27), they are fused into the wetnurse Asherah-and-Raḥmaya in text 52. It is in general a mistake to insist that a divine name of the A-and-B type must always be a single personality or must always be two distinct personalities. Thus Ktr-and-Ḫss is usually treated as a single god; however, in 51 : V : 104-5 he is clearly called 'the lads' (dual) || Ktr-and-Ḫss in line 103; and is called 'the gods' (du.) and is referred to as 'them' (du.) in 2 Aqht : V : 20, 29, 30. While the Aqht context might be considered plural of majesty (like Hebrew *'lôhîm*, lit. 'gods' = 'God'), it is most unlikely that 'lads' can be explained that way.

No. 14 is headed by the mention of 'House of 'Il' (= same wording as, and with the lit. meaning of, Hebrew 'Bethel') followed by a list of Lords (or Baals) of various houses (= shrines). One of the houses is that of Pdy, which may be the name that later turns up as the m. pers. name Padî borne by a Philistine ruler around 700 B. C. [2].

[1] The Old Testament names for God, of the A-B type like Qdš-Amrr ('nt : VI : 11) and 'Anat-Leviathan (9:17), are common; e. g., Elohim-Ṣᵉbā'ôt (not 'God of Hosts' since Elohim is grammatically in the absolute state), Yahwe-Elohim, Adonay-Elohim and Adonay-Yahwe.

[2] Mentioned by Sennacherib in the Taylor Prism II : 70 (Friedrich Delitzsch, *Assyrische Lesestücke* 5th ed., Leipzig 1912 66).

Text 2 is a ritual whereby the women (:10-17 and :27-35) and men (:18-26) of Ugarit atone for their sins by offering sacrifices and libations to the father of the gods (= 'Il) and the assembly of the gods via their official attendant(s) Tukamuna-and-Šnm. The object of the atonement is securing the salvation of Ugarit's people from its foes. The pattern is ABA (A = the women's rituals, B = the men's ritual). The last word in each of the last two sections is *'r*, which can stand for *'êr* 'an ass' or *'îr* 'city'. If 'ass' is right, it would refer to the beast to be laden with the offerings; if 'city' is right, it would refer to the community of the recipient gods. I prefer the first, because it can be tangibly accounted for; i. e., an 'ass' could carry off the gifts from the public scene to the temple, where the priests would accept the gifts for the gods whom they represent.

No. 1 is a list of sacrifices for various gods. No. 3 is another such list with indications of the day of the month for various groups of sacrifices. Lines 48 and 50 show that the king figures in the ritual. In the ancient East, kings often took part in rituals; e. g., the New Year or Akîtu ritual in Babylon (1). However, nowhere did the king participate in rituals more than perhaps among the Hittites(2), who may possibly have exerted some influence on their southerly neighbors in Ugarit.

Text 9 is a ritual for forgiveness of the soul by sacrifices to the gods. Again the king takes part. Since the ritual is dated in Tishri (which is still the month of the autumnal or religious New Year among the Jews), this may be a New Year ritual.

Text 5 is another ritual in which the king takes part, going by foot to the place of the gods. Animals, gold and silver are offered. Ritual costume is worn (3).

Nos. 19, 22, 23, 41, 44, 47 and 134 are small, fragmentary lists of sacrifices.

There are two stone stelae commemorating sacrifices to Dagân. Text 69 reads: 'The stela that Tryl erected to Dagân. A monument (commemorating) [a head of small] and a head of large cattle as food'. Text 70 reads: 'The monument that 'zn erected to Dagân, his master, (commemorating) [a head of small and a head of large] cattle in the *mḫrt* (= temple refectory?)'.

We should also mention two stone adzes that may well have been used cultically; one (text a) is inscribed 'Adze of the Highpriest', the other (text b) '(Belonging to) the Highpriest' (The word for 'adze' is *ḫrṣn*, which has been mistaken by some authorities for the personal name Ḥrẓn because of a syllabic writing of the latter that could ambiguously represent either combination of Ugaritic letters).

17:1 [A]rṣ[y ; U]šḫar[; A]starte;
'*l*[*l*]-Baal; Reshef; Ddmš; Assembly of the
:10 Gods; Sea; Utḫt; Wnr; Milkom; Dusk; 'Il-Ṣapân;
'Il-[i]b; 'Il; Dagân;
(rest broken).

(1) Cf. H. Frankfort, *Kingship and the Gods,* Chicago 1948 313, 320, 324, 325, 327-328.

(2) GdA II, 1 513.

(3) For the king donning a ritual garment, cf. 2:8 of the Mari ritual edited by G. Dossin RA 35 1938 1-13.

107 : God of '*Bethel*'; Congregation of the Gods; Assembly of the Gods; Tukamuna-and-Šnm; 'Il-and-Asherah; Ḥanan-'Il; Nṣbt-'Il; Šlm-'Il; 'Il-Ḥš, 'Il-Add;
: 10 *Baal*-Ṣapân, *Baal*-Ugarit; by the spear of 'Il; by the *nit* of 'Il; by the club of 'Il; by the *sledge* of 'Il; by the burning of 'Il; by the *knt* of 'Il; by the *ġdyn* of 'Il; [.

---

14 : House of 'Il; Lord of the House of Ažmny [ ]; Lord of the House of Pdy; Lord of the House of Nqly; Lord of the House of 'lr; Lord of the House of Ssl; Lord of the House of Trn; Lord of the House of Ktmn; [Lor]d of the House of Ndbd; [Lord of the House] of Ṣnr; [Lord] of the House of Bs - - [ ]

[(beginning broken)]

---

2 : 4 [ ] and *favor*
: 5 [ ] Ugarit
[(four lines broken)]

: 10 [and *fa]vor* [and *favor* T]mhnš
[ ] and *fa[vor*] or ye si[n]
O Ddm-ite chief
[Hurrian] chief
Hittite [ch]ief
[Alaṭite] chief
[Chief] of Tbr
Chief of your spoilers
Chief of [yo]ur (fem.) [*oppr]essors*
Chief of [ ]
or ye sin in your (fem.) bodies [ ]
: 15 ye transgress or ye sin
for *sacrifice* or for offering
[Our] sac[rifice] is sacrificed.
It is the offering offered
It is the libation poured
It is carried [to the father of the gods]
It is carried to the assembly of the gods
To the totality of the go[ds].

And offer a bull *mšr-mšr*, O son of Ugarit! (1)
And *favor* Tmhnš
And *favor* Yman
And *favor* Trmn
And *favor* [ ]Ugar
2:20 And *favor* Nqmd with your - - - - .
O chief of Q[ṭš
Ddm]-ite [chief]
Hurrian chief
Hittite chief
Alaṭite chief
Chie[f of Tbr
Ch]ief of your (m. pl.) spoilers
Chief of your *opp[res]sors*
Chief - - - - - - - with your - - - - .
Whether in your body
Or in a transgression of your soul
Or in (any) transgression wherein ye transgress
Your - - - - - for the sa[cr]ifices
And for the offering
Our sacrifice is sacrificed.
It is the offering offered
:25 It is the libation poured.
[It is] carried to the father of the gods
It is carried to the assembly of the gods
To Tukamuna-[and]-Šnm
Lo the *ass*!

And to return to the narration: *mšr-mšr*
O daughter of Ugarit!
So *favor* the sojourners of the walls of Ugarit
And [*favo*]*r* - - - with your (f. pl.) - - - - -
Chief of Qṭš
Ddm-ite chief
[Hur]rian chi[ef]
Hittite chief
Alaṭite chief
:30 Chief of Tbr
Chief [of your spoilers]
Chief of your *oppressors*
Chief of Qr with your - - - - - -

(1) *Bn ugrt* 'son of Ugarit' must be grammatically singular because of the parallel *bt ugrt* 'daughter of Ugarit' below. That, however, the entire male and female populations were meant is clear from the plural verbs ('ye - - -') and pronouns ('your - - -' instead of 'thy - - -') that follow.

(Whether) in [your] body
[Or in the transgres]sion of your soul
Or in any transgression wherein ye transgress
With your - - - - - - for the sacrifices
And for the offering.
Our sacrifice is sacrificed
It is the offering of[fered
It is the libation poured]
It is carried to the father of the gods
It is carried to the ass[embly of the gods
To] the totality of the gods
2:35 To Tukamuna-[and-Šnm].
Lo the *ass*!

1:1 A small beast is offered
Wines are offered
Small beast(*s are*) offered.
A perfect, honored gift.
A head of large (and) small cattle for 'Il.
A large beast of the gods Ṭukamuna and Šnm
A small beast of Reshef
A small beast as a burnt offering and a peace offering
:5 Two small beasts *for him.*
A head of large (and) small cattle of the gods.
Two large beasts of the gods.
['I]l: a head of small cattle
Asherah: a head of small cattle
Tukamuna-and-Šn[m]: a head of small cattle
['A]nat: a head of small cattle
Reshef: a head of small cattle
The assemblage of 'Il and congr[eg]ation of Baal: a head of [large] cattle
(as a) peace offering, a head of large cattle and - - - - in - - - -
:10 gods, Baals - - - and *two* cups, fifteen units - - - - *two-thirds of its half*(1).
Baal-Ṣapân: a head of small cattle
[ ]': a head of small cattle
'Ilat of Magdal: a head of small cattle
'Ilat of Asrm: a head of small cattle - - - -
Daybreak-Sun and Trmnm, house of the king
- - -: a large beast

(1) The awkwardness of this fractional expression makes me doubt that it is correct; for a circumlocution like '$\frac{2}{3}$ of $\frac{1}{2}$' to express '$\frac{1}{3}$' is without precedent as far as I know.

Ušḫaraya: a large beast
Sea: a large beast
Ṣml: a large beast
Moon: a large beast, a large beast
1:15 Trmn: a large beast
Pdry: a large beast
A small beast, a small beast
ʿrṯ: a small beast
[ ]ʿAnat: - - - [ ] sacrifices
Daybreak-S[u]n [ ] goddesses - - - - -
Two small b[ea]sts
[ ]: a large beast
And to Ġalmat (1): a head of small cattle
:20 [ ] thirty, and going down, [al]tars
A large beast for the Lady of the House(s)
Two birds for the servitors of the gods.

3:1 In the month of [ ]
- - - - ⌊]

On the third [ ]
on the fourth [ ]
:5 And two head of small cattle [ ]
gods, and a head of small cattle[ ]
[(5 lines broken)]
:12 a large beast of the gods [ ]
a small beast
Reshef: a head of small cattle
Np-and-Š [ ]
ʾIl [a head] of large and small cattle [ ]
:15 in [ ] Asherah
ʿAnat: a head of small cattle
Reshef: a head of small cattle [ ]
great beasts, peace offering[s]
- - - - of the god[s]
:20 cups, thirty [ ]
which he takes *into the house* [ ]
oil of *rqm* [ ]
and two - - - [ ]
two pitchers of wine of the fruit [ ]
altars of the house of ʾI[l]

(1) Professor A. Jirku has written and circulated privately a note on the goddess Ġalmat.

to [ ] a head of small cattle
and to [ ]
a large bea[st] for Nikkal [ ]
wood [ ] for the servitors
'Il [ ] a small beast, a head of small cattle [ ]
[ ] and a head of small cattle [ ]

[ ] males

:20 [ ] for ʿAnatûma

[ ] for the ladder

[ ] he will wear.

The king goes to [ ] of the gods.

The feet go to the place of the gods
:25 The king go[es] by foot
Seven times for all of them.

CHAPTER VIII

EPISTLES

Ugaritic letters contain, in varying degree, the following elements:
1. Addressee: 'To N, [socially appropriate title], speak!'
2. Sender: 'The message of N', [socially appropriate title].'
3. (a) Salutation(s) and/or (b) divine blessing:
a: 'At the feet of [N's title] (seven times this way and seven times that way) I/we bow down'.
'To N let there be peace!'
b: 'May the gods guard and preserve thee!'
4. Report on senders' welfare: 'With us all is well'.
5. Special message and/or request.
6. Request for report on addressee's welfare: 'Whatever the welfare of [addressee's title] be, may (s)he send back word to [sender's title]'.

The epistolary style of Ugarit is not *sui generis* but is in keeping with traditions reflected in Accadian correspondence, notably the Amarna tablets. Text 54 is a report to headquarters requesting aid for a hard-pressed unit in the field. Text 138 is another letter to headquarters written to straighten out a misunderstanding regarding former correspondence, and thereby extricate the sender from disfavor; cf. Lachish no. 2 : 6; 3 : 9–13; cf. 4 : 12–14. The expression '[let] him perceive the matter that he may know' (32 : 6) (i. e., let the addressee look into the situation so that he may see the correctness of the sender) is much like Lachish *baqqēr ʿwyēdaʿ* in ostracon 4 : 9–10. Furthermore, quotations from the addressee's letters are introduced by 'and when thou sayest' (13 : 5, rev. 3) much as in Lachish no. 3 : 8 (with 3rd person for politeness).

89 : 1 To the Queen, my lady, speak!
: 5 'The message of Tlmyn, thy slave:

"At the feet of my lady, seven times this way and
: 10 seven times that way, from afar I bow down.
(As to) whatever the welfare with my lady, may
: 15 she send back word to her slave."' (1)

95 : 1 To my mother, our lady, speak!
'The message of Tlmyn and ʾAḥâtmalk, thy slaves:
: 5 "At the feet of our lady, from afar, we bow down.

(1) Cf. Ginsberg, BASOR 72 1938 19.

May the gods guard (and) preserve thee!
95:10 Lo with us all is very well; and even I am at ease.
:15 (As to) whatever the welfare there with our Lady,
mayest thou send back word to thy slaves."'(1)

117:1 To the Queen, my mother, speak!
'The message of the King, thy son:

:5 "At the feet of my mother I bow down.
Unto my mother let there be peace!
May the gods guard (and) preserve thee.

:10 Lo with us all is well.
(As to) whatever the welfare there with my mo[ther],
may she send back word to [me].

:15 By Ty(2) it has been vowed 'Life to the Queen!'
And my words, the tablet - - - and the face of
the King we would - - - - -."'(3)

54:1 The message of Iwirižarri to Plsy: 'Say!

"Let there be peace unto thee!

:5 From Trǵds and from Klby I have heard (of) the
defeats wherewith they have been crushed.
Now, if there is nothing (= no assistance?), they
:10 will have been crushed, so send (troops?) to me.
And the love of the gods is here very strong,
like death.
There is no relief.
:15 Thy reply and any word that thou hearest there,
put in a letter to me!"'(4)

138:1 The message of Iwirižarri to Iwiripuḫenni, my son,
my brother, speak!
:5 'May the gods guard (and) preserve thee!

---

(1) Cf. Ginsberg, BASOR 72 1938 19.
(2) The god Ty occurs in text 7:8.
(3) Cf. H. N. Richardson, JBL 66 1947 321-324.
(4) Cf. Ginsberg & Maisler, *Journal of the Palestine Oriental Society* 14 1934 243-297 (cf. 15 1935 181-181).

How are the tablets of the letter that I sent to Tryl?
What is it I said?

138:10 And now let my brother, my son, ask Tryl and mention
my name to the King, and unto him let (my brother)
give the information.

:15 And n[ow] let my brother, my son, ask Tryl and send
back word to thy brother, thy sire.'

32: [(opening lines fragmentary)]
:3 for I have been humbled [ ]
that thou shouldst give to me - -[ ]
[Let him] perceive the matter that he may know [ ]

18:1 To the Highpriest, speak! [ ]

'The message [of]:
:5 "Let there be peace [unto thee. May the gods]
preserve [(and) guard] thee.
[ ]
:10 he asked [ ] I/thou asked
[ ]
I/thou [as]ked [ ] Why
:15 [ ]*gtr* [ ]*him*
[o]ne head of small cattle of *gtr*.

And now let my brother(1) hearken unto my voice,
and let him - - - - - - [ ]
And may the gods give into his hands [ ];
:20 in the hands of Iḫqm *gtr*, and in the hands of
Ytrhd Baal."'

[(opening broken)]
26:4 and [ ]rider
[(3 lines broken)]

---

(1) In addition to the explanations of the *u*-vowel in *uḫy* 'my brother' in UH 47 n. 1; we might also note that Arabic has that vowel in the f. *'uḫt-* 'sister'.

if/them

And long live the King [ ]
26:10 And how is it so? And [ ]
Thou/ye will establish it [ ]

101:1 [ ]let there be peace.
May the gods guard [(and) preserve thee].

Lo [ ]and Pdr [ ]
:5 [ ] They arrive [ ] and full
[ ] and [ ] until *we* arrive [ ]

CHAPTER IX

DIPLOMATIC TEXT

Text 118 is a diplomatically worded enumeration of tribute sent by Nqmd to the court of his master, the Great King, Shuppiluliuma. The latter is also referred to honorifically as the Sun (god), or specifically as the Sun of Arinna, the chief god of the Hittite Empire. The gifts are destined, in descending order, for the King, Queen, Crown Prince (?), and court dignitaries.

118:1 [ ]
:2 to [ ] arrive
] Su[n]
:5 [ ] bow [ ]

Whether the king [ ] to [ ]
[ ] - - - - [ ]
and to [ ]

:10 [ ] Nqmd [ ] to the
Su[n, the Great King], his master, peace [ ]
[ ] the Great King, his master, [ ] Nqmd,
:15 King of Ugari[t]

And Shuppiluliuma, King [ ] - - - - to Nqmd
[ ]. Here is the tribute that [N]qmd
:20 [brings] to the Sun of Arinna: two [ ] minas, twenty heavy shekels [ ] minas of gold and [ ] a robe and [fiv]e [hun]dred carbuncles, [five hun]dred (stones) of lapis-lazuli: the tribute of Nqmd, King
:25 of Ugarit, which he brings to the Sun, the Great King, his master.

A cup of gold *studded with* a hundred carbuncles (and) a hundred (stones) of lapis-lazuli for the Queen.

A cup of gold *studded with* a hundred carbuncles (and)
118 : 30 a hundred (stones) of lapis-lazuli for the *Prince* (1).

A cup of silver *studded with* a hundred carbuncles (and)
a hundred (stones) of lapis-lazuli for the Tuppanur.

[A cup of silver *stud*]*ded with* a hundred carbun[cles (and)
: 35 a hundred (stones) of lapis-lazuli] for the Ḫuburtanu[r].

[(4 lines broken)]

[A hundred (stones) of lapis]-lazuli (and) carbuncles for [ ]

: 40 [ ] lo [ ]

(1) This is the plausible interpretation of Professor Ch. Virolleaud on the basis of a syllabic parallel. The court dignitaries that follow (Tuppanur and Ḫuburtanur) have not yet been identified.

CHAPTER X

THE ADMINISTRATIVE TEXTS

Many of the tablets are administrative in character, and, since they consist of little other than names and numbers, there is no point in translating them. Their value, however, in providing a key to the governmental, economic and social structure of the kingdom, is considerable. The following sketch is based primarily on the administrative tablets, with supplementary items gleaned from the poems and from a few tablets in Babylonian.

At the head of the state was the king, whose line had divine sanction, and whose authority was therefore honored with religious devotion. Members of the king's clan and of other important clans were strategically placed in office, particularly in the priesthood where they could exercize control, to the advantage of the established regime, in a society that cherished religion and accepted theocratic principles. The Krt legend associates the king with the tribe of Tʿ and also glorifies the tribe of Dtn. Nqmd is called a Tʿy 'Tʿ-ite'. It may therefore be significant that in tablet 400, dealing with *maryanûma* (high-class warriors connected with horse-drawn chariots), there is a group of priests including Bn Tʿy (: VI : 22) and Bn Dtn (: 28), whose pay of ten shekels of silver puts them among the better-paid men in the long list of personnel in text 400. Bn Tʿy's status is further strengthened by the presence of his heir and the latter's heir on the pay-roll at four shekels each (: VI : 23. 24). The consecration of men from politically important families to the priesthood is well known from Hebrew, Egyptian and other ancient oriental records. The connection of the priests with the military in text 400 is a topic to be discussed presently.

The attribution of divinity to the king is found at Ugarit (as it is regularly in Egypt, sometimes in Mesopotamia, but never among the Hebrews of the Old Testament). The prince destined for the throne thus had to be nursed at the breasts of goddesses. If the deified king becomes ill, the country languishes sympathetically (126: III : 1 ff.) much as the earth did when Baal died.

Kingly virtues are clearly defined in the Aqht and Krt legends. The good king should defend and support the widow, the fatherless, the poor and the broken-in-spirit (1).

Ugarit was a particularly cosmopolitan city in that generally cosmopolitan Amarna Age. Culturally, the civilized world was united. The Pharaohs of Egypt were in communication with the rulers of Mesopotamia, Asia Minor, Syria and Palestine. There was an international language for diplomatic mail: Babylonian inscribed on clay. Even islands of the Mediterranean, notably Crete and Cyprus, were integrated into the 'One World' of the Amarna Age.

(1) 1 Aqht : 21–25 ; 2 Aqht : V : 6–8 ; 127 : 33–34, 45–48.

Situated on the coastal route that united Asia Minor with Syria and Palestine and boasting of the mainland harbor nearest to Cyprus, it was natural that Ugarit should be a polyglot community. The native Ugaritic language was far from the only one used there. Babylonian was used not only by itself but also in combination with Ugaritic by the same scribe on a single tablet. On administrative tabulations the scribe may make all the entries in Ugaritic but the totals in Babylonian (1). Proficiency in Babylonian necessitated some knowledge of Sumerian (the already dead classical tongue of Babylonia) at least to the extent of mastering Sumerian ideograms commonly employed in the Babylonian texts. Sumerian-Accadian vocabularies have been found at Ugarit (2). Hurrian tablets were also discovered at Ugarit, virtually all of a religious character, reflecting the primarily religious influence of the Hurrians there as in Asia Minor. The use of the original Hurrian instead of Ugaritic translations is in keeping with the conservatism of religion. Four alphabetic texts are strange; Professor E. Dhorme has proposed a decipherment whereby they are Babylonian incantations in the native Ugaritic script (3). If this is correct, the implications are revolutionary for Babylonian phonetics which would then include three sounds (*t*, *ẓ*, *š*) hitherto concealed by the Sumerian writing regularly used for Babylonian.

In the light of the preceding paragraph it is no surprise that trilingual vocabularies in Sumerian, Hurrian and Babylonian have come to light in Ugarit (4).

Other languages were used at Ugarit; Egyptian, Hittite and Cypriote inscriptions have been found there (5). Hittite must have been of some diplomatic importance because Ugarit was in the Hittite sphere of influence, at least when Nqmd paid tribute to Shuppiluliuma (6).

That the culture of the realm had to be highly composite is a foregone conclusion of Ugarit's location: a Syrian port with Mediterranean trade, a Semitic area under Hittite overlordship, a Canaanite population within the cuneiform world. Whether we take as the point of departure the languages used at Ugarit, or the derivations of the personal names (7), or the elements of the religion or of the literature, or any of many available criteria, we are led to the same conclusion: Ugarit's culture was quite composite and this fact must always be kept in mind. Thus, although the only evidence of the calendar used at Ugarit is text 9:11, where the Babylonian month of Tishri (= Sept.-Oct.) (8) is mentioned, it would be rash to conclude that a pure

(1) Thus texts 108, 110, 301, 307, 321, 324 and 400. Also the colophon categorizing the tablet may be in Babylonian (so text 113). Text 81 also is partly alphabetic and partly syllabic.

(2) F. Thureau-Dangin, *Syria* 12 1931 225-266, 13 1932 233-241.

(3) E. Dhorme, RA 37 1940-1 83-96.

(4) F. Thureau-Dangin, *Syria* 12 1931 236-243.

(5) See De Langhe I 88-95.

(6) In UH § 18.2203, the name of King Tpllm has been misspelled (with two p's instead of two l's).

(7) It is interesting to note that the name Arsw (UH § 18.297; the var. Arŝw indicates non-Semitic origin) is later borne by the 'Hurrian' (i. e., Syro-Palestinian) usurper of the throne of Egypt, who is generally called Arsu (GdA II, 1 583-584).

(8) If the text should prove to imply two Tishris, it would anticipate the two months of Tišrin (First T. and Second T.) in the calendar still used by Arab Christians.

Babylonian calendar was used at Ugarit. In communities with so mixed a culture as Ugarit, calendars may be composite as is known to be the case in Nuzu (1).

The population preserved tribal traditions, but the already well-developed trend to settling down had strengthened local organization at the expense of the tribal system (2). Thus, while the older designations such as T'y 'of the tribe of T'' occur, it is, however, more common to find names qualified by local designation such as Ary 'of the town of Ar'. Another factor that cut across society was the class-system according to occupation. Men are often grouped in the administrative documents according to occupations or guilds, which tended to be hereditary. The guilds included classes of warriors (*mrynm*, *n'rm*, *mrum*, *mru skn*, *mru ibrn*, *mžrġlm*) and priests (*khnm*, *qdšm*) as well as craftsmen (smiths, builders, wainrights, potters, launderers, sculptors, fowlers, shepherds, grooms, gatekeepers). Members of still other professions, such as scribes, are mentioned individually without any evidence so far of their guild (3). Obligations to the state, and benefits from the state, were handled administratively not only through town-districts but also through the guilds (e. g., text 113, where troops are supplied by 59 towns and by 16 guilds).

The realm was divided administratively into districts, each consisting of a focal town with its dependent suburbs called *ġmrm*. Text 321 is an administrative tablet dealing with bows and slings to be supplied by the people of various towns. The contributions by the people are listed for each town, and then after a scribal line the contributions from the *ġmrm* are listed; the totals are inclusive of the town itself plus its *ġmrm*, showing that administratively they form a unit. The literal meaning of *ġmrm* is 'habitations' if it is cognate with Aramaic *'mr* 'to inhabit'.

Taxes, or obligations to the state, were exacted in silver, labor (108, 109) or in kind (e g., wine in 110). Benefits from the state, as payment for public service, were in silver or in kind (e. g., clothing) (4).

Military manpower was supplied by draft quotas imposed on communities and guilds. It is also possible that military equipment was exacted on a quota system from the same sources, if text 321 is to be taken literally (i. e., that the 'slings' and 'bows' mean just that and not 'slingers' and 'bowmen'). The services included a navy (5) as well as an army; the main branches of the latter were the infantry and horse-drawn chariotry. The weapons included blades, clubs, slings, and bows-and-arrows. Scabbards were provided for the swords, and quivers for the arrows (6). Although military expeditions tended to live off the land, the Legend of Krt (Krt: 83 84, 174 175) reflects (however great the poetic hyperbole) the concept of

(1) Gordon & Lacheman, 'The Nuzu Menology' AO 10 1938 51-64.

(2) This trend is still going on in the Semitic World. It was first observed by Ibn Ḫaldûn.

(3) That they had some organization is suggested by the mention of Ḫbb the 'Chief Scribe' in 73:rev. 4.

(4) Clothing was evaluated by the weight as shown by text 116. This was common in the ancient East; cf. also the Nuzu tablets (E. Chiera, *Harvard Semitic Series* 5 1929 texts 20 : 6-7; 36 : 8, 15-16).

(5) Cf. 319 and 83.

(6) See UH §§ 18 352, 650, 663, 696, 1225, 1789, 1809, 2084.

the quartermaster to take along a large food supply; which implies an awareness of the realities of logistics. Krt's expedition also reflects the institution of total mobilization (Krt : 96-103, 184-191). However, all classes of warriors from the Maryanûma down, at times found substitutes (*bdlm*) for themselves, as in text 400; a practice forbidden in Hammurabi's Code (1). The professional military groups were paid in silver (400) and doubtless enjoyed other rights and emoluments. Perhaps the land grants in texts 85 and 300 were part of Ugarit's 'G. I. [i. e., Veterans'] Bill of Rights'; that G. I. bills of rights were already known in the ancient east is shown by Hammurabi's Code, whereby the veteran was provided with land and live-stock for his livelihood, and was protected in his possession of them by the law far beyond the protection enjoyed by other citizens (2).

It is interesting to note that some members of the priesthood were attached to the army (400 : VI : 21-35). Their function was probably not as comparable to that of a modern chaplain corps, as we might off-hand assume. Ugaritic society had theocratic elements not to be found in our modern states. By theocracy, I mean government and group action in accordance with divine decree as revealed through oracles, dreams or other accepted channels of revelation. Thus the priests were present not so much to raise morale in the ranks as to authorize or forbid military decisions. Their function was accordingly often one of command, which is not the case with modern chaplains. In the Mari tablets we read of a Babylonian unit of 300 men and a Mari unit of 300 men, whose only mentioned officers are a couple of barû-priests 'seers', one for each unit (3). In Israel the religious leaders who gave out Yahwe's oracles were a check on military leaders in the field, as well as on the government, from the king down, in time of peace Compare, for instance, 1 Samuel 14 : 3 where the only officer on Saul's staff, with troops in the field, is Ahijah the priest equipped with the ephod for supplying Saul with divine oracles to guide him in conducting the war (4). It is likely that certain priests, like those is text 400, were assigned on regular duty to the army, for it would be disastrous to have important military decisions affected by priests who were inexperienced or inept in military affairs.

It is possible to estimate the relative importance of towns in the Kingdom of Ugarit on the basis of the figures in the administrative texts. The larger the demands on a town, the more important it should be in terms of the commodity exacted. For example, higher taxes paid in wine (see text 110) need not indicate a greater population but only a larger viticultural output. Conscription and corvée demands should reflect density of population. Taxes in silver should be in proportion to commercial prosperity. Thus the figures in 321

(1) CH §§ 26, 33.

(2) CH §§ 27-29, 31-32, 35-37, 41:

(3) Ch. Jean, *Archives royales de Mari* 2, Paris 1941 text 22:23-26.

(4) It is of course familiar enough to students of antiquity that oracles and omens were sought before military ventures were gotten under way. To cite only one obvious example from the Bible, note the host of prophets consulted by Ahab and Jehoshaphat in 1 Kg. 22 : 5 ff. The new point I am trying to bring out is rather the staff function of priests or prophets in the field during military operations. We might also note in passing the influence of prophets in military circles as reflected in the Lachish ostraca (3:20 ; 16:5).

indicate that Ubr'y was the largest town in the list. The figures in 113 would put Ar in the same class of Ubr'y; those in 65, however, indicate that Atlg was greater than Ubr'y, and that Ar was still larger than Atlg. It is thus necessary to check the tablets against each other if results with high probability are to be obtained.

The evaluation of the towns is not only of interest for a study of the provincial life of the Kingdom but will be of the greatest importance in selecting promising sites to excavate if we are to know more about the Kingdom of Ugarit than the excavations at the Capital alone can give us.

Family life was patriarchal. The head of the family was a man who had one or more wives. Wives were not all of equal status. The ordinary wife was called *'aṯṯatu* (literally 'woman'). The wife of superior social status bore the title *'aṯṯatu 'addîratu* 'lady' (lit. 'great woman'). The children were not of equal status. A son could be called (1) *bn*, (2) *n'r* or (3) *ġzr*; a daughter, (1) *bt*, (2) *n'rt* or (3) *pġt* (see text 119). The threefold designations are tied up with the child's (1) slave or free status, and (2) inheritance rights, both of which would depend mostly on the mother's status, and sometimes to some extent on the father's wishes. *ʿzr* and *pġt*, being honorific designations in the literary texts, probably indicate the highest status for a son and daughter, respectively. The chief heir was called a *nḫl*.

Within the patriarchal system were fratriarchal elements. For the head of the family was not only master of his sons, daughters-in-law and unmarried daughters, but also of his brothers (329). Thus a father would designate his heir (usually, but not necessarly, the oldest son borne by the chief wife) as fratriarch over his brothers. On the death of the father, the heir would succeed as patriarch with respect to his own sons, daughters-in-law and unmarried daughters, but as fratriarch with respect to his brothers and their families.

Since the distinction between 'first-born' and 'fratriarch' was 'sociemic', the biblical Chronicler sharply distinguishes them with different words: *bkôr* 'first-born' and *rôš* 'fratriarch' [1]. That it was not only possible, but even worthy of saga in Ugarit to confer the birthright or 'firstbornship' on a younger child is shown by 128 : III : 16; as was also the case in Israel (e. g., the preference of Jacob over Esau, of Ephraim over Manasseh, of Perez over Zerah, etc.).

Filial virtues are stated in the Legend of Aqht. Pġt's epithet embodies the virtues of the ideal daughter: one who fetches water, looks after the grain supply, and is gifted with divination. The virtues of the model son are different and more numerous: he is to look after the religious ceremonies of the family, to help his father when drunk to get home, to keep his father's house in repair, to launder his father's clothes, etc.

Widows could be well-provided for by their husbands. One man made a will whereby after his death his wife could have the use of his entire estate, including live-stock, male and female slaves, and household utensils, for the rest of her days. Their two sons were induced to show filial respect to the widow; for the latter was given the power of willing the estate to whichever of them treated her better. Furthermore if either son filed suit against her, or treated

[1] For fratriarchy in the ancient Middle East with special reference to the Old Testament, see my article in JBL 54 1935 223-231.

her disrespectfully, he was liable to a fine of 500 shekels of silver and to be driven out threadbare (1).

Slaves were not necessarily denied all hope of freedom. One contract deals with a master freeing a slave-girl and marrying her off to a man upon the latter's paying 20 shekels of silver to the master (2).

The penalty for breaking a contract was not, as commonly in the ancient Middle East, a payment of damages to the party wronged but a payment of a fine to the crown (3).

The social attitudes at Ugarit, insofar as we know them, are paralleled in other countries of the Bible World. For example, the victors on the battlefields of the ancient Middle East would gloat over their slain foes by cutting off their heads and or hands to facilitate counting the victims. The warlike goddess 'Anat thus slays her victims and heaps up their heads and hands. Such cut-off heads and hands, symbolizing victory, appear on seal cylinders, especially in the Amarna Age. The custom of counting cut-off heads or hands is well attested in Egypt (4).

Miss A. Herdner has discovered that 67 : VI : 19-22 describes the frontal and dorsal lacerations for expressing grief. Such self-inflicted laceration is quite widespread; e. g., among the Hebrews (Jeremiah 41 : 5) and Egyptians: see the Ani papyrus pl. VI, where the female mourners (= Ugaritic *bkyt*) with bare breast and back have a red laceration on each cheek; one of the women is touching (= token blow?) her back. At Arab funerals in the Mosul area I have seen processions of mourners at funerals giving themselves token blows in rhythm. That barbaric laceration can still develop in connection with religious grief in the Middle East is illustrated by fanatical trends in Iran. A century ago, Count de Gobineau was impressed with the Shiite passion plays about the tragedies of Ali's household culminating in the Battle of Kerbela on the Tenth of Moharram (5). De Gobineau reports no lacerating or brutality in connection with the plays. Since his time, however, the Tenth of Moharram celebrations have degenerated into widely practiced rituals that include gory self-lacerations. The ruthless late Reza Shah suppressed them but under his milder son Mohammed Shah, they are being revived (6).

The appropriateness of dying with a hoary head is not only attested in the Bible (Gen. 15 : 15; 1 Kg. 2 : 6) but also in the Ugaritic Legend of Aqht (2 Aqht : VI : 36-37). The climate of the Fertile Crescent in Asia is so hard on organic matter that we can not be very optimistic in our hopes of finding paintings to illustrate the gray hair befitting the dying. However, Egypt, with its aridness even at short distances from the Nile Valley and Delta, provides us with at least one vivid illustration: Ani, who is regularly depicted with black hair, in one scene (pl. IV) has silvery white hair in keeping with the idea reflected in Ugarit and Scripture.

CHAPTER XI

HIPPIATRIC PRESCRIPTIONS

The poetic texts reflect numerous magical beliefs and practices. Krt's disease is exorcized by a magical process that includes the use of a clay puppet. Daniel makes a whole flock of eagles fall at his feet, simply by invoking Baal to do so; and after Daniel splits the birds open, he renders them whole and in flying condition by another invocation However, our prose texts contain no magical elements, not even in the hippiatric prescriptions where superstition might easily have found a place, even as it did to a stifling extent in Mesopotamian medicine. The hippiatric texts contain only rational elements: the diagnostic symptoms and the medicinal cure. One of the aliments 'roaring' is familiar enough to people who know horses. The medicines are injected through the nose: a technique attested in modern times as well as in antiquity; and sometimes used on hysterical patients today, for fluids are on occasion directed into the stomach by tubes introduced through the nostrils; though in our hippiatric texts also solids are forced through the horse's nose. The obvious reason for resorting to the nasal passage is that the horse cannot shut it as he can his mouth (1).

The hippiatric texts raise an economic and sociological question: Why is it that Ugarit has yielded two medical texts for horses but none for people? Possibly it is just an accident of discovery. But it is also conceivable that hippiatrics was more important than human medicine because a horse was worth more than a person in those times when national strength depended considerably on horse-drawn chariotry, and when slaves were cheap. A syllabic text from Ugarit (*Syria* 18 1937 2[18]) tells of a slave girl sold in marriage by her master for 20 shekels of silver. So far we have no documents mentioning the price of horses, but we are safe in assuming that 20 shekels would be a mere fraction of the cost of a horse in fair condition. Hence the importance of caring well for horses.

[ ]
55:2 [When]a hor[se compound it
together] and it is injected into [his] no[se].

:2 When [a horse (3 lines broken)]

:5 When [a horse (3 lines broken)]

When he does verily/not [ ]
:10 *ʿrgz*-herbs [are compounded together]
and injected [into his nose].

When [ ] seizes [a horse], put - - - [of the threshing
floor] and put [ ]
:15 and fruit of *ḫžr*[*t* . They are compounded]
together and injected [into his nose].

When *arl* seizes a h[orse], put *nnh*, put - - - -
[of the threshing floor], put warm *irġn* [. They are
:20 compounded] together and injected into [his nose].

When a horse tosses his head [ ]
[ ] - - - - - is injected into [his] no[se].

When [a horse] roars [ ] - - - -
:25 [ ] seed [ ]
- - - - [ ]mi[x]
[ ] and pla[ce]
and the fruit [of *ḫžrt*]
:30 [warm] *irġn* [. They are compounded]
togeth[er and injected into his nose].

When a horse *tosses* his head [and *ıchinnies*] much, an
ag[ed] fig cake [and] aged raisins and [grocer's flour] are
:35 compounded together and [injected] into his nose.

CHAPTER XII

INVENTORIES

There are quite a few inventories that may refer to rations, taxes or commercial shipments; see UH § 17.2 (subsection VI, 6). The two most interesting of such lists are translated below. Text 12 + 97 is a list of food items. Text 120 deals with luxury articles, largely perfumer's supplies; and if *mnḥ* means 'a presentation' (Hebrew *minḥā*) rather than 'deposited' (Hebrew *mûnāḥ*), the inventory would be one of tribute.

12 + 97 [ ] a great jar, six jars of barley
:2 [ ] and a thousand pitchers of honey, a pitcher of oil of myrrh
[ ] four hundred *ḫswn*, a *lṯḥ* (= a measure) of *aqhr*
[a *lṯḥ* of *p*]*sbbyn*, a *lṯḥ* of sesame, a *lṯḥ* of *šḫlt*
:5 [ ]raisins, six hundred *nṣ*, thirty birds
[ ]fif[ty home]rs of *šlkm*.

[ ] a great [jar], six jars of barley
[a thou]sand pitchers of honey, a pitcher of oil of myrrh
[cummin, a *lṯḥ* of *sbbyn*
:10 [ ] a *lṯḥ* of sesame
[ ] *ḫšwn*, six hundred *nṣ*
[ ] fifty homers of *šlkm*.

[ ]a great [jar], six jars of barley
[ ] four[tee]n hundred *tyt*
:15 [pitchers] of honey, a pitcher of oil of myrrh
[a *l*]*ṯḥ* of *psbbyn*, a *lṯḥ* of sesame
[ ] a *lṯḥ* of dried figs, a *lṯḥ* of raisins
[ ]jars, fifty homers of *šlkm*.

120:1 A presentation in the hands of Ybnn of one thousand and four hundred (measures) of (olive) oil,
:5 A [pre]sentation of six hundred (measures) of perfumer's oil.

Two talents of iron; a hundred (units) of *tišr*-wood; thirty
:10 (units) of *almg*-wood; fifty talents of cinnamon reeds; [tw]enty talen[ts] of [ ]*rr*; [tw]enty of *npš*; twenty of oil of *bitumen*.

:15 Forty (measures) of oil of myrrh. (1)

(1) This tablet has been studied by Y. Sukenik, *Tarbiz* 18 1947 125-128.

ADDENDA

1. The following are supplementary (1) corrections to and notes on UH Part II (= the edition of the Ugaritic texts, on which the foregoing translations are based (2)):

(51 : VIII : 15) ʿn*n . ilm* is favored by ʿnt : IV : 76.
(52 : 7) šlmt mlk (not šlm tmlk) is the word-division for the translation above on p. 58.
(60 : 12) *ḫšš* (not *ḫšš*).
(67 : II : 21) [*yšu g*]*h . wy!ṣḥ .*
(107 : 4) *ṯkmn wšnm* (not *ṯrmn wšnm*).
(126 : IV : 10) w! (not *k*).
(137 : 40) [*ʿn*]*t* and *ʿttrt* may be the goddesses here. For the combination, see ʿKrt : 145–6.
(1 Aqht : 152) *yṣḥ*! (not *yṣm*).
(ʿnt : IV : 69) *ar*[*bdd*] (not *ar*[*bbd*]).
(ʿnt : pl. ix : II : 23) : The restoration [*ʿmy*] is false.

2. Re pp. x–xi : The letter which was transliterated *ś* in UH is rendered more accurately *ž* in the present publication (see already UH § 4. 11 and UH p. 21, n. 7). The sound *ž* (like the 'z' in English 'azure'), though not Semitic, became part of the phonetic pattern of Canaan from the Hurrian substratum. The sound occurs in proper names, though it has been missed through orthographic concealment. For example, the name of the Philistine city 'Ashdod' contained the sound, whose voicing was concealed because it was represented by Hebrew *ś*. The Assyrian transliteration of the gentilic *az-du-da-a-a* (Sennaherib, Taylor Prism : II : 51) shows that the sibilant was voiced. Furthermore, the same name applied to another town near Ugarit is written *ažd̲d* (UH § 18. 322), which leaves little doubt that the sibilant is *ž*. It is interesting to note that the Hurrian substratum of Canaan has left its mark (via the Canaanite and Aramaic periods)

(1) Other corrections are in UH pp. 126–8 and inside the front paper-covers of Parts II and III ; and in the footnotes of the present publication.

(2) For the convenience of students (particularly for seminar groups requiring individual texts for the participants) the Pontifical Biblical Institute has reprinted Part II of UH for separate sale at low cost.

on the Syro-Palestinian dialects of Arabic. *Jîm* is still pronounced *ž* in what used to be Canaan, as distinct from the *j* (as in 'judge') of the surrounding areas of Arabic Asia. What happened is that *ž* (preserved at least in certain names), being the Canaanite sound nearest to Arabic *j*, was used in Canaan for *j*.

3. Re p. 7: The ABA pattern of Hammurabi's Code (whereby the prologue and epilogue are poetry; but the laws, in between, are prose) must be borne in mind when we deal with the book of Job. Job, too, follows the ABA pattern; though, since the main part of the book is poetry, the prologue and epilogue are prose. Stylistically, then, the prologue and epilogue are part of the original book of Job, precisely as the prologue and epilogue of the Code are part of Hammurabi's original stela. To separate the prose from the poetic parts by centuries is as unjustified in the one case, as in the other, as far as literary form is concerned. Furthermore, the plot of Job requires the prose sections. This is not the place to expatiate on Job; but in a book on *Ugaritic Literature* it may not be inappropriate to note that in the prose prologue the *bnê hā-ʾlôhîm* (who constitute God's court in Job 1:6; 2:1), far from being a late development, reflect the Canaanite idea of the assembly of the gods, *bn ilm* (see above, pp. 107–8 and, below, re pp. 109–111), so common in the Ugaritic tablets.

4. Re p. 8: Other social studies can not be expected to have the precision of linguistics, especially of phonetics. Therefore, the 'socieme' may often lack the clarity of the 'phoneme'. However, I think that the distinction is potentially so useful that I shall try to bring home the point with a still clearer example. In America, the legal status of a marriage is not affected by the fact that a husband or wife may be living at the home of this or that parent. However, in Assyria the matter was sociemic. Middle Assyrian Laws §§ A: 32, 33, 36, 38 (see Driver and Miles, *The Assyrian Laws*, Oxford, 1935) begin 'If a wife dwells in her father's house' because her residence there, being of legal importance, is sociemic. Similarly, the Deuteronomic law of levirate marriage is operative only 'when brothers are dwelling together' (Deut. 25:5); thus fratriarchal family union was sociemic. In later Jewish times (regardless of whether levirate marriage was practiced, as it has been among the Yemenites; or circumvented, as it has been in Europe), whether the brothers lived apart or together made no difference, for fratriarchal family union had become non-sociemic.

5. Re p. 10: The association of Baal with his fighting club(s) in text 68 is reflected in the divine name B'l Ṣmd 'Baal of the Club' in Zincirli (Klmw: 15).

6. Re pp. 13-14: The addition of *-n* to the preposition *l-*, yielding *ln* (137:25, 27, 29)||*l* (:23) is paralleled in Phoenician; e. g., *bny* 'in it' (Azitawadd: III: 8, cf. II: 18; see JNES 8 1949 111) and *bn 'spt* 'in the assembly' (G. A. Cooke, *A Text-Book of North-Semitic Inscriptions*, Oxford, 1933, text 33:1).

7. Re pp. 22-23: The Sefavid palace Hašt-e-Behešt ('The Eight Paradises') in Isfahan may be a reflex of the same general idea that lies behind 'In the seven rooms || In the eight chambers' of 'Il.

8. Re p. 23, n. 1: I have already showed, on other grounds, that Ḥkpt is Cretan and has nothing to do with Memphis or Egypt (JNES 7 1948 263).

9. Re p. 29: 'The shadow of silver' (*ṣl ksp* in 51:II:27) is an idiom found in Eccles. 7:12 (*ṣl hksp*). Not only are northern idioms to be found in Eccles. but also northern (a) grammatical and (b) lexical features. (a) The historical use of the adverbial infinitive followed by the independent pronoun 'I' is abundantly attested in Phoenician, notably the Azitawadd text (JNES 8 1949 112-3); cf. *wšabbēḥ 'nî* (Eccles. 4:2) 'and I praised'. (b) The Phoenician parallel pair *'dm* || *'št* (e. g., Azitawadd: II: 4-5), as against the normal Hebrew *'îš* || *'iššā* is found in Eccles. 7:28 (*'ādām* 'man' || *'iššā* 'woman'). I cannot help feeling that the northern character of Eccles. should be stressed, rather than its reputed 'very late' and 'Greek' character. It is basically not a philosophic treatise of Greece; and whatever Greek elements there may be in it must have come through Phoenician channels.

10. Re p. 33: The role of the mountains bringing the materials for Baal's palace is to be compared with Gudea's Cylinder A: XV-XVI where the mountains yield materials for Ningirsu's temple. Gudea's account is historical and therefore realistic; the Ugaritic story is mythological and hence fantastic.

11. Re p. 43, n. 1: Our adherence to *ḫmrm*, as against the restoration *[y]ḫmrm*, is strengthened by the fact that the Mari tablets attest the sacrifice of asses (*ḫayaram qatâlum*).

12. Re p. 45: The simile of 'Anat's tenderness is anticipated in Sumerian literature: *lid-amar-bi-šè-igi-gál-la-gim* 'like a cow that looks toward her calf' (Gudea's Cylinder A: XIX: 24).

13. Re pp. 46-48: A number of proper names in the O. T. are possibly to be explained against the background of the pagan mythology of Canaan, as witnessed in Ugarit. Thus *'yzbl* ('Jezebel') is letter

for letter Ugaritic *iy zbl* (which we have translated — how correctly does not matter in the present identification — 'Where is the Prince?') referring to Baal's revival (49 : IV : 29, 40) and therefore just the kind of context that would have great religious appeal. If this explanation of 'Jezebel' is correct, then 'Ichabod' (Heb. *'y kbwd*) must be the same type of name, with 'Honor' replacing 'Prince(ship)'. Another O. T. name that may hark back to the old mythology is *'zmwt* (1 Chron. 8 : 36 ; 9 : 42), which may refer to Môt in his unvanquished state: *mt 'z* (49 : VI : 17, 18, 20) 'Môt is strong' (more exactly, a technical combat term meaning 'is still in the fray'; see UH § 18.1471). That Môt, whose name and role are associated with destruction, should be worshiped and appear in personal names, need cause no surprise; cf. Nergal in Babylonia and Seth in Egypt; note also Môt's epithets 'Darling of the Gods', 'Beloved of 'Il', etc.

14. Re p. 57 : Our recognition of the wrestling-belt will clear up many passages in the literature of the ancient Middle East. Thus *ip-ṭur rik-si-šu iš-ta-ḫaṭ a-ga-šu* (*Enûma Eliš* : I : 72), describing how Ea stript Apsu of glory before slaying him, means 'he took off his belt (and) stript off his crown, not 'he severed his sinews and tore off his crown' (Langdon) or 'Ea lui rompit les muscles, arracha sa couronne' (Labat). The wrestling-belt symbolized the strength of the hero and was his most prized possession. Thus Enkidu's blessing of Šamḫat includes *mi-sir-ra-šú lip-ṭur-ki* (Gilgamesh Epic : VII : iv : 5) 'may (the hero) loosen his belt for thee'. The wrestling-belt (the most precious keepsake a hero could give) is clearly meant, not the money-belt (as Ebeling and other distinguished authorities have suggested). One of the interesting things about belt-wrestling is that it was sometimes used in court to settle cases where the litigants offered contradictory testimony. The litigants were instructed to fight it out by belt-wrestling and the winner would be awarded the legal verdict. Nuzu tablet JEN 331 is just such a case, where the litigants wrestle (*ṣabâtu*) equipped with a belt (*qannu*). The Hebrews also practiced this type of ordeal-contest in court. Thus when God summons the complacent women to trial, He figuratively speaks in in terms of the belt-wrestling ordeal-contest : 'Strip and be bare and put a belt on the loins' (Isaiah 32 : 11). (Nakedness, except for the belt, is in keeping with the artistic representations from Egypt and Mesopotamia.) My gifted student, Mr. Lawrence Manross, had the acumen to see that the contest between God and Job reflects the same belt-wrestling ordeal. When God condescends to argue the case with Job, He instructs Job 'Gird thy loins like a man!' (Job 38 : 3; 40 : 7) prior to God's interrogating Job. Overwhelmed by God's words, and cognizant of God's supreme power, Job (40 : 4 ; 42 : 6) concedes the case (thus eliminating the need for an ordeal, which is only indicated in case of apparently equally-cogent rival claims).

15. Re pp. 85, 86: While it is possible that Daniel's connection with the Rpum was responsible for his epithet *mt rpi*, the contrary is also conceivable: that the epithet gave rise etiologically to the episode of the Rpum (cf. pp. 7–8).

16. Re p. 99: The translation of *lymm lyrḫm, lyrḫm lšnt* (1 Aqht: 175–6) is smoother if *l- --- l-* is rendered 'from --- to' rather than 'for --- for'. Interestingly enough, the same holds for *ʿlbqr lbqr* (1 Chron. 9:27) which I would render 'and from morning to morning = around the clock'.

17. Re pp. 109–111: The *dr bn il(m)* (2:17, 25–26, 34) 'Generation/Assembly of the Gods' recurs in the final curse of the Azitawadd text (: edge). Accordingly, read *dr bn il* rather than *dr bt il* in 107:2.

18. Re p. 126: A fratriarchal element seems to occur in 77: 28–30, translated on p. 64, where ʿAṯtar seems to be in a position to marry off his sister.

19. Re p. 127: Jer. 48:37 also refers to lacerations inflicted from grief. For similar customs among the Baalists, see 1 Kings 18:28.

20. Re p. 127, n. 4: The seals of the Morgan Collection showing the amputated heads and hands are now published by E. Porada, *Corpus of Ancient Near East Seals* I, nos 935 E, 979 E.

21. Re pp. 128–9: Maurice B. Gordon, M. D., was the first to subject the hippiatric texts to a critical analysis from the medical viewpoint; see his 'Hippiatric Texts from Ugarit', *Annals of Medical History* IV, 5 1942 406–8.

YAHWEH AND THE GODS OF CANAAN

A Historical Analysis of Two Contrasting Faiths

by

WILLIAM FOXWELL ALBRIGHT

•

THE JORDAN LECTURES 1965
DELIVERED AT THE SCHOOL OF
ORIENTAL AND AFRICAN STUDIES
UNIVERSITY OF LONDON

•

GARDEN CITY, NEW YORK
DOUBLEDAY & COMPANY, INC.

The Louis H. Jordan Bequest

The will of the Reverend Louis H. Jordan provided that the greater part of his estate should be paid over to the School of Oriental and African Studies to be employed for the furtherance of studies in comparative religion, to which his life had been devoted. Part of the funds which thus became available was to be used for the endowment of a Louis H. Jordan Lectureship in Comparative Religion. The lecturer is required to deliver a course of six or eight lectures for subsequent publication. The first series of lectures was delivered in 1951.

Preface

This volume contains the lectures under the Louis H. Jordan Bequest, delivered in May 1965, at the School of Oriental and African Studies in the University of London. The original series consisted of seven lectures, entitled 'Canaan, Phoenicia, and Israel: An Historical Analysis of Two Contrasting Faiths'. The first three lectures appear as Chapters I–III, with the same headings, but the four remaining lectures have been compressed into two chapters with new headings. The title of the published volume is taken from the heading of Chapter IV. The content of the volume reflects my own research during the past decade. In preparing it for publication, I have expanded my treatment of basic topics considerably, while I have deleted material which can readily be located, or which will be published elsewhere in the near future.

No attempt to be exhaustive is made in the footnotes. Fortunately for the reader who wishes to acquaint himself with both historical positions and current views in Old Testament scholarship, we now have an excellent guide in H. H. Rowley's *Worship in Ancient Israel* (London, 1967), which reached me just after I finished reading galley proofs of the present volume. My old friend's exact and comprehensive knowledge of pertinent bibliography is well known; readers who find my approach to Old Testament problems disconcerting, may see our problems in wider perspective after studying Professor Rowley's book.

Since the preparation of the final copy was extended over a year and a half (owing chiefly to a major operation in August 1965), it has proved necessary to include several pages of Addenda in order to bring the reader's

information measurably up to date. But for the competent aid of Dr Leona G. Running, who was my research assistant in 1965–6, I might not have been able to complete the manuscript at all.

I wish to thank the Director and Academic Board of the School for the invitation to give these lectures. I also wish to express my hearty thanks to the Secretary of the School, Mr J. R. Bracken, and his staff for never-failing courtesy and competent assistance at all times. To the members of the faculty of the School I am indebted for friendship and hospitality.

I am greatly obligated to many scholars at home and abroad who have helped me with information and suggestions; I shall thank them in the notes.

I take exceptional pleasure in dedicating this volume to my old friend, Professor Otto Eissfeldt of Halle, whose indomitable spirit and acuteness in exploring *terra incognita* have so often opened new paths for me.

Lastly, I want to thank my wife once again for her patience with an odd specimen of an odd species, *Homo eruditus. Ad multos annos!*

W.F.A.

Baltimore, 1 July 1967

I

Verse and Prose in Early Israelite Tradition

A. POETRY VERSUS PROSE: THEIR RELATIVE DATE AND TRANSMISSION

In the early years of modern Biblical research, it seemed reasonable enough to men like J. G. Herder[1] and Heinrich Ewald[2] to suppose that early Hebrew poetry dated back in general to the beginnings of Hebrew literature and that prose followed early poetry just as was true of other Old World literatures. The romantic movement was then so strong that the relative priority of verse appeared to be self-evident. Then came a period dominated by Julius Wellhausen, in which the date of Hebrew poetry was lowered more and more as literary critics came to accept as normative for Israel Wellhausen's Hegelian[3] view of religious history as a development from 'fetishism', through henotheism, to monotheism. Under his influence, an increasingly large number of scholars in the first half of this century came to believe that virtually all

[1] Especially in *Vom Geiste der ebräischen Poesie* (1782–3).

[2] Especially in *Geschichte des Volkes Israel* (1843–59).

[3] The basic Hegelianism of Wellhausen has been strangely denied by some recent writers. His 'Hegelian' insistence that prophecy came before codified religious law led him to date most prophetic verse before *tôrah*. On the other hand, his unilinear system of religious evolution (which is partly Hegelian) resulted in his dating non-prophetic verse (Psalms, Wisdom literature) in the Persian and Greek periods. From the standpoint of consistency in dealing with literary forms, chaos resulted, as pointed out by H. Gunkel and his disciples and now demonstrated by comparative literary evidence.

extant Biblical Hebrew poetry is extremely late—in fact that much of it was composed in the Hellenistic age between the late fourth and the first century B.C., chiefly because of the 'advanced' concepts which were characteristic of it, generally presupposing monotheism.

The approach introduced by Wellhausen still holds sway today in many circles of Biblical scholarship, in spite of the swelling tide of archaeological finds which is making it an historical anachronism. It is surprising to see how many Old Testament scholars still deny that we have any appreciable amount of poetry antedating the monarchy—except for the Song of Deborah and a few fragments.

Yet, if the still current view is correct, the Hebrew Bible would probably be alone among Old World literatures in having the earliest poetry follow the oldest prose instead of precede it. The reason for the relative antiquity of verse is very simple: poetry was then regularly sung or chanted to the accompaniment of stringed instruments such as the harp and the lyre, especially various forms of the lyre, which were known in both Egypt and Babylonia before the middle of the third millennium. Since the lyre appears in rock carvings in central Arabia at an even earlier date, it must have been known in Mesopotamia from Chalcolithic, if not Neolithic, times.[4] Illustrations of the priority of verse are innumerable. Among historical civilizations (as opposed to the archaeologically-known cultures of the Old World and the little-known native cultures of the New), we need point only to Greek and Latin, Germanic and Romance, Slavic and Ugro-Finnic, Indic and Iranian, Chinese and other East-Asian literatures. In the ancient Near East we can point to Sumerian (we now have actual literary compositions from the Fara period before 2500 B.C.),[5] Accadian (hymnal-

[4] My information comes through Emmanuel Anati, the noted authority on rock carvings in southern Europe and the Near East.

[5] According to information received from Dr. Robert D. Biggs,

epic), Canaanite (Ugaritic), Hurrian and Hittite, and pre-Islamic Arab. Egyptian is not an exception, since the Pyramid Texts certainly go back in part to the First Dynasty or earlier—no later than about 2900 B.C.[6]

When clear analogies are so numerous, we are in a position to construct a loose model on which to pattern a viable theory of literary sequence-dating in Israel. Naturally, we cannot attain certainty unless we can confirm the applicability of the model in question to a given literature by checking it with all available empirical data. As we shall see, we can now parallel changing poetic style with historically meaningful content, a method which gives us approximate dates for stylistic modifications. After establishing phases of style, we can often employ stylistic methods to date archaic survivals from original poems embedded in prose narratives.[7] The value of this tool for determining the age of literary tradition should be obvious.

Poetic style does not change at a uniform rate. There are periods when it remains virtually unchanged for centuries; there are other times when it shifts so rapidly that

---

who is preparing the tablet material from Tell Ṣalābīkh for publication.

[6] Following the late Herman Junker, some Egyptologists insist that the Pyramid Texts are little, if any, older than the Pyramids in which they are found. Their definitive editor, Kurt Sethe, who was a far better linguist-philologian, insisted correctly on their relatively early date, in accord with what we know of similar religious poetry elsewhere. The archaism of language and especially the phonetic spelling used in these texts, are indications that they had been handed down from earlier times by scribes who knew that exact reproduction of their content was essential to their efficacy.

[7] Illustrations of this principle are common in the Bible; cf., for example, Jacob M. Myers, *The Linguistic and Literary Form of the Book of Ruth* (Leiden, 1955). Early and medieval Arabic literature abounds with poetry embedded in a prose matrix, either of descriptive or narrative character.

it is impossible to make a clear distinction between chronological stages. A good example of these two extremes is to be found in Greek poetry, where all known early verse appears in dactylic hexameters; then suddenly in the seventh century B.C. lyric verse emerges in the perfection of Archilocus, becoming stylistically complex as we approach fifth-century Pindar, in whose work many prosodic styles are combined. Particularly open to sequence-dating are early Roman and early Romance poetry, and—perhaps the best example—Old and Middle English verse to the fourteenth century A.D. Accadian poetry can be dated stylistically with increasing precision.[8]

B. CANAANITE REPETITIVE STYLE

In the second millennium B.C. Canaan underwent many cultural and ethno-political changes as it moved from Middle Bronze through Late Bronze into Early Iron. Thanks to the excavation of Ugarit by C. F. A. Schaeffer and the publication by Ch. Virolleaud, of poetic epics in the cuneiform alphabet, our knowledge of Canaanite higher culture has been increasing by leaps and bounds since 1932. Our knowledge of the period between c. 1500 and c. 1233 B.C. has been enlarged beyond our wildest dreams of 1929. It was a time peculiarly suited for rapid change in literary style, just as in England between the time of *Widsith* and *Beowulf* and that of Chaucer.

The three Canaanite (Ugaritic) epics which we possess in large part, Baal, Aqhat and Keret, were put into approximately their extant form between the seventeenth

[8] Cf. in particular the work of B. Landsberger and his pupils, especially W. von Soden. Important contributions were also made by A. Schott and recently by W. G. Lambert. The latter has been treating the material from the point of view of its historical and theological content, while the others have laid chief stress on philological and linguistic analysis.

and the fifteenth centuries in the order given,[9] and are in substantially the same poetic style. In particular, each has roughly the same proportion of repetitive parallelism.

It was H. L. Ginsberg who first defined repetitive parallelism in Canaanite poetry.[10] The fundamental significance of 'climactic parallelism' for the Song of Deborah had been recognized by C. F. Burney nearly half a century ago,[11] and in 1922 I had followed Burney, differing from him chiefly in my linguistic and metric reconstruction, and in recognizing that additional cases of repetition must have dropped out by haplography.[12] (Some scholars had previously tried to eliminate most—or even all—cases of repetition, which they treated as dittographies.)[13] At the same time I pointed out similarities

[9] The Baal Epic was composed during the transition from use of *ba'lu* as pure appellation ('lord') to its use as a proper name (Baal), that is, in the latter part of the Middle Bronze Age. Needless to say, the present form of the Baal Epic, in which the mimation has been dropped, has been influenced by oral transmission in the Late Bronze Age, after the mimation had been lost. Much of the poetic form of the Baal Epic may be still earlier, going back into the early Middle Bronze Age. The myths are naturally older. The Keret Epic could not have been composed until after the time of Kirta, putative founder of the Mitanni kingdom in the sixteenth century B.C. There is much Hurrian influence in this epic.

[10] *Orientalia* v (1936), 180. The Ginsberg-Gordon treatment of the poetic structure of Ugaritic in Cyrus H. Gordon, *Ugaritic Grammar* (Rome, 1940), pp. 78 ff., does not dwell on this matter. It seems that I was actually the first scholar to emphasize the importance of repetitive parallelism in Ugaritic, following C. F. Burney on the Song of Deborah (see n. 11).

[11] See C. F. Burney, *The Book of Judges*, pp. 169 ff., and my further application of his principles, with correction of his linguistic approach and comparison with Accadian hymnal-epic style in JPOS II (1922), 69 ff.

[12] This observation of mine has turned out to be quite correct in principle, though not every case may stand.

[13] Cf. especially Paul Haupt in the Wellhausen *Festschrift* (Giessen, 1914), pp. 191 ff., in which he condenses the entire poem by 30 per cent to seventy cola, omitting every trace of repetitive parallelism. Rudolf Kittel's animadversions in his *Geschichte des*

between Old-Babylonian verse structure and that of the Song of Deborah.[14] I naturally could have no idea that the discovery and decipherment of the Ugaritic epics would eventually confirm Burney's point of view in essentials. At the same time, some renderings and emendations have proved to be wrong in the light of our growing knowledge of the poetic language of Canaan.

The classic example of Canaanite repetitive style is a tricolon (3+3+3, with the word-pattern abc:abd: ad'b'),[15] which appears in nearly the same (theologically superior) form in Psalm 92:10:

Behold, thine enemies, O Baal,
Behold, thine enemies shalt thou crush,
Behold, thou shalt crush thy foes!

Another specimen of a repetitive tricolon of the same type (here abc:abd:b'b'd') appears in Aqhat II, vi:26 ff.:

Ask thou for life, O lad Aqhat,
Ask thou for life, and I'll give it to thee,
Immortality, and I'll grant it to thee![16]

Still another example may be quoted from Keret II, vi:54 ff. (abc:abd:a'a'd'):

Volkes Israel, 5th ed. (1922), II, 28 f., n. 7, were unfortunately quite justified.

[14] JPOS II, 70–3.

[15] Some scholars object to our substitution of the term 'colon', 'bicolon', 'tricolon' for 'stich' (or 'stichos'). The reason is that the term 'stich' is often used for a single verse unit (colon), whereas others prefer to use the term 'hemistich' for the same unit. In their terminology a 'stich' is the same as 'distich' in the alternative terminology. Since such confusion is intolerable, it is much better to employ the unambiguous term 'colon', as now done by my former students.

[16] For the translation, see Ginsberg, BASOR 98 (1945), 19, and note that we have two successive pronominal suffixes in the dative case, just [redacted] in Old and Middle Babylonian as well as in stereotyped expressions in Hebrew. A striking example in Ugaritic prose is found in PRU v, 84, No. 60, line 31, where we have *'eb. 'ltn,* 'the enemy has come up against me'; see Ch. IV, n. 22.

May Horan break, O my son,
May Horan break thy head,
May Glory-of-the-Name-of-Baal,[17] thy skull!

Again in Aqhat II, i:3–14 there are four successive occurrences of a single tricolon of similar type (abc: abd:ad'b'):

With honour (shall) Dan'el the gods.
With honour the gods shall he feed,
With honour shall he give drink to the sons of Qudshu.[18]

(Note that the third line of this tricolon has only three beats in Ugaritic.) There are many more complete examples of the repetitive tricolon in Ugaritic texts, but the above may suffice. Repetitive patterns of various types also appear in bicola. In the poetic liturgy of Shahar and Shalim we read, for instance,

In his (Death's) *hand is the staff* of bereavement (of children)
In his hand is the staff of widowhood.

Aqhat I:148–150 offers (abc:bca'):

The wings of the eagle *shall Baal break*,
Baal shall break their pinions.

This pattern was to become relatively commoner in early Israelite verse.

There are cases where single words are repeated in adjacent cola, though they are relatively scarce. We also have series of cola which begin with the same word or the same two words, showing a stylistic phenomenon quite common in archaic Hebrew poetry.

When we compare Canaanite with Hebrew poetic

[17] This is my translation of *'Aštart-Šem-Ba'al*. For details, see Ch. III below.

[18] For the meaning of *'uzr* see JAOS LXXI (1951), 262 f., where I wrongly treated it as in apposition to *Dn'el*. Here it is an adverbial accusative, as shown clearly in the same column, lines 22 f., where it has the enclitic *m* attached. In Punic it refers to a particularly important sacrifice; see J. G. Février, JA CCXLVIII (1960), 170 ff.

style[19] we must never forget that the resemblances in structure and wording go far beyond the phenomena we have just described. For example, there are over seventy specific pairs of vocabulary units (one word, occasionally two in each unit) in parallelism which appear in both Hebrew and Ugaritic, as shown by U. Cassuto and Moshe Held.[20]

This is not the place to discuss the origin of these complex patterns of repetitive parallelism. They unquestionably go back to Old Accadian, which was the spoken language of northern Babylonia during the Dynasty of Accad (24th–22nd centuries B.C.) and the Third Dynasty of Ur (c. 2060–1955 B.C.). At that time there developed a special generalized dialect of poetry, like Homeric Greek and the Canaanite of the Ugaritic epics (which was not the same as the dialect of the prose letters from Ugarit).[21] Called the 'hymnal-epic dialect' by B. Landsberger and W. von Soden,[22] it remained in use until the end of the First Dynasty of Babylon and was occasionally imitated later (not very successfully, as in the Creation Epic of the twelfth-eleventh centuries B.C.).[23] The earlier

[19] See below and Ch. III for discussion of the character and language of the Ugaritic epics, which are in a generalized Canaanite poetic dialect closely related to the South Canaanite *koinē* which we find underlying the Amarna Tablets and the early Canaanite alphabetic inscriptions, and which was ancestral to the various Hebrew dialects of Israel as well as to the dialects of Phoenicia.

[20] See M. D. (Umberto) Cassuto, *Ha-elah 'Anat* (Jerusalem, 1951), pp. 19 f., as well as his more detailed article in *Tarbiz* XIII (1942), 197–212. For many additional cases see Moshe Held, *Tarbiz* XXV (1954), 144–60. See also the useful monograph of Stanley Gevirtz, *Patterns in the Early Poetry of Israel* (Chicago, 1963).

[21] See my study in BASOR 150 (1958), 36 ff. and especially Mario Liverani, 'Elementi innovativi nell'Ugaritico non letterario', in *Accademia dei Lincei*, S. 8, CCCLXI (1964), 1–19.

[22] See W. von Soden, ZA XL (1932), 163 ff.; XLI (1933), 90 ff.

[23] This date has been demonstrated by W. G. Lambert in the T. J. Meek anniversary volume.

poems often show a complex and sometimes rather irregular repetition, whereas the later poems have become standardized by repeating the first half of a four-line stanza in the second half, with only one or rarely two verbal changes; the structure of a stanza generally consists of eight cola, each with two beats.[24] There are enough specific parallels in diction between this poetry and that of Canaanite literature from Ugarit and the early parts of the Hebrew Bible to make ultimate dependence reasonably certain, but it is possible that both poetic complexes go back to a common source antedating the Dynasty of Accad (instead of following it, as I formerly thought).

There is, however, one important area in which Hebrew prosody is intermediate between Accadian and Canaanite. In the former, metre is regularly 2 + 2, forming an accentual tetrameter. This is particularly clear in the hymnal-epic dialect, in which metre was probably native Accadian instead of being obscured by the influence of translations from Sumerian, as in the case of most lyric poetry of later date. On the other hand, Canaanite poetry is almost entirely accentual hexameter (3 + 3). Tetrameter (2 + 2) probably existed but has not yet been defined, and the mixed metres of early Israel have not been recognized in Ugaritic literature. Canaanite therefore agrees with Hittite (accentual) and early Greek (quantitative) models. It may be that Hebrew 2 + 2 metre goes back in part to Mesopotamian influence (see below).

As a result of the revolutionary changes in culture and political organization after the Amarna age, we find a rapid shift in poetic style as we move down from the fourteenth to the eleventh century B.C. Almost the only

[24] There is a pronounced shift in this respect between the early texts of this category (as in *Cuneiform Texts* XV) and such relatively late texts as the Ammiditana hymn; cf. my remarks in SOTP, 1950, p. 8.

materials we have from this time are Egyptian magical texts translated from older Canaanite spells[25] as well as some early Hebrew poems. It is the Hebrew group that enables us to trace these changes. The standard repetitive parallelism gradually yields to new types and is finally displaced by paronomasia. The latter seldom occurs in Ugaritic poetry (so far) and is at best very rare in Babylonian literature, but it is almost universal in all known periods of Egyptian literature, so on these grounds alone it is reasonable to assume that it came relatively late in Syria–Palestine, perhaps appearing first in twelfth-century Phoenicia.[26] We shall consider the poems in stylistic sequence, which in general corresponds to the historical order which one would infer from their content. Style does not naturally develop according to any unilinear scheme, so that one should not expect the two sequences to be consistently parallel.

C. EARLY ISRAELITE REPETITIVE STYLE

The thirteenth century was just as transitional in poetic style as in the linguistic history of Israel. At about that time, in the areas for which we have data, several consonants coalesced with other consonants and final short vowels were dropped;[27] the disappearance of morphemes

[25] See R. T. O'Callaghan, *Orientalia*, XXI (1952), pp. 37–46, and W. Helck, BAeV, pp. 580 f.

[26] There is evidence for a pronounced growth of Egyptian influence on Phoenicia about the end of the Empire, as illustrated by the Wen-Amun Report from c. 1060 B.C. Cf. my remarks in JAOS LXXI (1951), 100 f. We know that there was a great expansion of Egyptian influence in Phoenicia in the Amarna and Ramesside periods (see my discussion, JEA XXIII [1937], 190 ff., and now Helck, BAeV, *passim*). We shall also see below that it is hard to place the introduction of a number of Egyptian divine names into Phoenicia at any other period.

[27] Cf. my remarks on the interpretation of the alphabetic cuneiform incantation from Beth-shemesh in BASOR 173 (1964), 51 ff.

made it necessary to depend on fixed word order instead of on morphemic controls for intelligibility. At about that time the accent moved to the final syllable of most words and short accented vowels were lengthened.[28] Many other minor changes accompanied these major shifts, and verse structure was greatly affected, much as the change of Greek and Latin metre in the early Middle Ages from vowel length and syllabic quantity to stress accent brought with it major changes in prosody and poetic style generally.

At first Hebrew poetry preserved many of the old endings, in order not to change familiar word groups and phrases. For instance, the final short *i* of the gerundive *qatâli*, *qatôli* was lengthened and kept in such archaic passages as Gen. 49:11 and Ex. 15:6: in the Balaam Oracles the hero is called *bĕnō Bĕ'ôr*, 'son of Beor', where the first word stands for the older *bĭnŭ*, 'son of (nominative)', thus keeping the old metre which would otherwise have disappeared.[29] There can be no doubt that in many cola (verse-units) which are too short in their later Hebrew pronunciation, the same phenomenon was at work. Even in much later times, some of these archaic endings were used in accordance with old models. How the phonetic revolution worked in practice may be illustrated from the early thirteenth-century Song of Miriam (Ex. 15), where we have in verse 11a (3+3):

Who is like Thee among the gods, O Yahweh?
Who is like Thee, feared among the holy (ones)![30]

[28] For an account of the relation between these phenomena (though his dating is too low), see Zellig Harris, *The Development of the Canaanite Dialects* (1939), *passim* (see his Index under 'Stress').

[29] See JBL LXIII (1944), 216, n. 54.

[30] In Canaanite and Phoenician, *qdšm* has the same meaning as *'elm*, 'gods', and in later Hebrew it became 'angels' like *'ĕlîm*. The LXX preserves the original plural. See F. M. Cross, Jr., and D. N. Freedman, JNES XIV (1955), 247, n. 35.

The first phrase appears as a single beat, *mî-kāmôkā*, in Classical Hebrew, but a little before the time of Moses it was still pronounced in two beats, *miya kamôka*.[31] The metric structure remained a bicolon with 3 + 3 beats, but the prototype was shorter; it may have run:

Who is like unto thee, O Baal?
Who is like unto thee among the gods?[32]

Here we have a typical Canaanite abc:abd sequence, such as we have seen so often elsewhere.

The oldest Israelite poetry of any length, judging from stylistic indications, confirmed by the content, is the Song of Miriam, which I should date in the thirteenth century B.C., preferably in the first quarter. It belongs to a wider category of triumphal songs (or hymns) which includes the long poems celebrating the 'victory' of Ramesses II at Kadesh, the triumph of Marniptah over the Libyans, and the victory of Tukulti-Ninurta I over the Cossaeans of Babylonia—all from the same century B.C. The general fidelity with which the Song of Miriam has been transmitted may be partly due to its popularity as a kind of Israelite national anthem. In the Song there are three instances of full repetitive parallelism (for traces of a fourth see below):

Thy right hand, O Yahweh, is fearsome in might,
Thy right hand, O Yahweh, has crushed the enemy.
(verse 6)[33]

[31] In Amarna, *miya* or *miya-mi* and in Ugaritic, *my, my-m* (so!).

[32] In Stratum F of Ḥamā, dating from about the thirteenth–twelfth century B.C., Harald Ingholt discovered a cylinder seal of the Cossaean period containing an invocation to the goddess Ishtar which ends with the words *'mannu išan(n)anki ^{d}Nin-Eanna'* (or *Bêlit-Ayakki*), 'who can rival thee, O Lady of Eanna?' (name of the temple of Ishtar at Erech).

[33] On the archaism *ne'dârî* see JNES XIV (1955), 245 f., which refers to previous work on the form. This is another example of an archaic North-west Semitic ending (see W. Moran, JCS IV, 169 ff.).

Who is like Thee, among the gods, O Yahweh?
Who is like Thee, feared among the holy (ones)?
(verse 11)

While Thy people cross, O Yahweh,
While the *people cross* whom Thou hast created.
(verse 16)

The first two represent the fully-developed 2 + 2:2 + 2 pattern ab:cd/ab:ef, while the third example follows a 3 + 3 abc:abd pattern. This is sufficient to indicate that full repetitive parallelism was still alive, though slightly modified in structure. Furthermore there is an instance of partial repetitive parallelism (ab:ac) in verse 3:

Yahweh is a warrior (?),[34]
Yahweh is His name.

The Song of Deborah may be dated about 1150, or a little later.[35] It shows marked deterioration in the form of repetitive parallelism since the Song of Miriam, though the somewhat fragmentary nature of the text-tradition may obscure an originally good example here and there. As it is, words are sometimes repeated in contexts where the poetic structure is not clear. Although there are some eighteen examples of repetitive parallelism in Judges 5, the resulting mosaic of patterns becomes very complex, consisting mostly of secondary imitations of the standard structures of the Bronze Age. In this respect the Song of Miriam is far more conservative in patterning. Both poems seem to have been composed in strophes, with alternating 3 + 3 bicola and several lines of 2 + 2 bicola,

[34] I have given the conventional translation of the Hebrew, but my long-standing opinion is that it meant originally 'He brings warriors (collective) into being ⟨through⟩ His name Yahweh'.

[35] All my dates have had to be raised by the recent demonstration (included in the revised edition of CAH) that Ramesses II became king in 1304 B.C., and that the date of Ramesses III's accession must thus be raised again to between c. 1200 and 1195 B.C. This means that my original arguments for a date c. 1150 stand and my subsequent dating about 1125 must be given up.

but it is not possible to reconstruct the inferred strophic structure with certainty.[36] The prevalence of the two-beat rhythm accounts in part, no doubt, for the decline of the older Canaanite tricolon pattern; the shift is perhaps due both to the development of lyric patterns in preference to epic and to the phonetic changes which we have described above. It should be added that the tricolon 3 + 3 + 3, with or without repetitive pattern, still dominates Canaanite magical spells from Egypt and Palestine in the fourteenth–thirteenth centuries B.C.[37]

The old normative abc:abd bicolon appears in Judges 5:30:

Spoil of dyed stuff for Sisera,
Spoil of dyed stuff embroidered.

The almost equally popular Canaanite pattern abc:bcd is found in 5:23:

For they came not *to the help of Yahweh,*
To the help of Yahweh sending their warriors.

Note also the very ancient pattern in 5:12, which continued in occasional use long after the repetitive style had otherwise vanished:

Awake, awake, O Deborah,
Awake, awake, chant a song!

Repetitive patterns in 2 + 2 beat are quite common, as in 5:3: '*Even I* to Yahweh *Even I* will sing!' Just as in the Oracles of Balaam and the Song of Moses, etc.,

[36] In my paper, JPOS II (1922), 69 ff., I reconstructed the Song of Deborah as 3 + 3 followed by 2 + 2:2 + 2, or 2 + 2:2 + 2:2 + 2, with the latter predominating. In my own unpublished reconstruction the Song of Miriam seems to follow a somewhat similar plan, but Cross and Freedman (*loc. cit.*) have proposed a much more irregular reconstruction in which most cola have only two beats. More work will be needed on the verse structure of the poem.

[37] See Helck, BAeV, pp. 580 f., and my article in BASOR 173, 51 ff.

such repetition of single words in different patterns becomes dominant; sometimes there is only one such repetition and sometimes the single word recurs in different positions through a series of cola. It is noteworthy that not one instance of repetitive parallelism occurs in the list of tribes in verses 14 to 18. This style was perhaps foreign to Israel when such descriptions were being composed. On the other hand we find assonance replacing strict repetitive parallelism in verses 2, 6, 19, and especially 30.

The Oracles of Balaam (c. 1200 B.C.)[38] contain one perfect example of a repetitive pattern familiar from Ugarit (abc:acb′):

> *And* Edom *shall be dispossessed,*
> *And dispossessed shall be* Seir. (Num. 24:18)

There are also five instances where one word (one accentual unit) is repeated in parallelism, e.g.:

Utterance of Balaam who is Beor's son,
Utterance of the man whose eye is true. (Num. 24:3, 15)[39]

[38] This date may have to be raised; it is based primarily on recognition of the fact that Num. 24:23 refers to events connected with the irruption of the Sea Peoples, presumably between the first great invasion of the south-eastern Mediterranean about 1234 B.C. (revised CAH chronology) and the date of the decisive occupation of the seacoast of Palestine by the Philistines and their allies. Since my article in JBL LXIII (1944), 207–33, important new material on Balaam has come in from the Idrimi stele. Here we have the first occurrence of the already known Egyptian name *'Amaw* as cuneiform *Amau* (genitive *Amae*); see BASOR 118 (1950), 15 f., n. 13. That the city of Emar on the Euphrates was in the land of 'Amau is not certain but probable. The first location of Emar by G. Dossin at Meskene on the basis of the Mari texts has been corrected by A. Goetze in BASOR 147 (1957), 22 ff., to a location half-way between Meskene and Carchemish (see also JCS XVIII [1964], 115 f.). This new location is close to the site of ancient Pitru = Pethor, home of Balaam in the land of 'Amau (according to the Hebrew consonantal text, confirmed by LXX).

[39] This slight modification of Wellhausen's 'whose eye is perfect' is confirmed by the first Arslan Tash incantation; see my remarks in

In four instances part of an accentual unit is repeated, especially an emphatic negative, e.g.:

For there is *no* omen against Jacob,
And *no* spell can work against Israel. (Num. 23:23)

Lastly we find a group of oracles where the repetitive style is entirely absent (Num. 24:20–24); the oracles may originally have been unconnected items reported from the Negeb, where the three peoples in question still existed in the Late Bronze Age. The third of these oracles, verses 22–3, may well go back to Balaam's time.[40] In 23:8, 10, 20, and 24:4, 7, 10, etymological assonance has clearly begun to displace the older repetitive type, which now seems to be limited to a few specific words. Examples of etymological assonance are:

How shall *I curse* whom El *hath* not *cursed*,
How *shall I doom* whom Yahweh *hath* not *doomed*? (23:8)

Blessed is he who doth bless thee
And cursed is he who doth curse thee! (24:10)

JBL LXIII (1944), 216, n. 56 (with references to my own previous study and that of T. H. Gaster).

[40] My present interpretation of this oracle of Balaam differs somewhat from my first translation, *ibid.*, pp. 222 and 226. We must replace the lost three words at the beginning of verse 23 from the Greek, taking the variant 'Gog' (Num. 24:7) as probably the best reading, and recognizing as I have for a number of years that *Aššûr* in this verse is not Assyria but is a synonym of *'Eber*. We may then follow my previous rendering of 23b and 24a but accept the Masoretic text of the rest of verse 24, with the following translation: 'And he saw Gog and delivered an oracle about him, saying,

The isles shall be gathered from the north
And ships from the farthest sea,
And they shall harass Aššûr and harass 'Eber,
But he (Gog) will perish forever.'

Gog refers, of course, to the northern barbarians, Amarna *Gagāya*. *'šr* is a synonym of *'Eber* and perhaps means 'caravaneers', lit. 'walkers' (collective); cf. my remarks in the Alt *Festschrift* (Tübingen, 1953), pp. 10 f., on the plural, *Aššûrîm*, which seems to have this meaning. For the date, see n. 38 above.

In the so-called Blessing of Moses (Deut. 33), Levi is very much in favour. Since the Levites were most popular before the Fall of Shiloh, we may infer that Deut. 33 must have been composed before the shrine fell. After the Fall, when the tabernacle lay in ruins and the priests had been slaughtered,[41] Samuel, as the new religious leader of the people, disregarded the Levites. Our inference is that Deut. 33 was composed about the middle of the eleventh century,[42] and its ascription to Moses presumably arose from the specific mention of him in verse 4.

There are three instances of one-word repetitive parallelism in the poem. The same word occurs at the beginning of several cola in verses 13–16: 'from the abundance of'. A single word is also repeated in verse 17b as well as in verse 26, where Cross and Freedman have restored a colon:

Who rides the heavens mightily,
Who rides gloriously the clouds.[43]

Paronomasia is found in verses 6 and 17, e.g.:

Let Reuben live, *let him* not *die*
Although *his men* be few.

In verse 8 there are two striking examples of the *figura etymologica.* We conclude that by this stage repetitive parallelism had become rare, and that paronomasia was being deliberately cultivated in different ways.

Deut. 32 probably dates from about 1025 B.C., well after the Fall of Shiloh.[44] It contains very few instances

[41] For this see Ps. 78:64 and Eissfeldt's convincing interpretation of the passage in *Das Lied Moses . . .* in *Verh. Sächs. Acad. Wiss. Leipzig, Phil.-hist. Kl.* 104, 5 (1958), 26–41.

[42] See Cross and Freedman, JBL LXVII (1948), 191 ff.

[43] See Cross and Freedman, BASOR 108 (1947), 6 f.

[44] See Eissfeldt, *op. cit.* (n. 41), and my discussion in VT IX (1959), 339–46.

of repetitive parallelism. In verse 2 both of two prepositions in the first colon are repeated in the second:

Like fine rain *on* the grass,
Like showers *on* the herbs.

Verse 6 repeats the pronoun

Is not *He* thy father who created thee?
He who made thee and formed thee?

The repetition in verse 14 is very likely a case of (vertical) dittography. However, in verse 17 the MT conceals a good example preserved by the Greek:

Gods whom they *know not*,
(And) whom their fathers *knew not*.[45]

Another parallel that I should restore from the Greek and a Qumran fragment[46] is at the beginning of verse 43:

Rejoice with Him, O heavens,
And bow before Him, O sons of God!
Rejoice with His people, O nations,
And honour Him,[46a] all sons of God!

In verse 39 the first personal pronoun is repeated four times:

Behold now, *I* am *I*,[47]
And there is no other God than *I*;
I kill and restore to life,

[45] See Albright, *ibid.*, p. 342, for the text.

[46] See *ibid.* for my latest treatment. The Qumran text was published by Patrick W. Skehan, BASOR 136 (1954), 12 ff.

[46a] This colon is preserved only in LXX, where the verb *enischusatōsan* has remained obscure. Delbert Hillers has cleared it up (private communication, Nov., 1964) by pointing out that *enischuō* is used to translate Hebrew *kabbēd* in four passages in Genesis. He has also pointed out that the original Hebrew probably read *wa-yĕkabbedûhu kol-bĕnê-'ēl*. With this he properly compares Ps. 22:24.

[47] For this translation, which is absolutely certain, see VT [illegible] (1959), 342 f.

After I have smitten *I* heal,
And none can save from my hand!

There are nine indubitable cases of assonance. In one case phonetically similar words are set in parallelism (verse 22):

For a fire *is kindled* in my nostrils,
It *will burn* to lowermost Sheol.

In four verses a word appears in different forms, and in one verse (21) two words are so treated:

They set up a no-God *as My rival,*
They made Me angry by their follies;
So I *will set up* a no-people *as their rival,*
I will make them angry with a foolish nation.[48]

Assonance is also achieved by repetition of suffixes as in verse 6:

Is He not *thy* father who created *thee,*
He who made *thee* and formed *thee*?

We infer that Deut. 32 contains only echoes of true repetitive parallelism and that it dates from a time when assonance and paronomasia had become characteristic features of poetic style.

The Blessing of Jacob (Gen. 49) is favourable to Judah and Joseph, neutral towards Benjamin, and hostile to Levi; it should therefore date well after the Fall of Shiloh, but before the accession of Saul.[49] Its attribution to Jacob

[48] See *ibid.*, p. 344.

[49] Much confusion has been caused by mistranslation of Gen. 49:10, which must be rendered:

The (tribal) staff shall not depart from Judah
Nor the (tribal) chieftain from among his offspring.

In other words, this has nothing whatever to do (except according to later understanding) with the kingdom of David; it refers to the relative importance and stability of the tribe of Judah, protected on all sides by its mountainous terrain with steep ascents and deep gorges.

was presumably due to inference from verses 4 and 6 ff. Of five examples of repetitive parallelism, two are questionable (in verses 2 and 13), and one is still obscure (in verse 22). We shall limit ourselves to quoting two passages. Gen. 49:3:

Excelling in pride, and *excelling* in might.

In verses 25 f. we have virtually the same archaic oracle which we find in Deut. 33:13 ff.:

Blessings of the heavens above,
Blessings of the deep, which crouches beneath,
Blessings of breast and womb,
Blessings of thy father . . .[50]

Paronomasia abounds in the Blessing of Jacob, playing on the names of Judah (8), Dan (16), and Gad (19):

Judah, thy brothers *shall praise* thee,
Thy hand shall be on the neck of thy foes.
Dan shall judge his people.
Gad will be raided by raiders,
But he *will raid* . . .

Verses 3–4 offer a case of *figura etymologica*:

Excelling in pride, and *excelling* in might,
. . . those shall not *excel*.

In nearly every verse from v. 6 onwards, prepositions and suffixes are repeated, so that almost every bicolon has some element of assonance. Repetitive parallelism in the classic sense has, however, been virtually displaced by paronomasia throughout the Blessing of Jacob. And yet this Blessing contains some very archaic survivals from pre-Conquest days![51]

Some very archaic verse has been preserved as the

[50] The rest of the passage is defective, but 'blessings of' was repeated at least once more.

[51] Parade examples are Gen. 49:6 and 49:11. [See the Addenda.]

Song of Hannah (I Sam. 2:1–10). It is highly probable that it does go back to the time of Samuel, though rather to the end of his life than to its beginning. It is now possible to explain the final lines more appropriately:

> *It is Yahweh* who crushes His opponents,
> It is the Exalted One who thunders in Heaven;
> *It is Yahweh* who judges the ends of the earth,
> Giving power to His reign (!)
> As He lifts the horns (!) of His anointed one.[52]

Note that in Psalm 72, which may be about a century later in date, it is not Yahweh, but the king, who is said to reign as far as the ends of the earth. In the Song of Hannah the kingship belongs to Yahweh, just as it does to Baal in the Ugaritic epics. The very archaic poem Psalm 29 begins by assigning 'power' (using the same word *'oz*) to Yahweh.

The early date of the poem is indicated by several archaic features. God is referred to as *Ṣûr* ('Mountain'), as well as by Canaanite *'Alî* or *'Ēlî*, 'The Exalted One'. Repetitive parallelism may be found in verse 1 (but the Greek and Old Latin read 'my God' the second time):

> My heart rejoices *in Yahweh*,
> My horns (!) are exalted *in Yahweh*.

And once more there are a number of close parallels to

[52] The following changes are necessary in vocalization: Read an active for a passive form of the verb in the first colon. The first word in the second colon has been correctly explained by Nyberg as an appellation of Yahweh, 'the Exalted One', which also appears a number of times elsewhere in the Bible and is an appellation of Baal in the Ugaritic epics. The last word in the fourth colon must be vocalized *molkô*, 'his kingdom', as often elsewhere in the Bible as well as in Ugaritic and Phoenician. The second word of the fifth colon must be vocalized *qarnê*, i.e., dual instead of singular; it is an old metaphor representing the king as a wild bull. These are all archaic expressions whose meaning was often forgotten in later times.

the Song of Moses; Deut. 32:31, 37 are recalled by verse 2:

There is no Mountain like our God

and verses 6 ff:

Yahweh kills and revives,
Sends down to Sheol and raises,
Yahweh dispossesses and enriches,
Abases, yes, and exalts.

A few poetic fragments are extremely archaic in structure. Exodus 32:18 is a tricolon (3 + 3 + 3)—see below:

Not the musical tones of triumph,
Nor the musical tones of defeat,
But *the* (*musical*) *tones* ⟨of intoxication⟩ I hear![53]

Judges 15:16 (in the story of Samson) reads (two bicola, 2 + 2/2 + 2):

With the jawbone of a donkey
Have I mightily raged,[54]
With the jawbone of a donkey
Have I slain a thousand men!

Here are two perfect examples of repetitive parallelism, both similar in form to passages from Deut. 32. The second in particular has the same repetitive structure as

[53] I have restored this tricolon with the aid of the Greek and Syriac texts. The word *'annôt* should be so vocalized in all three occurrences of the consonantal frameword, not both *'anôt* and *'annôt*, as in Hebrew. This is in full agreement with the Greek and Syriac. In the third colon the Hebrew text omits the word after *'annôt*, but Greek and Syriac insert it as 'wine' and 'sin', respectively. In the context we have the word *br'* or *pr'*, with doubtful vocalization, in the meaning of 'intoxication' or 'disorderly conduct'. The Greek uses the former meaning ('wine') and the Syriac the latter (= 'sin').

[54] The Hebrew vocalization is corrupt; vocalize *ḥāmôr ḥamartîm* but treat the final *m* as a normal enclitic and render 'mightily have I raged' instead of 'I have destroyed them'.

Deut. 32:43; it is characterized by assonance and word-play very similar to what we find in the Blessing of Moses (see below); the stem *ḤMR* appears four times in three different forms and meanings. Both these poetic quotations must date originally from between the thirteenth and the eleventh centuries.

A survival from more ancient times is to be found in II Kings 13:17:

A good omen of victory for Yahweh!
A good omen of victory over Aram!

This is a belomantic formula of obvious antiquity, as has been demonstrated by S. Iwry.[55]

Again, in Hosea 12:13–14 we read (3+3:3+3?):

For a woman did Israel serve,
And through a woman was he preserved ⟨from his foes (?)⟩;
Through a prophet was Israel brought up (from Egypt),
And through a prophet was he preserved ⟨from his enemies (?)⟩.[56]

The two women were, of course, Rachel and Deborah or Jael; the two 'prophets' were Moses and Samuel. This repetitive style, complex but regular in form, suggests the period of Samuel as a probable date of composition. More early material was quoted by the prophets than is commonly supposed.[57]

[55] See JAOS LXXXI (1961), 27–34, especially p. 30.

[56] On this passage cf. my *Samuel and the Beginnings of the Prophetic Movement* (Cincinnati, Hebrew Union College Press, 1961), p. 9. I have made some minor changes in the text in order to restore its approximate original form, which was certainly more poetic than it is in the extant text.

[57] In the eighth- and seventh-century prophets we seem to have much less re-use of old material than we have in the latest pre-exilic and the exilic prophets, where quotations from much earlier texts, otherwise lost, are by no means uncommon—especially in Second Isaiah and Habakkuk. A clear case of prophetic re-use of older material is found in the oracles against Moab in Isaiah

Four poems attributed to David represent the next stage in the development of early Israelite verse. In David's lament over Saul and Jonathan (II Sam. 1:18–27) repetitive parallelism of single words still appears in three places (verses 20, 21, 26):

> *Lest the daughters of* the Philistines rejoice,
> *Lest the daughters of* the uncircumcised exult.
> For there was defiled *the shield of* the heroes,
> *The shield of* Saul, not anointed with oil.
> More wonderful was thy *love* for me
> Than the *love* of women.

Assonance appears in occasional repetition of unaccented negative particles, conjunctions and suffixes. There is a play on words at the beginning of verse 20: *'Tell it* not in *Gath.'* As might be expected in a lyric poem, we find a refrain: 'How have the mighty fallen!' and its archaic flavour is illustrated by the fact that it appears as the first element of more than one bicolon, in this respect like some of the earlier passages quoted above.

The last words of David in II Samuel 23:1–7 open with the Balaam formula, 'The oracle of . . .', in similar parallelism: 'The oracle of Balaam/David, son of Beor/Jesse// The oracle of the man . . .' One word is also repeated in parallelism in verses 3b, 4a, 5b, 5b–6. A single example of *figura etymologica* seems to occur in the last line. Confirming the antiquity of the poem, which the high ratio of repetitive parallelism would lead us to assume, is the use of the word *Ṣûr*, 'Mountain', for God (verse 3), which appears some eight times in Deut. 32.

Ṣûr is also used four times in our next poem (II Sam. 22 = Psalm 18); we must naturally include *Ṣûrî*, 'my God',

---

15–16 and Jeremiah 48, which are both probably adapted from a single ninth-century prototype. An earlier prototype has been suggested, but stylistic criteria are strongly opposed to an earlier date. In JBL LXI (1942), 119, I suggested that the original poem dated about 650 B.C., when Moab was inundated by nomad hordes. But this has become less and less probable.

among occurrences. In verse 47 its repetition in the Massoretic text is probably not original, since its second occurrence is *extra metrum*, and in fact does not appear in Psalm 18 (= II Sam. 22). The latter, together with the Greek and Syriac, also testifies against the repetition of 'I called' in verse 7. This leaves only one good case of repetitive parallelism, found in verse 32:

For *who* is a god, *except* Yahweh?
And *who* is a Mountain, *except* our God?

Assonance appears in several places, notably in verses 8, 11, and especially verses 26–27, where we can quote three good cases of *figura etymologica*:

With *the faithful He deals faithfully,*
With *the man of integrity He deals with integrity,*
With *the pure He deals purely.*

I date the composition of II Sam. 22 in the tenth century B.C., in agreement with the tradition; Cross and Freedman have shown that it is no later than the eighth century.[57a]

Psalm 78 is another archaic poem, as shown by Otto Eissfeldt.[58] The historical review in verses 9 ff., 56, comes down only to the Philistine destruction of Shiloh, ending with the rejection of Joseph–Ephraim and the establishment of David's kingship in Jerusalem. There is only one clear case of repetitive parallelism (verse 8):

A generation obstinate and rebellious,
A generation which did not make its heart true.

Occasionally we are strongly reminded of still earlier poems; for example, Deut. 32:16, 21 are recalled by verse 58:

They made Him angry with their high places,
And with their idols they made Him jealous.

[57a] F. M. Cross, Jr., and D. N. Freedman, 'A Royal Song of Thanksgiving: II Samuel 22 = Psalm 18', JBL LXXII (1953), 15–21.
[58] See Eissfeldt (n. 41), pp. 26 ff.

There are several reminiscences of Ex. 15, e.g., in verse 54:

> And He brought them to His holy mountain (!),[59]
> The mountain which His right hand had created.

Psalm 68 offers a valuable supplement to the data which we have sketched, since it contains material going back into pre-thirteenth-century North-west Semitic tradition, as well as matter which can be dated in the thirteenth–twelfth and eleventh–tenth centuries B.C. Until 1951, when I published my detailed study of this chapter based on the analogy of the ancient Oriental catalogues of incipits, it had proved quite impossible to treat the 'Psalm' as a unified composition.[60] My approach was widely rejected because of its novelty, but during the past fifteen years we have learned a great deal more about such catalogues, which include a Yale tablet copied as early as about 2000 B.C. We also possess new Ugaritic texts of liturgical character,[61] with similar incipits, and it has become possible to make some improvements over my then-suggested renderings. It is now certain that a number of incipits are taken without significant modification from 'Canaanite' sources already available to us in Ugaritic: e.g., verses 5, 6, 14b, 23, 34. There are a number of passages in which Canaanite divinities are explicitly or implicitly mentioned, or where a similar source is highly probable. There are also verses referring explicitly to the background of Sinai and Transjordan, as well as to

[59] This is a clear reminiscence of Ex. 15:17, which is itself an equally clear reflection of passages in the Baal Epic. On the passage in Ex. 15 see Cross and Freedman, JNES XIV (1955), 249 f. For Ugaritic *gbl* 'mountain' see G. R. Driver, CML 146, n. 28 and M. Dahood, *Mél. Eugène Tisserant* I (Rome, 1964), 86.

[60] See my studies, HUCA XXIII (1950–1), 1–39 and the Mowinckel *Festschrift* (Oslo, 1956), pp. 1 ff. Since these treatments appeared there have been a number of corrections and confirmations of individual proposals of mine; cf. n. 62.

[61] E.g. PRU II, Nos. 1 and 2, pp. 3 ff.

the days of the Conquest of Canaan and the period of the Judges (e.g., verses 2–3, 13–14, 15, 28); other passages belong to the time of the United Monarchy (e.g., 19, 30, 32, and perhaps others). While early poems need not have repetitive parallelism, it is always gratifying to find archaism in content combined with archaism in form. Three incipits in particular stand out; two of them require new translations in the light of advancing knowledge: Psalm 68:23:

> The (primordial?) Serpent *I have muzzled,*
> *I have muzzled* the abyss of Sea![62]

Psalm 68:13:

> (When) kings (and) armies *fled in disorder,*
> (When) *fled in disorder* (. . .),
> In the tent camps the spoil was divided.[63]

Psalm 68:17:

'O mountains of God,	*Mountains of Bashan,*
O domed (?) *mountains,*	*Mountains of Bashan,*
Why do ye . . . (?)	*O domed* (?) *mountains,*
Mountains which *God* wanted	For His habitation!'

From Psalms 22 (II Sam. 18), 78 and 72 on through the pre-exilic period most Psalms, like most prophetic verse, eschew repetition and endeavour to vary the wording as much as possible. There are, of course, exceptions in such clearly archaic verse as Psalm 29 as well as in older material in Habakkuk and the other prophets, but in general it is not until exilic times that we have a renaissance of archaism in poetic style. The composers of the *Šîrê ham-Ma'alot* (Psalms 120–134) felt the effect of the ancient repetitive style, but obviously had no clear idea how to imitate it. Naturally, the results, though often impressive, had little or nothing in common with the ancient formulas

[62] See M. Dahood, JBL LXXX (1961), 270 f.

[63] The discovery that in the Mari texts the North-west Semitic word *nawûm/nawêm* meant 'camp' requires a change from 'meadows' to 'tent camps'.

except word repetition. Similarly, the scribes of Shamash-shum-ukin wrote incredibly bad Sumerian in the seventh century B.C., and in the sixth century the scribes of Nebuchadnezzar had no idea how to use the old Babylonian case-endings which they tried to imitate. During the Early Iron Age, then, we can trace the gradual abandonment of repetitive parallelism, and a tendency to substitute various forms of assonance and paronomasia. Used in conjunction with other lines of evidence, these two factors serve as valid criteria for dating verse reputed to have been composed, or suspected of being composed, in the eleventh century or earlier.[64]

D. THE JE COMPLEX

The state of documentary analysis in the field of Old Testament studies has been changing rapidly during the past decade, though many specialists fail to recognize the fact. Until the discovery of Cave IV at Qumran, in September 1952, there was no evidence except the Nash Papyrus for a really divergent Hebrew text of the Bible; this fragment was thought by some to be a kind of amulet with conflate text, which did not reflect a uniform older recension.[65] Since the serious study of the innumerable fragments from Cave IV at Qumran began in 1953, the existence of widely divergent recensions of the Hebrew text of the Old Testament has become certain. I discussed the evidence available to me in 1955,[66] and Frank M. Cross, Jr., presented it on the basis of much more extensive material in 1958.[67] It is now demonstrated that the

[64] See my remarks in the Mowinckel *Festschrift* (1956), pp. 6 ff.
[65] JBL LVI (1937), 145–76.
[66] BASOR 140, pp. 27 ff.
[67] Frank M. Cross, Jr., *The Ancient Library of Qumran* (New York, 1958), pp. 124 ff., 140 ff. The most important subsequent development has been the increasing recognition by Cross of the importance of the Lucianic recension, which goes back to an Old Palestinian prototype.

recensional differences between the Hebrew and the Greek texts go back in principle to different Hebrew recensions antedating the Hellenistic period. Nearly all of the more striking differences between Hebrew and Greek may now be explained by recensional divergences between the Hebrew prototypes, and only rarely by inner Greek corruptions arising between the third–second centuries B.C. and the fourth–fifth centuries A.D.

The discovery of relatively wide limits of textual variation antedating the third century B.C. makes the minute analysis of the Pentateuch which became fashionable after Wellhausen completely absurd. While it is quite true that there is less evidence for recensional differences in the Pentateuch than there is, for example, in Samuel–Kings, there is already more than enough to warn against elaborate hypothetical analyses and against finding different 'sources' and 'documents' wherever there appears to be any flaw or inconsistency in the received text. Such a subjective approach to literary-historical problems was always suspect and has now become irrational. The distribution of short passages and often of single verses among various independent strands of tradition has generally been gratuitous. We shall illustrate below, with two detailed examples, how exaggerated recent analysis has been. Both these examples contain matter hitherto distributed between J, E, and P, or other sources related to them. As a matter of fact, the material is so homogeneous and yet so archaic that we can safely refer it to the J complex put together from verse and prose tradition in the tenth century B.C.[68] E is merely a northern

[68] It is scarcely possible that the date for the composition of the original J history is later than the tenth century, because the secondary E tradition shows strong indications of being an official recension of it intended for the Northern Kingdom and therefore hard to date much later than the disruption of the Monarchy. Besides, wherever we have J material which can be used for dating purposes, a date under the United Monarchy becomes highly prob-

recension of J (or of part of it) dating from the century following the Division of the Kingdom (c. 922 B.C.).[69] We shall return to this point below.

There can be no doubt that nineteenth-century scholarship was correct in recognizing different blocks of material in the Pentateuch. D must stand as the 'Second Law' regardless of hypotheses about its origin and date. P remains a repertory of cultic tradition whatever its date and origin, and remains more closely related to E than to J. And the narrative sources J and E clearly reflect two different, though closely related, bodies of material. The great importance of the two chief divine names in distinguishing them has not been diminished by the finds at Qumran. J. Skinner's demonstration that MT and Samaritan agree in the use of the names *Yahweh* and *Elohim* over 97 per cent of the time, remains a convincing answer to those scholars who reject the Documentary Hypothesis *in toto*.[70]

---

able. An argument which I have often advanced in the past is that such J material as the Oracles of Balaam was transmitted in the defective orthography of the tenth century before *waw* and *yod* began to be used as vowel letters in final position. That this was the case at that time we know from the early Phoenician inscriptions as well as from such Israelite texts as the Gezer Calendar.

[69] We owe recognition of this fact to the combined work of P. Volz, W. Rudolph, M. Noth, and S. Mowinckel. I came to adopt this point of view only about a decade ago (after following R. Kittel for decades), but did not publish anything on the subject until 1963 (CBQ xxv, 9 ff.). See especially Rudolph, *Der 'Elohist' von Exodus bis Josua* (BZATW, No. 63, 1938); Noth, *Ueberlieferungsgeschichte des Pentateuchs* (Stuttgart, 1948), pp. 40 ff. and *passim*; Mowinckel, *Erwägungen zur Pentateuch-Quellenfrage* (Oslo, 1964), pp. 59–118; *Tetrateuch-Pentateuch-Hexateuch* (BZATW, No. 90, 1964), *passim*. In my opinion, Mowinckel is correct in emphasizing the continuity of oral tradition after the appearance of J, but wrong in supposing that all the historically significant E matter came from J. My position is, therefore, closer to that of Noth than to that of Mowinckel.

[70] Since 1937 I have pointed out that the script in which the Samaritan Pentateuch and other documents were written was not a

The first real break in the deadlock which has stopped debate on the origins of J and E came with the publication of Robert G. Boling's paper, '"Synonymous" Parallelism in the Psalms', in 1960.[71] In this study he investigated the structure of poetic parallelism in the Psalter, basing his approach on a still unpublished thesis of Moshe Held, *Studies in Ugaritic Lexicography and Poetic Style*.[72] Ugaritic poetry is characterized, as we have seen, by fixed pairs of synonyms or related words appearing in parallelism. The first, Held and Boling call 'A-words'; they were common in prose and enjoyed a preferred sequence over 'B-words', which usually only appear in verse. In early Hebrew verse the rules of parallelism were originally nearly the same, and such differences from Canaanite as occur in the earliest Biblical poems are clearly due to the fact that Ugaritic poetry was considerably older, as a rule. In most of our extant Psalter we have much variation from the original norms, because of the considerably later date of most Psalms. Where standard metrical schemes were followed, a more or less fixed pattern of word order prevailed, words in A position enjoying a privileged status relative to words in B position.[73]

Boling has carefully compared the occurrences of *Yah-*

---

continuation of the pre-exilic cursive, but was an archaistic revival in Hasmonaean times, presumably during the subjugation of Samaria to the Jews in the late second and early first centuries B.C. See FSAC (1940 ed.), pp. 266 and 336. This late date has been confirmed by the analysis of palaeo-Hebrew scripts in the Hasmonaean age by Frank M. Cross, Jr., and Richard S. Hanson; see the latter's paper in BASOR 175 (1964), 26–42 especially p. 42. Once the two recensions had separated, they did not influence one another again.

[71] JSS v (1960), 221–55. This is a condensation of his unpublished Johns Hopkins dissertation (1959).

[72] Unpublished Johns Hopkins dissertation (1957).

[73] There is a remarkably regular shift in A and B words between Bronze-Age Canaanite and Iron-Age Hebrew.

weh and *Elôhîm* in the Psalter. In the so-called Elohistic Psalms (42–83) we have the following relation:[74]

	A	B
Eloh(im)	30	3
Yahweh	5	11

In all the remaining Psalms (1–41, 84–150) we have the following relation:

	A	B
Yahweh	77	7
Eloh(im)	6	27

Where divine names occur in texts transmitted independently in different contexts (e.g., Psalm 40:17 = 70:5), each following a different stylistic preference, the order is reversed. Finally, a comparison of counts of all occurrences of the divine names in question in the Psalter yields the following table:

	J Psalms	E Psalms
Yahweh	584 (86·1%)	45 (17·6%)
Eloh(im)	94 (13·9%)	210 (82·4%)

In other words, we have not only a stylistic preference for a fixed order in both groups, but we have also five or six times as large a number of occurrences of the preferred divine name in each group, the ratio being about the same (inverted) in each. This leaves little room for doubt that the source of preference for one divine name over the other is the same in JE as in the Psalter. The time has passed when most of the Psalter was unceremoniously relegated to post-exilic and Hellenistic times; there is no good reason to date any of the Psalms after the fifth–fourth centuries B.C. and most of them are probably pre-exilic.

Reconsideration of the origin of the J and E narratives

[74] See Boling's analysis, JSS v (1960), 248–55, which I have reproduced in CBQ xxv (1963), 3.

in the light of the foregoing material indicates that a new approach is necessary. In the light of Boling's material, interpreted according to the evidence now available for much higher dating of archaic Israelite verse, we are forced to look for an earlier origin of the alternation between J and E. Re-study of the Pentateuchal poems composed between the Exodus and the establishment of the Monarchy makes it clear that Ex. 15 is essentially 'J', while the Oracles of Balaam in Num. 23–24 are essentially 'E'; Deut. 32 and 33 (Song of Moses and Blessing of Moses, both from about the middle of the eleventh century) are rather 'J' than 'E'; Gen. 49 (Blessing of Jacob, late eleventh century in its present form, but with much earlier material) is uncertain. The Song of Deborah (Judg. 5) is definitely 'J'.

Starting probably as a liturgical formula among the Hebrews (or possibly the Midianites),[75] *Yahweh* was adopted by Moses as the official name of the God of Israel and gained ground rapidly, being employed by Joshua in forming his Yahwist name, and appearing twice among the names of the family of Gideon (twelfth century). It may, accordingly, be supposed that the Song of Miriam and the Oracles of Balaam (probably from the early and late thirteenth century, respectively) also reflect rapid adaptation of the new monotheistic terminology to traditional poetic usage. In Ugaritic poetry we find constantly recurring parallelism between different names or appellations of the same divinity (e.g., *Athirat* and *Qudšu*, *Aliyan Baʿlu* and *Zubulu baʿlu ʾarṣi*) or of different deities. In Mosaic Israel only a single God could appear: thus, in the Balaam Oracles, we have *El* and *Šaddai* in parallelism. Similarly, *Yahweh* replaced *Baʿal* (or a synonymous appellation) in Yahwistic poems, while El names (*El-šaddai*, etc.) were replaced by *Elôhîm*. It is

[75] See my discussion in JBL LXVII (1948), 377–81 and D. N. Freedman, 'The Name of the God of Moses', JBL LXXIX (1960), 151–6, as well as Frank M. Cross, Jr., in HTR LV (1962), 250 ff.

not surprising that *El* and *Elôhîm* tended to be more popular on the edge of the desert, where El names long remained dominant as a heritage from early times.

The following synopsis reflects my present views: When the ancient traditions in verse and prose were collected in the tenth century B.C., a paraphrase was made in prose, with *Yahweh* dominant throughout, but after the Division of the Monarchy this was replaced in the North by an E redaction, as normal alternative (in keeping with the Northern tendency to archaize). About the early seventh century B.C. a new edition of the early narrative tradition was prepared, which took J as its basis, supplementing its narrative by divergent material from the E recension.[76] From the tenth century onwards there were, accordingly, definite 'scribal' schools which preferred one or the other of the divine names in position A. In composing religious poetry, we find similar priorities, which are illustrated by the J and E Psalters; the latter must have been re-edited as late as the seventh century B.C., when 'Elohim' replaced Yahweh in hymns referring specifically to Jerusalem as the Holy City.

There are several bodies of material in the Pentateuch which are clearly homogeneous, though usually considered as highly composite. Among them are particularly the account of the march from Rameses across the 'sea' into the desert (Ex. 12–14, Num. 33—where a common original text can be easily reconstructed with the aid of the LXX),[77] and a group of narratives referring to the Kenites. Systematic comparison of MT, LXX (particularly in Judges), and new Qumran material in such books as Exodus, Deuteronomy and Samuel, show that there has been much shortening of originally longer text by haplographies of all kinds, including especially *homoio-*

[76] See notes 68 and 69 above.

[77] The method employed here is closely parallel to that used in my study of the two recensions of the list of Levitic cities; see below, n. 78.

teleuton and *homoioarkton*. There is less evidence than might have been expected for conflate readings and virtually none for late glosses. Scribes and reciters from memory were clearly conscientious in not adding to the text, though humanly fallible in dropping words, letters, phrases and even whole passages. In Judges we have such striking recensional differences between the A and B recensions of LXX that we must recognize the existence of lost Hebrew prototypes for most of the differences. In their way these LXX recensions are as valuable for reconstructing the Hebrew original as the different Qumran recensions of I Samuel, in which the combined evidence of Qumran, LXX and MT makes it possible to restore, with a high degree of probability, a substantially longer original.

After presenting these two examples of a common prose source, with poetic quotations, which have hitherto been attributed to several different documentary sources, I shall illustrate the heavy indebtedness of historical tradition to orally transmitted poetic saga. The supposed independent confirmation from different sources (J, E, P), which we seem to have lost, we regain with compound interest when we recognize the basic historical significance of archaic verse tradition.

The first of the two examples of a common source comes from the list of stations along the Exodus route in Egypt and immediately after crossing into the desert; it is preserved in Ex. 12–15 and Num. 33. The passages listing the stations in question have been distributed by leading critical authorities from Baentsch to Noth and from Carpenter to Cuthbert Simpson among at least three sources—and individual attributions vary enormously. Among the most recent, Cuthbert Simpson employs J_2, J_3, E_2, and P, besides various additional *sigla*. And yet the Hebrew lists differ among themselves little more than the Hebrew does from the Greek, or even than the A and B recensions of the LXX differ among themselves. Under

such conditions, one should look normally for recensional, not documentary, explanations of the divergences, especially when one observes that most variants can be easily explained as due to various simple types of scribal error. Here I recall my proof (1945) that the lists of the Levitic cities in Josh. 21 = I Chron. 6:54 ff. were two scribal recensions of the same written list and not distinct orally transmitted traditions, as thought by S. Klein.[78] My success was due to systematic application of the methods of Max Margolis to the Greek MS material, complemented by use of all then available data bearing on the history of occupation. Another important cause of scribal error in transmitting our lists of stations is the fact that they exhibit two types of epic material: prospective, or that in which a speaker tells what is to happen, or gives advance orders in detail; narrative, in which a speaker tells what happened or what was done. In the Ugaritic epics, especially in Keret, there are long doublets of this kind, and numerous obscurities have been cleared up and gaps filled by comparing prospective with narrative, and *vice versa*.

At the same time, the material from Cave IV at Qumran has proved that most of the Qumran Hebrew and LXX text of Samuel not found in Massoretic Hebrew is certainly or probably original; there has been a steady erosion of the text as passages with similar word-content have been dropped by copyists. In other words, we have few scribal glosses—the sacred text was exempt from such deliberate additions—but many inadvertent losses.

If we bear these principles in mind, and convert prospective passages into narrative, the basic text of the list of stations may be rendered *approximately* as follows:

And the children of Israel departed from Rameses to Suc-

[78] See 'The List of Levitic Cities' in the Louis Ginzberg Jubilee volume (New York, 1945), pp. 49–73, which was very well received by the late Peter Walters (Katz) and H. M. Orlinsky.

coth, and they encamped at Succoth (Ex. 12:37 combined with Num. 33:5);

And they departed from Succoth (to Othom), and they encamped at Othom on the edge of the desert (Ex. 13:20 = Num. 33:6);

And they departed from Othom . . . (Num. 33:7);

And they turned back towards (!) Pi-hahiroth, between Migdol and the sea, over against Baal-zephon (Ex. 14:2; Num. 33:7);

And opposite it they encamped by the sea (Ex. 14:2, 9);

And they departed from before Pi-hahiroth, and they passed through the midst of the sea into the desert (Num. 33:8);

And Moses caused them (!) to depart from the Sea of Reeds, and they went out into the desert of the Wall (Shur) . . . , and they came to Marah (Num. 33:8; Ex. 15:22).

In the midst of the condensed account in Exodus, we find the good poetic bicolon (3:3):

> Trapped are they in the land (Egypt),
> The desert has barred them in. (Ex. 14:3)

This quotation is so extraordinarily apt that one can scarcely doubt its antiquity. Our knowledge of the topography of north-eastern Egypt is now so precise that this reconstruction, based as it is on textual evidence throughout, is not likely to be appreciably wrong.[79] Of course, it lays no claim to be anything but an approximate condensation of a longer original, most of which has been irretrievably lost by the vicissitudes of oral and written transmission. That the original J text has come down to our Hebrew Bible through JE and P, I do not deny, but these are not in any sense independent sources, but

[79] My detailed analysis of the topographic material not yet published, is based on the Egyptian sources and on study of the terrain as it is today, as well as on a more precise linguistic approach to toponymy; for some preliminary observations see BASOR 109 (1948), 15 f. and the *Festschrift* Alfred Bertholet (Tübingen, 1950), pp. 1–14, especially pp. 12 ff.

rather very ancient recensions, all of which provide valuable clues in our efforts to reconstruct Biblical history.

Our second example of the homogeneity of material attributed by critical scholars since Wellhausen to different independent sources is the Kenite material in Exodus, Numbers and Judges.[80] As a result of the general misunderstanding of the nature of early Israelite historical tradition, a state of chaos continues to prevail among Biblical scholars with respect to the relation between Israel and the Kenites. The literary reflections of early Israelite oral tradition are confusing, since they appear to give three different names to the patron and father-in-law of Moses, who seems to be called Reuel, Jethro, or Hobab. The latter's affiliations are described as 'Midianite' and 'Kenite', a fact which seems to compound the difficulty.

The dilemma has been attacked with the aid of several techniques: (1) the texts can be harmonized, especially by giving *ḥôtén* a special sense, 'brother-in-law', when used of Hobab; (2) the different names can be assigned to different Pentateuchal documents: e.g., Hobab to J, Jethro to E; (3) Reuel (Ex. 2:18) can be considered secondary. Since Hobab (also Jethro, LXX B) is called a Kenite as well as a Midianite, it is often argued that the Kenites were a branch of the Midianites. But the problem is not solved by such superficial attempts to harmonize the text or by assigning variants to different sources. We must determine, if possible, the origin of the variations. While it is possible that there were different traditions about the name of the 'priest of Midian', it is wholly unnecessary to make this assumption. We need only analyse the texts and names in the light of modern knowledge in order to reach a reasonable solution of the present apparent dilemma.

As priest of Midian, Reuel is mentioned in MT only in

[80] See my discussion in CBQ xxv (1963), 3–9, which underlies the present treatment. For details consult the extensive material included there in footnotes.

Ex. 2:18, although this name has been introduced elsewhere in the recensions and is found almost exclusively in Josephus. In Num. 10:29 Reuel is stated explicitly to be the 'father' of Hobab. The name Reuel is clearly the clan name of Hobab, since in such early references to nomads the patronymic was usually a clan name. This name is actually preserved as that of a clan affiliated with Midian in the LXX of Gen. 25:3. Moreover, like many of these early tribal and clan names, Reuel also appears as a clan of the neighbouring people of Edom (Gen. 36, *passim*; I Chron. 1:35, 37). The situation here is similar to that of Kenaz and other groups, where a clan either shifts its tribal allegiance or is split into different parts, each of which becomes attached to a different group. Parallels in the tribal history of the Arabs are very numerous.

Accordingly, it is rather obvious that in Ex. 2:18, which mentions Reuel as the father of the daughters of Jethro (Ex. 3:1), we should read: 'And they (the daughters of the "priest of Midian" [v. 16]) came to ⟨Jethro⟩, son of Reuel, their father.' While this is not attested in any of the versions, it is most improbable that the original editors of the Pentateuch can have left such an obvious discrepancy standing. We may, therefore, eliminate the clan of Reuel as a competitor for the distinction of being the person intended to play the rôle of the priest of Midian, leaving only Jethro and Hobab to be considered.

Quite aside from the two distinct names, the rôles of Jethro and Hobab are entirely different. Jethro appears as an old man with seven daughters (Ex. 2:16), who advises his son-in-law from the wealth of his own experience (Ex. 18). Hobab, on the other hand, appears as a vigorous younger man whom Moses wants as a guide in the wilderness (Num. 10:29–32); the extant text assumes that Hobab did yield to pressure and act in this capacity. The antiquity of the passage—which is accepted by most critics—becomes even clearer when we note that a per-

fectly good poetic bicolon (3+3) is embedded in the words of Moses to Hobab:

> Thou dost know how we camp in the desert
> And thou shalt become our eyes.

We have only to change the vocalization from *ḥôtén* to *ḥătán* where Hobab is mentioned, and our difficulties vanish: render Num. 10:29, 'Hobab, the son of Reuel, the Midianite, son-in-law (!) of Moses.'[81] The fact that both Hobab and Jethro belonged to the clan of Reuel should cause no difficulty whatever, since the West Semitic nomads were as a rule endogamous; therefore one would expect Moses' son-in-law and father-in-law both to come from the same clan.

Although in Num. 10:29 Hobab is plainly identified as a Midianite, one may observe that elsewhere, in Judg. 1:16 and 4:11, Hobab is called a Kenite (*Qênî*): 'And the children of Hobab the Kenite, son-in-law (!) of Moses, went up from the Town of Date Palms (to dwell) with the children of Judah in the desert which is in the south of ⟨Judah, going down from⟩ Arad,[82] ⟨. . .⟩ and

[81] See *ibid.*, p. 7, n. 22, for the evidence.

[82] LXX B inserts in Judg. 1:16 . . . *Iouda hē estin epi katabaseōs Arad.* LXX A leaves out the first three words above but also inserts *epi katabaseōs Arad.* Since the word *katabasis* elsewhere translates Hebrew *môrād*, it follows that the Hebrew text read originally *be-môrad 'Arad*, just as we have *be-môrad Bêt-Hôrôn* (Josh. 10:11) and *be-môrad Ḥôrônaim* (Jer. 48:5). The haplography is so obvious that it is scarcely necessary to mention it. This reading disposes of the supposed conflict between the Hebrew text of the passage and the results of the excavation of the site by Yohanan Aharoni and Ruth Amiran, who have shown that Arad was not occupied between the early third millennium and the tenth century B.C. The Deuteronomic editor in the seventh century B.C. has been responsible for recent confusion. Either he or a precursor drew the natural inference that Arad was one of the Canaanite royal cities captured by Joshua (Josh. 12:14). This is on a par with several other reasonable inferences of his which happen to be wrong. On the other hand, this same editor has preserved several names of

they (!) went and dwelt with the Ama[lekites]. And Judah went with Simeon his brother and they defeated the Canaanite who resided in Zephath and devoted it to destruction, and they (!) called the name of the city Hormah' (Judg. 1:16f.). 'And Heber the Kenite left the Kenites who belonged to the children of Hobab, the son-in-law (!) of Moses' (Judg. 4:11). (Note that the changes of MT in angular brackets are from LXX A or B; the changes in square brackets are required by the context.)

It has long been recognized that *Qênî*, 'Kenite', is an occupational name derived from *qayn*, which meant originally 'metal-worker, smith', as in Aramaic and Arabic; the meaning is clearly preserved in the appellation of the third son of Lamech in Gen. 4:22, 'Tubal (the) smith, craftsman . . . worker in copper and iron.' Copper was extensively worked in Sinai from the third millennium on, and since there was more copper in Midian proper, the region east and south of the Gulf of 'Aqaba,[83] than there was in Sinai, we may safely suppose that copper working was just as ancient there. A passage in the 'Oracles of Balaam', which can scarcely be later than c. 1200 B.C., makes it clear that there was a metal-working tribe installed in the mountainous regions of Sinai or Midian at that time. From the two passages just cited, it is clear that metal-working was a speciality of the Midianite group among whom Moses settled. But it not necessary to connect the metal-working family of Hobab di-

towns captured by Israelites which are not preserved by any other source, so we owe a debt of gratitude to him for his effort not to miss anything. In my opinion, Zephath (later Hormah) was destroyed by the Israelites about that time; it is almost certainly modern Tell el-Milḥ south-east of Beersheba, where soundings have yielded remains of Middle and Late Bronze. For a different opinion, see B. Mazar in JNES XXIV (1965), 297–303, completed before my paper in CBQ appeared. Mazar's article contains important observations which would have been strengthened by use of the consistent LXX reading.

[83] On Midian see most recently my discussion, *ibid.*, pp. 7ff.

rectly to the reference in the 'Oracles of Balaam'. To summarize: Hobab, son-in-law of Moses, was a Midianite belonging to the clan of Reuel and a smith by profession. The apparent contradictions are the result of scribal errors and misunderstandings, and have been further exaggerated by the unnecessary conjectures of modern literary analysts.

E. THE HISTORICAL SIGNIFICANCE OF ARCHAIC HEBREW VERSE

In the following pages, I shall give some illustrations of the special historical significance of archaic verse in Exodus–Numbers. These will be followed by a few examples drawn from the Patriarchal narratives. The best cases come, however, from the Mosaic and early post-Mosaic tradition.

First let us consider Num. 12:6–8, which has been attributed by leading Pentateuchal scholars to J_1 (L), the oldest commonly recognized source:

Hear now the words of ⟨Yahweh⟩!

If there be a prophet among you,[84]
  In a vision I will make myself known to him,
    In a dream I will speak with him.
Not so is My servant Moses;
  Of all My household he is most faithful.
Mouth to mouth will I speak to him;
  ⟨Not⟩ in a vision and not in riddles,[85]
    But the image of Yahweh shall he see.[86]

[84] We must read, with Old Latin and Vulgate, *nābî' bākem* instead of *nĕbîākem*.

[85] We must prefix *lō'* ('not') to the colon; its loss is due to the fact that there are two other occurrences of *lō'* preceding and following in two successive lines. Incidentally, we should read *mar'eh* and not *mar'ah* in both cases.

[86] It is more than doubtful that the pointing *tĕmûnat* is correct. A more probable vocalization is simply *tamnît* (= *tabnît*), 'structure,

The archaism is clear from the stylistic resemblances (including some repetition) to passages in the Ugaritic Baal Epic. For instance, in both we find successive three-beat cola beginning with "In a dream . . . In a vision . . ." The important point is that here we can draw on an archaic verse account for a view of the relation of God to the prophets and Moses which antedates our extant prose tradition. A plausible conjectural date for the poem might be in the period of acute friction between priests and prophets in the time of Samuel (see Chapter IV).

The account of the Golden Calf episode of Ex. 32 is attributed by most critics to JE, with some earlier and later material distinguished. Actually it is very archaic and even totally unintelligible in places; it may not have been edited in approximately its present form until after the meaning of the text was no longer fully understood. Particularly archaic is the description (Ex. 32:20) of how the image of the young bull was destroyed, which shares three steps in progressive annihilation with the destruction of Death by the goddess Anath in the Baal Epic of Ugarit—each account using the same verbs, though in different order. The passages (verses 17, 22, 25) in which derivatives of a stem *BR'/PR'* seem to occur are almost wholly obscure. The tricolon (3 + 3 + 3) in 32:18 is especially significant—the repetitive part of it has been correctly preserved by LXX and Syriac, though with only imperfect comprehension (see above). In this fragment, just as in Ex. 15:11, two original beats had already been

---

form, image', especially since the same word may appear in Phoenician names as *Tbnt*, which is transcribed into Greek as *Tennēs* (probably from *Tennît*; see Ch. III on *Tnt.*). This word does not mean 'idol', nor 'similitude' or 'form', but rather an enveloping brilliance like Assyrian *melammû*, which made the presence of God known without permitting Him to be seen by mortal eye. LXX correctly renders the word *tmnt* as *doxa* and Syriac as *šubḥâ*. Note especially that *pānêkā* is in parallelism with *tĕmûnātkā* in Psalm 17:15. [See Addenda and Ch. III, n. 62.]

reduced to one by the loss of vocalic endings: *qôlu ghannôti* has become *qôl 'annôt*, literally 'the sound of music'. This suits a thirteenth-century date for the fragment very well; it may be contemporary with Ex. 15.

The Song of the Well (Num. 21:17–18) is another fragment going back to about the time of Moses. In it we seem to have a bicolon (2 + 2) followed by two bicola (3 + 3/3 + 3); the first line has been spoiled by the omission of a word and part of another word, both beginning with *'ayin*. The text is a play on the original meanings of the two place-names Beer and Mattanah, included in an early list of desert stations which are omitted from the P list in Num. 33:

⟨Sing⟩ about a well (Beer), Sing about it . . .
Well which the notables dug,
Which the leaders of the people sank;
From digging rock comes sustenance,
And from the desert (comes) a gift (Mattanah)![87]

This fragment goes back to the Mosaic period or very soon afterwards. Immediately before it comes another fragment (Num. 21:14–15), which cannot be reconstructed, though it is explicitly quoted from 'The Book of the Wars of Yahweh'. One sign of its antiquity is the insertion of the enclitic *mem* in the middle of a construct chain: *naḥalê-m Arnôn*, 'branch-wadis of the Arnon', like *hararê-m Śē 'îr*, 'mountains of Seir', in Gen. 14:6.[88]

[87] This archaic fragment has suffered at the hands of later oral and written transmission. The first colon should probably be read ⟨*'annu*⟩ *'alê be'er*. In cola 4 and 5 there has been some wrong division of words, and there has also been confusion between the two initial consonants of the first three words. In other words, restore the Hebrew as *bĕmō ḥqq miš'enet* (cf. Is. 3:1, *'all miš'an* of bread and all *miš'an* of water); the sixth colon then begins with *ū-bĕmō midbar mattānah*. Here is naturally a play on the meaning of the place-name *Mattānah*.

[88] This syntactic construction appears not infrequently in Ugarit and Amarna; more examples are being found all the time in biblical poetry or prose derived from poetry; see provisionally Albright,

Turning back to the Song of Miriam, with which we dealt above solely from the standpoint of its exceedingly archaic style, it must be emphasized that we not only have indications of great age in the prosodic structure, but we also have numerous survivals of Bronze Age grammatical phenomena, as well as allusions to ancient Canaanite poetry. For instance, in Ex. 15:17–18 we have a series of direct quotations from Canaanite sources, including especially the reference to 'the mountain of Thine inheritance, O Yahweh'—where 'Yahweh' replaces 'Baal'. In the light of this relationship, the often defended post-exilic date sounds absurd, to say the least.[89]

We can dispose of two alleged anachronisms without too much difficulty. In verse 8 we read (2+2/3+3):

By the breath of Thy nostrils The waters were heaped up,
They were raised like the dykes of the irrigators,
The deeps were curdled[90] in the midst of the sea.

The word *nēd*, for *nidd*, Arabic *nadd*, 'piled-up earth or sand' (also in Psalm 78:13),[91] refers to the raised banks of earth or sand (levees) which were thrown up along irrigation canals and ditches in order to prevent their water from escaping. In Egypt it was perfectly natural to employ such an allusion, and there is not the slightest reason to consider its use in the Song of Miriam as secondary to its use in the account of the damming up of the Jordan above the place where the Israelites crossed (Josh. 3:16). Exactly the reverse is true; the passage through the Sea of Reeds was so much more important than the crossing of the Jordan that borrowing must have

JBL LXIII (1944), 219, n. 83, and Horace D. Hummel, JBL LXXVI (1957), 99 ff. New examples are turning up constantly in Ugaritic.

[89] See the fuller treatment of the Song of Miriam above.

[90] In this connexion the translation 'congealed' is wrong, since *qp'* refers to churning of butter or curdling of milk and not to freezing, as there are no icy sheets of water in or around Egypt.

[91] Whether *nôzĕlîm* is correctly vocalized or not we cannot say; *nzlm* might mean either 'irrigators' or 'irrigation ditches'.

taken place along the normal stream of literary activity. Incidentally, the mixed metaphors in verse 8 are characteristic of North-west Semitic verse; cf. my comments elsewhere on the stylistically normal but illogical expressions used in Joshua's famous injunction to the sun and moon (Josh. 10:12), and in the Song of Deborah (Judg. 5:26), with Ugaritic parallels.[92] It was, accordingly, natural that the prose editor of Ex. 14:22 should understand the poetic tradition in the sense of walls of water standing on either side of the fleeing Israelites, whereas in Ex. 14:21, following independent tradition, he correctly explained the retreat of the water as caused by a strong east wind blowing all night before the Israelites crossed. In other words, all three descriptions are correct in essential respects: Ex. 15:8 in giving a vivid poetic description, entirely correct according to then prevailing stylistic norms; Ex. 14:21 in giving a factual account of what happened; Ex. 14:22 in translating vague poetic metaphors into literal prose at a time when the intentional vagueness of early verse was no longer understood.

One apparent anachronism in the Song of Miriam (verse 14) remains to be considered: the reference to the 'dwellers of Philistia', which employs the rare singular of the exceedingly common name 'Philistines', otherwise found only in a few late passages. Its location in the text immediately before the 'clans of Edom' and the '*êlê* Moab' is very strange.[93] Again the Oracles of Balaam

[92] On the proto-logical background of these devices, now so familiar from Ugarit, and their survival in the very oldest Israelite poetry, see HACH 95 f. It is interesting to note that all three passages were completely misunderstood by the empirically-minded Israelites of later times—in fact, in two cases (Ex. 14 and Judg. 4) an early poetic device has been misunderstood as a special cosmic miracle. A miracle was certainly involved, but it was historical rather than cosmic.

[93] Note that the translation of *êlê Mo'ab* is still very obscure. The rendering 'chieftains' is still the most likely, but it may refer to special social groups.

and the discoveries of Qumran come to our assistance. In the former we have a reference to 'all the *Bĕnê Šṯ*' in parallelism with a reference to Moab (Num. 24:17). An identification of *Bĕnê Šṯ* with the nomadic or semi-nomadic Shutu of the nineteenth century B.C., as well as with other groups of the same or a similar name, provides us with a clue.[94] If the original text in Ex. 15:14 read 'all the children of Shut' and *KL*, 'all', was accidentally omitted, it would be very easy to insert the letters *KL* (which in the cursive script of the seventh–sixth centuries B.C. looked almost exactly like *PL*) after 'dwellers', thus giving us the phrase 'the dwellers in Philistia', which MT actually has.[95] I have therefore no hesitation in proposing this emendation, though for the moment it must obviously remain hypothetical. At all events, it is no longer necessary to insist on an anachronism in this passage, which suits a thirteenth-century background so well.

For lack of space we shall not dwell at length on the period of the Conquest and the Judges, though there are a great many illustrations of the historical importance of archaic verse embedded in narrative prose. We have already discussed one of the best examples of true, though late, repetitive poetry quoted in prose context in the Story of Samson (Judg. 15:16).

The most archaic anecdote preserved in connexion with the capture by the Israelites of a Canaanite town is

[94] See my discussion in JBL LXIII (1944), 220, n. 89. Some new material has come in since, and the identification becomes more probable all the time. There is no evidence that the name of Seth son of Adam was in any way connected with this nomadic group, which may well have migrated into Transjordan from north-eastern Arabia. There is no difficulty in the equivalence of sibilants, since South-Canaanite *šin* (= Arabic *s*) was etymologically equivalent to Amorite *s*.

[95] Note that the last colon of v. 15 has *kol yôšĕbê Kĕna'an*, 'all the dwellers of Canaan', so *kol* might be expected in a similar position in v. 14.

found in Joshua 15:18–19 and Judges 1:14–15.[96] It does not seem to have been recognized in the past that this little story of Caleb's daughter Achsah's visit to her father on behalf of her husband, Othniel, is actually composed in scarcely disguised metrical form. While our extant fragment probably exhibits internal lacunae as it stands, it may be reconstructed roughly as follows:

And when she came, she urged him,
To ask tilled land from her father.

And she alighted from the donkey,
And Caleb said to her, "What's wrong?"
And she said to him, "Give me a blessing!
Truly thou hast given me Southland;
And now give me basins of water!"
So Caleb gave her
The upper basins
And the lower basins.

The alternation of a 3 + 3 tricolon with a 2 + 2 tricolon and the archaic forms *'illîyôt* (a *hapax*) and *taḥtîyôt* as well as the late repetitive style strongly suggest an early date, probably in the twelfth or eleventh century B.C.

How was this early verse transmitted? Undoubtedly in many different ways, but one kind of diffusion has been sadly neglected. As we shall see in Chapter II, the Hebrews first came to Palestine as donkey caravaneers, and we can trace this phase of their activity in Egypt down to the time of the Song of Deborah itself. In Palestine donkey caravaneering was still common at the time of the Amarna Tablets (fourteenth century B.C.),[97] and the

[96] For the identification of Debir (Kirjath-sepher) with Tell Beit Mirsim, see my essay in the forthcoming jubilee volume of the Society for Old Testament Study, *Archaeology and Old Testament Study* (ed. D. Winton Thomas). A much longer treatment of the topographical arguments will be found in the *Archaeological Encyclopedia* being prepared by the Israel Exploration Society.

[97] See the revised edition of CAH (II, ch. 20, published as a fascicle in 1966, p. 18) with the references cited there.

Hebrews probably took an active part in it until it was largely superseded by camel caravans about the eleventh century. The reference in the Song to the interruption of caravan trade at the time of Shamgar of Beth-anath almost certainly refers to the raids of the Sea Peoples, headed by the Philistines.[98] Verses 6–11 read as follows:

In the days of Shamgar ben Anath,
. . . the caravans ceased,[99]
And the caravaneers
Followed winding paths.[100]
Warriors[101] ceased,
In Israel they ceased.

O riders on tawny she-asses,
Ye who sit on caparisoned ⟨male donkeys⟩ (?)[102]

[98] See JPOS 1 (1921), 55–62, where I pointed out the historical position of Shamgar and his connexion with Beth-anath in Galilee. That his name is Hurrian was seen by M. Noth, who identified it with *Šimikari*. Suggestions frequently made that the name *Ben-'Anat* was a personal name are possible but improbable.

[99] The first word of this colon, 'in his days', is possible, but the reference to Shamgar in Judg. 3:31, followed immediately by a reference to Jabin, king of Canaan, suggests that we should insert 'Jabin' instead of the impossible 'Jael'. Incidentally, this name is an abbreviation of the longer *Yabni-Hadad* (name of a king of Hazor in the seventeenth century; cf. *Yabni-el*, name of a prince of Lachish in the fourteenth century). The final long vowel reflects a secondary North-Israelite stress lengthening of a short (anaptyctic) vowel in the jussive of several classes of weak verbs. This phenomenon is common in hypocoristica.

[100] As frequently in Hebrew poetic texts, there has been a secondary transposition of two words in parallelism; *hōlĕkê 'ōrăḥôt* means 'those who walk in the caravans', see our discussion immediately following.

[101] The word *pĕrāzôn* does not mean 'villagers', as formerly thought, but is a collective from a Canaanite word for 'warrior', which appears in Pap. Anastasi 1, 23, line 4, in the correct consonantal transcription.

[102] *Yôšĕbê 'al mdn* is probably incomplete, since we should expect a 3 + 3 + 3 unit. It has been suggested to me orally by Delbert Hillers that *mdn* may be derived from a dissimilated by-form of the word which appears in Ugaritic as *mdl* (see Jonas Greenfield,

O ye who walk on the road, attend!
At the sound of the cymbals,
Between the watering places,[103]
There they will recite the triumphs of Yahweh,
The triumphs of his warriors in Israel!

In order to understand the terminology it must be remembered that in the Amarna Tablets and other cuneiform texts of the age, as well as in Hebrew, the word meaning 'to walk' (*alāku, hālák*) was often used specifically in the sense 'to be a member of a donkey caravan', and one of the commonest terms for a caravan was the derived *aliktu, alaktu,* Hebrew *hălîkāh.*[104] There is ample evidence that caravan leaders rode on donkeys while ordinary caravaneers walked behind the donkeys, each caravaneer taking charge of a number of donkeys. In the late nineteenth century B.C., representations at Serābîṭ el-Khâdem show the caravan leader (who may or may not have been an 'Apiru) riding a donkey while his immediate followers walk; incidentally, he bore the name *Khabadadum* and is called 'brother of the chief of Retjenu'.

Unfortunately, we have no way of knowing whether the stories of the Patriarchs were transmitted through caravaneers and similar non-religious groups or whether they came down through religious channels; presumably both modes of oral transmission co-existed. Both professional and amateur rhapsodists undoubtedly existed in early Israel. However this may be, most of the poetry embedded in the stories of Abraham and Isaac in Gen.

Biblica XLV [1964], 527 ff.). In Ugaritic we have *mdl 'r,* 'caparison a young donkey!' parallel to *ṣmd pḥl,* 'harness a male donkey!' We must remember that donkeys were never saddled in our sense, but that heavy cloths were laid over them and fastened in place by straps. I suggest that we read *yōšĕbê 'al mdn⟨'air⟩,* in which case the loss of *'air* after *'al* is simple haplography.

[103] *Maš'ăbîm* must be derived from *š'b,* 'to draw water', which is common in Ugaritic as well as in Hebrew.

[104] On these words see especially CAD, s. vv. and R. Youngblood, BASOR 168 (1962), 24 ff.

12–27 cannot yet be dated stylistically. That the style is often archaic is clear, and I suspect that the original poetic form was Patriarchal Hebrew antedating the period of strong Canaanite influence. But I cannot find satisfactory parallels. Only in the case of Gen. 14, where much of the text can be put into rough metrical form by elimination of prose features and explanations, and where the presence of extremely archaic features cannot be denied, is an early date certain, in my opinion. In this chapter, which all serious critics recognize as an independent source, we find the caravaneering activities of Abraham brought so clearly to the surface that no other explanation of them is reasonable. Only a wealthy caravan leader would be likely to have 318 armed retainers (Gen. 14:14) and to be involved in covenant relationship with so many native chieftains, while he and his nephew remained foreign residents in towns ruled by others. Such a stirring saga may well have been transmitted by caravaneers, just as we have inferred from the Song of Deborah. As a fitting climax I quote the fragment put into the mouth of Abram's friend and ally Melchizedek[105] (Gen. 14:19f.); the metre seems to be 2 + 2 + 3/2 + 2 + 3, which was still common among the archaic incipits listed in Psalm 68:

Blessed art thou (O Abram) Unto the Highest God,
Creator of Heaven and Earth;
Blessed ⟨art thou⟩ Unto the Highest God,
Who hath given thy foes into thy hands!

[105] See my discussion in BASOR 163 (1961), 52. My observations have been misunderstood by R. H. Smith in ZAW LXXVII (1965), 141f. My proposal is to read *ū-Malki-ṣédeq mélek šĕlôm⟨ōh⟩ hôṣî' léḥem wa-yáyin*, 'And Melchizedek, his allied king, brought out bread and wine'. The only 'emendation' required is insertion of *h* lost by haplography between ŠLM and HWṢY'. *Melek šĕlômoh*, 'the king allied to him', has exceedingly good Hebrew parallels (see *ad loc.*, n. 75), and the spelling is normal pre-exilic. On Melchizedek and the tradition, see further the important discussion by J. A. Fitzmyer in CBQ XXV (1963), 305–21, especially pp. 313ff. [See also Addenda.]

The repetitive style is here definitely liturgical in character, and proves nothing about the original date of the quotation. The latter contains, however, some archaisms from an early source: the preposition *lĕ* may have the archaic sense 'from' instead of the usual Classical Hebrew 'to' in similar context. The divinity is now well known as Canaanite *El* (*'Elyôn*) *qônê 'ĕrĕṣ*, '(The Highest) God, Creator of Earth', who can be traced back through a Hittite adaptation of a lost Hurrian text in pre-Mosaic times.[106] *Miggēn*, 'he gave', appears in Ugaritic but is extremely rare in Hebrew. Even the strong monotheistic colouring is perhaps pre-Mosaic.

In this introductory chapter we have marshalled some of the evidence for early oral transmission of historical information through archaic verse. We have also presented evidence for the poetic background of early Hebrew prose. The examples of stylistic evolution which we have presented in chronological order (according to internal evidence) establish the soundness of our model, itself based on a very large number of analogies from all parts of the Old World, with no known exceptions. Two such consistent sets of evidence, each entirely independent of the other, force us to recognize that archaic Hebrew poetry furnishes invaluable confirmation—as well as correction—of the historical data in our early narrative sources.

II

The Patriarchal Background of Israel's Faith

A. RECENT ARCHAEOLOGICAL FINDS BEARING ON THE PATRIARCHAL AGE

During the forty years from 1925 to 1965 there has been extraordinary progress in our understanding of the Patriarchal background of Israel. First came thirty years of revolutionary advances, followed by steady consolidation of our gains during the past decade.[1]

In 1925 came the initial discovery of tablet archives at Nuzi in north-eastern Iraq, containing family records and legal documents belonging to a Hurrian (Biblical Horite) population in the fifteenth and early fourteenth centuries B.C. The Nuzi finds have proved that many curious details of customary law in the Patriarchal narratives are very ancient, and were no longer understood in tenth-century Israel and later times.[2]

The Nuzi discoveries were followed by the publication in 1926 and 1940 of the Egyptian 'Execration Texts'.[3]

[1] For successive surveys of our gains, see FSAC (1957 ed.), 25 ff.; OTMS 1–47; HACH 103 ff., 130 ff.

[2] See especially E. A. Speiser, *Genesis* (Anchor Bible, 1964), *passim*, and R. de Vaux's review in JBL LXXXV (1965), 74 ff. Speiser offers about twenty parallels between Patriarchal customary law and Nuzi. De Vaux's caveat about exaggerating the importance of Hurrian influence on the early Hebrews is not really necessary in view of the fact that the city of Nahor (Gen. 24:10) was actually ruled by Hurrian princes in the Mari period and that Harran itself was in an area inhabited by a mixed population of Hurrians and Semites. Cf. n. 31 below, as well as § F.

[3] On the initial publications by K. Sethe and G. Posener, cf. the

These texts are extremely significant because they contain long lists of place and tribal names together with the names of the chieftains who ruled these towns or tribes, dating from the late twentieth and nineteenth centuries B.C. In some respects, thanks to the light shed on the vocalization of these names by cuneiform transcriptions of West Semitic names, the Execration Texts are exceptionally important for our purpose, since all Asiatic names come from Palestine, Phoenicia and southern Syria.

The same year as the first publication of Execration Texts from Egypt, there appeared Theo Bauer's collection and analysis of North-west Semitic personal names from Babylonian tablets of the nineteenth to sixteenth centuries B.C.[4] Together with subsequent finds in Mesopotamia this has made it possible to place early Hebrew names in their correct setting and to use them as a key to Patriarchal chronology.

Since 1929 the epoch-making discoveries of tablets at Ugarit on the coast of northern Syria have greatly deepened our knowledge of native North-west Semitic language, religion and culture in the period between 1500 and 1200 B.C.[5] The Canaanite culture of the Late Bronze

---

references in OTMS, 43 f., n. 5. My own principal papers on the subject were published in JPOS VIII (1928), 223–56 and BASOR 83 (1941), 30 ff. Very important new material, confirming incidentally my chronology of these texts since 1940 (BASOR 83, 32 f.), has been discovered at Mirgissa, south of Wadi Halfa in Nubia. These new Execration Texts date between the Berlin vases and the statuettes of Saqqara, but are nearer the former than the latter in time. They may, therefore, be tentatively dated in the early nineteenth century B.C. On this discovery, which has not yet been formally published, see CRAI, 1963, 97–102, by J. Vercoutter and G. Posener. See also André Vila, *Journal des Savants*, 1963, 135–60.

[4] See his monograph *Die Ostkanaanäer*. The material has now been brought up to date by inclusion of all the Mari evidence as well as pertinent new material from Babylonian tablets in Herbert B. Huffmon, *Amorite Personal Names in the Mari Texts* (Baltimore, 1965).

[5] The literature on Ugarit is now so extensive that it is scarcely

Age was essentially a continuation of Middle Bronze civilization, so this material is vital for proper analysis of the differences between Canaanite and Sumero-Accadian elements in early Hebrew background. We need not dwell further on Ugaritic material here, since it has already been utilized so extensively in Chapter I and will be again in Chapter III.

Since 1933 A. Parrot's work at Mari in the Middle Euphrates Valley has yielded a mass of written material from the late eighteenth century B.C., some three centuries before the date of the Nuzi tablets. Publication is far from being completed, but we already know incomparably more than we previously did about the history, language and life of this key period of Patriarchal history. Inevitably, parallels of all kinds have been found between the contents of the Mari documents and early biblical traditions.[6]

Archaeological research during the past forty years has also been brilliantly successful in clearing up difficulties and filling in gaps in our previous knowledge of the general age in question, which extends from the late third millennium B.C. through the early centuries of the second. I must limit myself to a few hints of what has happened during the past few years. We can now date non-epigraphic finds belonging to the period between c. 2500 and 1500 B.C. with surprising precision, thanks especially

necessary to mention more than the two basic series, C. F. A. Schaeffer's *Ugaritica* (now in its 5th vol.) and *Le Palais Royal d'Ugarit* (consisting of texts mainly published by Ch. Virolleaud and J. Nougayrol). A good survey of the material has been published by John Gray, *The Legacy of Canaan* (2nd rev. ed., Leiden, 1965).

[6] The Mari material is being published in three series: (1) *Mission archéologique de Mari*, which deals with the non-epigraphic material; (2) *Archives royales de Mari*, nine volumes of which have appeared (cuneiform texts); (3) a series of *Archives royales de Mari* containing transcriptions and translations of the tablets, three volumes of which have appeared so far.

to excavations in such sites as Byblos[7] and to the able work of Ruth Amiran and Olga Tufnell in analysing the material in question.[8] We now know that after a period of relative depopulation between c. 2200 and 2000 B.C., the causes of which we do not yet know, the population began to increase again in the nineteenth century B.C. During the period between c. 2200 and 1800 B.C. came a phase of material culture which Dr. Kenyon has recently named 'Early Bronze–Middle Bronze'. Her designation covers, however, both Early Bronze IV (or III B) and the following period of debased caliciform pottery which I have been calling Middle Bronze I since 1932. At first I dated the latter between c. 2050 and 1850; I now date it between the early twentieth and the end of the nineteenth century B.C.

This lowering of M.B. I dates has become possible largely because of recent work on the chronology of the tombs of early princes of Byblos found by P. Montet over forty years ago, but whose chronology had not been adequately clarified.[9] Since the pottery found in these so-called 'Royal Tombs of Byblos' is characteristic M.B. IIA, though much richer than corresponding finds in Palestine, we can date similar Palestinian ware at the same time or a little later, between the late nineteenth century and the end of the eighteenth century B.C. This represents a reduction of over half a century in dating, and there can be no doubt about the general accuracy of the results, which are established by numerous synchronisms with Egyptian reigns fixed within a few years by a combina-

[7] Of the publications by P. Montet and M. Dunand half a dozen separately bound parts of three volumes have so far appeared, and a great deal more remains to be published.

[8] See R. Amiran, IEJ x (1960), 204–25, and Tufnell, *Bulletin of the University of London Institute of Archaeology*, III (1962). See also my discussion of their results in BASOR 168 (1962), 36 ff.

[9] On this clarification, see my papers in BASOR 176 (1964), 38–46, and 179 (1965), 38–43. [See also the fuller treatment in BASOR 184 (1966), 26–35.]

tion of astronomical data with dead reckoning by regnal years.

I shall avoid details about the new light shed on the Hyksos period; we now know that from the end of the eighteenth century B.C. to about the middle of the seventeenth Egypt was ruled by princes with West Semitic names. Some of these princes bear names already known from the Bible, such as *Ya'qub-'al* (Jacob)[10] and Shesha (Sheshai). The bearers of these names belonged to the general class of semi-nomadic folk described in Genesis, and there may well have been an even closer connexion, but evidence is still insufficient.

This phase was followed, about the middle of the seventeenth century B.C., by an irruption of chariot warriors from the north-east. Some of their leaders bore Indo-Aryan names but most had names which have not yet been identified linguistically.[11] They established an empire of considerable magnitude and held sway over all or most of Egypt for more than a century, until they were driven out about 1540–1530 B.C.[12]

[10] Past readings such as 'Jacob-El' and my own *Ya'qub-Har* are both wrong. We have two clear writings, neither of which is a mistake for the other, on scarabs of this reign: *Y'qbhr* and *Y'qb'r*. The second element is naturally the divine name *'Ali*, *'Eli* or *'Al*, on which see Ch. I, n. 52; it was first located in the Hebrew Bible by H. S. Nyberg, and has since been found elsewhere in the Bible. In Ugaritic texts it appears in the sense 'the Exalted One', an appellation of Baal. The alternative Egyptian writing with *h* is a simple dissimilation, in order to avert the repetition of a harsh Semitic *'ayin* in the same name. The Egyptian *'ayin* was much softer —just as today.

[11] I suggested many years ago in an unpublished paper that some of these names might be Luvian. Luvian names are quite common at Ugarit.

[12] Since the chronological evidence is more and more favourable, I adhere to my earlier suggestion that the Indo-Iranian name of the Manda chieftain *Zayaluti* or *Za'aluti* is identical with that of the first king of the Fifteenth Dynasty, Salitis; see BASOR 146 (1957), 31 f. It must be pointed out that among known Hyksos names there are also Egyptian, Semitic and Hurrian names. By the

B. TRADE AND COMMERCE IN THE ANCIENT EAST

One of the most important results of archaeological discovery during the past few years has been an enormous advance in understanding the trade relations of the ancient Near and Middle East. We now know that organized commerce was far earlier than we had imagined. The importance of trade in the development of civilization can scarcely be exaggerated. Without intensive trade, no great expansion of material civilization, or probably of higher culture, is possible. We can now trace commerce back to the pre-Pottery Neolithic of the seventh millennium B.C. at such sites as Jericho in Palestine and Çatal Hüyük in south-central Anatolia.[13] It was shown by Emmanuel Anati in 1962 that it is impossible to explain the massive fortification of Jericho nearly nine thousand years ago, or the high level of building art there at such an early time, without recognizing that the wealth of Jericho depended only in small part on its oasis, which covers a mere few hundred acres. While extremely useful as a source of food, it could not possibly be the source of the capital required by these indications of wealth. Jericho was, in fact, an important trade centre to which the mineral riches of the Dead Sea Valley, particularly salt, sulphur and asphalt, were brought in order to export them to surrounding regions. This implies some form of caravaneering, though we have no direct evidence for it.

---

time of the Fifteenth Dynasty, the ethnic composition of the foreign invaders must have been very mixed. The date of the final reconquest of Egypt by Amosis is now approximately fixed; the *terminus post quem* is his eleventh year (C. F. Nims, *Egypt of the Pharaohs*, 1965, 199, n. 2). Amosis became king after c. 1540 (Helck, 1962), after c. 1545 (Parker, 1964), after c. 1550 (Hornung, 1964).

[13] On Jericho see E. Anati, BASOR 167 (1962), 25 ff. On Çatal Hüyük see J. Mellaart, *Anatolian Studies* XIII (1963), 102 f. See also M. E. L. Mallowan, *Iran* III (1965), 1–8.

South-western Asia and Egypt, between 3200 and 2800 B.C., were closely linked together by trade. Somewhere about the thirty-first century B.C., during the 'Warka' period in Babylonia, whose influence already extended over most of south-western Asia, there was active trade between Mesopotamia and Egypt, reaching its climax in the so-called Djemdet Naṣr period about the beginning of the First Egyptian Dynasty. At that time many innovations were brought into Egypt from Babylonia, and it is probable that other novelties were exported from Egypt to Mesopotamia (though our evidence for the latter inference is still defective).[14] A little later, about the beginning of the First Egyptian Dynasty under Narmer, there was active commerce between Egypt and Palestine, as we know from the finds made at Gath in recent years by Samuel Yeivin,[15] confirmed by Ruth Amiran's work in Stratum 4 of Arad, in the extreme south of the hill-country of Judah. Her work in Stratum 3–1 at Arad has proved that there was equally active trade between Egypt in the middle and late First Dynasty and contemporary E.B. II Palestine.[16] It is most surprising to find such evidence of commerce across the central desert of Sinai at the very commencement of Egyptian Dynastic history, just as there was, though on a greatly expanded scale, in the days of the Patriarchs.

Under the Empire of Accad, which reached its acme in the twenty-third century B.C., we have a glorification of commerce which has seldom been surpassed in history. The most important, in fact almost the only, known epic from the time of this dynasty is 'The King of Battle' (*šar tamḫari*). The best known tablet deals at length with the activities of the merchants who were trading between

[14] On this general subject see W. Helck, BAeV, *passim*, and Helene J. Kantor, COWA, 1–46.

[15] See S. Yeivin, IEJ x (1960), 193 ff. and *Oriens Antiquus* II (1963), 205 ff., together with my brief discussion, COWA, 49 f.

[16] See Amiran, BASOR 179 (1965), 30 ff.

Babylonia and central Asia Minor, thanks to whose efforts the king of Accad, then in control of all Mesopotamia, was persuaded to extend Babylonian arms as far as Cappadocia, said to have been at a distance of 420 double-hours from Accad.[17] All through the Dynasty of Accad we have evidence from excavations in various parts of Mesopotamia that trade was highly regarded and was, in fact, the chief economic basis of the marvellous explosion of higher culture under these Semitic rulers of Babylonia.

The Third Dynasty of Ur, which flourished from the middle of the twenty-first century to the middle of the twentieth (about 2060–1955 B.C.)[18] was even more developed commercially than the Dynasty of Accad. It is true that trade may have become less glamorous, but it had also become better organized and was largely in the hands of the court, as we know from scores of thousands of accounting tablets, some of which show that double-entry book-keeping was already employed in Babylonia four thousand years ago.[19] From the economic texts of Ur III as well as from the tablets dated in the eighteenth century (long after Ur had been sacked by the Elamites), we know that it was still one of the greatest centres of commerce by sea and by land that the world had ever known.[20] Whether Ur was greater than the city of Accad

[17] See BASOR 163 (1961), 53, n. 76.

[18] In spite of the fact that the low chronology which I have defended for many years has been rejected by the editors of CAH² in favour of my middle chronology, which was shortly afterwards independently proposed by Sidney Smith, the evidence for the low dates has been steadily accumulating; see Helck, BAeV, 64 ff., and my remarks, BASOR 179 (1965), 42 f.

[19] This we know from the independent work of Tom B. Jones and W. W. Hallo, announced and discussed in various places but not yet fully published. On the economic life of the Third Dynasty in general, see C. J. Gadd, CAH² I, xxii, 28 ff., with the references.

[20] See especially A. L. Oppenheim, 'The Seafaring Merchants of Ur', JAOS 74 (1954), 6–17.

had been before its destruction by the Guti, we cannot say; the sea and land trade of the latter were both famous, as we know from contemporary inscriptions as well as from the Sumerian epic studied by S. N. Kramer, called 'The Curse of Accad'.[21]

At this time we find intensive trade between Assyria and Asia Minor, over a distance of nearly a thousand miles by road from Assyria proper, on the middle Tigris River, to Cappadocia, on the plateau of east-central Asia Minor. The so-called Cappadocian tablets are written in Old Assyrian and contain a vast amount of important information bearing on the history and economic life of the Assyrians and Anatolians (through the nineteenth century and for a short period in the third quarter of the eighteenth century B.C.).[22]

In the Egyptian Twelfth Dynasty, which lasted from 1991 to early in the eighteenth century B.C., Egypt turned towards Asia and extended its rule over Palestine, southern Syria and Phoenicia for the greater part of two centuries.[23] Egyptian finds from this dynasty have yielded

[21] See Kramer, *The Sumerians* (Chicago, 1963), 62 f.

[22] See most recently Hildegard Lewy in CAH² (1965) I, ch. xxiv. §§ vii–x; and for general orientation and chronology see BASOR 163 (1961), 40 f.

[23] Assertions to the contrary, insisting that Egypt did not control Palestine and adjacent parts of Syria during the Middle Kingdom, are frequently made by Egyptologists who should know better. For a good *mise-au-point* see G. Posener in CAH² (1965) I, ch. xxi, §§ i–iii. With the accumulation of data from the new Execration Texts (above, n. 3) it becomes completely absurd to suggest that all of these chieftains of Palestine, Phoenicia and southern Syria were only potential foes instead of being, like the Egyptians listed in the same documents, actual subjects and potential if not actual rebels. It must again be stressed that if our knowledge of Egyptian conquests in Nubia were limited to inscriptions found in Egypt itself (not including the Execration Texts), we should know next to nothing about them. No important public buildings from the Twelfth Dynasty have yet been excavated in either Palestine or Syria.

many objects imported from south-western Asia, including articles of Mesopotamian provenience. Objects sent out from Egypt are found in many excavated sites of this period in Syria and Asia Minor.[24] Byblos, the most important seaport of Phoenicia, had become an Egyptian harbour and was a focus of Egyptian influence throughout the eastern Mediterranean. For nearly two centuries there were no native Byblian princes as far as we know, but only Egyptian governors who ruled directly over the so-called 'tribes' of Byblos, as recorded in the Execration Texts. At the beginning of this period Byblos was still a vassal of Ur, but it was probably occupied by the Egyptians well before the death of Amenemmes I (1962 B.C.).[25]

One of the most important results of Nelson Glueck's explorations in the Negeb since 1952 (supplemented by those of Yohanan Aharoni and Beno Rothenberg in 1956–57) has been the tracing of caravan routes from the twentieth and nineteenth centuries B.C. (marked by settlements yielding M.B. I pottery) through the desert of north-central Sinai as far as just this side of Suez on the way into Egypt. Nelson Glueck had previously discovered scores of sites from this period distributed along the old north–south route through Transjordan.[26]

In the Negeb of Western Palestine Glueck has discovered hundreds more of these sites, and the Aharoni-Rothenberg expedition added scores more in the Kadesh

[24] See BAeV, 43 ff., and G. Posener, CAH² I, ch. xxi, § ii.

[25] See E. Sollberger, AfO XIX (1960), 120 ff.; and on the names, see BASOR 163 (1961), 45, nn. 44 and 45, as well as BASOR 179 (1965), 42 f.

[26] For a survey of the material found by Glueck and Rothenberg, see BASOR 163 (1961), 36 ff., to which must now be added the hitherto unpublished material discovered by Glueck and described in BASOR 179 (1965), 6–29, *passim*. On the chronology of the material, see BASOR 168 (1962), 36 ff.; 176 (1964), 38 ff.; and my remarks on COWA, especially pp. 52–7. [Also BASOR 184, 26–35.]

area and in Sinai proper. On the western side of Jordan we find, running down through the hill-country and spreading out in the Negeb, a whole series of sites with remains of occupation from this period. It is no accident that they are mostly located on the watershed-ridge road, since the trade routes in question started in Mesopotamia and Asia Minor, moving down from Aleppo and other Syrian cities to Damascus and then southward by way of Shechem, Bethel, and Jerusalem to Hebron and Gerar. From there easy routes led to Kadesh-barnea, where magnificent springs made it possible to establish a whole network of stations and posts. More sites are then found along the old caravan route through the desolate wilderness of north-central Sinai to just above Suez, as stated above. There are also many sites along the edge of the desert in Transjordan, as well as in the Jordan Valley as far south as Jericho and Bâb edh-Dhrâ'.[27]

[27] The importance of nineteenth-century occupation at Jericho has been accentuated by Kathleen Kenyon's discovery of many tombs from the period in the Jericho cemeteries. Paul Lapp's important work at the Mirzbâneh cemetery between Kefr Mâlik and Mugheir on the eastern edge of the watershed ridge north-east of eṭ-Ṭaiyibeh has yielded a quantity of material from the M.B. I proper (twentieth–nineteenth centuries B.C.) which must probably be explained in much the same way as the great cemetery of M.B. II at near-by 'Ain es-Sâmiyeh. They both appear to reflect seasonal movements of semi-nomadic folk who spent their winters in the Jordan Valley and their summers on the edge of the hill-country above. Bâb edh-Dhrâ', where Paul Lapp has made extraordinarily important finds both in cemeteries and residential quarters from the third millennium B.C., appears to have come to an end just before this time, but we must await further work and publication of Lapp's results before drawing historical inferences. Whether the great site of Bâb edh-Dhrâ' derived its importance chiefly from trade or had religious significance, is still quite uncertain—possibly both causes were operative. The total abandonment of the site, after long intermittent occupation and intensive settlement, towards the end of the third millennium, can be explained only by other causes—possibly by the natural cataclysm reflected in Gen. 14 and 19. For my

C. THE PATRIARCHAL MODE OF LIFE

Who were the Hebrew Patriarchs? This is a question which has been answered in many different ways during the past century of Biblical research. Some formerly held that the Patriarchs were really depotentized gods—in other words, gods who were transformed by legend into human beings and lost their divine characteristics. Others have thought that, in the course of many centuries of story-telling, the Hebrew Patriarchs came to reflect early ethnic movements. Thanks to our present evidence, it is certain today that the Patriarchs were indeed human beings who were the heroes of stories handed down from the Patriarchal Age. It is, however, quite true that there is a good deal of ethnic tradition intermingled with the Patriarchal narratives of Genesis, some of it very old, but mostly much later in date than the original stories of the Patriarchs. Even when the ethnic traditions are relatively late, few of them can have originated after the time of the JE recensions in the tenth–ninth centuries B.C. The so-called P material goes back ultimately to the same general period.[28]

About half a century ago, it began to be recognized by scholars that the traditions of Genesis reflect a semi-nomadic type of society in which tribesmen settled down much of the time but still moved about seasonally in search of pasturage, especially between summer and winter pastures (French *transhumance*). But there was still no explanation of what Abraham's 'Sitz im Leben' actually was. Ever since Israelite times it was supposed that the Patriarchs simply went wherever they pleased, in a country thought to have been relatively empty. The notion that the Patriarchs found little difficulty in pitching

previous work on the problem of Bâb edh-Dhrâ' see especially AASOR VI (1926), 53–66, and BASOR 95 (1944), 3–13.

[28] For references to the literature see Ch. I and n. 69 there.

camp and grazing flocks anywhere they wished is, however, in flat contradiction to the actual facts of life in all better-known periods of Palestinian history. Newcomers were not well received but were closely watched and were usually driven away. The life of wandering shepherds was anything but pleasant. People living in settled areas, as well as already accepted semi-nomads, bitterly resented any attempt on the part of outsiders to move in and take over their fields or pastures. In short, the semi-nomadic hypothesis was correct in some ways, but it failed to solve the problem of how the Patriarchs made their living and what their mode of life was. In the Bible we have many more data about the life and times of Abraham than we have about the circumstances of the later Patriarchs; these data have also been much more directly elucidated by archaeological discovery than traditions about the following ages of Isaac and Jacob.

Abraham is said to have come from Ur of the Chaldees and to have moved from Ur to Harran in north-western Mesopotamia.[29] It is no accident that Ur and Harran were two of the three greatest centres of trade in nineteenth-century Mesopotamia, and that the very name *Ḫarran* (*āl ḫarrānim*) meant 'Caravan City'. The two cities even shared the same cult—that of the Sumerian moon-god, Zuen (Sin). Abraham is said to have later adopted a citizen of Damascus.[30] This is indeed remarkable, since

[29] On Ur and Harran in this period, see the discussion and references in BASOR 163 (1961), 44 ff. On the close Patriarchal ties with the Harran region see most recently R. de Vaux, RB LXII (1965), 9 ff.

[30] Gen. 15:1–3. Damascus was capital of the land of Api (later Upi) (Hurrian Apina) in the Amarna period and, in view of its excellent location, was probably already capital of the district in the nineteenth century. According to the Saqqara Execration Texts published by G. Posener the land of Apum was ruled by a single prince. According to the eighteenth-century Mari economic tablets, it was ruled by kings (G. Dossin, *Syria* XX (1939), 109. In these texts it is called *māt Apim*, 'the land of Apum'. This land, with

this adoption almost certainly meant that Abraham followed a common practice of the day, well attested at Nuzi. By adopting the merchant, Abraham contracted to assign his property to the former in case of his own decease. This custom had doubtless originated at a time when real property was treated as inalienable, i.e., it was not allowed to be sold to an outsider. In this way he could obtain credit in order to buy donkeys, equipment and supplies for caravaneering or related activities.[31]

From Damascus Abraham is said to have gone south to Shechem, where he settled for a time. Shechem is mentioned in contemporary Egyptian texts of the early and late nineteenth century B.C., and pottery remains of that period have been found there by G. E. Wright. Farther south is Bethel, which also appears prominently in the story of Abraham. There we also find that the first important occupation after the late fourth millennium (so!)

---

its kings, is quite different from the land of Apum in the Khabur basin (A. Goetze, JCS VII, 1953, 65, 67), which was ruled by a chief and elders (G. Dossin, CRAI, 1958, 388 ff.). Obviously, these districts can scarcely be identified in any respect except in the name, which means 'Land of Reeds'. It is a pity that some scholars seem to have failed to note the radical difference in status between these two districts, which shared a common name.

[31] For the foregoing interpretation see my more detailed discussion in BASOR 163 (1961), 47. When I originally proposed this interpretation, E. A. Speiser was opposed because he refused to recognize any adoption in the Old Testament, apparently on the analogy of rabbinic law, which does not recognize it. In his *Genesis* (p. 112), however, Speiser accepts it in principle, though he bases his acceptance on a distinction between the *aplu* or direct heir and the *ewuru*, or indirect heir (in Hurrian family law). On the other hand, he does not even mention the formal contracts of adoption called *ṭuppī mārūti* which cover many cases in which a man of means was adopted as heir by another man who needed credit, but who had property collateral. In a still unpublished study, Dr. Seymour (Shalom) Paul has collected much indirect evidence for adoption in the Hebrew Bible. See also *mārūtu* in a forthcoming volume of CAD, and the already published article on *ewuru* and *ewurūtu*.

was precisely in the period of Middle Bronze I, during the twentieth and nineteenth centuries B.C. Hebron,[32] Beer-sheba and Gerar[33] are mentioned as places where Abraham established residence; outside Hebron he purchased the cave of Machpelah in order to bury his dead.

Above all, we have very important references to the desert of the Negeb. The 'Southland' in question is not the northern part of the Negeb, which is relatively well watered, but the arid desert between Kadesh-barnea and Shur (the Wall of the Prince, built by Amenemmes I, founder of the Twelfth Dynasty, in order to keep out the nomads). In Genesis 20:1 we are told, 'From there [i.e., from Mamre near Hebron] Abraham journeyed toward the Negeb and he spent his time[34] between Kadesh and Shur, while he was a foreign resident [*gēr*] in Gerar'. The area between Kadesh and Shur, which we have described, has always been a true desert in historical times, with only a few places where wells could be dug—although in ancient times, with somewhat more vegetation cover on the windward side of mountains, there were probably more wells than there are today. But the desert is virtually rainless, and it is almost incredible that Abraham could have spent his time there unless he was en-

[32] For the results of the Hebron excavation in 1964, see G. A. Larue in JBR XXXIII (1965), 337 ff. On Jebel er-Rumeideh, above the ancient site of the city proper, the Hammond expedition has found remains of both M.B. I and M.B. IIB (the Hyksos period).

[33] On Gerar = Tell Abu Ḥureira, see BASOR 163 (1961), 47 f. The site, which was much more extensive than the mound of the citadel in its centre, was also occupied in M.B. I and M.B. IIA (nineteenth–eighteenth centuries B.C.), dates which happen to suit (accidentally?) both the Abraham and the Isaac narratives.

[34] This translation of *way-yešeb* is attested elsewhere in Biblical Hebrew, but it may well be that there is a slight corruption in the text and that the original verb here was *way-yašŏr* (cf. Aramaic *šeyârâ*, 'caravan', Arabic *sayyāra*). The verb appears in Arabic *sāra, yasīru*, 'to travel, journey (of a caravan)'. It is tempting to emend the text to *wayyašŏr*, 'and he journeyed (with a caravan)', but this must remain hypothetical for the present.

gaged in caravan trade, leading donkey caravans back and forth between Palestine and Egypt.

The tradition preserved in Gen. 13:1–3 makes the nature of his occupations even clearer. We read there: 'And Abram went up from Egypt, he and his wife, with all his people,[35] including Lot, to the Negeb. And Abram was very rich in flocks, in silver and in gold. And his caravan journeyed by stages[36] from the south (Negeb) to Bethel.'

Such direct testimony is in full accord with what we hear elsewhere in the account of Abraham's life in Genesis; he not only spent time in Egypt, but kept up relations with the caravan centres at Harran and Nahor in Upper Mesopotamia.

A document fatal to the 'wandering "shepherd" hypothesis' has been preserved in Gen. 14. In 1961 I gave new explanations for several personalities and events mentioned in it, pointing out, for instance, that the hitherto mysterious Amraphel, king of Shinar (Babylonia), bears a name with the same consonants as Babylonian *Emudbal* (older *Yamud-balum* for *Yamud-pala*).[37] Our knowledge

[35] Note that this expression includes people as well as flocks and that *kōl* often means 'everyone' in Hebrew and Ugaritic.

[36] Note that the verb *hlk* is the same word as Old Assyr. *alāku*, 'to go (in a caravan)', from which are derived Acc. *ālik ḫarrāni*, 'caravaneer', as well as *aliktu*, later *alaktu*, 'caravan' = Heb. *halîkā*, 'caravan'; see Ch. I, § E, together with n. 104. Incidentally, note that these words refer in all early texts to donkey caravans in which the caravaneers walked behind the donkeys, whereas in camel caravans they ride the camels or walk at the head of their string of camels. Heb. *nasa'* means properly, as always recognized, 'to tear out tent-pegs', i.e., to travel in caravan stages. It has not always been recognized that *massa'* (found only in the Pentateuch in this sense), means 'caravan stage', that is, a normal day's journey for a caravan.

[37] For this explanation of the mysterious name 'Amraphel', see BASOR 163(1961), 49f. and n. 67. In addition to what was said there, it should be noted that in many Old Babylonian names the second element appears in composition as *pala*. Judging from parallels, it is likely that the name was itself abbreviated (hypocoristic)

of the history of Emudbal has been greatly increased in recent years, and we know now from Mari that the people of Emudbal were actively engaged in caravan activities.[38] We also know that Emudbal was one of the most important states in all Babylonia and Susiana (Elam) during the century before the triumph of Hammurapi (c. 1697 B.C.).[39]

The campaign described in Gen. 14 thus has an historical foundation, however much it may have been shifted in the course of time. It stands to reason that the five kings of the Dead Sea Valley appear chiefly because their rôle in the episode was the primary interest of the narrator. Furthermore, the tradition centres on the very ancient north–south trade routes beyond Jordan and down the central ridge of Western Palestine which reached, according to the extant narrative, the very frontiers of Egypt. The campaign itself was presumably directed against the Egyptians. This again points to a date towards the end of the nineteenth or the beginning of the eighteenth century B.C. It is interesting to note that Abra-

---

and that the original was something like *Yamud-pala-Adad*, 'May the kingdom of Adad endure'. For the meaning 'endure', note also Ugaritic *'amd*, 'lasting' (G. R. Driver).

[38] See NMTRM 176 ff., 216 ff., 256 f. and *passim*.

[39] See D. O. Edzard's discussion of the chronology of the kings of Emudbal, ZZB 105 f., and Erika Reiner, JCS XV (1961), 121 ff., on the year-dates of the earliest king of the dynasty, Sumuyamudbal. This king was contemporary with Sumulael, second king of the First Dynasty of Babylon (c. 1816–1781). This name is now known to belong to a group of names in which the second element is *sumu* and the third element is the name of a relative, god, or ethnic/territorial entity. The first element is usually either *yapi* or *yapa*, 'beautiful' or *yapi'*, 'glorious'; see BASOR 163 (1961), 52, n. 74; and BASOR 179 (1965), 39 f. Since it is perfectly possible that the name of this king was abbreviated to *Emudb/pal*, it may be that he is the original of 'Amraphel', especially since the chronology is approximately correct. It is safer, however, to treat the name as applying not to the founder of the dynasty but rather to the tribe or state to which he belonged.

ham's immediate retainers are called *ḫanîkîm*—a word which must be identified with the Egyptian *ḫnkw* used in the contemporary Execration Texts of the retainers of Palestinian chieftains, as well as with the *ḫanakû* of the Taanach letters, where they are the retainers of a local prince.[40]

At this stage in our discussion it is surely unnecessary to insist on the total absence of any evidence for the existence of camel caravans before the end of the Bronze Age (thirteenth century B.C.).[41] There are two main reasons why the caravan routes discovered by Aharoni and

[40] It is tempting to include further data on the archaisms in Gen. 14, but this is not the place for an extended discussion. Note my remarks at the end of Ch. I on the poetic survivals in vv. 19–20. There are also a number of other clear survivals of original poetry in vv. 6 and 10, as well as such linguistic archaisms as *miššĕmôl*, 'north of' (cf. the *Banū-sim'al*, 'northerners' in the Mari texts). There are also very early place-names in the chapter, as we know both from Bronze-Age lists and from M.B. pottery on the sites in question. In this connexion the mysterious Hobah in v. 15 has hitherto not been explained. The identification with Upi of the Amarna tablets, which was written with *aleph* and *pe* (as we know from Egyptian transcriptions), is impossible. Equally impossible is the identification, proposed long ago by Wetzstein, with an Arabic *ḫôba*, 'barren land', since every original *ḫ* in Syro-Palestinian place-names had become *ḥ* before being taken over into Arabic. There is, however, an obvious identification which has never been pointed out hitherto. In v. 15 we have it in the phrase *'ad Ḥobah*. Remembering again that the longest known alphabetic inscriptions from the eighth century B.C. were all written without word-dividers, it is clear that the simplest kind of haplography (since *d* and *r* were written alike or nearly alike in several periods of Hebrew script) would yield this from *'ad Reḥobah* (for the use of both preposition and directive *he* in the same phrase, see numerous examples cited by Gesenius-Kautzsch, *Hebräische Grammatik*[28], pp. 260 f. This is naturally the Rehob which was on the southern border of Hamath (Num. 13:21; II Sam. 10:8; and I Sam. [GL] 14:47).

[41] On the question of the date of the introduction of the camel see BASOR 163 (1961), 38, n. 9, and HACH 158, n. 2. This point of view has been accepted by most independent students of the problem, and literature on the subject is swelling rapidly.

Rothenberg must have been used by donkey caravans. First, in the twentieth and nineteenth centuries we have much Egyptian information about donkey caravans in Sinai and Sudan, as well as a wealth of data from Asia Minor about donkey caravans connecting Cappadocia with Assyria along different routes in northern Mesopotamia and southern Armenia. Numerous Egyptian statements about the numbers of donkeys involved in Sinai and Sudan list up to 500, 600 and 1,000,[42] which is the

[42] See W. K. Simpson, *Expedition* (University of Pennsylvania) IV (1962), 39, with a photograph of the stela of the year 1927 B.C. on p. 38. The caravan in question had been sent in the fourth year of Amenemmes II in order to bring a particular kind of semi-precious stone from the region of Toshka. The thousand asses appear at the end of an enumeration of the components of the caravan, which included officials, lapidaries, stone-cutters, and 1,006 'labourers'. In the Sixth Dynasty a caravan of 300 donkeys was taken across the Nubian Desert by Harkhuf. Arkell estimates that the caravan in question would have to be divided three ways, roughly one-third of the donkeys carrying goods for trade, a third carrying food for men and asses, and a third carrying water for both. (Cited from Barbara Mertz, *Temples, Tombs and Hieroglyphs*, 1964, p. 110, after A. J. Arkell, *A History of the Sudan*, London, 1955, 2nd ed. 1961.) Naturally, in a better watered region the proportions might be altered drastically.

The expression *'my-ʿ* (or *'my-ʿ3*; see H. Goedicke, JEA XLVI [1960], 62, n. 2), used as a title by two nobles of Elephantine, was explained by Sethe and Breasted as 'caravan leader'. This was rejected by Alan Gardiner, who rendered it 'interpreter'. We now have exhaustive studies, on the basis of much more extensive material, by Goedicke (JEA XLVI [1960], 60–4 and in a further unpublished article which he has kindly lent me), who explains the word as meaning 'commander of mercenary troops'. This must be approximately correct, but the precise meaning is made very difficult by the absence of any determinative for 'foreign lands' or 'troops'. In fact, the word never has any determinative of its own, though the context shows not infrequently that it means a group or body of men. The titles borne by Weni and Harkhuf in the Sixth Dynasty, designating them as *'my-ʿ(3)*, 'who brings whatever is required from foreign lands to his lord', must therefore mean something like 'one who is in charge of caravaneers', 'caravan leader', just as maintained originally by Sethe and Breasted. The term

largest number so far mentioned in any of these stelae. In the Mari tablets there is a reference to 3,000 donkeys in a single caravan.[48]

Second, donkey caravans can be employed only where desert routes are sufficiently short or well-watered to make it possible for donkeys to reach the next supply of water and food within two or three days. Camels, on the other hand, which were not used until much later as caravan animals and which are never mentioned in any contemporary text before the end of the second millennium B.C., can get along where water and food are supplied

---

would then be a collective designating caravaneers without troubling to indicate their ethnic origin, whether Egyptian or foreign. When used of a number of men dressed in Egyptian garb and evidently in charge of captive oarsmen on ships of Sahure', the term merely suggests that they might serve in different capacities. At all events, the word '(*ȝ*) appears in some such meaning in Egyptian texts in the Old and Middle Kingdoms—virtually always in regions where caravans were necessary. That the class in question is so anonymous is not surprising, since the dusty caravaneers were greatly despised by the Egyptians; see BASOR 163 (1961), 42, n. 28, on the *'mnw ḥt*, literally, 'the hidden ones of the rear(?)'. Note also the Story of Joseph (Gen. 42–4), with its numerous references to small donkey-caravans (not over 20 in a group) and its statement that the Egyptians were not permitted by their customs to eat with the *Hebrews*, i.e., the Asiatic donkey caravaneers.

[48] This caravan is mentioned in a letter partly published by Ch. F. Jean, *Semitica* 1 (1948), 21 f. In this first edition, quoted by Moshe Greenberg (*Ḫab.* 18), Jean completely misunderstood the context. The correct translation I owe to the kindness of Jean Bottéro, who wrote me 24 Nov. 1963, giving the correct reading and translation of the line, on both of which G. Dossin was in full agreement with him. There is no reference to the *'Apiru*, as supposed by Jean, but the context is now clear—which is far more important than another reference to *'Apiru*. The text actually reads, '3 *li-mi* (*ANŠE*^{pl}) *ša* (*LÚ*)*Ḫa-na*(!) *re-qú-su-nu i-tu-ru-nim*', '3,000 donkeys belonging to the men of Ḫana have returned without loads'. In the preceding lines, Nusugga, king of Šinamu, is reported to have refused to sell grain or wool to the men of Ḫana (on the Euphrates north of Mari), so their 3,000 donkeys had to return unladen.

only once a week or so. These figures apply only to trained desert donkeys and camels, since untrained donkeys and camels living in well-watered areas are quite unable to carry loads so long without water or food. But the ratio between the needs of donkeys and those of camels remains roughly the same, so donkey caravaneers had to provide water by digging wells and building small storage reservoirs to hold the water for a few months.[44] The same is true of food; the caravaneers had to store food where possible; they also had to grow it along the caravan routes in the Negeb and Sinai. In the same period (M.B. I) we find basins for collecting water and walled terraces where grain could be grown. Even when it could not mature, it was available as green fodder and unripe ears.

D. HEBREW AND ʿAPIRU

The problem of the identification of the Hebrews with the ʿApiru has become more and more complex in recent years. In 1954 and 1955, two excellent studies were published; the first edited and partially written by Jean Bottéro, and the second written by Moshe Greenberg.[45] But during the subsequent decade there has been such expansion of our knowledge that we can see patterns much more clearly. After analysing all the material now available as objectively as possible, I have been able to reach quite definite conclusions. One must fight shy of predictive 'models' in this area, for we must remember

[44] We must remember again that before the development of the art of digging or building cisterns and lining them with watertight plaster (made with slaked lime), no large cistern would hold water long, and only small pits lined with clay or 'hydraulic' lime plaster (i.e. made with unslaked lime) were available. Some of these pits would undoubtedly hold water for a few weeks or possibly months.

[45] See the list of abbreviations, s.v. 'PḪ' and 'Ḫab'.

that models are no more reliable than the statistical or stochastic (hypothetical) foundations on which they are built. Whenever there are serious gaps in our knowledge we cannot safely use such models in social or historical studies.[46]

Two cuneiform terms are used of the Hebrews: one is the Sumerian logogram SA.GAZ, the exact pronunciation of which is unfortunately doubtful; the other is *Ḫa-BI-ru.* That the latter was indeed the normal equivalent in Semitic of Sumerian SA.GAZ we know from the regular correspondence of the two in Hittite treaties, the Amarna tablets, Ugaritic lists, and elsewhere. This interchange of Sumerian logogram and Semitic translation, together with the close relationship of societal function between SA.GAZ and 'Ḫabiru' in groups of documents where there is no direct proof that the expressions were synonymous, leaves no room for doubt that the two must be equated. Cuneiform *Ḫa-BI-ru* used to be put into English as 'Khabiru', but since the middle sign could in that age be read *pi* as well as *bi,* and since *'ayin* (which had long been lost in cuneiform) was regularly transcribed as ḫ, it came as no surprise to specialists when it turned up in Egyptian as *'pr* or *'A-pi-ru* and in Ugaritic as *'pr.* The cuneiform name appears in the twelfth and eleventh centuries as *Ḫa-bir-A.A = Ḫabirāyu,* which shows an unmistakable *b.*

It has been pointed out by Edouard Dhorme and

[46] An essay in this direction has been undertaken by G. E. Mendenhall, 'The Hebrew Conquest of Palestine' (BA xxv, 1962, 66–87). For an attempt to describe the function of models in scientific and other disciplines (including social studies and even ethics), see Marshall Walker, *The Nature of Scientific Thought* (Prentice-Hall, 1963), 143–65. Meanwhile the use of 'model' has gone so far that theologians are using it as a normal part of their vocabulary to designate almost any speculative hypothesis (cf. Ian T. Ramsey, *Models and Mystery,* London, 1964). For the use of historical analogy in biblical history, see my Rockwell Lectures on *Archaeology, Historical Analogy, and Early Biblical Tradition* (Louisiana State University Press, 1966).

Riekele Borger[47] that in normal West Semitic this word can mean only 'dusty'; the original word, *'apiru* (with two short vowels), belongs to a very well-known Hebrew family of adjectives referring to a temporary condition, such as 'hungry', 'thirsty', 'barefoot', etc., and the word came down into Syriac, with well-known phonetic shifts, as *'afîr* or *'appîr*, 'dusty'. The use of the word to describe a caravaneer is a perfectly normal semantic development, like the Sumerian expression 'dusty man' (LÚ.SAḪARA), meaning 'groom' or 'chariot attendant'.[48] Similarly, in the Middle Ages the Old French term *pied-poudre*, meaning originally 'dusty foot', passed into English law as 'pie-powder' (pedlar). It was perfectly natural to call all of these people, whether they were caravaneers, grooms or pedlars, by the term 'dusty' or 'dusty foot'.[49]

The term SA.GAZ first appears in Sumerian tablets about 2500 B.C.; it is then found in texts of the Accad

[47] See *Revue historique* CCXI (1954), 261, and ZDPV LXXIV (1958), 126 ff. It should be added that the word cannot functionally be a passive participle, as suggested by Borger. On the other hand we should remember that the passive *qŭtĭla* and intransitive *qătĭla* fell together in Imperial Aramaic, both becoming *qĕtîl*. The doubling is just as secondary as in *qaddîš* and *ṣaddîq*, both replacing original *qădîš* and *ṣădîq*.

[48] Generally written LÚ.IŠ. In no case does the word ever seem to mean 'charioteer' as sometimes rendered.

[49] A curious additional example is Mandaean (Zimmern, *Akkadische Fremdwörter*, Leipzig, 1915, p. 47) *arqabirgal*, a contemptuous term for 'lowly person', literally '(one with) earth on (his) foot'. I am indebted to Dr. M. Gertner of London for a reference to Gen. 18:27, where Abraham is quoted as saying to God, 'I am (only) dirt and fine dust'. This expression was long ago connected by Hugo Winckler with the Amarna *ep(i)ru/'aparu ša šēpêka* 'I am the dust/dirt of thy feet', etc., used by a grovelling vassal in addressing Pharaoh. Accadian *ep(i)ru*, dust, dirt, is derived from earlier *'aparu* and was borrowed by Canaanite in the sense 'fine dust, ashes', Hebrew *'efer*. As pointed out by R. Borger, ZDPV LXXIV (1958), 128 ff., I had missed the sense of North-west Semitic personal names like *'pr-B'l*, etc., which means 'Dust (on Which) Baal (Treads)', not 'Fosterling of Baal'.

period (twenty-fourth to twenty-second centuries B.C.) and often in Ur III (c. 2060–1955 B.C.).[50] In this early period, it is certain that the word had both a good and a bad connotation. We find, for instance, tablets of the eighteenth century B.C. containing lists of rations given to the SA.GAZ, and a little later the 'canonical' vocabularies list SA.GAZ as an agricultural worker (harvest hand).[51] The term thus has a good sense, since obviously robbers would not be receiving regular rations of sheep and clothing—even in prison, of which there is no hint at all. The bad sense is illustrated by the listing of SA.GAZ in the sense of 'robber' in two vocabularies as well as in omen texts.[52]

In the Sumerian literary texts from the end of the third millennium, preserved in copies dating a few centuries later, there are quite a number of occurrences of the word. For example, in the Curse of Accad we read[53]

> From the watch-towers the watch has fled,
> On the caravan road the SA.GAZ lie in wait,[54]
> In the gate of the land the door moves in the wind.[55]

[50] I wish to thank Robert D. Biggs for kindly furnishing me information about LÚ-SA.GAZ in early Sumerian tablets. For the Dynasty of Accad see F. R. Kraus in BiOr XV (1958), 77 f. For the Dynasty of Ur see especially PḪ, 3 ff.; Ḫab, 1 f.

[51] See CAD, as well as AHW, s.v. *ḫabātu* and derivatives. A good deal has been written on the subject, but most of it is inconclusive. For my own position, see my remarks, CAH², II, ch. XX, 16.

[52] For the omen texts, see PḪ, 136–41.

[53] On the Curse of Accad see S. N. Kramer, *The Sumerians* (1963), 64. For the text cf. especially S. N. Kramer and Inez Bernhardt, SLTN, No. 33 on pl. 76, lines 12 ff. See also E. Chiera, *Sumerian Texts of Varied Contents* (Chicago, 1934), 94, lines 13–14.

[54] For the translation 'lie in wait' (Sumerian ba-e-DÚR) cf. A. K. Grayson, *Studies Presented to A. Leo Oppenheim* (Chicago, 1964), 90 ff., where he deals with Accadian *šubtu* and *šūšubātu*, 'ambush'.

[55] This translation of KÁ-GAL-kalam-ma-ka IG im-ma ba-e-GIN is much more likely than 'the doors of the gates of the land turned

This describes the desolation which has settled over the old capital city Accad after its destruction by the northern barbarians following an impious act of king Naram-Sin. After the destruction of Accad the old caravan trade came to an end, and the donkey caravaneers returned to their alternative 'occupation' as bandits. We also have a model letter from the reign of Shulgi, the second king of Ur III in the late twenty-first century B.C.[56] This contains an interesting description of the SA.GAZ which runs as follows:

> The unruly ones,[57] the SA.GAZ people,
> Their green plain[58] (is) devastated (by locusts?);
> As for their men and their women—
> Their men go where they please,
> Their women carry spindle and spinning bowl,[59]
>
> Their encampments are wherever they pitch them,
>
> The decrees of Shulgi, my king, they do not obey.

In other words, the SA.GAZ were semi-nomadic, but not true nomads, since the women who travelled with them used their spare time manufacturing woollen textiles.[60] Besides, their rebelliousness does not prove that

---

to clay'. In the first place, the massive wood-and-bronze doors of a city-gate could scarcely turn to clay, but doors in recently abandoned gateways can swing on their sockets in the wind.

[56] For the text see S. Langdon, BE XXXI, No. 54 on Pl. 45, corrected by S. N. Kramer, JAOS LX (1940), 253. For the translation see A. Falkenstein, ZA (NF), XIX (1959), 286, n. 32, supplemented by valuable suggestions in a letter of 13 Oct. 1963, from Th. Jacobsen.

[57] Read lú-la-ga with Jacobsen.

[58] If Sum. edin meant only 'desert', this obvious rendering of sisiga (= sig-sig-ga, 'yellow, green, of growing vegetation') would not be possible, but it refers also to the broad plains of Mesopotamia and eastern Syria, which were covered with grass in spring.

[59] See CAH² I, ch. XX, 16, n. 8 and T. Dothan, IEJ XIII (1963), 97 ff.

[60] See below, n. 76.

they were not eager for employment whenever they could find it, as we shall see later. With this description of the SA.GAZ we may contrast the description of the true Beduin in the Martu Epic, which is probably earlier.[61] Here we learn that the western nomads, that is, the nomads of the Syrian Desert, lived in tents, had no houses, ate their food raw, left their dead unburied, raised small cattle but no grain, and in general behaved like savages. All through this period, a clear distinction is made between the SA.GAZ or 'Apiru on the one hand, and the Sutû or other true nomads on the other.[62]

In the Lipit-Ishtar Code (c. 1870 B.C.) we have an obvious translation of a Semitic case-law into Sumerian. It runs as follows: 'If a man has rented a ship and has sent it on a trading expedition under contract, but bad luck has attended that trading expedition, where the crew that mans the ship gives itself to SA.GAZ activity, the man who has rented the ship must pay compensation for the ship (to its owner).'[63] We clearly have in this law a reference to smuggling or similar activities, including possible piracy. At all events, since the river boat had fallen into the hands of a lawless crew, it was lost to the lessor, and had to be replaced by the lessee.

The Mari letters from the late eighteenth century B.C. provide us with a mass of pertinent material which has

[61] For the description of the Amurrû Beduin, see S. N. Kramer in *Genava* VIII (1960), 281.

[62] On the relation of (LÚ)SA.GAZ and Sutû, see NMTRM, *passim*, and Kupper's additional communication in RA LV (1961), 197–200.

[63] See for the text F. R. Steele, AJA LII (1948), 435 f. and ArOr XVIII (1950), 490 ff. My translation has been worked out in collaboration with W. G. Lambert and Th. Jacobsen (letter of 13 Oct. 1963). The text is an obvious translation into Sumerian from Accadian. The translation is based on the following restoration: tuku[m-bi] lú-ù má in-ḫun kaskal KA-KÉŠ-DU-a in-na-an-gar [na]m-[ḫu]l kaskal-ᶠbi¹-[a](?) ki-erén-maᶠu¹₆-[da](?) sa-gaza-šê ba-ak[a] lú má i[n-ḫun-gá] má ìb-[sú-sú].

only recently been clarified. In 1964, André Finet pointed out for the first time that the northernmost of two groups called 'Sons of the South' and 'Sons of the North' (literally 'Sons of the Right' and 'Sons of the Left') is clearly identical with the SA.GAZ or 'Apiru, in tablets which deal with the extreme north-west of Mesopotamia.[64] It had already been noted by others that there are parallels between the Banū-yamīna or 'Children of the South' and the biblical Hebrews of the Patriarchal Age.[65] For example, the same name is given to a tribe of Israel known as Benjamin, which also means 'Son of the Right Hand', that is, 'Son of the South'. The Benjaminites seem, therefore, to have inherited the name 'Southerners'. The 'Northerners' (Banū-sim'al) do not appear to have left any specific imprint in Hebrew tradition, though this may be only because we do not yet know the names of their tribes. On the other hand, we know that the Banū-yamīna were divided into at least four or five tribes, two of which apparently bear the same names as two extinct clans of Judah mentioned in Genesis. Er and Onan died without leaving any offspring and so may safely be identified with extinct clans of the tribe of Judah. The name *'Ônān* (LXX: *Aunan*) has already been compared by Kupper with the best-known tribe of the Banū-yamīna, the Awnanum (Babylonian Amnānum).[66] The second most important tribe, the Yaḫrurum or Yaḫurrum,[67] is certainly to be identified with the Yauri (i.e. *Ya'urru*) of the inscriptions of Adad-nirari I, about 1290 B.C.; they are mentioned together with the Akhlamu and Sutû as a lead-

[64] See André Finet, 'Yawi-Ila, Roi de Talḫayum', *Syria* XLI (1964), 117–42, especially pp. 139 ff.

[65] Cf. G. Dossin in the *Mélanges Dussaud* II, 981–96, and NMTRM, 47–81. The Banū-yamīna tribe of Yariḫû has recently been identified with Jericho, but this is impossible (except that both names include the same element, *yariḫ*, 'moon'). The reading *Mārū-yamīna* is incredible.

[66] NMTRM, 50, n. 1.

[67] NMTRM, 49 ff., 75 ff.

ing nomadic or semi-nomadic people of Mesopotamia.[68] Since the two spellings show that the first consonant of the root would be *'ayin*, not *ḥet*, in Hebrew, it is probable that *'Er* stands for older *'Irru* or *'Urru* (hypocoristicon of an original **Ya'rur-El*⟩ **Ya'ur-El*).[69] There is a striking additional case: the name of the third most important tribe of the Banū-yamīna, Ubrapi'û or Ubrapû, is derived from a personal name *Ub-rapi'*,[70] the normal hypocoristicon of which would be *Rāfē'* in Hebrew. But this is the actual name of an extinct clan of Benjamin (*Raphē* in LXX). Such a triple coincidence seems too close to be accidental, especially since all three became extinct in pre-Israelite days.

In 1963 A. Falkenstein pointed out that the kings of the Awnanum tribe at Erech were related to the Hammurapi dynasty, which supported Sin-kâshid and sent troops of the Awnanum and Yaḫrurum tribes (settled at Sippar north of Babylon) to aid him.[71] In April, 1965,

[68] In Adad-nirari's historical introduction to his inscriptions (AOB I, xxii ff., 62 f., lines 22 f.) he calls his father, Arik-den-ili (c. 1307–1296) 'Conqueror of the land of Kutmuḫ and all of its helpers, the "whole" of the Aḫlamû, Sutû, Ia'ur(r)u and their lands'. The supposed Ya'uri Mountains of Luckenbill, AR II, §§ 164, 171, do not exist; we must read in the inscriptions of Tukulti-Ninurta I (Weidner, TN XXVI, No. 16, line 30 and XXX, line 45) *ana libbi mātiya lūrā*, 'I brought (the Hittite captives) into the midst of my land!'. The word *gunnu* does not mean 'elite troops' (CAD), but simply 'whole', 'lot', etc.; it is derived from Sumerian gu(n), 'totality' (with AHW).

[69] Such highly reduced abbreviations of personal names are common in Hebrew and should not cause any difficulty.

[70] See BASOR 163 (1961), 45, n. 44 for the divinity 'Ub/'Eb; see also Ch. III, § c. The name of the god appears both as *'Eb* or *'Ub* (Heb. *'ōb*, 'spirit of the dead') and as *'El'eb*, like *Wer* and *Iluwer*. It refers to the ancestral divinities (*manes*), either in the plural or in the person of a single great deity, perhaps later Graeco-Syrian *Ōp*, 'the very great god'; see R. Mouterde, *Mélanges Dussaud*, I (1939), 391 ff.

[71] See *Baghdader Mitteilungen*, II, 23 ff., as well as F. R. Kraus in BiOr XXII (1965), 292.

J. J. Finkelstein presented a paper at the Chicago meeting of the American Oriental Society, in which he discussed a tablet from the British Museum describing the funeral of 'Ammiṣaduqa. It contains a list of his ancestors, including the first nine kings of Babylon I and before them, a long list of their precursors, divided into two dynasties.[72] The names of these ancestors are very mixed —mostly Semitic but some non-Semitic; among them are the eponymous founders of the tribes of Awnanum and Yaḫrurum. Two other lists containing the same names in more fragmentary form celebrate the ancestry of Samsu-iluna son of Hammurapi, as well as of the latter's older contemporary Shamshi-Adad I of Assyria.[73]

These exciting new tablets cannot be discussed more fully in advance of publication, but they appear to prove that the ancestral Hebrews founded the First Dynasty of Babylon, and that they exercised some sort of hegemony in northern Mesopotamia after the end of the Qutû (Guti) rule, i.e. in the twentieth and nineteenth centuries B.C.[74] They were, in this case, most certainly of mixed blood, just as has often been deduced from names like Arphaxad and Nahor, neither of which is Hurrian.

[72] I wish to thank Professor Finkelstein for writing me on 30 April 1965, and enclosing a transcription of the text. [See now JCS XX (1966), 95–118.]

[73] I wish to thank Prof. Benno Landsberger for this information, which he kindly gave me in November, 1965. Meanwhile the valuable pertinent study by F. R. Kraus, *Könige, die in Zelten wohnten* (Amsterdam, Netherlands Academy, 1965) has reached me.

[74] There is a badly broken reference to the SA.GAZ in the hymn of Ishme-Dagan of Isin, predecessor of Lipit-Ishtar in the early nineteenth century, which has been recently discussed in great detail by W. H. Ph. Römer in DMOA XIII (1965), 50 f. and n. 384 on p. 72. In lines 224 ff. we read: 'I have verily broken the SA.GAZ . . . with the pick-axe; on his neck (?) I have verily imposed the yoke (?).' This attempt to suppress the restless energy of the 'Apiru does not seem to have been very successful; within half a century they had occupied extensive tracts of Babylonia proper.

In Semitic tribal genealogies, there is nearly always much shifting of periods and relationships. A once important tribe might decrease drastically in number or might be divided into splinter groups. A group might develop from a small family into a large clan or tribe in the course of a few centuries. A tribe might be split into clans which joined different tribes, or it might retain its identity of name and tradition after being separated by considerable distances from its original habitat. Examples of such situations are found in vast numbers in Arab tribal history, and there are many illustrations in genealogies of tribes and clans in the Bible as well as in the Ostraca of Samaria (eighth century B.C.).

There is a very interesting analogy between the tribal situation in Palestine after the Hebrew tribes had settled down and the similar situation in Palestine after the Crusades. The hill-country of central western Palestine (Ephraim, Benjamin and northern Judah), left largely depopulated by the Muslim reconquest, was repeopled by tribes from Arabia, whose occupation areas were still well defined in the third quarter of the nineteenth century A.D. when the Survey of Western Palestine was being made, as well as forty years ago when I was collecting historical traditions among the Arabs. The most important of these tribes in Palestine were the Beni 'Âmir, Beni Ḥasan, Beni Ḥârith, Beni Mâlik, Beni Murrah, Beni Sâlim, Beni Zeid.[75] The same tribes are still found in different parts of Arabia: in Yemen, 'Asîr, Ḥejâz, Nejd, 'Omân, el-Ḥasa, etc., as well as occasionally in more remote parts of the Arab world. There can be no doubt that the separation of the Arab tribes into segments which remained in their original home or migrated into new lands, goes back a millennium or more in some cases. In

[75] On the distribution of these tribes and clans in Arabia, see especially the index to the Admiralty *Handbook of Arabia* 1 (1920); see also M. von Oppenheim, *Die Beduinen-Stämme* (1939–52), *passim*.

other words, the period of a few centuries involved in early Hebrew displacements is short by comparison.

From the Mari documents we learn that the Banū-yamīna were semi-nomadic, living in villages (*kaprātum*) as well as in pastoral camps (*nawûm*). They were sheep-herders, building sheep-folds (*ḫaṣirātum*) and raiding the sheep of others. They also sowed wheat and barley, spending their time at the threshing floors during harvest. The women usually travelled with their men, but were left with settled friends when the men went on raids. Again, just as in the Shulgi letter cited above, we note that the women specialized in manufacture of woollen cloth; in a Mari letter we read that 300 garments were to be made for the court by the Banū-yamīna, apparently at very short notice.[76]

We may be surprised that the 'Apiru of the Mari letters are seldom specifically connected with donkey caravans, but we must remember the changing conditions at the time. It was precisely in the Mari period, about 1700 B.C., that the Hyksos first occupied Egypt, and completely disrupted land and sea trade between Egypt and Syria. Shortly before, the Assyrian trading settlements in Cappadocia had been abandoned for good. Thus we have no direct references to trade with Egypt[77] and scarcely any to commerce with Asia Minor; no objects of clear Egyptian origin have been reported from Zimri-Lim's palace

[76] Cf. the paintings representing the group of donkey-nomads headed by 'Absha' from Beni Ḥasan (early nineteenth century B.C.), showing the gaily woven (or embroidered) garments worn by men and women who brought stibium to the nomarch Khnumḥotpe.

[77] Egypt was called *Makan*, i.e., *Makkan*, at Mari (the simpler spelling is characteristic of Old Accadian and Old and Middle Assyrian). I have been promising a paper on this subject for years and hope to find time to publish it before long. The same spelling is found regularly in the inscriptions of Tukulti-Ninurta I in the late thirteenth century B.C., to designate Egypt and its Asiatic empire.

at Mari. On the other hand, there was active overseas trade with Cyprus and Crete. That the 'Apiru were engaged in caravaneering whenever the opportunity offered, is made probable by references to them as Sutû or as men of Yamudbal: as pointed out by most scholars today, they were members of a class, not properly of an ethnic group. We also have clear references to their concealing raids on caravans by pretending to go out with their own caravans.

Two of the chief caravan cities of north-western Mesopotamia, Harran and Nahor,[78] both mentioned in the Patriarchal narratives, appear also in connexion with the Banû-yamîna. The latter are reported to have 'killed a young donkey', i.e., to have made a treaty, with the kings of Zalmaqum in the temple of the moon-god Sin at Harran.[79] Frequent references in Old Babylonian texts to the two suburbs of Sippar, Sippar-Awnanum and Sippar-Yaḫrurum (see above, on the tribes of the Banû-yamîna), remind one of the suburb of Aleppo called *Ḫlb-'prm* in the Ugaritic lists as well as of the *kārum Kaneš*, a settlement outside the walled city of Kanesh in Cappadocia, where Assyrian merchants and caravaneers had been installed during the preceding two centuries.

We may safely suppose that in the heyday of donkey caravaneering in the early second millennium, the 'Apiru were usually employed, but as they increased in numbers and as opportunities for caravan trade became fewer with the breakdown of international commerce in the late eighteenth century and subsequently, they had to resort to other activities. Banditry was only one of a number of possible alternatives, and probably not the most remunerative. Their usual course was to become either mercenaries or slave troops, as in Syria and Anatolia (see below), or to sell themselves into slavery as at Nuzi and

[78] Mentioned by name, Gen. 24:10, where it is explicitly called *'îr*, 'city'.

[79] See n. 65 above.

elsewhere. Slavery was by no means as unpleasant a condition of life in those days as it became later, since the slave was protected by his owner and enjoyed more or less regular shelter, food and clothing, whereas the unemployed free man often had neither protection nor livelihood.[80] Since it was quite easy for a slave to escape in a milieu where there was little, if any, difference in colour and general appearance, it was much wiser for a master to treat his slaves well and keep them in his service than to treat them badly and drive them to escape.

Turning to the Old-Hittite texts from about the sixteenth century B.C., we now have an extremely interesting tablet recently published by H. Otten, and dated by H. G. Güterbock in the Old Empire.[81] In this tablet three special groups of 'mercenaries' are listed, with pledges given for their good treatment in the Hittite forces. These three groups are the desert tribes (*Lîm-ṣêri*), literally, 'tribes of the desert', like the *Le'ummîm* of Gen. 25:3.[82] After the men of the desert tribes we have the grooms, that is, men who took care of the chariots and horses; they are designated by the Sumerian logogram for 'dusty men' (LÚ^{pl}-SAḪARA). Third come the SA.GAZ men, who were, accordingly, neither light-armed desert scouts nor grooms, so they must have been the men who handled the transport and baggage of the army. In other words,

[80] A good illustration of the poverty of the common caravaneer (*ālik ḫarrāni*, Heb. *hōlek 'oraḥ*) is the fact that there is no evidence that he carried any foreign pottery or other imported objects with him. The pottery found in the caravan stations of southern Palestine is always local Palestinian ware. The same is true of the Assyrian colonies in Cappadocia, where no Assyrian pottery has yet been reported and practically all objects found in the *kârum* of Kanish are also of local Anatolian provenience.

[81] See ZA LII (1957), 216–23 and JAOS LXXXIV (1964), 109, n. 19.

[82] See my paper in *Geschichte und Altes Testament* (Alt *Festschrift*, Tübingen 1953), 10, n. 3, and note also that the Sutû are called *ṣāb ṣēri* in the texts of Sargon (NMTRM, 106).

they were caravaneers who filled the same transport function in the Hittite army as they normally did when employed in civil life. We have already noted that the word 'dusty' was applied to grooms in Sumerian, just as it was applied to caravaneers in Semitic.

Later in Hittite texts we find the 'Apiru (SA.GAZ, *Ḫabiru*) and the Lulaḫḫi listed together; the gods of these two peoples appear together in the lists of deities called on to sanction Hittite treaties. From other sources we know who the Lulaḫḫi were.[83] Called *Lullu* or *Lulubi* by the Mesopotamians, they were mountaineers from the Zagros, who may or may not have been related to the modern Lurs of Luristan, but like the Lurs, who leave the mountains to find work in Iraq, the Lullu found jobs as caravaneers in the Hittite empire.

Late-Bronze Syria-Palestine yields a wealth of information about the *'Apiru-'Abiru*.[84] We know from texts of Ugarit and Alalakh that they were scattered through northern Syria and that they were responsible to the kings of these Syrian cities for service, in return for which they received land and rations. They had their own somewhat irregular organization. In the early fifteenth century Idrimi had to flee from Alalakh in order to escape from his older brothers, and found refuge with the 'Apiru. We read in the tablets of Ugarit that escaped slaves had been accustomed to find asylum with the 'Apiru, preferably on the other side of the border between the Hittite empire proper and the vassal state of Ugarit. This practice was

[83] See Landsberger, 'Ḫabiru and Lulaḫḫu', *Kleinasiatische Forschungen* I (1929), 321–34.

[84] See my discussion, CAH² II, ch. XX (1966), 14 ff. Note that it is never possible to determine from occurrences of the name *Ḫa-BI-ru* in Old or Middle Babylonian whether the middle consonant is *p* or *b*; it is only in Middle Assyrian texts that we can be sure of the spelling with *b*. We can therefore not say just when the consonantal assimilation with concomitant popular etymology changing *'Apiru* to *'Abiru*, 'one from beyond (the river)', first came into use.

explicitly forbidden and runaway slaves had to be extradited.

We find constant complaints in the Amarna tablets about ʿApiru raids in both Syria and Palestine, as well as about intrigues of Canaanite rulers with the ʿApiru. A Palestinian ruler distinguishes clearly between three groups: ʿApiru, robbers (*ḫabbātu*) and Beduin (*Sutû*). Biryawaza, prince of the Damascene, refers to his ʿApiru and his Sutû. A triumphal inscription of Amenophis II (c. 1430 B.C.) lists among captives, 3600 ʿApiru, 15,200 Shasu (= Sutû), 36,300 Hurrians, and 15,070 men of Nuḫashshe (between Hamath and Aleppo).[85] In other words, a clear distinction was drawn in this period, at least in Palestine and Syria, between ʿApiru and Beduin on one hand, and robber bands on the other. The ʿApiru might rob, and so might the Beduin; on the other hand, robbery was usually sporadic among the ʿApiru and they were much less nomadic than the Beduin.[86] We learn from Hittite sources that in Syria, Tette, king of Nuḫashshe, was grandson of an ʿApiru chieftain whom the Hittites had placed on the throne. Tette seems to bear an abbreviated Hurrian name. The Amarna tablets insist on the close relation between Abdi-Ashirta and his son Aziru, on the one hand, and the ʿApiru on the other; it is possible that they were themselves of ʿApiru origin, which might

[85] See John Wilson in ANET, 245 ff., and B. Maisler (Mazar), BASOR 102 (1946), 9.

[86] CAH² II, ch. XX (1966), 15. A sidelight on the type of country which was preferred by the ʿApiru towards the end of the fourteenth century B.C. comes from the first Beth-shan stele of this king; see my study of it, BASOR 125 (1952), 24–32, where I first abandoned my long-standing attitude of 'cautious neutrality' towards the equation *Ḫa-BI-ru* = Hebrew. The Egyptians were called in to stop an attack which had been launched against the Asiatic nomads of Ruhma by the ʿApiru warriors and the Tayaru. So far as it goes this text confirms the view of M. B. Rowton that the later ʿApiru preferred wooded and scrub country for security (*Studies B. Landsberger*, Chicago, 1965, 375–87).

throw light on their grandiloquent assumption of the ancient Babylonian title, 'king of Amurru'.

The most interesting 'Apiru personality was Lab'ayu ('Lion Man') in central Palestine. Lab'ayu first appears as a chieftain against whom the Canaanite princes of both southern and northern Palestine were fighting.[87] As usual, we hear of much alleged duplicity and changing of sides, and it is often hard to tell just what facts underlie widely divergent reports. The same anomalous situation appears in nearly every Palestinian letter referring to specific events in which the 'Apiru are involved. Later, after Lab'ayu's death, we are told that his sons continued his policy of infiltration and aggression. In one letter we hear of 'Lab'ayu and [his sons who] have given the land of Shechem to the 'Apiru people'.[88] This may be one of the early crises in the history of Shechem which led to its being occupied by a dominantly Hebrew population in the time of Joshua, as we gather from the Book of Joshua, which nowhere mentions a Hebrew conquest of Shechem, though it became the focus of the Israelite confederacy in Joshua's own time. In the Pentateuch, on the other hand, we have specific references to the capture of Shechem by the Hebrews in the time of Jacob.[89]

We have an interesting hieratic story dealing with events of the early fifteenth century B.C. which relates how an Egyptian officer succeeded in capturing the town of Joppa by a ruse which reminds one both of the Trojan horse and of Ali Baba. In this story the officer stopped at the town on his way north, and was hospitably received by the local Canaanite prince. The prince tells his guest that one of the grooms[90] can take care of the chariot

[87] CAH² II, ch. XX, 18 f.

[88] *Ibid.*, 20.

[89] See BPAE, 32.

[90] Erman was undoubtedly right in supplying Egyptian *ma-ru-'i*, 'groom' in this passage; see now the A. M. Blackman–W. K. Simpson ed. (Harper Torch Book, 1966), 167. Alan Gardiner's substi-

horses, but if no groom is available, he will simply stop a passing 'Apiru and assign him the task. This presupposes that the 'Apiru, as one of the donkey caravaneers who by this time had long been used to mules as well as to donkeys, was able to take care of a horse perfectly well, and could do so without losing caste—he already belonged to the lowest caste in Palestinian society. In the thirteenth and twelfth centuries, during the reigns of Ramesses II and III, large numbers of 'Apiru were still being used by the Egyptians as transport labourers to bring stone from the quarries.[91]

But the 'Apiru/'Abiru must have been turning increasingly from caravaneering as well as from brigandage to more peaceful activities, such as trade[92] and cattle-

---

tute *maryan* is perhaps equally possible from the standpoint of hieratic traces, but is intrinsically impossible because the *maryannu* were nobles and could not be sent out to perform such menial services, whereas it was a groom's business to take care of horses and chariots. (In PḪ, 168 f., G. Posener follows Gardiner.)

[91] See PḪ, 169 ff.

[92] I continue to hold that the Hebrew verb *shr* (originally, *shr*) as well as its derivatives in the Patriarchal narratives (*as handed down to us*) refers to trade; see BASOR 163 (1961), 44 ff., and against this interpretation E. A. Speiser, BASOR 164 (1961), 23 ff., together with my brief rejoinder, *ibid.*, p. 28 (cf. also R. de Vaux, RB LXII, 17 ff.). In my opinion the evidence of the versions is alone decisive in favour of my position, which agrees only in part with that of C. H. Gordon, JNES XVII (1958), 28 ff. There is, however, a clear additional piece of evidence to which J. A. Fitzmyer, S.J., has called to my attention (letter of 27 March 1962). In a Sefîre treaty the words *mlky' zy shrty* (Stele III, lines 7 f.) are translated provisionally by Father Fitzmyer 'all the kings of my trading area' (i.e., 'all the kings who trade with me'). Later in the same line we have *lkl ḥpṣy*, 'for any business of mine'. See also J. J. Rabinowitz, *Biblica* XXXIX (1958), 40. Speiser is, of course, quite right in doubting that the 'Apiru were merchants, but merchants and caravaneers were by no means in the same class. A. F. Rainey in his paper, 'Business Agents at Ugarit', IEJ XIII (1963), 313–21, has some good observations on the words for 'merchant' (*mkr*) and 'agent, broker' (*bdl*) at Ugarit. His objections to my interpretation of the 'Apiru

raising.[93] The most interesting of these occupations were probably viniculture and viticulture. In Egypt during the early fifteenth century B.C., 'Apiru appear as vintagers, probably in the north-eastern Delta, though the north-western Delta is also possible.[94] In the thirteenth century B.C. there is much evidence for Semitic and other Asiatic vintagers in the north-western and the north-eastern Delta, biblical Goshen.[95] When the 'Apiru were forced by the decline of donkey caravaneering to find other means of livelihood, growing vines and making wine would be one of the most natural occupations for them both in Palestine and in Goshen. We have a vivid illustration of this fact in the archaic blessing of Judah found in Gen. 49:11.

> He tethered his donkey to a vine,
> To a grape-vine his young donkey;
> While he washed out his garment with wine,
> His robe with the blood of grapes.

---

as properly donkey drivers are not relevant and he has wholly misconceived the rôle of the donkey driver in comparing him to the *šamallûm* of the Code of Hammurapi, §§ 99–107. In these laws the merchant (*tamkārum*) is described as advancing money or goods to an apprentice merchant (*šamallûm* = Babylonian Aramaic *šəwalyâ*) in order to represent him in a caravan and make a profit for him if possible. The apprentice merchant had every hope of becoming a journeyman merchant, i.e., a full member of the merchants' guild (*mārū tamkārim*). It would be most surprising if the despised donkey drivers should be mentioned at all in the Code.

[93] Especially, of course, sheep-herding. In the light of our present much broader evidence for the background of the 'Apiru in Mesopotamia and Syria, we may have to return to the old explanation of *bĕnê Lĕ'āh* and *bĕnê Rāḥēl* as *originally* cattle-raisers and sheep-herders.

[94] PḪ, 166 f.

[95] Called 'the land of Rameses' (Gen. 47:11) and 'plain of Tanis' (Ps. 78:12, 43), probably from the late tenth century B.C. As is well known today, Tanis and Rameses either were identical, or were adjacent precincts.

The first bicolon contains three words which appear at Mari in connexion with a donkey sacrifice, celebrated in the temple of the moon-god at Harran in order to seal the above-mentioned treaty between the 'Apiru and kings of north-western Mesopotamia; they even appear in the same order in the Bible and at Mari.[96]

E. MESOPOTAMIAN COSMOGONY IN GENESIS

While there is no evidence that the Hebrews brought any special material culture with them from Mesopotamia to Palestine, it is now quite certain that they did keep a considerable part of their ancestral higher culture. Much of the early higher culture of the Hebrews as preserved in the books of Genesis and Exodus (rarely elsewhere), contains elements brought from Mesopotamia during the time of the Patriarchs, that is, no later than the sixteenth century B.C.

First we must list the cosmogonic stories. Among them we note particularly the accounts of Creation in Genesis 1–2 and the Garden of Eden in Genesis 4 and 5, the accounts of the Great Deluge of Noah (Genesis 6–8) and the Tower of Babel (Genesis 11). The account of Creation in Genesis 1 follows the ancient Sumerian cosmogonic pattern ud . . . udbi(a) 'when . . . then', literally 'the day of . . . that day', which was kept in Accadian translation but has not hitherto been found in North-west

[96] Cf. BPAE 12, and for the Mari material see G. Dossin, *Mélanges Dussaud* II (1940), 981 ff.; for the complete formula see ARM II (1950), 82, No. 37:11, *'ayaram mār atānim* (=Heb. *'air ben 'ātôn*) . . . *ušaqtil*. In this connexion I wish to express my regret for having overlooked the statement of Eduard Nielsen in the *Studia Orientalia Ioanni Pedersen* (1953), p. 274: 'No wonder that the ass in the Abraham and Joseph traditions plays an important rôle: the wanderings of Abraham reflect in reality the ancient trade-routes with a centre in Haran.'

Semitic texts outside of Hebrew.[97] It also appears in both the comogonic passages Gen. 2:4 and 5:1.

Genesis 1, though going back to early times in its original poetic form, received its present form in the seventh century B.C. ('P'), and is probably a specifically Israelite synthesis of elements from Babylonia, Egypt and Canaan (Phoenicia), largely obscured by Israelite demythologizing.[98] On the other hand, the account of creation in Genesis 2 is very definitely Mesopotamian in origin, as shown by mention of the Primordial River (Hebrew *'ēd*). This is transparently Sumerian id, 'river', which was taken over as the proper name (*Id*) of the River-god, especially in the valleys of the upper Euphrates (Mari) and Tigris (Assyria).[99]

[97] See for example JBL XLIV (1925), 363 ff., OTMS, 38, and E. A. Speiser, *Genesis* (1964), 3 ff., 12 f.

[98] See my treatment of Gen. 1 in my forthcoming *Experience on the Road to Reason: Phoenicia, Israel and Ionia* (vol. II of the McGraw-Hill series).

[99] For data available up to 1939, see JBL LVIII, 102 f. The identification was originally made by P. Dhorme, RB, 1907, 274. It is certain from many references that the Sumerian pronunciation was *id*, which was also the name of the river-god, written ^{d}(ÍD)*i-id*, in the Assyrian law code (e.g., Col. III, 93). There does not seem to be any real proof that the Semitic name of the divinity was ever *nāru*, since most of the names which have been explained in this way have nothing to do with it. The most important of these was *Narru*, a name of the Sumerian god of music, Dunga (^{d}NAR). There was also a Sumerian Nari mentioned in the Creation Epic, and a Hurrian Nara, consort of Namshara. Id was certainly one of the chief gods of Mari in the third and early second millennia B.C. A cuneiform ritual text (L. W. King, *The Seven Tablets of Creation* [London, 1902], pp. 128, 200) includes a cosmogonic passage in which the River-god (variant: goddess) is said to have created everything. The new evidence for the cosmogonic rôle of the river deity, given below, should be decisive. E. A. Speiser (*Genesis*, 16 and the material there cited) defends an identification with the Accadian word *edû*, which means 'tide', 'river-flood', etc. Phonetically and semantically this identification is possible, but it totally lacks the mythological and historical attestation that we have in the case of the river divinity.

We may render Gen. 2:4b–7a as follows: 'When[100] Yahweh-Elohim made Earth and Heaven,—before any vegetation had yet come into being in the earth and before any herbage had yet sprouted, for Yahweh-Elohim had not yet caused rain to fall on the earth and mankind was not there to till the soil—(then) he caused the primordial river to rise from the earth, irrigating all surface soil. Then Yahweh-Elohim formed mankind of (loose) earth from the soil and breathed living breath into his nostrils.'

In spite of the completely monotheistic character of the passage, its background in pagan cosmogony is clear. It is also clear that this particular text is only the introduction to the story of Eden, also derived from North-Mesopotamian mythological sources. A remarkable illustration of its crude background in the mixed Hurrian and Sumero-Accadian civilization of northern Mesopotamia appears in the cosmogonic text published by W. G. Lambert and A. R. Millard.[101] This extraordinary myth is preserved in a damaged Late-Babylonian tablet in the British Museum, which is expressly attributed in the colophon to an original from Assur (destroyed in 614 B.C.). The first three lines are badly damaged; then we read (lines 4 ff.):

> Furrowing [with] their plough(s), they caused
> (Nether) Sea[102] to produce offspring

[100] The Hebrew *bĕ-yôm* is etymologically identical with Accadian *inūmi*, *inūma*, but is normally used in Hebrew and Ugaritic with a following noun or infinitive in the meaning 'when' before a verbal clause.

[101] See CTBT XLVI (1965), pl. 39, as well as W. G. Lambert and Peter Walcot, *Kadmos* IV (1965), 64–72.

[102] *Tāmtu* refers in Accadian to either a salt sea or lake, but its original meaning, as shown by Hebrew and Ugaritic, was 'the subterranean fresh-water sea', Sumerian abzu (Acc. *apsû*). In this case it is obvious that the [illegible] in question must be the nether (fresh-water) sea, in keeping with the original meaning.

(5) [ ] By themselves[103] they gave birth to Amakandu[104]
For his [sp]ort (?)[105] they built Dunnu-of-Both-Sources[106]
[Ḫaḫ]arni[107] laid claim for himself to lordship over Dunnu.
[Earth] raised her face to her son Amakandu
"Come, let me make love to you," she said to him.
(10) Amakandu took his mother (as mistress) and
Ḫaḫar[ni], his [father] he killed,
In Dunnu, which he loved, they laid (him) to rest.
And Amakandu took over his father's lordship [and]
(Nether) Sea, his sister, [ ] he took (as wife).
(15) Laḫar, son of Amakandu, came [and]
Amakandu he killed, and in Dunnu,
In the [coffin?] of his father he caused him to rest.
[(Nether) S]ea, his mother, he took (as wife),
And (Nether) Sea confined (?)[108] Earth, her mother.

[103] Text *i-na ra-ma-n[i]-šu-n[u]*. The expression sounds odd in this context; one suspects that the divinities in question created Amakandu by normal sexual intercourse.

[104] For this name, which is a variant of the Sumerian name which usually appears in Accadian as Šakkan, see Lambert, *op. cit.*, p. 67.

[105] Read almost certainly *[a-na me-l]u-ul-ti-šú*.

[106] The text has *ālDu-un-nu[ ]ṣa-a-tú ki-lal-la*. Read in the broken space probably *[š]á*, rather than *ʿa*. The word *ṣa-a-tú* is obviously the plural of *ṣîtu*, and is to be transcribed either *ṣātu* or *ṣa'ātu*. It appears in the inscriptions of Shalmaneser III in the phrase *ṣît naqabîša*, literally the egress of the (tunnel) source (of the Tigris); cf. CAD XVI, 218a. The expression is identical with Sumerian id-ka-min-na, 'the source of both rivers' (Accadian *pî nārāti kilallê*); see AJSL XXXV (1919), 163, 172 f. Note that the early Mesopotamians believed that the Tigris and Euphrates shared a common source in the far north.

[107] This is surely the same name as the *dḪa-ḫar-ni* of line 37, where his descendant (*ṣiḫir*) is mentioned. In lines 7 and 11 the text is broken, with the beginning missing in the former and the end missing in the latter. It seems clear that the late cuneiform copies reflect an original *Ḫa-ḫar-ni*. In any case, the reading *Ḫain* is unattested elsewhere.

[108] Read perhaps *ta-ni[-i']* rather than *ta-ni[-ir]* (as Lambert seems to restore). It does seem a bit late in the myth for Earth to

(20) On the 16th of the month Chislev, he took over
lordship and kingship.
[X] son of Laḫar, took River (*dId-da*), his own
sister (as wife), and
[Laḫar, (his) fa]ther and (Nether) Sea, his
mother, he kil[led and]
[ ] laid them to rest . . . (?).

The dreary tale goes on: Y, son of Laḫar's son X, took his sister U'ayum[109] as wife (line 25), after which he killed (his father and) mother, River (line 30). Then Z son of Y married his sister, Ningeshtinna[110] and killed his father Y and mother, U'ayum. . . .

The account of the Garden of Eden is not necessarily Mesopotamian in its extant form, but it is certainly of Mesopotamian origin, since it deals with the division of a single cosmic source into four great rivers, including the Tigris, Euphrates, and two mythical streams.[111] In Babylonia we have many representations of and references to the two cosmic streams which spout from a vase held by the god of the subterranean fresh-water ocean, Enki or Ea, and these two sometimes appear as four rivers in representations where two gods hold vases, each of which has two streams spouting from it. The finest illustration of the four-river scene comes from the famous fresco

---

be murdered, and we should certainly expect the usual *dāku*. It may seem a little surprising to have Nether Sea limiting the movements of Earth, whereas the opposite is generally true. The idea of Earth's putting a limit to Sea's encroachment is familiar in ancient literature (cf. Job 38:8–11).

[109] Read simply *dU-a-a-am*. This might then be an old accusative of Sumerian u'a = GANÁM. It would not be surprising in such syncretistic myths to find both equivalents of (d)GANÁM, Laḫar and U'a, separated into two divinities.

[110] This is phonetically a shortened form of the full Sumerian Nin-geštin-anna, 'Lady of the Vine of Heaven', consort of Tammuz.

[111] See my study, 'The Location of the Garden of Eden', AJSL XXIX (1922), 15–31. For an important modification in the supposed geography of Eden (*ibid.*, p. 29) see the text below.

painting found by André Parrot in the palace of Zimri-Lim at Mari, from the late eighteenth century B.C.[112]

Returning to the cosmogonic myth translated above, attention should be called to the fact that we have here a classical description of the inheritance by sororate marriage which has been discovered by P. Koschaker and E. A. Speiser in the cultures of the mountaineers of the second millennium B.C. Koschaker first pointed it out in the case of Ḫayasha (in Armenia Major), where its existence is known from Hittite sources, and extended it to the Hurrians and Elamites.[113] E. A. Speiser has further confirmed its existence among the Hurrians.[114] We have a clue to the original location of this myth in line 41, where the colophon refers to the city of *Šu-pa-at* [ ]. This is obviously Shubat-Enlil, modern Chagar Bazar, in the upper basin of the Ḫabur river. The same spelling,

[112] For previously known representations of the flowing streams, see my paper 'The Mouth of the Rivers', AJSL XXXV (1919), 161–95. The motif is very common in Mesopotamian monumental and glyptic art. For the example found by A. Parrot in the palace of Zimri-Lim at Mari see Parrot, *Syria* XVIII (1937), 335 ff. and M.-Th. Barrelet, *Studia Mariana* (1950), 9 ff. There can be little doubt that the Mari representation from the latter part of the eighteenth century B.C. does reflect mythological motifs which have in part survived in the story of the Garden of Eden; note especially the two female divinities standing opposite each other in the central panel, each holding a vase with four flowing streams spouting from it. On either side of the central panel are three registers of apotropaeic figures with two ferocious mountain bisons facing each other at the bottom and two pairs of bearded cherubim facing one another in the second and third registers from below. In front of the apotropaeic figures are two tall flanking trees of obscure identity. Behind the figures are two other flanking trees which may easily be identified as date palms. All this reminds one strikingly of the symbolism in the story of Eden.

[113] See P. Koschaker, ZA XLI (1933), 1–89.

[114] See *Studies and Texts: I, Biblical and Other Studies*, ed. Alexander Altmann (Harvard University Press, 1963), pp. 15–28, where he discusses 'The Wife-Sister Motif in the Patriarchal Narratives'.

Šupat-Enlil, appears in a text cited by A. Goetze.[115] The town was very ancient and became one of the royal residences of Shamshi-Adad I, whose ancestors may well have lived in the area at one time (see above). Unhappily we do not know the origin of the name *Ḫaḫarni*, but W. G. Lambert has pointed out that it does occur in cuneiform texts together with that of another god, Ḫayashu (*Ḫa'ašu*).[116] It may well be that the name is connected with that of the country Ḫayasha, which lay directly north of it in the Armenian mountains. The North-Mesopotamian character of our text is demonstrated by the mixture of Sumerian, Accadian, and other non-Semitic cosmic names. It is particularly interesting to find the feminine order of fertility given as *Tāmtu* = *Tehôm*, the subterranean fresh-water ocean followed by *id* = *'ēd*, the primordial river (which can, of course, be either masculine or feminine). This is obviously a secondary development in which two separate myths have been fused.

The Dunnu-of-Both-Sources, which the two primordial divinities Ḫaḫarni and Earth built for Amakandu, Sumero-Accadian god of animal husbandry, strongly suggests the later Garden in Eden of the biblical narrative, which was also at the source of the rivers. Strangely enough, it does not seem to have been noticed by anyone —least of all by the writer—that the obscure *miqqedem* after 'And Yahweh Elohim planted a garden in Eden' means 'in primeval times', as so often in the Hebrew Bible, and not 'from the east'.[117]

The two lists of antediluvian patriarchs in chapters 4 and 5 of Genesis are most instructive, since they vary in number from seven (or eight) to ten in our lists. We have the same variations in number in Sumerian lists of the kings of Babylonia before the Great Flood; we have simi-

[115] See A. Goetze, JCS VII (1953), 58. On the identification of Shubat-Enlil with Chagar Bazar, see especially NMTRM, 2–8.

[116] See W. G. Lambert, *op. cit.*, 67.

[117] See n. 111, above.

lar reduction of ages before and after the Flood, though the ages are very much higher in all Babylonian lists.[118] While the names in Genesis are quite different from the Babylonian names, and no similarity has been found at any point, the variations in numbers and ages prove some sort of connexion—though not through written tradition. Incidentally, it may be remarked that Lamech, the last of the descendants of Cain in Genesis 4 and father of Noah in 5, may now be considered as a shortened form (hypocoristicon) of names like *Lamki-Mari*, which belonged to a king of Mari about the middle of the third millennium B.C.; cf. Old Accadian *Lamkiyum*.[119]

The story of the Flood in Genesis is so close to the various Sumerian and Accadian accounts of the Great Deluge that a close relationship is certain.[120] It is quite impossible, however, to assume that the story of the Flood is derived from any of the extant Sumerian or Accadian versions. They are all different in detail, and the Hebrew story shows archaic features which must have been derived from a form of the Mesopotamian myth earlier than any preserved in cuneiform sources. It is very difficult

[118] See SKL for the evidence up to 1939. Since then more such material has been discovered, but the picture has not been radically changed; see most recently J. van Dijk, *XVIII. vorläufiger Bericht über . . . Uruk-Warka* (1962), 44–52.

[119] I noted this equivalence several years ago, but have not published it. Meanwhile Stanley Gevirtz has (PEPI, 26) independently made the same identifications. In addition to the suggestions for explanation of antediluvian names which I included in my discussion, JBL LVIII (1939), 95 ff., it may be added that Adam may possibly be the Adamu listed among the early ancestors of Shamshi-Adad I, described as living in tents, and Jabal (Gen. 4:20) may be the god Yabal, whose name occurs in such composite names as Mut-iabal. I am still very sceptical about the identification of Cain as the eponym of the Kenites or of Seth as the eponym of Sutû-Shutu.

[120] On their relationship see A. Heidel in *The Gilgamesh Epic and Old Testament Parallels* (Phoenix ed., Chicago, 1963), 224 ff., and E. A. Speiser, *Genesis* (1964), 54 ff.

to separate a myth found all over the world, even as far away as pre-Columbian South America, from the tremendous floods which must have accompanied successive retreats of the glaciers in the closing phases of the Pleistocene Age. In other words, the Flood story presumably goes back, in one form or another, at least ten or twelve thousand years and, for all we know, much further. Now it is certain, thanks to recent prehistoric discoveries, that European man was much further advanced culturally in Middle and Upper Palaeolithic than had been supposed. There can, therefore, no longer be any serious difficulty in tracing some of the cosmogonic narratives of Genesis back ultimately to stories first told over ten or even twenty thousand years ago. So far no trace of a true Flood story has been found in Egypt and no such myth is yet known from Phoenicia proper, either at Ugarit or in Sanchuniathon.

Finally we have the account of the Tower of Babel, which is transparently Babylonian in origin. I do not, however, believe for a moment that the origin of the story has anything to do with the temple-tower (*ziqquratu*) of the First Dynasty of Babylon, Etemenanki, in the precinct of Esagila, though it is perfectly possible that the existence of a new tower after the early seventeenth century B.C. may have had something to do with the persistence of the story. Babylon is said by native historiographers to have been built 'opposite Accad'[121] by Sargon I, who founded the first great empire in south-western Asia. We now know that Accad was itself on the Euphrates near Babylon and quite possibly within the walls of the Greater Babylon of Nebuchadnezzar II. It was destroyed by the Guti between c. 2200 and 2150, as described in the often-mentioned Sumerian 'Curse of Accad'.

[121] An analysis of the Babylonian tradition about the foundation of Babylon was prepared years ago but was never finished, since new data kept coming to light from cuneiform sources. I hope to deal with this evidence elsewhere.

The Euphrates then flowed *east* of Babylon, and Accad lay presumably deep under the present water-table, south-east of the Esagila complex, across the ancient river bed from it. The 'Gate of God' (*Bāb-El*), Sumerian Kadingirra(k), may have been the original name of the temple-tower of Accad. The temple-tower seems to have been introduced into Babylonian architecture precisely in the Accad Dynasty, since it was unknown before, but was already normal in Ur III.[122]

It is highly probable, therefore, that the story goes back not to the time of Hammurapi or later, but rather to a time shortly after the downfall of Accad in the twenty-second century B.C. It may also be observed that the word *šem* does not mean here 'name, fame' as commonly supposed, but 'an (inscribed) monument'.[123] It was, therefore, as a tremendous monument to its builders that the Tower of Babel was intended.

It is not necessary to suppose that all these stories were first brought to Palestine at the same time; presumably successive waves of 'Apiru moved westward from before Abraham's time down to the sixteenth century B.C. (see below). Some of the apparently incongruous features may perhaps be explained not so much by the growth of tradition in later times, as by differences between successive forms of the ancient stories before they were brought to the West.

[122] For a clear representation of a temple-tower of the Accad period, see Edith Porada, *Iraq* XXII (1960), 120 and pl. 15. For the underlying symbolism of the mountain summit (also called *ziqurratu*), cf. the Naram-Sin Stele of Susa (e.g., ANEP 100, No. 309). For the 'Gate of God', see the remarks of W. Andrae, *Das Gotteshaus und die Urformen des Bauens im Alten Orient* (Berlin, 1930), especially pp. 16 f. on the temple as gateway; Andrae's discussion does not refer, even indirectly, to the name Babylon.

[123] For lack of space I refer again to a forthcoming study of analogous material (e.g., Acc. *šiṭir šumiya*, 'monument bearing my name').

F. MESOPOTAMIAN LAW IN HEBREW TRADITION

When we turn to the laws and customs of the early Hebrews, we find extraordinarily pertinent evidence for Mesopotamian origin of the customary laws known accidentally from Nuzi, about 150 miles north of Baghdad. The southern 'Apiru (Banū-yamīna) were chiefly found in Upper Mesopotamia, south of the hill-country, while the northern 'Apiru (Banū-sim'al) were to be found in the more mountainous region to the north.[124] It is not at all surprising that the mixed Hurrian and Semitic population of the two Patriarchal cities of Harran and Nahor in the eighteenth century B.C. exhibited a pattern of customary law similar to what we find at Nuzi in the fifteenth century. In the broad plains of northern Mesopotamia a distance of two or three hundred miles was unimportant, given semi-nomadic mobility and similar racial mixture. E. A. Speiser has collected a score of striking parallels between customary law at Nuzi and in Genesis; we have seen above that the resemblance in the case of adoption is even closer than he supposed.[125] These laws were presumably brought to the West by the migrating 'Apiru donkey caravaneers of early Patriarchal times.

On the other hand, there is a still better attested type of case-law which must have been brought to the West from Babylonia in late Patriarchal times, perhaps in the sixteenth century B.C. I am referring to Exodus 21–3, where we have the torso of a considerably longer code of case-laws following ancient Sumero-Accadian patterns established no later than the late third millennium B.C. For comparison we now have either the whole or extensive fragments of at least six codes of cuneiform case-law,

[124] See n. 64 above for a reference to André Finet's work.

[125] See above, n. 31. R. de Vaux's cautions in his review of Speiser's *Genesis* in JBL LXXXIV (1965), 75, are not really valid in the ethno-cultural situation described in this chapter.

all dating from between c. 2100 and 1500 B.C.; three of these are Sumerian, two are Accadian and one is Hittite. It was formerly thought that the Hittite laws belonged to the Late-Hittite Empire; now, however, we know that they were already written down in the Old-Hittite Empire.[126] They contain remains of two successive periods of previous legislation. In addition to these six cuneiform codes, we have a seventh, Middle-Assyrian, code from the palace of Tiglath-pileser I and clearly written about 1100 B.C. It is generally thought that the content of this code may be substantially earlier, but this is increasingly doubtful. In any case, the Assyrian law-code reflects a later, harsher, phase of law-enforcement, and may be omitted from consideration here.

By far the closest in content to the 'Book of the Covenant' are the Code of Eshnunna and the famous Code of Hammurapi, which date before c. 1725 and c. 1690 B.C., respectively, in our low chronology. The structure of these case-laws is identical with that of the Book of the Covenant; all begin with 'if' (*kî*), proceed with stipulations introduced by 'provided that' (*'im*), and end with a statement of the legal penalty. Similarly all laws begin in Sumerian with *tukumbi*, in Accadian with *šumma* and in Hittite with *takku*. In several cases we have identical laws in Hebrew and in one or both cuneiform codes; I shall limit myself to two examples which show how we can reconstruct the original form of the Hebrew laws in Exodus 21–3 on the basis of the two Babylonian law codes with the aid of textual variants in the Greek translation of the Pentateuch from the early third century B.C., a thousand years before the earliest Hebrew texts known until 1948. In Ex. 21:29, the Authorized Version reads: 'But if the ox were wont to push with his horns in time

[126] See H. G. Güterbock, JCS XV (1961), 64 f.; XVI (1962), 17 ff.; and JAOS LXXXIV (1964), 109.

past, and it hath been testified to his owner, and he hath not kept him in, but he hath killed a man or a woman; the ox shall be stoned and his owner shall also be put to death.' By following the two Babylonian case-laws and recognizing that there are two simple corruptions in the Hebrew text, we may render the verse: 'If the ox has habitually gored in the past, and his owner has been officially informed (by the authorities) and yet has not dehorned it, and it shall kill a man or a woman, the ox shall be stoned and its owner also shall be executed.'[127]

Another case is more complex; but we can draw on the Greek Bible, which must go back to an old Hebrew recension differing from the Masoretic text. In the light of the Code of Hammurapi (§ 266) we can select the more correct reading from the two divergent recensions and can supply a missing word. This law deals with the loss of a domestic animal which has been put into the care of another person. The Authorized Version follows the Masoretic Hebrew text and reads: 'If it be torn in pieces, (then) let him bring it (for) witness (and) he shall not make good that which is torn' (Ex. 22:12). Restored in the light of the Babylonian code and the Greek translation of another Hebrew recension of Exodus over 1400 years later, it reads: 'If it is torn by wild beasts, he shall bring it (to its owner) and ⟨shall swear⟩ an oath; he

[127] On Eshnunna Code, § 53, and the parallel law in the Code of Hammurapi, § 251, see A. Goetze, *The Laws of Eshnunna* (AASOR XXXI, 1956). In the Eshnunna Code one can scarcely read *p[a]-šī-ir*, corresponding in meaning to CḪ, *ušarrim*; I suggest reading *i[b]-šī-ir*. The word does not seem to appear in Accadian so far, but would be equivalent to Arabic *bšr*, 'to remove something from a human body, tree, or ground, by shaving, scraping, or otherwise denuding the surface'. The Accadian synonym *šrm* corresponds by the normal sibilant shift to Arabic *srm*, 'to cut or lop off'. As Goetze has seen, we should read in the Hebrew text *yšrmnw* for the *textus receptus yišměrennu*, and for the preceding *we-hŭ'ad* read *we-hŭda'*.

shall not pay compensation for the torn animal.'[128] This is exactly what the Babylonian code stipulates.

There are also quite a number of interesting archaisms in the Book of the Covenant which confirm the impression made by the structural identity in formulation. In Ex. 21:22 there is a reference to 'judges' (*pelîlîm*). This word is found only in three archaic or archaistic passages in the Old Testament, and its use was abandoned early. The verb appears, however, in the Assyrian letters from Cappadocia dating from the nineteenth century B.C., in the same sense of 'arbitrate' as we have in the Book of the Covenant.[129]

Samuel Iwry has recently discovered that Hebrew *nimṣā'*, found several times in the Book of the Covenant and mistranslated 'be found', actually means 'be caught (in the act)', in accord with the parallels in the Babylonian and Hittite laws. Interestingly enough, this correct original use of the word was not recognized until noted by Iwry in a Qumran variant of the First Isaiah Scroll!

Another curious expression which has always been misunderstood by later tradition is found in a law (Ex. 23:5) dealing with what one should do when one finds an enemy's ox or ass going astray or falling under a burden. At the end of the verse we are told, in the translation of the Authorized Version, '. . . thou shalt help with him'. In the Ugaritic epics we find the very same word employed in the sense 'adjusting the load of the donkey', which means that we should read '. . . thou shalt adjust his load'.[130] While this is a small point, it well illustrates the

[128] The Greek rendering presupposes an original *'ad* instead of *'ēd*, i.e., *'âd*, 'oath, pact', before which we should perhaps insert *yā'îd*, which would disappear by haplography. On the word, see W. F. Albright and D. R. Hillers, *''Âd, 'Êdût*, "Covenant", and Related Words in Hebrew', expected to appear soon as a separate monograph.

[129] See E. A. Speiser, *Landsberger Festschrift* (1965), 389 f.

[130] This verb, Hebrew *'zb*, appears in Ugaritic as *'db* for *'ḏb*. Its pertinence to this passage was first pointed out by U. Cassuto.

fact that in many cases where we would not suspect a wrong translation or an erroneous use of a word, we must yet beware. Especially significant is the archaic use of *'elôhîm*, 'gods', referring to oaths by pagan divinities (several passages).

Even more important is the archaic use of the term 'Hebrew' in Ex. 21:2. We are told that if a Hebrew slave has served six years he shall be allowed to go free. In other words, a native Hebrew slave was actually an indentured servant and could not be subjected to life-long slavery like ordinary slaves of foreign origin.[131] How shall we explain the fact that the Book of the Covenant contains such archaic material, going back long before the time of Moses? There is only one likely explanation—that the case-laws of early Israel were already in use among the Hebrews before the Mosaic period and had probably been brought from Mesopotamia by later Hebrew immigrants, presumably after a considerable body of Hebrews had already settled in the West. Historically, this movement is most likely to have taken place during the troubled times in the sixteenth century B.C., when the Cossaeans occupied much of Mesopotamia, and many of the semi-nomadic Hebrews presumably fled to the West. Though we cannot say just when or how the modified Babylonian case-laws came to the West, it is clear from Ex. 21:2 that they were already used by the Hebrews in pre-Mosaic times. In any case, it was these laws which formed the basis for Mosaic jurisprudence.[132] Again we have an example of the fact that the antiquity of Hebrew

[131] See especially A. Alt, KSGVI 1 (1953), 291 ff. Note also that in archaic legal terminology *'Ibrî* was still occasionally used in Deuteronomy and Jeremiah, though naturally in a somewhat different sense.

[132] See below, Ch. III. Note that W. G. Lambert has suggested that the *lex talionis*, which occasionally appears in the Code of Hammurapi, but has not yet been found elsewhere in Babylonian legislation, may have been taken into the Code of Hammurapi from the customary laws of the Amorites; see JTS XVI (1965), 289.

tradition is much greater than commonly thought. It is entirely unnecessary to suppose that the case-laws were brought to the West in written form, since customary laws are everywhere handed down orally before being put into writing.

We are rapidly learning about another branch of early Hebrew law not so closely connected with Mesopotamia, which includes making agreements, contracts and treaties —'covenants' in biblical English. There are two old words for covenant in Hebrew: *bĕrît*, which has now been found in extra-biblical sources from pre-Mosaic times;[133] and *'êdût*, a term hitherto rendered 'testimony' but which is undoubtedly a synonym of *bĕrît*.[134] In the course of time, however, the term *bĕrît* came to have other meanings such as 'contract labour' and the like,[135] whereas *'êdût* was originally the plural of a word meaning 'oath', which came into use in Assyria and among the Aramaeans in the sense of 'treaty' no later than the beginning of the first millennium B.C., and which had probably been employed for several centuries previously.[136] Thanks to

[133] See especially BASOR 121 (1951), 21 f., where we have the expression 'to cut ▪ *berītu*'. The two tablets in question are ration lists for payment to ERIN^{pl} *A-ša-[an]-nu*. The Ašannu also appear ▪▪ a class at Alalakh. These Qatna tablets may be dated about 1400 B.C. In Egyptian texts from the twelfth century B.C. we find ▪ similar Semitic loan word *birta*; see below, n. 135.

[134] See above, n. 128.

[135] In view of the different nominal forms mentioned in n. 133, *berītu* and *birtu*, one might look for different meanings, but they both seem to be used in the ▪▪▪ sense, which is not the ordinary sense of Heb. *bĕrît*. In my opinion, an etymological identification of the form *berītu* with Acc. *birītu* 'fetter' still remains highly probable; its relation to the form *birtu* would be something like that of Heb. *qiryā* and Phoen. *qart* for **qirtu*, 'town'.

[136] Assyr. *ādê* seems to appear first in our texts about the middle of the eighth century B.C., but the reason for its apparent absence in earlier texts of the first millennium may easily be that we have no treaties or specific references to treaties in royal inscriptions before this time. In Aramaic the plural *'ădayyâ*, lit. 'oaths', appears as the

the research of G. E. Mendenhall and others, we now know that the structure of the suzerainty treaty between Israel and Yahweh was almost identical with that of second-millennium treaties preserved in Anatolian and Syrian archives from the fifteenth–thirteenth centuries B.C.[137] Some elements of the patterns were still in use with little change in Assyrian and Aramaic treaties of the eighth and seventh centuries B.C., but there are important modifications in the structure as a whole. These facts point to a high antiquity for the pattern which appears most fully in Joshua 24. Characteristic of these early covenants between God and the Hebrew, Israelite, or Jewish ethno-political unit is their archaism and their religious purpose. The covenant between Yahweh and Abram in Gen. 15 is strikingly archaic; it is preserved in our oldest documentary source 'J'.[138] Hitherto no clear parallel has been found anywhere outside of the Bible.

It is scarcely surprising that these covenants are so basic to biblical religious history, because of the long prehistory of covenants among the Hebrews. Being prevailingly caravaneers and so ethno-political intruders in the West, the early Hebrews were in constant need of contractual and treaty protection. To illustrate, when the Hebrews started on an expedition they had to make contracts with suppliers of beasts and equipment, as well as of food for man and beast; they had to make contracts with the merchants and business agents who owned

---

word for 'treaty' throughout the Sefire treaties from c. 750 B.C. The Assyrian singular was undoubtedly **ādu*, from older **'ahdu*. Since an Accadian origin is precluded by the vocalization, it was probably borrowed from North-west Semitic.

[137] See especially G. E. Mendenhall, BA XVII (1954), 26–46, 49–76, reprinted in *Law and Covenant in Israel and the Ancient Near East* (Pittsburgh, 1955). See most recently H. B. Huffmon, 'The Treaty Background of Hebrew *Yāda'*', BASOR 181 (1966), 31–7.

[138] On Gen. 15 see Speiser, *Genesis* (1964), 110 ff., and for a striking chronological archaism in it see BASOR 162 (1961), 50 f.

goods and often accompanied the caravans; they had to make treaties with the states and tribes from whose territories they started, through whose territories they travelled and to whose territories they were going. Contracts had to be made between the chief caravaneers and the men who drove and cared for the donkeys, besides performing other stipulated duties. We must remember that caravans were constantly threatened by raiders, so it was necessary for all the caravaneers to carry arms and to be ready to fight at a moment's notice. This is undoubtedly one of the chief reasons why the *'Apiru* not only raided other caravans (as in the Mari letters) but also became attached as mercenaries or slave troops to the forces of many big and little states of south-western Asia. We now possess copies of such an agreement between the Hittite king and his 'Apiru troops from the sixteenth century B.C. (see above). Contracts and treaties were common everywhere, but only the Hebrews, so far as we know, made covenants with their gods or God.[139]

The paternal god of the Patriarchs, Shadday,[140] is now paralleled in similar ancient caravaneering societies, especially among the early Assyrian merchants of the nine-

[139] Note that this statement is provisional and that a new discovery may at any time partially disprove it.

[140] See my basic discussion, JBL LIV (1935), 173–93; M. Weippert, ZDMG CXI (1961), 41–62; F. M. Cross, Jr., HTR LV (1962), 244–50. It must be added that objections made by Weippert and others to an original vocalization *šaddāy* are not valid, since the formation in question is attested not only in Accadian, where it is very common, but also in North-west Semitic. The best example in the latter is *rabbāyū*, used of an important nomadic tribe or group of tribes in the Mari texts (NMTRM, *passim*). The name means transparently 'archer(s)', and is a form like *šaddāy* and numerous Accadian parallels, from the North-west Semitic stem *rby*, 'to shoot an arrow'. Incidentally, the singular *rabbāyum*, *rabbû* is naturally the direct source of Heb. *rabbîm*, 'archers'. As I pointed out, *ibid.*, p. 184, n. 36, the same word survived in Assyrian as *šaddā'û*. Of course the word does not mean simply 'mountaineer', but properly 'one who inhabits the mountain(s)'.

teenth and eighteenth centuries B.C., as well as among the Nabataeans and other North-Arabian caravaneers in the first centuries A.D. Among these groups it was customary for a man to worship one particular god, namely, his paternal or ancestral deity (Greek *theos patrōos*).[141] The paternal god or ancestral deity also played an unusually important rôle among the Hebrews of the Patriarchal and Mosaic ages. From this so-called 'monolatry' to a true, though perhaps implicit, monotheism, only a single long step was required. As we shall see, just such a step was taken by Moses. Because of the inevitable differences in emphasis, we can understand the survival of conflicting traditions: the Patriarchs are said to have worshipped 'other gods' in Mesopotamia and Egypt (Joshua 24) and yet a strong monotheistic spirit pervades Genesis. I formerly held that the religious traditions of Genesis were, in general, retrojections from post-Mosaic times, but I have now changed my mind, since there is no reason to single out religious traditions as relatively late while accepting the antiquity of Patriarchal customary law and historical tradition in general. Thanks to the work of E. A. Speiser and Frank M. Cross, Jr., it has become clear that early Hebrew religious traditions rest on pre-Mosaic foundations, since the divine names and forms of cult are different from anything in the later theology and cultic legislation of the Pentateuch.[142] We must, therefore, go back to Patriarchal times in order to understand the nature of specifically Israelite religious institutions once thought by most critical scholars to have developed only under the Monarchy (c. 1000–600 B.C.).

[141] See A. Alt, KSGVI I, 1–78; F. M. Cross, Jr., HTR LV (1962), 225 ff.

III

Canaanite Religion in the Bronze Age

A. THE ETHNIC AND CULTURAL BACKGROUND OF THE CANAANITES

Syria and Palestine form a land bridge which has been utilized from the very earliest times by peoples and armies moving between the continents of Asia and Africa.[1] Natural routes are relatively narrow and sharply defined by sea, lakes and mountains in the west and desert in the east. It was possible for groups to maintain their identity without being seriously disturbed by the passing of traders and other migrants or by the march of hostile armies, since they could simply retire into the mountains or to the fringe of the desert while awaiting a more favourable time to resume a normal mode of life. We must, however, remember that, because of the commerce which we have described in Chapter II, Palestine and Syria were never really isolated, but were always being traversed in season by trading caravans and visited in season by ships from different parts of the Mediterranean. Though Palestine was generally a poor country, Syria, on the other hand, was naturally wealthy. Because of their location between the rich foci of power in Egypt and Asia, both Syria and Palestine were considered very important prizes in the world politics of the third as well as the second millennium B.C.

Today it is clear that the ethnic identity of the people later known as 'Canaanites' was already established no

[1] For a succinct account with special reference to antiquity, see my survey in *Historia Mundi* II (1953), 330–5 and pertinent observations on pp. 335–76.

later than the end of the fourth millennium B.C. This statement might have been rash a few years ago, but the situation has changed radically. In the first place, we now know of a considerably larger number of towns with good Semitic names which were first occupied before the end of the fourth millennium B.C. In the second place, the material culture of Palestine and south-western Syria had since that time been generally different from that of northern and eastern Syria with its cultural hinterlands. In such periods as Early Bronze II (c. twenty-ninth–twenty-sixth centuries B.C.) and Middle Bronze–Late Bronze, the civilization of Phoenicia, southern Syria and Palestine was quite homogeneous. It is true that some scholars have insisted on the non-Semitic origin of a number of early Palestinian and south Syrian place-names, but the evidence for their assertions is exceedingly weak.[2] For example, to insist that Mount Tabor has a non-Semitic name which may be connected with that of Atabyrion[3] on Rhodes or of Mount Tibar in the Zagros region is quite superfluous, since there is a perfectly good Semitic etymology.[4] To hold that names like 'Jordan', original *Yordân*,[5] 'Jabbok' (*Yabbōq*), and *Yarmûk* are

[2] On the other hand, we have some good recent studies on Semitic place-names in the ancient Near East as well as on Israelite and pre-Israelite place-names in Palestine, by B. S. J. Isserlin in *Proc. Leeds Philos. Soc.* VIII (1956), 83–110 and PEQ, 1957, 133–44.

[3] The fact that Tabor is called *Atabyrion* by Polybius means no more than that *Taḥpanḥes* was called *Daphnē* in Greek or *Tēpe* was called *Thēbai*.

[4] Ugaritic *tbrrt*, presumably pronounced *tabrurtu* from a masculine **tabruru*-**taburru*, 'brightness, purity'.

[5] The combination of *Yordân* with Greek *Iardanos* is irrelevant. The oldest form of the name was probably **Yurdân*; *Yordân* is the original form which was kept in 'Amorite'; in Canaanite proper the form in the thirteenth century B.C. was spelled *Ya-ar-du-na* = *Yardôn*, which is the normal dissimilated form. Later Heb. *Yardēn* is an Aramaizing development from Canaanite-Hebrew; see VESO 36, IV, 6 for an analysis of these forms, with references.

non-Semitic overlooks the fact that they all have good Semitic forms and, in the case of the first two, obvious meanings. None of the characteristic Sumerian, 'Subarian', Hurrian, South Anatolian, or other recognizably non-Semitic place-names appear at all in Palestine—or, for that matter, anywhere in southern Syria and Phoenicia. Towns such as Beth-yeraḥ, Megiddo, Jericho, and Arad, which were first occupied before 3000 B.C., have good Semitic names which cannot belong to any other recognizable linguistic stock. When the Sumero-Accadians called the people of Palestine-Syria as well as their own nomads of western origin 'Westerners' (*Amurrium*, later *Amurrû*), the designation was applied to people bearing personal names of North-west Semitic type. When the Egyptians, no later than the early Pyramid Age, borrowed North-west Semitic *karmu* in the sense of 'vineyard'[6] and *qamḥu* in the sense of 'wheat flour', they were already employing typical North-west Semitic words, which were still used in Hebrew and cognate dialects millennia later. In the Execration Texts of the late twentieth and nineteenth centuries B.C., all hitherto identified personal names from Palestine and southern Syria were not only Semitic but nearly always specifically North-west Semitic.[7] At that time there is no evidence of non-Semitic populations in this region. There were, however, undoubtedly many historical movements of non-Semitic peoples into southern Syria and Palestine. For instance, there must have been an irruption from the north-west about 2500 B.C. when the so-called Khirbet Kerak pottery suddenly, though for a short time, flooded into Syria and

[6] For this word see JPOS VIII, 231, n. 1 and VESO 8, n. 21.

[7] See especially JPOS VIII (1928), 223–56 and BASOR 81 (1941), 16–21 and 83 (1941), 30–6. I am not citing other scholars here, since the few who know both Egyptian and the Semitic languages of the early second millennium B.C. and who also possess the necessary familiarity with comparative linguistics and historical phonology, have so far contributed only individual observations.

Palestine from Asia Minor. In a case like this, our principal reason for explaining the change of pottery styles as due to the sudden irruption of invaders is that the new style appeared first in Anatolia, spread to Syria, and inundated northern Palestine, occupying only part of the country and then vanishing with apparently equal rapidity. This pottery style is rare in central Palestine and scarcely appears at all in the south. It is impossible to say whether any specific linguistic stock was involved in the movement. We do not even know whether it affected Phoenicia and the coast of Palestine at all.

This 'Khirbet Kerak invasion' was followed by a strong cultural movement from Mesopotamia, illustrated by the caliciform ware of Syria[8] between the twenty-third and twentieth centuries B.C. and the debased pottery of the same origin which spread over Palestine in the twentieth–nineteenth centuries. As pointed out in Chapter II, this ware is useful for the chronology of the Patriarchal Age, though it was not brought into the country by the caravaneers, as far as we know.

During the twenty-third–twentieth centuries B.C. under Accad and Ur III, there was a very great increase of Mesopotamian influence in Syria. From this time on we can trace strong—though superficial—Mesopotamian influence on Syro-Palestinian culture. During the period of the Third Dynasty of Ur, about 2060 to 1955 B.C., this influence reached its height; at least one prince of Byblos was an acknowledged vassal of the king of Ur, receiving the title *ensi*, 'viceroy', about 2000 B.C.[9] To Ur III belongs also the earliest cuneiform tablet yet found in Palestine or Phoenicia. This is a very interesting phonetically arranged vocabulary of cuneiform characters from Byblos, proving that the Byblians were already trying to master

[8] See BASOR 168 (1962), 36–42; 184 (1966), 26–35.

[9] See E. Sollberger, AfO XIX (1960), 120 ff. and BASOR 163 (1961), 45.

the difficult cuneiform script by use of methods not yet attested in Mesopotamia![10]

During the following centuries the North-western Semites governed most of the city-states of Mesopotamia as well as of Syria and Palestine, sharing common personal names as well as a common language and undoubtedly many common customs. There is no reason to suppose that the Hebrews had yet achieved any degree of ethnopolitical solidarity; they were still semi-nomadic donkey caravaneers of chiefly North-west Semitic stock (see Chapter II).

During the Hyksos period, in the seventeenth and sixteenth centuries B.C., there was a series of invasions and migrations from the north-east and north, which brought the Hurrians (biblical Horites) down from northern Syria as far as the southern edge of Palestine. They were largely under the leadership of Indo-Aryan (Manda) chieftains, nearly a hundred of whose names have been identified as good early Indic (Vedic) forms.[11] It is quite probable that Anatolian (Luvian) elements entered Syria about the same time, since a good many Syrian names (especially at Ugarit and Alalakh) appear to belong to this stock. Other peoples may have come in with them, and it may well be that some of the non-Semitic groups whose names are found in the lists in the Bible, such as the Hittites, Hivites, Perizzites, Girgashites, etc., came in at this time.

In the Middle and Late Bronze Ages, between about 1700 and 1200 B.C., we find a surprisingly uniform devel-

[10] BASOR 163 (1961), 45, n. 46.

[11] For the latest survey of the field, which limits itself to identifications of Indo-Aryan names which appear to be certain and does not include many probable identifications, see the valuable survey by M. Mayrhofer, *Indogermanische Forschungen* LXX (1965), 146–63. The most difficult problem in making these identifications is that cuneiform phonology (itself a very complex subject) is just as important for a given equation as Indo-Aryan onomastics and historical phonology.

opment of material civilization extending from Ugarit, on the Syrian coast opposite the northern tip of Cyprus, to southern Palestine, and from the sea to the desert. This culture can be illustrated by artifacts of everyday use, such as pottery, tools, weapons, as well as by objects of art, plans of temples and other buildings, types of fortifications, etc. There is a no less striking similarity in the North-west Semitic personal names, the same names recurring from Hebron to Ugarit and from Gaza to Damascus. Their language was also very similar: while we know of several distinct dialects and of numerous local variations, the differences between them were relatively slight. We cannot, in fact, delimit any of these dialects precisely, and in them we find recurring phenomena which appear odd at first sight to students of classical Hebrew or Aramaic. There is not the slightest reason, then, to doubt the existence of a uniform higher culture throughout western and southern Syria as well as Palestine, during this whole period.

The chief dialects known to us from inscriptions of the fifteenth–thirteenth centuries are North Canaanite (Ugaritic),[12] South Canaanite (Amarna, etc.),[13] and Egyptian Canaanite (Proto-Sinaitic).[14]

B. THE NATURE OF CANAANITE RELIGION: THE EPIC PANTHEON

The religion of the Canaanites is incomparably better known now than it was twenty-five years ago, thanks to

[12] The best Ugaritic grammar is C. H. Gordon's *Ugaritic Textbook* (Rome, 1965). See below, n. 16, for the local dialect of Ugarit.

[13] Our manuals of Amarna Canaanite are quite out of date and have not been replaced by any systematic study, though a great deal of detailed work has been done in recent years, on which see W. L. Moran, in BANE, 54–72.

[14] See *The Proto-Sinaitic Inscriptions and Their Decipherment* (Cambridge, Mass., 1966), by the present author.

the discoveries at Ugarit. It is not clear to what extent Ugarit was considered a part of Canaan, though there are passages which seem to distinguish sharply between Ugarit and Canaan.[15] In some passages it seems, however, to be simply another Canaanite city, and it certainly shared a common Canaanite culture and language. Furthermore, the religion of the epics which have been recovered from Ugarit is virtually identical, so far as we can see, with the religion of the North-western Semites throughout Palestine and Syria. Differences are mostly due to admixture of linguistic elements—Hurrian, Accadian, etc.—and foreign myths.

The language of the epics is certainly not the contemporary tongue of Ugarit, which is represented by an increasingly large number of letters and documents dating mostly from the thirteenth century B.C.[16] The generalized epic dialect found at Ugarit and probably in some early

[15] Cf. A. F. Rainey, IEJ XIII (1963), 43–5 and BA XXVIII (1965), 105 ff. This approach is decidedly misleading, since 'language' and 'nationality' are both fluctuating terms. For example, it would obviously be absurd to say that the Austrians and Swiss do not speak German because their countries are not part of Germany. Arabic was until recently the chief language of all parts of Palestine and Syria, but this fact had little to do with the national divisions of the area. The fact is that 'Canaan' was never, so far as we know, a national unit. The geographical extension of this term undoubtedly fluctuated, and we cannot attribute the same borders to it when we find it mentioned in different periods and literatures. Between 1250 and 1150 B.C., for instance, the territory of 'Canaan' shrank enormously. I have always preferred to call Ugaritic 'North Canaanite', and since we now know that the dialects of North-west Semitic were very similar from north-western Syria to northern Egypt, it is going much too far to refuse the designation 'Canaanite' to any of them, as long as we explain what kind of 'Canaanite' we are talking about. In any case, as we shall see, the epics of Ugarit are written in a generalized epic language and its gods were worshipped all over Palestine and Syria, as well as in Egypt.

[16] See BASOR 150 (1958), 36–8, and Mario Liverani, 'Elementi Innovativi nell' Ugaritico non Letterario', *Atti della Accademia Nazionale dei Lincei* (1964), 1–19.

Hebrew verse (see above, Chapter I) differs no more from any one of these dialects than Homeric Greek does from the Mycenaean Greek of the Linear B tablets deciphered by Ventris and Chadwick in 1953. These Mycenaean texts come chiefly from Knossos, Pylos and Mycenae; all exhibit virtually the same speech, which has much in common with the language of Homer, but is different in detail. The relation between the Mycenaean *Koinē*, the generalized epic dialect of Homer, and later dialects such as Cypriote, Aeolic, Ionic, Boeotian, Attic, Doric, etc., is similar to the situation appearing in the hymnal-epic language of early Babylonian poetry, where we also have a blend of different dialects. This tendency to generalize is partly due to the composite sources of epic verse, but chiefly to the need for a common vehicle through which it can be understood by speakers of different dialects. Of course the language of the Ugaritic epics has been modernized in certain respects to accord with the grammatical development of Canaanite between c. 1700 and 1400 B.C. By this time the characteristics of Middle Bronze North-west Semitic had changed. For example, mimation had certainly been abandoned. Such modernizing of earlier linguistic forms is a common characteristic of most oral transmission. In no case can the absence of mimation be used to argue for a relatively late date of origin.

Thanks to the place-names mentioned in the Ugaritic epics, we can locate the chief source of their dialect quite precisely in Phoenicia and the hinterland. Places specifically mentioned include Tyre and Sidon, and apparently Byblos; they also include such inland sites as the source of the Adonis river north-east of Byblos and *Hrnm* = Hermel at the source of the Orontes in the Biqâʿ east of Byblos.[17] Among mountains we have Lebanon and An-

[17] For the last two identifications, see M. H. Pope, *El in the Ugaritic Texts* (Leiden, 1955), pp. 72–81 and my remarks in BASOR 130 (1953), 26f.

tilibanus, and especially Casius north of Ugarit in the far north. This was the holy mountain of the Canaanites, Mount Ṣaphon, modern Jebel el-Aqra', just north of Ras Shamra, which recurs several times in biblical verse of Canaanite origin. The marshy districts of the Ghâb on the middle Orontes and Ḥûleh in the northern Jordan valley are also probably mentioned.[18]

In the Baal and Keret epics we find quite a mixture of ethnic backgrounds, including non-Semitic names of Anatolian type in the former, and very clear Hurrian and Indo-Aryan elements in the Keret epic. The latter, undoubtedly the latest of the great Ugaritic epics, mentions horses and chariots; it definitely goes back to a Hurrian prototype of some kind, though it has been quite thoroughly semitized in style and vocabulary. The hero, *Krt*, is probably the *Kirta* who was the ancestor of the reigning dynasty of Mitanni; he bears a good Indo-Aryan name.[19] The myths of the Baal epic are specifically Canaanite and do not reflect either a Mesopotamian or a Hurrian background, although there are, of course, parallels from all neighbouring regions, including Asia Minor, Egypt and the Aegean, as we should expect because of the movements of population and culture described above.

The gods of the epics are just as generalized as their language and style. In other words, there is no local pantheon, any more than there is in the Homeric epics.

[18] For the Ghâb, see BASOR 91 (1943), 42, n. 33, and for the sea or marsh of *Šmk* (Aram. *Yam Simko*), see IV AB, ii:9.

[19] As pointed out to me by P. E. Dumont. For the reading *Kirta*, see also my remarks in *Interpretation* XVIII (1964), 196. The name was first read on the *Saushshatar* seal. At fifteenth-century Alalakh the same name appears, spelled *Ki-ir-ta*. This is the name of the Mitannian king who was apparently founder of the dynasty of Shuttarna about 1500 B.C. or earlier, and whose name was formerly read *I-di-ir-ta* instead of the correct *mār Ki-ir-ta*. That *Krt* was the putative founder of a dynasty was pointed out long ago by Johannes Pedersen.

Instead we find a selection of important and interesting deities, most of the details which would tie them down locally being omitted. And just as the language of the epics differs from the current dialect of Ugarit, so the gods named and described in the epics differ from the divinities of the city as they appear (usually in a fixed order) in the official pantheon of Ugarit (see below) and in sacrificial lists. The discovery of Babylonian cuneiform lists which parallel fragments already known in alphabetic cuneiform makes the identities of the divinities certain almost throughout. The divine names in question frequently recur in theophorous personal names in the Ugaritic texts. From Mari (c. 1700 B.C.) we also have an official pantheon differing widely in detail from the list of divinities which can be put together from personal names in the Mari tablets (G. Dossin in *Studia Mariana* [Leiden, 1950], pp. 41 ff.). It has been urged by some classical scholars that the striking differences between the local pantheons of Pylos and Knossos and the pantheon of Homer proves that Homer must be much later than Mycenae. This is not, however, a valid objection to an early date for Homer, since we find an exactly comparable situation in the texts of Ugarit. In other words, both early Greek and Ugaritic texts exhibit a similar contrast between generalized epic and local pantheons.

Turning now to the gods and goddesses mentioned in the epics, I will limit myself to discussing some outstanding figures. In this case most of the material comes from the Baal epic, and somewhat less from Aqhat. In Keret we have significant information only about minor divinities. The head of the epic pantheon is the god El.[20] El

[20] See Pope's book, referred to in n. 17, as well as O. Eissfeldt's *El im Ugaritischen Pantheon* (Leipzig Academy, 98 [1951], 4). In general, for the latest discussions of the gods and goddesses of Ugarit, see especially M. H. Pope and W. Röllig in WM I (1965), 219–312, which deals with Syria in general and Ugarit and Phoenicia in particular. An earlier but very useful survey is that of

had probably declined in relative prominence during the second half of the third and the first half of the second millennium (judging from theophorous names of Semitic origin on cuneiform tablets ranging in date from the twenty-sixth century on). Yet he remained the active head of some local pantheons, and his name still appeared as the first component of such divine names as *El-ʿelyôn* and *El-ʿôlām*.[21] But by the time of the composition of the epics he had become otiose. In this respect he resembled the Greek deity Kronos (with whom he was regularly identified in later times) as well as the Egyptian Rēʿ and the Babylonian Anu. In the epics El appears as the father of mankind and as creator, but seldom figures actively in mythology. He is also called 'the Bull, El'. The name El meant originally 'the strong one', or 'the leader'. Thus 'the Bull' was an appropriate designation, since among wild cattle, horses, etc., strength and precedence are almost synonymous, the leader being the bull or stallion strong enough to vanquish all rivals. That the name *'el* is also borne by any and every god means only that the chief god is the god *par excellence*.

In order to visit El, the gods have to journey to the region known as the 'source of the two rivers, the fountain of the two deeps',[22] which is described as being very remote. Marvin Pope has made it probable that this region was originally in the heart of Canaanite territory, namely at Aphaca, later the site of an important sanctuary of Adonis. The name originally meant simply 'fountain'.[23] The nearness of Aphaca and the remoteness of its location in the epic need not disturb us at all, since such ambivalence is common in all mythology, e.g., Casius and Olympus were both homes of the gods, but the gods also dwelt

M. J. Dahood in ADS (1958), 65–94. See also the discussion by John Gray in LC², especially pp. 152–92.

[21] See F. M. Cross, Jr., HTR LV (1962), 236–44.

[22] For this rendering of the passage, see ARI 72, 194.

[23] See above, n. 17, for Pope's discussion.

in heaven. Later the earthly mountains were considered as terrestrial counterparts of the celestial abode. We have no idea, of course, how far it was supposed to be between the terrestrial entrance to the subterranean home of El and the actual abode itself. In any event, El was not thought to communicate with gods or men except through visits or visions, respectively.

His consort, Asherah, has a name which was originally part of a longer appellation, which appears in Ugaritic as *Rabbatu 'athiratu yammi*, meaning either 'The Lady Who Traverses the Sea',[24] or 'The Lady Who Treads on the Sea (Dragon)'. Just as El was called *Bâniyu binawāti*, 'Begetter of Creatures', so Asherah also has the appellation *Qâniyatu 'elîma*, 'She Who Gives Birth[25] to the Gods'. In some earlier myth she was presumably thought to have destroyed the Sea Dragon, thus making it possible for El to create the earth. Later Baal or his sister Anath displaced Asherah as the dragon slayer.[26] (We must always remember that it is not possible to make either the myths or the figures of Canaanite mythology fit into a logical framework.) One of Asherah's most common appellations was 'Holiness' (Canaanite *Qudšu*). The 'holiness of Asherah' is a term with many ancient parallels,[27] even in Rabbinic literature, where 'the Holiness' is a designation of God. In contemporary Egypt the name *Qdš* (*Qudšu*) is attached to a nude goddess shown *en face*, with spirally curled locks and with raised hands

[24] See ARI 77 f. It has also been plausibly suggested that Yam was the sea-dragon rather than the literal sea. Both explanations are perhaps equally tenable. Yahweh also appears as 'treading on the back of Yam' (Job 9:8).

[25] For this appellation see most recently BASOR 173 (1964), 52.

[26] BASOR 84 (1941), 14–17.

[27] On the rendering 'holiness', see ARI 78 and 196, n. 17 and MSD 1, 118, n. 2. This translation has been accepted by H. L. Ginsberg in all his subsequent writings. Note also that in Jewish Aramaic the same word for 'holiness', *qudšâ*, is used of God.

holding lilies and serpents.[28] Often she stands on her sacred animal—a lion. In Palestine and Syria many plaques showing the same goddess without the lion have been found in sites ranging from c. 1700 to 1200 B.C. There are indications that the absence of Asherah's lion in Asiatic representations is accidental. For instance, the 'Mistress of the Lions' is mentioned in an Amarna letter from Zaphon in the middle Jordan Valley (probably Tell es-Sa'īdîyeh today).[29]

In the Baal Epic Asherah appears many times, usually as the sworn foe of Baal and his sister Anath. She appears as a bricklayer (builder) and as the patronness of diviners,[30] just as in a fifteenth-century letter found at Ta-

[28] See especially the illustrations in ANEP, 471–4.

[29] Cf. BASOR 89 (1943), 15–17. The existence of the town of Zaphon is well established from the Late Bronze Age to the period of the Maccabees, whereas I have long been identifying it with Tell es-Sa'īdîyeh (see already *Annual* VI [1926], 46). On the other hand, there is little evidence for the existence of a town named Zarethan. It was, in any event, north of the area of Tell es-Sa'īdîyeh. Incidentally, the princess of Ṣapuna (Zaphon) called 'Lady of the Lions' lived a good century before the princess whose rich burial was recently discovered by J. B. Pritchard at Sa'īdîyeh.

[30] See II AB iv–v, lines 58 ff. In my opinion the passage should be rendered:

> And the Kindly One, God of Mercy, replied,
> 'Not a slave am I, A play-boy of Athirat;
> Not a slave am I, An apprentice carpenter;
> If Maid Athirat Will mould bricks,
> A house will be built for Baal.'
> [The metre seems to be 2 + 2/2 + 2/2 + 2 + 3.]

Details of this translation will be discussed elsewhere; note meanwhile that *'nn 'Aṯrt* is related both to the Canaanite word *'anni* or *'aninī* of reciting (Eg. *ḏd*) to music (*'nn*) and Heb. *'ônēn* 'to recite charms'. Ug. *'aḫd 'ulṭ* may be compared to Acc. *āḫizu*, 'learner', and the foreign loanword *'Ilš*, name of the carpenter (*ngr*) god in Ugaritic. 'Maid' (*'amt*) is a common designation of Athirat herself. Note that on a Phoenician coin of the reign of Gordian III (A.D. 238–44), published in IEJ IV (1954), 208, 224 (No. 138), and pl. 21, we have a scene showing a goddess engaged in building

anach in Palestine.[31] How complex her figure was may be seen from the early Babylonian description of her once as 'bride of Anu' (god of heaven and also the equivalent of West Semitic El) and again as 'wife of Anu'.

Two very interesting Asherah myths appear in Late Bronze sources outside the epics. In one myth, preserved in a Late Hittite tablet,[32] we read that Asherah (*Ašertum*) tried to seduce the storm-god (Baal), who rejected her advances. Asherah then went to El-Creator-of-the-Earth (*El-qônê-erṣi*, written *El-ku-ni-ir-ša*, pronounced *Elkoners*) and complained about Baal's treatment, presumably alleging (like Potiphar's wife) that it was actually Baal who had insulted her. El tells Asherah to deal with the storm-god as she pleases, but the latter's friend 'Ishtar' (Astarte or more probably Anath) listens to the conversation and apparently goes to her friend's aid.

Another myth may be roughly inferred from a three-story altar-house from Bethshan (twelfth century B.C.).[33] The latter shows the naked goddess Asherah seated on the window sill of the third story, while two gods seem to be stepping out of two doors in the second story as they fight over her. Around the corner of the terrace the lion of Asherah walks towards them, while her serpent emerges from a window of the first story towards the feet of the god on the left, presumably in order to bite him.

---

with the Greek inscription *Didō* and the Phoenician 'LT ṢR, 'goddess of Tyre'. Since this goddess of Tyre is presumably Asherah, the question of possible identification with Dido comes up, but need not be discussed here, where we are interested in the goddess as builder.

[31] See BASOR 94 (1944), 18.

[32] See H. Otten, MDOG 85 (1953), 30 ff.; MIOF 1 (1953), 125 ff.; E. von Schuler in WM 1 (1965), 159; cf. also my remarks in the Mowinckel *Festschrift* (1956), 7 f., where I omit the conjectural part of the restored plot.

[33] See FCTBS, pls. xvii:2 and lvi A:1 and 3. This house altar must not be confused with the somewhat similar one published as plates xvii:1, lvi A:2, lvii A:1 and 2.

No reconstruction of the myth would be worth while, but the situation speaks for itself.

But the most important active figure of the Canaanite pantheon was Baal.[34] Baal is called 'son of Dagan', (*Dăgăn*, later Hebrew *Dāgōn*, Phoenician *Dăgōn*). The god Dagan makes no other appearance in Canaanite mythology so far as we know, except that the name was employed in Hebrew (*dāgān*) and Phoenician for 'grain'. Dagan was originally a god of fertility who was worshipped from the earliest times in the Euphrates Valley. Recently discovered Ugaritic texts identify him specifically with the chief god of Tuttul, perhaps Tell el-Biya' near the confluence of the Euphrates and the Balikh rivers.[35] At Tuttul Sargon of Accad had paid homage to the god Dagan in the twenty-third century B.C.

Baal's personal name was usually *Hădăd*, which appears in many different spellings and in various shortened forms. Just when the appellation 'lord' (which is the proper meaning of *Ba'al*) became applied to Hadad as a personal name we do not know. It scarcely ever appears in the Mari texts[36] and never in Egyptian transcriptions from c. 1900 to 1700, but it was certainly common from the fifteenth century on. There is good reason to believe that *Ba'al* was coming into use as a personal name of the god during the Hyksos period (seventeenth to sixteenth centuries B.C.), when Hadad was identified with the Egyptian storm-god, Seth.[37] Baal is not only storm-god,

[34] See ARI 73 ff.; ADS 75 ff.; WM 1, 253 ff.; and LC², *passim*.

[35] See BASOR 20 (1925), 13 ff. The site has scarcely been mentioned in recent literature, but was exceedingly important in the late third millennium.

[36] APNMT, pp. 100, 174 f. The number of clear examples at Mari where *ba'lu*, *ba'al* is a proper name rather than an appellation, 'lord', was still very small. The feminine form *ba'altu*, *ba'alat* came into use as a proper name as well as an appellative at an earlier date; see JAOS LXXIV (1954), 231.

[37] See J. Zandee, ZÄS XC (1963), 144–56. The Egyptian material seems to be rather exhaustively collected, but the author does not,

but is also king of heaven and earth. He is thus the Canaanite equivalent of Greek Zeus and also of Babylonian Marduk in so far as the latter was considered to be the active head of the pantheon. His terrestrial home was on Mount Casius or Ṣaphôn (Zaphon or Zephon) and, because of this association, he was called Baal-zephon (*Baʿal-ṣaphôn*).[38] Among Baal's favourite titles in the epic are 'Triumphant (*ʾAlʾiyan*) Baal', 'Cloud-Rider' (*rākibu ʿarapāti*), and 'Majesty, Lord of the Earth' (*zubūlu baʿalu ʾarṣi*). Baal is said to have destroyed a monster of chaos, who is called '(his) Majesty, the Sea' and 'Judge River'. The figures of Sea and River were originally distinct (see Chapter II), and have obviously been conflated in this cosmogonic myth.

Baal also had a struggle with the god of death, which ended when Môt, 'Death', conquered him and took him

---

for instance, realize that *Sūtaḫ* is only the older form of the later *Sēth* in which the final consonant is strongly aspirated and is not a spirant at all. The references to Seth as storm-god in early texts do not seem to have any relation at all to the Canaanite storm-god Hadad or Baal.

[38] On this divinity see especially O. Eissfeldt, *Baal Zaphon, Zeus Kasios und der Durchzug der Israeliten durchs Meer* (Halle, 1932), and my supplementary study, 'Baal-zephon', in the *Festschrift* for Alfred Bertholet (Tübingen, 1950). For the primacy of this god at Ugarit see O. Eissfeldt, FF XXXVI (1960), 338 ff., where he correctly read *Bʿ*[*l*]*-ṣpn* in PRU II (1957), No. 18. The original form was not *Ṣăpăn*, as I once thought, but *Ṣapân*. In a letter published in 1956 by J. Nougayrol (PRU IV, 132), we should actually read (see BASOR 146 [1957], 35): *ilānu*^{pl} [*ša māt āl*] *U-ga-ri-it* ^{d}*IM* [*ša* (*ḪUR.SAG*) *Ṣa-*] *pá-ni* ^{d}*Pí-id-ra-i* [*û puḫur*] *ilāni liṣṣurū-ka*, 'May all the gods of Ugarit, [Baal-ze]phon, Pidrai, and all the gods keep thee'. In 1957 I also saw that Pidrai (*Pdry*) was, of course, the daughter and consort of Baal. This passage proves that the original vocalization of the name was indeed *Baʿal-ṣapân*, which later became (as in the Assyrian spelling *ṣapun-* for both mountain and god) *ṣaphôn*. Baal-zephon is simply the conventional English transcription of the Masoretic Hebrew text. WM I, 258 is doubtless right in deriving the name from the stem *ṣpy*, meaning 'to watch', as 'lookout'.

down to the underworld, from which his sister and sometime consort Anath freed him by destroying Môt after a violent conflict. As in most such myths there is a pronounced ambivalence. In mythology an event which is recurrent in actual life or cultic practice may be treated as occurring once for all. In the Baal epic it is recorded that at the beginning there was a victory of Death over Baal, which was later followed by a triumph of Baal over Death, at the end of which the sad refrain,

> Truly I know that Triumphant Baal is dead,
> That the Lord of the Earth has perished

is changed to

> Truly I know that Triumphant Baal lives,
> That the Lord of the Earth exists.

It is not easy to say just what this means. At first it was considered by all scholars that the Adonis myth in general refers to summer death of vegetation (or farther north, his death in winter). More recently it has been urged by C. H. Gordon and others that this is a mistake and that the god was not killed and brought to life again more than once. But we must bear in mind that an actual ecological situation must be presupposed. The god or goddess of fertility comes to life with the growth of vegetation. He or she dies when vegetation dies, either because of winter frosts or, in Mediterranean climate, because of summer drought. In irrigated regions the god or goddess of vegetation is brought to life by annual or seasonal flooding. In the Near East the concept that the vegetation god dies because of cold weather and comes to life again with warm is rare, but it inevitably enters the picture because many of its peoples originally occupied or still inhabited mountain regions or high plateau areas in which there is snow in winter. The plateau of Asia Minor and the mountains of Armenia and the Zagros were almost impassable during this season. It is the death, for

one reason or another, of grain or other vegetation that is the common factor. A given myth may gather a considerable variety of motifs from different ecological sources. Traces of these only confirm the identification of the birth and death of a divinity with that of the vegetation he or she represents. The error of those who deny this lies in their attempt to apply our post-Aristotelian logic to pre-Aristotelian thought patterns—an attempt which obscures, rather than clarifies, these patterns. The fact that Death (Môt) was eventually destroyed and completely reduced to powder, which was then scattered to the wind and devoured by birds, does not in any way indicate that he died once for all. There is no solid basis for the idea that the myth of Baal and Death involves a seven-year famine or seven years of plenty. There is, however, ample proof that there was annual weeping for Tammuz, for Adonis at Byblos, and for Hadad-Rimmon (the Aramaic form of Hadad) at Megiddo. Whatever the 'original' motif may have been, the decease of the god of fertility came to be celebrated annually.[39]

As we have seen, the principal form of Baal at Ugarit was Baal-ṣaphôn. While his terrestrial home was on Mount Ṣaphôn, he had a palace or temple in heaven, just as the Greek gods occupied Olympus as their terrestrial home, it being understood at the same time that their home was also in heaven. Baal-ṣaphôn was not only Lord of the North, but also lord of the northern storms.[40] Hadad was himself in a general way the storm-god, but Baal-ṣaphôn was the marine storm-god *par excellence*, like Greek Poseidon. As such, he was also the protector

[39] Since writing these lines I have received a short paper from S. N. Kramer [BASOR 183 (1966), 31], in which he accepts A. Falkenstein's correction of the key passage in the Sumerian myth of Inanna's Descent to the Underworld (BiOr XXII, p. 281). Now we know that both Tammuz and his sister-consort Inanna (Ishtar) were to spend half of every year in the Underworld.

[40] Cf. p. 9 of my paper mentioned in n. 38.

of mariners against storms. In his honour temples were built and ports were named along the Mediterranean littoral as far as Egypt, where we find Baal-zephon worshipped at Tahpanhes (Daphne) and Memphis. In later times he was succeeded by Zeus Casius, after Mount Casius, the hellenized Anatolian name (*Ḥazzi*) of *Ṣaphôn*. The consort of Baal-zephon in the treaties between Ugarit and its Hittite suzerains, as well as in an Aramaic text in demotic characters written nearly a thousand years later,[41] was *Pidraya*,[42] named first in the list of Baal's three daughters in our epic. The name may be derived from Ugar. *pdr*, synonym of *'r*, 'town'; it may then mean 'She of the Underworld'.[43] In fixing relationships we must remember that both in Egypt and Canaan the notion of incest scarcely existed. In fact, Phoenicia and Egypt shared a general tendency to use 'sister' and 'wife' synonymously. Such kings as Akhenaten and Ramesses II married one or more of their own daughters as late as the fourteenth and thirteenth centuries B.C.

Baal was closely associated with two other goddesses. The relations between him and the goddesses Anath and Astarte were very complex. For example, Anath was not only Baal's virgin (*batultu*) sister, but also his consort. While she was in the form of a heifer, he raped her in an epic myth '77—even 88 times'.[44] The figure of Anath can

[41] See my articles in the Bertholet volume (see n. 38), pp. 9 ff., and the Mowinckel volume (see n. 32), pp. 6 f.

[42] See above, n. 38.

[43] An additional parallel would be the appellation of the Tyrian Baal, *Milk-qart*, Melcarth, which I have shown elsewhere to mean almost certainly 'King of the Underworld City'. This Baal was probably an original Resheph (= Nergal); see below.

[44] I* AB v, 17 ff., where the animal is called *'glt*, 'a female calf' and *prt*, 'a heifer'. For the corresponding Egyptian designation of Anath as a heifer (with the determinative for 'cow' attached), see A. Massart, *The Leiden Magical Papyrus* (Leiden, 1954), pp. 71, 73, where other occurrences are listed. The word *'amraya* presumably meant 'heifer from 'Amr', or the like, referring to a highly regarded Asiatic breed.

be better understood in the light of several Egyptian accounts of the goddess, unquestionably translated from an original Canaanite myth, to judge from words and idiomatic expressions.

Extensive mythological material of Canaanite origin is to be found in the great Egyptian magical collections from the Nineteenth Dynasty.[45] The most striking of the Canaanite myths of Anath preserved in Egyptian dress runs as follows: Anath was bathing on the shore of the sea, at Ḥamkat. Baal (Seth) went for a walk and raped her, 'leaping her as the sacred ram (of Amun) leaps, forcing her[46] as a . . . forces . . .' Baal fell ill because of this, but Anath came unexpectedly to his rescue: 'Anath the Victorious, a man-like woman, dressed as a man but girded as a woman, went to the sun-god, her father.' Re replied at some length, stressing Baal's folly and ending, 'It is punishment for his folly, since he . . . had intercourse with her in fire and raped her with a chisel.' The chisel of Anath appears in another magical text.[47] On Roman coins the divinity of Ascalon named *Phanebal(os)*, 'Presence of Baal', has long been recognized as a man-like goddess, with slender uncurved body in female dress but fully armed.[48] Another Egyptian magical

[45] For a complete collection see BAeV, 494 ff.

[46] On the meaning of the Semitic loanword *'mq* see ARI, 197, n. 39. Contrast BAeV, 494.

[47] BAeV, 495, after the Leiden Papyrus (A. Massart, p. 36, line 6).

[48] G. F. Hill, *Catalogue of the Greek Coins in the British Museum; Palestine* (1914), pp. lix–lxi, 115–39, *passim*, describes the coins of Ascalon which represent a war divinity, labelled specifically *Phanēbal(os)* on second-century pieces. The coins in question (pls. xiii–xiv) extend from Augustus (A.D. 6/7) to Severus Alexander (230/31): 'The figure on the coins of Ascalon has generally been described as male . . . in spite of the curiously feminine appearance . . . on some coins, which show a long skirt and broad hips.' However, the 'broad hips' seem to indicate a robe caught up at the hips, not the hips themselves. Since there is sometimes a

text says that 'the mouth of the wombs of Anath and Astarte, the two great goddesses, was closed by the god Horus (Canaanite *Ḥôrân* or *Ḥaurôn*), so they could become pregnant but could not bear, and was opened by Seth (Baal)'.

It cannot be accidental that this late form of Anath at Ascalon was also called *Derketō* = *darkatu*, 'dominion, rule'.[49] Among Anath's titles as queen of heaven in a recently described Ugaritic tablet[50] are *Ba'latu mulki*, *ba'latu darkati*, and *Ba'latu šamêm(i) râmêm(i)*, 'Mistress of Kingship, Mistress of Dominion, and Mistress of the High Heavens', respectively. Below we will show that the Carthaginian appellation of the goddess Anath, *Tennît-panê-Ba'al* means 'Radiance of the Presence of Baal', or the like. Tennît was often identified with Juno Caelestis, Juno as queen of heaven, or as Virgo Caelestis, 'the Heavenly Virgin' (cf. the standing appellation at Ugarit, *batultu 'Anat*, 'the Virgin Anath'). At the same time Anath could be consort and wet-nurse, as we know from passages in the epic literature. Such apparent contradictions meant nothing in a prelogical world of thinking, as soon as they were transposed to a dimension over which man could normally exercise no control.

Anath was, not surprisingly, an extraordinarily cruel goddess, represented as having slaughtered mankind from 'the rising of the sun' to 'the shore of the sea'. Apparently the slaughter delighted her, since 'her heart rejoiced and her liver exulted' over the massacre.

> Beneath her were heads like balls,
> Above her were hands like locusts.

'Tanit' symbol beside the figure, the divinity of Ascalon is evidently related to the chief goddess of Carthage; see below.

[49] This I first suggested in JPOS XIV (1934), 130, n. 53; cf. JBL LXIII (1944), 219, n. 82. In connexion with *drkt-darkatu* see further M. Dahood, ThSt XV (1954), 627 ff., and *Biblica* XLV (1964), 404.

[50] Ch. Virolleaud, CRAI, 1962, 109.

She plunged her knees into the blood of warriors,
Her thighs into the blood of youths.

It has been pointed out by Marvin Pope that there are many traits which Anath shares in common with the Indic goddess Kali or Durga.[51] In fact, the respective figures are in some ways so similar that coincidence can scarcely be the only explanation. It may be that major common traits spring from a substratum extending from the Mediterranean to India before the intrusion of the Sumerians (no later than the fourth millennium B.C.) and that minor resemblances are the result of secondary pseudomorphism. Both goddesses are represented as protecting and destroying, their beneficent and destructive aspects complementing each other in a way that startles and shocks a Westerner, but which undoubtedly does reflect the reactions of primitive man to the sharp contrasts of his environment.

When Anath found the dead body of Baal, we read in a recently published tablet:[52]

While Anath walked along, lamenting (?)[53]
The beauty[54] of her brother ⟨—how fair!⟩[55]

[51] In several papers presented before learned societies, as well as in printed comments; his eagerly awaited monograph has not yet appeared.

[52] Ch. Virolleaud, CRAI, 1960, 182 ff. For details see also M. Astour, RHR CLXIV (1963), 4 ff. [I have since become acquainted with the paper by E. Lipiński, *Syria* XLII (1965), 45–73, which gives valuable additional suggestions, though I cannot agree with his interpretation of this passage as a whole.]

[53] The abrupt introduction of Anath's name and the strange word-order demand that we begin the sentence in the lost (?) preceding line.—Read *hlkt* for *tlkt* (presumably a scribal error).—My rendering of the verb *šnw* is conjectural; cf. Eth. and Arab. *snw*, 'to irrigate', etc. Here it would refer to the flow of tears.

[54] I cannot accept the rendering 'tambourine', though this meaning for *tp* is well attested in Ugaritic. Translate rather 'beauty', from *wpy*, assuming a form *tôpê* for **tawpay* like Ug. *tsm* (*tôsamu*),

The charm of her brother—how seemly!
She devoured his flesh without a knife
And drank his blood without a cup.

Apparently she was carrying her gruesome burden as she devoured it. The clear parallel between this episode and well-known Dionysiac myths and rites has been pointed out by M. Astour.[56] The practice of *omophagia*, eating sacrifices raw, is well known. Legend pointed to Zagreus, a form of Dionysus, who was torn to pieces and devoured by the Titans. The Bacchantes tore Pentheus to pieces and a band of their sisters treated Orpheus in the same way. (It must be remembered that cannibalism is said in early Hittite historical inscriptions to have been practised in Armenia about the sixteenth century B.C.)

Anath's ferocity could, however, be combined with tenderness as, when she attacked Death in order to rescue Baal from the underworld, we read,

Like the longing (heart) of a wild cow[57] for her calf,
Like the longing of a wild ewe for her lamb,
So was the longing of Anath for Baal.
She seized Death, son of El;
With the sword she split him open.

The figure of 'Athtart/Astarte appears very rarely in the epics, where her *Doppelgängerin*, Anath, steals the show.

'charm', from **wsm*; note the perfect parallel in Cant. 7:7 [and the remarks of Lipiński].

[55] This phrase is needed for the metre; it was presumably lost by vertical haplography. For the idiom, see the material from Hebrew and Ugaritic collected in my paper *Mélanges bibliques . . . André Robert* (Paris, 1957), pp. 22–6.

[56] See Astour (cited in n. 52).

[57] It must be emphasized that *'arḫ* means '*wild* cow' in Ugaritic, just as in Accadian; similarly, *ṯa't* means '*wild* ewe'. Anyone who is accustomed to the reaction of female wild animals with young, will understand how much stronger the comparison is than the usual one with a 'cow' and a 'ewe'. Note that both words appear also in Proto-Sinaitic inscriptions as designations of sacrificial animals (PSID 38, 44). At Serābîṭ they would have to be wild.

In Phoenicia and Palestine Astarte grew in importance, while Anath became hidden under various other appellations. Still later, as Aramaean influence spread, both goddesses were fused into a new conflate figure, Atargatis.[58] We know from the evidence of names, and especially from Egyptian sources, that Astarte was already very popular in the Late Bronze Age.

The Egyptian story of 'Astarte and the Sea (*Yam*)' is obviously a variant form of the Ugaritic epic myth of Baal and Sea (*Yam*), to which we have referred above. In both, Sea intimidates the gods, who pay tribute to him and finally offer him Baal (in the Ugaritic text) or Astarte (in the Egyptian version). In both, Baal (Seth) takes the initiative against Sea, and in both Astarte plays an important rôle (as central figure in the Egyptian version, and as supporting figure in the Ugaritic myth). Astarte is called 'daughter of Ptaḥ' in the hieratic text, but we do not know which of the alternative identifications of Ptaḥ, with El or Koshar, is involved here.

More information about Astarte comes from New Kingdom Egypt. Especially significant are numerous representations of Astarte (spelled *'Astar(a)ta* and rarely *'Asita*[?]) as a naked girl, with immature breasts, astride[59] a galloping stallion.[60] She is armed either with bow and arrows or with shield and javelin. These representations

[58] On the origin of the name *Atargatis*, see my studies in AJSL XLI (1925), 73 ff., 283 ff., and XLIII, 233 ff. While these are antiquated, the explanation of the name as a fusion of Aram. *'Attar* (for *'Aṯtar*) and *'Attah* has long since been accepted by all competent scholars. The reduction of the doubling is a normal phenomenon in early Aramaic.

[59] While both of the rider's legs can sometimes be seen, this phenomenon may much more easily be explained by the conceptual approach (in H. Schäfer's sense) of much Egyptian art, rather than by supposing that she actually rode sideways, 'à l'Amazone'.

[60] On this whole subject see J. Leclant, 'Astarté à cheval', *Syria* XXXVII (1960), 1–67. [In the Ugaritic text 18.39 (PRU v [1965], 189 f.) *both* 'the horse of Astarte and the horse of Anath' appear.]

are obviously no earlier than the seventeenth century, when the horse first came into general military use. Between the seventeenth and the twelfth centuries B.C. horsemen do not ordinarily appear in combat, where chariots were supreme. In Syria and Palestine it was not until the ninth century, after the first Assyrian victories, that cavalry replaced chariotry in warfare. Astarte's appearance on horseback is, therefore, a glorification of the young divinity as goddess of war, like Ishtar and Shulmânîtu before her.

Astarte's full name as war-goddess was *'Aštart-šem-Ba'al*, 'Splendour of the name of Baal', attested as far back as the Ugaritic epics, and appearing occasionally in late texts, down into Persian times. 'Splendour' is not the usual translation of the name *'Athtart*, but it must be emphasized that all suggested cognates or derivatives which are found in the other Semitic languages, such as Arab. *'āṯūr* and *'aṯarīy*, are doubtful and at best quite secondary to the fully developed figure of the goddess. The name *'Athtart* was always connected with the evening star, just as *'Athtar* (the corresponding masculine name) was the morning star all over the West Semitic world from Syria to South Arabia. The ancients early became aware of the fact that the evening and morning star were simply different manifestations of the same entity—since they saw that the two have the same magnitude and never appear together, yet always in related positions in the heavens. The word may originally have belonged to a stem meaning something like 'sparkle, of a star',[61] yielding the substantive appellation, 'splendour', which became ultimately the abbreviated form of the full name.

Similarly the name *'Anat* is probably an abbreviation

[61] Like the words for 'sparrow/bird' in Semitic, Heb. *ṣippōr*, Acc. *iṣṣūru*, Arab *'uṣfūr* (note also *ṣpr*, 'to sing, of a bird'), the quadrilateral *'Aṯtar* may be a congeneric assimilation (*Mischbildung*) from such stems ■ *'ṯ* and *'ṯr*; cf. Arab. *'aṯṯa*, 'to beat, of heart, pulse'; *'aṯara*, 'to vibrate, of sound, to trill'.

of an original *'Anat-panê-Ba'al*, meaning something like 'Turning of Baal's Face', that is, 'Wrath of Baal'. The word *pānîm*, 'face, presence', connotes both favour and disfavour in the Hebrew Bible, where it must sometimes be rendered 'wrath', depending on the context.[62] In Hebrew it was also hypostatized as a designation of Yahweh: 'The Presence'. The same designation, *panê Ba'al*, was also applied to the Carthaginian Tennit (*tennît-panê-Ba'al*, properly 'Glory[63] of the Face of Baal') as well as to the chief goddess of Ascalon (see above). Also like Tennit, who was regularly called by the Romans *Juno Caelestis*, Anath, in a recently described cuneiform text from Ugarit, is called 'Mistress of the Lofty Heavens' (see above).

The coexistence of the three goddesses, Asherah, consort of El, Anath, and Astarte, apparently both sisters and wives of Baal, not unnaturally confused the Egyptians, used to a more highly crystallized hierarchy of gods. In late Ramesside times (twelfth century) they identified all three, as we know from a painted limestone relief published by I. E. S. Edwards.[64]

One of the most interesting figures of the epic pantheon is Kôshar, patron of all forms of craftsmanship, from con-

[62] I owe some valuable hints in this connexion to Dr. M. Gertner, of the University of London. The evidence is far more extensive than might be supposed; for example, in very old Samaritan tradition *fanûta* for older *panûtā* means 'the Period of Divine Wrath'.

[63] For the pronunciation *Tennît* see A. Berthier and R. Charlier, *Le sanctuaire punique d'El-Hofra à Constantine* (Paris, 1955), pp. 167, 169 and pl. xviii, A and C (ΘINIΘΦANEBAΛ, ΘENNEIΘ ΦENH[BA]Λ). For the meaning of the first element see above, Ch. I, n. 86. Note that the unassimilated form *tmnt*, used of God in Num. 12:8, is rendered both in Greek and in Syriac by words meaning 'glory'. For the original form *tabnît*⟩*tamnît*⟩*tennît*, see also Ch. I, n. 86. My former explanation of the word in question as the infinitive construct of the word 'to give' (*tnt*, which actually appears in Proto-Sinaitic) is no longer possible after the Ḥofra transcriptions.

[64] JNES XIV (1955), 49–51.

struction through metallurgy to magic and music. Here again the name appears in a variety of dialectal forms, the original of which was *Kauṯar*, Syriac *Kauṯar*, Arabic (Quranic) *Kauṯar*, Ugaritic *Kôthar* (pronounced *Kôsar*, *Ku-šar* in Accadian transcriptions).[65] In Phoenician times the name was pronounced *Kûšōr* (Gr. *Chūsōr*). In the Bible the name appears in the feminine plural *kôšārôt*, 'birth pains' (literally, divine midwives)[66] and dissimilated as *kîšōr*, 'skill' (Prov. 31:19).[67] In fifth-century Ecclesiastes the verb and its derivatives regularly mean 'be skillful, skill'. This god was identified at Ugarit with Babylonian Ae ('Ea'), god of wisdom (both practical and esoteric); he was the inventor and contriver of new constructions and instruments, such as the composite bow. His full name in the epics was Kôthar-and-Khasis, 'the

[65] On the various forms of the name cf. my treatment in JAOS LX (1940), 296 f. (which has now appeared in revised form in HACH, 170 f.). See most recently J. P. Brown, 'Kothar, Kinyras and Kythereia', JSS X (1965), 197–219, whose discussion of Kothar and Kinyras is good, but whose treatment of the name of the island of Kythera and the derived appellation of Aphrodite, *Kythereia*, is spoiled by his lack of linguistic training. *Kythera* (with ▪ strong aspirate in the middle) cannot reflect *Kôṯar* (*'Kôthar'*), because the latter was pronounced **Kausar* in Canaanite and *Kaušar* in 'Amorite' during the Bronze Age, ▪▪ early ▪▪ the Sethe Execration Texts, c. 1900 B.C., where Kaušar is a chieftain of the 'Amorite' 'Shutu' mentioned between ▪ 'Job' and a 'Zebulun'. Note that original *ṯ* normally became *š* in 'Amorite'. In other words, we should have to go back to the third millennium to make such ▪ derivation possible. The initial Greek ▪ instead of usual Greek χ (a strong aspirate) = Semitic *k* could be ▪ normal dissimilation, since Greek did not tolerate an aspirate before another aspirate.

[66] See below, n. 86.

[67] Heb. *kîšōr* in Prov. 31:19 does not mean 'spindle' but 'skill' (Pešiṭta *kašširûṯâ*, Targ. *kušrâ*). All these Aramaic words are ultimately derived from Canaanite; Aram. *ktr*, 'await, remain', was originally *ktr*, not *kṯr*. It should be added that all derivatives of *kšr* in Ecclesiastes refer to 'skill', and that 'utility' is quite secondary; this applies also to the meaning 'useful purposes' given by the Greek in Prov. 31:19.

Very Skillful and Intelligent One'.[68] Wholly unexpected is the discovery that in the epic literature Kôshar was believed to be particularly fond of Memphis and Crete. This is sometimes denied, but if we remember how often in our Ugaritic epic texts we find words, phrases and lines omitted in one of two occurrences of passages repeated in prospective and narrative form, it is easy to restore the complete text here too. If we take the chief passages in the Baal and Aqhat epics together, the following picture emerges. In both passages the divine craftsman Koshar is the central figure, to whom a special messenger is sent and who is honoured by a special banquet. Koshar is called explicitly (by filling an omission in one from the other):

b'l Ḥkpt 'el klh
Kptr ks'u ṯbth
Ḥkpt 'rṣ nḥlth
Lord of the Memphis-of-Ptaḥ[69]—it is truly his,[70]
Kaptara (Crete), the throne on which he sits,
Ḥekupta (Egypt), the land of his heritage.

The admission that the arts and crafts came to Canaan from Egypt and Crete probably goes back to the Middle Bronze Age, when the cultural influence of both was at its height.

[68] It should be pointed out here again that the original *Kauṯăr* was an augmentative (the opposite of diminutives like Arabic *fu'ail*⟩ *fu'ēl*), with the same meaning as Acc. *Watar-ḫasīsim* or *Watram-ḫasis* ('Atraḫasis').

[69] The identification of Ug. *Ḥkpt* with Amarna *Ḥikuptaḫ*, for Eg. *Ḥ(t)-kȝ-Ptḥ* (pronounced *Ḥekuptaḫ*) is perfectly satisfactory (contrary to many contemporary assertions). Two successive occurrences of *ḫ* in the same word are virtually always dissimilated in Semitic. Nor does the meaning offer any difficulty, since Amarna *Ḥikuptaḫ* refers to Memphis, while Homer's *Aiguptos* means 'Egypt'. Ptaḥ and Chusor are closely linked in the Phoenician cosmogony handed down under the name of Mochus; see Ch. V.

[70] Read *ki-laḥu*. The adverb *ki* is a strong asseverative; see above, n. 55.

As we shall see below, the feminine counterpart of Kôshar, Kôshart(u), was the goddess of childbirth, and the seven Kôsharôt are the divine midwives.

Another important god, whose name was originally *Ḥaurân*, appears as *Ḥôrân* in Ugaritic, *Ḥôrôn* in South Canaanite and *Ḥaurôn* (Gr. *Aurōnas*) later in southern Palestine.[71] This divinity was identified with Sumero-Accadian Ninurta, the Assyrian war-god, as we know from personal and place-names where Ninurta appears as the second element in some texts, while Ḥaurôn appears as the second element in others. Thus the *Bît Ninurta*, which the prince of Jerusalem mentions in the Amarna tablets, is not Bethlehem, as suggested by O. Schroeder, but undoubtedly Beth-horon the Nether,[72] which was claimed as part of his territory by 'Abdi-Kheba of Jerusalem (c. 1360 B.C.). In the Baal epic Ḥaurôn appears only rarely, and then together with Astarte as the military champion of Baal. From later texts it is certain that Ḥaurôn was a form of the god Baal.[73] In Egyptian texts

[71] On this god see ARI, 80 f.; ADS, 82 f.; LC², 178 ff.

[72] On this site see EM II, cols. 73 ff., s.v. *Bêt Ḥôrôn*. Beit 'Ûr et-Taḥtā was occupied in the Late Bronze, and its location about equidistant (in a straight line) from Jerusalem and Gezer fits the indications in EA 290.

[73] See especially BASOR 76 (1939), 8, and T. H. Gaster, Or XI (1942), 44. I should translate the relevant lines of the Arslan Tash incantation as 'By the incantation of the wife of Ḥûrûn, whose word is true, and her seven co-wives and the eight wives of Baal [?]'. Neither I nor Gaster saw the picture quite correctly, though he was undoubtedly right in referring 'whose word is true' to the wife of Ḥûrûn (the late Phoenician pronunciation of Ḥaurôn). He was, however, wrong in the very natural identification of the goddess in question with Ereshkigal. This follows partly from an item preserved by Eusebius from Philo Byblius mentioning *Ūrūmbēlos* and his consort *Thūrō* (= *Tĕwūre*, later *Thŏēris*), a name of the Egyptian goddess of child-birth, wife of Seth (= Baal). Since the latter was expressly identified by Philo with *Chūsarthis* (= *Kûšart*, singular of the word which appears in Hebrew as *Kôšārôt*), there can be no reasonable doubt that the hitherto mysterious COYPMOYBHΛOS

of the New Kingdom he was, however, identified with Horus, especially in the form of Harmachis, god of war.[74]

A god who became very popular as a war-god in Egypt and who appears as the angel of death in the Bible, is Resheph (Hab. 3:5), identified with Apollo in Cyprus. In the Mari texts his name is spelled (following Amorite pronunciation) as *Rasap*, but in Phoenician it was pronounced *Rašōp* (modern Arsûf = Apollonia). All these names go back to an original appellation *Rašpu*, probably 'He Who Burns', and his sacred emblem was the head of a gazelle. Since 1926 (cf. ARI 79) I have insisted on treating him as a Nergal figure, that is, as a god of the underworld, a god of pestilence and destruction, of death and war. At the time he was considered by all to be a storm deity, so my identification was rejected, in spite of arguments which retain their validity. Discovery after discovery has confirmed the correctness of this identification, until, finally, the recent discovery of two equivalent official lists of the Ugaritic pantheon, one in Ugaritic, the other in Accadian, has shown that *Ršp* was directly equated with Nergal. In the texts of Ugarit Resheph appears only rarely, but as the sender of pestilence, like Nergal. He also appears at Ugarit as the 'Lord of Good Fortune' (*b'l ḥẓ*), just as, in Phoenician inscriptions from Cyprus a thousand years later, he is called 'Resheph of Good Fortune' (*ḥṣ*).[75] In New Kingdom Egypt Resheph appears again and again as a redoubtable war-god who brings death to the foe; he is regularly represented with a gazelle's head projecting from his helmet, just above his

---

of Philo is indeed a deformation of ΟΥΡΟΥΜΒΗΛΟΣ (for details see Vol. II of my McGraw-Hill series, now in preparation).

[74] See the discussion of the plaques of Amenophis II in BASOR 84 (1941), 7 ff., and the further discussions by G. Posener and K. C. Seele, JNES IV (1945), 240–44.

[75] The usual translation 'Resheph-of-the-Arrow' is naturally wrong; see Samuel Iwry, JAOS LXXXI (1961), 27–34.

forehead. The gazelle was also particularly sacred to Nergal, for reasons which also escape us.

Thanks to the Egyptian magical texts we know that the consort of Resheph was named *'A-tu-m*, which can be normalized either as *Atum* or as *Adum*. Fortunately, the name is preserved in the Bible as that of a Canaanite convert to Yahwism, which we must vocalize as *'Abd-'adōm* ('Obed-edom'), following the LXX. The meaning of the name was wholly obscure until M. Dahood demonstrated convincingly that there is a Hebrew word *'dm*, to be vocalized *'ādōm*, literally 'the red (earth)' which means 'earth' like the feminine *'adāmāh*. Resheph's wife was thus an underworld divinity, just as 'Arṣay, daughter of Baal, is identified in the Pantheon of Ugarit (see below) with Allatu, consort of Nergal. On the other hand, the name *Šamš-'at/dum*, given in the lists of Tuthmosis III (c. 1468 B.C.) to a town in northern Galilee or south-central Syria, can scarcely have anything to do with the goddess.[76]

C. THE PANTHEON OF UGARIT

As we have observed, the pantheon of Ugarit is quite different in detail from that of the epic texts and is, in fact, derived from different ethnic and linguistic sources. In 1929 M. Schaeffer discovered a broken alphabetic text (No. 17) among the first lot of tablets found at Ugarit; it was not considered important until the excavation of an Accadian tablet of similar content in the 1956 campaign (20.24). J. Nougayrol identified the two lists of gods, calling the alphabetic tablet 'B' and the Accadian 'A'; the former is clearly more original than the latter. B:1 (only

[76] For the Leiden Magical Papyrus V, 7, see A. Massart's edition (above, n. 44), pl. II and pp. 17, 65 f. For Hebrew *'ādōm* (MT *'ādām* or *'ĕdōm*), 'earth, underworld', see M. Dahood, CBQ XXV (1963), 123 f., with our joint observations in *Biblica* XLIV (1963), 292.

in the alphabetic text) begins with a heading: 'Gods of Mount Casius' (*'el ṣpn*). Then follows a long list of divinities, which we will summarize, stressing figures with which we have not dealt so far.[77]

First comes *'El['e]b*, whose name is translated into Accadian as 'the god of the father'. This is a remarkably accurate translation, though the element *'eb* has nothing directly to do with *abu*, 'father'. As pointed out independently by A. Goetze and me, 'El'eb is the patron of ancestor worship, and in the plural the word seems to mean the *manes*, dead spirits of ancestors. In the Aqhat epic we find the plural used in the following passage:

nṣb skn 'el'ebh
b-qdš ztr 'mh
Who sets up the stelae of his ancestral spirits,
In the holy place the guardians (?) of his family.[78]

Etymologically *'Eb* and *'El'eb* are analogous to *Wêr* (*Mêr*), *Iluwêr*,[79] *Elwêr* in the stele of Zakir, king of Hamath (eighth century B.C.); *'El'eb* appears as a divine element in a seal from Palestine, mentioning the personal name *'Abd-El'eb*.[80] The frequent replacement of *'Eb* by

[77] See CRAI XVIII (1957), 82 f.; AfO XVIII (1957), 170.

[78] My translation (BASOR 94, 35) has been adopted by H. L. Ginsberg, ANET 150.

[79] The name appears as an element in *Tukultī-Mēr*, name of an early Assyrian ruler, and often a *I-lu-me-er*, *I-lu-we-er*, etc.; intervocalic *m* in Babylonian orthography was pronounced *w*. The North-Mesopotamian divinity is identified either with Adad or with Shamash.

[80] The word *'l'b* probably appears in the meaning 'ghost' in Is. 14:19, where the reading of MT, *yôrĕdê*, may be corrected to *yûrĕdû* by $1QIs_1$ (middle of second century B.C.), in keeping with 14:11 and 14:15, where we also have the *hof'al* of *yrd*. This poem teems with mythological allusions; for the same idiom, see the Ug. Baal Epic and Psalm 88:5. Read probably:

yūrĕdû⟨šĕ'ōlāh⟩ *'el'ĕbê bôr*
Let them be brought down ⟨to Sheol⟩,
O ghosts of the Nether World!

'El'eb probably has two immediate reasons: (1) *'eb* alone is homonymous with *'eb* (Heb. *'ôyēb*), 'enemy'; (2) *'eb* in the sense of 'ghost' is too easy to confuse with the god by the same name. The short form *Ib*, *Eb* also appears in two names, *Ib-dâdî*, *Ib-addî* from Byblos about 2000 B.C.,[81] as well as (in the labialized form *Ub*[82]) in the early tribal name *Ub-rapi'* (see Chapter II). The labialized *'ub* is, of course, the source of Heb. *'ōb*, 'ancestral spirit, ghost'.[83] Cf. especially Isa. 29:4, where the expression *'ōb mē-'ereṣ* should probably be read *'ōb-m 'ereṣ* and rendered 'ghost of the underworld', in keeping with the context.[84] Most interesting is a hitherto unexplained passage in Job 8:8, where our *'ōb* has been discovered by J. A. Fitzmyer, S.J.:

> Be sure to enquire from men of past ages,
> Set about to examine their ghosts.[85]

It is more than likely that the same god continued to be worshipped in Roman Syria as the 'very great god' (*theos megistos*) Op (*ōp*), whose name is found in two inscriptions from Syria; the god is represented in the Mashtala stele as standing on a lion (*not* a bull) under whom are two large serpents. Op is clearly a god of the underworld

[81] Published by E. Sollberger, AfO [illegible] (1960), 120 ff. For the explanation of the names see BASOR 163 (1961), 45, n. 44.

[82] Such labialized vowels were very common in North-west Semitic; cf. Heb. *lĕ'ummîm* = Ug. *l'emm* and Ug. *'um* = Heb. *'ēm* (for **'imm*).

[83] The basic meaning is probably like French *revenant*, 'ghost, apparition' (cf. Arab. *'āba*, 'return'), as pointed out long ago. In other words, the original intransitive participle *'ib* was used as a noun in different senses: 'foe' and 'ghost'. One can easily imagine possible semantic developments to explain the facts.

[84] For the enclitic *m* in archaic construct chains see Ch. I, § D and n. 88.

[85] Communicated to me orally. There is no need to change the transmitted Hebrew consonantal text; read probably *dôrê* instead of *dôr*, 'age' (see BASOR 163, 1961, 49 f.) and clearly *'ōbôtām* for *'ăbôtām*.

like Nergal; no such Sumerian divinity as the suggested Ub is known.[86]

Next comes El, who was the head of the pantheon in the epics. He is followed by Dagan, the grain god (father of Baal in the epics). Then come seven different storm-gods (*B'lm*, corresponding to the Hebrew plural *Bĕ'ālîm*, 'the Baals'), headed by Baal-zephon (in Accadian Adad of Mt. Casius). Among the names which follow is Accadian *Šasurātum*, '(divine) midwives'. These midwife goddesses were actually called in Ugaritic, as well as in Canaanite generally, the *Kôsharôt* (see above). According to the epic of Aqhat, there were seven *Kôsharôt*, and Philo Byblius gives the same number of divine midwives, called by him the Artemides or Titanides, Greek names for divine midwives.[87]

Of the other names of divinities, some are Canaanite, some are Accadian, some are Hurrian, reflecting the ethnic mixture of northern Syria. Preserved are: the moon-god Sīn (probably *Yaraḥ*), Mt. Casius itself (*Ḥazzi*, Ugaritic and Hebrew Ṣaphôn), Ae ('Ea' = Kôthar), the Hurrian divinities Ḫebat and Aštabi, the Canaanite goddesses (in Accadian transcription) Ašratum, Anatum, the sun-goddess 'Šamaš' (Ugar. Šapaš), the underworld goddess Allatum (= 'Arṣay, daughter of Baal), and the Accadian goddess Išḫara ([*'I*]*šḫr*), Ishtar-the-Hurrian ([*'A*]*ṯtart*).[88] Next we have the 'Auxiliaries of Baal',[89] Nergal (= *Ra-*

[86] For Greek ΩΠ see R. Mouterde, *Mélanges . . . Dussaud*, 391–7.

[87] I owe this combination to Delbert Hillers. Note that we may have one, seven, and fourteen birth-goddesses; a similar wide variation in their number is found in Egypt. [On the Acc. name (explained by W. G. Lambert) see M. Astour, JAOS LXXXVI, 280.]

[88] This is, of course, the *'Astar-Ḫuru* of Egyptian texts and Ishtar of Nineveh. Nineveh was a Hurrian city before c. 1350. For the name see VESO 37, V.A.8.

[89] The *'ḏr B'l* (cf. Heb. *'ôzĕrê Rhb*, 'auxiliaries of Rahab', the primordial dragon of chaos, Job 9:13) may either be rendered in

šap), the Hurrian god Dadmiš, the 'Council of the Gods' (*phr 'elm*), the Sea-god Tāmtu (Yam), the divine incense burner (*'Uṯḫt*[90]), Kinnâr,[91] (the divine lyre), and Salimu (*Šalim*).[92]

The divine incense burner, if correct, is very interesting, since it reminds us forcibly of the chief god of Carthage, Baʿal-ḥammôn. He was the active head of the Punic pantheon, whereas El, Latin Saturnus, was relatively inactive. The name Baʿal-ḥammôn meant 'Lord of the Incense Burner'.[93] The view that Cinyras, king of Paphos, the mythical father of Adonis, bears a name going back to a god of the lyre is also substantiated (see above).

The third daughter of Baal, Arṣay, now appears in the pantheon of Ugarit as equivalent to Babylonian Allatum,

---

this way, or as 'warriors of Baal', since the word *'ôzer*, 'helper', was borrowed in Egyptian as *'u-ḏi-ir*, 'warrior' (VESO 38, V.C.1).

[90] I provisionally accept J. Nougayrol's translation of *'Uṯḫt*, which he compares with Accad. *šēḫtu*. The latter means 'high incense burner', i.e., an incense burner on a pole (cf. BASOR 85, 1942, 18–27), from Accad. *šēḫu*, 'grow, be high'. (For this word see Müller, *Das assyrische Ritual* [MVAG XLI:3, p. 21].) But the first syllable would remain unexplained, so we may have to identify the name with Accad. *ašūḫu*, Jewish-Aramaic *'ašûḥâ*, said to mean 'female (!) cedar'. It may be that *'Uṯḫt* was a tree-goddess like Eg. *nūhe*, 'Sycomore', a solution which might explain the idea that the cedar is unisexual. Note that a vocalization *'ušúḥatu* would suggest original *'*ašuḥatu*, just as Ug. *'urbt*, 'lattice' = Heb. *'arubbāh*, stands for *'*arúbatu*.

[91] Spelled *Ki-na-ru*(*m*). On the name and its feminine counterpart Kinnartu (Chinnereth) see A. Jirku, FF XXXVII (1963), 211. Note, however, that the Ugaritic vocalization reflects the ancestral vocalization of Heb. *kinnôr*, 'lyre' (Eg. *kennur*, VESO 47, IX.C.6). In later Phoenician the final vowel became *û*, yielding *kin*(*n*)*ûr* = Κινυρας.

[92] This is presumably the *Šalim* of the liturgy for Šaḥar and Šalim, 'Dawn and Dusk'.

[93] See my detailed treatment in ARI 215 f., following H. Ingholt in *Mélanges . . . Dussaud* II (1940). 'Lord of the Brazier' would probably be more correct; see below, Ch. V, § c.

consort of Nergal, goddess of the underworld, Greek Persephone. We may then include among the divinities of the pantheon Pidray of the cuneiform treaties from Ugarit, who is the first daughter of Baal in the epic; in the treaties she is the consort of Baal-zephon, and a millennium later she still appears in the Aramaic magical text in Egyptian demotic script to be published by R. A. Bowman. It is highly probable that she is also the *Peraia* (for **Pedraia*) of Philo Byblius.[94] Pidray was the first of the three daughters of Baal, and, of course, a daughter could also be a consort, as we have seen. The second daughter, *Ṯly* of the epic, is not yet known outside of the epic.

D. SOME OTHER PHOENICIAN PANTHEONS

But what of the Bronze Age pantheons of Byblos, Tyre and Sidon? These pantheons were remarkably tenacious, and yet by no means static, since new gods and identifications of deities seem to have made their appearance at regular intervals in all of them, so that we are frequently hard put to define the exact nature of the basic pantheons. Only at Ugarit do we have a complete pantheon in any period.

The chief god of Tyre in later times was Baal Melcarth; the appellation *Milk-qart*, 'King of the City', refers to the city of the underworld, as in the case of various Sumerian divinities of the Nether World.[95] In Hebrew

[94] See above, and n. 38. A false etymology is presumably responsible for the omission of *delta*.

[95] See ARI[4], 156 f., 219, 226 f., 227 for discussion and references. The most important direct contribution is J. M. Solá Solé's proof that *Ršp* (in the form *'ršp*) was identified with Melcarth in Punic Spain (*Sefarad* XVI [1956], 341–55), as well as H. Seyrig's demonstration that Melcarth was still identified with Nergal in the Roman period (*Syria* XXIV, 1947, 62–80). On the pantheon of Tyre see also R. du Mesnil du Buisson, RHR CLXIV (1963), 133 ff. A valuable study of the Melcarth of Gades (Cadiz) has been published

tradition Baal and Asherah (I Kings 16:33, 18:19) were heads of the Tyrian pantheon, and the rôle of Asherah at Tyre is confirmed by the Keret Epic, centuries earlier. (On the pantheon of Tyre see also below, Chapter V, § c.)

The basic pantheon of Tyre is probably represented in Egyptian art, including particularly a beautiful stele in the British Museum, which shows a triad with 'Holiness' (Qudshu) in the centre.[96] She is standing stark naked on a lion, with a spiral headdress which came originally from Babylonia and was then developed in Twelfth-Dynasty Egypt. Since the Palestinian plaques showing Qudshu with the spiral locks are in many cases indistinguishable from contemporary plaques found in Babylonia, there is good reason to believe that the representation spread westward from Babylonia to Egypt and not north from Egypt.[97] The lion appears elsewhere as her special favourite. In her right hand she holds lotus blossoms, and in her left stylized serpents (not onions!). At her right is El, represented, because of the great stress laid in Canaanite mythology on his virility, as the ithyphallic Min or Ptaḥ. At her left is the young god, Resheph, with a gazelle head projecting from his forehead and with a spear in his right hand. Since Melcarth was later identified with Nergal, the Babylonian god of the Nether World,[98] and since Rašap was equated with Nergal in the pantheon of Ugarit, there is no difficulty in the identification (see above, n. 95).

At Byblos the situation is less transparent. The earliest pantheon, dating from the eighteenth century B.C., consists of a native deity, who is reflected by the Egyptian sun-god, incarnated in Pharaoh; of a mother-goddess, who

by A. García y Bellido, *Archivo Español de Arqueología* XXXVI (1964), 70–153. See further below, Ch. V, § c.

[96] See above, and n. 28.

[97] See *Mélanges . . . Dussaud* I, 114 ff.

[98] See above, n. 95.

is called the 'Lady of Byblos'—*Ba'lat* for short—represented by the Egyptian cow-goddess, Ḥaṯor; and of the Egyptian patron of the forests of Lebanon, Kha'y-taw.[99] This last god is probably Phoenician Koshar (see above). It is likely that the Damu mentioned in the Amarna tablets from Byblos is the Damu of the Sumerian Tammuz litanies from the early second millennium B.C. where it is the short form of the name of the latter.[100] The name *Tammuz* was originally Sumerian *Damu(Dumu)-zid-abzu*, meaning something like 'the faithful son of the subterranean fresh-water ocean'. This probably means that Koshar was later identified with Tammuz and that the Byblian figure of the dying god Adonis (literally *'adōnî*, 'my lord') was identical with Koshar. That the cutting down of the coniferous trees of Lebanon should become a symbol of the god who dies but is always reborn, is not surprising. With this was combined the annual death of Adonis when the waters of the River Adonis (Nahr Ibrahim) are coloured blood-red after the first heavy winter rains bring down mud stained with the ferrous oxide of the *terra rossa*.[101]

According to Greek tradition, derived from Paphos in Cyprus, Adonis was the son of the Cyprian king Cinyras, who must be identified with Phoenician Kinnûr, god of the lyre (see above on the new Ugaritic pantheon), and of a mother called *Myrrha* or *Smyrna*, both variant Greek dialect forms of the word for 'myrrh' or 'incense'.[102] Syr-

[99] See BASOR 176 (1964), 44 f., n. 25, and for the name in general see P. Montet, *Byblos et l'Égypte* (Paris, 1928), pp. 64 ff.

[100] See O. Schroeder, OLZ XVIII (1915), 291, on EA 84:31–35, written by Rib-Addi of Byblos to Pharaoh. These lines should be rendered: 'And let my lord send men in order to take the property of my god Damu (Adonis) to my lord, but let not that dog (Abdi-Aširta) take any property of thy gods.'

[101] W. W. Baudissin, *Adonis und Esmun* (1911), pp. 65–202, especially pp. 71 ff.

[102] It is at least a striking coincidence that *'Uṯṯ* and *Knr* are mentioned together, possibly as the two parents of Adonis. The

iac tradition reports that Tammuz was son of Kautar (the later Aramaic form of the original *Kauthar* (= *Kôshar*). In view of the fact that *Tammuz* stands for Sumerian 'son of the *abzu*', which is the home of the god Ea, it is curious indeed that the Canaanite god identified explicitly with Ea appears as father of Tammuz. Two such cases are scarcely coincidences; we are probably faced with different forms of the common mythological replacement of a father by a son with similar attributes. The historical cause of such replacements may be that when the cults of two different divinities clash because the latter are not similar enough to be identified, an easy way out is to make the newer arrival son of the older one.

At Sidon the situation is at least equally complex. In 1931 I published an article in which I proposed to identify the chief Iron Age deity of Sidon, Eshmûn, the god of healing, with the Bronze Age Shulmân.[103] This proposal seemed somewhat adventurous to many scholars at the time. But it is remarkable that there is no mention of Eshmûn in that form in the Ugaritic literature. One instance is the minor goddess Thatmânîtu[104] (or the like).

incense in question must have been derived from resin of the cedars and pines of Lebanon, regardless of the etymology (on which see n. 90); for the importance of the fragrant resin and resinous oil from the forests of Lebanon in the twenty-third century see BASOR 168 (1962), 40 f., and for an Egyptian view in the eighteenth century B.C. see BASOR 179 (1965), 41.

[103] AfO VII, 164–9.

[104] In the Keret Epic, Tablet C, Thatmânîtu is the youngest daughter of Keret, who heals her father from illness (there is no 'Sha'taqat', which is merely a causative perfect *š'tqt*). The name means transparently, 'She Who Belongs to the Ogdoad (*taṯmânû*)'; the form is like Accad. *tū'amu*, 'twin', and *takšû*, 'plural birth'; the initial transposition is of common type. This Ogdoad must already have been connected with Thoth, the Egyptian patron of physicians, whose chief appellation in the second millennium was *nb Ḫmnw*, 'Lord of the Ogdoad' (i.e., lord of Hermopolis Magna, later *Ṣhmūne*). Philo Byblius says that Asklepios, i.e., Eshmûn, was the youngest of the eight sons of Sydyk (I, 10, 38; cf. I, 10, 25) by

While there is not the slightest indication in our texts that this figure has any direct relation to Eshmûn, there does seem to be an indirect connexion through the latter's early association with the ogdoad.[105] The fact remains that in the Late Bronze Age there are many references in Hittite, Ugaritic and later in Assyrian tablets to a god whose name appears between c. 1400 and 700 B.C. as *Šulmanuḫa*, *Šulmanuḫi*, *Samnuḫa*, and in fuller form, *Šamanminuḫi*, etc.[106] The form of the name is Hurrian, and it obviously goes back to **Šulmān-minuḫi*, 'Shulmân of (the Ninevite temple) Emenue', which is said to have been built by Manishtusu of Accad in the twenty-third century B.C.[107] Furthermore, the consort of Eshmûn at Sidon is said by Damascius to have been Astronoe.[108] When I first suggested that the name *Ešmûn* was a form of *Šulmân* (Can. *Šalmôn*) shortened by dissimilation, I hesitantly observed that this goddess might be the famous Ishtar of Nineveh, who is called 'Astar-Ḥūru in the Egyptian texts of the New Kingdom. It was already known at that time that the cult of Ishtar of Nineveh was widespread, and was particularly popular in Mitanni. But it was not until the publication of the Boğazköy tablets that a prayer came to light in which the goddess in question is begged to come to the land of the Hittites from her different cult-centres

one of the birth-goddesses (= Kôsharôt), from which a semantic connexion between the name of the god and the minor goddess may be inferred. We are presumably influenced by a secondary popular etymology in the case of Eshmûn. We must, however, bear in mind that an eighth son or daughter was apparently believed to be exceptionally lucky or well-endowed.

[105] This is one of the unexpected partial returns to earlier, pre-archaeological, views, derived from classical sources and vigorously rejected by sober critical scholars like W. W. Baudissin (*Adonis und Esmun*, p. 209, n. 6).

[106] See AfO VII (1931), 105 f.

[107] AAA XIX (1931), 59 ff.

[108] On Astronoe in Roman Tyre see H. Seyrig, *Syria*, XL (1963), 21 ff. Astronoe was now associated with Heracles (Melcarth), having presumably been fused with the earlier Asherah.

all over south-western Asia, from the Aegean to the Tigris and from northern Asia Minor to Phoenicia.[109] The loci of these cult-centres are particularly interesting. One is located in Caria and must obviously be identified with Carian Aphrodisias, where the goddess Aphrodite was worshipped—especially since the original name of the place is said, in Greek sources, to be Ninoe, which is hard to separate from Ninuwa, 'Nineveh'. Another cult-centre is even more unexpected. In 1930 I had not yet studied this text so I was puzzled by finding, as I thought, Hurrian deities of ultimately Accadian origin worshipped at Sidon in the Late Bronze Age. The Hittite prayer specifically mentions Sidon as a cult-centre of the goddess Ishtar of Nineveh, so that it is no longer at all adventurous to identify Astronoe with Ishtar of Nineveh, or her young lover Eshmun with Shulmân of Nineveh, who had presumably been worshipped since the twenty-third century B.C. in the temple Emenue. There are, of course, a number of unexpected further identifications. Shulman was identified in Syria with Resheph, and was evidently considered an underworld deity. The Shulamite of Canticles goes back almost certainly to *Šulmānîtu*, name of the goddess of love and war, as well as a figure with underworld associations.[110] As mentioned above, we cannot analyse Canaanite mythology in terms of Aristotelian logic. Eshmûn, the Iron-Age god of Sidon, was also a dying god, with Astronoe playing the rôle of his mistress. Eshmûn also reflects the healing qualities which we should expect from his precursor, Shulmân, literally 'He who (brings) welfare'. The serpents of Eshmûn belong to the chthonic figure named *Rašap-Šulmân*.[111]

[109] See KBo II, 9, i:4, in the middle of a list of Syrian cities, including Ugarit (where her name actually appears in the pantheon; cf. above) and Alalaḫ (Tell Açana). The text was treated by F. Sommer in ZA XXXIII (1921), 85 ff.

[110] See HSSt (Driver volume), 5 ff.

[111] See W. Spiegelberg, ZA XIII (1898), 120.

E. MISCELLANEOUS BELIEFS, SANCTUARIES, AND PRACTICES

The reader of this chapter may have been disconcerted at finding so much detailed interpretation of the names and functions of gods and goddesses, without systematic reconstruction of Canaanite epics, cults, or religious practice. The reason is simple; it is better to limit ourselves at this stage to what is known rather than to launch a frail boat of conjecture upon the treacherous seas of mythological plots and religious observance. Much useful work has been done along this line by such scholars as H. L. Ginsberg, T. H. Gaster, C. H. Gordon, and John Gray. During the past twenty years I have continued my own efforts to interpret difficult passages in the epics without publishing most of my results. Many of the supposed points of reference around which plots have been constructed have proved either to be completely misunderstood or even to be totally non-existent. No one can map little-known areas of research without reliable parameters. For instance, it can be shown conclusively that the so-called goddess Sha'taqat is a figment of the imagination; the supposed name is a finite verb and the figure referred to is the minor goddess of healing, Thatmânîtu.[112] Instead of trying to reconstruct elaborate maps I have preferred to select a few of the more striking motifs for treatment in appropriate places.

Much the same uncertainties present themselves to every investigator of the still scanty data for North-west Semitic sacred buildings. We have surprisingly few clear-cut temple plans and even fewer types of cult objects whose use can be described with any confidence. In dealing with Israelite borrowings from Canaanite religion in Chapter IV, I shall have occasion to refer to the more

[112] See above, n. 104.

important types of temple structure, such as are found in the Middle-Bronze temple of Byblos and the Late-Bronze temple of Hazor, or in the *migdal* temples of Ugarit, Beth-shan and Shechem.

Our knowledge of religious practice will probably be considerably enlarged when the mass of still unpublished ritual texts from Ugarit has become available and when all then-known material has been systematically analysed and compared with similar data in various parts of Mesopotamia and Asia Minor. Such problems as divination and human sacrifice will also be discussed elsewhere in this volume.

The picture which we have drawn exhibits a startling combination of primitiveness and over-sophistication. We are as yet in no position to say that the North-western Semites were more 'depraved' (from a Yahwist point of view) than the Egyptians, Mesopotamians and Hittites, but it is certainly true that human sacrifice lasted much longer among the Canaanites and their congeners than in either Egypt or Mesopotamia. The same situation seems to hold for sexual abuses in the service of religion, for both Egypt and—on the whole—Mesopotamia seem to have raised standards in this area at a much earlier date than was true in Canaan. We shall return to this subject below in various connexions.

IV

The Struggle between Yahweh and the Gods of Canaan

A. THE MOSAIC MOVEMENT

In our survey of Hebrew literary and historical origins (above, Chapters I and II), we have been faced with an apparent paradox, which has disturbed many scholars. Though the Patriarchs were unmistakably immigrants from Mesopotamia, with historical traditions as well as religious lore and customary law derived from the northeast, the Hebrew language and poetic style were quite certainly Canaanite in origin. The seeming difficulty is materially reduced when we bear in mind that the Mesopotamian precursors of the Hebrews were themselves largely of West-Semitic ('Amorite') extraction. Yet it remains a problem for which a solution must be sought.

The solution is probably to be found, paradoxically enough, in the very fact that the immediate followers of Moses belonged mainly to Hebrew groups which had settled long before at the Egyptian end of the old caravan routes between Palestine and Egypt. Elsewhere I will survey the new data which have become available in recent years for the period between the settlement of Jacob and his followers in early Hyksos times[1] through

[1] My detailed study of the Hyksos period in Egypt has been delayed by repeated (and hitherto only partially satisfactory) efforts to decipher the short inscriptions in enigmatic (but not meaningless) hieroglyphic script on Hyksos scarabs. Five names of rulers can be placed in order before the irruption of the non-Semitic Fifteenth Dynasty under Salitis (c. 1650 B.C.): *Šš'* (biblical *Šešay*, though not necessarily founder of the pre-Israelite clan of Hebron

the bitter years of state slavery which followed the triumph of Amosis over the Hyksos in the third quarter of the sixteenth century B.C.[2] This period probably lasted about two and a half centuries, down into the early thirteenth century B.C. That the Israelites did not leave Egypt *en masse* during these centuries, may easily be explained; flight into the desert meant starvation for many, and single persons who could not stand life in Egypt could quite easily find refuge among their kindred in the hill-country of Palestine, where many of the old Hebrew clans still preserved a quasi-ethnic entity: e.g., Judah, Benjamin, Ephraim, Manasseh, and probably others.[3] Aside from occasional short revolts, Palestine remained within the Egyptian empire during almost the whole of this period.

From biblical tradition, confirmed by the alphabetic inscriptions from Sinai (dating between c. 1525 and 1450 B.C.)[4] and Egyptian sources, we know that the pantheon of the authors of the inscriptions consisted chiefly of a mixture of the old Semitic divinities with Egyptian deities; not a single Canaanite god or goddess can be identified with certainty.[5] Hebrew personal names of the age also show that the old Hebrew gods were still revered;

bearing this name), *Ya'qub-'âli* (with the same name as Jacob), *'Anati-'âli*, *Bbnm* (cf. *Bablimma*, name of a king mentioned in a Qatna inventory, and perhaps the same person). The leader of the invasion (or perhaps the clan to which the dynasty belonged) was probably named *Yam'i* or *Yam'ay* (cf. the two twentieth-century names *Yam'i-'ilu* and *Yam'i-nu'mu* of the Sethe Execration Texts).

[2] For the date see BiOr XXI (1964), 65 and note, as well as BASOR 176 (1964), 44, n. 23. The recovery of Tanis from the Hyksos took place after the eleventh year of Amosis (C. F. Nims, *Thebes of the Pharaohs*, New York, 1965), p. 199. On the period of state slavery c. 1525–1450 B.C. see PSID 10–15, etc.

[3] Cf. provisionally BPAE 32.

[4] See PSID, which contains the results of my decipherment since the appearance of BASOR 110 (1948), 6–22, and especially since the summer of 1957.

[5] PSID 13 ff.

the figure of Shaddai, in particular, appears to have been dominant.[6] But, in general, the Hebrews lived in the north-easternmost part of Egypt, in the region called in the Bible variously the 'land of Rameses', i.e., the region around Tanis-Pira'masese (Gen. 47:11), the 'plain of Tanis' (Ps. 78:12, 43, from the tenth century B.C.),[7] and Goshen (a Semitic name referring apparently to a certain kind of soil).[8] It is no accident that such names as *Ba'al-ṣaphôn*, *Migdol*, *Zilû* and *Sukkôt*,[9] all in this region, are North-west Semitic.

In other words, most Hebrews in Egypt lived in the north-eastern corner of the Nile Valley, where they were effectively prevented by the sea to the north and the desert to the east and south-east from maintaining normal contact with other Semitic ethnic groups. Even had this been practicable, the fact that the former Hebrew donkey caravaneers were despised by their neighbours—Egyptians and Canaanites alike—made close relations difficult at best. Under these circumstances, Hebrew tenacity in maintaining ancient traditions becomes easy to understand. Parallels abound.

When R. Kittel, A. Alt and others compared the Hebrews of the pre-Conquest age to the semi-nomadic *'Arab* (as contrasted with *Bedū*) of the Middle East before the beginning of the automotive age, they made it possible to correct the analogy drawn by J. Wellhausen with the pre-Islamic camel-raising *Bādiya*. I took another step

[6] BPAE 13 f.

[7] On the date, established by O. Eissfeldt, see Ch. I.

[8] The initial voiced g was impossible in Egyptian, as we know from extensive phonological evidence, e.g., Semitic *g* was transcribed as *q* or *k* in Egyptian, and Eg. *g* appears as *q* in Semitic. *Gošen* appears several times as a South-Palestinian place-name, and Heb. *gûš* (Aram. *gûšâ*) is a word for soil of some kind (cf. also Guš-ḥālāb = Gischala in Galilee).

[9] Baal-zephon was at Tahpanhes = Daphne (*Festschrift für Alfred Bertholet* [Tübingen, 1950], 14, n. 4); Zilû = Roman Silē, formerly *Zaru* of Egyptologists (see JEA x [1924], 6–8).

when, about thirty years ago, I began insisting that the Hebrews were 'ass nomads', not camel nomads,[10] but it was not until 1961 that I realized that they had to be 'donkey caravaneers' (see Chapter II, above). This has completely altered our entire picture of their place in the geographical horizon of the second millennium B.C. They may have been despised, but they were far from ignorant. In fact, since they spent most of their time in activities such as driving donkeys from one country to another, in wandering from pasturage to pasturage with their flocks, in cultivating vineyards and selling wine, as hucksters and traders, in raiding their more settled neighbours, and in serving as mercenaries or as state slaves, they were presumably as clever and as tricky as the Arabs, when judged from Turkish and Kurdish points of view. It is particularly difficult to imagine them as ignorant of international military movements at any time.

Furthermore, the Hebrews in Egypt were settled around the new Ramesside capital and along the routes which led from it by land into Palestine, and by water into the Mediterranean. In a poem to Pharaoh composed under Ramesses II, it is called 'The beginning of every foreign land and the end of Egypt, with beautiful terraces and shining halls of lapis lazuli and turquoise, where thy chariots are marshalled, where thy footmen are mustered, where thy navies reach port, bringing thee tribute.'[11] There they were in a position to learn about troop movements and hear rumours of impending attack from the increasingly unpredictable north. We probably have a definite peg on which to tie the chronology of the Exodus, as we shall now see.

In 1923 Wilhelm Spiegelberg published a list of 679

[10] See FSAC (written in 1939), 119–22, where I published the results of previous years of research on the question. See also JAOS LX (1940), 283, note.

[11] Cf. R. A. Caminos, *Late-Egyptian Miscellanies* (London, 1954), p. 101.

sealings from wine jars from the Ramesseum at Thebes.[12] The place-names in them are, as far as they can be identified, nearly all in the North-eastern Delta, where most of the Egyptian vineyards were located at that time.[13] The personal names are in part Egyptian, in part Northwest Semitic, and in part gentilic, such as 'The Cypriote', or 'The Syrian'. The sealings are dated as follows:

Year	1	3	Year	5	72	Year	9	11	Year	13	3
	2	13		6	70		10	6		14	0
	3	48		7	244		11	5			
	4	41		8	146		12	3			

From year 15 to year 52 (when the list ends) there are only 14 sealings in all and never more than 2 in a single year; the last 14 years of the 67-year reign of Ramesses II are missing—presumably because the building in question was no longer used for storing wine. The extraordinary oscillations of wine delivery to the Ramesseum at Thebes in the sixth–ninth years illustrate the fluctuations of the war, as we shall see. During the time of greatest danger the capital was moved south to Thebes, along with many government offices and much military preparation.

In the fifth year of his reign Ramesses II was roundly defeated by the Hittites, as disclosed by Hittite records now supplemented by documents found at Ugarit, in the

[12] ZÄS LVIII (1923), 25–36.

[13] See H. Kees, *Ancient Egypt* (Chicago, 1961), pp. 81 f. and 195 f. for the distribution of vineyards in northern Egypt. Note also that *kȝmw*, 'vineyard' is a very old Egyptian loan from *karmu* vineyard (Heb. *kérem*) and that the vineyards mentioned in the Ramesseum material were mostly near Rameses (Tanis), with some coming from near Silē (see above, n. 9). Note further that the proportion of vineyards located in the north-eastern Delta in the early years of Ramesses II is much higher than was true of the jar labels from the palace of Amenophis III at Thebes, where the proportion of vineyards in the north-western Delta was much higher (see W. C. Hayes, JNES X [1951], 35 ff., 82 ff., 156 ff., 231 ff.). Evidently the north-eastern Delta was much more intensively developed in the Nineteenth Dynasty.

light of which we can disregard the claim to victory which Ramesses II makes in his own inscriptions—a claim which turns out to be nothing but a boast that he escaped death by breaking out of the encircling Hittite forces with a small bodyguard. This defeat provoked a general revolt, doubtless incited and supported by the Hittites, which apparently began in the sixth or early seventh year.

The revolt extended at least as far south as Ascalon, which had to be taken before the war could be carried north. In the eighth year the Egyptians finally triumphed over Accho and the rebellious cities in Galilee, the Jordan Valley, northern Transjordan and southern Syria.[14] In the ninth year Ramesses celebrated his triumph and the formal submission of the rebels at Rameses by erecting a basalt stele in Beth-shan,[15] and by his tenth year he had fixed the northern boundary of the Egyptian Empire at Nahr el-Kelb north of Beirut. The outbreak of the general revolt is reflected by the sharp increase in the number of sealings in the seventh year. After the reconquest of the rebellious Asiatic cities in the eighth year of the king, there is a sudden drop from 146 in the eighth to 11 sealings in the ninth year. While the simplest explanation of the drop is that there was much less demand for wine jars at the Egyptian headquarters in Thebes[16] after the bitter fighting of the seventh and eighth years had died down, there is another explanation which may help account for its suddenness, and may well be the true one. We have seen in Chapter II that the 'Apiru of the Late

[14] See J. Simons, S.J., *Handbook for the Study of Egyptian Topographical Lists Relating to Western Asia* (Leiden, 1937), pp. 64 ff. and 149.

[15] J. Černý has recently expressed some doubt about the date, but none was raised by any of the Egyptologists who examined the stele after its discovery. By chance I was the first to read the text, and the date seemed certain to me.

[16] Thebes was still the winter capital, and it was so far removed from the danger of immediate Hittite attack by land and sea that it must have been the seat of government at that critical juncture.

Bronze Age became known as vintagers and vintners, both in Egypt and in Palestine. It is highly improbable that the Israelites would risk flight from near the residence of Pharaoh himself at Rameses (whether at Tanis itself or in the vicinity) unless the opportunity seemed unusually advantageous. But if they fled from the country during the height of the rebellion against Egypt, in the eighth year of the king's reign, the sudden drop in the supply of wine to Thebes might be explained by the shortage of vintagers to take care of the vineyards.

These considerations suggest a date c. 1297 for the Exodus, if we follow M. B. Rowton's new date in 1304 for the accession of Ramesses II.[17] My latest date for the Exodus is relatively about the same as my past dates c. 1290 (when I followed the then standard formula, Ramesses II: 1301–1235 B.C.) and c. 1280 (when I followed Rowton's former date 1290–1224). We now have several independent means of dating the critical phase of the conquest of Western Palestine. The most important of these remains the Israel Stele of Merneptah, on which Merneptah celebrates his victory over the Libyans and at the end refers to his triumph over Israel in Palestine. Apparently the latter took place early in his fifth year, or late in the preceding fourth year. Lachish, in the low hill country of southern Palestine, has yielded important evidence.[18] In the burned level marking the destruction of the Late Bronze town, the sherds of a broken bowl were found scattered over a square metre, indicating that the bowl must have been broken at the time of the destruction. Otherwise the sherds would have been strewn over a considerable area, and it is most unlikely that more than a few would have been found. The bowl bears a

[17] See M. Rowton, JNES XIX (1960), 15–22; R. A. Parker, JNES XVI (1957), 39–43; my 'Chronological Note on the Fall of Ugarit' to appear in C. F. A. Schaeffer, *Ugaritica* V (condensed in CAH², I, ch. XXXIII, pp. 31 f.).

[18] BASOR 68 (1937), 23 f., and 74 (1939), 20 ff.

hieratic inscription mentioning the payment of tribute in the fourth year of a king who must be either Merneptah himself or one of his immediate successors, since it is quite possible to distinguish the script of the fourth year of Merneptah from that of the fourth year of his father and predecessor, Ramesses II, over sixty-six years before, but it is not possible to assign a hieratic text to reigns which were separated by only a few years, as one would have to do in order to distinguish between the script of Merneptah and that of his immediate successors. Since no Egyptian inscribed objects from later reigns have turned up in Bronze Age deposits at Lachish, the attribution of the bowl to Merneptah seems virtually certain.

But there is still more decisive new evidence. In the excavations conducted by C. F. A. Schaeffer at Ugarit in 1957, remains of a tablet oven were uncovered in the stratum to which the final destruction of the city belonged.[19] In this oven were found tablets in the process of being baked at the time of the final destruction. Two tablets are particularly important. One is a letter from the 'great king of the Hittites' to the last known king of Ugarit, 'Ammurapi', saying: 'The enemy has come up against me, (namely) the Assyrian.' This reading was not recognized by the first editor, but examination of the photograph published by Schaeffer in 1963[20] and of the copy and transliteration by Ch. Virolleaud,[21] shows that the word for 'Assyrian(s)' is the only possible reading, spelled as elsewhere in Ugaritic, as well as in later Aramaic.[22]

[19] Nothing later (before the Persian period) seems to have been found at the site, and the picture presented by the tablets of the oven and other tablets from the latest stratum of the city outside this area is the same.

[20] *Ugaritica* IV, 59, fig. 4.

[21] R. S. 18.38, published in PRU V, 84 ff.

[22] In an unpublished text (UM 244, No. 296a) *'aṯrym* appears with *Mṣrym*, 'Egyptians' as recipients of wine. Aramaic *Āṯûr*, 'Assyria' goes back to the same source. For *'ltn*, 'has come up against

The other important tablet from the oven is a letter from a Ugaritic field commander to the king of Ugarit.[23] The former has been watching the 'enemy' from Lawazanda,[24] overlooking the Euphrates valley from the west. With him had been the king of Siyanna (capital of a small state just south of Ugarit, and also belonging to the Hittite empire). The only possible enemy which threatened Ugarit and Siyanna as well as the Hittite states to the north (which were then ruled by members of the Hittite royal family) was precisely Assyria. There is only one recorded Assyrian invasion with which we can identify it, namely that of Tukulti-Ninurta I in the first full year of his reign (c. 1234–33 B.C.).[25] The inscriptions of the Assyrian king which mention this invasion of the Hittite empire (from which he carried off 8 *šar* of captives according to his own statement), come from the latter part of his reign; there is no reference anywhere to a later invasion of Khatti. After the king's raid into Commagene he invaded the regions north of Mesopotamia which had once belonged to the Mitannian empire. He then conquered Babylonia (c. 1232),[26] after which he was fully occupied in the south for many years.

me', see the rich comparative material for non-accusative verbal suffixes in North-west Semitic gathered by M. Bogaert, *Biblica*, XLV (1964), 220–47.

[23] R. S. 18.40 (No. 63, PRU v, 90).

[24] Written *Lwsnd* and identified with the Hittite name by M. Astour (AJA LXIX [1965], 257). The following name *Syn* (*Sianna*) was not recognized by Virolleaud; I wish to thank M. Schaeffer for kindly lending several photos.

[25] See E. Weidner, *Die Inschriften Tukulti-Ninurtas I und seiner Nachfolger* (Graz, 1959), No. 16:27–30 and 17:23–25.

[26] Note that Rowton's Assyrian chronology is ten years too high, as indicated by the agreement of both the well-preserved Khorsabad and S.D.A. tablets of the Assyrian King List against the badly preserved Nassouhi tablet on the reign of Ninurta-apil-Ekur, to which they assign 3 years (c. 1182–80) while the latter assigns 13 years to it. There is another strong argument for the same date, hitherto apparently overlooked. The Fourth Dynasty of Babylon

Though the Assyrian invasion did not reach Ugarit, its exact dating makes it possible for us to date the tablets from the oven within a year or two.[27] In tablets found not in the oven but elsewhere in the latest stratum of Ugarit, we have references to the invasion of Cyprus by seafaring peoples, as well as to the sacking of towns on the coast near Ugarit by the same foreigners.[28] Taken together with the latest inscriptions from Boğazköy,[29] these Ugaritic texts make it clear that the menace of the Sea Peoples was increasing steadily towards the end of the reign of 'Ammurapi', the last known king of Ugarit, and that it is no longer possible to separate these events completely from the Libyan and Aegean invasion of the north-western Delta in the fifth year of Merneptah. Since the latter accuses the Hittites (justly or not) of having sent the marauding Sea Peoples, including the Greek Achaeans, against Egypt, we may safely infer that the Egyptians reacted, not only by resisting the attack in Egypt itself, but also by persuading the Assyrians to mount an expedition from the north-east in order to divert

(Isin II) began c. 1160 B.C., and if we follow the regnal years of King List A, supported by other documents, the reign of Kashtiliash III ended c. 1232 B.C. (but not later than c. 1230 B.C.). If we study the inscriptions of Tukulti-Ninurta I, it becomes rather clear that his initial success against the south-eastern dependencies of the Hittite Empire was not followed up because of the war with Babylonia, in the course of which Kashtiliash III was taken prisoner. Babylonia had been in alliance with Khatti since the Assyrian conquest of Mitanni. In other words, if the raid across the Euphrates took place c. 1234/33, and Babylonia was invaded between 1232 and 1230, our data would fall neatly into place.

[27] At an extreme estimate, since it is scarcely likely that any of the originals or copies (translated or not) had been inscribed more than a few weeks (or months, in the case of texts translated from Hittite) before the oven was sealed.

[28] See the evidence so far available which has been collected by M. Astour (AJA LXIX [1965], 254 ff.).

[29] See H. Otten, MDOG XCIV (1963), 13 ff.; H. G. Güterbock, JNES XXVI (1967), 73–81.

the supposed Hittite vassals from Egypt by a direct attack on the Hittite empire. In one of the latest tablets from Ugarit the king of Ugarit tells the king of Cyprus, who has asked for naval aid, that he has no ships to send, since his fleet is in Lycian waters—obviously to guard against an attack of the Sea Peoples on the Hittite coast! Merneptah may have been wrong in blaming the Hittites for the piratic movements of peoples who were in no sense loyal vassals of Khatti, but who were in fact in open rebellion against the Hittites. That the Egyptians reacted to the supposed situation by encouraging the raiders to attack the coast of Hittite Syria is likely enough; this sort of manoeuvre has always been characteristic of the Mediterranean world.

David Neiman suggested to me in 1964[30] that it is difficult to separate the critical phase of the Israelite invasion of western Palestine from the world situation at the time. Having long schooled myself to keep away from such far-reaching hypotheses, I should probably not have noticed it myself. Not only were the Egyptian coast proper and the coasts of Cyprus and Ugarit menaced by marauding Sea Peoples,[31] but there were also attacks of this sort on Palestine.[32] In any case Egypt's preoccupation with the task of warding off the dangerous invaders gave the Israelites an ideal opportunity to attack the Canaanites on their own account. While it is still too early to be sure that events followed exactly this course,

[30] See now his remarks in *Studies and Texts* (Lown Institute, Brandeis University) III (Cambridge [Mass.], 1966), pp. 127 ff.

[31] Believed by the Egyptians to have been sent by the Hittites (as stated in Merneptah's Israel Stele), and presumably believed by the latter to have been encouraged by the Egyptians. Since Egypt and Assyria were almost certainly allies at the time, both beliefs may have been correct. The Amarna and Boğazköy letters have long since proved that far-reaching alliances against common foes were common in the fourteenth–thirteenth centuries B.C.

[32] See CAH², II, ch. xxxiii, 26 f., 31 f.

the evidence dovetails so well that something of the sort must have occurred.

The evidence sampled in Chapter I for the antiquity of the basic oral traditions about the Exodus makes it quite unreasonable to deny its substantial accuracy. It is true that some of the prose narratives of 'JEP' in Ex. 1–14 reflect later traditions which do not seem to have the poetic or legal basis needed to establish an early date on internal literary grounds alone. As I have long maintained, a period of some sixty years probably elapsed between the Exodus from Egypt and the destruction of the Canaanite towns in the Shephelah (Josh. 10). We may roughly divide this period into three phases: (1) the desert wanderings between Egypt and the settlement in Eastern Palestine; (2) the occupation of Eastern Palestine; and (3) a period of consolidation with the native Palestinian Hebrew groups before the full-scale onslaught against the Canaanite city-states. The first two phases may be roughly equated with the traditional 'forty years in the wilderness', while Phases (2) and (3) may have taken considerably longer than one might assume from the canonical form given to the early traditions in the seventh century B.C. Phase (1) was then correspondingly shorter, and may have taken only a few years.

Any reasonable historical reconstruction must recognize that Moses was an outstanding figure according to any standard.[33] It is impossible to imagine the foundation of such a religious confederacy as that of Israel, without a founder; and the founder of Israel is acknowledged by all independent sources, as well as by all recensional

[33] A substantial part of my forthcoming *History of the Religion of Israel* will be devoted to analysis of the traditions about Moses and his work in order to fix his place in history. A direct approach will be made through traditions preserved in verse or validated by poetic reminiscences of archaic type. Then I shall try to place his work with reference to what we know about pre-Mosaic and post-Mosaic law and institutions.

variants, to have been Moses. It has long been known that the family of Moses was quite thoroughly Egyptianized, since a number of its members bear characteristic Egyptian names, such as *Môšé = Mōsĕ*, *Pineḥás = Penaḥse*,[34] *Ḥopnî = Ḥfny* (*Ḥfnn*), *Merarî = Mrry*,[35] and *Pašḥûr = Pašḥōr*.[36] Other names have been thought to be Egyptian, including Aaron and Miriam, but only the few mentioned above are clearly Egyptian. The Egyptian name *Mōsĕ* became *Môšé* in Hebrew; it is a common Egyptian hypocoristicon (short form), which is the second element in numerous personal names, all beginning with the name of a divinity (e.g. *Ṭḥutmōse*, *Re-'mōse*, *'Aḥmōse*). The name meant originally, '(such and a god) is born'. It may be that the name *Môšé* was originally connected by a popular etymology with a Northwest Semitic word *mṯ* no longer found in Biblical Hebrew, meaning 'master, lord', and used frequently in the Proto-Sinaitic inscriptions in invoking divinities.[37]

Moses was probably born during the middle decades of the fourteenth century B.C., not long after the collapse of

[34] Eg. *pȝ-nḥsy*, 'The Dark-skinned One'. When short vowel endings were dropped in Hebrew about the thirteenth century B.C., a helping vowel was inserted. The name was exceedingly common in this period.

[35] Eg. *mrr(w)*, '(He) whom (one) loves' was a very common first element in names of the Old and Middle Kingdoms; it appears more rarely in the New Kingdom (ÄPN I, 162:17–27, 421:22; II, 291:23–25). *Mrrî* and *Mrrw* were common hypocoristic forms.

[36] Eg. *Psš-Ḥr* according to W. Spiegelberg, ZDMG LIII (1900), 635. Names with this initial element followed by a divine name seem all to be late. An identification with *Pȝ-šd-Ḥr*, attested by Alan Gardiner for the twelfth century (ÄPN I, 119:17) is better, since the formation was very common in the New Kingdom (ÄPN I, 119:13, 18, 20). Note that Y. Aharoni's excavations at Arad in southern Judah have turned up sherds at the sanctuary, with names of the old priestly *ma'mādôt*, *Pašḥûr* and *Merēmôt*, in script and spelling of the sixth century B.C., so the former may have been much older than generally thought.

[37] PSID, 41 f.

the Aten revolution. We do not know whether there was any direct relationship between the Aten revolution and the Mosaic movement. The two do share certain general features, such as monotheism—both emphasize that their god is the sole creator and lord, 'beside whom there is no other'—though Amarna monotheism centred around a triad, in which the king was also divine. Yet the *aten* was not the sun-god, but was the solar disk, the glorious refulgence of Rē', not Rē' himself. The ethical level of Atenism was much lower, from our post-Israelite and post-Hellenic point of view, than that of Mosaic society. 'Truth' (*mu'a*)[38] was essentially the acceptance of the new standards of the élite in language and art. The charming freedom of manners, shown in court scenes, went hand in hand with total demoralization of the royal family, where incest was glorified as never before or since in Egyptian history. Yahweh, unlike the Aten, does not reflect any force or phenomenon of nature, but is the God who created all and reigns over all. There are, however, other interesting points of contact. For example, both emphasize the official 'teaching' (Eg. *sbȃye*, whence Coptic *sbō*, and Heb. *tôrāh*).

How new the religion of Moses was, and how much of it was derived from older Hebrew sources, is difficult to say. In the case of every great religious reformer the same problem arises: is he a reformer or an innovator? A great reformer nearly always innovates. He cannot help innovating, since so many things seem wrong with the old society and its inherited beliefs. On the other hand a great reformer seldom, if ever, is a deliberate innovator, but someone concerned to restore the ancient heritage, which he tends to see in the light of his own ideals. We find this dual rôle in all outstanding figures of Judaeo-Christian religious history, and we should therefore ex-

[38] Conventionally transcribed 'maat' since early Egyptological days; on this concept at Amarna see R. Anthes, JAOS, *Supplement* 14 (1952).

pect to find it also in Moses. And indeed there are very ancient elements in the Mosaic tradition. Among them we may count a strong basic tendency towards monotheism (see above), and a hitherto unparalleled emphasis on the Covenant between the supreme God and his worshippers.

The Covenant or Pact between God and Israel is now known, as shown by G. E. Mendenhall,[39] to have followed the pattern of suzerainty treaties in late second-millennium Anatolia and Syria (see Chapter II). In these treaties a suzerain makes a pact with a vassal, the rôle of suzerain being, of course, more important than that of vassal. There is a parallel sequence of subject-matter in these treaties, virtually all of which start with a historical preamble and end with the statement that the text of the treaty is to be deposited in the temple of the chief god of each country. Exactly the same pattern is found in Joshua 24, which thus appears to be the oldest description in the Bible of a covenant between God and His people —instead of being one of the latest, as used to be thought by critical scholars in the absence of material to the contrary. This epoch-making discovery by Mendenhall has been rejected or modified by other scholars, but erroneously. It has been pointed out recently by Herbert B. Huffmon (CBQ xxvii [1965], 100 ff.) and others that critics of Mendenhall's views have overlooked certain facts and have disregarded vital differences between the suzerainty treaties of the second millennium B.C. and the Assyrian and Aramaean treaties from the first millennium B.C. For example, the historical preamble has disappeared completely from the first-millennium treaties. Above, at the end of Chapter II, emphasis was laid on the vital function of pacts or covenants at all stages of early Hebrew life.

[39] See especially his classical treatment, *Law and Covenant in Israel and the Ancient Orient* (The Biblical Colloquium, Pittsburgh, 1955, reprinted from BA xvii [1954], 26–46 and 49–76).

Another important religious principle handed down through Moses was belief in 'the god of the fathers'. The 'god of the fathers' was not the same as the Accadian translation, 'god of the father', of the name of the great patron of ancestral worship, 'El'eb, among the North-western Semites.[40] As pointed out by A. Alt[41] and J. Lewy,[42] this is, rather, akin to what we have later in the Nabataean and other North-Arabic inscriptions of mercantile and caravaneering families, as well as in the Old Assyrian tablets from the Patriarchal age itself. The god(s) of a man's father, the teraphim,[43] could be carried around by a man when he was unable to attend to his cultic obligations in an established sanctuary. Yet the Accadian translation 'god of the father' does show that the concept of *theos patrōos* was familiar in the Late Bronze Age as well as in the Patriarchal period; it therefore serves as another bridge between Abraham and Moses. It was Moses' acceptance of the old faith in the god of the fathers that led him to identify Yahweh with the 'god of the fathers' as well as with Shaddai. Belief in the Covenant and the God of the Fathers are undoubtedly the two most important elements taken by Moses from Patriarchal tradition.

The long debate over the original meaning of the name *Yahwêh* shows no sign of abating, and the most incredible etymologies are still advanced by otherwise serious scholars. The indicative form of the name is clearly demon-

[40] See above, Ch. III, § c, and below, § d.

[41] *Der Gott der Väter* (BWANT III:12 [1929]), reprinted in KSGVI I, 1–78; cf. JBL LIV (1935), 188.

[42] RHR CX (1934), 50 ff.

[43] On the teraphim cf. ARI, 114 and 207, n. 63. As a possibility I may now add that *tĕrāfîm* may be a contemptuous deformation of a hypothetical noun (**tarpa'u?*) from the stem *rp'*, from which the name of the Rephaim (the spirits of ancestral heroes in Ugaritic, Phoenician and Hebrew) is derived. Note also the name *Ubrapi'*, belonging to a very ancient Hebrew tribe (see Ch. II), and containing the name of the archetype ancestral deity Ub.

strated by the ending; otherwise we should expect to have a jussive as in the case of the hypocoristic form *Yahū*, which can be traced back as far as the ninth century B.C., thanks to Assyrian transcriptions. We must remember that in Hebrew and cognate dialects there was a tendency to reduce imperfect verbal elements in personal names to jussive form, precisely because the original form of nearly all such elements in composition was jussive.[44] It is rather obvious that a *qal* interpretation of the name, though possible for 'Amorite'[45] and normal for Arabic verbs *tertiae infirmae*, would have a strange meaning. In those days of emergent empirical reasoning about theological matters,[46] a rendering such as '(He) is' or '(He) will be' makes no sense. On the other hand, a causative explanation was perfectly intelligible and has hosts of parallels; the notion that a causative meaning would be 'too abstract for early Israel' is nonsense, since no semantic category which is represented by special morphemes and innumerable individual cases in any language can be considered too abstract for the genius of that language. We might just as well say that the *ung/ing* ending had too abstract a meaning for the early Germanic peoples. The stem *HWY* itself appears in both Hebrew and Aramaic, the only known Semitic tongues in which it was regularly used. It is true that the *hif'il* of this verb has disappeared from normal use in Classical Hebrew, but Aramaic dialects exhibit both *pa'el* and *af'el* in causative sense, 'cause to be', 'create'. Similar formations are common in other Semitic verbs with the same meaning: e.g.,

[44] As pointed out in JBL XLVI (1927), 153–78, M. Noth's treatment in *Die israelitischen Personennamen im Rahmen der gemeinsemitischen Namengebung* (Stuttgart, 1928) leaves the question open most of the time. In general we find utter confusion among biblical scholars today, though the evidence for jussive form and meaning has been increasing steadily.

[45] See APNMT, 66–73, and especially pp. 72 f. and 159 f.

[46] On this subject see especially HACH, 83 ff. and Albright, *New Horizons in Biblical Research* (London, 1966), pp. 17 ff.

in Phoenician and cognate names we have both *kân* and the corresponding causative, indicative *yakîn* and jussive *yakĭn*; in Accadian names we have *bašû* as well as *šubšû* ('cause to be, create'); in Egyptian *sḫpr*, 'to cause to come into existence, to create', is also common in personal names.

It has recently been argued that the *qal* would be more natural, and Accadian forms like *Ibašši-ilu* are cited as relevant.[47] But the corresponding Canaanite-Hebrew form would almost certainly be *'Iṯ-Baʿal*, 'Baal (actually) exists'. The Hebrew name *'Iš-baʿal* or *'Eš-baʿal* corresponds to the formula in the Baal epic, '(I know that) the Prince, Lord of the Earth, exists (*'iṯ*)'.

There is another solid reason for objecting to the *qal* interpretation: in Ugaritic and Hebrew (as well as in South Canaanite of the Amarna period) the Barth-Ginsberg law holds, that there was dissimilation from very early times in the vocalization of the intransitive imperfect; the normal form of the intransitive *qal* imperfect (indicative) would be **yihwayu*>*yihyê* (Hebrew).

The indicative *qal* form *Yahwê* (jussive *Yahu*) is extremely significant, since it must normally be an abbreviation of a longer formula. This idea is not at all adventurous, since it is assumed in the explanation of the name given in Ex. 3:14, where God informs Moses that his full name is *'ehyê 'ašer 'ehyê* and commands him to tell the children of Israel that his name is *'ehyê*. It has long been recognized by many scholars that the vocalization is wrong and that the full name had to be in the first person (when spoken by God) *'ahyê 'ašer 'ahyê*, with *'ahyê* as the short form. The absence of any known reflection of this formula elsewhere in the Hebrew Bible suggests that it is a secondary theological adaptation of an original formula in the third person, 'It Is He Who

[47] W. von Soden, 'Jahwe "Er ist, Er erweist sich"', *Die Welt des Orients* III (1965), 177–87.

Creates What Comes into Existence', like Eg. *sḫpr.f pw wnn.ty.fy* and *qm³ wnn.t.*[48] I pointed out a good many years ago that *Yahweh* appears as the first element of other names of obvious liturgical origin such as *Yahwê Ṣebā'ôt*; D. N. Freedman has followed with other suggestions,[49] to which I shall add elsewhere. That the appellation is pre-Mosaic seems to be shown by the following considerations: (1) the 'Amorite' personal name *Yahwi-il*, spelled *Yaḥwi-il* and *Yawi-il*, is quite common in Old Babylonian transcriptions (the double writing is due to the fact that there is no *h* in Accadian); (2) the element appears as a place-name written *Y(a)hw(e?)* in a fourteenth–thirteenth-century Egyptian list of south Palestinian place-names; (3) the appellation *Yahwê* is used as an alternative designation for *'Elôhîm*, 'totality of the gods, the supreme god', as far back as the Song of Miriam and other poems from the thirteenth and twelfth centuries B.C.[50] This use in poetic parallelism, either in A or B position, lies entirely within normal Canaanite practice and suggests that it was introduced into Israel at a very early date. The preservation of the name as the indicative verbal element in ancient liturgical formulas is so archaic and was so little understood in later times that it must go back to extremely early times. For the use of old cultic formulas as divine appellations there are a great many examples in Canaanite, Egyptian, Sumerian,

[48] For the first reference to these Egyptian parallels see JBL XLIII (1924), 370–8; cf. also JBL XLIV (1925), 158–62. I may also repeat what I have said above, that many Sumerian, Egyptian and Canaanite divine names and appellations are abbreviations of liturgical formulas.

[49] See my review of Wambacq, JBL LXVII (1948), 377–381, and D. N. Freedman, JBL LXXIX (1960), 151–6, as well as F. M. Cross, Jr., HTR LV (1962), 250 ff.

[50] On the early use of *Yahweh* and *'Elôhîm* in parallelism, one taking position A, the other position B, according to the 'school' to which the poet belonged, see CBQ XXV (1963), 1–4 and 9–11, and above, Ch. I, § D.

Accadian, etc. If my interpretation is correct, a number of cases appear already in the Proto-Sinaitic inscriptions.[51]

With these remarks we take leave of this subject for the present; it will be considerably expanded elsewhere.[52] The evidence is now so clear and extensive that it is hard to see how it can be refuted.

B. THE ANTIQUITY OF MOSAIC LAW

Turning to the case-laws of Exodus, we have already seen (Chapter II) that they are much more ancient than their present context suggests, and that they must have been —at least in large part—brought from Mesopotamia by the ancestors of the Hebrews and kept alive in Egypt as well as Palestine. Among them is, however, some material of apodictic and generalizing character which points to Mosaic or post-Mosaic reworking or editing.

This apodictic material appears as insertions scattered in blocks through Ex. 21–3, especially at 21:12–17, 22:17 (Heb.)–23:3, and 23:6 ff. It is scarcely ever stated in the conditional form of case-laws but always as declarations, either in the form of prohibitions or more rarely as positive commands. Their content is religious, moral and humane; the brilliant analysis by Albrecht Alt[53] clarified the difference between the originally non-Hebrew customary law in case form and the apodictic law found in the Book of the Covenant and elsewhere in the Books of Moses. Their general character reminds one of the Egyptian Negative Confession (Book of the Dead, Ch. 125),[54] which goes back at least to the sixteenth cen-

tury B.C. and was very popular during the centuries immediately preceding and following the time of Moses. The Egyptian statements are couched as protestations of innocence, e.g.: 'I have not committed murder, I have not ordered murder to be committed, I have not treated anyone unjustly, I have not reduced the food offerings in the temples, I have not debased the bread of the gods, . . . I have not had homosexual relations, I have not defiled myself, I have neither increased nor diminished measures (of capacity), I have not tampered with the balance', etc. The Negative Confession shows a remarkable lack of systematic order or selectivity with regard to different types of sin which will cause a man to be rejected by the judges of the Nether World. A striking difference is the relative lack of specific cultic regulations among the apodictic rules in the Book of the Covenant. At the same time the Hebrew texts lay much greater stress than the Egyptian on humane treatment of men and animals. The Decalogue consists of a similar intermixture of prohibitions and positive commands, but its content was remarkably well selected from a much larger body of similar material in the apodictic law. We have no way of telling whether the Decalogue is younger than the apodictic law as such, or not; the differing recensions found in Ex. 20 and Deut. 5 show that different forms of it had diverged early, while, on the other hand, use of words like *melā'kāh* in the sense of 'labour' or 'business' shows that the text was put into Classical Hebrew form at a date subsequent to the time of Moses.[55] But the use of relatively late words does not mean that the Decalogue as such is necessarily later than Moses, since the wording of such a popular list of moral norms for behaviour might easily be changed quite often in the course of its history

[55] On the meaning of Ugar. *ml'akt* at that time (a meaning which it still has occasionally in Hebrew verse), see BASOR 150 (1958), 38, n. 14.

and there has obviously been some expansion of items.[56] Elsewhere I shall present extrinsic arguments for an original date of the Decalogue no later than the thirteenth century B.C.[57] The generalized pattern of the norms of the Decalogue is very striking and places it in a different category from the Negative Confession or corresponding Babylonian lists of sins and taboos, also from the latter part of the second millennium B.C.[58] Most remarkable is the generalized statement of the *lex talionis* in Ex. 21:23–25. A. Alt pointed out in 1934 that the formula in question appears in very similar terms in Punic inscriptions of about the third century A.D. from North Africa. In the Latin text we have *anima pro anima, sanguine pro sanguine, vita pro vita*, which is so like the Hebrew formula in Exodus (together with its variants in Lev. 24:20 and Deut. 19:21) as to be unmistakably derived from the same ultimate source.[59] On the other hand, the two formulas are not sufficiently alike to make direct borrowing likely, even if it were not excluded by the totally different context in each case: the Punic formula involves substitution of animal for human sacrifice, whereas the Hebrew adumbrates the principle of equal justice for all. We may, therefore, be reasonably sure that this formulation of the *lex talionis* goes back to not later than the seventh century B.C., after which there was little fresh influence from Phoenicia on Carthage.

In the Hebrew formula, we have what may be the earliest enunciation of a generalized legal principle known anywhere in the world. Though it has not yet

[56] One hopes that no student has been misled by the fanciful additions to the text of the Decalogue made by Shapira, the antiquities' dealer of Jerusalem. A recent attempt to whitewash him and to prove that the leather strips of 'Deuteronomy' were authentic, has been made by J. M. Allegro, *The Shapira Affair*; cf. my review in the *Baltimore Sun*, 31 March 1965.

[59] ZATW, N.F. XI (1934), pp. 303 ff., KSGVI I, 341 ff.

attained the level of a generalized abstract proposition, it reaches its purpose by listing several related concrete propositions to illustrate the scope of the generalized principle. Since the Old Testament shows little trace of protological thinking after the thirteenth–twelfth centuries B.C. but is throughout a monument of empirical logic,[60] we need not have any hesitation about tracing this legal generalization back to the beginnings of the Mosaic revolution—either to Moses himself or to a 'school' of interpreters who endeavoured to harmonize the ancient case law with the body of apodictic law which had been developing since the time of Moses. The latest probable date for the collection of their material is the tenth century B.C., as will be argued below.

Since it is not our purpose here to discuss the entire Mosaic *corpus* of apodictic law, we shall limit ourselves to a necessarily brief discussion of certain features of the dietary and sanitary codes attributed to Moses.[61]

A detailed analysis of the dietary and hygienic rules of the Pentateuch is still premature, though I have attempted it in a still unpublished manuscript. We have much material for the laws of purity in the ancient Near East in the collections of ritual taboos which were prepared in Egypt and especially in Babylonia during the second millennium B.C. It is noteworthy that the Hebrew rules are much more highly developed than the corresponding ancient Near Eastern lists of taboos. For this we may adduce a number of reasons. In the first place, there is a strong flavour of sympathetic magic—sometimes even of professional magic—about the taboos in such cuneiform collections as Shurpu and Maqlû. If we knew more about corresponding Egyptian forms of ritual, we should doubtless find much the same situation in Egypt where, to quote Adolf Erman, some aspects of Egyptian culture tended to resemble newly hatched chicks which

[60] See above, n. 46, for recent discussions.

[61] See n. 57, above.

carry bits of eggshell about on their backs for days after they emerge from the shell. It must also be recognized that there had probably been much more revision and interpretation of the content of the Hebrew laws of purity, with addition of later interpretation and commentary, than would be true of case-law or simple apodictic declarations. This is probably because the case-law as preserved in the Pentateuch is at best extremely fragmentary, containing essentially only laws about homicide, slavery, and torts,[62] and because the early apodictic law is even more fragmentary and less systematic. The relatively systematic presentation of the rules of purity strongly suggests a later date for them than for the less complete tradition of civil and moral law. The codification of the laws of purity may well come down to the seventh century B.C. in their present form (chiefly in 'P' and 'D').[63] On the other hand, we shall see that no part of the Hebrew Bible is more clearly empirico-logical in its background than the rules of purity; the body of rules in question carries us directly back to the lessons learned from common experience.

After a long period in which anthropologists were accustomed to explain all such regulations as going back to totemism or animism, there is now a striking reaction. It is being increasingly recognized that men have always learned from experience and observation, especially in the ancient Near East, where sedentary culture began long before its origin in most other parts of the world. Everywhere man has a natural capacity, not only for observing closely, but also for remembering what he has observed. Such memories are carried down by collective activity. In other words, the elders teach what they have heard from the elders of their generation, supplemented

[62] For a striking Greek parallel to this partial preservation of case laws dealing especially with homicide, see BPAE, 99, n. 46.

[63] See now the judicious analysis by W. L. Moran, S.J., in CBQ XXVIII, 271–7.

by their own experience, to younger people who, in turn, transmit it to the next generation, in such a way that the experience of one person is checked by that of others and that of one chronological group by the experience of the following. I have repeatedly pointed out that the Hebrew Bible is the greatest existing monument of empirical logic and that this logic is more exact than formal logic in some important respects. After all, it is based on the cumulative experience of men, and not on postulates or presuppositions which may or may not be correct, as is inevitably true of most postulational reasoning outside of mathematics and the exact sciences.

Just as the Chinese had long known the curative properties of *mahuang* before it was exported to the West and finally replaced by its active alkaloid, ephedrine, so the ancient Egyptians discovered the curative function of many medicinal plants and preparations, which they duly transmitted to the Greeks, who in turn passed on their pharmacopoeia to mediaeval Europe.

It is equally natural that men should have learned through the experience of many centuries to distinguish between poisonous and non-poisonous serpents, mushrooms, etc. For example, they early learned the danger involved in eating pork. Since trichinosis has been endemic in all Near Eastern lands from antiquity, and since there are several other dangerous maladies which come from eating insufficiently cooked pork, some connexion must have been recognized at an early date, at least in areas where the habits of domesticated pigs had become unusually filthy. Since they knew nothing specific about the causes of illness contracted by eating pork, they did not realize that adequate cooking would dispose of the dangers. The common explanation for the biblical legislation concerning pork—that it was not eaten because it was sacred among pagan peoples—is sheer nonsense. The pig was sacred in certain places and periods, but large and small cattle were even more generally sacred, so that

it is quite irrational to single out the economically and religiously much less important pig, and to explain its prohibition in Israel by its alleged religious significance. If there were any doubt about the empirical explanation, it should be removed by the fact that both the hare and the hyrax (*šāfān*) were also prohibited. This can be explained only by the fact that both animals are carriers of tularemia, which comes from infected cuts received in the process of skinning and dismembering the animals. While it is true that the hyrax belongs to an entirely different mammalian family from the hare, it is also true that their habits of life have converged almost completely, and it is now well known that the hyrax, like the hare, carries this disease.

The most remarkable distinction of this kind in the regulations distinguishing clean from unclean animals in Lev. 11 and Deut. 14 is that made between fish with fins and scales and fish without fins and scales. It is only in the water of extremely muddy and slow-flowing rivers such as the Nile that the distinction is important for health.[64] Fish with scales and fins are normally free-swimming, whereas fish without scales and fins, such as eels, are usually mud-burrowers and therefore hosts to a great many more parasites than free-swimming fish. (Of course there are periods in the life cycles of some aquatic animals when they are free-swimming, and periods when they are not, but in general this distinction holds true.) Animal parasites and native inhabitants often establish a symbiosis, but foreign visitors to the Nile valley have not established immunity, so that parasites can be quite lethal, for the number of diseases carried by aquatic animals in the Nile valley is prodigious. For foreigners, then, the distinction is extremely significant. The most reason-

[64] It is true that the rabbis remarked on this very fact with reference to the Sea of Galilee, but there is absolutely no comparison today between this lake and the Nile as a refuge for pathogenic organisms and the aquatic animals which carry them.

able explanation of its origin seems to be that this distinction was discovered by early Semitic settlers in Egypt, and passed on by them to the Hebrews during the centuries in which they lived in the Nile valley. It is thus a vivid example of the antiquity of some of this legislation which is often thought to be very late. In salt water the distinction is not generally valid, and it could not have been noticed in the clean salt waters of the Mediterranean, or in the Dead Sea, where there are no fish at all. It might conceivably have arisen in the Jordan Valley and the Sea of Galilee, but there is nothing to show that fisheries played a significant economic rôle there in Israelite times. An ultimate Babylonian origin is possible but not very likely, since we have no trace of it in our extensive Babylonian rituals of purity such as the Shurpu and Maqlû codes.

Another case is that of the camel. The camel, as far as we know at present, was not generally domesticated even in Arabia until the end of the Bronze Age. By the late twelfth century it was being used to mount large-scale raids, as well as presumably for trade. The camel was certainly known through this entire period and had been since Pleistocene times, at least. Since camels are notoriously stupid, it is highly probable that herds of them were kept in half-wild state in order to provide milk, flesh, hair and skins for the nomads. Camel flesh, as far as known to medical science, is harmless though extremely tough. But the Egyptians were much less hospitable to the camel than the Semites. In fact there is no evidence for domesticated camels in Egypt until the Persian period—and this evidence comes from texts copied in Roman times. The Arabian camel was not introduced into North Africa west of Egypt until still later. It is therefore probable that the prohibition against camel flesh was also Egyptian in origin.

The most striking feature of the dietary laws in the

Pentateuch is that for the first known time in history we have generalized classification of complex zoological phenomena according to observed criteria. In this connexion it is scarcely relevant to point out that the classification of clean and unclean animals according to parting the hoof and 'chewing the cud' is not quite accurate, since hares, for example, do not actually chew their cud but merely move their lips. Nor is it significant that these rules can scarcely have been drawn up on the basis of any knowledge of the aetiology underlying the prohibition of certain mammals, fish, and other animals. It is rather a kind of mnemonic device to make abstention from certain kinds of flesh easier for the young or unsophisticated person. And yet we find no classification as logical as this in any of the elaborate cuneiform lists of fauna or of ritual taboos.

In the case of hygienic regulations, it is perfectly obvious that their ultimate basis rests on the observed facts of contagion and infection. It could not possibly escape the sharp eyes and active mind of the proto-physician that certain diseases were communicated from person to person or from contaminated locations or areas to persons. In this case the background is reasonably clear. Both in ancient Near Eastern medicine and post-biblical Jewish folklore the rôle played by demons in transmitting disease was well known. (In practice there is little difference between belief in demons and in pathogenic organisms as a basis for transmitting infection!) In the Mosaic tradition the rôle of demons had been almost always cancelled by the process of demythologizing which set in with Moses. But the facts of experience remained and were presupposed in the hygienic laws. Thanks to the dietary and hygienic regulations of Mosaic law, held firmly together and developed along empirico-logical lines by post-Mosaic commentators down to the seventh century B.C., subsequent history has been marked by a

tremendous advantage in this respect held by Jews over all other comparable ethnic and religious groups. It is only in our own times that advances in medicine have made it possible to replace rule-of-thumb regulations of former times by medical and hygienic practices which obtain similar results by scientific methods.

One of the most remarkable features of Mosaic legislation—always using the term in its widest sense, of laws approved or introduced by Moses and developed in later Israel—is its humanity to man. It is the most humanitarian of all known bodies of laws before recent times. The laws about slavery, which envisage the liberation of Hebrew slaves after seven years, are a good example. But there are also laws protecting the poor: interest (always high in the ancient East) was prohibited, and again there was a moratorium on payments after a term of years. Furthermore, it was not permitted to take a man's clothing in payment for a debt. Even strangers, who normally had very little protection in antiquity, except when they were citizens of a strong neighbouring state which might step in and protect them by force of arms, are exceptionally well cared for by Mosaic law. Not only do we find numerous special provisions for the humane treatment of human beings, but even the well-being of animals receives attention; as for example in the command, 'Thou shalt not muzzle the ox that treads out the grain' (Deut. 25:4). The original practice may well have been connected with pagan cult, as so often, but the apodictic law has been depaganized.

In 1950 I pointed out that the laws of Exodus could scarcely be later than the ninth century B.C., because they contain no hint of the royal appointment of judges which was introduced under king Jehoshaphat, according to II Chron. 19.[65] We can be reasonably sure that the

[65] See my study, 'The Judicial Reform of Jehoshaphat' in the *Alexander Marx Jubilee Volume* (New York, 1950), pp. 61–82.

tradition has an historical basis for three reasons: (1) The compiler of Chronicles was very much interested in legal matters and should therefore be particularly reliable in treating them. This reason would be even stronger if I am correct in maintaining that the first edition, at least, of this work is due to Ezra, who was himself a jurist.[66] (2) The reform is said to have involved setting up a mixed tribunal of royally appointed judges of both priestly and non-priestly origin, which can be closely paralleled in fourteenth- and thirteenth-century Egypt. (3) Our respect for the accuracy of both the written and the oral tradition recorded by the Chronicler has been notably enhanced in recent years.[67]

The legislative material of Exodus was not intended to be a digest of current or proposed legislation, but as just what it purports to be—an account of the legislation of Moses, drawn up and edited in its present form in the seventh and sixth centuries B.C., but not including anything then known to date after the Mosaic age. When one combines the material presented in this chapter with what was given in Chapter II, one realizes that it is no longer rational to deny the antiquity of the Pentateuchal laws in general, and that there is no reason why we should date the case laws later than the Patriarchal Age. The older legislation was presumably accepted by Moses and adapted where necessary to the situation of Israel in his day. The apodictic law also reflects pre-Mosaic sources, but has been so thoroughly reworked in the spirit of the Mosaic movement that its originality cannot be denied.

[66] For this obviously correct view see the demonstration by H. H. Schaeder, *Esra der Schreiber* (Tübingen, 1930).

[67] On the historical value of the Chronicler's work see Jacob M. Myers, *Chronicles*, in two volumes (Anchor Bible, 1965), especially the Introduction to Vol. I.

C. EARLY PAGAN VESTIGES IN HEBREW LITERATURE: ARCHAIC DEMYTHOLOGIZING

There is much confusion in dealing with pagan survivals in the Hebrew Bible. If we had the necessary evidence we might be able to distinguish clearly among: (1) pagan elements in Hebrew religion as Moses found it, (2) elements borrowed by the Israelites at an early date from the Canaanites among whom they lived, (3) elements of early date which continued in use among the Israelites and are accidentally found only in later literature, and (4) later borrowings from Phoenicia. In this section we shall deal with the first three groups of material, without attempting to isolate them. At the same time that these pagan elements were handed down through Mosaic channels or appeared subsequently, there tended to be a process of excising or transforming obviously pagan ideas. This process we have called 'archaic demythologizing'. We owe the term 'Entmythologisierung' to Rudolf Bultmann, but it is scarcely necessary to point out that we are using it in a quite non-Bultmannian sense, since we are not employing any form of existential philosophy in order to reach our conclusions.[68]

The reader may wonder why we have not dealt with material survivals of cultic structures or with the pagan elements in Hebrew ritual, but the fact is that nearly all pertinent evidence is extremely fragmentary and elusive because of our lack of knowledge of substantive data. It is therefore safer to begin with what we actually do have, Hebrew literary survivals, such as names of divinities with some information about their functions, etc.

The process of demythologizing pagan myths undoubtedly took a long time, beginning in the thirteenth century

[68] For my attitude towards existential philosophy and its use in biblical interpretation see HACH, 272–84.

and not ending until the seventh or even the sixth century B.C. Since no religion can exist without the use of concrete language and symbolism to express the ineffable, it is, of course, impossible to eliminate all 'myth' in the post-Platonic sense without destroying the best part of our religious heritage. When I use the term 'demythologizing' I am using it in the sense of eliminating specifically polytheistic elements in the narratives of Genesis as well as poetic survivals or pagan borrowings in Old Testament literature. A very good illustration comes from the first chapter of Genesis. We do not know the age of this chapter, and can say only that it had a complex history which certainly went back to remote times, and can probably be followed in still preserved structural elements partly to the Late Bronze Age and partly to about the tenth century B.C., reaching its extant form in the seventh century B.C.[69] In other words, it belongs with the 'Priestly Code' in general as well as with the 'later Elohist', which is so closely related in many ways to 'P'. Here, as first pointed out by the late G. A. Barton, appears the ancient myth of the destruction of the dragon of chaos which we find alluded to so frequently in the Prophets, especially Amos[70] and Isaiah. In verse 2 we read: 'And the earth was empty and chaotic, and there was darkness over the primordial fresh-water ocean' (Heb. *tehôm*). Then we are told that 'the spirit of God was soaring over the waters'. There is obviously some kind of break between these two passages. Now, whereas in Canaanite just as in Babylonian mythology, the dragon or dragons of chaos preceded the regnant divinities, in Gen. 1 the monsters are created by God himself. We read in verse 21 that

[69] See my discussion in *Mélanges bibliques . . . André Robert* (Paris, 1957), pp. 22–6; J. B. Bauer, 'Das Heptaëmeron' in *Biblische Zeitschrift*, 1957, Heft 2 (and the independent study by S. E. Loewenstamm, IEJ XV [1965], 121–33).

[70] One such reference in Amos 7:4 has been clarified by Delbert Hillers; see CBQ XXVI (1964), 221–5.

'God created the sea-monsters' (Heb. *tannînîm*), using the plural of a word which in Canaanite was employed in the singular for the dragon of chaos which was destroyed by a god at Creation. It follows that there was originally a statement in verse 2 mentioning specifically and succinctly the triumph of God over the great Deep (*Tehôm* = Acc. *Ti'āmat*), which was later deleted. In any case it is obvious that the pagan archetype was thoroughly demythologized at some stage in the history of Gen. 1. There are many other cases of demythologizing in the cosmogonic narratives of Genesis as well as in the Patriarchal stories. In later Israel the tendency to eliminate polytheistic references was spasmodic, depending presumably upon periodic reform movements and efforts to eliminate remaining traces of paganism. "It may confidently be stated that there is no true mythology anywhere in the Hebrew Bible. What we have consists of vestiges—what may be called the 'débris' of a past religious culture. "

There are, however, a great many minor vestiges from Canaanite religion among the Hebrews. The names of many pagan gods and goddesses continued to be used in Hebrew for religious or nonreligious purposes, just as in English. For instance, when we speak of eating breakfast cereal we certainly do not mean to imply worship of the goddess Ceres. The word has simply been borrowed and applied to products previously believed to be under the special protection of the goddess of that name. Similarly we celebrate Easter, which bears the name of the Anglo-Saxon goddess Eostre, without intending to venerate her at all. If anyone insists that these etymologies prove the mythological character of our beliefs, we should have every right to laugh him out of court, and yet such reasoning is still common among historians of religion. In the Bible the goddess Ashtaroth appears in the term *'aštĕrôt* (*haṣ-*)*ṣôn*, meaning 'sheep-breeding' (several times in Deut.). Since Astarte was best known

as the patroness of sexual reproduction, this is a very natural development, quite acceptable in Israel, as the Israelites had little feeling for the religious connotations of the expression. The three words *dāgān*, *tîrōš*, and *yiṣhār*, referring to grain, wine, and oil, respectively, often appear together. *Dāgān*, 'grain', comes from the name of the god Dagan (which became *Dagôn* in Phoenician), on whom see above. Similarly, it is now virtually certain that *tîrōš*, 'wine', Ugar. *trṯ*, 'wine', is derived from the Canaanite divine name *Tiršu*, which appears at Hazor and Ugarit; the name has nothing to do with unfermented wine, as was formerly thought on the basis of imaginative etymologies.[71] In view of these parallels, *yiṣhār* which takes the place of the ordinary word for oil, *šemen*, is almost certainly the name of an old god of olive oil, though so far this name has not been identified among the references to pagan divinities in Palestine and Syria. The name itself is obviously the normal imperfect of the verb *ṣhr* (**ẓhr*), 'to be bright'.

A pair of names in Hab. 3:5 has often been mentioned since it was first discovered that Resheph was the name of a Canaanite god. Here Resheph and Deber appear as angels.

> Before Him Pestilence marched.
> And Plague went forth at His feet.

On Resheph see above, Chapter II; Deber has not yet been identified as a divine name in Ugaritic literature, but it is quite likely that it was, since divinities of this type tend to appear in pairs in Canaanite mythology.

It was seen long ago that the plant-beds of Na'man (*niṭ'ê na'mānîm*) in Is. 17:10 mean 'plant-beds of Adonis', who may be referred to under this name in the Ugaritic

[71] The word is probably non-Semitic; the extant form may reflect the name of the god after it had reached the status of a proper noun with helping vowel *ă*. The name would then become *Tîrôš* in Phoenician and North Israelite.

texts. In any event, there can be no doubt that the designation *Na'mân–Nu'mân–Na'môn*, 'the Charming One', was employed for Adonis by the Phoenicians.[72] The so-called Adonis gardens enjoyed a long life in the ancient Mediterranean world and ultimately became popular Easter customs of the Greek churches, where they still exist today in some places. Eshmun, Sidonian god of healing (see above, Chapter III), and also, like Adonis, a dying and reviving god, clearly appears in Is. 59:10 as well as in the first Isaiah scroll of Qumrân in the form *'ešmûnîm* (with *plene* spelling of the middle vowel). The context makes it perfectly clear that *'ešmûnîm* is the opposite of *mētîm*, 'dead, death', just as the preceding *ṣŏhŏrayim*, 'noon', is the opposite of *nešef*, 'dusk'. *'Ešmûnîm* is here an abstract plural meaning 'health'. In Chapter III we have already referred to *kôšārôt*, 'the process of birth', originally the goddesses of birth (Ps. 68:7). We have also shown that *kîšōr* (Prov. 31:19) is derived from original *Kôšar*, the Canaanite name of the god of skill.

In a number of poetic passages Canaanite deities appear, going back ultimately to pagan compositions. For instance, in Is. 14:12 Hêlêl[73] is called 'son of *Šaḥar*', the Canaanite name of the god of dawn, to whom a liturgical text is devoted at Ugarit.[74] In Cant. 7:1 f. the Shulammite appears in a context which almost certainly refers back to the war goddess named *Šulmânîtu* (on whom see Chapter III).[75] In Ps. 68:24 f. I have proposed to divide the first four letters, which read an impossible *le-ma'an*, into *LM 'N* and to insert a fifth letter *T*, which would

[72] HACH, 172 f.

[73] Certainly an appellation of 'Athtar; the LXX would not be likely to be ignorant of its meaning when they translated ἑωσφόρος. Its etymology is obscure.

[74] The composition celebrating the birth of the 'beautiful and gracious' gods Šaḥar and Šalim, Dawn and Dusk, respectively.

[75] See also my remarks in *Hebrew and Semitic Studies . . . Godfrey Rolles Driver* (Oxford, 1963), pp. 5–6.

involve a haplography of the fifth letter of the verse (*T*). The text would then read:

Why, O Anath, dost thou wash Thy feet in blood,
The tongues of thy dogs In the blood of the foes?[76]

As emphasized above in Chapter I, Ps. 68 is an anthology of opening lines and strophes of ancient poems, and it would not be at all surprising to find such echoes of pagan material in it. Note that in none of these cases is there any reason to suppose that the Hebrew writers were deliberately employing pagan expressions. Some of the names of pagan divinities have simply become secular Hebrew words with no pagan meaning; mythological expressions are used as poetic symbolism without indicating the slightest reverence for the original pagan deities, just as in many Christian poets of the fifteenth–seventeenth centuries A.D.

We have dealt at some length with this material (which we have in no way exhausted), in order to make it easier to deal with two classes of ancient divine names and appellations where there is still much disagreement. We have, as authentic Hebrew appellations of Yahweh/Elohim, the names *El*, *Ṣûr*, *'Al* or *'Elî*, *'Elyôn* and *Šadday*, which are all particularly common in very early texts and reappear archaistically in late books. It has been urged that the Patriarchal religion had a kind of 'El-monotheism' which recognized El as the Supreme Being and disregarded most other divinities. This point of view is quite possible, but I must confess to serious doubts about its validity. The name *Ṣûr* (on which see Chapter I) means literally 'mountain'; 'cliff' or 'rock' are very inadequate renderings. But since 'mountain' was often a synonym for 'god' in Syria and Anatolia, it is not surprising to find that *Ṣûr* is simply a synonym of *El* in early Hebrew lit-

[76] See HUCA XXIV, Part I, 28–9.

erature. *Šadday*,[77] 'He of the Mountains', though a more obviously secondary appellation, belongs semantically with *Ṣûr*. *'Al* or *'Elî* means, of course, 'the Exalted One' and has been recognized in recent years in a number of Hebrew religious poems as well as an element in personal names.[78] *'Elyôn* is a variant of it, going back to high antiquity.[79] We must emphasize, however, that there is not the slightest reason to suppose that any of these names were used for members of an Israelite pantheon of divinities. Just as in Canaanite religious literature, we often have synonymous divine names and appellations used in parallelism. No inferences as to the dominance of polytheism can be drawn from them.

We have reserved for the end of this treatment of depotentized or transformed divinities a group which is intimately related, both linguistically and semantically, to *'El*. The feminine of *'El*, Canaanite *'Elat*, 'goddess', which is also applied to Asherah as *the* goddess, El's consort, is found in the Hebrew Bible, so far as we know, only as the ordinary word for 'terebinth'. The terebinth (*Pistacia palaestina*) is one of the finest shade trees in Palestine, with a broad oval crown and with small fruit which may be roasted and eaten as nuts. Ben Sira describes the terebinth as follows (24:16):

> Like a terebinth I have extended my branches,
> And my branches are branches of glory and grace.

As in other parts of the eastern Mediterranean outside of forested mountains, a fine shade tree such as a terebinth

[77] See JBL LIV (1935), 180–93 (with many subsequent additions, such as the name *Sadê'ammî* in Egypt c. 1300 B.C., and the parallel noun formation *Rabbâyu*, of a tribe of bowmen in the Mari letters); Manfred Weippert, ZDMG CXI (1961), 42–62; F. M. Cross, Jr., HTR LV (1962), 244–50 (on Shaddai as God of the Fathers see pp. 226–32).

[78] See especially M. Dahood, ThSt XIV (1953), 452–7.

[79] For recent treatments of *'Elyôn* see J. A. Fitzmyer, S.J., JAOS LXXXI (1961), 193.

was highly regarded and early became deified, just as was true of the sycomore fig (Heb. *šiqmāh*) which was deified in Egyptian as *nūhe* (*Nht*). The oak tree was probably also deified, as in other Mediterranean lands (see below); it is certain that Heb. *'allôn* means 'oak' and probable that the word *'ēlôn* should be vocalized *'allôn* in some cases. It is, in any case, hard to separate *'ēlôn* from Aram. *'ilânâ*, 'tree', which replaced *'q)'*, the older Aram. equivalent of *'ēṣ*. (When a word is reduced so completely to a mere hiccup, its utility is at an end, according to well-established principles of dialect geography, so a new, longer word replaces it, in this case a common word for 'oak'.) There is much confusion here, owing to the variety of different species of *Quercus* as well as of the Arabic *ballût*, which have been given varying scientific names by different taxonomists. In antiquity there were undoubtedly many more of the high oak species in the hill country of Palestine and Syria than remain today, when the *ballût* is generally a dwarf oak. The familiar word *ballût* is therefore an unsafe guide to the type of oak which was meant. That the oak was also sacred is clear. Greek *dryas* (from *drys*, 'oak') and *hamadryas* both refer to minor divinities ('nymphs') whose life is bound up with that of the oak tree to which they were attached. It is quite possible that the Ugaritic *'elnym* which stands in parallelism with *'elm*, 'gods', refers to minor divinities of the same type. The etymology of the word is, in any event, quite clear; it must be derived from a double adjectival formation pronounced *'elânîyîma* (accus.). On the other hand we cannot be sure that these particular minor divinities were attached to oak trees as such. It is to be noted that *'ēlôn* tends to have the specific meaning 'sacred tree' and is sometimes used with reference to a dead tree or even to a post replacing an original tree, as for example in Jud. 9:6, interpreted in the light of the LXX and of Samuel Iwry's discovery of the true meaning

of the word *nimṣā'* in Hebrew.[80] The plural **'ēlônîm* (found only in the construct) probably has the same formation as Phoen. *'elônîm*, plural of *'el*, just as *'Elôhîm* = *'ēlîm* is plural of *'Ēl*. *'Elônîm*, 'gods', would then go back to *'elônîyîm*, contracted as normally in Phoenician and Hebrew to *'elônîm*. In this case *'ēlôn*, 'sacred tree' (e.g., I Sam. 10:3, Gen. 35:8, Josh. 19:33, Gen. 14:13, etc.) might be a back-formation from the plural *'elônîm*.

The name *'Ašērāh* is a special case.[81] Originally, as pointed out above, it was a shortened form of the phrase *'Aṯiratu yammi*, 'She Who Treads on the (dragon) Sea', or the like. Later it became an ordinary term for a grove of trees which was popularly considered as sacred. This we know from the LXX, which translates it by *alsos*, as well as from the context of the word in various Hebrew passages. Such groves of high trees were rare in ancient Palestine, and by the 1920's they had become very much rarer; old groves on hill-tops were then still attached to saints' shrines (*welis*).

Since H. Wheeler Robinson's famous paper of 1944,[82] many additional references bearing on the divine council in Israel have been brought together from the Hebrew Bible.[83] At the same time much new information bearing on the subject has been collected from Sumerian, Accadian and Ugaritic sources. In I Kings 22:19 ff. we have a vision of the heavenly court in which the angels make suggestions. In Isa. 40:1 ff. several scholars have shown that the agents of Yahweh are the angels of the heavenly council. In Psalms 82 and 89 we have references to the

[80] *Textus* v (1966), 34–43. See provisionally my remarks in BASOR 169 (1963), 28 f., n. 32.

[81] On this question see the survey by W. L. Reed, *The Asherah in the Old Testament* (Yale thesis, published at Fort Worth, Texas, 1949).

[82] JTS XLV (1944), 151–7.

divine assembly in which Canaanite terminology is transparent. On the other hand, we have an interesting case of demythologizing in Gen. 1:26, where God speaks in the plural, 'Let us make man in our image and likeness', with a striking Ugaritic parallel. The term *sôd* at that time meant undoubtedly 'assembly, council', just as *mswd* did in South Arabia. In Job the angels appear as members of the council of God, but they do not take an active part, only standing to receive orders. In other words there was a tendency, which becomes accentuated with the progress of time, to change the divine assembly from an actual council to a forum where God's orders are transmitted to his messengers (angels), who then go out to execute them. In view of the great antiquity of the conception of the Sumerian ukkin, Accadian *puḫru(m)*,[84] and the fact that the same word is used in Ugaritic for the divine assembly, it is probably quite unnecessary to assume a Canaanite origin for the concept in question. On the other hand, there can be no reasonable doubt that Canaanite ideas did influence specific details of the concept of the divine assembly in early Israel. In Deut. 32:8 we read:

> When the Most High distributed lots,
> When he separated the children of men,
> He set the borders of the peoples,
> Like the number of sons of God.[85]

The sons of God are the angels, as elsewhere in Hebrew, and not the gods as in Ugaritic. The number of the *banū 'Aṯirat* is given in the Baal epic as seventy, in accord with the statement in the Haggada that 'seventy angels were appointed by God to rule the seventy nations'—these seventy nations corresponding to the roughly seventy peoples of Genesis 10. In a minor detail like this it is clear

[84] See Thorkild Jacobsen, JNES II (1943), 159–72 and ZA LII (N. F. XVIII, 1957), 91–140. Cf. my remarks in HACH, 183 ff.

[85] See VT IX (1959), 343 f.

that Israelite thought was indeed influenced by Canaanite mythological patterns. It is probable that similar patterns would appear in many other areas of religious thought where basic Hebrew conceptions were derived chiefly from Mesopotamia, but were later modified in detail by Canaanite terminology. It is noteworthy that such Canaanite patterns were depotentized and demythologized rapidly, so that by the end of Old Testament times official Yahwist religion had been demythologized to a rather extreme degree. In fact, too little place was sometimes left for anthropomorphic expression of abstract religious concepts.

D. SOME ASPECTS OF EARLY ISRAELITE CULT

In the area of specific divine names or appellations and their functional evolution among Canaanites and Israelites, we are on much more solid ground than when we attempt to combine the archaeological remains of the Hebrew and Canaanite cults with literary material. This may seem strange, since the concrete, excavated remains and the specific descriptions of Tabernacle and Temple, Ark of the Covenant and Altar of Burnt Offering, etc., seem to provide us with a mass of objective data on which to base sound inferences. In dealing with the rich sacrificial ritual of Leviticus, we appear to be situated even more favourably for comparative research. Actually this is not true at all. We have few clear temple and sanctuary sites of the Canaanite Bronze Age and almost none of the Phoenician Iron Age. The Tabernacle was mostly of cloth, leather, and wood, and the original Ark of the Covenant was mostly wood, so all traces of both, as well as of possible parallels, have perished. We have no satisfactory analogies between the Pentateuchal descriptions and Canaanite sources. Only in the description of the temple of Solomon do we have parallels, and even there they

are often more puzzling than clarifying, as in the case of the pillars of Jachin and Boaz. We have almost no description of ritual in the entire Ugaritic literature. What we have consists chiefly of lists of gods and offerings, as well as later sacrificial tariffs, none of which can be found in the Pentateuch. In short, our points of contact are so vague that we must still turn to ancient and modern Beduin parallels to find plausible analogies from non-Israelite cultures. How unsatisfactory this kind of analogy may be, we have had occasion to see above. Presumably there were close parallels between portable sanctuary and cult objects of Israel as described in Exodus, and similar sanctuaries and objects in the cult of the ancestral Hebrews as well as of nomadic and semi-nomadic Semitic peoples of the Bronze Age. Since practically every trace of the latter has disappeared, this must remain an assumption—though in itself highly plausible. In short, where we ought to have parallels, they do not exist, and if it were not for the general picture which has emerged from consideration of divine names and functions as well as for a number of sometimes unexpected points of contact in material cult, we should find ourselves in a relative vacuum.

Quite aside from the witness of biblical tradition to the existence of shrines, sacred objects, divination, etc., in early Israel, we now have direct archaeological evidence to explain some otherwise enigmatic details. The first wave of Israelite invaders in the late thirteenth century B.C. was certainly hostile to image worship, as we can illustrate by finds at Tell Beit Mirsim in the south and Hazor in the north. In the 1930 campaign at the former site, we found a shallow pit containing bones of sacrificial bovides, including the skull of a young ox, and also two cult objects: a large libation bowl of soft chalk limestone with a lioness and two cubs in relief (30 cm. across) and a lion in somewhat harder limestone (over

50 cm. long).[86] These objects had been thrown into the pit and were standing on their sides in it, among the débris. The temple from which they must have come lay just outside our excavated area. These remains all came from the last Canaanite destruction level. In Hazor, Yigael Yadin discovered that the image of a standing bull which had, we may suppose, originally supported an image of the storm god, had been deliberately broken before the destruction of the temple in which it stood.[87] This was also found in the destruction level marking the end of the Canaanite occupation of Hazor about the third quarter of the thirteenth century B.C.

The excavation of Shechem, begun by a German expedition directed successively by E. Sellin and G. Welter, and successfully resumed in recent years by G. Ernest Wright, has shown that in the acropolis area there was a special enclosure which was fortified for at least part of the time. This enclosure lasted from about 1700 B.C. or a little earlier, to the Israelite period.[88] Here we have, almost certainly, the sacred precinct of Shechem, called *āl ili*, 'city of god', in the Amarna Letters.[89] According to biblical tradition Shechem was sacred to the Hebrews from the time of Abraham to its destruction by Abimelech. It was believed to have become Hebrew in the days of Jacob. This seems to be confirmed by the correspondence of Lab'ayu, ruler of central Palestine in the Amarna Age, with his Egyptian suzerain.[90] In the correspondence of another Palestinian prince, 'Abdu-Kheba of Jerusalem, with Shuwardata, prince of the adjacent territory to the south, we are told that Shechem had be-

[86] AASOR XVII (1938), 65 ff. (§§ 75–7).

[88] See G. E. Wright, *Shechem* (New York, 1964), pp. 80 ff., 123 ff.

[89] See my remarks, CAH², II, ch. XX (1966), p. 19 f.

[90] See *ibid.* for details.

come Hebrew, thanks to the activities of Lab'ayu and his sons.[91] In any event this sanctuary was completely destroyed in the late twelfth century B.C. And just as was true of the sanctuary at Shiloh, discredited after its abandonment by Yahweh and its destruction by the Philistines, so was the fate of the old sanctuary at Shechem. The temple which existed on Mt. Gerizim in late Persian and Hellenistic times was in quite a different location, and it is not likely that any connexion was ever admitted by the Samaritans.

There were undoubtedly many local sanctuaries in Israel during the time of the Judges, most of which probably went back to earlier tradition, as in the case of Shechem, Bethel, Beersheba (?), etc. There were also local sanctuaries whose nature must remain in doubt even after they have been cleared by excavation. For example, the sanctuary of Hazor found in Stratum XI from about the eleventh century B.C., has been described by Y. Yadin as 'an idolatrous Israelite cult place'.[92] In it were found two incense stands, similar in shape to eleventh-century incense stands from Megiddo, a jar full of votive bronzes, including a figurine of a seated war-god, etc.[93] Since Hazor was at this time so close to the indefinite border between Israel and Canaan, it would be quite unrealistic to expect a consistent Yahwist tradition there.

The latest excavation of the Israeli Department of Antiquities at Laish (Dan) in the spring of 1966, under the direction of Avram Biran, has yielded clear evidence of a somewhat earlier destruction of the town followed by a reoccupation.[94] This confirms the account in Judges of the destruction of Laish (later Dan) by the Israelites as well as the subsequent occupation by the latter. The

Israelites are said to have erected an idolatrous object (*pesel*) of some sort and to have made Jonathan, son of Gershom, son of Moses[95] its priest (Judg. 18:30f.). The close association of a descendant of Moses with idolatry cannot be taken at face value, since the accounts of the origins of the cult at Bethel and Dan were both edited by the same Deuteronomic historian in the late seventh century B.C. It is stated explicitly in the text that Jonathan's descendants remained priests of Dan until the Assyrian captivity. Unfortunately, the terms *pesel* and *'ēfôd* are very obscure (see below); this sanctuary was, however, definitely Israelite and not pagan, though obviously paganizing in tendency.

In connexion with the erection of a 'golden calf' at Dan (I Kings 12:28ff.) as well as at Bethel, we must remember what was said about Exodus 32 in Chapter I. As shown there, with examples from prose and verse, the content of this chapter is in large part archaic; it refers specifically to an attempted return by the Israelites of Moses' time to the ancient practice of representing the chief divinity in the form of a storm-god standing on a young bull. This practice had doubtless been shared by pre-Mosaic Hebrews with the pagans among whom they lived, and its restoration by Jeroboam is simply a return to early Hebrew tradition. It may well have been found by the Danites at Laish, though we do not know whether or not the figure of the god standing on the young bull was supposed to be visible or invisible. The latter was true later. In view of the archaism of Exodus 32 and Jeroboam's obvious intention, over 350 years later, to restore pre-Solomonic faith and practice rather than to create a new paganism, it is much safer to assume that the Israelites did not erect a visible image at either Bethel or Dan.

[95] MT has an impossible 'Manasseh', but Greek MSS going back to Lucianic (now called by F. M. Cross, Jr., 'Old Palestinian') tradition read 'Moses'. Of course, Gershom was one of Moses' sons, not a Manassite clan.

It has long since been pointed out that in glyptic art there is a clear development from a young bull with a storm-god on his back, carrying a sheaf of lightning bolts, through a bull with only the sheaf of thunderbolts on his back, to a young bull without anything on his back. The first two of these types are documented from cylinder seals of the Bronze Age,[96] and the third is found on an Israelite seal dating no later than the early ninth century B.C., as is clearly shown by the extraordinarily archaic *mem* and *aleph*.[97]

There are a good many illustrations of reaction against paganizing tendencies in early Yahwism. For example, we read in Deut. 32:17, from the eleventh century B.C.,

> They sacrificed to demons,[98] not divine,
> Who are too deaf to approach,[99]
> Gods whom they knew not,
> And whom their fathers did not know.

In the official Deuteronomic history from the late seventh

[96] See Th. Obbink (ZATW XLVII (1929), 264–74) and my observations in FSAC^2 (1957), 298–300; my detailed study has, unfortunately, not been published as promised. For some of these early seals see W. H. Ward, *Seal Cylinders of Western Asia* (Washington, 1910), pp. 171 ff. For a seal with only the thunderbolt standing on the bull see p. 174, Fig. 468.

[97] See H. Gressmann, *Altorientalische Bilder zum Alten Testament* (Berlin, 1927), pl. CCXXVI, No. 582, and p. 165. The seal reads, 'Belonging to Shemaiah son of Uriah' (not Azariah), and dates no later than the early ninth century B.C., as shown by the very archaic *mem* and *aleph*, with which the other characters agree. It is probably the earliest known inscribed Israelite seal; it has been overlooked partly because it was published over a century ago (1862).

[98] Whether we read *šēdîm* or *śē'îrîm*, or both in parallelism (in which case something has dropped out of the text), is quite irrelevant for our purpose here.

[99] Reading the consonantal text and vocalizing *ḥērēšîm miqrob ('alēhem)*, comparing Hab. 1:13 for the syntax and inserting a third word as haplography before *'elôhîm*. On the verse see VT IX (1959), 341 f.

century B.C. this theme is resumed, especially in the book of Judges, indicating that according to official tradition the Israelites backslid at every opportunity and during every period of relative peace and prosperity. There is no reason to doubt that this point of view was essentially correct, though details may have been exaggerated.

The unrealistic approach of the late Yehezkel Kaufmann,[100] who held that there was no backsliding in Israel except possibly during the period of Ahab and Jezebel in the ninth century B.C., is, in my opinion, quite untenable. The religion of Yahweh was far ahead of the popular level in its abstract approach to theology, and at the same time far too intolerant of objectionable pagan practices to be an easy faith to follow. Since the entire subsequent Judaeo-Christian tradition is full of reform movements, both in theology and in moral practice, it is incredible that the Israelites should have formed an exception. After all, they were surrounded by pagans and were constantly engaged in trade with them. Besides, virtually all art, music and 'science' were then saturated with pagan elements.

In Judg. 6:25 ff. we have a most instructive account of a phase of the struggle with paganism about the middle of the twelfth century B.C. Gideon, whose original name was Jerubbaal,[101] was a strong supporter of Yahwism. In

[100] See the excellent English condensation of Kaufmann's great work, *Toledot ha-'emunah ha-yisre'elit* (in eight volumes, 1937–56), by Moshe Greenberg: *The Religion of Israel* (Chicago, 1960), especially pp. 18–19, 134–47. It is a theme to which the author returns again and again.

[101] The name 'Gideon' (*Gid'ôn*) is obviously a *kunyah* (kenning) of *Yarib-Ba'al* ('Jerubbaal'), so I suggest that it was applied to the hero after he had gained a reputation as an image-destroyer (Greek *eikonoklastēs*). Since quite different verbs are used of his destruction of a Baal altar and Asherah at Ophrah (Judg. 6:25 ff.), though *gd'* is used specifically of destroying idols in Deut. 7:5; 12:3, etc., this explanation is reasonable. (In this case the popular elimination of oral tradition as an historical source by assuming an aetiological explanation for nearly everything is incredible.)

pursuit of his mission he destroyed an altar of Baal in his native town of Ophrah and cut down the sacred *'ashērāh*, thereby incurring the wrath of his fellow citizens. Note that his father bore the Yahwist name of Joash, and yet Gideon is said to have borne a name formed with 'Baal'. Just what this oscillation in the use of theophorous personal names meant, we do not know, but its very existence indicates that there was still much uncertainty as to whether 'Baal' could be used as an appellation of Yahweh in the sense of 'lord'. To complicate our problem, Gideon later set up a golden ephod in Ophrah. Similarly we are told in the prelude to the Danite story (Judg. 17:5), which probably dates from a slightly earlier period, that a Levite named Micah or Micaiah[102] set up a silver ephod somewhere in mount Ephraim, where he had a 'house of God' (*bêt 'elôhîm*). The last expression is obscure enough in Hebrew, but it is supported by both Greek recensions of Judges. Besides the ephod we hear of a *pesel* and of *tĕrāfîm*. We also hear that Micah made one of his sons priest of his shrine. While we are obviously not yet able to solve the problems which arise in connexion with this tradition, which may not have been put into writing until the late seventh century B.C., we must treat it with the utmost care, since tradition was often exceedingly tenacious. In this case it is even less likely to have been invented, since there is nothing to prove a specifically anti-Ephraimite bias.

The problem of the ephod has been attacked from different directions, but no previous efforts seem to have been successful. Fortunately, we now have Old Assyrian and Ugaritic material for the interpretation of the word. In the nineteenth century B.C. the word appears in the Cappadocian tablets as *epādum*, pl. *epādātum* (CAD IV, 183a), which almost certainly means something like

[102] Since he is a Levite the longer form is probably authentic. His original name may have been 'Michael' (*Mî-kā-'El*), the normal hypocoristic of which is 'Micah'.

'plaid robe'. The singular of this word, pronounced *'epd*, that is, *'epâdu*, appears at least twice in now available Ugaritic materials. In text 17.125 from the palace of Ugarit[103] we read in an inventory (line 3), 'a woman's robe of hy[r]ax skin, an ephod'—in Ugaritic *md. ṯ[p]n. 'epd.* The word *md* is used specifically in Ugaritic for a woman's garment. The second word is almost certainly *ṯpn* = Heb. *šapan*, Arab. *ṯafan*, 'hyrax'.[104] Hyrax skin was covered with a fur not unlike rabbit fur, so that a garment of it should be quite acceptable for winter wear. The *'epâdu* was a specific kind of robe, presumably a wrap-around plaid something like a *sari* but not so wide, i.e., a strip which was wrapped around the body and fastened at the shoulder, leaving one arm free. In the Baal epic we have another reference to the ephod. The context probably refers to the impending slaying of Leviathan by the goddess Anath.[105] The text reads as follows:

When thou dost smite Lôtân, the primordial serpent,
When thou dost destroy the winding serpent,
Shalyaṭ of the seven heads,
The heavens will wither,
And will sag like the fastening(?) of thy ephod.

There are numerous parallels in the Hebrew Bible to the concept that the heavens will waste away: cf. particularly Ps. 102:26 f.; cf. also Is. 51:6; Job 26:11. In Heb. 1:10 ff. there is an interesting variation in the first passage based on the LXX: 'and like a mantle shalt thou roll them up'. Though the Hebrew text is probably right, there can be little doubt that the Greek comparison was suggested by the winding of a plaid robe, which became a simile for the revolving vault of heaven. In representations of Babylonian divinities from the ninth to seventh centuries B.C.

[103] PRU II, 182, No. 152:3.

[104] Also as a proper name *Tpn* (= Shaphan), PSID, 45.

[105] See BASOR 83 (1941), 39–42 and 84, 14–17. While other translations have been proposed, none of them makes good sense.

they are clad in outer robes studded with stars.[106] In much later times we have a description by the poet Nonnus (fourth to fifth century A.D.)[107] of the star-studded garment (*astrochitōn*) of the Tyrian Heracles (Phoen. Melcarth).

In 1936 the eminent classical archaeologist, Hermann Thiersch, devoted an important volume to a comparison of the form and function (but not the name) of the Greek *ependytēs* and the ephod.[108] In this volume he dealt particularly with a Greek outer garment which was often completely covered with gold and silver and other rich decoration; in Greek iconography it is represented as a robe fastened tightly around the upper middle and lower part of the body, often resembling a mummy-case. The best-known example of this garb is the outer garment of the goddess Artemis of Ephesus.[109] There is another extremely interesting example of a famous goddess of Oriental origin who wears an elaborate *ependytēs*—the Aphrodite of Aphrodisias in Caria (originally called *Ninoē*).[110] As we have seen in Chapter III, this is the Hurrian goddess Ishtar of Nineveh who was worshipped in Caria in the Late Bronze Age, as we know from Hittite sources. The best-known male deity shown wearing the

[106] How deep-rooted this Babylonian symbolism was, may be seen from the fact that a common word for the firmament in which the stars were set was *burūmu*, literally, 'what is embroidered'. The stem *barāmu* and its derivative *birmu* are used regularly of embroidered garments (cf. CAD II, 103, 257 f., and 344 f.). On the general idea of the starry firmament as the garment of God, see R. Eisler, *Weltenmantel und Himmelszelt* (1908) and A. Jeremias, *Das Alte Testament im Lichte des alten Orients*[3] (1916), p. 581 (on Psalm 104:10).

[107] *Dionysiaca*, 40:408. The same word is used of 'star-clad night' in much older, Orphic, poetry.

[108] *Ependytes und Ephod: Gottesbild und Priesterkleid im alten Vorderasien* (Stuttgart, 1936).

[109] *Op. cit.*, pp. 54–8.

[110] *Ibid.*, pp. 59–72, and pls. viii–xii. On this goddess (originally the Hurrian Ishtar of Nineveh) see also above, Ch. III.

ependytēs is the Syrian storm-god of Baalbek, called *Jupiter Heliopolitanus* in Roman times.[111]

As worn by the high priest, the ephod with its *ḥošen* (gem-set breastplate) was quite distinct in function from the ephod as a separate cult object. This question has been so well discussed by Thiersch[112] that it is not necessary to go into detail here. As a cult object the ephod was probably taken over from pagan sources in Palestine, either as a direct adaptation of an older Canaanite object, or as a legacy from early Hebrew times. The God of Israel, being invisible, was represented only by His heavenly glory—a monotheistic offshoot of the *astrochitōn* concept. Such a rich costume covered with gold or silver and studded with stars and other cosmic symbols could be interpreted as an idol by Yahwists adhering to the strict Mosaic tradition, or treated simply as the visible symbol of the invisible deity in the official Yahwist cult of the day. I need scarcely point out that in cult images of all periods, both among pagans and Christians, there has been a strong tendency to turn the garb of a sacred statue into the most significant item of its ensemble. From this to the veneration of the outer garment, richly decorated with cosmic symbols, as a substitute for the image of the divinity, was a natural step. We may, therefore, provisionally consider the ephod of the time of the Judges as on a par with the golden bullocks of Bethel and Dan, which were visible but whose function was to support the invisible presence of Yahweh, as we have seen above.

In 1956 I presented a paper at the Strasbourg Congress of Old Testament Scholars on 'The High Place in Ancient Palestine'.[113] This paper was strongly influenced in its presentation by the work of L. R. Farnell, *Greek Hero Cults and Ideas of Immortality* (1941) and Martin P. Nilsson, *Greek Popular Religion* (1940). As the result

[111] *Loc. cit.*, pp. 73 ff. and pls. xii–xix.
[112] *Ibid.*, 120 ff.
[113] VT, *Supplement* IV (1957), 242–58.

of archaeological excavations and explorations in Palestine and neighbouring areas, it had become clear that the *bâmôt*[114] must have been connected in some way with the stone cairns which are found in Palestine, Sinai and Arabia both in cultic areas and on the summits of hills and ridges. The *bâmôt* were in different ways strikingly parallel to Greek hero-shrines, which were primarily devoted to the veneration of ancestors. It has since become clear from Ugaritic evidence, which agrees closely with biblical and Mesopotamian data, that the cult of ancestors was much more widespread in antiquity than I had supposed a decade ago. Important contributions to my understanding were also made by R. de Vaux and Yigael Yadin.[115] This is not the place to go into detail, since the subject was adequately treated in the original publication and new material will be added in the proper place. The main point in which we are interested here is that there was a flourishing cult of 'heroes' in second-millennium Palestine, which perpetuated both ancestral Hebrew and Canaanite practices.

Since 1963 we have learned something about the cult of deceased kings both at Ugarit and among the Amorite rulers of Babylon and Asshur. We have already seen in Chapter III how important were beliefs in *'El'eb*, the mysterious deity who seems to have been the patron of all respectable ghosts, and who apparently embodied their collective cult in his own person. In this connexion

[114] The etymological observations, *ibid.*, pp. 255 f., still hold as made, though many more phonetic parallels can now be given. CAD II (1965), 76, is quite wrong in rendering *bāmātu* as 'plain', or as 'plains in the mountains(!)'; it should be rendered 'ridge(s)'.

[115] Yadin has since called attention to II Sam. 1:19, where the Greek text requires a reading *haṣṣîb* instead of MT *haṣ-ṣĕbî*. I suggest that the two following words *bâmôt* and *ḥālāl* be transposed; the text would then mean

Set up, O Israel, Burial cairns over thy slain.

This at least makes complete sense.

we also saw that the word *'ōb* appears more frequently in the Hebrew Bible than had been supposed, and that *'el 'eb* seems to appear at least once in the same sense (attested also by a Palestinian seal). The practice of necromancy, which is somewhat obscurely attested in Hittite and Mesopotamian cuneiform sources, appears in the famous narrative of the 'witch of Endor' who called up the *'ōb* of Samuel from the grave, as well as in the frequent denunciations of the practice of calling up the ghosts of the dead (*'ōbôt*) in Pentateuchal legislation and elsewhere in the Hebrew Bible.

The word *bâmāh* not only denoted a memorial stone cairn but also was often transferred to the standing stone, or *maṣṣēbāh*, which stood on or in the cairn. For instance, on the Mesha Stone the stele is called 'this *bmt*'. And in the Greek Bible throughout the Pentateuch *bâmāh* is regularly translated *stēlē*. The *bêt bâmôt* would thus be a house of (burial) stelae, like the *temple des obélisques* of Byblos from the latter part of the Egyptian Middle Kingdom, or the thirteenth-century funerary shrine at Hazor which originally contained at least 27 funerary stelae.[116] Even more striking in some ways is the open-air sanctuary containing a whole row of massive standing stones of earlier date at Gezer. To what extent the cult of the Canaanite divinity Asherah was associated with the *bâmôt* we do not know, but the constant association of *'ashērîm* in the sense of 'groves' with *bâmôt* in the Bible makes it virtually certain that this was the case.[117] In any event the cult of the *bâmôt* was a paganizing survival and so had to be rejected by official Yahwism, just as was true of the ephod and various other cult objects. Below, in Chapter V, § A, we shall deal briefly

[116] See Y. Yadin, *Hazor* I (1958), pp. 83–90; II (1960), pp. 97 f. I was wrong (*op. cit.*, p. 252) in quoting the number '45'; only 27 stelae were found in and around the shrine.

[117] See my remarks *op. cit.*, pp. 254 f. For additional details see W. L. Reed, *The Asherah in the Old Testament* (1949).

with an attempt to reform the *bâmôt* cult in the time of Samuel.

In this chapter we have endeavoured to draw sharp distinctions, wherever possible, between the Patriarchal Hebrew heritage, the unique contribution of Moses and the movement which he founded, and the influence of contemporary Canaanite culture on the Israelites who were exposed to it. The latter is an exceptionally complex problem, since the early Hebrews were influenced by their Canaanite neighbours, there were beliefs and practices common to both, and there were later borrowings and adaptations from Canaanite culture during the period of the Judges as well as of the subsequent Monarchy. The picture is, accordingly, by no means simple. Yet we can state definitely that it does not support the extreme position of the late Yehezkel Kaufmann, who maintained in his great 'History of the Faith of Israel'[118] that Mosaic monotheism was a phenomenon entirely peculiar to Israel. According to him, Moses founded Israel, and Israel created monotheism; or, to put it another way, Moses was himself a member of the people which he brought into existence, and because he was an Israelite he was able to create monotheism. Mosaic monotheism was, he thought, a creation of Israelite religious genius, as the intellectual achievements of Greece in the sixth–fourth centuries B.C. were a product of Hellenic secular genius. Neither phenomenon can be explained by ordinary evolutionary processes. According to Kaufmann, the Israelites were completely unable even to understand the nature of polytheism, since it was totally foreign to their entire higher culture. Kaufmann's point of view certainly has an element of truth. Without monotheism, Israel, as we know it, could not have existed. It was indeed Moses who was the principal architect of Israelite monotheism.

[118] See the condensed English translation quoted in n. 100, especially pp. 60 ff., 212 ff. and Index, *passim*.

The pious Israelite probably knew little about many pagan beliefs. But, on the other hand, there was so much exchange of cultural influences between Israel and its neighbours on all sides of its tiny territory, and there were so many irruptions of paganism into Israel, that the ignorance presupposed by Kaufmann's view is simply incredible. We shall see that there was profound influence from Phoenicia on the literature of later Israel. This Phoenician contribution was pagan in background, but Israelite authors were able to utilize it without permitting it seriously to distort their monotheistic approach. In much the same way Christian authors of the second–fifth centuries A.D. utilized the literary and philosophical heritage of pagan Greece without allowing it, in general, to paganize their religious outlook.[119]

[119] For the best treatment of this subject yet produced, see Harry Austryn Wolfson, *The Philosophy of the Church Fathers*, vol. 1: *Faith, Trinity, Incarnation* (Cambridge, Mass., 1964).

V

The Religious Cultures of Israel and Phoenicia in Periodic Tension

After our descriptions of the background and character of each of the two contrasting religions, one would expect violent conflicts to break out when the two directly confronted one another. Before the tenth century Canaan had influenced Israel strongly, but there is no evidence for a similar impact of Israel on Canaan. In the time of Solomon the Israelites seem to have given something to the Phoenicians as well as to have received much from them. But what they received is certainly far better known to us today, in both earlier and later times.

A. THE PROPHETIC MOVEMENT IN ISRAEL

In some ways the ethical monotheism of early Yahwist faith was not so directly opposed to the crude polytheism of Phoenicia as the prophets of the Hebrew Bible were to Phoenician hierophants. Without the great rebirth of conscience which the entire subsequent world owes to the spiritual revival of the Mosaic movement led by Samuel, the religion founded by Moses could not have flowered into normative Judaism and Christianity.

Many years ago H. Torczyner (Tur Sinai) pointed out that *nābîʾ*, 'prophet', must be derived from the word which appears in Accadian as *nabāʾum*, 'to call (especially of a man by a god)'.[1] More recently the same verb has turned up repeatedly in 'Amorite' proper names at

[1] FSAC², 303, which was independent of H. Torczyner's previous suggestion. See also SBPM, 5 ff.

Mari, with the same use as in Accadian personal names.[2] The *nābîʾ* was, accordingly, one who was called by God for a special purpose, or who believed that he had received such a call. He was, then, a charismatic religious figure without hereditary right or political appointment, but authorized by his vocation to speak or act for Yahweh. Before the time of Samuel, the term is seldom used. In Gen. 20:7 God says of Abraham, 'he has a call from me', not 'he is a prophet' as vocalized in the Hebrew text.[3] Moses is explicitly contrasted with the *nābîʾ* class in Num. 12:6–8;[4] and in Ex. 7:1 f. he is to appear before Pharaoh as 'God', while Aaron is to go to Pharaoh as his representative (*nābîʾ*). In the period of the Judges the later 'prophet' (*nābîʾ*) was still called 'man of God'—a term that, in the early monarchy, appears simply as a synonym of *nābîʾ*.

In Chapter I we have discussed a passage quoted in Hosea 12:13 ff., the archaic form of which fixes its origin no later than about the eleventh century B.C.; here we have a clear reference to Moses as a *nābîʾ* like Samuel:

'Through a prophet did Yahweh bring Israel up from Egypt.'

Even more striking is Jer. 15:1, where Moses and Samuel are mentioned together as possible defenders of Israel at the heavenly assizes: 'And Yahweh said to me, "Even if Moses and Samuel stood before me, I should not favour this people."'[5] Jeremiah evidently considered Samuel as founder of the prophetic movement in Israel, just as Moses was Israel's great teacher and lawgiver.

The description of Samuel's activities after the destruction of Shiloh is extremely interesting. He replaced the

[2] APNMT, 236.
[3] Vocalize probably: *kî nĕbîʾî hûʾ*.
[4] See above, Ch. I, § E.
[5] SBPM, 9.

lost central sanctuary at Shiloh with *meqômôt*, 'places' (I Sam. 7:16), at Bethel, Gilgal and Mizpah. The use of this word as a generic term for local shrines foreshadows a general later use in Hebrew, regardless of whether the cult was Jewish or pagan (cf. Deut. 12:2 f.). Later still it was to be used in Samaritan of the 'tabernacle' on Gerizim.[6] In Aramaic the equivalent *'athrâ* in *'athrâ qaddîšâ*, 'holy place', had a similar semantic development. In any event, the shift which led Samuel and his ecstatic followers to give up the official 'Tabernacle' and its cultic equipment in favour of the ancient Hebrew-Canaanite *bâmôt* is hard to explain unless the idea of fixed holy places had been replacing that of the movable Mosaic shrine for some time.[7]

The religious behaviour associated with these shrines was that of 'revival' groups. In a recent book entitled *Battle for the Mind*,[8] the eminent neuro-psychiatrist, Dr. William Sargant, examines the effects of religious revivals in the history of the Christian church, especially among Quakers, Methodists, and Baptists. Similar phenomena appear also among Muslims and Jews. When tremendous emotional stress is accompanied by continuous dancing and instrumental music, a subject will often go into a trance and become a typical ecstatic. Dr. Sargant is aware of the great power of such methods in stirring up the emotions, which can result not only in brainwashing, but also in true religious conversion, which establishes a reserve for later spiritual life. The two have much in common when seen through the eyes of a perceptive psychologist and neurologist. However, Dr. Sargant's comparisons are not intended to disparage revival experiences—quite the reverse. He emphasizes that religious revivals produce both valuable results and gross

[6] Here I depend largely on still unpublished work of Abram Spiro.

[7] See above, Ch. IV, § D.

[8] *Battle for the Mind* (London, 1958, 1961).

perversions. In human affairs every important mass phenomenon can be used for evil as well as for good, as has always been recognized by careful observers. While it is quite natural for members of an established religious organization to be afraid of such a movement, frequently with good reason, it is also probable that their own organization could not have been established originally without an emotionally supercharged beginning. Although Dr. Sargant does not mention Samuel, the biblical account of Samuel's activities contains elements more characteristic of the situation he describes than Pentecost, or than most revivals among early Quakers, Baptists, and Methodists.[9]

As the founder of a great new movement of unparalleled spiritual significance, Samuel left his stamp indelibly impressed on the pages of religious history. At no other time and in no other place, so far as we know, has there been an institution quite comparable to Israelite prophetism. Though often dishonoured by 'false prophets', it revived again and again. Represented at its best by one great figure after another, it persisted through the five centuries of Israel's life as a nation, and did not die out until after the Restoration. In this light Samuel appears as second only to Moses in his impact on the religious history of Israel.[10]

Samuel was born a Nazirite, vowed to the life of a *nāzîr* by his mother before his birth—apparently a common practice in Israel.[11] He grew up at the tabernacle or temple in Shiloh; he must have been deeply impressed

[9] SBPM, 7 ff.; AHAEBT, 64 f.

[10] On Samuel in general see AHAEBT, 42–65. Both 'JE' and 'D' reflect prophetic editing in the tenth–seventh centuries; the late Edward Robertson even over-emphasized the relation between Samuel and Deuteronomy; see his papers in BJRL and his book *The Old Testament Problem: A Re-investigation* (Manchester, 1950).

[11] Evidence from LXX, DSS, Ben Sira and Mishnah. See AHAEBT, 47 f.

by the reported corruption of the priests who officiated there and especially by the ensuing disaster. After the Philistines had won a great victory over Israel near Aphek, they destroyed the temple at Shiloh and slaughtered its priests, as presupposed by Jer. 7:12 ff.; 26:6 ff., favoured by archaeological excavations at Seilûn, and stated explictly in Psalm 78:60, 64.[12]

Israel was now under the heel of the hated Philistine, with the priests scattered and no generally accepted cult of Yahweh left. This new situation made it possible for a mass ecstatic movement to develop with extraordinary rapidity. That this movement was new at the time may be inferred from the numerous references in I Samuel to bands of prophets who, dancing and singing to the accompaniment of musical instruments, worked themselves up into a frenzy, and then fell into trances (see above). References to ecstatic votaries appear in the Mari texts and thereafter in Mesopotamian records, and their generic designation, *maḫḫû*, was also used of madmen, without any clear distinction. Similarly, a Hebrew denominative verb, derived from *nābi'*, is employed in the sense 'to behave like a madman, to rave'. In the Wen-Amun report (c. 1060 B.C.) there is a remarkable reference to an ecstatic who delivers an oracle to Zakar-Baal, king of Byblos.[13] Since this was probably within a decade or two of the fall of Shiloh, we may perhaps suppose that there was some indirect connexion.[14] The movement in Israel may have formed part of a general surge of this phenomenon through south-west Asia, as has not infre-

[12] On the date of Psalm 78 see O. Eissfeldt in *Das Lied Moses* . . . (above, Ch. I, notes 41 and 58).

[13] For the meaning of the reference see A. Scharff, ZÄS, 1938, 147. The determinative reappears in the Onomasticon of Amenemope, resting on more ancient tradition, together with names of musicians and dancers, with *kumru* = *komer*, 'eunuch priest' (FSAC², 234 f., n. 34).

[14] See below, § E, on the ecstatic prophets in Phoenicia.

quently been surmised in the past. It may be that it began in Anatolia, where such phenomena were particularly well attested in antiquity. However this may be, in Israel it achieved positive significance, since Samuel, fired with zeal for the reformation of the cult of Yahweh and for the expulsion of the Philistines, was present to give it direction.

We have no indication in our extant tradition that Samuel took any interest after the fall of Shiloh either in the central sanctuary or in the Ark of the Covenant.[15] At first this may seem strange, but a little reflection shows a clear pattern. In the first place, we have often seen how the destruction of a sanctuary led to its abandonment, and even to the complete secularization of its site. This is particularly evident in the case of the sanctuaries at Shechem (see above) and Shiloh. In the latter case Israel was so overwhelmed at the thoroughness of Yahweh's punishment of an allegedly wicked priesthood, that the people looked for spiritual leadership outside the priesthood. In the ecstatic prophets they found a natural substitute for the disgraced priests. In any event the latter had by this time become an established hierarchy, with formalized cultic practices which had developed far beyond the simple liturgy of the original tabernacle. New religious leaders generally organize very simply at first, avoiding the formation of a complex hierarchy—which would remind them of the reasons for their original revolt. Illustrations abound all through the Judaeo-Christian religious tradition.[16] The emergence of the Essenes in the second century B.C. was accompanied by *de facto* sectarian replacement of priests by laymen. Priests were still highly respected in the sect if they were descendants of Zadok, but in the ordinary affairs of the community they were replaced by elders and especially by overseers,

[15] See SBPM, 16 ff. and AHAEBT, 56 ff.
[16] See SBPM, 19 ff. and AHAEBT, 63 ff.

who were to become the prototypes of Christian bishops.[17] Among the Pharisees religious teachers took the place of priests in the practical life of the sect. The *rabbânîm*, or rabbis, were not ordained priests, but laymen who showed unusual knowledge of the law and an unusual talent for interpreting it; they were eventually ordained in their turn.

In Christianity the apostolic church kept only the twelve laymen of the Essenes' governing body of twelve laymen and three priests.[18] However, since it is always necessary to have leaders, Christians began to follow the example of the Jewish sectarians from whose ranks many of them had come, and at an extremely early date—scarcely later than the middle of the first century A.D.—set up *episkopoi*, 'overseers', who became bishops. In the later Christian church the same thing happened over and over again. In the sixth century A.D., for example, the Benedictine order was formed in order to compensate for the over-formalized hierarchic organization of the secular clergy. In the thirteenth and fourteenth centuries the mendicant friars emerged—again in protest against corruption and inefficiency among both secular clergy and religious orders. Just as in later Israel the long-continued tension between priests and prophets led to a remarkably well-balanced structure, so in the Roman church the elaborate system of checks and balances between the secular clergy and the religious organizations has maintained stable equilibrium for several centuries.

In the Reformation there was an even more vigorous change of this kind. Lutherans and Calvinists replaced ordained priests by 'shepherds' of both priestly and lay origin. These pastors soon became the ordained equivalents of the Roman priests. In the eighteenth century John Wesley, though an Anglican all his life, introduced a

[17] See especially the discussion by C. S. Mann in Johannes Munck, *Acts* (Anchor Bible, 1967), Appendix 4.

[18] See C. S. Mann, *loc. cit.*

new system of lay preachers which was directly responsible for Methodism's break with the Church of England. This break was followed by the establishment of a new hierarchic organization in American Methodism. The same phenomenon reappears in some of the youngest Protestant sects. Turning back to the Jews, we note that the Hasidic movement of the eighteenth century replaced orthodox rabbis by saints and miracle workers, who themselves were called rabbis (*rebs*) by their followers. This process is characteristic of any religious movement which, like Judaeo-Christianity, has a built-in tendency to correct its own weaknesses and reorganize its structure in order to keep spiritual devotion and moral action in the forefront of life.

The 'renewal' feature of Israelite prophetism can be documented from the works of the canonical prophets, especially Amos, Micah, Isaiah and Jeremiah. After the prophetic movement died out in the late sixth or fifth century B.C., it was replaced in part by the spread of apocalyptic thinking, which despaired of a solution on earth, and awaited a general catastrophe, national or cosmic, to be followed by a new world under the direct rule of God. This movement also had its roots in the pagan world, as the author has tried to show in still unpublished studies.

There were other exceedingly important aspects of the prophetic movement in pre-exilic times. Continuing the Israelite tradition that the prophets were originally called *rô'îm*, 'diviners' (I Sam. 9:9), as well as the tradition in Chronicles that the synonym *ḥôzîm* was applied to archetype poet-musicians,[19] the prophets of Israel were expected to predict the future and to compose their oracles in good lyric verse. Such emphasis was laid on these points that their message was validated in part by

[19] Cf. below, § E, on Phoenician analogies among the hierophants.

the accuracy of their predictions, and the literary quality of the canonical prophetic oracles is nearly all high.

Though it is very doubtful whether there were true 'cult prophets' in Israel,[20] there were certainly prophets who were also priests, like Jeremiah, or 'singers' (poet-musicians), like Habakkuk. Even Samuel appears as member of the hereditary guild of singers, according to tradition preserved by the Chronicler.[21] The members of prophetic guilds were also custodians of the literary heritage of Israel's faith, especially of the 'JE' and Deuteronomic traditions.[22] To what extent they overlapped the class of scribes is very difficult to estimate on the basis of our available sources. It is becoming increasingly clear that some prophets attained high prestige as advisers to the king, who greatly appreciated favourable oracles. The rôles of Isaiah and Jeremiah, though very different, illustrate this point. The oracles of Amos are even more instructive, since they show that even the poorest citizen might feel duty-bound to speak out as a prophet on delicate points of international significance.[23]

Two recent studies by Delbert Hillers[24] and Isaac Rabinowitz,[25] respectively, throw light on the rôle of the prophet in international relations. Hillers has demonstrated that the sanctions ('curses') invoked by the prophets are substantially identical with the sanctions in

[20] For the classic treatment of this theme see I. Engnell's article 'Profeter' in *Svenskt Bibliskt Uppslagsverk* II (1952), 729 ff.

[21] Cf. SBPM, 26, and on these guilds see ARI[2], 125 ff., 209 ff., 227 f., 230, n. 70, as well as below.

[22] Cf. above, n. 10.

[23] It is still uncertain whether *lō'* in Amos 7:14 is negative or asseverative (as in Amos 1:3, 6, 9, 11, 13; 2:1, 4, 6). Zech. 13:5 is considerably later, but is also rather ambiguous, in spite of the negative attitude taken towards prophets.

[24] *Treaty Curses and the Old Testament Prophets*, Rome, 1964.

[25] 'Towards a Valid Theory of Biblical Hebrew Literature' (*The Classical Tradition . . . in Honor of Harry Caplan*, Ithaca, 1966, pp. 315–28).

contemporary treaties from Syria and Assyria, thus making it virtually certain that these prophets were familiar with diplomacy. Rabinowitz has pointed out that the 'word' of Yahweh as transmitted to foreign lands and rulers by the prophets was believed to embody power far more effective than any ordinary diplomatic exchange could possibly be.

Under § c below I shall discuss the relation between the hierophants of Phoenicia and the prophets and wise men of Israel. In spite of basic differences this relation was closer externally than I, for one, have ever suspected in the past. But superficial resemblances in origin, terminology and function only emphasize the fundamental contrast between the spiritual monotheism of Israel and the physiocentric[26] polytheism of Canaan.

B. PHOENICIA AND PHOENICIAN HIGHER CULTURE

In Chapter III we dealt with the religion of Canaan in the Bronze Age, that is, roughly before the twelfth century B.C. Our evidence came from contemporary texts and excavations, particularly at Ugarit, north of Phoenicia proper. We occasionally drew on later sources, where they corroborated evidence from the Bronze Age. In this chapter our sources are much scantier, for two reasons. Owing to the displacement of clay tablets and cuneiform script by papyrus and sheepskin, on which alphabetic script was written in ink, the available written material is very much reduced by the action of time. Furthermore, strange to say, there has been almost no excavation in Iron Age levels of any Phoenician town or site. Evidence comes chiefly from biblical and classical sources. There are many scattered stone inscriptions, chiefly from North Africa, and there is much Egyptian and Assyrian material for comparison. We are greatly

[26] For this term see HACH, 265.

helped by numerous points of agreement between Bronze Age data from Ugarit and information provided by late Greek writers, which bracket the Iron Age.

In the early Iron Age the political and cultural situation in Phoenicia changed radically.[27] After the thirteenth century B.C. the Canaanites were restricted to Phoenicia proper and its hinterland, with some extension southward along the coast of Palestine and into the low plains of Galilee. Otherwise the area once dominated by Canaanite culture in Syria was in the hands of the Aramaeans, while Israel and the Sea Peoples occupied Palestine. Under Philistine hegemony, the Sea Peoples established control of the eastern Mediterranean, with their cultural foci in Cyprus and the coast of Palestine. From before 1060 B.C.[28] until the middle of David's reign (c. 975 B.C.) the Phoenicians were at the mercy of the Sea Peoples, and were thus unable to expand their sea trade. The power of the Philistines was then destroyed by an alliance between the Tyrian kings Abibaal and his son Hiram (c. 969–936 B.C.), on the one hand, and David on the other.[29] During the middle decades of

[27] See *Historia Mundi* ■ (1953), 362 ff.; BANE, 340 ff.; CAH², II, ch. XXXIII (1966).

[28] For this date of Wen-amûn add 130 years to the accession of Shishak c. 935 B.C. and deduct five years. The latter date is based on the Tyrian chronology as transmitted by Menander of Ephesus through Josephus; see my papers in BASOR 100 (1945), p. 20; 130 (1953), pp. 4 ff.; 141 (1956), pp. 26 f.

[29] This is clear from II Sam. 5:11 and I Kings 5:15, expanded in Chronicles and Phoenician records cited by Josephus, *Apion* I, 108 ff. Note that, as pointed out by M. Rowton, BASOR 119 (1950), pp. 20 ff., the Tyrian date for the building of Solomon's Temple agrees exactly with mine. As proved by W. L. Moran, citing the observations of J. A. Montgomery, *Kings* (ICC, 1951), 132 ff., in CBQ XXV (1963), 77 ff., the word *'ôhēb*, used of Hiram's relation to David, refers specifically to political ties of alliance. The usual cavalier disregard of clear biblical evidence is not 'critical' but just the opposite. See also H. Huffmon, BASOR 181 (1966), 31 ff.

the tenth century B.C., the foundations of a great maritime empire were laid.

There was no great competing Mediterranean power at the time, so the new Tyro-Sidonian empire rapidly established trading stations in different parts of the Mediterranean in order to barter for the mineral wealth of Cyprus, Sardinia and north-western Spain. Before the end of the tenth century there were Phoenician ports in Cyprus (Citium) and Sardinia (Tarshish),[30] as well as probably at Gades (Cadiz) in Spain and Utica in North Africa. Direct evidence is lacking for such intermediate stations as Malta and Motya. The biblical tradition about Hiram's fleets of ore-carrying vessels (*'ŏnîyôt Taršîš*) in the time of Solomon is completely in accord with our present evidence, though every new piece of concrete evidence will be welcome. When we remember how rapidly the Spaniards spread over the New World between 1492 and 1542, by which time Chile had become a province, the coast of California had been explored, and the Philippines had been discovered by Magellan and were already being colonized, there is no difficulty in accepting a comparable speed of expansion on the part of the Phoenician mariners and traders. After all, their ships were built of the splendid forest trees of Lebanon, hewn

[30] Since Sardinia was, next to Cyprus, the principal source of copper ore in the Mediterranean, it is really unimportant whether *Taršîš* was originally a Phoenician word for 'refinery' or a non-Semitic place-name in Sardinia. In either case the connexion with Tharros, where quite early Phoenician remains (e.g., D. B. Harden, *The Phoenicians* [1962], pp. 30 f., etc.) have been found, would stand. It must be remembered that Greek *rr* often stands for earlier *rs*, as in Attic Τυρρηνοί = Doric Τυρσανοι (the Tursha = Etruscans). [The new 5-line Phoenician inscription 'Hispania 14' from Seville (M. Solá Solé, *Rivista degli Studi Orientali* XLI [1966], 97–108), probably from the early eighth century B.C., favours an early date for Phoenician colonization in both Spain and Sardinia. On the ninth-century Nora stone see most recently BASOR 180, 42.]

and shaped with iron tools for the first time in history. They did not need the magnetic compass of the Spaniards, since they sailed in the dry season, when the sky was seldom overcast for long. In addition, the then recent development of the art of building watertight cisterns made it possible to provide island strongholds such as Tyre and Arvad, Malta and Motya, with plenty of fresh water. (In the Amarna Age Tyre was still dependent on the mainland for water.)

The wealth of the Tyro-Sidonian empire became fabulous, and the arts and crafts flourished as never before. Our concrete evidence is still restricted chiefly to ivories and work in gold, silver, and bronze, since the even more important work in woods of Lebanon, dyed and embroidered textiles, and leather has disappeared—until some chance find in a desert cache like the caves of Murabba'at, brings samples to light. Israel was one of the chief indirect beneficiaries of the rapidly expanding wealth of Phoenicia, since virtually the entire western boundary of North Israel was shared with the Tyro-Sidonian state in most periods of the Monarchy. From Tyre south the Israelite border can seldom have averaged over ten miles from the Phoenician coast. Israel provided agricultural products and manpower; it also controlled the shortest caravan routes between Arabia and Phoenicia. Even when Phoenicia was dominated by Assyria and Babylonia its commerce remained enormous; cf. Ezek. 27–28.

Probably the most characteristic feature of Phoenician civilization in the first millennium B.C. was its dependence on Egyptian motifs and prototypes. During the Pyramid Age (Dyn. IV–VI) and the Middle Kingdom (Dyn. XII) Byblos had been the most important foreign colony of Egypt. Before the end of the nineteenth century B.C. it became an autonomous vassal state, which retained its Egyptian culture down at least into the early

Hyksos period, after c. 1700 B.C.[31] Rib-Adda, prince of Byblos about 1370 B.C., assures Pharaoh that his city is as Egyptian as Memphis.[32] A few years later the official scribe of Abimilku of Tyre wrote a whole series of letters to Akhenaten in the customary Babylonian cuneiform, but the numerous mistakes, use of Egyptian words and translations of Egyptian verse into Accadian prove that he was himself an Egyptian.[33]

Phoenicia's awareness of its debt to Egypt is well illustrated by the Wen-Amun report, dating from shortly before the middle of the eleventh century B.C. In this report an Egyptian envoy named Wen-Amun tells the story of his adventurous mission to Byblos on behalf of Ḥriḥor, high priest of Thebes. With the necessary authorization from Smendes, first king of the Tanite Dynasty in the north-eastern Delta, the envoy sailed up the coast of Palestine and Phoenicia in order to procure timber for the construction of a new barque for the god Amun at Thebes. In the past this account was generally regarded as a romance, but J. Černý has demonstrated conclusively that it was actually an official report. The author, whatever his success as a diplomat, was certainly a man of letters, and he was also an accurate observer, apparently writing down just what he saw and heard.[34] (This does not, of course, mean that he reported incidents that might reflect on his judgment or honesty!)

Wen-Amun puts the following words into the mouth of Zakar-baal: 'See, Amun created thunder in heaven when he gave Baal his kingdom. For when Baal founded

On its historical value see my remarks, *Studies Presented to David Moore Robinson* (St. Louis, 1951), 203–31, and B. Mazar, *The Israel Academy of Sciences and Humanities, Proceedings*, I:7 (1964), pp. 3 ff.

all lands, he founded them after first founding the land of Egypt, whence thou comest; for craftsmanship issued from it to reach the region where I am, and instruction issued from it to reach the region where I am.'[35] Zakarbaal was not necessarily trying to flatter the Egyptian envoy; he was simply stating what most Phoenicians probably regarded as the plain truth. Similarly, in Gen. 10, which has long been recognized as an adaptation of a Phoenician model of some sort,[36] Canaan appears as one of the sons of Ham, that is, as a younger brother of Egypt.

In the Ugaritic epics, dating in their extant form before c. 1365, but composed much earlier, there is little evidence for direct Egyptian influence on any phase of Canaanite mythology. The only clear case is the identification of Koshar (*Kôthar*) with Ptaḥ of Memphis, which recurs in the Sidonian cosmogony of Mochus, as we shall see. The latter appears to be a mixture of elements from Phoenician and Egyptian sources. That the account of it which was transmitted by Damascius, a Neo-Platonist of the fifth century A.D., is substantially correct, seems clear, once we have discarded his post-Platonic theosophy.[37] There are several undeniably Egyptian elements in the accounts of the Sidonian cosmogony attributed by Damascius to Eudemus (fourth century B.C.) and Mochus. The latter seems to be more reliable; Eudemus' informer may have been inadequately informed himself. First in the scheme of Mochus came (in Greek translation)

[35] See JAOS LXXI (1951), 261. The previously enigmatic *mlk.f* is simply 'his kingdom', Can. *mulk*, not *milk* (from *mālīk*), 'king'. The syntax has been revised after F. Hintze, *Untersuchungen*, II (1952), p. 261.

[36] It is obvious from the place-names of Ezek. 27, which certainly rests on Phoenician sources, that most of the names in Gen. 10 were also derived through Phoenicia.

[37] It was this secondary theosophical dress, borrowed from Middle Platonic and Stoic sources, which led earlier scholars to consider the data in question as worthless.

Aithēr and *Aēr* (= *Aēr* and *Aura* according to Eudemus). From them was born the Phoenician *Ūlōmos*, who begot the Phoenician *Chūsōr* by masturbation, like Atum and other Egyptian creator-gods. *Chūsōr* created the cosmic egg, which he then split into heaven and earth in his name as the 'Opener' (*Anoigeus* = Ptaḥ; see below). Here we have elements of the creation myths of Memphis (Ptaḥ) and Heliopolis (Atum). (As is well known, there was some confusion in later times between the cosmogonies of these two neighbouring cult centres, as well as with the cosmogony of Hermopolis Magna.) Among such elements are: Ptaḥ as creator, the cosmic egg,[38] and masturbation as the chief method of divine procreation.

The date of Mochus would be quite obscure if he were not obviously a native Phoenician writer.[39] The relative archaism of the cosmogony of Mochus is obvious when it is compared to the highly sophisticated cosmogony of Taauth, handed down to us by Sanchuniathon in the sixth century B.C. (see below).

Thanks to Eusebius of Caesarea, who wrote his *Praeparatio Evangelica* in the early fourth century A.D., we possess a substantial transcript of the mythological part of the 'Phoenician History' of Philo Byblius. According to Eusebius, Philo (who wrote in Greek c. A.D. 100) quoted faithfully from Sanchuniathon, who had written in Phoenician, drawing in his turn on such older sources as the 'Cosmogony of Taauth'. Moreover, the meticulous accuracy with which Eusebius reproduced his sources, wherever we can check his quotations, was demonstrated

[38] See Siegfried Morenz, 'Ägypten und die altorphische Kosmogonie', in *Aus Antike und Orient* (*Festschrift Wilhelm Schubart*, Leipzig, 1950), pp. 64–111. Note Eduard Meyer's recovery of two references to the cosmic egg in the Mochus tradition (GA II:2[2] [1931], p. 180, n. 2).

[39] The name is not *Moschus* (e.g., in WM), but a hypocoristic Μωχος = Punic *MKY* or Hebrew *Mākî* (or a parallel **MK'*).

conclusively by the late Karl Mras.[40] Since the decipherment of the Ugaritic texts there has been a steady flow of material (still continuing) to confirm the statements of Philo Byblius about Phoenician mythology. That Phoenician was still written (and read) is certain from coins of the third century A.D. inscribed in Phoenician.[41]

It is no longer possible to suppose that the work of Philo Byblius is full of secondary Greek euhemeristic speculations. We know now that simple euhemerism was common in the ancient Orient.[42] Furthermore, the Phoenician milieu in which Sanchuniathon lived was favourable to demythologizing—though scarcely in a monotheistic sense.[43] Although Sanchuniathon makes little effort to distinguish between the pantheons and myths of different cities, it must be observed that by the sixth century B.C.—to say nothing of Philo in the late first century A.D.—it was probably no longer possible to distinguish the sources of particular myths or divine figures. A gradual transfusion of practices and beliefs, resulting from extensive trade and movement of population between Phoenician cities, must have rendered any such analysis extremely difficult, if not impossible.

[40] See especially his lecture on 'Die Stellung der *Praeparatio Evangelica* des Eusebius im antiken Schrifttum' (Vienna Academy: *Anzeiger, Phil.-hist. Klasse*, 1956:17, 209–17).

[41] IEJ IV (1954), 8 (reign of Gordian, A.D. 238–244).

[42] Note especially the Sumerian King Lists and fragments of chronicles (see especially Jacobsen, *The Sumerian King List* [Chicago, 1939]), where names of gods and human beings are interspersed. Still more important for us is the Turin Papyrus, copied in the thirteenth century B.C. and beginning with a long list of gods (Rē', Geb, Osiris, Seth, Horus, Thoth, etc.). All regnal years preserved are abnormally long, just as in the case of early Sumerian rulers.

[43] For this see especially the discussions in my forthcoming volume 'Experience on the Road to Reason: Phoenicia, Israel and Ionia'. The demonstration will also be given in more concise form in my study 'Neglected Factors in the Greek Intellectual Revolution', to appear in PAPS.

While we cannot date Mochus with any confidence, Sanchuniathon was a refugee from Tyre who settled in Berytus about the second quarter of the sixth century B.C.[44] In my opinion the cosmogony of Mochus is older and may easily go back to the seventh or eighth century B.C., if not earlier.

But the cosmogonies of Sanchuniathon and Mochus were much earlier than the time of these writers. In Sanchuniathon there are a number of very archaic forms, such as *Taauth* for *Ṭăḥáwtĕ* (later *Thōth*), and *Thūrō* (*Thourō*) for *Tĕwūrĕ* (later *Thoēris*).[45] Both these names have kept their New Kingdom pronunciation in Phoenician; accordingly they cannot have been taken over from Egyptian after the thirteenth century B.C. Moreover, the designation of Kôshar (late Phoenician *Kûšōr*) by Damascius as the 'Opener' (*Anoigeus*) means that the name *Ptaḥ* had been explained as *pattāḥ*, with the same sense. Again we have to reckon with the change of *pattāḥ* to *pattōḥ* between c. 1200 and 1000 B.C.—this time in Phoenician. This phonological point is quite independent of the fact that a specific connexion is made in the Baal and Aqhat Epics between Kôshar and Memphis, Ptaḥ's home. It is by no means impossible that the identification of Kôshar with Ptaḥ goes back to the Pyramid Age (see Chapter III).

The Tyrian cosmogony of Sanchuniathon was based on a very ancient Hermopolite myth of the beginning, centring around Thoth, the patron divinity of Hermopolis Magna in early Middle Egypt. That Taauth was indeed

[44] For details see above, n. 43; the evidence is much stronger than I should have expected twenty-five years ago, when I did not venture to date Sanchuniathon more closely than between 700 and 500 B.C. (e.g., FSAC [1940 ed.], 243, 334 [= 1957 ed., 230, 317 f.]), though I then preferred the seventh century.

[45] E.g. *Tȝ-wr.t*, lit., 'The Great One'. Before the twelfth century B.C. long (accented) *ē* in an open syllable was regularly *ū*; see VESO, 16–18, and for the corresponding masculine *Pȝ-wr*, Amarna *Pawuru*, *Pauru*, etc., see JNES v (1946), 19.

Thoth was well known to all these writers, including Eusebius. (For his rôle as a Phoenician hierophant and a Hebrew sage, see below.) Taauth is called by Sanchuniathon 'the wisest man that ever was under the sun'. The expression 'under the sun'—one of the most characteristic Phoenician traits in this account—is, of course, characteristic of the strongly Phoenicianizing book of Ecclesiastes (see below), and also appears in Sidonian inscriptions from the fifth century B.C., as well as occasionally in the dramas of Euripides, also from the fifth century B.C. The use of this expression sheds light only on the date of Sanchuniathon, not on that of the Taauth cosmogony, which was certainly older.[46]

C. PHOENICIAN AND ISRAELITE RELIGION IN CONTACT

Turning from late compilations back to primary sources, we have a most valuable Iron Age pantheon of Tyre preserved in the treaty concluded between Esarhaddon of Assyria and Baal of Tyre in the early seventh century B.C.[47] In the last section of the preserved part of the treaty is a list of the deities called upon to sanction details of the treaty, first those of Assyria, followed by an enigmatic line of divinities with Aramaic names,[48] then

[46] Cf. Uvo Hölscher, *Hermes* LXXXI (1953), 394. Hölscher is clearly right about the Semitic character of the verse underlying the condensed translation of the original poem into Greek prose, but there is no trace of second-millennium repetitive style. I should date the original poem between the tenth and eighth centuries B.C. —i.e., before the time of Gen. 1–2:3a.

[47] See R. Borger, *Die Inschriften Asarhaddons Königs von Assyrien* (AfO, Beiheft 9, Graz, 1956), 107–9 and pls. iii–iv.

[48] See Col. IV:6 with Borger's discussion in VT VII (1957), 102 ff. The paired names $^{d}Bait(i)$-$ILĀNI^{pl}$ and $^{d}Anat(i)$-$ba[it(i)$-$IL]$-$ĀNI^{pl}$ are, therefore, reasonably certain, and reflect Aramaic names **Bait-'elâhayyâ* and **'Anat-bait-'elâhayyâ*, 'House-of-the-Gods' and 'Anath-of-the-House-of-the-Gods'. Some 250 years later these Ara-

the Phoenician deities of Tyre. First come three Baals: *dBa-al-sa-me-me*, *dBa-al-ma-la-ge-e*, and *dBa-al-ṣa-pu-na*, followed by Melcarth (*Milqartu*) of Tyre, Eshmun (*Iasumunu*) of Sidon, and 'Ashtart (*Astartu*).[49] These three are called upon in the curse formula to punish any violator of the treaty by sending storms against the ships, tearing up mooring-posts, causing the ships to be swamped by mighty seas. It is particularly interesting to find the god Baal-shamêm here as a Tyrian deity, since, while the cult of the Lord of Heaven is so far unattested in Bronze Age Canaan proper, it becomes very important in Iron Age Phoenicia. That it had been known farther north in Syria is shown by a number of references to *dIM-ša-me-e* = Can. *Baʿal-šamêm* in fourteenth-century treaties between the Hittites and Ugarit.[50] The oldest reference to it in Phoenicia proper is in a Byblian inscription dating from the tenth century B.C.[51] The name *Baal-malagê* has certainly been misread. But there is a simple solution at hand. We have only to read the sign *ad* for the middle *la* (which is almost identical in form), and we have *Baal-madgê*, meaning something like 'Lord of Fishing (Fishery)'.[52] It

---

maic gods appear at Elephantine as 'Bethel' and 'Anath-bethel'. See for my latest published views (which require modification today) ARI (1956 ed.), 173 f.; 222, n. 132; 230, n. 74.

[49] Note that Assyrian *s* and *š* (in normal Accadian spelling) were pronounced *š* and *s* respectively, as we know from a host of transcriptions in both directions.

[50] Cf. several passages in PRU IV including Nos. 17, 227, line 51 (p. 43); 17, 340, line 17 (p. 51), to which Dr. Hillers has called my attention. In the Amarna Tablets, *dIM* stands for Baal as well as for Adad.

[51] In the Yeḥîmilk inscription; see JAOS LXVII (1947), 157 and n. 34.

[52] This may be the meaning of Ugar. *mdgt* in Aqhat I:147. The line was plausibly read *yqbrnn . bmdgt . bknrt* by G. A. Barton, JBL LX, 217; I suggest rendering 'They (?) buried him (?) in the fishing place at Kinnereth' = Tell el-'Oreimeh on the Sea of Galilee,

would be equivalent to *dûgāh*, if this word has been correctly preserved in the MT of Amos 4:9. This divinity may be the fisherman of the sea-goddess Asherah (*dgy 'Aṯrt*), mentioned twice in the Baal Epic. Melqart and Eshmun are to lay the country waste and take away food, clothing and oil. Astarte, the goddess of war, is invoked to destroy the weapons of the Tyrians in the event of their rebelling against Assyria.

The figure of Ba'al-shamêm (Aram. *Be'el-šamên*) has never been adequately explained, so far as I know, though a valuable paper was devoted to the subject by Otto Eissfeldt in 1939.[53] The original identity of the divinity might have been recognized long ago, if the Aramaic inscription published by J. A. Montgomery in 1907[54] and studied by M. Lidzbarski somewhat later[55] had been taken seriously. The inscription was found in Cilicia and dates from about the fifth century B.C.; it invokes the sanctions of Be'el-shamên 'the great', and of the Aramaic moon-god Sahar and sun-god Shamash upon the violator of a boundary. In other words, Ba'al-shamêm was neither the moon nor the sun, but a god who was above both. This god was presumably the same as the South-Arabic Dhū-samāwi, 'Lord of Heaven', properly 'Athtar, god of Venus-in-the-Morning, and thus equivalent to the North-Arabic *Atar-samayin* of the seventh century B.C.[56] i.e., Aram. *'Attar-šamayin*, 'Morning Star of Heaven'. The reason why the name is so rare in the Bronze Age is simply that the appellation only began to displace the original name towards the end of the Bronze Age, centuries after the appellation *Ba'al* had displaced

with M.B. and L.B. remains, including a basalt stele fragment from the fifteenth century B.C. (cf. JEA XIV [1928], 36 ff.).

[53] 'Ba'alšamēm und Jahwe', OEKS II, 171–98.

[54] JAOS XXVIII (1907), 164 ff.

[55] *Ephemeris*, III, 64.

[56] In inscriptions of Esarhaddon and Asshurbanapal. Note again that the Assyrian pronunciation of the sibilant was reversed.

Hadad (Adad). The cult of Ba'al-shamêm was probably in the act of sweeping over Phoenicia in the tenth century B.C., as acutely observed by B. Mazar.[57] Besides the reference in the inscription of Yeḥimilk of Byblos, cited above, where Ba'al-shamêm is placed at the head of the pantheon, even before Ba'al-gebal himself, there are very important statements by Dius and Menander, quoted by Josephus.[58] The latter, who got his material from good Tyrian sources, states that Hiram, son of Abibal, 'dedicated the pillar of gold in the (temple) of Zeus'; the inscription was presumably visible for several centuries. Dius also mentions the building of 'the temple (*hieron*) of the Olympian Zeus'[59] explicitly. Menander further mentions Hiram's construction of sanctuaries (*naoi*) for Heracles (Melcarth) and Astarte. Evidently the cult of Ba'al-shamêm occupied a favoured place in Phoenicia at the time of Solomon!

There is an extraordinary tradition preserved by Sanchuniathon about the beginnings of the cult of Ba'al-shamêm (*Praep. Evang.*, I, 10, 7). It is said of the offspring of the primordial human pair, Genos and Genea, that they 'populated Phoenicia, and when droughts came, they raised their hands skyward towards the sun. The latter, he [Sanchuniathon] says, they considered as the only god, lord of heaven,[60] whom they call Beelsamēn, that is "Lord of Heaven" in Phoenician, and Zeus in Greek.' It is possible that this curious story goes back to an identification of the head of the Tyrian pantheon with the Egyptian sun-god (Aten) in the Amarna period,

[57] *Israel Academy of Sciences and Humanities*, I, No. 7, pp. 19 f.

[58] *Apion*, I, 113, 118 f.

[59] On Ba'al-shamêm = Zeus Olympios in the early second century B.C. see, e.g., Elias Bickermann, *Der Gott der Makkabäer* (Berlin, 1937), pp. 90 ff., and O. Eissfeldt, *op. cit.* (n. 53), pp. 191 f.

[60] The Greek text has clearly: '. . . θεὸν . . . μόνον οὐρανοῦ . . .', without variant readings.

when Tyre became the personal property of Meritaten (*Mayāti*).[61] This might account for the otherwise undocumented identification of the god with the sun.

However this may be, Mazar has made a plausible case (on other grounds), for recognizing some direct connexion between the cult of Ba'al-shamêm and Hiram's association with Solomon in planning, building, and equipping the Temple in Jerusalem. According to the data transmitted by Josephus, the temple was built (i.e., founded) in the twelfth year of Hiram, which overlapped the fourth year of Solomon, c. 958 B.C.[62]

G. Ernest Wright and I have written at length about the extent to which the Temple of Solomon reflects Phoenician culture, in architecture, art, and cultic furnishings.[63] We now know much more about the evolution of the plan itself, thanks to the work of Y. Yadin at Hazor (Late Bronze)[64] and to the finds of M. Dunand at Byblos (early Middle Bronze).[65] The former shows the same tripartite division along an axis running lengthwise; the passage from each section to the next is longer and narrower than in the Temple of Solomon. The much earlier structure at Byblos shows three sections at angles to one another, with still longer passages between them. It was thus impossible to see through the building along the axis. It is likely that the longitudinal axis was introduced into the tripartite scheme under Egyptian influence, perhaps in the latter part of the Middle Bronze. The familiar model of Solomon's temple and of the sanctuary of Ta'yinat in North Syria is probably no earlier than the end of the second millennium.

There is a striking reflection of Phoenician imagery in the short poetic dedication preserved in the Hebrew text of I Kings 8:12f. and the corresponding Greek text in the same chapter, verse 53a, which contains a line lost or deleted in MT. With due caution we may render (3+3:3+3):

Yahweh hath created[66] the sun in heaven—
Doth He desire[67] to tent in the storm clouds?[68]
Truly I have built Him a majestic house,
A dais on which to be enthroned for ever!

Here Yahweh is placed above both Baʿal-shamêm, Lord of the Morning Star, whose chief glory is the sun, and Baʿal-ṣaphôn, the older Hadad, Lord of the Storm. One must, however, note that there seems to have been an actual quasi-monotheistic current among some Phoenicians and most Aramaeans, which attributed a place to Baʿal-shamêm far above all other divinities of their pantheons. For instance, Zakir, king of Hamath in the early eighth century, in setting up a stele to his north-Mesopotamian god Iluwer, ascribes all successes of his life to Beʿel-shamayin. It is more than likely that the Israelites of the tenth century B.C. played a considerable rôle in encouraging this quasi-monotheistic movement, though they can scarcely be credited with the Egyptianizing identification of the god in question with the sun, as we have just seen.

A curious episode in the Baal Epic, where ʿAthtar tries

[66] For the best treatment of this text see J. A. Montgomery, *Kings* (ICC), pp. 189ff. My own rendering is new. For Greek ἐγνώρισεν lit. 'he made known', render probably 'he created' (cf. Acc. *šuma nabû*, 'to call by name' = 'create'). The often proposed *hēkîn* would also mean 'he created' in Phoenician.

[67] Read perhaps *ḥamád* = *baḥár*, 'to choose', instead of *'amár* (MT, LXX).

[68] Heb. *'rpl* cannot ערפל 'black darkness' (LXX γνόφος) but 'storm cloud(s)', *'rp* in Ugaritic. Actually the strange εκνοφου of GB should probably be read ἐκ νέφου, 'from a cloud'.

to usurp the throne of Baal while he is in the underworld, suggests that there had actually been intense rivalry between the Canaanite followers of Hadad Ba'al-ṣaphôn and the adherents of 'Athtar at an early date, well before the middle of the second millennium. The defeat of 'Athtar is vividly described in a Canaanite mythological dirge quoted in the seventh or sixth century B.C. (Is. 14:12 ff.):

> How hast thou fallen from heaven,
> Helel, son of Shaḥar (Dawn)!
> Thou didst say in thy heart,
> 'I will ascend to heaven,
> Above the circumpolar stars (*kôkăbê 'El*)[69]
> I will raise my throne
> And I will dwell on the Mount of Council
> In the back of the north (*ṣāphôn*);
> I will mount on the back of a cloud,
> I will be like unto 'Elyôn (= Baal).'

There must have been intense hostility between the priests and votaries of Melcarth, lord of Tyre, and the followers of Ba'al-shamêm. About the middle of the ninth century B.C. the cult of Melcarth had not only taken Israel and Judah by storm, but had also been accepted by Ben-hadad of Syria.[70] A few years later Israel and Judah had risen against the foreign intruders and we hear no more of Melcarth among the Aramaeans. On the contrary, Be'el-shamên had regained his prestige, as we know from the Zakir inscription (see above). Melcarth had become the chief god of Carthage, Tyre's chief colony, and c. 450 B.C. Herodotus (II. 44) places the gold monument which Menander and Dius locate in the temple of Olympian Zeus (= Ba'al-shamêm), in one of the

[69] This phrase (also found in the Phoenician inscription from Pyrgi, c. 500 B.C.) refers to the far northern stars which never set (Eg. *iḫmw sk*); it symbolizes eternity.

[70] BMB III, 65–76; BASOR 84 (1941), 7–12; G. Levi della Vida, BASOR 90 (1943), 30–2.

two temples of Heracles; Zeus is not mentioned at all. Of course Tyre had been destroyed by the Chaldaeans c. 572 B.C.,[71] but the loss of influence on the part of Ba'al-shamêm remains noteworthy.

The official foundation of the Tyrian colony at Carthage in 814 B.C., according to the oldest and most solidly established Phoenician tradition, brought with it the introduction of a slightly modified pantheon. The chief deities of Carthage ('New Town' = *Qart-ḥadašt*) were Ba'al-ḥammôn, Melcarth, and Tennît ('Taniť'). We have already discussed the names and have touched briefly on the functions of the divinities in question. Following Greek identifications (at least in the first two cases), the Romans identified them with their own Saturn (Greek *Kronos*), Hercules (*Heraklēs*), and Juno (especially in her rôle of *virgo caelestis*).

One of the most significant aspects of Punic religion consists in its archaic appearance and secondary specialization. The name of the chief god, *Ba'al-ḥammôn*, 'Lord of the Brazier',[72] first appears in Syria together with *Ba'al-ṣmd*, 'Lord of the Mace',[73] and *Rakkâb-el* in the inscription of Kilamuwa of Sham'al (Zincirli), c. 825 B.C. The sequence of gods corresponds, as pointed out by B. Landsberger,[74] with the three gods listed in two inscriptions of the eighth century from the same city: Hadad, El, and Rakkâb-el. That the 'Lord of the Mace' is a form of Hadad is obvious, and the identification of Ba'al-ḥammôn with El follows naturally. This combina-

[71] For this date see the convincing paper by O. Eissfeldt (OEKS II, 1 ff.).

[72] This underlying meaning was established in ARI[1] (1942), 215 f., and was first applied to Ba'al-ḥammân by J. Février, JA CCXLVIII (1960), 179, but his association of the name with the sun will not do—Saturn was certainly not Helios nor Apollo.

[73] Since Baal smites Yam with a *ṣmd* in the epic, and since he is often depicted with a mace, this rendering is much more probable than the usual 'team (of horses)'.

[74] *Sam'al* (Ankara, 1948), pp. 45 ff.

tion provides a clue to the nature of the chief god of Carthage. Sanchuniathon furnishes the complementary evidence by describing: (1) how Elos (=Kronos), in order to stop a destructive plague, sacrificed his only (*monogenēs*) son to his father Heaven (*Ūranos*), introducing the practice of circumcision to commemorate the occurrence; (2) how Elos, during a great war, sacrificed his only son by 'the nymph Anobret', after dressing him in royal attire and preparing a special altar.

We are not told by Philo Byblius how the sacrifice was performed, but in Carthage Ba'al-ḥammôn (=El) was honoured down to the third century A.D. by having children sacrificed as burnt offerings—presumably to recall the debt which the Phoenicians owed to him for his own sacrifices to save their forefathers. That El should be the patron of human sacrifice may seem strange, in view of the fact that he appears in early sources as the 'Merciful One' (*ḏû-pe'di, ḏû-ṭôbi*, etc.),[75] but it is only another of the many paradoxes exhibited by polytheism everywhere.

Greek and Roman authors have provided us with a wealth of information about the practice of human sacrifice in Phoenicia and North Africa.[76] Thus Quintus Curtius (first century A.D.), the chronicler of Alexander's campaigns, says that when the inhabitants of Tyre were threatened by Alexander's siege of the city, they decided to resort to a practice which had been in disuse for centuries, namely, revival of the institution of human sacrifice in order to appease the anger of the gods. From his statement we might infer that it had been abandoned for 'many centuries' (*multis saeculis*), but we may safely limit ourselves to several centuries (see below). In any event, it was still being practised in Phoenicia when the early Punic colonies in the western Mediterranean were founded (tenth to eighth centuries B.C.). Among classical

[75] See F. M. Cross, Jr., HTR LV (1962), and Heb. *'El ḥannûn we-reḥûm*, 'God, merciful and gracious'.

[76] See the bibliography given by W. Röllig in WM, 300.

authors who have transmitted details about the burning of children as sacrifices to Kronos (Saturnus) are especially Diodorus Siculus (first century B.C., on events of the late fourth century B.C.) and Tertullian (late second century A.D.). Diodorus followed Timaeus, a Sicilian who was contemporary with the events in question, whereas Tertullian was himself an African of pagan parentage, whose background in law gave him valuable information about the efforts of successive Roman emperors to stamp out the practice of human sacrifice.

In spite of the documentation available in pagan and Christian sources about human sacrifice in Phoenicia and Carthage, the rationalistic critics of the nineteenth and early twentieth centuries refused to believe that the reports had any basis, especially since archaeological work seemed not to furnish any support.

In 1921 the situation changed with the discovery at Carthage of a pointed stele from about the third century B.C. dedicated to Tennît (as shown by the symbols), with the representation of a priest holding a human infant in the usual position for offering a lamb.[77] This isolated find was followed in 1930 by the discovery at Ngaus in eastern Algeria of five stelae inscribed in Latin, dating from the second or third century A.D.[78] From these texts there emerged interesting variations of a dedicatory formula 'To the holy lord Saturn (Ba'al-ḥammôn), a great sacrifice of night-time (*sacrum magnum nocturnum*), *molchomor*, breath for breath, blood for blood, life for life'. It was quickly pointed out that the Punic expression corresponded exactly to an already published *MLK 'MR*, the second part of which was known to mean 'lamb' in Punic (as in Ugaritic and Aramaic).

The finds at Ngaus made it possible to explain previously excavated stelae from el-Ḥofra (Roman Cirta, near

[77] For an excellent photograph see Jacques Allibert, *Archéologia* 1:1 (1964), 82.

[78] MOPH, 1 ff.

Constantine in eastern Algeria). Among the 1875 finds were pre-Christian Punic inscriptions, some of which replaced *MLK 'MR* by *MLK 'DM*, occasionally followed by the words *BŠR(M) BTM*.[79] Evidently there had been an increasing tendency to substitute a lamb for a child, a fact which would explain the substitutionary formula 'life for life', etc.

In 1935 Otto Eissfeldt published a monograph[80] in which he brought the evidence together, combining it with the data for biblical 'Moloch'. He showed convincingly that *mōlek* was a sacrificial term and not the name of a Canaanite divinity. Punic *molk* and Heb. *mōlek* (vocalized correctly by MT) are in fact the same word, and both refer to a sacrifice which was, for Phoenicians and Hebrews alike, the most awe-inspiring of all possible sacred acts—whether it was considered as holy or as an abomination. Reception of Eissfeldt's drastic reinterpretation of the meaning of 'Moloch' was mixed; most accepted it, with slight modifications here and there.[81] There are probably few competent scholars who now believe that a god Moloch is intended in any biblical passage referring to human sacrifice.

Meanwhile, exploration has continued, with increasing success.

[79] There has been much discussion of the meaning of this expression. Since G. Levi della Vida's demonstration that *btm* was rendered in Latin (first century A.D.) *de sua pecunia* (Accademia dei Lincei, *Rendiconti*, Ser. VIII, Vol. IV, fasc. 7–10 [1949], pp. 400–5), the meaning 'paid with his own funds' has been widely accepted (e.g., by H. Cazelles, *Dictionnaire de la Bible: Supplément* V [1957], 1341—but contrast J. Février, JA CCXLVIII [1960], 172). I should, however, prefer to equate it with Heb. *be-tōm*, and render 'completely'. In the Lepcis inscription it would mean '(paid) in full'. Our formula then means '(whose) body (cf. Prov. 14:30) (is) intact'.

[80] MOPH. Cf. my enthusiastic review in JPOS XV (1935), 344, as well as my more nuanced statement in ARI[1] (1942), 162 ff.

[81] The only real difficulty came with the discovery of a place-name *Ilummuluk* or *Ilumalik* at Mari; see below.

In 1950, seventy-five years after the first important discovery of stelae with Punic inscriptions at Cirta (el-Ḥofra), came the sensational find of no fewer than 700 stelae (or fragments), over 300 of which were inscribed. This lot, which covers at least seven centuries, was admirably published in 1955; a number of these Punic texts mention *MLK 'DM* as well as *MLK 'MR*, thus notably increasing our documentation.[82]

About 1920, stelae of the same types began to be found by natives in Carthage itself, in the area which became known as the 'Precinct of Tanit', now generally called the 'Tophet'. In 1925 excavations were carried out by a Franco-American expedition headed by Francis W. Kelsey, with Donald Harden among its members.[83] Since then other excavations have been undertaken at this rich and still only partly excavated site, notably by Pierre Cintas. Here we have a stratified site, consisting of three main strata, the lowest of which seems to date from the ninth–seventh centuries B.C.[84] This period has yielded many urn-burials of children (mostly very young infants)[85] and sacrificial animals, all of which had been cremated, but no stelae; the stelae begin only in the second period, in the seventh century B.C. No other Punic 'tophet' is so early, though the finds at el-Ḥofra cover a longer period. Other 'tophets' have been located at Sousse (Hadrumetum), and elsewhere in Punic Africa; the former is particularly important, since it also yielded a cremation pit like one described by Diodorus (see

[82] See André Berthier and René Charlier, *Le sanctuaire punique d'el-Hofra à Constantine*, Paris, 1952–55.

[83] Cf. L. Poinssot and R. Lantier, RHR XLIV (1923), 32–68; F. W. Kelsey, *Excavations at Carthage, 1925: A Preliminary Report*, New York 1926; Donald Harden, *The Phoenicians* (London, 1962), 95 ff.

[84] Cf. Harden, *op. cit.*, p. 100.

[85] See R. de Vaux, *Studies in Old Testament Sacrifice* (Cardiff, 1964), pp. 82 f., reporting on the examination of skeletal remains by Dr. J. Richard.

above).[86] In the pit all contents had been reduced by the heat to a mass of burnt and calcined matter. In the Phoenician settlements in Sardinia and Sicily, a number of examples of sanctuaries of the 'tophet' category have now been excavated, especially at Nora, Tharros (Tarshish?), Sulcis and Monte Sirai in Sardinia, and at Motya in Sicily.[87] Some of the Sardinian urns go back to Greek geometric patterns—no later than the eighth century B.C. and probably earlier. The stelae are closely related to North-African prototypes. None of the island stelae appears to be earlier than the sixth century B.C., and most are several centuries later.

The relatively late date at which the practice of setting up commemorative stelae in connexion with 'tophet' sacrifices was introduced, makes it improbable that they were derived from Phoenicia proper. There is not the slightest reason to connect them directly with the stelae set up at Gezer, Hazor and Byblos to commemorate ancestors.[88] On the other hand, there is a certain resemblance in function to sacrificial stelae from the temple of Dagon at Ugarit, which bear inscriptions recording mortuary offerings.[89] That sanctuaries of the 'tophet' class have not yet been found in Syria-Palestine may easily be accounted for. Like Tophet in Jerusalem, they must preferably have been located near the bottom of valleys on the south or east of the towns to which they belonged. By now most of them must be covered deep with débris, blown or washed over them.

There is also a substantial amount of written evidence for the existence of human sacrifice among the Moabites and Aramaeans during the tenth–seventh centuries B.C. The biblical evidence with respect to Moab is found in II Kings 3:26 f. and Amos 2:1. In the former passage Mesha, king of Moab, is said to have sacrificed his first-born son, heir to the throne, on the city wall before the horrified besiegers. In his own long inscription, Mesha reports that he had slaughtered the entire population (7,000) of Nebo, whom he had devoted to ritual destruction (*ḥerem*) for 'Ashtar-Chemosh. Since Chemosh, as lord of Moab and its king, is mentioned ten times elsewhere in the inscription, we may safely assume that he was identified with the morning star, the lord of heaven (see above). J. Gray is, therefore, justified in bringing in St. Nilus' account of his adventures in Sinai, where his younger son had a narrow escape from being sacrificed to the god of the morning star by the nomad Arabs who had migrated into this region from eastern Arabia.[90] It is true that the reliability of Nilus has been impugned by various scholars, including J. Henninger.[91] However, no anachronisms have been shown to exist in the work of Nilus, ostensibly composed in the early fifth century A.D., and most recently Philip Mayerson has demonstrated the accuracy of Nilus' topographical information.[92] That such

[90] See LC², 170 f., and for a criticism of his use of Nilus see A. Caquot, *Syria* XXXV (1958), 50, n. 7.

[91] In his important monograph 'Ist der sogenannte Nilus-Bericht eine brauchbare religionsgeschichtliche Quelle?' (*Anthropos*, L [1955], 81–148). While I sometimes disagree with Henninger's views, we are all under tremendous obligation to him for his wealth of learning which he has brought to bear on ancient Arabia.

[92] See his paper, 'The Desert of Southern Palestine According to Byzantine Sources' (PAPS CVII [1963], 160–72). He has shown that the narrative of Nilus agrees closely with the archaeological and documentary data recovered by the Colt Expedition. If we remember that Nilus had been an accomplished Byzantine courtier, we shall not be worried by the suggestion of critics that he imitated then popular romances in writing his story. True adventures in the

a broadly educated man as Nilus wrote in a sophisticated style showing the influence of the pagan Greek novelists is no argument against the veracity of his account. Civilized travellers in desert regions often have unusual adventures, as I can attest from extended personal contact with adventure-prone archaeological explorers. There is, besides, ample documentation in Aramaic and Arabic sources for human sacrifices made to the evening star (Aram. *Kawkabtâ*, Arab. *al-'Uzzā*).[93]

Returning to human sacrifice in Moab, H. Tur Sinai (Torczyner) has offered a convincing revocalization of the consonantal text of Amos 2:1,[94] which should be pointed to mean (with a further correction of my own):

'Thus Yahweh has spoken,

"Because of three offences of Moab,
Because of four, I shall surely requite him!
Because he burns the bones . . .
. . . of a human sacrifice to a demon."'

The usual Massoretic pointing, which means 'because he burned the bones of the king of Edom into lime', yields a very strange sense. How can one burn bones without calcining them? By simply changing the pointing to read *mōlek 'ādām laś-śēd* instead of *mélek 'Edōm laś-śîd*, one obtains a perfectly satisfactory text, closely parallel to Psalm 106:37.[95]

Human sacrifice to the god Adad is attested among the Aramaeans of Gozan at the source of the Khābûr in northern Mesopotamia (late tenth century), in Late-

Arabian desert have often sounded quite incredible, as I know from my own earlier life.

[93] See J. Henninger, 'Menschenopfer bei den Arabern' (*Anthropos* LIII [1958], 721–805); on sacrifice to the evening star see p. 742.

[94] LS 1 (1948), 64 ff. Tur-Sinai did not change the last word; see n. 95 for an exact parallel.

[95] 'And they sacrificed their sons and their daughters to demons (*laś-śēdîm*).'

Assyrian economic texts under Aramaean influence, and in the North-Syrian cult of Sepharvaim (Dead Sea Scroll Isaiah *SPRYYM*, elsewhere *Sibraim* = Assyr. *Šabarain*),[96] where children were sacrificed (II Kings 17:31) to the god Adrammelech (= Assyr. Adad-milki, attested in Aramaean personal names from late cuneiform tablets.[97]

What evidence do we have for 'moloch' sacrifices at Ugarit? There is surprisingly little—and even that is controversial. Schaeffer, following Virolleaud's first interpretation of the liturgical text 19.15, discovered in 1955 and published ten years later, has insisted that the text has nothing to do with human sacrifice,[98] but Virolleaud has meanwhile become more cautious in the light of Février's article.[99] Unfortunately, the text is incomplete; the first two lines run:

(1) Wine which is measured by the hand of [ ]
(2) in the *mulk* sacrifice (*dbḥ . mlk*).

A horizontal line separates line 2 from 3. In line 3 we have only 'sacrifice of the north' (*dbḥ ṣpn*); in 7, 10 and 11, 'the palace' (*bt.mlk*); in 14, 'sacrifice of Baal' (*dbḥ.b'l*). The divinities Astarte and Resheph are also mentioned, both in enigmatic context.

That *mulk*)*mōlek* meant originally 'kingdom, royalty' is certain; it often appears in the Bible in this sense, and it is also found in Ugaritic, South Canaanite, and early Aramaic.[100] Such cases of abstract nouns assuming a concrete meaning, like *Qdš*, 'Holiness' (appellation of Asherah), or Aramaic *qudšâ* as title of God, are very common; a case in point is *Molk-'aštart* (not *Milk-'aštart*),

literally 'Royalty of Astarte'.[101] There was a town in eighteenth-century Mari named *Ilumuluk* or *Ilumalik*,[102] literally 'God-Royalty' or 'God-King'; for the form cf. *Iluwêr* and *'El'eb*. It is reasonable to suppose that the name originally referred to the god of the king or the royal god, and that **ḏabḥu mulki* came to mean 'royal sacrifice', i.e., the noblest possible sacred act. Eventually *mulk/molk* developed the sense 'princely sacrifice' by itself, after which the transition was easy to 'vow of exceptional sanctity', and finally 'solemn promise' (Syriac *mulkânâ*).

In view of the denunciation of such sacrifices in all recorded stages of Mosaic law, it is in the highest degree unlikely that 'moloch' ceremonies were tolerated in Israel before the eighth century B.C., though there were doubtless occasional occurrences of them among pagan or paganizing elements of the population. Otherwise we should find some specific reference to them outside of 'P' in Leviticus, Jer. 32:35, and II Kings 23:10. As I have elsewhere maintained, the re-introduction of the practice into Israel presumably came with the growth of pagan Aramaean influence from the time of Ahaz on.[103]

The story of Abraham's plan to sacrifice Isaac had probably been handed down from the Patriarchal Age. We now know that there was a striking change in Babylonian burial practices between the Third Dynasty of Ur (lowest date c. 2060–1950) and the death of the Amorite king 'Ammiṣaduqa (c. 1562 B.C.). In the former a number of

[101] On this divinity see especially A. Caquot, *Semitica* XV (1965), 29–33, who has shown that it is masculine. I strongly suspect that the figure in question is androgynous like Phanebal of Ascalon (see Ch. III).

[102] See ARM XV (1954), 127: spelled *I-lu-um-mu-lu-uk(KI)*, *AN-mu-lu-uk(KI)*, with gentilic *AN-mu-lu-ka-ya(KI)*, *I-lu-ma-li-ka-ya(KI)*.

[103] ARI², 161 ff.

persons were put to death and buried with the king,[104] just as in the Royal Tombs of Ur (c. twenty-fifth century B.C.) and the tombs of the First Dynasty in Egypt (c. twenty-ninth century B.C.). In the case of 'Ammiṣaduqa the only death seems to have been that of an officer who fell into the burial pit.[105] This shift in practice took place during the Patriarchal Age, *latiore sensu*.

I still maintain (cf. above) that the official Phoenician cult which was brought into Israel in the time of Jezebel, and which even obtained a foothold in Judah under the queen-mother Athaliah, was that of Melcarth, which certainly enjoyed a revival of popularity in Tyre as well as in neighbouring Aram about this time. Like Nergal, whose name meant 'Lord of the Great City', Melcarth, 'Lord of the City' (the Nether World) was at home both in the Upper and the Lower World; his identification with Heracles illustrates the basically chthonic nature of the latter's cult. It was Heracles who conquered the three-headed monster Cerberus, and therefore became the defender of all who were threatened by the dread powers of the Nether World. Like Nergal, who was worshipped at Tyre in Graeco-Roman times, Heracles was *par excellence* the conqueror of dreaded monsters; this was certainly an attribute of Melcarth. Human sacrifice is nowhere mentioned as an issue in the conflict between Elijah and the followers of Baal and Asherah. This fact also militates against identifying the Baal in question with

[104] This was true of the tombs of both Shulgi and Amarzuen, in each of which there were two chambers, one intended for the king and the other containing the bodies of persons buried with the king (Woolley, *Excavations at Ur* [London, 1954], p. 157). Evidence from Sumerian literary texts confirms the situation; see S. N. Kramer, BASOR 94 (1944), 2–12 (legend of Gilgamesh), but this text describes burial of a whole retinue, as in the Royal Tombs of c. 2500 B.C. There is still some difference of opinion; cf. the discussions by C. J. Gadd and S. N. Kramer in *Iraq* XXII (1960), 51–68.

[105] See Addendum.

Ba'al-shamêm, originally the god of the morning star, as we have seen. It is not impossible that the decline of the practice of human sacrifice at Tyre was partly connected with the increasing popularity of Melcarth and Eshmun, gods who healed instead of destroying. However this may be, it is very hard not to give Israel credit for having helped by its example to encourage the opponents of human sacrifice in Phoenicia.

D. PHOENICIAN HIEROPHANTS AND THEIR METAMORPHOSES

A striking contrast between Phoenicia and Israel is the great popularity in the former of specifically named hierophants, inventors, and sages in general, whereas in Israel native hierophants in this sense were virtually unknown, and emphasis was laid on 'men of God' or 'men called (by God)', as we have seen in § A. The absence of native hierophants in Israel is all the clearer because of numerous appearances of Canaanite and Phoenician hierophants to fill the place of native figures missing in extant Israelite literature. Outstanding among Phoenician–Canaanite hierophants is Taauth, who was called by Sanchuniathon 'the wisest man who ever lived under the sun'. This wisest man, Taauth (the best spelling preserved in the MSS), is always identified in the text of Eusebius with the Egyptian god Thoth, the older form of whose name down to about 1200 B.C. was *Ṭaḥawte* (still earlier *Ḏḥwty*, i.e. *Djaḥáwtey*).[106] Since the later form with *ô* instead of *aw* displaced the archaic form in Egypt before c. 1100 B.C. at the latest, it is clear that the

[106] Note that *Ṭḥ* is the normal early equivalent of the name in Semitic but that assimilation of the first to the second of two such 'litterae incompatibiles' ultimately yielded *Ṭḥ* as the later Aramaic form of the month-name *Thōth*, especially when the first two consonants fell together as a strong aspirate (= *t* not *ṯ*), Greek *thēta*, in transcription.

figure of the ibis-headed moon-god of wisdom had been taken over by the Canaanites not later than this time and perhaps at a considerably earlier date.

The most important literary text attributed to Taauth is the Cosmogony of Taauth, which was based on the native cosmogony of the chief city of Thoth, Hermopolis Magna in Middle Egypt. I shall demonstrate elsewhere[107] that there is no clear evidence for any of the syncretistic forms of this cosmogony which appear in later Egypt. There is indeed a tendency to replace the Egyptian gods by natural phenomena, but this process of rationalization has virtually nothing in common with the metaphysical reinterpretation of the Sidonian cosmogony of Mochus by Damascius (see above). To what extent the rationalistic thought of Sanchuniathon has actually changed details of the Taauth cosmogony must remain uncertain.

Thoth was also credited by the Egyptians with the invention of script, just as Taauth was among the Phoenicians. Taauth as inventor is bracketed in Job with an enigmatic figure which has hitherto remained completely without reasonable explanation. In Job 38:36 we have the following couplet:

> Who put wisdom in *Ṭḥwt*?
> Or who gave understanding to *Škwy*?[108]

A number of years ago, after beginning systematic work on the Phoenician material in the Bible, I saw that the enigmatic *ṭḥwt* must refer to Taauth as the hierophant of Sanchuniathon. It is true that the Hebrew *Ṭḥwt* has often

[107] In my forthcoming *Experience on the Road to Reason: Phoenicia, Israel and Ionia.*

[108] On earlier exegesis of this long enigmatic verse see Marvin Pope, *Job* (Anchor Bible, 1965), pp. 255 f. We may add that the Greek translators in the second century B.C. had no better idea of the meaning—they rendered:

> Who has given wisdom to skilled weaving women,
> Or understanding to (1) a skilled embroiderer?

been connected with the Egyptian god Thoth, prototype of Taauth. Others have rendered the word as 'ibis', Thoth's sacred bird (!). The parallel name, vocalized *Śekwî*, has a very curious history, as we shall see presently.[109] (Note that the distinction between *ś* and *š* is in the pointed, not the consonantal, text.) Since the discovery of the Hebrew and Ugaritic word *ṯkt*, 'bark' (Hebrew plural *šekîyôt*),[110] it has become clear to me that if the basic consonants are right, *Škwy* ought to mean 'mariner, navigator', like Ugaritic *dgy*, 'fisherman', from *dg*, 'fish'. That the name has been correctly transmitted has now been demonstrated by the discovery of a carved seal in script of the fourth century B.C., at Tell Makmish, a Phoenician seaport on the coast of northern Palestine. The seal reads: 'Belonging to Ḥanan, son of *Škwy*'.[111] On the basis of a rabbinic prayer, 'Blessed be Thou, O Lord our God, king of the world, who didst give to *Śkwy* the intelligence to discern between day and night', the word was explained by mediaeval Jewish commentators as meaning 'cock, barnyard fowl'. Though this explanation sounds ridiculous, it gives us an important clue. Why was the cock considered as the creature which was able to tell day from night? Naturally because the cock crows before the first break of dawn. But this made the barnyard fowl a natural alarm clock for fishermen on the Sea of Galilee, who set out in their boats well before the first break of dawn in order to assure a good catch. Fish in the Sea of Galilee go deeper into the water after dawn and are no longer

[109] There is no such Coptic name as *Sūchī* = the planet Mercury, as supposed by G. Hoffmann (letter of 5 Sept. 1962, from H. J. Polotsky). Actually the word was invented by modern European students of Coptic, who copied one another's misunderstandings, going back to the element—σουχις (from older *Sbk*, name of the crocodile-god) in late personal names.

[110] See my remarks (partly suggested by H. L. Ginsberg) in the Bertholet *Festschrift* (Tübingen, 1950), pp. 4 f., note.

[111] I wish to thank Dr. N. Avigad for showing me a photograph of the seal, which he was then about to publish.

easy to catch.[112] Half humorously, the Galilaeans living around the lake seem to have given the title 'Sailor' to the cock.

Close relationship between Taauth and *Škwy* is confirmed by Sanchuniathon's statement that Taauth was the son of Misōr (Phoen. *Mîšôr*), while his brother Sydyk (Phoen. *Ṣedeq*) begot sons who are said to have invented the ship. That these myths are early is shown by the fact that the same pair *Mšr* and *Ṣdq* has recently been found in Ugaritic texts.[113] Taauth himself is said to have invented the script and to have planned in detail for the symbolism and iconography of the gods; he was finally placed by Kronos (El) over the land of Egypt. Taauth was, moreover, not only an inventor himself but the direct or collateral ancestor of a large family of divine or quasi-divine inventors.

The figure of Taauth appears again in the Bible, in the sense of 'esoteric lore', or the like. In Psalm 51:8 (51:6 in English), we may probably render:

> Truly Thou takest ⟨no⟩ pleasure in esoteric lore[114]
> But hidden wisdom[115] Thou shalt teach me.

The best illustration comes through Porphyry, whom Eusebius (1. 10, 43) quotes as follows:

Taauth, whom the Egyptians call Thoth, who excelled in wisdom among the Phoenicians, was the first to organise re-

[112] Cf. Franz Dunkel, C.M., *Biblica* v (1924), 380; G. Dalman, *Arbeit und Sitte in Palästina*, vi (1939), 356.

[113] These are, of course, Heb. *mîšôr-mêšārîm* and *ṣedeq*; cf. *ṣedeq ū-mêšārîm*, etc.

[114] Reading *'ĕmét⟨lô'⟩ḥafaṣtā bĕ-ṭaḥût* instead of *hēn 'emét ḥafaṣtā ba-ṭûḥôt: hēn* is vertical dittography from v. 7; *lô'* is required by the context. Another possibility is that we have here the *bĕ* of comparison, first pointed out by M. Dahood: 'Thou dost prefer truth to esoteric lore.' This was my first rendering of the passage and Father Dahood tells me that he has also employed this syntax in his forthcoming *Psalms*, II (Anchor Bible).

[115] The word *ṣātûm* is ambiguous; see p. 248.

ligious worship, (removing it) from the ignorance of the common people to systematic practice. After long ages he was followed by the god Sūrmūbēlos and ⟨the goddess⟩[116] Thūrō, whose name is equivalent to *Chūsarthis*; and they clarified the theology of Taauth, which had been concealed and obscured by allegories.[117]

As shown on pp. 137 f. the two deities are Ḥaurôn, pronounced *Ḥûrûn* in later Phoenician, and his consort, who appears on the first Phoenician incantation from Arslan Tash as the protectress of women in child-birth. Thūrō is older Egyptian *Tewūre* (Greek Thoéris), and Chūsarthis is older *Kôšart*, goddess of child-birth, the singular of the *Kôšārôt* of Psalm 68:7, Phoenician *Kûšart*. We may safely suppose that Ḥaurôn and Kôshart were singled out of the crowd of divine and semi-divine personalities because of the abundance of incantations credited to them. For the Psalmist the name *Ṭaḥût* had become a word embodying the esoteric wisdom of the hierophant. To the author of Job, who was directly acquainted with Phoenician literature, *Ṭaḥût* was just what Sanchuniathon called him in the sixth century B.C., 'the wisest man who ever was under the sun'.

In this connexion, another Phoenician hierophant may be mentioned: Daniel or Dan'el, father of Aqhat, hero of the epic which bears his name. In the early sixth century B.C., Ezekiel addresses the prince of Tyre (28:3):

Art thou wiser than Daniel?
Hath he not equalled thee in all hidden lore?[118]

Note that the word used for 'hidden, esoteric lore' is the same in Psalm 51:8 and Ezek. 28:3. Elsewhere (14:13, 19) Ezekiel mentions Dan'el with Noah and Job as an

[116] Though not hitherto noticed, the word θεὰ has obviously been dropped by *homoioarkton*.

[117] Here again we have an obvious influence from Hellenistic-Roman theosophic speculation in the manner of Plutarch, *De Iside et Osiride*. These 'allegories' were merely myths.

[118] A rhetorical question with LXX.

archetype sage, and Jubilees 4:20 states that Enoch's wife, Edni, was the daughter of Danel, thus continuing the Dan'el tradition into the second century B.C. In the epic Dan'el is called 'man of Harnam', and since the latter town must have been identical with the Harnam of the Egyptian account of the battle of Kadesh, we can safely locate it at Hermel, near the source of the Orontes (not far from Ba'albek).[119]

Continuing down the line of Phoenician hierophants as reported by Philo Byblius, we come upon two basically historical figures, Thabion and Eisirios. About them Philo reports as follows: (1. 10, 39):

All these things Thabion as[120] the first hierophant of all Phoenicians born from of old, speaking in allegories and mixing natural with cosmic happenings, transmitted to the ecstatic votaries and prophets who initiated the mystery rites; but they, contriving in every way to increase the delusion, handed them down to their successors as well as to those brought in from outside.[121] One of them was Eisirios, the discoverer of the Three Books; he was the brother of Chna, whose name is equivalent to 'Phoenician'.

Immediately before this quotation, Tauthos is called 'god' and is followed by the 'first' human hierophant Thabion, who is himself followed by ecstatics and prophets, including especially Eisirios, author of three mysterious books (see below).

The name *Thabiōn* is actually found in its original form at Ugarit, where it appears as a personal name *Tabiyanu* in the fourteenth century B.C.[122] The transcription is per-

[119] BASOR 130 (1953), 26 f.

[120] The Greek text is corrupt; I suggest reading, instead of the impossible θαβιωνος or the syntactically awkward θαβιων ος (= ὃς) simply ὡς.

[121] That is, to men who did not belong to initiated families, but were initiated 'on their own'.

[122] PRU III, No. 16.249, line 13, written *Ta-bi-ya-nu*. The name was originally Hurrian (like Ethan below), as we know from the

fect, since *thēta* reflects Phoenician aspirated *t* (*taw*), not *ṭ* (*ṭēth*), and the *a* in the penultimate syllable is unquestionably short,[123] yielding Phoenician *Tabiōn* instead of *Tabiûn*, as it would if this *a* were originally long. Thabion thus belongs to the same ethnic group of hierophants as we find in biblical Ethan, transcribed *Eytān* (where the original *a* of the name had to be short) and Heman (*Heymān*), where the same is true.[124] 'Ethan' stands by a common shift, now well attested in North-west Semitic, and normal in Accadian, for the Ugaritic name *Attuyanu*,[125] alphabetic *'Atyn* (**Atyănu*⟩ **Aytănu*⟩ **Eytān*). In Hebrew these two figures appear among the greatest sages of antiquity, who were allegedly excelled only by Solomon (I Kings 5:11 = Eng. 4:31). They were considered in Israel as the founders of the two most important Davidic musical guilds, but their names may be used simply as a designation for schools of musicians. These names ending in *yănu* were mostly Hurrian in origin, as was true of this hypocoristic ending.[126] It is interesting to note the fact that Ethan and Heman were archetype musicians, just as Thabion was believed to have founded dramatic reli-

---

ending *yanu*, which was properly a Hurrian gentilic ending, also used for hypocoristica; cf. *Masriyanu*, 'Egyptian (land)' (so [!], spelled Mašriyan-), *Talmiyanu* from the fuller *Talmi-Tešub*. Cf. also the Hurrian hypocoristicon written *Tabeya*, *Tabiya*, *Tapaya* (NPN, 147), which have nothing to do with Accadian names beginning with *Ṭāb-*.

[123] Originally short *a* followed by one consonant, which became *ā* in Hebrew, changed to *ō* as in *dāgōn* for *dăgăn*; cf. PPG 30, § 78.

[124] Over twenty years ago I presented a paper on the Ugaritic names ending in *yn* but have never published it. See provisionally ARI², 127, 210 (n. 99).

[125] See PRU III (1955), 243b for several occurrences, spelled *A(d)duyanu* and *Attuyanu* = *'Atyn*; cf. the Hurrian Adduya, son of Iṯḫip-šarri (NPN, 40a). Note that cuneiform *d* and *t* reflect the same Hurrian phoneme.

[126] See above on this ending. There is, e.g., no doubt at all about *Šukriyanu* (PRU III, 255) = *Šukri-Tešub* (NPN, 137, borne by a score of different persons).

gious rites, in which music played a dominant rôle. The name *Eisirios* is unparalleled, and it may well be a corruption of *Sisirios* (CICIPIOC instead of EICIPIOC). This again may be *Sisera'*, name of a famous enemy of Israel in the twelfth century, as well as of the putative ancestor of a class of foreign temple servants in Jerusalem; it can easily be identified with the cuneiform personal name *Sisaruwa* (written *Zi-za-ru-wa*),[127] which sounds Luvian. Such origin is scarcely surprising, since the region north of Ugarit and the Plain of Antioch was occupied by Luvians. Eisirios or Sisirios is said to have been the 'discoverer of the Three Books (τῶν τριῶν γραμμάτων εὑρετής)'. These books have been a complete mystery, but they have perhaps turned up lately in the Aramaic 'Elect of God' text from Cave IV at Qumran. In this text, from about the first century B.C., we are told of the birth of Noah, 'who will not possess knowledge until the time when he comes to know the Three Books'.[128] Since this pseudepigraphical literature contains much material from ultimately pagan sources, they may be identical with the enigmatic Three Books found by the Phoenician sage.

The other ancient sages compared unfavourably to Solomon (I Kings 5:11), are called Chalcol and Darda, the sons of Mahol. As I pointed out in 1942, the designation *Bĕnê Māḥōl* refers to members of a guild of dancers or singers—probably combining both, as so often in an-

127 PRU IV, 286 (19.68: 33 ff.), where *Sí-sà-ru-wa* appears three times as the name of a fourteenth-century prince in north-western Syria said to be hostile to Ugarit. The sign *zi* is regularly used to transcribe the Hittite affricative *z* (probably *ts*) and the similar Canaanite *samek* in LB tablets. *Samek* shifted from *ts* or *č* to *s* at some time in the early part of the Iron Age.

128 On this text, published by J. Starcky, see most recently J. A. Fitzmyer, S.J., CBQ XXVII (1965), 348–72, especially pp. 357, 362 f. In my own opinion, this fragment comes from a second copy of the Genesis 'Apocryphon', and takes its place in a missing column of the latter.

tiquity.[129] 'Chalcol' appears also as the name of a female musician of the thirteenth century B.C. at the temple of the god Ptaḥ-prince-of-Ascalon.[130] The name is written in Egyptian syllabic orthography, and must be read either *Kurkur* or *Kulkul*, according to the now generally accepted transcription of syllabic orthography.[131] Needless to say *Kalkōl* is a normal Hebrew dissimilation of original *Kŭlkŭl*.

In evaluating this material, we must remember that music, dancing, and poetry were all considered to be the necessary concomitants of esoteric religious 'wisdom', as may be illustrated by a wealth of material from ancient Mediterranean lands. Note also that Greek *prophētēs* is used of ecstatics, whereas *hierophantēs* is employed for sages who were believed to have originated or organized the practice of religion. The Greek translation of *nabî'* as *prophētēs* is thus intimately connected with the ecstatic tradition in both Phoenicia and Israel. This fact was well known to the Israelites; cf. the references to ecstatic prophets of Baal as *nĕbî'ê Ba'al* in I and II Kings. The prophets of Israel, as we have seen above, composed nearly all their oracles in verse, which was always (as far as we know) either sung or chanted, often to the accompaniment of instruments. Habbakuk was primarily a temple musician and only secondarily a prophet. It should be obvious that one of the prerequisites for being considered as a true prophet was native poetic genius. In this connexion we may recall the Talmudic dictum (*Baba Bathra* 12a), 'The wise man is more excellent than the prophet',

[129] ARI², 126 f.

[130] ARI², 210, nn. 97, 100.

[131] VESO (see especially p. 60); W. F. Albright and T. O. Lambdin (JSS II [1957], 113–27); numerous papers by Elmar Edel, and the more elaborate, but essentially identical, system of W. Helck, BAeV (1962), especially pp. 380, 480 (where he reads *Kurkur*, not having seen my discussion in ARI).

which reflects the attitude of a more mature age, which distrusted charismatic figures. In Israel we know that the canonical prophets were far from being mere charismatics, but we also know that they were regarded with distrust by the priests, who took a position characteristic of professionals when faced with amateurs in all ages. In Phoenicia the sages were often practical men, to whom inventions and discoveries as well as esoteric knowledge were attributed. This does not seem true of early Israel, but under Phoenician influence it was not long in developing. Note also that diviners and sages of Aramaic background, such as Balaam,[132] Lemuel and Agur of Massa,[133] come under quite different categories.

In estimating the influence of legendary Phoenician wise men on Israel, we must not forget that the biblical references to them come chiefly from Kings, Psalms, Job, and Ezekiel in contexts dating in general from the seventh or early sixth centuries B.C. in their extant form. This was the period in which Phoenician literary influence reached its climax. Earlier Canaanite influence came in mostly before the establishment of Israel as a commonwealth or in the time of David and Solomon.

E. SOME MAJOR ASPECTS OF PHOENICIAN LITERARY INFLUENCE ON ISRAEL

In Chapter I we dealt with Canaanite literary influence on the verse of early Israel. As pointed out there, the tenth century marked a great change in basic stylistic

[132] On Balaam see JBL LXIII (1944), 207–33 and BASOR 118 (1950), p. 20; another study is in preparation.

[133] On these figures see my study in *Studi Orientalistici in onore di Giorgio Levi della Vida* (Rome, 1956), 1–14, especially pp. 6 ff., where I analyse the structure of the poems attributed to them, noting the archaic Canaanite background, in spite of Aramaic influence on details.

features of Israelite poetry. Owing to lack of material, we must depend for a *terminus ante quem* upon tenth-century Psalms such as Psalms 78 and 18, in which such a date is highly probable. Characteristic of these Psalms is a stylistic reaction against repetitive parallelism of any kind; instead we have a strong tendency to eliminate repetitive elements and to vary wording for the apparent purpose of using as many different words as possible. It would, therefore, seem highly probable that Canaanite poetry was already giving up repetitive parallelism and replacing it by maximal variation of vocabulary, within the limits of what were then considered to be good taste and respect for the sacred. Since we now know that Hebrew music and, naturally, musical compositions were then under particularly strong Phoenician influence,[134] it is incredible that the new aversion to repetitive parallelism can have developed independently in Israel. If other evidence is needed, it may easily be drawn from a study of the prophetic writings of the eighth century B.C., where there is virtually no repetitive parallelism. As pointed out in Chapter I, occasional cases of repetitive parallelism in later Psalms and the Prophets, as well as in other parts of the Bible, are clearly archaic survivals—that is, either drawn from much older sources (as in Habakkuk),[135] or picked up from the mouth of the peo-

[134] I have long been intending to discuss this whole question in detail, following the concise survey in ARI, but have not had time. Meanwhile, I adhere firmly to my 1942 position on the Davidic date of the establishment of the musical guilds, as well as on their non-Israelite origin.

[135] See SOTP, 1–18. Here I may add my present interpretation of the puzzling verse Hab. 2:5a which I first discussed in BASOR 91 (1943), 40, n. 11. I then pointed out that the enigmatic *HYYN* of MT may reflect Ugar. *Hyn*, another name for the craftsman god Kôshar. The subsequent discovery of the Habakkuk commentary, reading *W'P KY' HYN* (or *HWN*) *YBGWD* (next colon like MT), yields a better text (see also W. H. Brownlee, *The Meaning of the*

ple, where they had been handed down without change for centuries (as in Canticles).[136] Where we do have attempts at original repetitive parallelism, as in the sixth-century *Šîrê ham-Ma'alôt*, it is so irregular and so different from archaic repetitive parallelism that its authors obviously did not understand the rules of the style they were attempting to imitate. In some Psalms such as 29, the text of which is very corrupt, it is quite impossible to tell what the date of the original composition may have been. I suspect that it passed through a number of different stages between Middle Bronze and its final redaction about the fifth(?) century B.C.

The recent publications of Mitchell Dahood have made it clear that Canaan exercised profound influence on Israelite lyric style in all periods after the end of the Patriarchal Age, and that it is absurd to try to isolate any aspect of Hebrew literature from Canaanite-Phoenician influence.[137] What is true of Psalms applies also to the

---

Qumrân Scrolls for the Bible, New York, 1964, 24 ff.). My present interpretation is:

> And even though he be as crafty as Hîyôn,
> A cowardly man will not succeed.

The Hebrew form *Hîyôn* corresponds to a probable Ugaritic *Hayyân*; Heb. *yahîr* is derived from the same verb as Arabic *wahrah*, 'fear', etc. Kôshar corresponds closely in some ways to Greek Hermes.

[136] See my essay in *Hebrew and Semitic Studies Presented to Godfrey Rolles Driver* (Oxford, 1963), pp. 1–7. Cf. also the review by J. C. Greenfield, JAOS LXXXV (1965), 257, with all of whose corrections I agree except that *elēlu* (CAD IV, 40a–b) and *šūlulu, mēlultu, melēlu* do refer to dancing to music, etc. (from *ḫll* = *ḥwl*). Incidentally, we should clearly emend the Greek text of Cant. 7:1 to read—ἡ ὀρχουμένη, '(she) who dances', instead of ἡ ἐρχομένη, '(she) who comes'. The Hebrew should then read ⟨*meḥôlélet*⟩ *bi-mḥôlát maḥanáyim*, 'dancing in the dance of two armies' with the corrected Greek text and variant Massoretic MSS (correct my remarks on p. 5 of my paper accordingly).

[137] See especially his major work, *Psalms* (Anchor Bible), to appear in three volumes, the first of which has already appeared

wisdom literature collected in Proverbs, as pointed out successively by Cullen Story[138] and Pierre Proulx,[139] and most recently by Mitchell Dahood,[140] with a wealth of new data. Father Proulx has shown that, while there is no repetitive parallelism in Proverbs except towards the end of the book,[141] the stylistic and syntactic phenomena which we do have are generally in accord with similar phenomena in Ugaritic verse. Mitchell Dahood is now demonstrating that a host of obscure passages in Proverbs may be clarified from the vocabulary, grammar and style of Ugaritic and later Phoenician sources. Since Proverbs contains the largest body of secular literature in the Bible, we should expect Phoenician influence on it to be disproportionately high. Criticisms levelled against the interpretation of biblical texts, particularly of wisdom literature, on the basis of Ugaritic material are groundless. In the first place, if we omit proper names, the vocabulary of the Hebrew Bible consists of about 3,000 words—varying according to the norms used to distinguish words from one another. Judging from the Egyptian and Accadian dictionaries, the total number of words—including all known Canaanite and Aramaic dialects between c. 2000 B.C. and A.D. 500—could not be appreciably less than 15,000. Accordingly, we may not know more than a fraction of the total Hebrew vocabulary in biblical times. It is, therefore, absurd for biblical scholars to insist that we must limit our vocabulary to Hebrew words found in standard Hebrew dictionaries. In principle, the

(New York, 1966) and the second of which is in press at the time of writing.

141 See my treatment referred to in n. 133.

late F. X. Wutz was quite correct in recognizing the fact that there must have been many hundreds of words in the original Hebrew Psalter which have been lost in transmission. He was wrong in trying to reconstruct a more elaborate Hebrew vocabulary through attempted retroversion of the Greek translation into a Hebrew text of his own creation with the aid of words in other Semitic languages. It is naturally impossible to know without specific examples in published literature just what words which appear in other Semitic languages may also have been employed in a Hebrew dialect or literary category. In spite of the lack of extra-biblical North-west Semitic sources, he correctly explained *rôkēb 'arābôt* in Ps. 68:5 as a mistake for *rôkēb 'arāfôt*, 'rider on the clouds' (Ugar. *rkb 'rpt*, of Baal).

Even such an outstanding example of derivation from an external source as the material from the Proverbs of Amenemope (Prov. 22:17–23:11) was, in my opinion, almost certainly borrowed through Phoenicia. We now know that Amenemope was composed no later than the twelfth century B.C. and perhaps as early as the thirteenth.[142] Relations between Phoenicia and Egypt in these centuries were extremely close, as we have seen above. It is no accident that Israelite wisdom literature was particularly indebted to Phoenicia for literary inspiration. A highly sophisticated trading civilization is always likely to be interested in practical advice. Examples of the popularity of such aphorisms among cultures of this type are so numerous that we need scarcely dwell on them: mention of the Chinese, Scots, East European Jews, and Levantines is enough. Ugarit has yielded important remains of the oldest known wisdom book from South-west Asia, the Teachings of Shuruppak (which

[142] See my remarks in VT, *Supplements*, III (1955), 6; A. H. Gardiner in *The Legacy of Egypt* (Oxford, 1942), pp. 67–70; J. M. Plumley in DOTT, 172 ff. (1958); R. S. Williams, JEA XLVII (1961), 100–6.

have also been found lately in fairly extensive Sumerian fragments at Tell eṣ-Ṣalābîkh, dating from about the twenty-sixth century B.C.).[143]

When we turn from Proverbs to Job and Ecclesiastes, we find that Phoenician influence continues to grow. This is perhaps due to the fact that Proverbs, though containing some obviously Phoenician material also includes many orthodox Israelite sayings, as well as collections attributed to various special sources, both Israelite and non-Israelite. It is improbable that the book was edited before the sixth century B.C., and its final redaction may come down to the fifth.[144] Job and Ecclesiastes, on the other hand, are highly personal compositions; Job probably dates from the seventh century B.C., though an early sixth-century date is by no means impossible; only in the last chapter do we find passages added in later times.[145] Ecclesiastes dates almost certainly from the fifth century B.C. and is also the work of a single man.[146] Neither book contains specific quotations from earlier, now canonical, Hebrew literature and it is, accordingly, impossible to judge these writings on the same basis that we can judge a work containing chiefly traditional material. Both the authors were heretics in their own way, and it is most unlikely that their works would have survived if it had not been for their outstanding literary qualities, as well as for the fact that they deal with 'existential' themes

[143] R. D. Biggs, JCS xx (1966), 78; W. G. Lambert, *Babylonian Wisdom Literature* (Oxford, 1960), 92 ff.

[144] The best general survey now available of the place of Proverbs in wisdom literature is that of R. B. Y. Scott, *Proverbs* (Anchor Bible, 1965), pp. xv–liii and 3–30.

[145] For the date of Job see especially Marvin Pope, *Job* (Anchor Bible), pp. xxx–xxxvii; my own arguments for the same date are largely different, but do not conflict. For a full discussion see my forthcoming *Experience on the Road to Reason: Phoenicia, Israel and Ionia.*

[146] See the treatments, recent and forthcoming, cited below, p. 259, n. 147, and p. 261, n. 151.

which are scarcely touched on in earlier biblical literature.

In a forthcoming book to be entitled *Experience on the Road to Reason: Phoenicia, Israel and Ionia*[147] I shall deal with the origins of the new ways of thinking which seem suddenly to appear among the Greeks in the early sixth century B.C. I trace them back to a general intellectual movement which probably appeared first in Phoenicia, from which it spread more or less contemporaneously to Israel on the one hand and to the Aegean shores on the other, taking different forms in the two very different cultures. The roots of this movement can be traced in the earlier literature of Israel as well as in the active intellectual ferment which began with the foundation of Greek colonies all around the eastern Mediterranean in the eighth–seventh centuries B.C. This is not the place to go into detail about this movement, which can be best followed by analysis of the legal institutions of the Old Testament and the early Greek world. It was an age of increasing scepticism, with intensely cosmopolitan cultural transfusion in which the old polytheistic superstitions seemed more and more out of date and men struggled towards a more rational way of explaining the world in which they lived. While we have only fragments of native Phoenician literature before the sixth century B.C., we have in Sanchuniathon a rich source of information with regard to the growth of scepticism. In fact, Eusebius was so horrified by the impersonal character of the cosmogony of Taauth, where the ancient gods became natural phenomena, that he burst out: 'A cosmogony which leads directly to atheism! (κοσμογονία ἄντικρυς ἀθεότητα εἰσάγουσα)'.[148] Sanchuniathon was emphatically not influenced by Greek philosophy in any form known to

[147] See provisionally my forthcoming paper in PAPS, entitled 'Neglected Factors in the Greek Intellectual Revolution'.

[148] This reminds one of St. Augustine's reaction to the sceptical philosophy of Anaximander, but is stated more forcefully.

us, nor is there the slightest evidence for any Greek philosophical influence either on Job or on Ecclesiastes—though I formerly believed, with many other scholars, that the latter was composed in the third century B.C. under eclectic influence from popular Stoicism and Epicureanism.[149]

Actually, Job and Ecclesiastes are both so full of Phoenician language, economic practice, cosmology, astronomy, and imagery, that it is increasingly difficult to believe that either was written outside of the Phoenician sphere of higher culture. It is perfectly absurd to consider Job as an outgrowth of Edomite, still less of Arab, culture. The story of Job is, of course, much older, and probably goes back to an epic narrative which arose between the age during which the name *Ayyābum* was popular (first half of the second millennium B.C.) and Israelite times. The references to North Arabic districts are characteristic of the early first millennium B.C., and the names need not imply any personal acquaintance with the places in question. The name *Bûz*, for example, is typically Phoenician in form, since the native pronunciation, followed in Accadian, was *Bāzu* which would become, by normal rules of phonetic development, *Bûz* in Phoenician.[150] Allusions to the Chaldaeans and Sabaeans point to a relatively early date, before the two peoples had settled down completely, substituting caravaneering for raiding. A date after the middle of the seventh century B.C. would be difficult. It is most significant that there is not a single scriptural quotation in the whole of Job, devoutly monotheistic though its author is. Since it is written in Hebrew, in spite of its rich Phoenician colour, it contains many idiomatic Hebrew expressions which also occur in the

[149] FSAC^2 (1957), 351 f. The most extreme recent view of the lateness of the alleged Greek influence on Ecclesiastes is in the late Moses Hadas' *Hellenistic Culture: Fusion and Diffusion* (New York, 1959), pp. 140 ff.

[150] For its location see the Alt *Festschrift, Geschichte und Altes Testament* (Tübingen, 1953), pp. 8 f.

pre-exilic books of the Bible. One might expect scriptural quotations, but there is none. This suggests a period before the work of the Deuteronomist in the late seventh century B.C., or at least before the work of the Deuteronomist had become widely known. Even more surprising, if possible, is the lack of any quotation from the Hebrew prophets, since we should certainly expect to find such quotations if the author had been strongly influenced by them. His Phoenicianizing Hebrew may have come from North Israel or from the non-Israelite coast of Palestine, whose culture was Phoenician but whose population was certainly in part Israelite. The author was familiar with the Assyrian practice of compulsory exchange of populations, a fact which points to a date after c. 740 B.C. Had he written after the fall of Jerusalem there would surely have been some allusion to it, direct or indirect. Above, in dealing with the Phoenician hierophants, we have pointed out that some of our best material comes from Job. In our forthcoming volume, referred to above, we shall try to show in detail the extent of Phoenician influence on cosmogony, cosmology, and astronomy.

After many years in which I insisted on a third-century date for Ecclesiastes I accepted Mitchell Dahood's late fourth-century date.[151] More recently I have changed my mind again, going back successively to the early fourth century and then to the fifth century B.C.—preferably to the second half, though a date in the first half does not seem at all impossible. It is noteworthy that here also there are no scriptural quotations. In fact, we are in an atmosphere which is considerably more sceptical than the approach in the book of Job. We no longer have an author who can be called 'a devout Yahwist', yet he evi-

[151] See Dahood's study 'Canaanite-Phoenician Influence in Qoheleth' (*Biblica*, XXXIII [1952], 30–52; 191–221), and my remarks in VT, *Supplements*, III 14 f. [See now Dahood, *Biblica*, XLVII (1966), 264–82.]

dently considered himself as a good Jew. In fact, the difference is roughly on the order of a Leibnitz followed by a Schelling or, in more recent American terms, of a Borden P. Bowne[152] followed by a Paul Tillich. Furthermore, Qoheleth contains a very much higher proportion of Phoenician elements than Job. Yet it must be emphasized that not one of the supposed influences from Greek philosophy can be sustained. On the contrary, we have in Qoheleth some of the raw material on which the earliest Greek philosophers built their metaphysical structures. Note also that in Qoheleth we have three Persian loanwords,[153] with no Greek words at all. Note also that the content, including particularly the many occurrences of the expression 'under the sun', has its closest parallels in the Phoenician inscriptions of Eshmunazor and Tabnit in the early fifth century B.C. and the work of Sanchuniathon about the second quarter of the sixth century B.C., to say nothing of Euripides in the second half of the fifth century B.C. Examples—literary, quasi-philosophical, and historical—are now fairly numerous and all point in the direction of a date in the fifth century B.C.

But we must not suppose that literary influence was all from Phoenicia on Israel. Some of it was certainly in the opposite direction. We are told by Porphyry that Sanchuniathon wrote on Jewish history,[154] using information which he had obtained from a priest of the god called *Ieû*, that is, the North Israelite pronunciation of *Yáhû*

[152] Bowne (1847–1910) was the Methodist founder of the 'Personalist' philosophy.

[153] *Pardés*, *pitgám*, *zemán* (Syr. *zĕván*, *zavnâ*). Until recently I have oscillated between Acc. *simānu*) *Sīwān* and Old Iranian *zṛvan* as the source of *zemán*, but I have lately accepted the latter.

[154] Karl Mras pointed out long ago (Austrian Academy: *Anzeiger*, 1952, No. 12, p. 175), that it was Sanchuniathon, not Hierombal, priest of Ieu, who dedicated a history of the Jews to Abibal, king of Byblos. Contrast C. Clemen, MVAeG XLII:3 (1939), 4.

(*Iaō* in Greek).[155] Eusebius takes occasion to remark that this material was reported accurately by Sanchuniathon.

Our treatment has necessarily been uneven because of the fragmentary nature of our Canaanite and Phoenician sources. But the swelling tide of discovery has brought the evidence needed to prove the remarkable accuracy of Israelite tradition. The biblical sources make no attempt to disguise the extent to which Israel was influenced by the paganism from which it had emerged and to which it was always exposed. There is no evidence that any Israelite author or editor held 'historiosophic' views about the Hebrew past, to use Y. Kaufmann's phrase. Theirs was always a fundamentally empirical approach, and the errors which they sometimes made in interpreting tradition were natural and inevitable, not the result of a distorted world view.

The contrast between Canaanite and Phoenician paganism, on the one hand, and the faith and practice of Israel, on the other, was relatively just as great as that between Graeco-Roman paganism and Judaeo-Christian monotheism in the time of the rabbis and church fathers. Israel learned the arts of civilization, including music and belles lettres, from Canaanite-Phoenician neighbours, just as later Jews and Christians learned how to reason systematically from the Greeks. In the process of acculturation heresies arose. There were syncretistic cults and movements at every known stage of the development of

155 *Praep. Evang.* I.9, 21. The critical apparatus of Mras lists Codex A as reading Ιευ, while Theodoret read Ιαω; the other codices read Ιευω. As well known, *Iaō* stands for *Yahū*; *Ieu* reflects the typical North-Israelite and Phoenician dissimilation, like *Yēšū'* for *Yôšū'*, *Yēhū'* for **Yōhū* (original **Yahuhū'*, Assyr. *Iau'a*), *'ēdût* for **'ôdôt*(*'âdôt* (**'ahdôt*, 'oaths, covenant'), etc. The Gnostic figures of Ιαω and Ιευ are doublets, the former reflecting the old southern, the latter the old North-Israelite pronunciation.

Yahwism. Gnosticism had its forerunners among Israelites and Samaritans, even though we can only see dimly at present. But significant pagan influences always came from the older and richer cultures, not from the nomads and semi-nomads of Sinai and North Arabia, as romantically imagined by many biblical scholars. It is high time that we turn from such imaginative fantasies to the real world of antiquity, which has so much to tell our own world of today.

Addenda

CHAPTER I

(a) Ch. I, § A, n. 3. On Wellhausen's Hegelianism see now Lothar Perlitt, *Vatke und Wellhausen* (BZATW 94, 1965). However, he forgets that a scholar may be strongly influenced by a school of thought (e.g. Platonism) even when he is quite unconscious of that fact. Wellhausen was certainly not interested in philosophical speculation. In this respect he resembled two eminent scholars whom I knew well: Paul Haupt and C. C. Torrey, both of whom considered themselves free of philosophical bias.

(b) Ch. I, § B, n. 20. Father Mitchell Dahood, S.J., whose work on archaic features of biblical poetry has been outstanding in both quantity and quality, informs me that he now has isolated over 200 such pairs of words common to both Hebrew and Ugaritic verse. Even if a number of them should prove to be coincidences, this impressive total compels us to recognize stylistic dependence of the former on the latter.

(c) Ch. I, § C, n. 51. Following E. A. Speiser, *Anchor Bible: Genesis* (1964), 361–72, I am now calling Gen. 49 'The Testament of Jacob' instead of 'The Blessing of Jacob'. In addition to his bibliography on p. 372, note Hans-Jürgen Zobel, *Stammesspruch und Geschichte* (BZATW 95, 1965). Though the latter did not come to my attention until I had nearly completed intensive research on Gen. 49 (which began in the autumn of 1966, several weeks after the manuscript of this volume had been completed), it has influenced me substantially. (The original impetus to return to this challenging poem came from my former student, Rev Dr Francis I. Andersen, in a letter of 14 October 1966.) Since I must be concise, I will say here that the content of the 'Testament of Jacob' is surprisingly heterogeneous. All the passages containing obvious plays on words are late, in accordance with our present knowledge of Hebrew stylistic development. Several

individual tribal sayings are composite, containing both early and late passages. The consonantal text has been remarkably well preserved, though there is much archaism of language and not a little wrong division of a continuous text (as in the Sefîreh treaties of the mid-eighth century B.C.). The sayings about Naphtali and Benjamin are very archaic and point to a nomadic atmosphere. Late Patriarchal are sayings about Issachar, Judah, Reuben, Simeon and Levi, Dan, and especially Joseph (which is historically very important). The sayings about Asher and Zebulun are later and have obviously been interchanged. No early saying about Gad has been preserved. A single illustration must suffice; the beginning of the Issachar saying (Gen. 49:14) may be read, without changing a single consonant: *Yiśśakar ḥammôr gēr marbîṣ bên (ham)mišpetáyim*, 'Issachar is a (resident) alien donkey-driver/ Who camps between the (camp-fire) hearths'. Since a donkey does not bend his shoulder to accept a burden, the usual vocalization *ḥămôr*, 'donkey', will not do; the word is the North-Israelite pronunciation of later Hebrew and Aramaic *ḥammār*, Arabic *ḥammâr*, all meaning 'donkey-driver' (cf. early Hebrew *pārāš*, 'horseman', for **parrāš*. [See below, Addendum (r) for additional confirmation.] A. Alt's historical explanation of the passage in KSGVI I, 167 f. still holds; the settlement of Issachar probably began well before the fourteenth century B.C.

(d) Ch. I, § D, n. 67. In subsequent papers, Cross has further developed his views of the Old Palestinian and Proto-Lucianic recensions; see HTR LVII (1964), 292–9; IEJ XVI (1966), 81–95. At the same time our views appear to be diverging with respect to the relative importance of contractions and expansions of the text; I hold firmly to my long-standing position that in the Pentateuch and the Former Prophets (Joshua-Kings) 'losses' far outweigh 'glosses'.

(e) Ch. I, § E, n. 86. Father Dahood (*Anchor Bible: Psalms* I, 1966, p. 100) calls attention to the fact that the *tmn* of the dragon *Yam* in Ugaritic is parallel to his *pnt* (Baal Epic, IIIAB, A: 17 f. and 26), just as *tmnt* is parallel to *pānîm*, with reference to Yahweh, in Psalm 17:15. Both should be translated 'glory' or 'majesty' (note that when Baal fells the dragon, the latter's *pnt* is weakened [*nḡṣ*] and his *tmn* is ex-

hausted [*dlp*]). These and other considerations make the rendering 'image' (vocalized *temûnāh*) still more unlikely.

(f) Ch. I, § E, n. 105. I have to thank Dr Menahem Haran for making me aware of a grammatical impossibility in my rendering (BASOR 163, 52) of *melek šělôm⟨ōh⟩* as 'a king allied to him'. In his remarks (*Annual of the Swedish Theological Institute*, IV, 1965, 48, n. 14), he gives the correct translation, '*the* king with whom he (Abraham) has peaceful relations'. Subsequent correspondence shows that the correction was inadvertent (i.e. it was dictated by his sense of Hebrew grammar), since he does not accept it himself. That it is idiomatic Hebrew is shown by the two pairs *malkê ḥesed* (I Kings 20:31) and *'îš ḥesed* (Prov. 20:6 with Greek and Syriac) versus several occurrences of *'îš šělômî*, *'anšê šělômkā*, etc., and our probable *melek šělôm⟨ōh⟩*. I now see that there is reason to consider Melchizedek as king of Jerusalem, as maintained by Haran; the original text (oral or written) may have been worded approximately, 'And Melchizedek, king ⟨of Jerusalem, the king⟩ who was ⟨his⟩ ally, brought out . . .'. This, or a similar, restoration of the original text would involve nothing but simple haplographies. It may be noted that the relation between Abraham's people and the king of Jerusalem would be analogous in some ways to that described in the Yaḥdun-Lim inscription of Mari, from the second quarter of the eighteenth century B.C. Here the two 'Apiru tribes of Ubrapû and Awnānum, as well as the similar tribe of the Rabbûm, are each allied to a different city king of the Upper Euphrates Valley (G. Dossin, *Syria*, XXXII, 1955, 14 f.); on these tribes and their biblical counterparts see Ch. II, § D.

(g) Ch. I, § E, last paragraph. For the use of historical analogies and models see AHAEBT, 3 ff., 60 ff.

CHAPTER II

(h) Ch. II, § A, n. 3. See now G. Posener's forthcoming paper in Syria, 1967, and my observations in BASOR 184, pp. 28, n. 10, and 35, addendum.

(i) Ch. II, § A, n. 9. Note that all efforts to push the royal

tombs of Byblos back before the end of the nineteenth century B.C. are rendered impossible because none of the three now known lots of Execration Texts, dating roughly between 1925 and 1825 B.C., mention any native princes but only 'tribes' at Byblos, though they contain many other names of Palestinian and Phoenician chieftains of much less important places than Byblos. On this question see BASOR 184, 27 ff.

(j) Ch. II, end of § A. See below, Addendum (x) on Ch. IV, § A, n. 1.

(k) Ch. II, § B, n. 18. Two very recent efforts have been made to fit the kings of Byblos now known into the so-called 'middle' Babylonian chronology (that accepted in CAH²): J. Van Seters in a paper read at the New Haven meeting of the American Oriental Society in April 1967, and K. A. Kitchen, *Orientalia* XXXVI (1967), 39–54. The former operated with a very early date for Abishemu I of Byblos (c. 1840–1820), against which see above, Addendum (i), as well as with an impossibly short reign of Zimri-Lim, king of Mari, against which A. Goetze protested at the meeting; see also on Kitchen's similar view, below. Kitchen's treatment of the material from Byblos is excellent, but he has also become a victim of Dr H. Lewy's synchronisms (*Die Welt des Orients*, II, 5/6, 1959, 438–53). Since G. Dossin's exhaustive collection of the known year-names of Zimri-Lim (*Studia Mariana* [DMOA IV], 1950, 50–61), it has been quite certain that Zimri-Lim reigned at least 32 years, not 18 as assumed on the basis of dubious synchronisms by Dr Lewy. This would mean that he was on the throne from c. 1728 (or earlier), following the low chronology, to 1697. It is most unlikely that the letter ARM IV, 20, from Ishme-Dagan, son of Shamshi-Adad I of Assyria to his brother Ishme-Adad, was written after their father's death. The whole tone of the letter shows that the former (installed at Ekallatum on the Tigris, south of Assur, or at Assur itself) considered himself as still only a little superior to his brother; in other words, Shamshi-Adad was still alive, residing at Shubat-Ellil, and his elder son was only the heir apparent, not the reigning monarch. It is thoroughly improbable that the expression *ana kussî bīt abīya ērub*, 'I have entered the throne(room) of my father's house' has the same sense as the familiar *ina kussî abīya ūšib*, 'I sat on the throne

of my father'. Similarly, the year-name of Eshnunna [H. Lewy, *op. cit.*, 440, n. 1 (a)], (MU) *Daduša ana bīt abīšu īrubu* probably means 'Year in which Dadusha was installed in his father's palace' (there is nothing to prove that this year was the year after his accession as sole ruler). When, for example, a year of Ishme-Adad at Mari is dated by the formula (*Studia Mariana*, 53) (MU) *Nergal ana bītišu īrubu*, this does not mean that the god Nergal became king but that he was installed in a new temple (= palace). It stands to reason that the young co-regent was immensely proud at occupying the redecorated (or rebuilt) palace of his father, wherever it was. I should date Shamshi-Adad I c. 1750–1718, and his younger son's co-regency at Mari during the middle years of his father's reign, before Zimri-Lim's accession in or before c. 1728. Reducing these results to the 'middle' Babylonian chronology Zimri-Lim would have reigned c. 1792–1760 and Shamshi-Adad I c. 1814–1782, dates which would make the almost total absence of references to Egypt or imports from Egypt totally inexplicable, besides creating insoluble problems for the historian.

(l) Ch. II, § B, n. 22. See also the extremely useful survey by Paul Garelli, *Les Assyriens en Cappadoce* (*Bib. Arch. et Hist. de l'Inst. Français d'Arch. d'Istanbul*, XIX, 1963), *passim* (see Index) on donkey caravans and drivers in the nineteenth century B.C.

(m) Ch. II, § C. Note also my concise presentation of the material from the standpoint of historical analogy in AHAEBT 22–41.

(n) Ch. II, § D, n. 50. E. Sollberger has, however, in *The Business and Administrative Correspondence under the Kings of Ur* (1966), No. 6 (pp. 73 f.), collated the tablet published by Kraus and refers it to the Third Dynasty of Ur instead of to Accad. But it remains highly improbable that the three SA. GAZ men in question, who resided in the town of [Bára-s]i_{11}-ga(KI), were actually robbers as he supposes.

(o) Ch. II, § D, n. 53. See now especially the critical edition and translation of the 'Curse of Accad' by the late Adam Falkenstein, ZA LVII (n.f. XXIII), 1965, 43–124. He has also

shown that the text was already being copied in the Ur III period, c. 2000 B.C.

(p) Ch. II, § D, n. 69. I have long since pointed out that such words as Amorite *naḫraru*) Accad. *niraru*, Amarna *ennirir*, Amorite *šunuḫra* are derived from the same stem *ʿrr* as Heb. *ʿatar* and *heʿtîr*, 'pray for help', *neʿtar*, 'come to (somebody's) help'; Arab. *iʿtarra*, 'beg for help'. See JPOS XIV (1934), 122, n. 105, and BASOR 78 (1940), 24, n. 5. Note that the clan-name *ʿEr* also appears in I Chron. 4:21 as the name of a son of Shelah, younger brother of Er and Onan—a typical case of the confusions in clan genealogies which are so common in early Hebrew and Arab tradition. The same clan name may also appear in the eleventh-century patronymic *Yaʿōr* (*ketîv* in I Chron. 20:5), which corresponds phonetically to the Mari variant *Yaḫurru* and early Assyrian *Yaʾuri* (see above, n. 68). There is no way of telling whether the name in the Berlin Execration Texts which I tentatively identified with biblical *ʿEr* (JPOS VIII, 1928, 238) is really the same name or not, since it may be transcribed as Semitic *ʿlm* or *ʿrm*.

(q) Ch. II, § D, n. 92. There is a remarkable parallel, hitherto completely overlooked, between the situation among the early Asiatic ('Apiru) donkey caravaneers, and the semantic development of New Egyptian *šwwty*, 'huckster, trader', whence Coptic *ĕššôt*, 'trader'. The material is too extensive to be discussed here in detail; it is enough to say that the word *šw* (vocalized probably *šaw-*) appears in the funerary inscription of *Bby*, a late Middle Kingdom notable from El-Kab in Upper Egypt who was the provisioner of the ruler (*wʿrtw n ḥ3wt ḥq3*, published by H. Brugsch, *Thesaurus*, 1527 f.; Porter and Moss, *Topographical Bibliography*, V, 184). Among the offerings were grain, 20 bovides (large cattle), 32 bubalis antelopes (often included with the bovides in such gifts), 8 *šw* donkeys (with clear determinative), besides the usual spices, ointments, etc. The donkeys are unusual in such lists and presumably were connected with donkey caravans used in bringing supplies to the ruler's court; the name may be connected with Eg. *šw*, 'dry, desert'. Several different words are derived from this stem, including especially *šwwty* and the contracted *šwty*, who appear in the Nineteenth

Dynasty as hucksters trading especially with Syria (see also the Amenope list published by A. H. Gardiner, *Ancient Egyptian Onomastica*, I, 94* f., where *šwwty* appears as No. 210 followed immediately by Canaanite *m(u)ḫr*, 'buyer' (No. 211) and *mukiru*, 'seller' (No. 212). In the Papyrus Harris (early twelfth century) the class is so numerous as to be labelled 'unlisted' (*nn rdysn*). In the Nauri Stele of Sethos I (late thirteenth century) the expression *šwyw* (not *šwtyw*) *n ḫ3st*, 'foreign donkey-drivers', is found in a long list of labourers in the mines, followed immediately by 'refiners' (*qu-ra*, plural) and 'gold washers'. The extensive ramifications of this subject will be fully discussed elsewhere. (It is unlikely that there is any connexion between these words—despite the fact that all are written with the feather sign—and the Transjordan land of *Šwtw* in the Execration Texts [which I have identified with *Benê ŠT*, the archaic name of the Moabites] or the *'3mw n šwt*, 'Asiatics of Šwt', in the contemporary Beni Ḥasan tomb paintings, or even the much older *t3 šwt*, 'land of the feather', one of the 'Nine Bows'.)

(r) Ch. II, § D, n. 96. Note also that when Hamor appears as 'the father of Shechem' in Gen. 34, this term simply means 'founder' of the city in question, and that Shechem became a clan (district in the eighth-century Ostraca of Samaria) of Manasseh in the genealogical tradition of Israel. I strongly suspect that here again (see Addendum (c) above) we have a North-Israelite pronunciation *ḥammôr* for Hebrew *ḥammâr*, 'donkey-driver'. In this case, the Greek spelling *Emmōr* (which is the normal transcription of a Hebrew *Ḥammôr*) confirms my suggestion directly. I have long since accepted the Greek reading *Chorraios* instead of Hebrew *Ḥiwwî* in this passage. In the tradition preserved in the JE recensions of Gen. 34, Shechem was thus founded by Hurrian caravaneers, who were displaced (presumably in the fourteenth century B.C.) by Semitic 'Apiru.

(s) Ch. II, § E, n. 99. Contrast W. G. Lambert in *Iraq*, XXVII (1965), p. 11, appendix. The argument from half-a-dozen spellings ^{d}(ÍD)I-id in the Assyrian Law Code is alone decisive.

(t) Ch. II, end of § E. At the New Haven meeting of the

American Oriental Society (April 1967), S. N. Kramer described new fragments of a Sumerian mythological text which recounts a feud between Ellil and Enki (Ae, Ea), creator of mankind, in which the former brought about confusion of tongues among men. This proves the Sumerian origin of yet another early story of beginnings in Genesis.

(u) Ch. II, § F, paragraph following n. 129. His important paper has now been published in *Textus* V (1966), 34 ff. (see my remarks quoted by G. E. Wright in BASOR 169 [1963], note on pp. 28 f.) based on Dr Iwry's original observations, as stated.

CHAPTER III

(v) Ch. III, § C, first paragraph. The sacrificial tablet RS 24.643 (which actually contains what amounts to a third copy of the Ugaritic pantheon) has now been discussed in detail by M. Astour in JAOS LXXXVI (1966), 279 ff.

(w) Ch. III, § D. It may be considered quite certain that the references to the restoration of the temple of the Egyptian goddess Nut and the appellation 'beloved of Nut' in the seventeenth-century Byblian texts Nos. 1 and 2, refer to Anath, who was also called 'Mistress of Heaven'. For the material see P. Montet, *Kemi*, XVII (1963), 61–8; Albright, BASOR 179 (1965), 39–40; K. A. Kitchen, *Orientalia*, XXXVI (1967), 52 ff.

CHAPTER IV

(x) Ch. IV, § A, n. 1. For the latest competent treatments of the Hyksos problem see Jürgen von Beckerath, *Untersuchungen zur politischen Geschichte der Zweiten Zwischenzeit in Ägypten* (Glückstadt, 1964); John Van Seters, *The Hyksos: A New Investigation* (New Haven, 1966); Donald B. Redford, *History and Chronology of the Eighteenth Dynasty of Egypt: Seven Studies* (Toronto, 1967), pp. 39–49. My own treatment has been deferred repeatedly, chiefly because my work on the Hyksos alphabetic inscriptions on scarabs must remain hypothetical until more data are available.

(y) Ch. IV, § A, second paragraph. See also above, Addendum (c).

(z) Ch. IV, § A, fifth paragraph. See also above Addendum (q).

(aa) Ch. IV, § A, n. 26. My synchronism between the destruction of Ugarit (probably by the Sea Peoples before the Tablet Oven with its priceless contents could be opened) with the Assyrian invasion of Khatti in the first full year of Tukulti-Ninurta I, has been criticized by a number of scholars, but they have not been able to produce any solid argument against it. Two wars between the Assyrians and the Hittites are known to have taken place during the last generation of Hittite imperial history; the first under Tudhaliya IV of Khatti, Ini-Teshub of Carchemish and the contemporary rulers Amishtamru of Ugarit and Shaushgamuwa of Amurru (referred to in the clearest language by documents from Ugarit and Boğazköy); the second in the time of Ini-Teshub's son Talmi-Teshub and Amishtamru's son Ammurapi', the last king of Ugarit (a war known from Assyrian and Ugaritic texts). Suppiluliuma II was almost certainly king of Khatti at that time. An important study by H. G. Güterbock (JNES XXVI, 1967, 73–81) seems to have settled the problem of the relation between Khatti and Cyprus (Alashiya) in the reigns of Tudhaliya IV and his son Suppiluliuma II, in complete agreement with the evidence from the Tablet Oven and contemporary tablets of Ugarit; the father conquered Alashiya after defeating its king, whereas the son defeated 'the ships of Alashiya' and 'enemies from Alashiya' on sea and land. In other words, the Sea Peoples and their allies were already in control of the island. There is clear evidence, which I had overlooked, for the second war between Assyria and Khatti in the triumphal epic of Tukulti-Ninurta in which he celebrates his victory over Kashtiliash of Babylonia. Towards the end of the poem (as far as preserved; see E. Ebeling, *Mitteilungen der Altorientalischen Gesellschaft*, XII, 2, pp. 19–21), after reciting some of the deeds of his recent ancestors, including the final conquest of Mitanni by his father Shalmaneser I, the Assyrian king mentions the 'Hittite (king)' (*Ḫa-at-tu-ú*, col. v: 40). If we accept the sequence of events in the royal inscriptions of Tukulti-Ninurta, the attack on

Khatti in the first full year of the king was followed successively by repulse of the Hittite 'allies' in the northern mountains and by the defeat of the Babylonians, who had long been in alliance with Khatti. These events cannot well be separated by more than a year or two in time. If we take 1160 as the official beginning of the Second Dynasty of Isin, with J. A. Brinkman in 1962 (JCS XVI, 1962, 103) and add the seventy-one regnal years of the last eight kings of the Third Dynasty of Babylon as recorded in King List A, we arrive at a date, c. 1232 B.C. for the dethronement of Kashtiliash III. The insertion of an interregnum of seven years for the Assyrian occupation is *a priori* improbable, and there is no likelihood that any clear synchronism can be set up between Egypt, Khatti and Babylonia during the reign of Ramesses II (1304–1238). These considerations leave us with the year 1234/3 for the Assyrian attack on Khatti and the destruction of the Tablet Oven, followed by the war against the eastern 'allies' of Khatti and about 1232–30 by the punishment of Babylonia. Of course, this last date is not exact and may have to be lowered by a few years—and possibly even raised by one year.

(bb) Ch. IV, § D. With reference to the ephod as the visible heavenly glory of the invisible God of Israel (fifth paragraph from end of chapter), see above on the heavenly glory (*pnm/pnt*) and majesty (*tmnt*) of Yahweh in Addendum (e). Much more significant is the forthcoming treatment of the *'ānān* of Yahweh (which corresponds even more directly to the *melammû* of the Accadians) by G. E. Mendenhall, who has presented his views in lectures and papers (note especially the second series of Lovejoy Lectures given by him at Johns Hopkins University in March, 1967).

(cc) Ch. IV, § D, notes 113, 116. On the mortuary character of the whole area around the Temple aux Obélisques at Byblos see now BASOR 184 (1966), 26 ff.

CHAPTER V

(dd) Ch. V, § B, third paragraph and n. 30. For the latest surveys of Phoenician penetration into the western Mediter-

ranean in the early first millennium B.C. see S. Moscati in the *Atti della Accademia . . . Lincei*, CCCLXIII (1966), *Memorie (Classe di Scienze morali . . . , Serie* VIII, Vol. XII), pp. 217–50; G. Garbini in *Studi Etruschi*, XXXIV (1966), 111–47. There is at present a strong reaction towards earlier dating. The Nora inscription is now dated by virtually all scholars in the ninth century; for the latest treatment see J. Ferron in *Rivista degli Studi Orientali* XLI (1966), 281–8, with a useful survey of recent interpretations. It must again be emphasized that the inscription cannot be complete: the alleged right edge is no original edge at all, since the letters along it are not aligned vertically; the resulting text cannot possibly be Phoenician, since it violates the normal rules of Phoenician grammar and crthography. B. Mazar's extension of my original suggestion that the right edge of the stone was cut off to include the left side as well, is the only reasonable view. The original stone block (which presumably included only part of the text) must have been cut into paving slabs or building material of similar shape.

(ee) Ch. V, § C, n. 86. See now the valuable survey by S. Moscati: 'Il sacrificio dei fanciulli' in *Rendiconti della Pontificia Accademia Romana di Archeologia*, XXXVIII (1965/66), 1–8. There can be little doubt that the term 'tophet' has been correctly used, though the word was probably not actually found in Phoenician. On the etymology of the word and its congeners see Koehler-Baumgartner, *Lexicon in Veteris Testamenti Libros*, s.v. *'ašpôt* (p. 95), *špt* (p. 1006), *tofet* (p. 1038). The stem *špt/tpt* is now generally identified with Ugar. *ṯpd*, 'set, place', as I first pointed out in JPOS XII, 18, n. 83; *tpt* (*tofet*) is not necessarily Aramaic but may be dialectal Hebrew like *tannôt*, 'recite', in the Song of Deborah. In HUCA XXIII (1950/51), Part I, p. 22, I pointed out that Heb. *mišpetayim* (Gen. 49:14, Judg. 5:16) and *šefattayim* (as vocalized in Psalm 68:14) is the dual of a word for 'hearth, fireplace' (see P. Haupt, AJSL XXIII, 1907, 236, n. 57) and must be identical with Ugar. *mṯpdm* in the Baal Epic, V AB, A: 79, where I should still render *ṯn mṯpdm ṯḥt 'nt 'arṣ* as 'the two fire-places under the fountains of the earth', i.e., hot springs.

(ff) Ch. V, § C, n. 105. This rendering of line 33 in the new funerary tablet of Ammiṣaduqa, *u rēdûm ša ina dannat bēlišu*

imqutu has imposed itself ever since I received a copy from Prof. J. J. Finkelstein in the spring of 1965. The word *dannatu* is well attested in the sense of 'pit, dungeon, etc.' His translation 'and the soldier(s) who fell while on perilous campaigns(?) for their (lit: "his") lord' (JCS xx, 1966, 97, 113 f.) seems to me exceedingly forced and intrinsically improbable.

THEOLOGY LIBRARY
CLAREMONT, CALIF

William Foxwell Albright is Professor Emeritus of Semitic Languages at Johns Hopkins University. He holds honorary doctorates from Harvard, Yale and twenty-five other institutions; he belongs to many honorary learned bodies, including the *Institut de France* (1947), the National Academy of Sciences (1955), and the British Academy (1967). Most recently he has been awarded the gold medal of the Archaeological Institute of America for "distinguished archaeological achievement." Among his best-known books may be mentioned *From the Stone Age to Christianity* (1940), which has been translated into a number of languages. He is the senior editor of the *Anchor Bible*.
